Dear readers,

The twenty-first issue of the Statistical Yearbook of the Slovak Republic brings you comprehensive statistical overview from all the areas of the national economy. The publication also offers international comparisons of our country development based on key statistical indicators.

The substantial part of the publication retains the same functional stability but also reflects changes implemented in the areas of statistics during the last year. There are methodological notes, definitions of indicators and data sources included in each of thirty-one chapters. Tabular summaries illustrate time series in particular for five-year-period of 2006 – 2010. There is also enclosed a CD-ROM as an inseparable component of the yearbook.

In comparison with the previous publications, in the yearbook there is the modified chapter Labour Market in which new data relating to one-off sample survey on reconciliation between work and family life is included. The chapter Income, Expenditures and Consumption of Households was supplemented by new information on households with children and without children. The chapter Finance has been taken out from the yearbook. Certain data, which is processed by the Statistical Office, has been transferred to the new twenty-sixth chapter Management of Non-Financial and Financial Corporations. It entails that financial indicators taken from respective institutions aren´t published by the Statistical Office any more. They are available on the websites of the Ministry of Finance of the Slovak Republic and the National Bank of the Slovak Republic.

Besides basic indicators of the development of the European Union, international overviews include new supplemented information on active use of the Internet by inhabitants of the European Union.

Wide range of statistics on economic and social development of Slovakia can be obtained from the Statistical Yearbook of the SR and also from the public database Slovstat and the

regional database RegDat which are also available on the website of the Statistical Office of the SR (www.statistics.sk).

The Statistical Yearbook of the Slovak Republic was edited by the employees of the Statistical Office of the Slovak Republic in cooperation with respective ministries and institutions that contributed with their data to its compilation and enrichment. I would like to acknowledge everybody who participated in the preparation of it. My acknowledgment is also devoted to the publishing house VEDA that has published and distributed the Statistical Yearbook of the Slovak Republic since its establishment.

Ľudmila Benkovičová
President of the Statistical Office
of the Slovak Republic

This publication was compiled by a team of authors, employees of the Statistical Office of the Slovak Republic, under the leadership of the editorial board:

Ľudmila Benkovičová, chairwoman
Štefan Adamec
František Bernadič
Dagmar Blahová
Eva Dočolomanská
Oľga Dzianová
Ivan Chrappa
Alena Illiťová
Ľudmila Ivančíková
Libuša Kolesárová
Branislav Neborásek
Edita Novotná
Magdaléna Šipková
Roman Török

The Statistical Office of the SR will gladly receive your comments and suggestions for the improvement of the next issue of the Statistical Yearbook at the following address: Statistical Office of the Slovak Republic, Miletičova 3, 824 67 Bratislava 26.

Notice

Unless otherwise specified in the heading or a legend to the table, the area the data refers to (country, region, etc.) is the territory of the Slovak Republic.

Unless the name of the table or the note under the table contains the size of published data, this is the data on the whole economy of the SR (including imputation for the organization of up to 19 employees, tradesmen, or the whole population).

As to the data published according to certain classifications (for example Statistical Classification of Economic Activities, Standard International Trade Classification, etc.) the names of indicators in English do not always correspond to literal names in Slovak language, but they are given according to the international classification, or an abbreviation is used.

The names of the countries are abbreviated, not always in official version.

Differences in sums and ratios result from rounding the data. Unless explicitly stated, the published data is definitive.

Financial data are recalculated by conversion course declared on July 8, 2008, 1 EUR = = 30,1260 SKK.

Explanations to symbols

Macron (–)	the phenomenon did not occur
Zero (0; 0,0; 0,00)	denotes greater than zero but less than the smallest unit expressible in the table
Dot (•)	data is not available or reliable
Cross (x)	the entry is not possible for logical reasons
Capital D (D)	data cannot be published because of its confidentiality
Break symbol (~)	cut in comparability of time series due to methodology or other reasons

1. Primary Economic Indicators

2. Territory and Climate

2. Territory and Climate

T 2–1. Territorial division of the Slovak Republic in 2010
T 2–2. Area, borders and surface of the Slovak Republic in 2010
T 2–3. Location of the Slovak Republic's territory
T 2–4. Maximum distances on the area of the Slovak Republic
T 2–5. Meteorological data from selected monitoring stations
T 2–6. Hydrological data
T 2–7. Main rivers in the Slovak Republic, their basins and length of bordering water courses
T 2–8. Mountains

T 5–3. Gross money income and expenditure of private households by social groups (House-hold Budget Surveys)
T 5–4. Structure of net money income and expenditure of private households by social groups (Household Budget Surveys)
T 5–5. Selected cross-sectional indicators based on the cross-sectional component of EU-SILC
T 5–6. Consumption of selected kinds of food and alcoholic beverages (per capita/year)
T 5–7. Recommended yearly allowances of the foodstuffs per capita year (gross figures as purchased, including losses during food preparation)
T 5–8. Daily consumption of energy and the most important nutritive substances per capita

6. Education

T 6–1. Kindergartens and basic schools
T 6–2. Grammar schools (secondary general education)
T 6–3. Special schools
T 6–4. Specialized secondary schools
T 6–5. Specialized secondary schools – students and school-leavers by fields of study (full time study)
T 6–6. Higher education institutions
T 6–7. Higher education institutions by fields of study – students of Slovak nationality
T 6–8. Higher education institutions – foreign students by nationality
T 6–9. Higher education institutions in school year 2010/2011 – public, private and state
T 6–10. Schools by type and teaching language
T 6–11. Private schools
T 6–12. Basic schools of arts
T 6–13. Providing meals at schools
T 6–14. Scholarships
T 6–15. After school facilities
T 6–16. Church schools
T 6–17. Income in private subsidized and church schools
T 6–18. Expenditures in private subsidized and church schools

7. Health

T 7–1. Health facilities, working posts, beds as of Dec. 31
T 7–2. Natural curative spa
T 7–3. Employees working in health services as of Dec. 31
T 7–4. Bed fund in the wards of institutional health care facilities as of Dec. 31
T 7–5. Hospitalized patients in the wards of institutional health care facilities
T 7–6. Average length of stay in the wards of institutional health care facilities
T 7–7. Bed occupancy in the wards of institutional health care facilities
T 7–8. Cases of treatments (examination) in out-patient facilities of curative and preventive care (without visiting service)
T 7–9. Selected infectious diseases compulsory notified
T 7–10. Terminated cases of disability to work
T 7–11. Disability to work due to disease and injury
T 7–12. Calendar days of disability to work by SK NACE Rev. 2
T 7–13. Revenues and expenditures on health insurance companies
T 7–14. Insured under health insurance companies as of Dec. 31
T 7–15. Expenditures on health
T 7–16. Consumption of drugs
T 7–17. Consumption of drugs by categories
T 7–18. Consumption of drugs by selected producer countries
T 7–19. Consumption of drugs by selected producers

8. Social Protection

T 8–1. Revenues of the Social Insurance Agency
T 8–2. Expenditures of the Social Insurance Agency
T 8–3. Pension benefits refunded by government
T 8–4. Insured under the Social Insurance Agency as of Dec. 31
T 8–5. Systematic sickness insurance benefits by kind
T 8–6. Number of pensions and average pensions as of Dec. 31
T 8–7. Actually paid out pensions benefits
T 8–8. Number of pensions receivers
T 8–9. Number of new granted pensions and average age of beneficiaries
T 8–10. Expenditures on the active labour market measures
T 8–11. Revenues and expenditures of supplementary pension funds
T 8–12. Number of contracts, insured and beneficiaries in supplementary pension funds
T 8–13. State social benefits
T 8–14. Social service facilities as of Dec. 31
T 8–15. Social service facilities as of Dec. 31 by kind
T 8–16. Non-investment expenditures on social assistance
T 8–17. Receipts and expenditure on social protection

9. Culture and Religion

T 9–1. Theatres
T 9–2. Musical ensembles
T 9–3. Motion picture distribution for cinema in 2010
T 9–4. Audio-visual works
T 9–5. Radio broadcasting
T 9–6. Television broadcasting
T 9–7. Public libraries, scientific libraries, university libraries
T 9–8. Periodical press
T 9–9. Magazines by periodicity of issue and target group
T 9–10. Newspapers by periodicity of issue and target group
T 9–11. Activities of individual cultural facilities (museums, galleries, observatories, ZOO's)
T 9–12. Botanical gardens
T 9–13. Preservation of monuments
T 9–14. Caves
T 9–15. Selected indicators on churches
T 9–16. Selected indicators on Roman Catholic Church
T 9–17. Membership in civil associations, chambers and trade unions

10. Physical Training and Sport

T 10–1. Selected indicators on physical culture
T 10–2. Sports schools
T 10–3. Sports classes
T 10–4. Unions and membership of the Association of Technical and Sporting Activities of the SR
T 10–5. Medals won by the Slovak sportsmen (adults)
T 10–6. Medals won by the Slovak sportsmen (juniors)

11. National Accounts

12. Foreign Trade

13. Prices

14. Fixed Assets

15. Organizational Statistics

11. National Accounts

T 11–1. Gross domestic product
T 11–2. Goods and services account
T 11–3. Sector accounts of the SR in 2010
T 11–4. Gross domestic product by output, income and expenditure approach
T 11–5. Balancing items of national accounts in the Slovak Republic
T 11–6. Distributive transactions for institutional sectors
T 11–7. Main components of non-financial assets for institutional sectors
T 11–8. Financial transactions
T 11–9. Gross output from supply and use tables by branches
T 11–10. Intermediate consumption from supply and use tables by branches
T 11–11. Gross value added by economic activities from supply and use tables
T 11–12. Final consumption from supply and use tables by commodities
T 11–13. Compensation of employees from supply and use tables by branches
T 11–14. Gross fixed capital formation by selected economic activities

12. Foreign Trade

T 12–1. Territorial structure of foreign trade
T 12–2. Foreign trade by commodity groups (SITC Rev. 4)
T 12–3. Total imports, total exports and trade balance by selected countries
T 12–4. Foreign trade by chapters in Harmonised System – total imports
T 12–5. Foreign trade by chapters in Harmonised System – total exports
T 12–6. Total imports of selected commodities by the most important partners
T 12–7. Total exports of selected commodities by the most important partners

13. Prices

T 13–1. Development of price indices (annual averages) – inland
T 13–2. Industrial producers price indices in classes of SK NACE Rev. 2 – inland
T 13–3. Industrial producers price indices by the SK NACE Rev. 2 – inland
T 13–4. Industrial producers price indices by the SK NACE Rev. 2 – export
T 13–5. Industrial producers price indices by the SK NACE Rev. 2 – total
T 13–6. Price indices of construction works by the Classification of Products by Activity
T 13–7. Producer price indices of agricultural products
T 13–8. Average prices of agricultural products
T 13–9. Development of core and net inflation
T 13–10. Harmonized indices of consumer prices
T 13–11. Consumer price indices
T 13–12. Cost of living indices of employees
T 13–13. Cost of living indices of pensioners
T 13–14. Average consumer prices of selected products

14. Fixed Assets

T 14–1. Status and movement of fixed assets at purchasing value in 2009
T 14–2. Gross fixed assets at replacement prices as of Dec. 31, 2009
T 14–3. Net fixed assets at replacement prices as of Dec. 31, 2009
T 14–4. Fixed assets at replacement prices by sectors of national accounts as of Dec. 31
T 14–5. Dwellings
T 14–6. Completed dwellings by number of rooms in 2010
T 14–7. Completed dwellings by ownership in 2010

15. Organizational Statistics

T 15–1. Legal units by economic activities
T 15–2. Legal units by selected legal forms
T 15–3. Legal units by sectors and subsectors of the National Accounts System as of Dec. 31, 2010
T 15–4. Enterprises by economic activities
T 15–5. Enterprises by economic activities and selected ownership forms as of Dec. 31, 2010
T 15–6. Enterprises by economic activities and size categories by employees as of Dec. 31, 2010
T 15–7. Enterprises by selected ownership forms and size categories by employees as of Dec. 31, 2010
T 15–8. Natural persons-entrepreneurs by economic activities and selected legal forms as of Dec. 31, 2010

16. Agriculture

21. Trade, Catering and Accommodation

22. Transport, Storage and Post Services

23. Information and Communication, Information Services

24. Selected Market Services

25. Tourism

26. Management of Non-financial and Financial Corporations

16. Agriculture

T 16–1. Use of land
T 16–2. Gross agricultural production in enterprises with 20 and more employees
T 16–3. Sown areas as of May 20
T 16–4. Production of agricultural crops
T 16–5. Hectare yields
T 16–6. Selected sorts of vegetables
T 16–7. Selected sorts of fruit
T 16–8. Roofed areas and irrigation
T 16–9. Age and sort composition of vineyards as of Dec. 31
T 16–10. Balance of cereals
T 16–11. Livestock as of Dec. 31
T 16–12. Livestock production
T 16–13. Livestock yields
T 16–14. Catches in inland waters
T 16–15. Apiculture
T 16–16. Sales of animal products of primary producers
T 16–17. Level of agricultural production
T 16–18. Consumption of fertilizers
T 16–19. Consumption of plant protection agents
T 16–20. Employees and earnings by main professions in agriculture (in enterprises with 20 and more employees)

T 16–21. Economic accounts for agriculture (EAA): production account
T 16–22. The structure of farms (from results of the Farm Structure Survey)
T 16–23. The employees on farms of legal persons (from results of the Farm Structure Survey)
T 16–24. Workers on farms of natural persons (from results of the Farm Structure Survey)
T 16–25. Age structure of workers on farms (from results of the Farm Structure Survey)
T 16–26. Classification of farms by economic size (from results of the Farm Structure Survey)
T 16–27. Used agricultural land area (from results of the Farm Structure Survey)
T 16–28. Farms by size of used agriculture land (from results of the Farm Structure Survey)

17. Forestry

T 17–1. Forest land
T 17–2. Afforestation and silviculture
T 17–3. Logging and timber deliveries
T 17–4. Number and size of enterprises managing forest in 2010

18. Industry

T 18–1. Basic indicators of industry
T 18–2. Selected indicators in industry by size structure of enterprises
T 18–3. Industrial production index (not adjusted from influence of working days number) by economic activity
T 18–4. Industrial production index (PY = 100; not adjusted from influence of working days number) by economic activity
T 18–5. Industrial production index (not adjusted from influence of working days number) by Main Industrial Groupings
T 18–6. Industrial production index (PY = 100; not adjusted from influence of working days number) by Main Industrial Groupings
T 18–7. Turnover non-domestic of enterprises with 20 and more employees by economic activity
T 18–8. Turnover of enterprises with 20 and more employees by economic activity
T 18–9. Number of enterprises with 20 and more employees by economic activity
T 18–10. Monthly labour productivity based on turn-over in enterprises with 20 and more employees by economic activity
T 18–11. Average number of employed persons in enterprises with 20 and more employees by economic activity
T 18–12. Average nominal monthly earning of employee in enterprises with 20 and more employees by economic activity

T 18–13. Turnover of enterprises with 20 and more employees by Main Industrial Groupings
T 18–14. Selected indicators of enterprises with 20 and more employees by sector of ownership
T 18–15. Production of selected industrial commodities

19. Energy

T 19–1. Balance of fuels, electricity and heat
T 19–2. Balance of solid fuels
T 19–3. Balance of gaseous fuels
T 19–4. Balance of crude oil and petroleum products
T 19–5. Balance of renewables and wastes
T 19–6. Balance of electricity
T 19–7. Balance of heat
T 19–8. Consumption of selected fuels in agriculture in enterprises with 20 and more employees
T 19–9. Consumption of selected fuels and electricity in industry in enterprises with 20 and more employees
T 19–10. Consumption of selected fuels and electricity in construction in enterprises with 20 and more employees

20. Construction

T 20–1. Construction production and turnover – aggregate data
T 20–2. Construction production carried out by own employees and average number of employed persons by ownership sector
T 20–3. Construction production carried out by own employees and average nominal monthly earning by size structure of enterprises
T 20–4. Average number of employed persons and labour productivity per employed person by size structure of enterprises
T 20–5. Average number of workers and labour productivity per worker by size structure of enterprises
T 20–6. Turnover by size structure of enterprises
T 20–7. Basic indicators in construction enterprises with 20 and more employees
T 21–8. Contractually agreed construction production in new construction, reconstructions and modernizations in inland by Classification of Types of Constructions in enterprises with 20 and more employees
T 20–9. Construction production carried out by own employees by Classification of Production (CPA) in enterprises with 20 and more employees

21. Trade, Catering and Accommodation

T 21–1. Selected indicators on internal trade
T 21–2. Turnover in wholesale and retail trade a repair of motor vehicles and motorcycles by economic activities
T 21–3. Average number of employed persons in wholesale and retail trade and repair of motor vehicles and motorcycles by economic activities
T 21–4. Average nominal monthly earning in whole-sale and retail trade a repair of motor vehicles and motorcycles by economic activities
T 21–5. Turnover in wholesale trade except of motor vehicles and motorcycles by economic activities
T 21–6. Average number of employed persons in wholesale trade except of motor vehicles and motorcycles by economic activities
T 21–7. Average nominal monthly earning wholesale trade except of motor vehicles and motorcycles by economic activities
T 21–8. Turnover in retail trade except of motor vehicles and motorcycles by economic activities
T 21–9. Average number of employed persons in retail trade except of motor vehicles and motorcycles by economic activities
T 21–10. Average nominal monthly earning in retail trade except of motor vehicles and motorcycles by economic activities
T 21–11. Selected indicators in internal trade by size structure of enterprises

T 21–12. Retail network in organizations with 20 and more employees as of Dec. 31, 2010
T 21–13. Turnover in accomodation and food and beverage services by economic activities
T 21–14. Average number of employed persons in accomodation and food beverage services by economic activities
T 21–15. Average nominal monthly earning in accomodation and food beverage services by economic activities
T 21–16. Network of outlet centres of catering with 20 and more employees as of Dec. 31, 2010

22. Transport, Storage and Post Services

T 22–1. Selected indicators on transport, storage and post services (NACE Rev. 2)
T 22–2. Basic data on transport network as of Dec. 31
T 22–3. Motor vehicles as of Dec. 31
T 22–4. Average registered number of employees for incorporated enterprises with 20 and more employees (NACE Rev. 2)
T 22–5. Railway transport
T 22–6. Railway public freight transport by commodity groups
T 22–7. Road transport
T 22–8. Selected indicators in road public transport by size structure of enterprises (without city transport and taxi)
T 22–9. Road public freight transport by commodity groups
T 22–10 Inland waterway transport
T 22–11. Inland waterway public freight transport by commodity groups
T 22–12. City transport
T 22–13. Air transport
T 22–14. Pipeline transport
T 22–15. Post offices
T 22–16. Other post enterprises

23. Information and Communication, Information Services

T 23–1. Selected indicators on information and communication (NACE Rev. 2)
T 23–2. Telecommunications as of Dec. 31
T 23–3. Information and communication technology in enterprises with 10 and more employees
T 23–4. Information and communication technology in enterprises of finance and insurance (NACE Rev.) with 10 and more employees
T 23–5. Information and communication technology in households and by individuals

24. Selected Market Services

T 24–1. Basic indicators for selected market services
T 24–2. Turnover for selected market services by size structure of enterprises
T 24–3. Average number of employed persons for selected market services by size structure of enterprises
T 24–4. Average nominal monthly earning for selected market services by size structure of enterprises
T 24–5. Turnover for selected market services

25. Tourism

T 25–1. Capacity and performances of accommodation establishments
T 25–2. Capacity and performances of accommodation establishments in selected towns in 2010
T 25–3. Foreign visitors in accommodation establishments of tourism
T 25–4. Overnight stays of foreign visitors in accommodation establishments of tourism
T 25–5. Active tourism organized by touroperators and travel agencies in the SR
T 25–6. Passive tourism organized by touroperators and travel agencies in the SR

26. Management of non-financial and financial corporations

T 26–1. Selected indicators of non-financial corporations by size structure of enterprises
T 26–2. Selected financial indicators of non-financial corporations
T 26–3. Selected financial indicators of financial corporations

27. Environment

28. Science and Technology

27. Environment

T 27–1. Protected territories
T 27–2. Tree species area and their age structure as of Dec. 31, 2010
T 27–3. Penalties
T 27–4. Environmental expenditures
T 27–5. National parks and protected landscape areas as of Dec. 31, 2010
T 27–6. Damage to forests caused by immisions as of Dec. 31, 2010
T 27–7. Degree of damage to forests by tree species as of Dec. 31, 2010
T 27–8. Damage of forests caused by abiotic and biotic factors as of Dec. 31, 2010
T 27–9. Data on hunting grounds as of Dec. 31
T 27–10. Hunting and spring stock of game
T 27–11. Xenobiotics in foodstuffs
T 27–12. Municipal waste generation by subgroup of Waste Catalogue
T 27–13. Waste by economic activities
T 27–14. Emissions of major pollutants by economic activity
T 27–15. Emissions and weighted emissions in districts according to the highest amount of weighted emissions in 2009
T 27–16. Immissions in selected localities in 2010 – annual average concentrations
T 27–17. Numbers of exceedances of immission limit values in 2010
T 27–18. Regional air pollution in 2010
T 27–19. Levels of surface ozone in selected monitoring stations
T 27–20. Regional pollution of precipitation in 2010

T 27–21. Water courses and waterworks under the administration of water management organizations as of Dec. 31
T 27–22. Public water-supply and sewage systems as of Dec. 31
T 27–23. Waste water discharged into water courses in 2010
T 27–24. Generation of waste water in 2010
T 27–25. Assessment of quality of surface water by river basins in 2010
T 27–26. Water quality in the mouths of significant water courses in 2010

28. Science and Technology

T 28–1. Research and development (R&D) personnel
T 28–2. Research and development personnel in FTE by sectors and fields of science
T 28–3. Expenditures on research and development
T 28–4. Expenditures on research and development by sectors and fields of sciences
T 28–5. Expenditures on research and development by socio-economic objectives
T 28–6. Expenditures on research and development by R&D activities
T 28–7. Expenditures on research and development in selected fields of R&D performance
T 28–8. Applications concerning industrial legal protection
T 28–9. Granted and registered kinds concerning industrial legal protection
T 28–10. Applications concerning inventions according to the International Patent Classification
T 28–11. Foreign applications concerning inventions and PCT according to the International Patent Classification

Methodological notes

Selected data on territorial division of the SR, location, area and the highest mountains of the SR, meteorological data on selected stations, hydrological data on selected water courses, data on main rivers on the territory of the SR, length of water courses creating a border of the SR on neighboring countries and areas of their basins, SO SR obtained from non-statistical sources on the basis of measurement, records and methodology used in corresponding institution.

