

Annual Abstract of Statistics

No 145 2009 Edition

Editor: Ian Macrory Office for National Statistics

ISBN 978-0-230-57609-4

ISSN 0072-5730

A National Statistics publication

National Statistics are produced to high professional standards as set out in the Code of Practice for Official Statistics. They are produced free from political influence.

Not all of the statistics contained in this publication are National Statistics because it is a compilation from various data sources.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy which provides evidence for policy and decision-making and in the allocation of resources.

The Director of ONS is also the National Statistician.

Palgrave Macmillan

This publication first published 2009 by Palgrave Macmillan.

Palgrave Macmillan in the UK is an imprint of Macmillan Publishers Limited, registered in England, company number 785998, of Houndmills, Basingstoke, Hampshire RG21 6XS.

Palgrave Macmillan in the US is a division of St Martin's Press LLC, 175 Fifth Avenue, New York, NY 10010.

Palgrave Macmillan is the global academic imprint of the above companies and has companies and representatives throughout the world.

Palgrave [®] and Macmillan [®] are registered trademarks in the United States, the United Kingdom, Europe and other countries.

A catalogue record for this book is available from the British Library.

^{*} This publication contains a mixture of 'National Statistics' and 'Other Official Statistics'. Statistics accredited as 'National Statistics' (NS) are fully compliant with the Code of Practice for Official Statistics and carry the National Statistics Kitemark. Statistics labelled as 'Other Official Statistics' (Non NS) follow many of the best practice principles set out in the Code but have not been accredited as fully compliant.

Contributors and acknowledgements

The editor would like to thank the following people for their help in producing this book:

Production team: Angela Collin

Marc Evans

Tammy Powell

Dilys Rosen

Andrew White

Contributors

The Editor also wishes to thank all his colleagues in ONS, the rest of the Government Statistical Service and all contributors in other organisations for their generous support and helpful comments, without whose help this publication would not be possible.

 = 8 pints
 = 4.546 litres

 1 bulk barrel
 = 36 gallons (gal.)
 = 1.637 hectolitres

Weight

1 gram (g) = 0.03527 ounce avoirdupois 1 hectogram (hg) = 100 grams = 3.527 ounces or 0.2205 pound

1 kilogram (kg) = 1,000 grams or 10 hectograms = 2.205 pounds

1 tonne (t) = 1,000 kilograms = 1.102 short tons or 0.9842 long ton

1 ounce avoirdupois (oz.)= 437.5 grains= 28.35 grams1 pound avoirdupois (lb.)= 16 ounces= 0.4536 kilogram1 hundredweight (cwt.)= 112 pounds= 50.80 kilograms

1 short ton = 2,000 pounds = 907.2 kilograms or 0.9072 tonne 1 long ton (referred to as ton) = 2,240 pounds = 1,016 kilograms or 1.016 tonnes

1 ounce troy = 480 grains = 31.10 grams

Energy

British thermal unit (Btu) = 0.2520 kilocalorie (kcal) = 1.055 kilojoule (kj)Therm = 105 British thermal units = 25,200 kcal = 105,506 kj

Megawatt hour (MWh) = 106 watt hours (Wh)

Gigawatt hour (GWh) = 106 kilowatt hours = 34,121 therms

Food and drink

Butter 23,310 litres milk = 1 tonne butter (average)
Cheese 10,070 litres milk = 1 tonne cheese

Condensed milk 2,550 litres milk = 1 tonne full cream condensed milk 2,953 litres skimmed milk = 1 tonne skimmed condensed milk

Milk 1 million litres = 1,030 tonnes

Milk nowder 8 054 litres milk = 1 tonne full cr

Milk powder 8,054 litres milk = 1 tonne full cream milk powder 10,740 litres skimmed milk = 1 tonne skimmed milk powder Eggs 17,126 eggs = 1 tonne (approximate)

Eggs 17,126 eggs = 1 tonne (approximate)
Sugar 100 tonnes sugar beet = 92 tonnes refined sugar
100 tonnes cane sugar = 96 tonnes refined sugar

Shipping

Gross tonnage = The total volume of all the enclosed spaces of a vessel, the unit of measurement being a 'ton' of 100 cubic

Deadweight tonnage = Deadweight tonnage is the total weight in tons of 2,240 lb. that a ship can legally carry, that is the total weight

of cargo, bunkers, stores and crew

Introduction

Introduction

Welcome to the 2009 edition of the *Annual Abstract* of *Statistics*. This compendium draws together statistics from a wide range of official and other authoritative sources. Their help is gratefully acknowledged.

Regional information, supplementary to the national figures in *Annual Abstract*, appear in *Regional Trends*. The latest edition of *Regional Trends* is available electronically on the Office for National Statistics Website free of charge. This can be accessed at: www.statistics.gov.uk/regionaltrends41. Earlier editions are available via Palgrave Macmillan.

Current data for many of the series appearing in this Annual Abstract are contained in other ONS publications, such as *Economic & Labour Market Review, Population Trends, Health Statistics Quarterly and Financial Statistics*. All are published by Palgrave Macmillan.

Other Office for National Statistics (ONS) publications which contain related data are the *Monthly Digest of Statistics* and *Social Trends*, these are also published by Palgrave Macmillan or can be found directly at:

www.statistics.gov.uk/statbase/Product.asp?vlnk=611

www.statistics.gov.uk/socialtrends39/

The name (and telephone number, where this is available) of the organisation providing the statistics are shown under each table. In addition, a list of Sources is given at the back of the book, which sets out the official publications or other sources to which further reference can be made.

Identification codes

The four-letter identification code at the top of each data column, or at the side of each row is the ONS reference for this series of data on our database. Please quote the relevant code if you contact us requiring any further information about the data. On some tables it is not possible to include these codes, so please quote the table number in these cases.