Definitions

Population density is the number of inhabitants as of Dec. 31 per unit of area (km^2).

Source

Data source on territorial division of the SR are the SO SR databases. The SO SR acquired geodesic data from the Geodesic and Cartographic Institute. Meteorological and hydrological data were granted by the Slovak Hydrometeorological Institute.

More detailed information can be obtained in given institutes.

T 2–2. Rozloha, hranice a povrch Slovenskej republiky v roku 2010
Area, borders and surface of the Slovak Republic in 2010

Ukazovateľ	V absolútnych číslach In absolute numbers	V percentách In per cent	Indicator
Rozloha k 31. 12. (km^2)	49 036	x	Area as of December 31 (km^2)
Hustota obyvateľstva na 1 km^2	110	x	Population density per km^2
Obvod (km)	1 653	100	Perimeter (km)
Dĺžka hranice (km) s:			Length of the border (km) on:
Českom	251,8	15,2	Czech Republic
Maďarskom	654,8	39,6	Hungary
Poľskom	541,1	32,8	Poland
Rakúskom	107,1	6,5	Austria
Ukrajinou	97,8	5,9	Ukraine
Najnižšie položené miesto – vyústenie rieky Bodrog zo SR (m n. m.)	94	x	Altitude of the lowest place – place where the river Bodrog is leaving the Slovak Republic (metres above sea level)
Najvyššie položené miesto – Gerlachovský štít (m n. m.)	2 655	x	Altitude of the highest place – Gerlachovský štít (metres above sea level)
Výškový rozdiel reliéfu – vo vzdialenosti 153 km (m)	2 561	x	Altitude difference of relief – in distance 153 km (m)
Najvyššia vyhasnutá sopka – Poľana (m n. m.)	1 458	x	The highest extinct volcano – Poľana (metres above sea level)
Najväčšia nížina – Podunajská nížina (km^2)	9 816	20,4	The largest lowland – Podunajská nížina (km^2)
Najväčší riečny ostrov – Žitný ostrov (km^2)	1 236	2,5	The largest river island – Žitný ostrov (km^2)
Výškové stupne povrchu (km^2)			Altitude degrees of surface (km^2)
nížiny (94 – 300 m n. m.)	20 260	41,0	Lowlands (94 – 300 metres above sea level)
nízke vysočiny (301 – 750 m n. m.)	20 662	45,0	Low highlands (301 – 750 metres above sea level)
stredné vysočiny (751 – 1 500 m n. m.)	7 716	13,0	Middle highlands (751 – 1 500 metres above sea level)
vysoké vysočiny (1 501 – 2 655 m n. m.)	398	1,0	High highlands (1 501 – 2 655 metres above sea level)
Najdlhšia dolina Tatier – Bielovodská (km)	10	x	The longest Tatras valley – Bielovodská (km)
Celková rozloha krasu (km^2)	2 700	5,5	Area of carst in total (km^2)
Najhlbšia jaskyňa – systém Hipmanových jaskýň (m)	495	x	The deepest cave – Hipmanove jaskyne System (m)
Najdlhšia jaskyňa – Systém Demänovských jaskýň (km)	35	x	The longest cave – Demänovské jaskyne System (km)
Celková dĺžka evidovaných tokov – riečna sieť (km)	49 775	x	Length of registered water courses in total – river net (km)
Najdlhšia rieka – Váh (km)	403	x	The longest river – Váh (km)
Najväčšie jazero – Veľké Hincovo pleso (ha)	20,1	x	The largest lake – Veľké Hincovo pleso (ha)
Najvyšší vodopád – Kmeťov (m)	90	x	The biggest waterfall – Kmeťov (m)
Prírodné liečivé zdroje	54	x	Natural curative sources
Využiteľné množstvo podzemných vôd ($m^3.s^{-1}$)	77,1	x	Available volume of subsoil waters ($m^3.s^{-1}$)
Výskyt geotermálnych vôd (lokality)	106	x	Finding places of geothermal waters (localities)

T 2–3. Poloha územia Slovenskej republiky
Location of the Slovak Republic's territory

Medzná súradnica Limiting coordinates	Poloha Location	
	Okres District	Obec Municipality
Južná 47°43'54" s. š. Southern 47°43'54" N	Komárno	Patince
Severná 49°36'52" s. š. Northern 49°36'52" N	Námestovo	Oravská Polhora
Západná (Greenw.) 16°50'05" v. d. Western (Greenw.) 16°50'05" E	Malacky	Záhorská Ves
Východná (Greenw.) 22°34'04" v. d. Eastern (Greenw.) 22°34'04" E	Snina	Nová Sedlica

T 2–4. Maximálne dĺžky na ploche Slovenskej republiky
Maximum distances on the area of the Slovak Republic

Ukazovateľ Indicator	Vzdušná vzdialenosť (km) Beeline distance (km)
Spojnica najsevernejšieho a najjužnejšieho bodu Connecting line of the northernmost and southernmost points	226
Spojnica najzápadnejšieho a najvýchodnejšieho bodu Connecting line of the westernmost and easternmost points	429
Maximálna dĺžka v smere poludníka Maximum distance in the direction of the meridian	197
Maximálna dĺžka v smere rovnobežky Maximum distance in the direction of the parallel	395

3. Population

Methodological notes

Data on **population changes** are obtained from statistical reports processing about demographic population events (marriages, divorces, births and deaths) producing statistical survey contents on population. The data cover all inhabitants residing permanently in Slovakia regardless of their citizenship as well as citizens of the SR with permanent residence in the SR during their temporary residence abroad. Demographic statistics includes also the statistics on spontaneous and induced abortions, which is processed from data of the Ministry of Health of the Slovak Republic.

Migration statistics includes **internal migration** (permanent address changes between municipalities, districts and regions) and **foreign migration**, which means a change of the country of residence, irrespective of citizenship.

Data from the **Population and Housing Census** make up the foundation for balancing of the number and structure of the population by age, marital status and ethnic nationality in the next ten years term on the basis of population change and foreign migration of the population.

The methodology and the content of demographic statistics are internationally comparable. The processing by classification point of view is done according to the code-lists of ethnic nationalities and marital status, the Statistical code-list of countries and the Register of the spatial units. Since 1994, death causes at departeds have been processed according to the International Statistical Classification of Diseases and Related Health Problems, the tenth revision. Names of the countries are used according to the international standard ISO 3166-93.

Definitions

Mid-year population is the number of the population as of July 1 of the reference year.

Under-age child means a child under 18 years of age.

A live-born child is a child showing at least one of the following signs of life at birth such as breathing, beating of the heart, pulsation of the umbilical cord, active movement of muscles though the umbilical cord has not been cut or the placenta has not been born. At the same time, the birth weight is

a) 500 and more grams or
b) 499 grams and less if a child survives 24 hours after its birth.

Abortion is premature spontaneous or artificially induced termination of pregnancy including extra-uterine pregnancy where the foetus does not show signs of life and its birth weight is below 1 000 grams, or the foetus shows some sign of life and its birth weight is below 500 grams but it does not survive 24 hours, or if the weight of the foetus cannot be established and duration of gestation is below 28 weeks.

Induced abortion is artificially induced termination of pregnancy including extra-uterine pregnancy.

Spontaneous abortion (miscarriage) is spontaneous termination of pregnancy, i.e., an abortion due to biological causes, without an obvious external intervention.

Natural increase in the population shows the difference between the number of live-born children and number of the deceased.

Net migration is the difference between the number of immigrants and the number of emigrants.

Total increase it is the sum of natural increase and net migration.

Ageing index is represented by the number of persons aged 65 years and over per 100 persons aged 0 to 14 years.

Economic dependency ratio is represented by the number of persons aged 0 to 14 years and persons aged 65 years and over per 100 persons aged 15 to 64 years.

Average age is weighted arithmetic mean of the number of the years lived by members of a given population till a specified point in time. It is an average age of living population.

Average age at marriage is an average age in which people entre into marriage. It is calculated from marriage rates by age, separately by sex, for persons 15 – 49 years old.

Average age at first marriage is an average age when single persons enter into marriage. It is calculated from marriage rates by age, separately by sex, for persons 15 – 49 years old.

Average maternal age at childbirth is mean age of mothers usually in the given year. It is calculated from fertility rate by age. Average age of primiparas there is specifically monitored.

Total fertility rate is the mean number of live-born children per one woman throughout her childbearing years (between the ages of 15 and 49) if the fertility rate level in the reference year was kept on and the mortality rate level showed the value of zero.

Gross reproduction rate is the mean number of live-born girls that would be delivered by one woman throughout her childbearing years (between the ages of 15 and 49) if the fertility

rate level in the reference year was kept on and the mortality rate level showed the value of zero.

Net reproduction rate is the mean number of live-born girls that would be delivered by one woman throughout her childbearing years (between the ages of 15 and 49) if the levels of fertility and mortality rates in the reference year were kept on.

Life expectancy at a specific age (expectation of life) is the mean number of additional years a person of that age could live if current mortality rates were to continue.

Life expectancy at birth is the mean number of additional years a newborn could live if current mortality rates were to continue.

Source

All published data for demographic statistics are the result of the data collection and processing in the SO SR, except primary data relating abortions, which are obtained from the sector surveying of the Ministry of Health of the Slovak Republic realized by the National Health Information Centre in Bratislava and processed by the SO SR.

More detailed information can be found in the public databases of the SO SR, i.e. Slovstat and RegDat, and in the following publications: State and Movement of the Population in the SR; Age Structure of the Population of the SR; Development of the Population of the SR; Balance of Movement of the Population by Ethnic Nationality; Movement of the Population in the SR, International Migration and Foreigners in the SR and the International Migration Statistics in the SR. Publications are available either as printed editions or some of them can be downloaded from the SO SR website.

Methodological notes

The **Labour Force Sample Survey** provides a permanent monitoring of the labour force on the basis of a direct survey in selected households. The survey is based on a random selection of dwellings in all districts of the Slovak Republic. The sample covers 10 250 dwellings every quarter, which represents 0,6 % of the total number of permanently occupied dwellings in the Slovak Republic. The survey covers all persons aged 15 and over living in the households of the selected dwellings without regards to permanent, temporary or unregistered stay, institutionally population excepted. Each selected household remains in the sample for 5 subsequent quarters. All surveyed figures are weighted on the basis of current demographic data of SR derived from statistical surveys on population changes.

In processing various classifications are applied including the standard Classification of Occupation, the Statistical Classification of Education and others.

The methodology used for the survey fully corresponds to the International Labour Organizations and the Eurostat recommendations and definitions.

Employment and earnings are collected from enterprises in the framework of monitoring economy development of the SR. Persons on maternity and parental leave and employed under the agreement are not included among employees. Processed data for organizations with 20 and more employees are classified by regions and districts, by staff categories, by kind of property and by legal form of organization. Numbers of employees are presented in persons.

The basic information on the development of earnings is completed with data on the **structure of gross nominal monthly earnings** obtained by sample survey on the structure of earnings in the Slovak Republic. These are processed using the standard Classification of Occupation, the Statistical Classification of Education, the Code-Lists of Regions, Sex and Age of employees.

Earnings statistics also includes the survey on **total labour costs** of employers in the Slovak Republic. The more detailed classification of the labour costs uses the Code-Lists of Regions, Staff Categories, Kind of Property and Legal Form of Organization.

The methodology of the sample survey on the structure of earnings and total labour costs is recommended by the Eurostat and corresponds to the related European regulations.

A job applicant of school leavers ranks is defined as an unemployed citizen younger than 25 years, who has finished continual professional training in full time study less than two years ago and who has not obtained first periodically paid employment, which lasted more than six consecutive months.

The processing of selected labour market indicators has used the Statistical Classification of Economic Activities (SK NACE Rev. 2) since 2008.

Definitions

Economically active population by labour force sample survey (LFS) are persons aged 15 and over who are employed or unemployed.

Economically inactive population by LFS are persons who have no job in the reference week because they are students and apprentices, pensioners, persons keeping household, persons in retraining course and therefore they were not seeking a job actively during the last four weeks or they are seeking a job but they are not able to start work within two weeks. Persons on parental leave, discouraged workers (they would like to work but are not seeking a job because they do not believe to find suitable job) and persons younger than 15 years are also included.

Economic activity rate by LFS is calculated according to the following formula:

$$\text{Economic activity rate in per cent} = \frac{\text{Economic active population}}{\text{Population aged 15 and more}} \times 100$$

Employed by LFS are all those aged 15 and over who worked at least one hour for pay or profit (full-time or part-time job, permanent, temporary, casual or seasonal job) in the reference week, as well as contributing (unpaid) family workers, professionals in armed forces and persons working abroad. Data on employed include contributing family workers, who did not receive any wage and allowance for their work, professionals in armed forces, persons not working in the reference week due to illness, holiday, maternity leave, study, weather conditions and strike or dispute, except persons on long-term unpaid leave of work. Persons on parental leave are not included among employed.

Employees in the LFS are those aged 15 and over who work for a public or private employer and who receive compensations in the form of wage or salary, including members

of productive co-operatives. **Employees according to the enterprise reporting** are all the stable as well as temporary employees regardless of their citizenship, who have a contract of employment, service, state employment or membership attachment with the employing organization. Students attending vocational secondary schools, persons on maternity and parental leave and persons working upon contract are not included among employees.

Self-employed in the LFS are entrepreneurs with employees (employers), entrepreneurs without employees (own-account workers) and contributing (unpaid) family workers.

Employment rate 15 – 64 by LFS is calculated according to the formula:

$$\text{Employment rate 15 – 64 in per cent} = \frac{\text{Number of employed persons at the age of 15 – 64}}{\text{Number of population at the age of 15 – 64}} \times 100$$

Unemployed in the LFS are persons aged 15 and over who were not working for pay or profit during the reference week, who are actively seeking work during the last four weeks (or who have already found a job to start work within 3 month) and who are able to start work in the next two weeks. These persons are not obliged to be registered at offices of labour, social affairs and family as job applicants.

Unemployment rate by LFS is calculated according to the following formula:

$$\text{Unemployment rate in per cent} = \frac{\text{Number of unemployed persons by LFS}}{\text{Economically active population by LFS}} \times 100$$

Economically active population in the denominator of the formula excludes persons on parental leave.

Duration of unemployment by LFS is defined as the shorter of the following two periods: the duration of work searching or duration since the last employment termination.

Job applicant is a citizen who is able and wants to work, is looking for a job and after a personal submission of a written application in order to be placed into the register of job applicants at office of labour, social affairs and family situated in a territorial district where he has a residence. This citizen is not in working, state employment or membership relation, in a service relation; he does not perform individual gainful occupation, he does not perform a

gainful occupation in an EU member state or abroad; he can perform gainful occupation with his wage or allowance for this performance not exceeding 65% of the living minimum for one adult person as of first day of the respective calendar month, for which the wage or allowance is rendered, increased by relevant payments for health insurance contributions and social insurance contributions paid by employee and advanced payment for income tax. The gainful activity being considered as personal execution of an activity either on the basis of a labour-law relation or another legal relation.

There are not included applicants interested in work, who are looking for another job or who are interested in providing professional consultancy and education services or persons preparing for labour market and are not job applicants. A citizen who is obliged to compulsory school attendance, namely to the end of school year, when he reached the age of 16 years or is in systematic vocational preparation, is temporarily unable to work, he has a right to maternity benefits, he has granted old-age pension or he has granted invalidity pension and reached the age required for a claim for old-age pension or he was excluded from the register of job applicants on the base of his requirement to be excluded from the evidence and because of work performance without working relation, or similar working relation, taking a job, he has broken a duty to be at disposal of the Office within 3 working days after delivery of written summons or oral summoning by the Office in case of personal contact in order to offer appropriate job or participation in some of tools of active measures on labour market without serious reasons, non-cooperation with office of labour or he has granted work permit in an EU member state or abroad; he is not included in the register of job applicants. The methodology of indicators is defined by the Ministry of Labour, Social Affairs and Family of the SR and it is included in the Act No. 5/2004 Code of Acts on employment services amended and supplemented by certain acts.

Registered unemployment rate is calculated from **a number of disposable job applicants**, who can immediately report to work after submission of an offer of convenient job vacancy, in accordance with the Agreement of the International Labour Organisation.

The registered unemployment rate (methodology of the Ministry of Labour, Social Affairs and Family of the SR) is calculated according to the following formula:

$$\text{Registered unemployment rate in per cent} = \frac{\text{Disponsible job applicants}}{\text{Economically active population}} \times 100$$

The economically active population in the denominator of the formula covers employed from LFS for previous year (includes persons on maternity leave) plus job applicants.

A job vacancy is defined as a paid post (newly created, unoccupied or to become vacant) for which the employer is taking active steps to find a suitable candidate from outside the enterprise and is prepared to take more steps to fill it. An occupied post that become vacant due to long-term absence – maternity or parental leave or long-term sickness (more than 4 weeks) is included into job vacancy. The average annual number of job vacancies per year is calculated as average of job vacancy number of the last day of each month in the reference year.

The average gross nominal monthly earnings consist of basic (tariff) wage set by wage rules including basic components of contracted payments for working overtime, payments for hours not worked, monthly and long-term bonuses paid according to the performance and evaluation criteria, extra payments for working overtime, the night work, work during Saturdays and Sundays, holidays, for environment damaging health, noise, risky and hard work, in-kind wages express in financial terms and other wage in the form of wage advantages whose level and periodicity are set in advance regardless of the situation in an enterprise.

The total labour costs represent a sum of cost spent by employer to recruit and train their employees, remunerate their work as well as to ensure their social welfare according to obligations adopted. Total labour costs include both direct labour costs and indirect labour costs minus subsidies. **Direct labour costs** are the sum of wages and wages compensation, payments to employee's savings schemes, compensation for being on call to work outside the workplace, bonuses based on profit after taxation and other direct costs. **Indirect labour costs** include statutory and supplementary social security contributions paid by employer, social allowances, employer's social contributions for apprentices, social benefits, vocational training costs paid by the employer, taxes linked to wages paid by employer and other expenditures paid by the employer. **Subsidies** are the sum of all amounts received in the form of subsidies, which are intended to refund a part or all of the cost of direct remuneration.

Data on total labour costs are surveyed in annual periodicity; data are published for **annual labour costs**, **monthly labour costs** and **hourly labour costs** according to the number of working-hours.

Source

All published data are the result of the statistical surveys carried out by the Statistical Office of the Slovak Republic, except data relating job applicants. These data are supplied by the Central Office of Labour, Social Affairs and Family.

More detailed information can be obtained in quarterly publications Labour Force Sample Survey Results and in annual publications Structure of Wages, Total Labour Costs and Employees and Average Monthly Wages.

Methodological notes

Household Budget Surveys is regular surveys of income and expenditure of private households.

Data were obtained by randomly selected units network. As support for units selection served the aggregate of all households in permanently occupied dwellings surveyed in Census on population, houses and dwellings 2001. For survey was selected the same number of households in every region, at which structure of the number of households in segmentation according to size structure of municipalities in region remains the same. Recommendation by Eurostat related to obtaining of data on household expenditure and income in national surveys was taken into consideration. The Classification of Individual Consumption of Purpose for needs on household budget gives consumption expenditures.

Gross and net money income and expenditure of private households has been recalculated by calibrated weights following the structure of the age and sex of household members.

Tables were filled by data related to number of children living in private households with economically active head (working and unemployed): without and with children.

Statistics on Income and Living Conditions (EU SILC) is the survey whose aim is to obtain information on income distribution, level and structure of poverty and on social exclusion. The survey is implemented under the Commission Regulation (EC) No. 1177/2003 of the European Parliament and of the Council concerning Community statistics on income and living conditions. This regulation was later amended by regulation (EC) No. 1553/2005 following the EU enlargements. The survey provides data on income (labor, social and others), information on opinions of households on their financial position, information on income indicators and indicators of material deprivation for different types of households.

Basic unit of this survey is private jointly managed household.

Part of obtained data is used for calculation of Laeken indicators, through which monetary poverty is evaluated. Indicators of monetary poverty are for example:

– at-risk-of poverty rate – by age, gender, the most frequent activity status, household type, tenure status, before all social transfers and before social transfers including old-age and survivor's benefits

– relative median at-risk-of-poverty gap
– income quintile share ratio (S80/S20)
– Gini coefficient
– at-risk-of poverty threshold
– relative median income ratio of elderly people 65+
– aggregate replacement ratio.

In connection with the request of the Eurostat, methodology was changed in EU SILC 2009 survey – in the calculation of indicators, variable "Pension from individual private pension plans" was included and therefore indicators for the EU SILC 2006 – 2008 have been revised.

Data on **consumption of food and alcoholic beverages per capita** are calculated by using the balance method. Consumption is computed per mid-year population. Main data inputs used for the calculation are data on domestic production, imports, exports, initial and final stocks. Calculation of individual data on consumption of food is based on statistical information of the Statistical Office of the SR, the Ministry of Agriculture of the SR and Central Controlling and Testing Institute in Agriculture as well as information from some food industry unions.

Daily consumption of energy and the most important nutrients per 1 capita are calculated on the base of food consumption data, which were calculated by balance method after excluding consumption in food industry for further processing and from the nutritive values of food given in the food tables. Data were increased by equivalent intake corresponding to the consumption of alcoholic and non-alcoholic beverages. The result is expressed in gross terms, i. e. including losses (as purchased).

Meat consumption in total is given in terms of carcass weight including entrails.

Fats in total are expressed in terms of net fat.

Vegetable, vegetable products, fruits and fruits products are expressed in terms of fresh product.

Definition

Private jointly managed household consists of the people, who permanently occupy together one dwelling and reimburse together the household expenditure (food, current necessary household expenditure, maintenance of the dwelling, etc.). Member of household is also a

person who is not relative with other members of household but he/she permanently shares one dwelling and all household expenditure with them.

Gross money income of private jointly managed households represents the total sum of money received by any member of a household. It is the sum of the money income from employment (from wages and compensations for work activity in non-agricultural and agricultural branches from employer, or co-operative), financial amounts assigned by self-employer from his/her business income for the needs of the household, social income, financial givings, compensations from insurance companies, gains from lotteries, withdrawals of loans and the like.

Income from the property of private jointly managed households is created by the financial amounts from bond, shares and coupon dividends, from sales of farming products, from real-estate lease, etc.

Net money income of private jointly managed households consists of:

- net income from employment without income tax and compulsory contributions to the Social Insurance Agency and health insurance companies;
- part of income from private business running used by an entrepreneur for household providing;
- social income, i. e. pension security benefits, sickness insurance benefits, state social benefits, social aid benefits and unemployment benefit;
- other income, i. e. income from property, income from institutions and income from private persons, income from sales of farming products and income from abroad and withdrawn new loans.

Gross money expenditure of private jointly managed households is the sum of financial amounts spent on purchase of goods and services including all types of insurance (consumption expenditure) and transfer of all payments (other expenditure) including income tax and loans payments. The consumption expenditure does not contain under the item “miscellaneous goods and services” expenditure of households on compulsory personal insurance, i. e. contributions on health and sickness insurance and pension security and contributions on insurance in unemployment (they are involved in the item “other expenditure”).

Net money expenditure of private jointly managed households is recalculated as the sum of expenditure on consumer goods and services and other net expenditure. Income tax, compulsory contributions on health and sickness insurance and pension security and contributions on insurance in unemployment are excluded.

Social category of jointly managed household corresponds with social category of person at the head of household, which is derived from the position in occupation, from type of economic activity and from the form of compensation.

Economical active person is a person who is worked or unemployed.

Employed is a person who works at least 1hour during a week.

Employee is working for wage, salary or other kind of compensation in state enterprise, in private enterprise, in agricultural or other cooperative organization, in other employer.

Self-employer (entrepreneur, associate, self-employed persons, self-employed farmer, freelancers) is a person who performs economic activity for the purpose to obtain a profit regardless other persons are employed by him/her or not.

Unemployed is a person who had no employment during income reference period, but he/she looked active, and it is not decisive if he/she is registered or not at labour office.

Pensioner is a person in retirement or early retirement if he/she left his/her work for age or other reason.

Old-age pensioner is a person who draws an old-age pension and he/she is not employed**.**

Other inactive person is a person who lives from other sources, e. g., housewife, students, apprentices, persons not included in the work process, persons working in a family business without reward, etc.

Dependent child is defined as a household member aged 0 – 15 or aged 16 – 24 who is economically inactive and is living with at least one parent.

Most frequent activity status is defined by own deliberation of person (besides at-work) i. e. self-defined status of economic activity is intended on the basis of principle most time spent.

Total disposable household income is the sum of gross personal income components for all household members plus gross income components at household level (e. g. income from rental of a property or land, inter-household cash transfers received from other households) minus regular taxes on property, regular inter-household cash transfers paid (e. g. alimony, regular cash support from other households), tax on income and social insurance contributions.

Equivalised scale is used for calculation of equivalent household size. For calculation of indicators of poverty is used modified OECD scale, where coefficient 1 is assigned to the first adult household member, 0,5 to the second one and each adult household member, 0,5 to persons 14 years old and older and 0,3 to each child younger than 14 years.

Equivalised disposable income is defined as the total disposable income of household divided by the equivalent number of household members. This income is assigned to each member of households.

At-risk-of poverty rate is share of persons with an equivalised disposable income below 60% of the national equivalised median income.

Relative median at-risk-of-poverty gap is defined as difference between the median equivalised disposable income of persons below the at-risk-of poverty threshold and the threshold itself, expressed as a percentage of the at-risk-of poverty threshold.

Income quintile share ratio (S80/S20) is ratio of total income received by the 20 % of the country's population with the highest income (top quintile) to that received by the 20 % of the country's population with the lowest income (lowest quintile).

Gini coefficient is summary measure of the cumulative shares of equivalized accounted for by the cumulative percentage of the number of individuals. Its value ranges from 0 % (complete equality) to 100 % (complete inequality).

At-risk-of poverty threshold is the value of the at-risk-of-poverty threshold (60 % median national equivalised income.

Median of equivalised disposable income is the value of the equivalised disposable income, which divides the population according to income amount into two equally numerous parts according to number of persons.

Relative median income ratio of people aged 65+ is the ratio of the median equivalised disposable income of people aged 65+ to the median equivalised disposable income of people aged 0 – 64.

Aggregate replacement ratio is the ratio of the median personal (non-equivalised) income from pensions of retired persons aged 65 – 74, to the median personal (non-equivalised) income from earnings of persons aged 50 – 59. Income in both cases, is not recalculated per equivalised unit.

The average consumption of selected kind of food and alcoholic beverages is total amount of the commodity available in the country as human food during given year per capita. The consumption of surveyed kinds of food also involves the consumption in food industry for further processing (meat for production of smoked products, sugar for confectionery production, e. g.).

Source

Money income and expenditure of private households data are the result of the statistics on the household budget survey carried out by the Statistical Office of the SR. More detailed information is available in the publication Income, Expenditures and Consumption of Private Households.

In statistics of incomes and living conditions are presented finally results from survey on incomes and living conditions of households for EU SILC 2006 – 2010. Detailed data were published in a special publication.

Food consumption and its nutritive evaluation were processed by the Statistical Office of the SR. Data on nutritive value of consumption were elaborated with cooperation with the Research Food Institute in Bratislava. Next information can be found in annual publications Food Consumption in the SR.

Methodological notes

The Act No. 245/2008 Code of Acts on the Education defines individual types of schools that provide pre-school, primary, secondary education and leisure educational activities: **kindergarten, basic school, grammar school, specialized secondary school, conservatory, schools for children and pupils with special pedagogical and educational needs, basic school of arts, language school**. **Educational facilities** are also the part of the educational system.

Higher education institutions are defined by Act No. 131/2002 Code of Acts on Higher Education Institutions on change and amendment of some acts in wording of later regulations.

The school years presented in the tables are indicated by the years in which started, e. g. the year 2010 refers to the school year 2010/2011.

Data on church and private schools are included in the tables related to the individual type of schools and are published separately at the end of the chapter.

According to the Act No. 245/2008 joint secondary school, vocational secondary school and vocational school, established according to the former regulations, are specialized secondary schools. From this reason all data on joint secondary schools, vocational secondary schools and vocational schools are included in data on specialized secondary schools.

Schools, where upbringing and education are carried out in the language of the minority in addition to the Slovak language are reported as the schools with several teaching languages which means that in such schools there are classes with the Slovak teaching language and classes with the minority teaching language established.

Teachers for statutable working time (full-time), including headmasters and deputy headmasters are included in the number of teachers.

Shift teaching expresses the share of pupils and classes involved in classes held in the second shift.

Definitions

Specialized secondary school is internally differentiated secondary school, where pupils are educated at least two- and at most five year educational program of respective branch of education. Educational programs of specialized secondary school are mainly specialized for professional activities of economy, health system, public administration, culture, arts and other professional branches and also they can prepare pupils for next study. According to article 94, paragraph 1 of the Act No. 245/2008 Code of Acts the education of handicapped children is usually realized in **special schools.** There are established special classes for children with the same kind of health impact. If it is necessary, this child or pupil is educated according to individual educational program.

Special educational facilities are facilities of educational prevention and facilities of substitutional education. Their main tasks are to protect the children against social-pathological effects, to prevent problematic and delinquent development of children, and to provide institutional and protective education. For the needs of this statistical yearbook special educational facilities include re-educative child houses, re-educative youth houses, therapeutic-educational sanatorium, diagnostic centre for children, diagnostic centre for youth, re-educative houses for mothers with children.

Source

Source of data are statistical surveys carried out by the Ministry of Education of the SR (the Institute of Information and Prognoses of Education). Source of financial data are the statistical surveys carried out by the SO SR.

[1)] In 2006 and 2007 data of the structure of intermediate consumption was not surveyed

Methodological notes

Data on **health care and employees** working in health service are summarily published for the branches of the Ministry of Health of the SR, the Ministry of Defence of the SR, the Ministry of Interior of the SR, the Ministry of Justice of the SR, The Ministry of Transport, Construction and Regional Development of the SR.

The out-patient health care facilities include general out-patient care units, special out-patient care units, emergency out-patient units, facilities providing day care, residential health care units, policlinics, home nursing care agencies, facilities for common examination and curative components and mobile hospices.

The institutional health care facilities (including out-patients units) cover general hospitals, specialized hospitals, institutes for treatment and natural curative spas. Category of institutes for treatment includes institutes for treatment, hospices, houses of nursing care and facilities of biomedicine research. Category of natural curative spas contains also curative spa institutes.

Data about employees working in health services are classified according to the Classification of occupations (ISCO).

Infectious diseases data are obtained from the compulsory announcements. There are only newly notified cases presented. Newly notified cases of tuberculosis are surveyed including relapses.

Average number of persons covered by sickness insurance comprises the insured employees, members of manufacturing and farming cooperatives, self-employed persons – artists and others (scientific workers, journalists and the like). Persons on maternity and parental leave, professionals in armed forces and prisoners placed in penitentiary institutions are excluded.

Current expenditures on health care are obtained from processing of the System of Health Accounts.

Health expenditures paid by citizens are obtained by the sample statistical survey in households.

Expenditures of non-profit institutions serving households are obtained by statistical survey in non-profit sector.

Data on **drugs consumption** are obtained from reports of drugs distributors. Drugs consumption is surveyed by drugs categories, producers, producer countries and it is given in number of consumed packs and financial value.

Definitions

Working post is determined by the number of contract duty hours of independent specialized health professionals according to the particular rules where total length of set (specified) working time per week is considered as one working post. Partial or additional duties are converted to the whole working posts. The conversion of the number of employees into the whole working posts is not performed on principle at these employees, which have set by legal regulations shorter working time from the reasons of harmful to health environment and the like.

Day of stay is all calendar day, when a patient was provided with all of the services, which a facility with beds can provide, i.e. treatment including accommodation and board. The first and last calendar day in bed facility is calculated as one day of stay.

Average length of stay in days is a ratio of the number of days of stay and number of hospitalised patients.

Treatment (examination) is the set of all activities done by physician or nurse according to physician instructions and under his control by treatment (examination) of one patient in the same outpatient department by one visit of patient.

Public pharmacy provides pharmacy care for public including of individually prepared drugs. In the framework of pharmacy care a pharmacy provides drugs and prepares, checks, stores, gets out and sells drugs, gives special information about drugs and consultation on determination and monitoring of therapeutic method.

Average duration of disability to work is the number of days of disability to work per one case.

Average percentage of disability to work per year is calculated as a ratio of calendar days of disability to work due to illness and injury and average number of persons covered by sickness insurance, multiplied by the number of calendar days of the year.

Revenue from the collection of premium for health insurance represent payments of payers under the applicable laws.

In health insurance companies **insured** are presented by summarized data from the registers of insured in individual health insurance companies.

Expenditures paid by health insurance companies are reimbursements of health insurance companies for health care provided to their insured in accordance with the valid Therapeutic Regulation.

Expenditures paid by citizens include the expenditures of population for health and pharmaceutical products, therapeutic devices and for out-patients and hospitals health services.

Average price of drug per pack is defined as a ratio of value of consumed drugs in EUR and number of packs of consumed drugs. The value of consumed drugs is expressed in EUR and for its calculation is used maximal prise determined by the Ministry of Finance of the SR in the period of drug consumption.

Source

Data are obtained from processing of sector statistical surveys of the Ministry of Health (National Health Information Centre) of the SR and from the processing of the State Institute for Control of Drugs (drugs consumption). There are also used the administrative sources of Regional Office of Public Health Banská Bystrica (infectious diseases) and Social Insurance Agency. Sources of data on expenditures on health paid by citizens and non-profit institutions serving households are annual statistical surveys of the SO SR.

Data on income and expenditure of health insurance companies in the past were acquired from the annual statistical surveys, since 2009 from administrative sources.

Published data on disability to work due to disease and injury are gained from administrative data sources of the Social Insurance Agency.

More detailed information can be found in the annual publication Disability to Work Due to Disease and Injury in the SR.

Methodological notes

Social protection is defined as all interventions from public or private bodies intended to relieve households and individuals of the burden of a defined set of risks or needs. For the comparison needs of the EU countries is used „European system of social protection statistics“ (ESSPROS) in compliance with Regulation (EC) No. 458/2007 of the European Parliament and of the Council and Commission Regulations (EC) No. 1322/2007 and No. 10/2008, 110/2011 a č.263/2011, implementing the EP and Council Regulation.

In this publication social protection is represented by the social insurance, state social benefits and social assistance.

Pension insurance according to the Act No. 461/2003 Code of Acts on Social Insurance is comprised of the **old-age insurance** for secured income at old-age and in case of death and **invalidity insurance** in case of decline ability carry out gainful activity in consequence of long-term unfavourable health condition of insured person and in case of death. On financing of the pension insurance participate employees, employers, mandatory pension insured self-employed persons, voluntary pension insured persons and state. Social insurance of armed forces is determined by the Act No. 328/2002 Code of Acts on Social Security for Policemen and Soldiers and on change and amendment of some acts.

Pension insurance system includes an old-age and early pensions, invalidity pensions, widow’s, widower’s and orphan’s pensions. Spousal pensions, social pensions, increase of pension in case of disability and increase of pension as the sole source of income are state benefits refunded by government.

Benefits of **sickness insurance** include four systematic benefits: sickness benefits, benefit for care for sick relative, maternity benefit and equalization allowance. Since 2004 employee obtains sickness entitlement refunded by the Social Insurance Agency from 11th day of temporary incapacity from work. Employer refunds the first ten days. Self-employed persons obtained sickness entitlement from 1st day of temporary incapacity from work.

Accident insurance is insurance in case health damage or death as a result of working accident and occupational disease.

Guarantee insurance is insurance in case of employers insolvency for employee claim satisfaction.

Insurance in unemployment is insurance of employee for ensuring of income in case of income loss from employee activity in consequence of loss of work.

Social security benefits includes **state social benefits** is such as child allowance, parental allowance, attendance service benefit, funeral grant, child birth allowance, benefits to parents and substitute care benefits. Since 2005 housing contribution belongs to the social assistant benefits.

Services of social assistance and material needs benefits are given to the persons for reducing and getting over material need with their active participation. Benefits in material need are offered according to the Act No. 599/2003 Code of Acts. Expenditures for social assistance are classified according to the Budgetary Classification valid for particular year. Since the year 2009 disability benefits are paid according to Act No. 477/2008 Code of Acts on Disability Compensation Benefits and on change and amendment of some acts.

Institutional social care in the facilities of social services and in the facilities of social and legal protection and social guardianship is provided according to the Act No. 448/2008 Code of Acts on Social Services and on change and amendment of the Act. No. 455/1991 Code of Acts and Act No. 305/2005 Code of Acts on Social and Legal Child Protection and Social Guardianship. According to the Act No. 416/2001 Code of Acts on the Transfer of Some Competencies from the State Administration Bodies to the Municipalities and Higher Territorial Units, most of these facilities were transferred to the field of activity of self-governing regions and municipalities.

Definitions

Old-age pension is the fundamental benefit of pension insurance. Insured person has entitlement for old-age pension, when was insured at least 15 years and reached pension age.

Insured person has entitlement for **early pension**, when was insured at least 15 years, needs maximum two years to the reaching of age of old pension and the sum of early pension by the day by which pension awarded is higher than 1,2 times the subsistence level sum for one full-aged natural person.