Definitions and classification

Time series

So far as possible annual totals are given throughout, but quarterly or monthly figures are given where these are more suitable to the type of series.

Explanatory notes

Most sections are preceded by explanatory notes which should be read in conjunction with the tables. Definitions and explanatory notes for many of the terms occurring in the *Annual Abstract* are also given in the *Annual Supplement to the Monthly Digest of Statistics*, published in the January edition. Detailed notes on items which appear in both the *Annual Abstract* and *Financial Statistics* are given in an annual supplement to the latter entitled *Financial Statistics Explanatory Handbook*. The original sources listed in the Sources may also be consulted.

Standard Industrial Classification

A Standard Industrial Classification (SIC) was first introduced into the UK in 1948 for use in classifying business establishments and other statistical units by the type of economic activity in which they are engaged. The classification provides a framework for the collection, tabulation, presentation and analysis of data about economic activities. Its use promotes uniformity of data collected by various government departments and agencies. Since 1948 the classification has been revised in 1958, 1968, 1980, 1992, 2003 and 2007. One of the principal objectives of the 1980 revision was to eliminate differences from the activity classification issued by the Statistical Office of the European Communities (Eurostat) and entitled 'Nomenclature générale des activités économiques dans les Communautés Européennes', usually abbreviated to NACE. In 1990 the European Communities introduced a new statistical classification of economic activities (NACE Rev 1) by regulation. The regulation made it obligatory for the UK to introduce a new Standard Industrial Classification SIC(92), based on NACE Rev 1. UK SIC(92) was based exactly on NACE Rev 1 but, where it was thought necessary or helpful, a fifth digit was added to form subclasses of the NACE 1 four digit system. Classification systems need to be revised periodically because, over time, new products, processes and industries emerge. In January 2003 a minor revision of NACE Rev 1, known as NACE Rev 1.1, was published in the Official Journal of the European Communities.

Consequently, the UK was obliged to introduce a new Standard Industrial Classification, SIC(2003) consistent with NACE Rev 1.1. The UK took the opportunity of the 2003 revision also to update the national Subclasses. Full details are available in UK Standard Industrial Classification of Economic Activities 2003 and the Indexes to the UK Standard Industrial Classification of Economic Activities 2003. These are the most recent

Introduction

that are currently used. The most up to date version is the UK Standard Industrial Classification of Economic activities 2007 (SIC2007). It will be implemented in 5 stages and came into effect on 1 January 2008.

- For reference year 2008, the Annual Business Inquiry (parts 1 & 2) will be based on SIC 2007
- PRODCOM will also be based on SIC 2007 from reference year 2008
- Other annual outputs will be based on SIC 2007 from reference year 2009, unless otherwise determined by regulation
- Quarterly and monthly surveys will be based on SIC 2007 from the first reference period in 2010, unless otherwise determined by regulation
- National Accounts will move to SIC 2007 in September 2011

ONS is currently working on a detailed implementation plan for the introduction of the new classification, covering all of our surveys and outputs.

For further information see:

www.statistics.gov.uk/statbase/Product.asp?vlnk=14012

Revisions to contents

Some of the figures, particularly for the latest year, are provisional and may be revised in a subsequent issue of the *Annual Abstract*.

Symbols and conventions used

Change of basis

Where consecutive figures have been compiled on different bases and are not strictly comparable, a footnote is added indicating the nature of the difference.

Geographic coverage

Statistics relate mainly to the UK. Where figures relate to other areas, this is indicated on the table.

Units of measurement

The various units of measurement used are listed after the Contents.

Rounding of figures

In tables where figures have been rounded to the nearest final digit, the constituent items may not add up exactly to the total.

Symbols

The following symbols have been used throughout:

- .. = not available or not applicable (also information supressed to avoid disclosure)
- = nil or less than half the final digit shown

Office for National Statistics online: www.ons.gov.uk

Web-based access to time series, cross-sectional data and metadata from across the Government Statistical Service (GSS), is available using the site search function from the homepage. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents or in XLS and CSV formats, compatible with most spreadsheet packages. Complete copies of this publication are available to download free of charge on the following web page: www.statistics.gov.uk/statbase/product.asp?vlnk=94

Contact point

The ONS welcomes any feedback on the content of the *Annual Abstract*, including comments on the format of the data and the selection of topics. Comments and requests for general information should be addressed to:

July 2009

Area

Chapter 1

Area

The UK comprises Great Britain and Northern Ireland. Great Britain comprises England, Wales and Scotland.

Physical Features

The UK constitutes the greater part of the British Isles. The largest of the islands is Great Britain. The next largest comprises Northern Ireland and the Irish Republic. Western Scotland is fringed by the large island chain known as the Hebrides, and to the north east of the Scottish mainland are the Orkney and Shetland Islands. All these, along with the Isle of Wight, Anglesey and the Isles of Scilly, form part of the UK. The Isle of Man, in the Irish Sea, and the Channel Islands, between Great Britain and France, are largely self-governing and are not part of the UK. The UK is one of the 27 member states of the European Union following the accession of Bulgaria and Romania on 1 January 2007. With an area of about 243,000 sq km (about 94,000 sq miles), the UK is just under 1,000 km (about 600 miles) from the south coast to the extreme north of Scotland and just under 500 km (around 300 miles) across at the widest point.

- Highest mountain: Ben Nevis, in the highlands of Scotland, at 1,343 m (4,406 ft)
- Longest river: the Severn, 354 km (220 miles) long, which rises in central Wales and flows through Shrewsbury, Worcester and Gloucester in England to the Bristol Channel
- Largest lake: Lough Neagh, Northern Ireland, at 396 sqkm (153 sq miles)
- Deepest lake: Loch Morar in the Highlands of Scotland,
 310 m (1,017 ft) deep
- Highest waterfall: Eas a'Chual Aluinn, from Glas Bheinn, in the highlands of Scotland, with a drop of 200 m (660 ft)
- Deepest cave: Ogof Ffynnon Ddu, Wales, at 308 m (1,010 ft) deep
- Most northerly point on the British mainland: Dunnet Head, north-east Scotland
- Most southerly point on the British mainland: Lizard Point, Cornwall
- Closest point to mainland continental Europe: Dover, Kent. The Channel Tunnel, which links England and France, is a little over 50 km (31 miles) long, of which nearly 38 km (24 miles) are actually under the Channel.