Invalidity pension is allocated for insured person, who became disabled and obtained nec-

essary number of pension insurance years and on the invalidity formation day didn't realized conditions of demand for old-age pension and was not him award early pension.

Orphan's pension is allocated to the dependent children due to death of a parent or adoptive parent. Full orphan pension is allocated to children whose parents (or adoptive parents) both died. These pensions do not depend on employment duration.

Widow's pension is allocated as the partial replacement of deceased husband's income.

Widower's pension is allocated as the partial replacement of deceased wife's income if some of next conditions is met: he caring for at least one dependent child, or he is an invalid with an incapacity for work of more than 70 %, or he raised at least three children (only 2 children if 52 years or older), or he reached retirement age.

Wife's pension is the pension security benefit refunded by government available to married women who are fully disabled or have reached 65 years of age but who do not qualify for benefits based on their own pension schemes and earn no income.

Social pension is allocated to person without subsistence who do not qualify for pension.

Invalidity pension from youth is allocated for person who became disabled in childhood. This pension is granted since reached 18 years of age.

Increase of pension in case of immobility is the allowance for replacement of increased costs relating to the need of serving and taking care of him/her by another person.

Increase of pension in case of sole source of income is the state benefit of pension security granted in case that, old-age, invalidity, widow's, widower's or full orphan's pension is the only income source and do not reached 1,1 times the subsistence level.

Sickness benefits temporary compensate to insured person for loss of income due to sickness or accident. Employee obtains sickness entitlement from 11th day of temporary incapacity.

Benefit for care for sick relative is claimed when caring for a sick child under the age of 10 or caring for another sick member of the family when the provision of such care by another person is necessary.

Maternity benefit compensates to woman for loss of income during 28 weeks in last period of pregnancy and after delivery. It is paid 37 week in case of an employee who is single or who has given two or more children.

Equalization allowance is paid during pregnancy and until the end of the nine-month from delivery to a woman who was transferred to a different job because her original work was dangerous or threatened her pregnancy or maternity.

Child allowance provides to all dependent children at the same amount regardless of children age and income of family members according to the law.

Parental allowance is repeated benefit entitled to the parent or person for permanent personal and proper care of at least one child up to the age of 3 years or up to the age of 7 years for child recognized as suffering from long-term severe health impairment.

Allowance to parents of which together born three or more children or which during two years frequently born twins is state social benefits which state once a year contribute on increased expenditures associated with care on together born children.

Child birth allowance is a single benefit given to the mother who gave birth to the child or is given to the father of the child or to the another person meeting the conditions according to the law.

Substitute care benefits are a one-off or recurring benefits paid to the children in caring.

Funeral grant is a single benefit given as the partial replacement of expenditure for the funeral of a person under the social security.

Benefit in material need is a single or repeated benefit allocated to the person in material destitution to provide basic living condition of this person.

Revenues from premium collection sickness insurance, old-age and disability insurance, accident insurance, unemployment insurance, guarantee insurance, collection of contributions to solidarity reserve fund represent payments of payers according to valid acts.

Other payments include incomes of the Social Insurance Agency from outstanding premium, fines, penalties, requital of submitted claim, gifts and payment from government assets. Financial assistance – transfers from other funds of the Social Insurance Agency to basic fund of old-age insurance is not included.

Sickness insurance benefits (sickness benefits, benefit for care for sick relative, equalization allowance and maternity benefits) are provided **from sickness insurance**.

Since January 1, 2004 pension benefits are provided from **pension insurance**, which is divided into **old-age insurance** (old-age pension, early pension, orphan's pensions, widow´s pension, widower´s pension and from **invalidity insurance** (invalidity pension, orphan's pension, widow´s, widower´s pension).

Accident benefits (surcharge benefit, injury annuity, one-off redemption benefit, surviving annuity, one-off compensation benefit, rehabilitation benefit, retraining benefit, compensation for pain, compensation for reduced social opportunities, compensation of cost joint to cure, compensation od cost joint to funeral) are provided from **accident insurance**.

Guaranteee insurance benefits are provided from **guarantee insurance**.

Unemployment benefits are provided from **insurance in unemployment**.

Social security benefits paid by state include wife´s pension, social pensions, invalidity pension from youth, increase of pension in case of sole source income, increase of pension in case of disability, increase of pension in case of fight against fascism and rehabilitation, other pensions declared before January 1, 1957, compensation of employment injuries and occupational diseases cancelled employers, which a founder was the government or the National Property Fund of the Slovak Republic and accident allowances to persons according to valid acts.

Old-age pension saving is saving to personal account of a saver, purpose of which is together with old-age insurance to ensure its income in retirement and survivers in the case of death. Participant of old-age pension saving is a saver, i.e. natural person, who conclude a contract on old-age pension saving with pension fund management company in compliance with the Act No. 43/2004 Code of Acts, in wording of later regulations.

Supplementary pension saving enables to obtain a pension benefit in old age and a supplementary pension benefit in case of concluding works performance included on the base of a decision of health protection body in the category 3 or 4 in accordance with the Act No. 650/2004 Code of Acts.

The active labour market measures introduce a complex of tools, which are used for employment increase and which support creation of new working places.

Source

Data on incomes and expenditures of the Social Insurance Agency are acquired from the information system of the Social Insurance Agency.

Published data on social insurance benefits and state social benefits are taken from the informative system of the Social Insurance Agency, from the Central Office of Labour Social Affairs and Family of the SR and from statistical surveys of the Ministry of Labour, Social Affairs and Family of the SR.

Expenditures for the active labour market measures are acquired from the Central Office of Labour, Social Affairs and Family information system.

Methodological notes

Statistical data presented in the chapter refer to the network and activity of the state, municipal and private **cultural institutions**.

All kinds of professional theatres of the Ministry of Culture of the SR (including theatres for the youth and puppet ones) are presented.

Data for galleries include state, self-government and private institutions.

The term “Musical ensembles” contains data on state musical ensembles and state ensembles of songs and dances.

The indicators **radio broadcasting and TV broadcasting** include providers on the basis of the law – public broadcasters and providers on the basis of the licence – private broadcasters.

Since 2007 three academic and also specialized scientific libraries are presented as academic libraries.

The indicator “number of **newspapers** titles” includes local publications if they are different from main publications, parts of newspapers sold separately, special editions, morning and evening papers with own name and registration, different language versions of the same periodical. There are not included local issued papers of the same papers, if they are not different from each other and parts of papers, if they are not sold separately.

The indicator circulation includes also non-sold pieces. Since 2009 this data is not surveyed.

Figures on **religion** show selected indicators on five most frequent registered churches.

Definitions

Completed film is Slovak audiovisual work produced till December 31, of surveyed period and is ready for public proliferation by audiovisual performance, for public dissemination on any carrier or for retributive distribution to the public in or out territory of the Slovak Republic.

Broadcasted program presents all programs broadcasted through the own independent networks (including national broadcasting), local or outside production.

General news cover regularly daily news and commentaries to main events, including sports news.

Loans to users include the loans of all library units, i. e. books, periodicals, other documents and information sources to readers, i. e. without inter-library loan service.

Periodical publication is periodical press or another periodical issued at least two times per year with the same title, periodicity indication and standard layout for the publication.

Branch office of the museum refers to the detached parts of museum (including monuments belonging to museum), which are out-of the museum residence and create administrative entity with the museum.

Exposition is the whole installation placed in one building and opened for public.

Realized **exhibitions** in museums and galleries involve exhibitions realized in the SR, exhibitions taken from other institutions in the SR, exhibitions taken abroad and exhibitions taken from abroad.

Sacral buildings include temples, churches, chapels and vestries.

Membership in civil associations, professional organizations, trade unions etc. is given in accordance with their rules.

Source

Source of data on culture is annual statistical survey in several ministries. The Ministry of Culture obtains data for theatres, musical ensembles, museums, galleries, audio-visual works, libraries (except university libraries), radio and TV broadcasting, observatories, planetariums, astronomic cabinets, periodical press, preservation of monuments and churches. Data on the university libraries are obtained from the Ministry of Education of the SR. Data on the botanical gardens are reported by the Botanical garden of the Pavel Jozef Šafárik University in Košice. The Ministry of Environment of the SR reports zoological gardens data.

Data on caves are obtained from administrative sources of the Slovak Caves Administration.

Data on the membership in civil associations the SO SR obtained from central bodies of civil associations by questionnaire method.

More detailed information can be obtained at mentioned ministries and organizations as well as on their Internet web-sites.

10. Physical Training and Sport

Methodological notes

Physical training and sport according to the Act No. 288/1997 Code of Acts on Physical culture and on change and amendment of Act No. 455/1991 Code – Self-employed persons act in wording of later rules is understood as (both) – an organized or non-organized, individual or collective activity connected with physical training, sport, hiking and active recreation activity of people. Physical culture according to this act is carried out by relevant authorities of public administration, bodies of self-government and civil associations and other legal persons and their community associations (e.g. the Slovak Association of Physical Culture and the Association of Technical and Sporting Activities of the SR).

Number of members of individual unions of the Association of Technical and Sporting Activities of the SR is given only for years, when they were its members.

Definition

Juniors include sportsmen who have not reached the age in which they can attend races for adults category. Various sports have different age for the category of adults. In gymnastics it is the age of 16, in different sports it is varying up to 23 year of the age.

Source

Data are obtained from the statistical surveys of the Ministry of Education of the SR (Institute of Information and Prognoses of Education) and administrative data taken from the Association of Technical and Sporting Activities of the SR. Detailed data can be granted by organizations mentioned above.

Methodological notes

In the part “Primary Economic Indicators” is published revised historic time data series of selected aggregates of national accounts since 1997 at current and constant prices of the previous year according to the methodology ESA 95 (European System of National and Regional Accounts in the Community 1995). Data either for 2008 and 2009 are preliminary, for 2010 estimated. Data are comparable in full time series.

Annual National Accounts represent a compatible accounting framework for the systematic and detailed description of the total economy as well as particular sectors and sub-sectors where all stages of the economic process are recorded (output, generation and distribution of income, use of income, accumulation and financial transactions). In line with the methodology, each account has the resource side and the use side and the balancing item of each account has its own economic contents. Transactions represent economic operations and the related flows carried out between economic units. According to their nature, they can be broken down into four main groups:

– transactions in goods and services (code P) which are related to production (national output or imports), exchange and use of goods and services (intermediate consumption, final consumption, capital formation or exports),
– distributive transactions (code D) by means of which the value added generated by residents is being distributed and the income or wealth is redistributed,
– financial transactions (code F) (transactions in financial means) are related to changes in financial assets and liabilities in particular sectors,
– other flows in accumulation accounts (code K), for instance, consumption of fixed capital (K.1), acquisition less disposal of non-financial non-produced assets (K.2).

The code B is assigned to balancing items, which express the difference between the resources and use in the current accounts and the difference between assets and liabilities in the capital and financial accounts.

Balance items in the tables are given in gross term, i. e. including fixed capital consumption or in net term, i. e. without fixed capital consumption. The code for balance item in gross term

is created by the code of item and by the letter “g”. Also the letter “n” is linked to the code relating the net balance item. Item code with sign “*” creates balance item for economy in total.

The balancing item of Production Account is **gross domestic product at market prices (B.1*g)** for economy in total which is the final result of activities of resident producers. In the sector classification the balance item is **gross value added B.1g.** After subtracting of fixed capital consumption both items are created in net term **(B.1*n, B.1n).**

Net operating surplus (B.2n) is balancing item of the Generation of Income Account, which include distributive transaction linked to production. Net operating surplus corresponds to the net domestic product at market prices less the rewards of employees and net taxes on production and imports. In the sector of households it also represents the **net mixed income (B.3n)**. It includes profit and compensation for work of entrepreneurs not registered in the Business Register. Distinction of the two items can be done by gross estimate and therefore it is not applied.

The balancing item of the Allocation of Primary Income Account is **net national income (B.5*n)**. According to the sector classification the balancing item is **net balance of primary income (B.5n)**. The balancing item of Secondary Distribution of Income Account is **net disposable income (B.6n)** which expresses the income of the country (or the given sector) usable for the final consumption and saving.

The Redistribution of Income in Kind records flows related to the use of particular goods and services which these households obtain free of charge. The balancing item is **net adjusted disposable income (B.7n).**

Net saving (B.8n) are the balancing item of the Use of Disposable Income Account.

The balancing item of the Capital Account, which records the acquisition less disposal of non-financial assets of resident units and measures the changes in the net worth due to saving (the last balance item of current accounts) and capital transfers, **are net lending (+) or net borrowing (–) (B.9)** for total economy which are the sum of net lending and net borrowing of institutional sectors. They represent net resources which the total economy lends abroad (if they are plus) or borrows from abroad (if minus). The net lending (+) or borrowing (–) for total economy are equal, however with the opposite sign, to the net borrowing (–) or lending (+) from abroad. Net lending (+) or borrowing (–) should correspond to B.9 item’s value in the Financial Account. The differences between items are caused by using of different data sources in non-financial and financial accounts and timing difference.

Changes **in the net worth due to saving and capital transfers (B.10.1)** are not balanc-

ing item in the system structure. But it is important part of changes of net worth, therefore it is coded together with others balancing items.

External Account of Goods and Services records imports of goods and services on resources side of the account and exports of goods and services on the uses side. The difference between resources and uses is balancing item called **external balance of goods and services (B.11).**

External Account of Primary Incomes and Current Transfers is determined by **current external balance (B.12)**, which in the structure of the system corresponds to saving by the institutional sectors.

The Supply and Use Tables provide a background for a detailed analysis of the process of generation of resources of goods and services, their use and generation of income linked to the production process. Methodological basis for the compilation of commodity by industry tables is the ESA 95 methodology. In tables, there are indicators aggregated into categories broken down by commodities and main activity. The gross output and value added are expressed at basic prices while the intermediate consumption at purchaser's prices. Data on gross output are based on the Supply table and intermediate consumption indicator results from the 1. quadrant of the Use table. Other indicators (final consumption, formation of gross fixed capital are given at purchaser's prices) are the part of the 2. quadrant of the Use table. Time series of indicators for years 2004 – 2007 is compiled at current prices and at constant prices of previous year for years 2004 – 2007. Supply and Use tables have been revised at full extent as annual national accounts.

Definitions

Output represents the value of goods and services, which are the result of the activity of resident units during the accounting period in the territory of the Slovak Republic. Production according to the ESA 95 is broken down into market production, own account production and other non-market production.

Intermediate consumption consists of services and goods of a short-term use which have been consumed or transformed by the production process within the accounting period.

Value added is a balancing item and is calculated by a subtraction of intermediate consumption from production of individual sectors or branches.

Domestic product at market prices expresses the final result of the production activity of

resident producers for economy in total. It corresponds to the total production (at basic prices, i.e. it includes other net taxes on production) of resident producers after subtracting their intermediate consumption and adding the net taxes on products.

Within the **final consumption**, two types of consumption are distinguished: **expenditures on final consumption**, which include expenditures on the consumption of goods and services and may occur in the sector of government, households and non-profit institutions serving households and **actual final consumption** related to the acquisition of consumer goods and services, which can be of a nature of the collective or individual consumption.

Gross fixed capital formation for total economy consists from expenditures on new tangible and intangible fixed assets or from other specific expenditures, which the producers spend on goods and services in order to retain, increase or expand their production capacity or to create new production possibilities in the future. In the framework of sector classification except costs on purchase of new tangible and intangible fixed assets (without lands, valuables and valuable rights) there are included costs on purchase of used tangible and intangible fixed assets. Formation value is reduced by sale of tangible and intangible fixed assets, transfer by barter exchange or natural capital transfer.

Change in inventories is defined as a difference between the acquisition and disposal of inventories of the particular time period. Inventories include the stored material, work in progress, semi-finished goods of the own-production, goods, animals and stored goods.

Valuables are non-financial assets bought or held by people for purpose of saving value.

Consumption of fixed capital represents the amount of fixed assets consumed for surveyed period in consequence of normal depreciation and foreseeable obsolescence.

Exports and imports of goods and services include exports and imports of goods surveyed in the framework of the trade balance and exports and imports of services surveyed in the framework of the balance of services. Exports and imports of services include all services related to the foreign activity (services of freight, passenger and other transport, insurance and other services).

Compensation of employees covers total compensation in a monetary form (or in kind) which is paid by an employer to the employee as a compensation for work being done by the employee during the given accounting period. Compensation of employees is broken down into wages and salaries and social contributions of employers. Social contributions of employers are further broken down into actual social contributions of employers and imputed social contributions of employers.

Taxes on production and imports are compulsory unrequited payments, in cash or in kind, which are levied by general government. They are divided into taxes on products and other taxes on production.

Subsidies are current unrequited payments, which general government make to resident producers. They include subsidies on products and other subsidies on production.

Property income results from the ownership of financial assets, i. e. deposits, bonds or tangible non-produced assets (land and sub-soil assets) which the owner obtains as a compensation for providing them to or making them available for another institutional unit. Property income includes interest, distributed income of corporations (dividends, withdrawals from the income of quasi-corporations), re-invested profit from foreign direct investment, property income attributed to insurance policy holders and rent.

Current taxes on income and wealth, etc. are of the same nature as tax on income (of households, from the profit of corporations, of non-profit institutions), as well as the tax on wealth which are being paid regularly each tax period (on the contrary to the taxes on capital which are being levied irregularly). The transfers are in question because the government does not provide any counter-value to the individual unit paying taxes. Current taxes on income and wealth do not include inheritance taxes, death duties or taxes on gifts, occasional or exceptional levies on capital or wealth, taxes on land, buildings or other assets (owned or rented) which are used for production.

Social contributions and benefits are broken down into social contributions (actual and imputed), social benefits other than social transfers and social transfers in kind which the government units and non-profit institutions serving households provide to individual households.

Other current transfers cover non-life insurance premiums and claims, transfers within general government, current international co-operation and miscellaneous current transfers which represent transfers to non-profit institutions, transfers between households, fines and penalties, lottery, winnings and bets, etc.

Adjustment for the change in net equity of households in pension funds reserves is a item harmonizing households savings and a change in net equity of households in pension funds reserves in the financial account.

Financial transactions are transactions in financial assets and liabilities between institutional units and between them and the rest of the world by mutual agreement involving simultaneous creation or liquidation of a financial asset and the counterpart liability or a change of ownership of a financial asset or assumption of a liability.

Monetary gold and special drawing rights. Monetary gold includes gold held by monetary authorities or other institutions under supervision of monetary authorities as foreign exchange reserve. Special drawing rights include all transactions with international reserve assets created by the International Monetary Fund.

Currency and deposits. There are included currency (notes and coins in circulation), transferable deposits, which are immediately convertible into currency or which are transferable by cheques, banker's order, debit entry or the like both without any kind of significant restriction or penalty. There are included other deposits not negotiable, in national or in foreign currency (e. g. time deposits, savings certificates, savings books, etc.).

Securities other than shares. They cover debt securities as bills, bonds, certificates of deposit, commercial paper, debentures, financial derivates and similar instruments normally traded in the financial market.

Loans are unconditional debts to the creditor which have to be repaid at maturity and which are interest-bearing. There are included bank credits, loans to foreign institutions and loans between institutional units.

Shares and other equity. These financial assets generally entitle the holder to a share in the profits of the corporation or quasi-corporation and to share in their net assets in the event of liquidation. There are divided on shares and other equity excluding mutual funds shares, which represent property rights on corporations or quasi-corporations and generally entitle the holders to a share in the profits and to share in their net assets in the event of liquidation. Mutual funds shares include shares issued by funds regardless they are open-end, semi-open, closed-end funds. They may be quoted or unquoted.

Insurance technical reserves cover net equity of households in life insurance and pension funds reserves, prepayments of insurance premium, reserves for outstanding claims. In the Financial Account the prepayments of insurance premium recorded between policy holders and insurance corporations consist of those parts of the premiums that are payable in the current accounting period and that are intended to cover risks outstanding within the following period.

Other accounts receivable/payable include trade credits and advances, which create financial claims relating to the delivery of goods and services, where payment has not taken place. Other accounts receivable/payable arise from timing difference between distributive transactions or financial transactions on the secondary market and the corresponding payment.