¹ Figures relate to land area only.
2 The area measurements are a definitive set derived from boundaries maintained by Ordnance Survey and Ordnance Survey of Northern Ireland. The current measurements may differ from those published previously in tables, publications or other statistical outputs, even allowing for boundary changes or changes to the physical structure of the land because of improvements to the source of the data.

3 Excludes inland water for all countries.

4 Formerly known as the Western Isles.

International development

Chapter 3

International development

Overseas development assistance

(Tables 3.1 and 3.2)

The Department for International Development (DFID) is the UK government department with lead responsibility for overseas development. DFID's aim is to eliminate poverty in poorer countries through achievement of the Millennium Development Goals (MDGs) by 2015. Statistics relating to international development are published on a financial year basis and on a calendar year basis. Statistics on a calendar year basis allow comparisons of aid expenditure with other donor countries. Aid flows can be measured before (gross) or after (net) deductions of repayments of principal on past loans. These tables show only the gross figures.

Aid is provided in two main ways: Bilateral funding is provided directly to partner countries while multilateral funding is provided through international organisations.

Funds can only be classified as multilateral if they are channelled through one of the organisations listed in the OECD Development Assistance Committee (DAC) statistical reporting directives which identifies all multilateral organisations. This list also highlights some bodies that might appear to be multilateral but are actually bilateral (in particular this latter category includes some international non-governmental organisations such as the International Committee of the Red Cross and some public–private partnerships such as the Global Alliance for Vaccines and Immunisation). The DAC list of multilaterals is updated annually based on members nominations. Organisations must be engaged in development work to be classified as multilateral aid channels.¹

While core funding to multilateral organisations is always classified as multilateral expenditure, additional funding channelled through multilaterals is often classified as bilateral expenditure. This would be the case in circumstances where a DFID country office transfers some money to a multilateral organisation (for example, a UN agency) for a particular programme in that country (or region). That is, where DFID has control over what the money is being spent on and/or where it is being spent. Likewise, if DFID responds to an emergency appeal from an agency for a particular country

or area, the funds will be allocated as bilateral spend to that country or region. As a result, some organisations, such as UN agencies have some of their DFID funding classified as bilateral and some as multilateral.

DFID is planning to introduce a new activity reporting system between 2007/08 and 2009/10. The new system will integrate all DFID's current financial and project management systems. To coincide with the introduction of the new system, DFID is reviewing how it classifies its aid delivery types. The outcome of this review may lead to the introduction of a new set of classifications which may result in changes to the format in future publications.

Table 3.1 shows the main groups of multilateral agencies; the International Development Association being the largest in the World Bank Group.

Bilateral assistance takes various forms:

Financial aid: Poverty Reduction Budget Support (PRBS) – funds provided to developing countries for them to spend in support of their expenditure programmes whose long-term objective is to reduce poverty. Funds are spent using the overseas governments' own financial management, procurement and accountability systems to increase ownership and long-term sustainability. PRBS can take the form of a general contribution to the overall budget – general budget support – or support with a more restricted focus which is earmarked for a specific sector – sector budget support.

Other financial aid – funding of projects and programmes such as sector-wide programmes not classified as PRBS. Financial aid in its broader sense covers all bilateral aid expenditure other than technical cooperation and administrative costs but in *Statistics on International Development* (SID) Humanitarian Assistance, DFID Debt Relief, and 'Other bilateral aid' are separately categorised. Aid and Trade Provision which was previously identified in SID has now been merged into 'Other financial aid' as it is a rapidly declining flow.

Technical co-operation – activities designed to enhance the knowledge, intellectual skills, technical expertise or the productive capability of people in recipient countries. It also covers funding of services which contribute to the design or implementation of development projects and programmes.

This assistance is mainly delivered through research and development, the use of consultants, training (generally overseas partners visiting the UK or elsewhere for a training programme) and employment of 'other personnel' (non-DFID experts on fixed-term contracts). This latter category is growing less significant over time as existing contracted staff reach the end of their assignments.

^{1.} money may be classified as bilateral while a case is being made for a new multilateral organisation to be recognised.

Other bilateral aid – this category comprises support to the development work of UK and international voluntary organisations, grants to the British Council and for other development work by UK institutions, and non-emergency special appeals through multilateral agencies. The remaining element of 'Other bilateral aid' is made up of a number of categories including, for example, DFID's contributions to two multi-donor trust funds for Sudan, the Development Awareness Fund and the provision of books, equipment and other supplies.

Humanitarian assistance – provides food, aid and other humanitarian assistance including shelter, medical care and advice in emergency situations and their aftermath. Work of the conflict pools is also included.

DFID debt relief – this includes sums for debt relief on DFID aid loans and cancellation of debt under the Commonwealth Debt Initiative (CDI). The non-CDI DFID debt relief is reported on the basis of the 'benefit to the recipient country'. This means that figures shown represent the money available to the country in the year in question that would otherwise have been spent on debt servicing. The CDI debt cancellation is reported on a 'lump sum' basis where all outstanding amounts on a loan are shown at the time the agreement to cancel is made.

CDC investments – CDC Group plc (or CDC) replaced the former Commonwealth Development Corporation in 1999. CDC was founded in 1948 and is now the UK Government's instrument for investing in the private sector in developing economies (it does so through fund management companies, of whom the largest is Actis Capital LLP). CDC has activities in more than 50 developing countries. CDC provides equities an concessional loans to companies in some aid-eligible countries, and these disbursements and repayments are included as UK flows. Although CDC no longer provides loans to governments, it did in the past and these existing loans can become eligible for debt relief.

Non-DFID debt relief – comprises CDC debt and Export Credit Guarantee Department (ECGD) debt. CDC has a portfolio of loans to governments which can become eligible for debt relief under the HIPC (Heavily Indebted Poor Countries) or other debt relief deals. In 2005/06 £90 million of debts owed to CDC were reorganised. ECGD is the UK's official Export Credit Agency which provides insurance for exporters against the main risks in selling overseas and guarantees to banks providing export finance. It also negotiates debt relief arrangements on commercial debt.

Other – This includes contributions from other government departments to civil society organisations, British Council and Global Conflict Pool, and small amounts of drug related

assistance funded by the Home Office and the Foreign and Commonwealth Office.

Further details on the UK's development assistance can be found in the Department for International Developments publication *Statistics on International Development* which can be found on the website at: www.dfid.gov.uk/About-DFID/Finance-and-performance/DFID-Expenditure-Statistics/. International Comparisons are available in the OECD Development Assistance Committee's annual report.

 The institution, not the member states of the European Union.
 IMF Poverty Reduction and Growth Facility, Global Environmental Assistance, HIPC Trust Funds and Regional Development Banks are now included in Multilateral Assistance Other.

² Includes grants to VSO, CSOs, Research Institutions and Commonwealth Organisations based in the UK.

Defence

Chapter 4

Defence

This section includes figures on defence expenditure, on the size and role of the Armed Forces and on related support activities.

Much of the material in this section can be found in UK Defence Statistics 2007 (*The Stationery Office*).

Defence expenditure

(Table 4.1)

UK Defence Expenditure – the move from cash to resource accounting

Up until financial year 1998/99, government expenditure was accounted for on a cash basis. In April 1999 the introduction of Resource Accounting and Budgeting (RAB) brought in an accruals-based accounting system, although government departments were still controlled on a cash basis. This transitional accounting regime remained for two financial years. Government expenditure has been accounted for on a resource basis only since 2001/02.

The main difference arising from the adoption of RAB is that costs are accounted for as they are incurred (the principle of accruals), rather than when payment is made (the principle of cash). This gives rise to timing differences in accounting between the cash and RAB systems and also to the recognition of depreciation, which expends the cost of an asset over its useful economic life, and the cost of capital charge, equivalent to an interest charge on the net assets held on the balance sheet. At the time that RAB was introduced the cost of capital charge was 6 per cent of the net value of assets; although this was reduced to 3.5 per cent in 2003/04.

The change from cash based accounting to resource (accruals) based accounting, and the two-stage introduction of RAB (outlined below) has affected the time series comparability of the data.

Please refer to *UK Defence Statistics* 2007 Chapter 1 – Resource Accounting & Budgeting section for a summary of the key events leading to the introduction of RAB. Back copies of this publication are available at: www.dasa.mod. uk/natstats/natstatsindex.html

Control regime

Under Resource Accounting, government departments are accountable for their spending against Resource and Capital

Departmental Expenditure Limits (DELs). Spending against the Resource DEL includes current items, which are explained in the following two paragraphs. The Capital DEL, while part of the overall DEL, reflects investment spending that will appear on the department's balance sheet and be consumed over a number of years, net of the receipts from sale of assets. Departments are also responsible for Annually Managed Expenditure (AME). This spending is demand led (for example, payment of war pensions) and therefore cannot be controlled by departments in the same way.

In Stage 1 of RAB, which was introduced at the start of financial year 2001/02, the Resource DEL covered current costs such as in-year personnel costs, equipment, and maintenance of land and buildings. Non-cash costs such as depreciation and the cost of capital charge fell within Annually Managed Expenditure (AME) and were not controlled to the same degree as DELs. This allowed departments an interim period to gain experience of managing the new non-cash costs and to review their holdings of stocks and fixed assets, which impact the non-cash costs, prior to the charge impacting on the more tightly controlled DELs.

Stage 2 of RAB was introduced at the start of the financial year 2003/04. This involved the movement of the primary non-cash costs (depreciation and the cost of capital charge) from AME into the Resource DEL, and a reduction of the cost of capital charge to 3.5 per cent of the net value of assets.

The change in definition of the DELs combined with volatile non-cash costs over the Stage 1 period make time series comparisons over the period 2001/02 to 2003/04 complex.

From 2006/07, the MOD has transferred ownership of fixed assets into two top level budgets (TLBs): Defence Estates (DE) for land and buildings, and Defence Equipment & Support (DE&S) for plant and machinery, transport, IT and communications equipment, and single use military equipment (SUME).

Factors affecting Cash to RAB data consistency

- There are timing differences as to when payments are recognised
- The movement of non-cash items of expenditure from AME into the Resource DEL from 2003/04 onwards has the 'apparent' effect of inflating the Resource DEL
- In the financial year 2003/04 the rate of interest used to calculate the cost of capital charge was reduced from 6 per cent to 3.5 per cent

- The discount rate for provisions was changed from 3.5 per cent real to 2.2 per cent real with effect from 1 April 2005
- The discount rate for pension's liabilities was changed from 2.8 per cent real to 1.8 per cent real with effect from 1 April 2007

Resource DEL includes expenditure under the following headings:

- Equipment support: internal and contracted-out costs for equipment repair and maintenance
- Stock consumption: consumption of armament, medical, dental, veterinary, oil, clothing, and general stores
- Property management: estate and facilities management services and costs for building maintenance
- Movements: cost of transportation of freight and personnel
- Accommodation and utilities: charges include rent, rates, gas, electricity, water and sewerage costs
- Professional fees: fees, such as legal costs paid to professional organisations
- Fuel: relates to fuel consumption by military vehicles, ships and aircraft
- Other costs: includes stock and fixed assets written off, research and expensed development and rentals paid under operating leases