Purchasing Power Parity is an artificial rate of currency conversion of different countries, which takes into account price levels of purchased goods and services in these countries. It is possible to see it as well as a price index which compares the prices of goods and services in these countries. It serves as well for more realistic explanation of various economical relationships as provide official exchange rate of currencies of these countries.

Source

The compilation of the National Accounts is based on the following data sources:

- annual and quarterly state statistical surveys,
- banking information, e. g. monetary overview, balance of payments, banking statistics data,
- accounting statements and administrative data sources of the Ministry of Finance of the SR and other next ministries and central bodies,
- expert estimates of data based on the methodological recommendations of experts from Eurostat.

[1)] Methodology ESA 95

Methodological notes

Foreign trade statistics generally covers the movement of goods between the Slovak Republic and the rest of the world realized by entrepreneurial subjects. Total imports include goods entering Slovak Republic intended for a domestic consumption, and also for processing and subsequently re-exported. In the total exports, there are included goods permanently leaving territory of the Slovak Republic or goods leaving the territory for processing and subsequently re-imported.

Since accession of the Slovak Republic into European Union (EU), i. e. since May 1, 2004 foreign trade statistics have been composed of data from EXTRASTAT system and INTRASTAT system. EXTRASTAT system furnishes information on exchange of commodities with non-member countries of the EU based on documents prescribed for customs procedure, INTRASTAT system contains information on commodity transactions with EU member states as partner countries obtained from statistical surveys.

Customs administration provides for collection of data and processing of information on trade with **non-member countries of EU** on the basis of documents prescribed for customs procedure according to Community legislation and legislation of the Slovak Republic (e.g. Council Regulation EEC No. 2913/1992 establishing the Community Customs Code or the Act No. 199/2004 Code of Acts both in wording of later changes and amendments of some acts).

Collection and processing of information on trade among **EU member states** is realized by the Decree of the SO SR No. 416/2008 Code of Acts and Act No. 625/2004 Code of Acts.

Data are collected and processed by Combined Nomenclature, which was published by Customs Tariff till April 30, 2004. This nomenclature was fully compatible with the nomenclature used by the EU. Data are also published according to the Standard International Trade Classification, Revision 4, (SITC, Rev. 4.).

Data are published by **country of origin** (for total import) and **country of destination** (for total export), which is in compliance with the international methodology of presentation of foreign trade data. Values of imported and exported goods are compiled as **FOB-type values**. Value of goods, which is the subject of temporary operations and of goods for repair and after repair is not included to the value of foreign trade. According to the methodology valid from

2007 value of goods, which were only cleared for customs purposes in the Slovak Republic, is also not included to the value of foreign trade with non-member countries (value of indirect imports and exports).

Data on value of imported and exported electricity were estimated on the base of data on physical flows of electricity.

Data are published by countries according to the Community Nomenclature of countries and territories for the statistics of foreign trade valid for 2010.

Definitions

Country of origin is the country, where goods were completely produced or obtained, or where goods were substantially transformed.

Country of destination is the country, where goods will be used, consumed or processed, or it is the last known country, where goods will be transported.

FOB-type value includes the transaction value of goods and the values of services (e.g. transport, insurance, transfer, storing of the goods etc.) performed to deliver goods to the border of the exporting country.

Economical groups consist of the next countries:

EU-27: Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Greece, Netherlands, Ireland, Lithuania, Latvia, Luxembourg, Hungary, Malta, Germany, Poland, Portugal, Austria, Romania, Slovakia, Slovenia, United Kingdom, Spain, Sweden, Italy;

EFTA: Iceland, Liechtenstein, Norway, Switzerland;

OECD: Australia, Belgium, Czech Republic, Denmark, Finland, France, Greece, Netherlands, Ireland, Iceland, Japan, Canada, Republic of Korea, Luxembourg, Hungary, Mexico, Germany, Norway, New Zealand, Poland, Portugal, Austria, Slovakia, United Kingdom, United States, Spain, Switzerland, Sweden, Italy, Turkey.

Source

Documents prescribed for customs procedure (Single Administrative Documents) checked and recorded by customs administration in accordance with the legislation mentioned above present a source of data for EXTRASTAT system.

INTRASTAT-SK declarations collected by customs administration, which are provided by receivers and dispatchers of goods represent the main source of data for INTRASTAT system. Imputations for business realized by reporting units which defaulted their reporting duty and adjustment of reporting units which have no reporting duty with regard to a little volume of trade with goods are used as another source of data. These data are calculated by the SO SR as a person responsible for foreign trade data processing and publishing.

More detailed information on foreign trade can be obtained in monthly publication Foreign Trade of the Slovak Republic and in the Yearbook of Foreign Trade of the Slovak Republic.

Methodological notes

Price indices in production branch express the rate of production price changes of inland producers realized on domestic market and since 2002 in industry of goods for export too, resp. in total for inland and export.

Within the harmonization with EU statistics was created a model of price indices of industrial products, realized in export by analogy of models of price indices on the domestic market. The weights structure of domestic price indices and export price indices is projected into new weight pattern for calculation total industrial producers price indices.

The total revision of industrial producers price indices was accomplished during the year 2006. Weight scheme, sampling of price items and reporting units for domestic market, and also parallelly for export, were revised. Since 2007 the price basic period is changed to December 2005 = 100.

In 2010 the scheme of **industrial producers price index** contains app. 3 600 representatives (products) of inland serial industrial production resp. further 2 600 products for export classified into divisions 05 to 37 of the European Classification of Economic Activities (SK NACE) Rev. 2. Constant weights derived from the structure of industrial receipts for year 2005 are used for the aggregation of individual products indices into higher classification levels. The calculation of index of industrial producers prices has also covered the observation of drinking and drainaged water prices. The base price period is December 2005.

Products prices are surveyed for selected industrial producers on “primary market” i. e. during first market transaction between producer and customer. Prices do not comprise value added tax and excise duty.

Price index of raw wood covers 16 selected products (representatives) of leafy and coniferous raw wood assortments (division 02 – CPA 2008). The index is calculated by using of constant weights derived from the sale structure in 2005. This index is published with 2005 average = 100 as a base. Prices of selected assortments of coniferous and leafy wood (excluding value added tax) are surveyed for selected more important producers.

The **price index of agricultural products** contains information on price level development for 87 main agricultural products (crop, livestock, fruit, vegetables) and fishes classified in

divisions 01 and 03 CPA 2008. Indices are calculated from surveyed prices of production assigned for further processing or sale. Calculation of aggregates is based on constant weighting system derived from the average structure of agricultural production sales for years 2004 – 2006. Prices of individual months of 2005 are the basis for price index calculation. The prices of agricultural products are surveyed in selected producers during the sale to a first customer (i. e. primary market) without value added tax.

Data on average prices of selected agricultural products are the average for selected qualities (without a non-standard) for crops and animals products and in fruit and vegetables for 1st quality.

The scheme of **price indices of construction works** is compiled from app. 1 900 representatives – selected items of construction works (divisions 41 to 43 – CPA 2008). Weights system reflects the structure of construction production in 2005. The price base is average of 2005. Selected construction suppliers grant the prices for representatives without value added tax. Price of construction work per one measuring unit includes all costs needed to build a construction, i. e. materials, semi-finished goods, costs of the operation of construction machines, costs of transport, indirect costs (except equipment in the construction site) and profit. Indices has been published according Classification of Products by Activity (CPA 2008) and Classification types of Construction (CC). Total price index of construction work consists of the price index of new construction and of the price index of repair and maintenance.

The price indices of supplies of goods and services to agriculture and the price indices of materials and components used in construction express the rate of price changes on input side.

The price index of supplies of goods and services into agriculture includes products and services purchased by agricultural producers and consumed by agricultural production. It is calculated from surveyed prices of 101 kinds of important purchased products and services (selection of respondents is identical with the selection for the price index of agricultural products) and from price indices of selected groups, or CPA 2008 classes, taken from industrial producers price index, price index of drinking and drainage water, construction works price index and the price index of communication performances. The index is published with 2005 average = 100 as a base. Value added tax is excluded from the purchase prices of products.

The price index of (production) materials and components consumed in construction contains price indices for selected materials and products (55 groups of CPA 2008) taken from price index of inland industrial producers. The weights for index calculation were derived

from the value of consumed construction materials in construction process in 2005. The base period is average of 2005.

The indices of consumer prices and living costs are calculated from the prices of individual representatives collected from the network of selected shops and service business. The base period for calculating of consumer prices indices is December 2000.

Since January 2010, after comprehensive revision of consumer price indices, the development of consumer price indices has been surveying on an universal consumer basket established on the set of 720 representatives – selected goods and services paid by the population. Revised consumer basket was discussed and consented by the representatives of the statistical bodies, ministries, trade unions and others.

Consumer price index presents the price development on a generally average level. Living costs indices are also the price indices that show how the different expenditure structures of individual social groups of households influence their changes. The coverage of representatives in the consumer price index as well as in living costs indices is the same besides that some products and services are excluded from those households in which their consumption is insignificant.

Representatives of consumer basket are updated yearly. Consumer basket is divided by COICOP (Classification of Individual Consumption by Purpose Use) used by the countries of the European Union. Breakdowns of indices were designed in harmony with methodology of Eurostat; universal consumer basket is divided into 12 divisions and 44 groups.

Several standards required for calculation of harmonised consumer price index of member countries of the European Union are applied in processing of consumer price index.

Since January 2005 the consumer price index (based on December 2000) is calculated by chaining using December of a previous year as a linking period. Weights for the elementary aggregates have to be annually revised to ensure that they reflect current expenditure sample and consumer behaviour. The important feature of a chain index formula is that it allows weights to be annually updated and facilitates the introduction of new items and sub-indices and the removal of obsolete ones.

In order to be able to link the old and the new series, an overlapping (link) period is needed in which the index has to be calculated using both the old and the new set of weights. The SO SR stated as a link period December of a previous year, i. e. December 2009 is a link period for the compilation of indices in the year 2010. December 2009 is a last period, for which the index is calculated using the previous consumer basket and system of weights

and at the same time is the price reference period for an updated consumer basket. Thus December of a previous year is a link period between the new and the old index and these indices create (compile) a chain index.

A chain index may have two or more links. Between each link period, the index may be calculated as a fixed weight index.

The disadvantage of a chain index is that chaining leads to non-additivity. When the new series is chained onto the old, the higher-level indices after the link cannot be obtained as weighted arithmetic averages of individual indices using the new weights.

Average consumer prices of selected products refer to average prices for the SR calculated from the prices surveyed in selected shops and service business.

Core and net inflation quantifies growth rate of price level on incomplete consumer basket. From the consumer basket there are excluded those items with regulated prices and items with prices influenced by other administrative measurements. The items which will be changed due to tax amendments (e.g. changes of VAT, excise duties) stay a part of consumer basket, but influence of tax amendments is eliminated. Total inflation is divided into core inflation (influence of items with market prices), influence of items with regulated prices and influence of indirect duties (elimination of tax amendments). Contribution of core inflation represents the information by how much percentage should the price level be changed, if there is no price change due to administrative interference. It means that if there are no changes of administrative prices, contribution of core inflation is equal with total inflation. Contribution of core inflation (in percentual points) to total inflation is further divided into contribution of net inflation and contribution of foodstuff prices. Reason for putting aside share of foodstuff from net inflation was the fact that foodstuff prices in the past were determined by considerable seasonality as well as non-market measurements (e.g. changes of guaranteed prices for the first producers, subsidies, import duties, quotas).

Harmonized Indices of Consumer Prices (HICPs) have been set up with an aim to ensure a comparability of consumer price indices of individual countries within the European Union. Annual average rate of change in HICP is one of the convergence Maastricht criteria for achieving stage three of Economic and Monetary Union (EMU). The third stage of EMU is the final stage of EMU with the common euro currency, achieved by the member states participating in Monetary Union (euro area).

HICPs of those Member States, which became members of euro area, form a basis for

monthly compilation of Monetary Union Index of Consumer Prices (MUICP). HICPs of all member states are the basis for the compilation of European Index of Consumer Prices (EICP).

In the year 2010 the HICP consumer basket was established on the set of 711 representative items (some of the items related to the Owner Occupied Housing are at present excluded from HICP coverage). The index reference period for Harmonized Indices of consumer prices index is average of the year 2005. The harmonized index based on average of 2005 is calculated by chaining – linking period is December of a previous year. Weights for the elementary aggregates are annually revised to ensure that they reflect current expenditure patterns and consumer behavior. HICP weights are priceupdated to December of the previous year. Consumer basket is divided by COICOP/HICP (COICOP modified for HICP).

Definitions

The price indices are created as sample indices of constant structure (influence of structure change onto price index level is excluded). Summary indices are calculated by aggregation of individual simple price indices of representatives by convenient weights system, i.e. structure of receipts from sales of products (expenditure of households for goods and services) in the basic year. The index schemes (system of weights, representatives and respondents systems) are regularly (5-years interval) revaluated and adapted to actual structures. Since 2007 price indices of producers are calculated against December 2005 or average of 2005. For calculation of price indices is used Laspeyres formula.

Producers price refers to contract price agreed between producer and inland customer invoiced for more important business transaction realized in the middle of current month excluding value added tax and excise duty and costs for transport to purchaser and costs related to transport.

Export value is contract price agreed between producer and foreign customer according to the qualitatively agreed conditions, terms of payments and delivery conditions. Invoiced price to customer is presented without value added tax and excise duty.

Consumer price is contract price agreed between seller and final consumer. It includes producer price, price of business performance (wholesale or retail trade margin), value added tax and other duties (e. g. excise duty).

Source

All published data are the result of regular surveys and processing realized by the Statistical Office of the SR.

The state statistical questionnaires submitted by selected reporting units are data source for calculation of price indices in production branch. More detailed information can be found in monthly publications Price Indices of Industrial Producers, Drinking and Drainaged Water; Producers Price Indices of Agricultural Products; Price Indices of Construction Works, Materials and Products Consumed in Construction.

Consumer prices of goods and services for calculation of average prices and indices of consumer prices are surveyed in selected shops and service business in the Slovak Republic. More detailed information on consumer prices indices can be obtained in monthly publication Consumer Price Indices.

14. Fixed Assets

Methodological notes

Fixed assets (capital assets) data cover the value of the assets of all legal entities. They do not include the value of fixed assets of population and fixed assets owning by churches in case that the legal procedure and pricing has not been finished. The data on fixed assets for 2009 were presented for the economy in total in the summary table containing basic indicators.

Branch classification is given according to main economic activity of reporting units. Ownership is an aggregation of included owners of fixed assets into particular groups according to the main kind of ownership.

Fixed assets are given at acquisition prices i. e. in prices, for which fixed assets were purchased or produced in time of acquisition. The data express residual price of fixed assets after deduction of consumption, i. e. value of fixed assets yearly permanently consumed in consequence of physical depreciation and foreseeable obsolescence including security from losses of fixed assets.

In line with ESA 95 methodology the fixed assets at replacement prices express the price, for which the fixed assets would be acquired as new in time of accounting.

Definitions

Fixed assets consist of all assets of intangible and tangible character on which an economic subject has the right of ownership or right of management. Fixed assets consist of two groups of assets: intangible and tangible.

Intangible fixed assets consist of the costs of the founder (first costs), capitalized costs on development, software, valuable rights, goodwill and other intangible fixed assets, whose value in individual cases is more than 2 400 Eur, the service life is more than 1 year.

Tangible fixed assets are the real estates and separate movables or sets of movable things and cultivated assets whose value is more than 1 700 Eur in individual case and the operational and technological function is longer than one year.

Completed dwellings are those that were passed as acceptable by an approving officer

after construction completion. It refers to completed dwellings in constructions intended for living, i.e. in housing buildings, family houses and in polyfunctional buildings. There are included also dwelling in constructions undisposed for living, for example in administrative buildings, banks, posts, stations. Completed dwellings refer to dwellings acquired by new construction, improvements or another construction repairs.

Average living area of completed dwelling expresses housing space (m^2) per one completed dwelling.

Useful floor area of completed dwelling is the area of all rooms of completed dwelling. There are not included common non-housing space serving for all users of dwelling (staircase) and non-housing rooms used by dwellings users (cellars, room for prams, common laundry) and balconies or loggias.

Decrease of dwellings is represented by decrease of existing dwelling number on the base of given decision of construction offices on their extinction (demolition, abolition or change of utilization).

Fixed assets at purchasing price express the value of their acquisition including costs spend for their acquisition. It can be a purchase of new or fixed assets used before by another subject, own-account production, restitution of property based on legal regulations (restitution, legal decisions), dedication, transfers between corporations. The change is, on the other hand, influenced by disposals of fixed assets occurring during the year, e.g. a sale, transfers by legal regulations, liquidation of fixed assets caused by full depreciation or dedication of fixed assets to another corporation or subject.

Consumption of fixed assets represents the value of accumulated depreciation for individual years.

Gross fixed assets is the value, of assets hold by producers before deducting of depreciation.

Net fixed assets for national accounts purposes is derived from gross fixed assets by deducting of the fixed assets consumption.

15. Organizational Statistics

Methodological notes

Data on **organizational structure of the economy** are compiled on the basis of data kept in the Register of Organizations of the Statistical Office of the SR. The register is created and updated by the Statistical Office of the SR according to the Act No. 540/2001 Code of Acts on Government Statistics in wording of later regulations. The Register of Organizations of the SO SR is regularly updated by data from the Business Register, the Trade Register and from statistical surveys. It contains identification and classification characteristics on legal persons and natural persons-entrepreneurs.

Data concern only those legal and natural persons-entrepreneurs specified in the Register of Organizations of the SO SR as economically active.

Definitions

Legal persons are legal entities. The law adjusts their existence independently on individuals or institutions that are their owners or their members.

Natural persons-entrepreneurs non incorporated are persons, who undertake on their own liability according to special rules. These are self-employed persons (persons running business on the basis of the self-employed persons law), persons with freelance professions (persons running business on the basis of a law other than self-employed persons law e. g. lawyers, physicians, auditors and others) and self-employed farmers.

Enterprises are legal persons performing systematic activity to make profit. There are included corporations (enterprises in ownership of groups of subjects e. g. joint stock companies, co-operatives, limited liability companies, etc.) and quasi-corporation (enterprises in ownership of one subject).

Non-profit oriented institutions are legal persons serving to financial and non-financial corporations, government and households e. g. budgetary organizations, subsidized organizations, whose receipts don't exceed 50 % of presented costs, civil associations, societies and clubs, political parties, churches and others.

Public sector includes enterprises in state, municipal and international ownership being under the state control.

Private sector includes enterprises in ownership of private inland and foreign legal persons as well as natural persons-entrepreneurs and enterprises with foreign participation not being under the state control.

Foreign ownership includes subjects founded and controlled by a foreign legal person or natural person-entrepreneur.

International ownership includes the subjects that were founded jointly by a inland and a foreign legal person or a natural person-entrepreneur.

Non-financial corporations are corporations and quasicorporations, whose essential activity is production of products and providing services of nonfinancial character.

Financial corporations are all corporations and quasicorporations carrying out especially financial intermediation or auxiliary financial activities.

Methodological notes

Agriculture includes all statistical units (legal and natural persons) which are active in crop and animal production, in related service activities and aquaculture.

The basic statistical unit for the purposes of the statistics on land resources and crop production, is considered as:

a) total of agricultural land with the area larger than 0,10 ha
b) total of agricultural land with the area up to 0,10 ha
   – if the products from this land are usually sold
   – if there is a vineyard on the land with the area larger than 0,05 ha
c) total of the forest land or ponds with the area larger then 0,10 ha if these cultures are not a part of the agricultural establishments under the point a).

Every breeder of farm animals who breeds them for sale or for next processing including agricultural enterprises and other breeders without agricultural land or with agricultural land area up to 0,10 ha are basic statistical units for the purposes of the animal production statistics.

All recalculations concerning intensity of agricultural production take into account either agricultural or arable land being exclusively in possession of agricultural establishments.