Expenditure on fixed asset categories in Capital DEL includes:

- Intangible assets: comprise the development costs of major equipment projects and Intellectual property rights.
- Single use military equipment (SUME): Prior to 2004/05, this category was called 'Fighting equipment'. The category contains assets which only have a military use, such as tanks and fighter aircrafts. Dual use items such as those that also have a civilian use are recorded under the other categories
- Assets under construction: largely consist of major weapons platforms under construction in the Defence Procurement Agency, and a smaller element of buildings under construction. Once construction is complete, those platforms will transfer to the relevant TLB holder as SUME on their balance sheets

- Transport/Capital spares: from 2004/05 'Transport' has been recorded as a separate category and 'Capital spares' has been removed as a category, with the costs previously recorded here being incorporated into Transport or SUME
- Other costs: include, amongst others, items of Capital DEL and capital income

Annual Managed Expenditure includes:

 Other: for 2001/02 and 2002/03, AME included depreciation and the cost of capital charge. Under Stage 2 of RAB, this category now contains only demand led payments, such as cash release and cost of capital credit on nuclear provisions and QinetiQ loan repayments

In order to give a single measure of spending on public services under full resource budgeting, the Defence Spending line is presented as the sum of the resource and capital budgets, net of depreciation and impairments. This reflects the resources required plus the net investment in them, but avoids double counting the writing down of the existing capital stock and the cash outlay on new assets. Control is exercised separately on gross Capital and Resource DEL.

Service personnel

(Tables 4.2, 4.4, 4.5, 4.8 and 4.10)

The Regular Forces consist entirely of volunteer members serving on a whole-time basis, figures for which include both trained and untrained personnel and exclude Gurkhas, Full Time Reserve Service personnel, the Home Service battalions of the Royal Irish Regiment, mobilised reservists and Naval Activated Reservists.

Locally Entered Personnel are recruited outside the UK for whole-time service in special formations with special conditions of service and normally restricted locations. The Brigade of Gurkhas is an example.

The Regular Forces are supported by Reserves and Auxiliary Forces. There are both regular and volunteer Reserves. Regular Reserves consist of former Service personnel with a Reserve liability. Volunteer Reserves are open to both former personnel and civilians. The call out liabilities of the various reserve forces differ in accordance with their roles.

Defence

All three Services run cadet forces for young people and the Combined Cadet Force, which is found in certain schools where education is continued to the age of 17 or above, may operate sections for any or all of the Services.

Full Time Reserve Service (FTRS) personnel represent reserves serving full-time in regular posts. This was made possible by the Reserve Forces Act 1996. None existed before 1998. FTRS figures include Full Commitment (FC), Home Commitment (HC) and Limited Commitment (LC) individuals.

Home Service battalions of the Royal Irish Regiment were, until 1 July 1992, the Ulster Defence Regiment. The figures for the Territorial Army include Officer Training Corps and non-regular permanent staff.

The figures for cadet forces for each Service include the Combined Cadet Force. Naval Service figures include officers and civilian instructors. The Army and Royal Air Force figures exclude officers and civilian instructors.

Intake of UK regular forces from civilian life: by service

(Table 4.2)

This table shows all intakes to UK Regular Forces including reenlistments and rejoined reservists.

Formation of the armed forces

(Table 4.3)

This table shows the number of units which comprise the 'teeth' elements of the Armed Forces and excludes supporting units.

Outflow of UK regular forces: by service

(Table 4.4)

This table does not include promotions to officer from other ranks and miscellaneous outflow.

Civilian personnel

(Table 4.6)

In previous years, the Ministry of Defence civilian workforce definition has reflected the historical requirement to understand the number of civil servants being directly funded. However with changes in employment legislation and the requirement to plan the future of the civilian workforce there was a need to change the definition to a more inclusive one, better reflecting modern human resources methods and policies. In the longer

term it will be used for skills planning, ensuring that the Ministry of Defence has a well-equipped workforce able to provide the best support to the UK Armed Forces.

In summary, the change over previous years is the addition of two further categories of individuals:

Casual personnel – those employed on a short-term casual contract

Those not directly funded – personnel who are employed by the Ministry of Defence, but whose salaries are paid for by another department/agency etc. This includes personnel on loan to other government departments or working for NATO, as well as those on a career break or long-term sickness absence

These additions allow two levels of definition to be established:

Definition - Level 1 This includes permanent and casual personnel, Royal Fleet Auxiliaries, but excludes Trading Funds. This is generally used for internal reporting and planning.

Definition - Level 0 This contains all those at Level 1 plus Trading Funds and Locally Engaged Civilians. This is used for external reporting, including National Statistics publications CPS1 (Civilian Personnel Statistics) and UKDS (UK Defence Statistics), and Parliamentary business.

For more information on the revised civilian workforce definition, visit: www.dasa.mod.uk/natstats/consultation/consultation.html

As from 1 April 2000 a new top level budget was formed in the Centre called Defence Logistics Organisation, replacing the top level budgets CinC Fleet Support, Quarter Master General and RAF Logistics Command.

At 1 April 2007, Chief of Defence Logistics and Defence Procurement Agency merged to form Defence Equipment and Support.

The QinetiQ portion of the Defence Evaluation and Research Agency was established as a private company in July 2001. The War Pensions Agency transferred from the Department of Work and Pensions in 2001. The Clyde Dockyards were contractorised in 2002.

Data on manually paid personnel before 1999 is not available, so estimates are used.

Totals and subtotals have been rounded separately and so may not appear to be the sums of their parts.