Summary data on gross agricultural production (see part 1. Primary economic indicators) are for agriculture in total, i. e. including calculation for small enterprises and population. The structure of **gross agricultural production** is showed for incorporated entrepreneurial entities employing 20 and more employees.

Root crops in the **structure of land use** include potatoes, sugar beet and feeding root crops. Industrial crops include oil seeds crops, fibre plants, tobacco, hops, chicory root, medical and culinary plants. Other field crops area includes horticulture, experimental plots, nurseries on arable land. Seed and seedling area include root crops, sugar beet and vegetables planting stock and seeds vegetables, seeds of perennial fodders.

In **crop production** data on sown area and data on crops production are showed for agriculture in total.

Production of agricultural crops represents by the Slovak Technical Standards a total yield of the given crop that was harvested under standard humidity and purity without harvest loss-

es including species of minor quality used for feeding (background grain, small potatoes etc.) excluding seedlings and saplings. Sugar beet harvest is given without reduction for impurities. The crop of green fodders is recalculated to the value of hay according to conversion coefficients. The total crop of vegetables represents vegetable production also from repeated areas includes forced early species.

Harvested areas of particular sorts of vegetables include areas where vegetable has been sown or planted as a main crop as well as all resowings and reseedings including covered areas.

The number of fruit trees includes all fruit trees regardless of age and shape namely bearing trees, newly planted ones or overaged, non bearing ones.

The survey on balance of cereals covers only the enterprises growing cereals. In an increase of cereals are included: own crop, purchase, imports and another incomes. In a decrease are included: the consumption of own seeds, sales of perquisites to their own members and employees, sales to the trading and processing organizations, exports, fodder consumption and others.

Consumption of fertilizers is surveyed without private plot owners for the economic period, i. e. from the July, 1 of the current year until the June, 30 of the next year.

In the **animal production** the category of cows, sows and ewes include the breeding ones that at least once calved, farrowed (without sows excluded from breeding and included in fattening). Poultry includes hens, cocks, geese, ganders, ducks, drakes, turkey hens, turkeys including young ones of these species.

Meat production includes the total volume of sales of slaughtered cattle, pigs, sheep and goats in live weight delivered to slaughterhouse increased by self-supply. In addition to the total sales, milk production includes self-supply and also milk that has been sucked or fed by calves. Production of sheep milk covers only milked sheep milk from incorporated agricultural enterprises and from selected private farmers with reporting duty.

Fishing includes live freshwater fish determined for consumption and market purposes.

Data on sale cover sales of incorporated agricultural enterprises and selected private farmers with reporting duty. Data on sales of all products are surveyed for a calendar year.

The **level of agriculture production** is calculated per area of agricultural or arable land determined by census of sown areas. The level of agriculture production per capita is calculated on the mid-year population at the surveyed year.

Oil plants group includes all oil plants except for flax and hemp seed. Group of slaughtered animals in total includes the production of slaughtered cattle, calves, pigs, sheep and goats.

The number of **farms by type and category of economic size** is from the Farm Structure Survey 2003, 2005 and 2007 processing. The farm's type and category of economic size was calculated only for units being in compliance with farm's criteria.

Definitions

Utilized agricultural land is the sum of independent kinds of lands, which were really exploited in growing season in agricultural production, for crop production. There are excluded unutilized and abandoned areas, previously agricultural used, no longer worked for social, economic, eventually other reasons and which are not used in crop rotation system, but it would be possible without extensive expenses cultivated them again.

Arable land is created by lands for growing cereals, root crops, industrial crops, vegetables and another horticultural crops according to the specified rotation of crops. There are included temporary grassland or parcels used for growing of perennial fodder crops as well as hotbeds and glasshouses if they are built up on arable land. Fallow land is arable land withdrawing from crop rotation and is leaved to recover on one growing season, during which time there was not seed another crops or just crops for green manure, eventually there is spontaneous vegetation, which may be used as feed or ploughed in.

Gross agricultural production is the sum of sales out of enterprise, internal turnover and changes in stocks at the beginning and at the end of year (Gross Turnover Method). It is calculated at natural units and in financial terms – at constant prices 2005 (data were recalculated in 2010) and at current prices.

Sown area refers to a spring productive area of arable land expected to bear a crop in the surveyed year. The following kinds of areas belong here:

a) areas of winter crop sown in autumn of the previous year and preserved until the completion of spring sowing in the surveyed year
b) areas of spring crop sown in spring of surveyed year
c) areas of perennial crops sown in past years and preserved until the completion of sowing in the surveyed year
d) areas that were not sown due to unfavourable climatic conditions as well as fallow land.

Hectare yield refers to average yield from 1 hectare and it is calculated as a ratio of total yield of given crop and area on which the crop was harvested.

The average annual milk yield expresses the volume of milked and sucked milk per one cow. It is calculated for average number of cows per year excluding cows without market milk production (meat breed cows, cull cows).

An average egg laying per one hen expresses the number of totally annual laid eggs recalculated per one hen.

Rearing of calves, pigs and lambs expresses the difference between live birth and dead young (including whole confiscation) for an average number of cows, sows and ewes.

Loss rate of calves and lambs is counted until the age of 3 months and of pigs until weaning.

Livestock unit is the weight of 500 kilograms for which individual farm animal species and their categories are recalculated.

In agricultural organizations permanent **employees** are those, whose job is a sole or a major activity in an agricultural organization and who has an employment contract including working conditions concluded for this purpose.

Type of farm reflects production orientation and it is determined by share of the individual branches and total standard gross margin of farm.

Standard Gross Margin (SGM) is average value of production from 1 ha or from 1 pc of animal minus variable costs spent on this production. It expresses gross profit produced per unit of production of individual sectors of crop and animal production.

ESU (European Size Unit) is applied to express the economic size of enterprise and it is defined by value 1 200 EUR.

Economic account for agriculture is the basic methodological instrument for performance rating on agriculture sector, or on agriculture primary production within the national economy. Following aggregates are the main part thereof:

– **output of the agriculture industry**, which express the value of agriculture products and agriculture services, produced by related units of that branches plus additional inseparable activities,
– **intermediate consumption** expressing the value of products, goods and services consumed in production process and serving as the one of the main indicator of production intensity of agriculture branch,

– **gross value added**, which express final effect of agriculture branch, is calculated by a subtraction of value of intermediate consumption from production of agriculture branch,
– **net value added** is value created by all agriculture units after deduction of fixed capital consumption.

Source

Published data are the result of the statistical surveys of the SO SR except data on meat production and apiculture taken from the Ministry of Agriculture and Rural Development of the SR, from the Slovak Association of Beekeepers and the Society of Beekeepers of Slovakia. Data on the consumption of fertilizers were taken from the Central Control and Testing Agricultural Institute. Economic accounts of agriculture are elaborated in cooperation with the Ministry of Agriculture and Rural Development of the SR.

More detailed information can be obtained in following publications: Animal Production and Sales of Farming Products from Primary Production and Balance of Crops, Selected Economic Indicators and Employees in Agriculture, Census of Area Sown with Crops as of May 20; Final Data on Crops, Harvest of Fruit and Vegetables, Register of Farm Animals, Machines and Equipment in Agriculture as of Dec. 31, Gross Turnover – Economic Account – Selected Indicators on Agriculture, Structure of Employees in Agriculture and Farm Structure Survey 2003 – Complete Results I. and II., Farm Structure Survey 2005, 2007 – Complete Results, Farm Typology 2003, 2005 and 2007.

17. Forestry

Methodological notes

The branch of **forestry** includes basic data on forest land structure in classification by category of forest and by management type, basic data on work in silviculture activities, on regeneration and protection of forests, basic data on logging activities and timber deliveries. The data are given for state forest enterprises, military forests enterprises, forests of industrial and farming companies, municipal forests and organizations covering private forests as well as land associations (land-registers, composesorates, cottar forests and other) including entities non-incorporated in the Business or the Trade Register.

Definitions

Timber land includes all lands covered by forest tree species serving for the fulfilment of forest functions and the lands on which the forest stands were temporarily removed with aim of their regeneration or establishment of forest nurseries or forest seed plantation.

Commercial forests are those, whose main purpose is a production of quality timber while ensuring other roles of the forest.

Protective forests include forest stands with prevailing protective functions. The aim of economy is to guard permanent filling of relevant ecological functions.

Forests for special purposes are those having functions resulting from specific important social needs by which is conducted the way of management.

Land designed for afforestation comprises the whole area designed for afforestation including land taken over to be afforested (former non-forest – mainly agricultural – land). Unsuccessful afforestation increment comprises areas of unsuccessful plantations in surveyed and previous years.

Afforestation stands for land actually afforested by sowing and planting (including established plantations). It comprises areas afforested for the first time as well as enrichment planting recalculated per area of full afforestation.

Plant production includes the number of plants taken from forest tree nurseries for afforestation and sale purposes in observed year.

Forest tree nursery is the land designed for the production of planting stock.

Cleaning is usually the first silviculture intervention in young immature stands.

Thinning includes mainly regulations of stand composition, shape tending and stand stabilization.

Logging includes logged mass of wood in thousand cubic metres under bark that was received as a final assortment or as a green trunk including logged mass from so called "self-production". The mass is included regardless of type of silviculture or logging interventions it was received from, including salvage felling. Self-production stands for volume of harvested timber left to the subject who felled it for a fee to cover self-supplying of inhabitants with fuel wood.

Timber deliveries comprise mass of wood (full-size timber, non full-size timber) in thousand cubic metres under bark designed for a sale to domestic and foreign customers and delivered for own consumption regardless of delivery place.

Source

Published data of selected indicators in forestry provides the National Forest Centre Zvolen.

Basic information on forestry can be obtained from annual publication of the Ministry of Agriculture and Rural Development of the Slovak Republic and the National Forest Centre in Zvolen – Report on Forestry in the Slovak Republic (Green Report).

Methodological notes

Industry includes activities connected with mining and quarrying; manufacturing; electricity, gas, steam and air conditioning supply; water supply, sewerage, waste management and remediation activities. It is divided according to the Statistical Classification of Economic Activities Rev. 2 (2008), ownership, size category by number of employees and by the Main Industrial Groupings.

Industrial production index (IPI) is calculated according to the methodology valid in the European Union on the base of the Standard on Short-term Indicators. IPI calculation is based on the change of selected products volume expressed in physical terms and on the two-step weight system. The index expresses a change of industrial production in current year in comparison with base year. Data for IPI calculation are fully-range surveyed for industrial enterprises enrolled in the Business Register with 20 and more employees, for selected industrial enterprises up to 19 employees and for selected enterprises with non-industrial main activity.

Production of selected industrial commodities is given in the aggregation of products according to the list of industrial products PRODSLOV, which is elaborated on the base of international classification of products PRODCOM.

Turnover is given without value added tax and excise duty.

Data on financial indicators are presented in the part Management of non-financial and financial corporations.

Definitions

Turnover non-domestic include the sale to a foreign customer that is realized by the manufacturing enterprise or by an intermediary organization. The sold products are transported directly from the store of the manufacturing enterprise abroad.

Industrial production index expresses the change of production volume given in physical terms.

Production of selected industrial commodities includes the products intended for sale outside the enterprise as well as those consumed for manufacturing purposes (i. e. intra-plant

consumption) and for industrial services (i. e. adaptations, repairs, maintenance, installation, contract treatment) and they are intended for outside sale.

Monthly labour productivity based on turnover is expressed by volume of the turnover per one employee in industry per month.

Source

All published data are the result of the statistical surveys of the SO SR.

More detailed information can be obtained in monthly publications Selected Indicators and Industrial Production Index; in publications Results of Quarterly Surveys in Industry of the SR and Production of Selected Goods; Results of Annual Surveys in Industry in the SR, Production and Sales of Selected Goods by Enterprises and Establishments and in the Yearbook of Industry.

Methodological notes

Data on energy sources have been taken from the producers, importers, exporters and fuel and energy traders. Data on use are obtained from statistical units consuming individual kinds of fuel and energy, from distributors and with calculations.

Balance of solid fuel includes hard coal, brown coal, coke, briquettes.

Balance of gaseous fuels includes natural gas, coke-oven gas, blast furnace gas, oxygen steel furnace gas.

Balance of crude oil and petroleum product includes crude oil, NGL, refinery feedstock, refinery gas, ethane, LPG, gasolines, diesel oil, fuel oils, lubricants, waxes, bitumenes, petroleum coke, other refinery products.

Balance of renewables and wastes includes wood, wood waste, other biomass, municipal solid wastes, biogas, industrial wastes (solid, liquid and gaseous). Hydroenergy and windenergy are involved in electricity balance and geothermal heat in heat balance.

Definitions

Gross inland consumption includes primary production (brown coal, lignite, crude oil, natural gas, heat and electricity) and it is modified by recovered products, by balance of imports and exports and by drawing of stocks. It also includes the balance of imports and exports and drawing of the other resources stocks such as hard coal, coke, brown-coal briquettes, diesel oil, gasolines, light and heavy fuel oils, kerosene and other solid, liquid and gaseous fuels.

Transformation – input is amount of fuels transformed to obtain derived fuels or electricity and a part of fuels consumed for heat production. The total amount of fuels used in public power, central heating plants and heat plants is reported. Autoproducer's fuel consumption for electricity production is reported. There is also included a part of fuels which corresponds to heat sold from autoproducer's central heating plants and heat plants production. Fuels which were used for autoproducer's heat production for own consumption is reported in energy sector or other sectors which covers autoproducer's main activity.

Transformation – output is amount of produced fuels and energy obtained by upgrading of other fuels and energy. Individual items of output meet items of transformation – input.

Exchanges and transfers, backflows are amount of products which were reclassified to feedstocks or to other products and amount of products returned from petrochemical industry for further processing.

Consumption of the energy sector are fuels used by the energy industry to support the mining (mining coal, oil and gas production) or transformation activity.

Distribution and transmission losses figure a difference between fuels and energy input into the long-distance transport systems (oil pipelines, gas-lines and public electricity and heat distribution) and output from them (intra-plant losses being a part of consumption are excluded). Well-founded losses caused by depreciation or destruction are included.

Final consumption is calculated like: gross inland consumption
– transformation – input
+ transformation – output
+ exchanges and transfers, backflows
– consumption of the energy sector
– distribution and transmission losses.

Final non-energy consumption is energy products used as raw materials in the different sectors, i. e. is not consumed as a fuel or transformed into another fuel.

Final energy consumption is final consumption minus final non-energy consumption.

Consumption of fuels and energy is consumption including charging and operational consumption in the process of generation of electricity and production of heat as well as in the fuel improvement processes. Electricity consumption also includes consumption of energy for pumping.

20. Construction

Methodological notes

The production of the construction branch covers construction production realized on the territory of the Slovak Republic and abroad by supplier construction enterprises with the major activity in the field of building and construction registered in the Slovak Republic (including self-employed persons) and by construction establishments of non-construction enterprises. Prevailing building and construction activity of the enterprise is determined by its registered appurtenance to divisions 41, 42, 43 of the Statistical Classification of Economic Activities SK NACE Rev. 2 (in historical data to section 45 of Branch Classification of Economic Activities NACE Rev. 1.1).

Data on contractually agreed inland construction production are divided by persons or organizations placing orders for construction works and new construction, reconstructions and modernisations are structured into particular branches of construction types by the Classification of Types of Constructions. Data on construction production carried out by own employees by the Statistical Classification of Products by activity CPA 2008 (in historical data in section 45 of the Classification of Production CPA) are divided by individual kind of construction activities.

Data are presented in methodology and organization structure of the current year, at current prices and constant prices converted on the average of 2005.

Definitions

Construction production carried out by own employees is the value of construction production realized by employees included in the registered number of employees of the given construction enterprise as well as by persons working with the enterprise upon contract (including productive work of apprentices). Also the production within own capital construction as well as production for other suppliers of construction production including production produced abroad are included.

Contractually agreed construction production is the value of construction production based on a delivery contract for a customer. It is the sum of own performances from construction activity including the production carried out by sub-supliers.

New construction, reconstructions and modernizations is the value of inland production connected with acquisition of the new tangible fixed assets and with rebuilding, extension or reconstruction of the existing ones.

Maintenance and repairs are the value of works realized on existing buildings or construction parts of tangible fixed assets removing partial depreciation or damage by repairs to make them functional.

Other construction production comprises all production that cannot be included in new construction, reconstructions, modernizations and repairs. It includes, for example, construction work for geological survey, removing of mined earth carried out by contractors and demolition work (in the site where another construction will not be erected instead), etc.

Workers carrying out construction work comprise employees (workers) from the average registered number of employees included in groups 7, 8, 9 of the Classification of Occupations who are involved fully or mainly in construction activities of the enterprise.

Average nominal monthly earning consists of basic (tarrif) wage set by wage rules including basic components of contracted wages and salaries for working overtime, payments for time not worked, monthly and long-term bonuses paid according to the performance and evaluation criteria, special premium payments for overtime, for the night work, work during Saturdays and Sundays, holidays, for environment damaging health, noise, risky and hard work, in-kind wages expressed in financial terms and other wages in the form of wage advantages which amount and periodicity are predetermined regardless to the situation in an enterprise.

Labour productivity is expressed as the amount of the construction production per one employee or worker engaged in construction work.

Source

All published data are the result of the statistical surveys carried out by the Statistical Office of the SR.

More detailed information can be obtained in monthly publication Construction Production, Employees and Wages in Construction Enterprises, in quarterly publication Stock of Orders and Financial Indicators of Construction Enterprises and in Yearbook of Construction.

Methodological notes

The branch of **internal trade** includes entrepreneurial subjects with the following prevailing activity:
– wholesale and retail trade and repair of motor vehicles and motorcycles,
– wholesale trade, except of motor vehicles and motorcycles,
– retail trade, except of motor vehicles and motorcycles.

Wholesale and retail trade and repair of motor vehicles and motorcycles includes all activities (except manufacture and renting) related to motor vehicles and motorcycles, including lorries and trucks. Excludes retail sale of automotive fuel and lubricating or cooling products.

Wholesale trade, except of motor vehicles and motorcycles include sale of new and used goods to next sale or processing, eventually wholesale on a fee or contract basis for commission. This division also includes usual manipulations involved in wholesale such as assembling, sorting and goods grading according to quality and size in large quantity, repacking, bottling, redistribution in lower quantity, storage, refrigeration, etc. Excludes wholesale of motor vehicles and accessories for motor vehicles.

Retail trade, except of motor vehicles and motorcycles includes sale of new and used goods, eventually own products to final consumer for personal or domestic consumption or utilization, realized mainly in units of retail network (i. e. shops, stands, department stores, petrol stations), and also consignment sale, hawkers etc. This division also includes retail sale of automotive fuel and lubricating or cooling products.

Accommodation and food service activities include entrepreneurial subjects with prevailing activity:
– accommodation,
– food and beverage service activities.

Accommodation comprise the provision of short-stay accommodation in the hotel type establishments, guest-houses (hotels, camping sites, youth hostels, tourist hostels and chalets, campuses, boarding houses, etc.).

Food and beverage service activities includes catering (nutrition, refreshment, eventually

social and entertaining activity) and activities of other specific purposes canteens (restaurants, fast food shoppings, buffets, confectioners, bars, nightclubs, beer parlors, winerooms, canteens, works, schools and students canteens, food production and deliveries, refreshment etc.).

Detailed classification all above mentioned activities is used by the Statistical Classification of Economic Activities.

Data on internal trade, catering and on hotels and restaurants are surveyed for incorporated legal persons and for natural persons running business on the base of the Trade Licence or another licence.

Data on retail network and on network of outlet centres of catering are surveyed for incorporated legal persons with 20 and more employees.

Definitions

Retail network consists of shops in which retail activity is carried out. Units of retail network are classified into assortment types by receipts in particular assortment (e. g. department stores, shopping centers, hypermarkets, general shops, supermarkets etc.).

Department store is retail unit, which forms a complex of selling departments under joint operation, concentrated in one object. Department store offers wide assortment of goods (minimum foodstuffs, clothing, consumer goods), generally also community feeding and complementary services. Minimal extent of selling area is 1 500 m^2, in rural areas exceptionally 1 000 m^2.

Shopping centres is wide-assortment retail unit, which provide sale at least of three basic assortment group of goods (foodstuffs, clothing, consumer goods) namely at least in two individual selling departments within one object. Selling departments have the same operator. Shopping centre has selling area greater than 250 m^2 and less than 1 000 m^2 (quantitative line 300, 600, 900 m^2), in cities exceptionally as many as 1 500 m^2.

Hypermarket (indoor help-yourself department store) is high density help-yourself retail unit, offering wide assortment of foodstuff and non-foodstuff goods in the form of selfservice. Hypermarket is characterized by selling area above 2 500 m^2 and accumulating payment (cash boxes are situated at exit from selling hall and no in individual selling departments, how is it at department store). Hypermarket is located in single till two-storied hall, generally away from core city.

General shop is shop offering wide assortment of foodstuff and non-foodstuff goods and is not possible expressly defined centre of assortment. The proportion of foodstuffs and non-foodstuff assortment is roughly acquited, it comes to this, that proportion of foodstuffs and non-foodstuff does not decrease in annual average below 40 % of turnover. The selling area of general shop is generally less than 1 000 m^2. Consumer's co-operatives in this assortment type show classic general shops with selling area 75, 100, 150 m^2.

Supermarket (big shop of foodstuff) is retail unit offered wide assortment of foodstuff goods, supplemented by non-foodstuff convenience goods. The supermarket selling area are moving between 400 up to 2 500 m^2. Selfservice with accumulating payment is prevailing form of sales (cash partitions enclose the selling areas). Moreover they have also sales with attendant at the specialized selling sections (e. g. delicacies, meat- smoked-meat products, fruit-vegetable, etc.). Houses of foodstuff (they belong to the foodstuff of wide assortment) and supermarkets within department store and shopping centres are excluded.

Immobile stalls are places of business with a separate place for goods and shop-assistant but not for customers. Petrol stations and car services have no selling area too. Units for sales of fuels and construction materials do not report their selling area if they have no sales room and they sell directly on storage area.

Receipts in manufacturing units of retail trade are presented in sale prices for year (including value added tax).

The network of outlet centres of catering consists of centres of catering providing catering services, social and entertaining activities as well as supplementary catering services. According to the period of operation the outlet centres are divided into year-round and seasonal ones. A seasonal unit operates less than 9 months during the year.

Receipts of outlet centres of catering are presented in sale prices for year (including value added tax).

22. Transport, Storage and Post Services

Methodological notes

The branch of transport includes entrepreneurial subjects providing services in the fields of public and non-public transport, post transport and financial services.

Public transport includes enterprises with transport as prevailing activity carrying out the inland or international transport of goods and passengers including supporting and auxiliary activities in the transport for external needs.

Data on public transport are for all incorporated transport enterprises and self-employed persons enrolled in Trade Register.

Road transport of goods includes transport of goods by all freight means of transport registered in Register of Vehicles in the Slovak Republic, realized for hire or reward and own account. Transport activity for own account includes the transport of goods for own production. Transport activity for hire or reward account is paid transport service according to the legal relationship based on the agreement between transport operator and natural or legal persons whom the transport of goods, another things will be realized for payment.

Transport of goods given in tons and performances given in ton-kilometres are surveyed according to the Classification of Goods in Transport NST 2007 which contains 20 commodity groups.

Roads and motorways are divided into roads I., II. and III. class expressways and motorways.

Local communications include data for local roads for class I. to IV. and they are surveyed once within five years.

City transport ensured by the branches of the city transport companies in Bratislava, Banská Bystrica, Košice, Prešov and Žilina. In other towns of the Slovak Republic the city transport is carried out by companies of the road passenger transport.

Inland waterway transport, air transport and railway transport is presented for all enterprises regardless of their prevailing activity given in the Business Register, including licences.

Definitions

Roads and motorways are connected line structure serving for transport connection between residence units and centres of inland or international value. Cross-roads, resting places, bridges and tunnels are included.

Local communications include all accessible and used streets, roads and public places excluded from roads and motorways network lying in built-up municipal areas or in areas intended to be built-up.

Other land transport includes road transport, the city transport and taxi.

Transport of goods expresses real mass of transported goods (load) realized by means of particular kind of transport by the communication. It is surveyed according to the commodity groups.

Performances in ton-kilometres present value of total transported performances in ton-kilometres carried out by freight transport means of particular kind of transport. They are calculated (tons x kilometres) for every journey individually.

Net ton-kilometres in railway transport express a net transport performance of locomotives by actually covered distance.

Gross ton-kilometres of traction in railway transport represent product of gross weight of train and train-kilometres in goods resp. passengers transport.

Loading expresses a mass of loaded goods intended for inland transport or exports. Loading as activity is the beginning of transport process realized by the agreement.

Average static load in railway transport is a ratio of loading in tons and number of loaded train units.

Transported passengers present the total number of transported persons in national or international transport.

Passenger-kilometres express the value of transport performances in passenger transport. One passenger-kilometre is equal to transport of one person per 1 kilometre distance.

Seat-kilometres express carriage capacity of city transport. This indicator is a product of vehicle driven kilometres and average vehicle capacity rate for every journey individually.

Post office is the independent postal establishment on determined place carrying out receiving and delivery service. Some post offices also provide clearing service.

Post Partner is a contact point, in which an eligible person is allowed to pick up a postal item based on agreement with provider of mandatory postal service.

Dispatched letter items are all kinds of items containing paper documents or tiny objects sent by post offices or by mail boxes.

Deposits of financial services include deposits sent by post cheques (cash or direct), international cheques, deposits for the Post Bank, telecommunication remittances, coupons and others.

Withdrawals of financial services express the number of paid inland and international post cheques, withdrawals for the Post Bank, withdrawals of pensions as well lottery prises.

Source

All published data are the result of the statistical surveys of the Statistical Office of the SR, except data on the length of roads, number of motor vehicles and performance data on posts, which are taken from the Ministry of Transport, Construction and Regional Development of the SR and from the Ministry of Interior of the SR.

More detailed information can be obtained in Yearbook of Transport, Posts and Telecommunications.

23. Information and Communication, Information Services

Methodological notes

The branch of **information and communication** includes enterprises registered in Business Register which provide publishing activities, motion picture, video and television programme production, sound recording and music publishing activities, programming and broadcasting activities, telecommunications, computer programming, consultancy and related activities.

The sectional survey on **information and communication technology** (ICT) included all enterprises registered in Business Register regardless of the main activity. The individual survey is realized in enterprises of banking and insurance. Information and communication technology data in households were surveyed through individual survey on ICT in households.

Definitions

Main telephone lines are subscriber lines as a set of technical facilities for the public telephone services access network in both fixed network of exchange termination of the relevant service nodes.

Mobile telephones are lines of public radiotelephone network (NMT – Nordic Mobile Telephone, GSM – Global System of Mobile Communication, UMT – Universal Mobile Telecommunications System), which call number is registered in the organization which operate public radiotelephone network NMT, GSM, UMTS.

Digital exchanges are devices with electronic structural members, digital changing of signals and automatic controlled connecting processes.

Internet is a complex computer network providing communication among public and private networks on different types of communication media and different technical platforms.

Intranet is internal communications network within the organization working on the base of transmitting protocols TCP/IP.

E-mail is electronic transmission of messages, including text and attachments, from one computer to another located within or outside of the organization.

Web-side is the network information service going out from Internet defined by the www address.

Source

All published data are the result of the statistical surveys of the Statistical Office of the SR, except performance data on telecommunications, which are taken from the Ministry of Transport, Construction and Regional Development of the SR.

More detailed information can be obtained in Yearbook of Transport, Posts and Telecommunications and in annual publications Survey on ICT Usage in Households and Survey on ICT Usage in Enterprises.

24. Selected Market Services

Methodological notes

Area of **selected market services** covers those entrepreneurial entities that provide paid services to enterprises and the population mainly in the field of real property, legal and accounting activities, activities of head offices and management consultancy activities, architectural and engineering activities and related technical consultancy, advertising and market research, other professional and technical activities, rental and leasing activities, employment activities, tourism, security and investigation activities, services to building and landscape activities, office administrative, office support and other business support activities, education (other education and educational support activities), creative, arts and entertainment activities, libraries, archives, museums and other cultural activities, gambling and betting activities, sports activities and amusement and recreation activities, repair of computers and personal and household goods, other personal service activities (such as laundry and dry-cleaning, hairstyling and cosmetic care, funeral services, body relaxation activities and other services prevailingly of personal character).

Data on selected market services include data for legal persons and data for natural persons.

Turnover for selected market services is surveyed without value added tax and is divided according to the Statistical Classification of Economic Activities. The number of enterprises includes only legal persons.

Definitions

Turnover for selected market services expresses the value of receipts from selling of own products, services and business goods realised in the reference period and specified for inland and foreign customers. The indicator includes receipts of enterprise from its all entrepreneurial activities.

Source

All published data are the result of the statistical surveys carried out by the SO SR.

More detailed information can be obtained in quarterly publication Basic Indicators of Selected Market Services.

Methodological notes

The activities of accommodation establishments and selected tourism services are surveyed within the framework of **tourism.**

Foreign visitors accommodated in the tourism establishments are surveyed by the country of residence.

Data on accommodation and tourism services have been obtained from statistical units entered in the Business Register and from natural persons entered in the Trade Register.

The region Vysoké Tatry is created by selected cadastral units of towns and municipalities in districts of Liptovský Mikuláš, Kežmarok and Poprad (town Poprad is introduced separately in the table 25–2.).

Names of the countries are used according to the ISO standard No. 3166.

Definitions

Accommodation establishments of tourism are those which provide temporary accommodation for visitors regularly or occasionally. They include hotels, boatels, motels, guest houses, apartment houses, tourist hostels, cottage camps, campsites, other collective accommodations and accommodation in private. Only complete cottage camps and campsites are considered to be as accommodation establishment but individual cottages, cabins or tents of provider are not.

Beds in accommodation establishments of tourism include all beds determined for overnight lodging of visitors including occasional beds. The beds intended for the owner and for stuff of accommodation establishment are excluded.

Places on free area are basic camp units for tents, tent and passenger car, caravans, motor caravan multiplied by 4. Four people can be accommodated per one camp unit.

A visitor in accommodation establishment of tourism is a person (except staff and owner) using services of temporary accommodation establishment regardless of country of permanent residence. Children are also included in the number of visitors. The visitor uses accommodation services for the reason of holiday, business trip, participation in sport event,

training, course, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Also accommodation of children in out-door schooling and in summer and winter holiday camps for children are included. Domestic and foreign employees working in Slovakia who use the accommodation establishment temporally as a hostel are not considered to be visitors. The period of temporary accommodation should not exceed 1 year.

Overnight stays of visitors in accommodation establishment of tourism express the number of overnight stays of visitors in accommodation establishment of tourism for certain time period.

Receipts for accommodation services include the receipts with value added tax obtained from overnight stays of visitors (domestic and foreign), receipts from setting of the tent, motor vehicle or caravan, connecting to electric network, etc., (regardless of the way of the payments for accommodation). Receipts from services relating to accommodation (e.g. washing and cleaning of laundry, using of bathroom, etc.) are also included. Receipts from services of personal character e.g. cosmetics, hairdresser's, manicure and chiropody services are excluded.

Foreign visitor accommodated in an accommodation establishment is a person who visits the country and is not the resident of the country. Children are also included in the number of visitors. Foreign visitor can use accommodation services for the reason of holiday, business trip, participation in sport event, training, course, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Exceptions are those persons who are coming to do a job, to prepare for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. The period of stay should not exceed 1 year.

Organized international tourism of the Slovak Republic includes inbound arrivals of foreign visitors to the SR (active tourism), outbound departures of Slovak residents abroad (passive tourism) organized by Slovak touroperators and travel agencies.

Inbound arrivals of foreign visitors to the Slovak Republic within organized international tourism of the SR represent number of arrivals of all foreign visitors – non-residents of the Slovak Republic (participants of active tourism) to the Slovak Republic for the purpose of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa, visit of friends or relatives, participation in church events, etc. and use services of organized tourism. Exceptions are those persons who are coming to do a job, to prepare for a profession

(a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. The period of stay should not exceed 1 year.

Departures of Slovak residents abroad within organized international tourism represent number of departures of Slovak residents (participants of passive tourism), who travel to abroad for the purpose of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa, visit of friends or relatives, participation in church events, etc. and use services of organized tourism. Exceptions are those persons who are travelling to do a job, to prepare for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. The period of stay should not exceed 1 year.

Stay days within of organized tourism include total number of stay days multiplied by number of persons participated in organized tourism (for all type of tourism as active, passive and domestic). In the case of one day visits (without night spent), the stay day is included only if the travel agency or the touroperator provided 2 type of services at least (for example: transport, boarding, guide services, inquiry services, sight-seeing etc.).

26. Management of Non-financial and Financial Corporations

Methodological notes

This chapter includes data on non-financial and financial corporations.

Non-financial corporations are incorporated entrepreneurial subjects running business to make profit in all branches of activity except banking and insurance. Subsidized organizations covering their expenditures by more than 50 % of revenues are also included. Those enterprises which are not corporations (households, self-employed persons, freelancers and farmers) are excluded.

Financial corporations are entities, which realize especially financial intermediation and supporting financial activities. The financial corporations sector includes the National Bank of Slovakia, commercial banks, financial leasing companies, exchange offices, asset management companies, commercial insurances, mutual funds, etc.

Definitions

Costs for particular period present the sum of costs on operation, financial transactions and extraordinary costs.

Profit/loss expresses the result of economic activity of reporting unit for the reference period. It is calculated as a subtraction of revenues from expenditures and has character of profit or loss. For statistical purposes it is given before taxation.

Liabilities express payment obligation of a debtor to domestic or foreign creditors. They express foreign investments for financing of current operation. Bank credits and short term-financial subsidies are excluded.

Turnover represents revenues from own products, services and revenues from merchandise, which are realized by enterprise for all its activities. Data are aggregated by main economic activity of enterprise and are without VAT and excise duties.

Source

Published data for the branch of non-financial and financial corporations are the result of the statistical surveys of the SO SR.

Methodological notes

In total number of **protected territories** are included all categories of protected territories of a nature and of a landscape: protected landscape areas, national parks, natural reserves, national natural reserves, natural monuments, national natural monuments and protected areas.

Some protected territories from categories natural reserve, national natural reserve, natural monument, national natural monument and protected area are also located in the area of protected landscape areas or national parks, therefore their area is included into the area of these categories, too.

Penalties for air pollution as well as in the sector of water management, waste management and nature protection are imposed on legal entities for breaking their duties provided by the relevant laws and administrative orders.

Environmental expenditures are financial resources spent in surveyed period on the erecting, purchase or provision of intangible and tangible fixed assets, used on protection of environment (i. e. protection of the air, waters, land and other factors of environment) as well as on the expenditures connected with this assets operation.

Intensity of **immission load** in interaction with ecological factors is expressed by zones of endangered forests – categories A, B, C:

Zone A comprises areas with a strong long-term load in the localities exposed to intensive air streams from immission sources (local and from long-distance pollutant transport).

Zone B includes areas under the same immission conditions as Zone A but under better ecological conditions in the localities partially protected against direct air streams from immission sources.

Zone C comprises areas under more favourable ecological conditions with a lower immission load.

Endangered zones are those parts of forest ecosystems where intensity of load together with ecological conditions and climatic factors causes their dynamic damages. Attributes of these zones are the level of immission load and longevity of stands of a specific species composition derived from the model for mature spruce stands.

Degrees of damage to stands are derived from the state of stands and are based on the

evaluation of defoliation and depigmentation of trees. A qualification scale of the international health monitoring is applied:

0 –Healthy trees, damage (0 – 10 %)
1 –Slightly damaged trees (10.1 – 25.0 %)
2 –Medium damaged trees (25.1 – 60.0 %)
3 –Heavily damaged trees (60.1 – 90.0 %)
4 –Dying and dead trees (90.1 – 100 %)

Abiotic injurious factors (drought, wind, snow) are important from the point of view of volume of salvage felling. Together with immissions produce conditions for further activation of biotic factors.

The most important biotic injurious factors are insect, vertebrate animals (mainly game animals) and fungal diseases.

Categorization of game to commercial and predacious animals is from practical point of view relative and is important mainly from economic standpoint. For this reason a notion of "predacious animals" started to be used under which belong individual game species (predators) that cause damage to commercial game (it is a component of the food chain). Division of game into furred and feathered one is a species division and is of biological importance.

Data on **xenobiotics** in foodstuff were received from records on individual cases during the reference year.

As a limit is defined the highest acceptable amount of xenobiotics in the given foodstuff; is determined by the Bulletin of the Ministry of Health of the Slovak Republic, Part 9 to 13, of July 15, 1996.

Values presented as average represent an average content of xenobiotics in concerning foodstuff calculated from individual contents.

Data on **waste** originating in the territory of the Slovak Republic are surveyed according to the Act No. 223/2001 Code of Acts, by the Decree No. 283/2001 Code of Acts and by the Decree No. 284/2001 Code of Acts.

The separate table shows the amount of municipal waste and similar waste not treated by municipality and which was produced in activities of legal or natural persons entitled to enterprising in particular branches of the economy of the SR.

Data on **emissions of major pollutants** by economic activities cover pollution of air by injurants produced by industry, energetics, agriculture, transport, housing and municipal

spheres. The quality of air depends on the level of emissions from individual sources of air pollution and is expressed as immissions monitored by individual monitoring stations.

Data on emissions for energetics and process combustion include data for emissions from process combustion and from stationary units for fuel combustion with thermal output of 0.2 to 5 MW which are the part of technological units.

Local heating facilities also include central heating with the output up to 0.2 MW.

Emissions from industrial technological processes are the sum of emissions from relevant technological processes and emissions from combustion processes which are the part of the source (boiler house).

Levels of emissions and weighted emissions in selected districts with largest specific emissions are only for stationary sources of pollution.

Levels of **immissions in selected localities** are assessed on the basis of a continual measurement done at individual monitoring stations.

Data on regional air pollution are presented for the four monitoring stations (Chopok, Liesek, Stará Lesná, Starina), which are the part of the European monitoring network EMEP.

Levels of **surface ozone** in selected monitoring station are assessed on the basis of the eight-hour concentration (time of measurement is from 9 a. m. to 5 p. m.). The target value for the protection of human health is 120 $\mu g/m^3$.

Regional pollution of precipitation informs on acidity and chemical composition of precipitation obtained from regional monitoring stations and from city station in Bratislava.

Water-supply and sewage systems include waterworks activities related to the administration and operation of water-supply and sewage systems, i. e. production and supplies of drinking water and drainage of sewage water and its purification.

Length of dikes protecting against flooding is measured in the axis of a dike and on each bank separately.

Values of individual pollutants drained off into the water courses are presented for the water companies as well as for the river-basin companies.

Values of the **water pollution** are shown for producers monitored by the water and sewage companies as well as river-basin ones.

Definition

Protected territory is geographically defined territory determined or controlled and administrated for the purpose to reach the specific aims of protection.

Current expenditures are the sum of internal and external environmental expenditures.

Hunting ground is continual hunting land up to 500 ha at least.

Xenobiotics in foodstuff are those that are not a natural component of foodstuffs and they are not characteristic for the given kind of foodstuff or their amount can have a negative impact on the human health.

Waste is an article, its owner wants to get rid of or moveable things, which must be removed from the point of view of care on proper living conditions and protection of environment.

Municipal waste is the waste originating in municipalities and is treated further by the municipality. Households waste and waste produced in activities of municipality, self-employed persons, transport, recreation and sport are included.

Mobile sources of air pollution are the road, railway, water and air transport equipment with explosion engine or other driving engines.

Stationary sources of air pollution are all the other sources emitting pollutants.

PM_{10} are dust particles with aerodynamic diameter of beads less than 10 μm.

Regional air pollution is a pollution of the atmosphere boundary layer in the countryside sufficiently far from the local industrial and urban sources. Injurants in this layer of the atmosphere are getting involved into the global circulation.