Family accommodation and defence land holdings

(Table 4.7)

In November 1996 most of the Ministry of Defence (MOD) housing stock in England and Wales was sold to a private company, Annington Homes. The homes retained for use by Service families were leased back with the condition that the MOD releases a certain number of houses each year for disposal by Annington. The proceeds of the sale are being used to upgrade the housing stock.

The table also presents statistics of land and foreshore in the UK owned or leased by the MOD or over which it has limited rights under grants or licences. Land declared as surplus to Defence requirements is also included.

Deployment of Service personnel

(Table 4.8)

The figures for Service personnel in England, Wales, Scotland and Northern Ireland are obtained from a different source from that used to compile the UK total. Consequently the sum of the national figures can differ from the UK total. The figures for Northern Ireland include all personnel who are serving on emergency tours of duty but exclude the former Ulster Defence Regiment, now the Home Services element of the Royal Irish Regiment. The figures for overseas countries include service personnel who are on loan to countries in the areas shown. Royal Navy and Royal Marines personnel on board ship are included in the UK figure if the ship was in home waters on the situation date or otherwise against the appropriate overseas area. All Defence Attaches and Advisers and their staffs are included under 'Other locations' and not identified within specific areas. From 2001 the grouping of overseas locations has been changed to give a more relevant overview.

The table reports personnel against their stationed location (where they are normally based). It does not show the location of troops on operational deployments.

UK regular forces – deaths

(Table 4.9)

Rates have been standardised to 2004 Tri-Service age and gender structure. In previous publications, deaths among the Brigade of Gurkhas were excluded, even though they belong to the regular Army, owing to the lack of reliable data on date of birth from which to calculate mortality rates. Gurkhas have been included in the number of deaths provided in Table 4.9. However they have been excluded from calculations for age-and gender-standardised rates.

Health

(Table 4.10)

The Services operate a number of hospitals in this country and in areas abroad where there is a significant British military presence. These hospitals take as patients, members of all three Services and their dependants. In addition, the hospitals in the UK take civilian patients under arrangements agreed with the National Health Service. Medical support is also supplied by service medical staff at individual units, ships and stations.

Defence services and the civilian community

(Table 4.11)

Search & Rescue (SAR)

This table covers incidents attended by military SAR units. The Royal Air Force and Royal Navy provide an essential service to the search and rescue effort around the UK forming part of the national UK SAR coverage throughout the year for air, land and maritime operations. Military SAR teams' primary purpose is to recover aircrew from crashed military aircraft although, each year, over 90 per cent of call-outs are to civilian incidents. The SAR force currently consists of 6 x RAF and 2 x RN SAR Sea King helicopter units and 4 RAF mountain rescue teams operating from bases around the UK plus specially equipped RAF Nimrod aircraft based in RAF Kinloss in Scotland

The table also includes urgent medical incidents in which the military SAR facilities gave assistance (for example, interhospital transfers).

More than one SAR unit may be called to the same incident; consequently the number of call-outs is likely to be greater than the number of incidents.

Persons moved involves moving people from a hostile environment to a safe environment or to a medical facility to receive urgent medical attention. People assisted by RAF mountain rescue teams, but subsequently transported from the scene by helicopter, are recorded as having been rescued by the helicopter unit concerned.

Fisheries Protection

The Royal Navy Fishery Protection squadron operates within the British fishery limits under contract to the Department for Environment, Food and Rural Affairs. Boardings carried out by vessels of the Scottish Executive Environment and Rural Affairs Department and the Department of Agriculture for Northern Ireland are not included.

² The definitions of outflow used have been standardised from 1997/98 to give a more consistent picture across the three services.

³ Due to ongoing validation of data from the new Personnel Administration System, Naval Service statistics from 1 October 2006, Army statistics from 1 April 2007 and RAF statistics from 1 May 2007 are provisional and subject to review.

² Due to ongoing validation of data from Joint Personnel Administration Sys-

tem, 2007 Reserve data for Army are as at March 2007.

3 The Royal Irish Regiment disbanded on 31 March 2008.

4 2008 Army Reserves data are as at 1 June.

2 Rates have been age and gender standardised to the 2006 Armed Forces population. Following data validation on Gurkhas, they are now included in the numbers of deaths and the standardised rates provided in Table 4.9. Also included for the first time are non-regular Service Personnel who died whilst on Operations.

² Not permanently on stand-by.
3 Rescue: Moving an uninjured person from a hostile to a benign environ-

⁴ Medrescue: Moving an injured casualty from a hostile environment to a medical facility.

⁵ Medtransfer (formerly Medevac): Moving a sick person between medical facilities such as a hospital or occasionally to move transplant organs.
6 Recovery: Moving people declared dead on scene or confirmed dead on arrival by a qualified doctor.

7 Transfer

⁷ Transfer (formerly Airlift): Moving military personnel, or their families, on compassionate grounds.

Chapter 5

This section begins with a summary of population figures for the UK and constituent countries for 1851 to 2026 and for Great Britain from 1801 (Table 5.1). Table 5.2 analyses the components of population change. Table 5.3 gives details of the national sex and age structures for years up to the present date, with projected figures up to the year 2026. Legal marital condition of the population is shown in Table 5.4. The distribution of population at regional and local levels is summarised in Table 5.5.

In the main, historical series relate to census information, while mid-year estimates, which make allowance for underenumeration in the census, are given for the recent past and the present (from 1961 onwards).

Population

(Tables 5.1 to 5.3)

Figures shown in these tables relate to the population enumerated at successive censuses (up to 1951), mid-year estimates (from 1961 to 2007) and population projections (up to 2026). Further information can be found on the Office for National Statistics (ONS) website (www.statistics.gov. uk/popest).

Population projections are 2006-based and were published by ONS on 23 October 2007. Further information can be found at: www.statistics.gov.uk/cci/nugget.asp?id=1352

Definition of resident population

The estimated resident population of an area includes all people who usually live there, whatever their nationality. Members of HM and US Armed Forces in England and Wales are included on a residential basis wherever possible. HM Forces stationed outside England and Wales are not included. Students are taken to be resident at their term time address.

The projections of the resident population of the UK and constituent countries were prepared by the National Statistics Centre for Demography within ONS, in consultation with the Registrars General, as a common framework for use in national planning in a number of different fields. New projections are made every second year on assumptions regarding future fertility, mortality and migration which seem most appropriate on the basis of the statistical evidence available at the time. The population projections in Tables 5.1

to 5.3 are based on the estimates of the population of the UK at mid-2006 made by the Registrars General.

Marital condition (de jure): estimated population

(Table 5.4)

This table shows population estimates by marital status.

Geographical distribution of the population

(Table 5.5)

The population enumerated in the censuses for 1911 to 1951, and the mid-year population estimates for later years, are provided for standard regions of the UK, for metropolitan areas, for broad groupings of local authority districts by type within England and Wales, and for some of the larger cities. Projections of future sub-national population levels are prepared from time to time by the Registrar General, but are not shown in this publication.

Migration into and out of the UK

(Tables 5.7 to 5.9)

A migrant is defined as a person who changes his or her country of usual residence for a period of at least a year, so that the country of destination effectively becomes the country of usual residence.

The main source of international migration data is the International Passenger Survey (IPS). This is a continuous voluntary sample survey that provides information on passengers entering and leaving the UK by the principal air, sea and tunnel routes. Being a sample survey, the IPS is subject to some uncertainty; therefore it should be noted that international migration estimates, in particular the difference between inflow and outflow, may be subject to large sampling errors. The IPS excludes routes between the Channel Islands and Isle of Man and the rest of the world.

The IPS data are supplemented with three types of additional information in order to provide a full picture of total international migration:

 The IPS is based on intentions to migrate and intentions are liable to change. Adjustments are made for visitor switchers (those who intend to stay in the UK or abroad for less than one year but subsequently stay for longer and become migrants) and for migrant switchers (those who intend to stay in the UK or abroad for one year or more but then return earlier so are no longer migrants). These adjustments are primarily based on IPS data but, for years prior to 2001, Home Office data on short-term visitors who were subsequently granted an extension of stay for a year or longer for other reasons have been incorporated.

- Home Office data on applications for asylum and dependants of asylum seekers entering the UK are used to estimate inflows of asylum seekers and dependants not already captured by the IPS. In addition, Home Office data on removals and refusals are used to estimate outflows of failed asylum seekers not identified by the IPS.
- 3. Migration flows between the UK and the Irish Republic are added to these data, as the IPS did not cover this route until recently and the quality of these data are still being assessed. Migration flows are obtained mainly from the Quarterly National Household Survey and are agreed between the Irish Central Statistics Office and ONS.

The international migration estimates in Table 5.7 are derived from all these sources and represent total international migration. The estimates in Tables 5.8 and 5.9 are based on the International Passenger Survey only (without the three adjustments outlined above).

Grants for settlement in the UK

(Table 5.10)

This table presents in geographic regions the statistics of individual countries of nationality, arranged alphabetically within each region. The figures are on a different basis from those derived from IPS (Tables 5.8 and 5.9) and relate only to people subject to immigration control. Persons granted settlements are allowed to stay indefinitely in the UK. They exclude temporary migrants such as students and generally relate only to non-EEA nationals. Settlement can occur several years after entry to the country.

Applications received for asylum in the UK, excluding dependants

(Table 5.11)

This table shows statistics of applications for asylum in the UK. Figures are shown for the main applicant nationalities by geographic region. The basis of assessing asylum applications, and hence of deciding whether to grant asylum in the UK, is the 1951 United Nations Convention on Refugees.

Marriages

(Table 5.12)

The figures in this table relate to marriages solemnised in the constituent countries of the UK. They take no account of the growing trend towards marrying abroad.

Divorces

(Tables 5.13 and 5.14)

A marriage may be either dissolved following a petition for divorce and the granting of a decree absolute, or annulled, following a petition for nullity and the awarding of a decree of nullity. The first group of decrees are known as dissolutions of marriage and the second as annulments of marriage. In Table 5.13 the term 'divorce' includes both types of decrees, although strictly speaking, it should refer only to dissolutions.

Births

(Tables 5.15 to 5.17)

Live births: For England and Wales, figures relate to the number of births occurring in a period; for Scotland and Northern Ireland, figures relate to births registered in a period. By law, births must be registered within 42 days in England and Wales, within 21 days in Scotland, and within 42 days in Northern Ireland. In England and Wales, where a birth is registered later than the legal time period, and too late to be included in the count for the year of occurrence, it will be included in the count for the following year.

All data for England and Wales and for Scotland include births occurring in those countries to mothers not usually resident in them. Data for Northern Ireland, and hence UK, prior to 1981 include births occurring in Northern Ireland to non-resident mothers; from 1981, such births are excluded.

Deaths

(Tables 5.19 and 5.21)

The figures relate to the number of deaths registered during each calendar year.

Infant and maternal mortality

(Table 5.20)

On 1 October 1992 the legal definition of a stillbirth was altered from a baby born dead after 28 completed weeks

gestation or more, to one born after 24 completed weeks of gestation or more. The 258 stillbirths of 24 to 27 weeks gestation that occurred between 1 October and 31 December 1992 are excluded from this table.

Life tables

(Table 5.22)

The current set of interim life tables are constructed from the estimated populations in 2005–07 and corresponding data on births, infant deaths and deaths by individual age occurring in those years.