Dike is an inflating construction damming up the river-bed or, exceptionally, valley that serves for formation of a reservoir to get a permanent or temporary inflation of the water for various waterworks purposes.

Water reservoir is reservoir from which water offtake for public water supply is realized.

Controllable volume of water reservoirs is a total controllable capacity of reservoirs where it is possible, regardless of tributaries to the reservoir, to accumulate and to drain the water as necessary.

Retentive volume of water reservoirs is a controllable protective capacity of the reservoir.

Reserve volume of water reservoirs is a part of the total reservoir capacity that serves for improving flow and for securing water taking in drought areas.

Area endangered by floods includes the area that is endangered by the high water. High

water is 10 years old water (Q 10) and 100 years old water (Q 100). We give approximate figures.

Area protected against floods includes the area that would be flooded because of higher flows of the water in water-courses in case that the retentive volume of reservoirs, adjustments to water courses or protecting dikes were not built.

Production of drinking water includes total amount of drinking water produced in own watermanagement facilities under the administration of water companies and municipalities after adding an amount of drinking water taken from other watermanagement organizations or from other water suppliers (legal persons) and after subtracting an amount of drinking water delivered free of charge to watermanagement organizations.

Invoiced water includes the amount of drinking water sold to direct customers.

Non-invoiced water includes losses of the water in the pipe network, own water consumption or possible free water supplies, e. g. for fire protection purposes.

Waste water treatment plants are facilities purifying sewage water, applying mechanical and biological way of purification or the so-called third stage of purification applying mechanical and biological additional purification. Waste water treatment plants do not include facilities for rough pre-purification of waste water (sand-traps, oil-traps, etc.), septic tanks, cesspools and simple facilities that are not observed and served regularly.

Suspended solid pollutants are substances determined by water filtration and dehydration of the rest (on filter) at 105 °C to constant weight.

Oil pollutants are the substances extracted from water excluding polar substances that can be separated from the extract by a standard way.

Biochemical oxygen demand (BOD) is the volume of oxygen consumed in aerobe biochemical decomposition process of organic compounds present in the water for the period of 5 days at standard conditions.

Chemical oxygen demand (COD) is a consumption of oxygen (O_2) by dichromate method.

Source

Data on protected territories and national parks are provided by the Ministry of Environment of the SR. Data on hunting ground, hunting and spring stock of game are taken from materials of the Ministry of Agriculture and Rural Development of the SR. Further information can be obtained in these organizations.

Data on municipal waste and environmental expenditures are the results of the statistical survey of the SO SR. Data on waste in the economy of the SR are taken from administrative sources of the Ministry of Environment of the SR. More detailed information can be obtained in the publication Waste in the Slovak Republic and Environment in the Slovak Republic.

All data on air quality are taken from the Slovak Hydrometeorological Institute.

Data on water management are obtained from the surveys carried out by the SO SR and data on water quality are taken from the Slovak Hydrometeorological Institute and from the Public Health Authority of the SR.

More detailed information can be obtained in the organizations mentioned above.

Methodological notes

Research and development (R&D) surveys are realized by legal and natural persons in which research and development is their prevailing activity, as well as legal and natural persons whose prevailing activity is different from research and development, but their R&D potential calculated to the full time equivalent (FTE) is equal at least to one man/year.

R&D activities include basic research, applied research and experimental development.

Methodology and content of R&D statistics is comparable with international statistics of the European Union.

Industrial legal protection statistics contains patents, utility models, designs and trademarks.

Surveys methodology about **innovation** in the SR is harmonized with EU countries. The surveys were realized as a sample surveys in enterprises with 10 and more employees in industry and selected services. Selective sample included approximately one third from total number of enterprises in the given branches and size classes of enterprises.

Data are presented in the prices and by methodology of the current year.

Definitions

R&D personnel includes persons employed directly in the field of research and development as well as persons providing direct services to research and development. Pedagogical staff at higher education institutions who within the framework of their work to a certain extent participate in research and development are also included.

Category of “researchers” comprises employees essentially important to the creation and social use of the scientific knowledge.

Technicians and equivalent personnel include employees participating in research projects by performing scientific and technical tasks usually under the supervision of researchers.

Supporting staff includes qualified and non-qualified workers, secretaries and other employees participating in the work on R&D projects. There are also included other managers and

administrative workers dealing with personnel and financial matters whose activities are qualified as a direct service supporting research.

Expenditures on research and development comprise total amount of expenditures spent in organization on R&D activities, i. e. they are internal expenditures. Expenditures spent out of the organization include only those serving for support to the internal research and development (for instance purchase of equipment for R&D. Depreciation of buildings, machines and equipment is excluded from statistical observation of internal expenditures on R&D.

Capital expenditures are resources for supplying tangible and intangible property. Lands and buildings are expenditures on lands obtained for R&D needs (e.g. industrial lands, location for laboratories, semi-operational facilities) and buildings obtained by construction or purchase, expenditure for reconstruction or modernization of buildings etc. Machines and equipment are expenditure on machines and equipment obtained for R&D needs (e.g. machines, computers with software etc.).

Current expenditures comprise costs of own activities of organizations and workplaces for research and development and costs for tasks solved by the own capacity of organization and workplace. (It is a sum of operational and financial costs related to R&D activities).

Patent is a protective document granted by the state giving the patent proprietor the exclusive right for exploitation of his invention during the fixed period. According to the Act No. 435/2001 Code of Acts on patents, supplementary protection certificates and on amendment of other acts in wording of later regulation (The Patent Act), patents shall be granted for inventions which are new, involve an inventive activity and are susceptible of industrial application after performing preliminary and substantive examination.

Classification of inventions by subject is based on the International Patent Classification.

Utility model is a form of protection of new technical solutions which are results of an inventive activity from any technical field (not comply with the strict terms for the granting of a patent). Rights and obligations from creation and application of utility models is governed by the Act No. 517/2007 Code of Acts on utility models and on amendment of some acts in wording of the Act No. 495/2008 Code of Acts.

Design shall mean the appearance of a whole or a part of a product resulting from the features of, in particular, the lines, contours, colours, shape, texture or materials of a product itself or its ornamentation. Applications of designs must meet, according to the Act No. 444/2002 Code of Acts on designs, formal and substantive requirements. Among the basic requirements

for the registration of design into the Register and certification belong the novelty and specific character of design.

Trademark is verbal, figurative, three-dimensional or combined sign which is capable of distinguishing goods and services on the market. The Act No. 506/2009 Code of Acts on trademarks defines the conditions for the so-called registrability of a trademark and specifies in details the exclusions from registration as well as the signs that cannot serve as a trademark. For example, signs devoid of any distinctive character, indications containing official names of states, signs that designate the kind of goods or services, well-known geographical indications, deceptive denominations, signs identical with a trademark already registered for another person for identical goods or services.

The new definition of innovation based on the revised Oslo manual methodology (third edition, 2005) includes four types of innovation: product innovation, process innovation, organisational innovation and marketing innovation. According to the previous edition of the Oslo manual (1997), innovation covered product innovation and process innovation only. In order to preserve the continuity with the previous definition, the term of **technological innovation** is used for the sum of product innovations and process innovations; the term of **non-technological innovation** is used for the sum of organisational innovations and marketing innovations.

Innovation is a new or significantly improved product (good, service) introduced to the market or introduction of a new or significantly improved process within an enterprise or introducing of new organisational or marketing methods. Innovations are based on the results of new technological developments, new combinations of existing technology or the utilization of other knowledge acquired by the enterprise. Innovations may be developed by the innovating enterprise or by another enterprises; however purely selling innovation wholly produced and developed by other enterprises is not included as an innovation activity. Innovations should be new to the enterprise concerned; for product innovations they do not necessarily have to be new to the market and for process innovations the enterprise does not necessarily have to be the first to have introduced the process.

Product innovation was realized when a product (good, service) which is new or significantly improved with respect to their fundamental characteristics, technical specifications, incorporated software or other immaterial components, intended uses or user friendliness. Changes of a solely aesthetic nature and pure sale of product innovations wholly produced and developed by other enterprises are not included.

Process innovation includes new or significantly improved production technologies or new

and significantly improved methods of supplying services and delivering products. The outcome of such innovations should be significant with respect to the level of output, quality of products or costs of production and distribution. Purely organizational or managerial changes are not included.

Organisational innovation is the implementation of a new organisational method in the firm's business practices, workplace organisation or external relations in order to improve use of knowledge in the firm, to improve the quality of products and services or increase efficiency of workflows.

Marketing innovation is the implementation of a new marketing concept or strategy involving significant changes in product design or packaging, product promotion, product placement or pricing.

Enterprises with innovation activity are enterprises that have had any kind of innovation activity during the surveyed period, i.e. have introduced new products or processes or have had on-going or abandoned innovation activity or have introduced new organisational or marketing methods.

Source

Published data on R&D and on innovations are the result of the statistical survey of the SO SR. Data on industrial legal protection are kept by the Statistical Office of the SR from the informational system of the Industrial Property Office of the SR.

More detailed information can be obtained from annual publications Yearbook of Science and Technology and from monothematic publication Innovation Activity of Enterprises in the Slovak Republic.

T 28–15. Inovačná činnosť podnikov
Innovation activity of enterprises

Ukazovateľ	2004	2006	2008	Indicator
Podiel podnikov s inovačnou činnosťou na celkovom počte podnikov podľa veľkostných skupín v SR spolu (%)				**Share of enterprises with innovation activity on total number of enterprises by size classes – SR total (per cent)**
všetky podniky	21,1	22,7	33,6	All enterprises
podniky s 10 – 49 zamestnancami	14,9	17,4	29,3	Enterprises with 10 – 49 employees
podniky s 50 – 249 zamestnancami	32,7	31,8	46,6	Enterprises with 50 – 249 employees
podniky s 250 a viac zamestnancami	57,4	56,6	67,9	Enterprises with 250 and more employees
Podiel podnikov s inovačnou činnosťou na celkovom počte podnikov podľa druhu inovácií v SR spolu (%)				**Share of enterprises with innovation activity on total number of enterprises by type of innovation – SR total (per cent)**
všetky druhy inovácií spolu[1)]	21,1	22,7	33,6	All kind of innovations – total[1)]
technologické inovácie	21,1	22,7	19,9	Technological innovations
inovácia produktu (len)	3,7	5,0	3,8	Product innovation only
inovácia procesu (len)	7,1	8,1	6,5	Process innovation only
inovácia produktu a procesu	9,2	8,6	8,6	Product and process innovation
nedokončené alebo zastavené inovačné aktivity (len)	1,1	1,0	1,0	Ongoing or abandoned innovation activities only
netechnologické inovácie	10,3	15,1	13,7	Non-technological innovations
bez inovačnej aktivity	78,9	77,3	66,4	Without innovation activity
Podiel podnikov s inovačnou činnosťou na celkovom počte podnikov v priemysle a vybraných službách (%)				**Share of enterprises with innovation activity on total number of enterprises in industry and selected services (per cent)**
priemysel	26,9	26,8	37,0	Industry
služby	17,9	22,0	35,1	Services
Podiel výdavkov na inovácie z celkových tržieb inovujúcich podnikov podľa veľkostných skupín v SR spolu (%)				**Share of innovation expenditure on total turnover of innovative enterprises by size classes – SR total (per cent)**
všetky podniky	3,1	2,9	1,2	All enterprises
podniky s 10 – 49 zamestnancami	3,3	3,2	1,4	Enterprises with 10 – 49 employees
podniky s 50 – 249 zamestnancami	2,7	6,6	1,9	Enterprises with 50 – 249 employees
podniky s 250 a viac zamestnancami	3,2	2,1	1,0	Enterprises with 250 and more employees
Podiel výdavkov na inovácie z celkových tržieb inovujúcich podnikov v priemysle a službách (%)				**Share of innovation expenditure on total turnover of innovative enterprises in industry and services (per cent)**
priemysel	2,8	2,8	1,3	Industry
služby	4,2	3,5	1,1	Services

[1)] netechnologické inovácie sa do roku 2006 nezapočítavali do inovačnej činnosti

[1)] Non-technological innovations were not included into innovation activity up to the year 2006

29. Criminality and Justice

Methodological notes

Data on **criminality** are obtained from the Registration Statistical System of Criminality kept by the Police Force of the Slovak Republic. Data on crime incidents and data on known perpetrators (persons under investigation) are registered in the system.

The statistical tables also contain data registered by the Railway Police, the Military Police, the Corps of Prison and Court Guard, and the Customs Directorate. Data about proceedings and court decisions are obtained from the Ministry of Justice of the Slovak Republic.

Definitions

Criminal offence is a wrongful act with characteristics defined in the Penal Code.

Murder is a criminal offence by which the perpetrator intentionally kills another person.

Robbery is a criminal offence of taking or attempting to take something owned by another person with violence or threat of immediate violence.

Battery is a criminal offence of intentionally causing damage of health to another person with a consequence of disability to work for at least 7 calendar days.

Habitual offender is a person who has repeatedly committed the same criminal offence.

From the justice statistics point of view **habitual offender** is a person on whom the sentence was passed by the court taking into account his/her previous conviction as an exacerbating circumstance.

Children and juveniles are persons under the age of 18, while juveniles are those already in the age of criminal responsibility, thus 14 years and older.

Property crimes are mainly thefts (from person, burglary, motor vehicle theft etc.), but also acts of damaging property.

Violent crimes include criminal offences such as murder, robbery, battery, making threats, kidnapping, maltreatment etc.

Moral crimes are offences such as rape, sexual abuse, child pornography, and procuring.

Other crimes are for example production of illicit drugs, riot, obstruction of official decisions, etc.

Economic criminality is a specific kind of criminality, which causes economic damage to the country, to legal entities, and to individuals. Crimes such as embezzlement, fraud, credit card fraud, consumer fraud, and bribery, but also pollution of environment and poaching fall between economic crimes.

Another crimes include for example avoidance of alimony payments, medical malpractice, traffic accidents, cruelty to animals etc.

Military crimes are related to crimes such as disobeying order or avoiding service duties, but they also include crimes against national security, republic, peace, etc.

Cases mean cases registered in a particular register and being on the agenda at courts. One case may involve more persons.

Criminal cases are cases being on the agenda at courts on the basis of charges ceded to the courts by the prosecutor's office, within which the decisions on guilt, punishment, protective measures and compensation of damages caused by the criminal activity are made.

Fill is the total number of criminal cases that entered the courts during the calendar year; or cases registered in a particular register as a consequence of application of revisions. In civil cases and in cases of care for minor children, fill represents the number of proposals that were recommended to the court to be dealt with, and were registered by the court.

The main part of **civil cases** consists of cases regulated by the Civil Code, the Act on Family, the Act on Land and by the Labour Code.

Settled is the total number of cases completed within the calendar year by legal decision on conviction, acquittal, abolition of the criminal prosecution or conveying to another body.

Unsettled is the number of cases that were not legally completed for some reason in the course of the calendar year. The data always refers to December 31 of the given year.

Sued person is a person accused of a specific crime, if competent bodies started criminal charge. On the prosecutor's motion a written order of a judge may be issued to detain the sued person in **custody** for purposes of criminal proceedings. The total duration of pre-trial detention cannot exceed a specific period, which depends on the seriousness of the offense.

Defendant is a person against whom a legal action was brought by the prosecutor.

Convict is a person on whom a sentence was passed that came into force.

Sentence without suspension is sentence to imprisonment in penitentiary institutions administered by the Ministry of Justice of the Slovak Republic.

Suspended sentence is sentence to imprisonment that is suspended for a specific period

of probation, which may last up to 5 years. Imprisonment may be suspended only if the sentence does not exceed 2 years.

Banned profession means forbidding a person to operate in a certain occupation, profession, function or activity. The duration of this sentence is limited to the period of 1 to 10 years.

In addition to the duration of a sentence to imprisonment without suspension the court imposes also the **rank of patrol**. Convicts enter correctional groups form I. to III. according to the seriousness of the committed crime. The higher is the rank of the reformatory and correctional group, the smaller is the extent of the rights of the convicts and the larger is the extent of their limitation.

Sources

The source of statistical data on crime is the administrative system of the Ministry of Interior of the Slovak Republic. Data on justice is acquired from materials of the Ministry of Justice of the Slovak Republic.

More detailed information can be found in an annual publication called Selected Indicators on Criminality and Frequency of Fires or it may be provided by the above mentioned ministries.

Methodological notes

Killed persons are persons who died in the place of the accident (or in the place of fire), or when being transported to hospital, or within 24 hours after the accident.

Material loss is the extent of damage registered by the police on the basis of the loss indicated by parties involved in the accident. Since 2009 it has been obligatory only to report those accidents with damage (loss) exceeding 3 990 EUR. Road traffic accidents with lower damage and without death or injury of persons need not be reported to the police.

Direct material loss is the sum of losses calculated from estimated residual value of tangible fixed assets, materials and other means destroyed by the fire.

Values saved is the sum of values of tangible fixed assets and other values that were rescued from fire.

Evacuated persons (animals) indicates the number of persons (animals) that were evacuated before flood from the area, where the flood was expected to expand.

Rescued persons (animals) indicates the number of persons (animals) who found themselves in direct danger of an already expanded flood, and were saved.

Sources

The source of statistical data on traffic accidents and natural disasters is the Ministry of Interior of the Slovak Republic, the Ministry of Environment of the Slovak Republic, the Presidium of Fire and Rescue Corps and its section the Institute of Fire Technics and Expertises.

More detailed information can be found in an annual publication called Selected Indicators on Criminality and Frequency of Fires or it may be provided by the above mentioned institutions.

Methodological notes

The data are taken from the sources below.

Starting from the year 2004, Statistical Office of the Slovak Republic provides its users selected indicators in which uniform methodology of compilation for international comparisons is ensured. Included among them are especially structural indicators compiled by Eurostat from national statistics.

Source of data is mentioned below the tables.

Definitions

Life expectancy at a specific age (expectation of life) is the mean number of additional years a person of that age could expect to live if current mortality rates were to continue.

Education attainment level expresses the share of the people aged 25 – 64 having completed at least upper secondary education from the total population of the same age group.

Employment rate expresses a share employed persons aged 15 – 64 from the total population of the same age group.

Employment rate of older workers means employed persons aged 55 – 64 as share of the total population of the same age group.

Unemployment rate is presented by the labour force sample survey (methodology of the International Labour Organization ILO).

Long-term unemployment rate is defined as share of the unemployed for 12 months and more in the economically active population.

The volume index of **gross domestic product per capita in purchasing power standards** is expressed in relation to the European Union average set to equal 100 (EU 27 = 100).

The calculation of the annual **growth rate of GDP** volume is intended to allow comparison of the dynamics of economic development both over time and between economies of different sizes.

For measuring the growth rate of GDP in terms of volumes, the GDP at current prices are valued in the prices of the previous year and the thus computed volume changes are imposed

on the level of a reference year, this is called a chain-linked series. Accordingly, price movements will not inflate the growth rate.

Gross domestic expenditures on research and development are consequently composed of: business enterprise expenditures, higher education expenditures, government expenditures and private non-profit expenditures.

Total **emissions** of six **greenhouse gases** listed in the Kyoto Protocol converted into an aggregate value using CO_2 equivalents and expressed by means of indices as a percentage change since the base year of 1990 (i. e. index 1990 = 100). The indicator is compiled to monitor the fulfilment of the targets to reduce the emissions according to the Kyoto Protocol and the Council Decision for the years 2008 to 2012.

The indicator **energy intensity of the economy** is the ratio between the gross inland consumption of energy and the gross domestic product for a given calendar year. It measures the energy consumption of an economy and its overall energy efficiency. The GDP figures are taken at constant prices to avoid the impact of the inflation, with base period 1995 (ESA 95).

Comparative price levels are the ratio between purchasing power standards and market exchange rate for each country. The ratio is shown in relation to the EU average (EU 27 = 100). If the index of the comparative price levels shown for a country is higher (lower) than 100, the country concerned is relatively “expensive” (“cheap”) as compared with the EU average.