The estimates used in these interim life tables are the estimates, or revised estimates, issued on the following dates:

Mid-year population estimates	England	Wales	Scotland	Northern Ireland
2004	August	August	July	July
	2007	2007	2007	2005
2005	August	August	July	October
	2007	2007	2007	2006
2006	August	August	July	July
	2007	2007	2007	2007
2007	August	August	July	July
	2008	2008	2008	2008

Adoptions

(Tables 5.23)

The figures shown in this table relate to the date the adoption was entered in the Adopted Children Register. Figures based on the date of the court order are available for England and Wales in the volume *Marriage, divorce and adoption statistics 2006* (no. 34 in the FM2 series) available on the Office for National Statistics website (www.ons.gov.uk) or from the ONS enquiry point telephone number shown at the foot of the table.

10

2011 - 2021

¹ Census enumerated population up to 1951; mid-year estimates of resident population from 1961 to 2006 and mid-2006-based projections of resident population thereafter.

² Including deaths of non-civilians and merchant seamen who died outside the country. These numbered 577 000 in 1911-1921 and 240 000 in 1931-1951 for England and Wales; 74 000 in 1911-1921 and 34 000 in 1931-1951 for Scotland; and 10 000 in 1911-1926 for Northern Ireland.

^{1 2006} based national population projections . See explanatory notes at beginning of chapter for further details.

Sources: Office for National Statistics: 01329 444661; General Register Office for Scotland; General Register Office for Northern Ireland

² Data for mid 1991 for UK, England and Wales and Scotland were revised in light of the results of the 2001 Census.

³ Data for mid-2001 was revised as a result of local authority population studies.

⁴ England & Wales population estimates for mid-2003 to mid-2005 were revised in August 2007 to take account of improved estimates of international migration.

⁵ The pensionable age population is that over state retirement age. These figures take account of the forthcoming changes in state retirement age between April 2010 and March 2020 from 65 for men and 60 for women to 65 for both sexes; and a further increase to 66 for both sexes between April 2024 and March 2026.

5.4 Marital condition (*de jure*)¹: estimated population: by age and sex England and Wales

¹ Mid 2002 to mid 2005 population estimates for the UK and England & Wales have been updated to include the latest revised estimates that take improved estimates of international migration into account.

Sources: Office for National Statistics: 01329 444661; General Register Office for Scotland; Northern Ireland Statistics and Research Agency

² Details of the classification by broad area type are given in recent issues of the ONS annual reference volume Key Population and Vital Statistics; local and health authority areas (Series VS). The ten broad area types include all local authorities in England and Wales.

local authorities in England and Wales.

3 The breakdown of non-metropolitan districts by area type has not been provided from mid-2001 onwards. This is because the effect of boundary changes due to the major local government reorganisation on 1 April 1995 and 1 April 1996 (particularly in Wales) make the comparison of 2001 data with data for earlier years invalid.

^{4 1931} figures shown for Northern Ireland and the City of Belfast relate to the 1937 Census.

¹ The1998-2005 were revised, following changes to the weightings used to gross up the IPS data, in November 2007. Therefore they may not agree with previously published estimates.

Source: Office for National Statistics: 01329 444645

² Based mainly on data from the IPS. Includes adjustments for (1) those whose intended length of stay changes so that their migrant status changes; (2) asylum seekers and their dependants not identified by the IPS; and (3) flows between the UK and the Republic of Ireland.

³ Estimates of international migration flows are shown rounded to the nearest thousand, rather than nearest hundred, as they are considered less reliable at the more detailed level.

⁴ European Union estimates are for the EU15 (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Republic of Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain and Sweden) from 1998- 2003, EU25 (EU15 and Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Cyprus, Slovakia and Slovenia). from 2004-2006, and for the EU27 (EU25 plus Bulgaria and Romania) from 2007. British citizens are excluded from all EU citizenship groupings and are shown separately.

⁵ For 2004 onwards, the New Commonwealth excludes Malta and Cyprus.

⁶ For 2004 onwards, Other foreign excludes the eight Central and Eastern European member states that joined the EU in May 2004. For 2007 other foreign excludes Bulgaria and Romania which joined the EU in January 2007.

The 1991-2005 estimates were revised following changes to the weightings used to gross up the IPS data, in November 2007. Therefore the above

38

Ings used to gross up the IPS data, in November 2007. Therefore the above figures may not agree with previous estimates published before then.

1 EU estimates are for the EU15 (Austria, Belgium, Denmark, Finland, France, Germany, Greece, the Irish Republic, Italy, Luxembourg, Netherlands, Portugal, Spain and Sweden) from 1991-2003, EU25 (EU15 and A8 groupings plus Malta and Cyprus) form 2004 -2006 and for the EU27 (EU25 plus Bulgaria and Romania) from 2007.

² From 2004 onwards, the New Commonwealth excludes Malta and Cyprus.

³ From 2004 onwards these categories exclude the A8 Central and Eastern countries that joined the EU in 2004. From 2007 these categories exclude the A2 countries (Bulgaria and Romania) that joined the EU in 2007.

⁴ From 2004 onwards Other countries excludes Malta and cyprus.

¹ The terms petition filed, decree nisi granted, decree absolute and judicial separation are not used in Scotland. Decree absolute granted to 'both' and 'Combination of more than one ground and other' are not procedures used

Sources: Office for National Statistics: 01329 444410; General Register Office for Scotland; Northern Ireland Statistics and Research Agency; Ministry of Justice (England & Wales); Scottish Courts Administration; Northern Ireland Courts Administration

² New categories introduced with effect from 4 May 2006 by the Family Law (Scotland) Act 2006. These replace the two 'non-cohabitation' categories (non-cohabitation is a category that is used in Scotland only) of 2 years with consent and 5 years.

³ Data supplied by Ministry of Justice (12 February 2008) see Judicial and Court Statistics.
4 2007 data are provisional.

¹ See chapter text.

dead after 24 completed weeks gestation or more. Between 1 October and 31 December 1992 in the UK there were 258 babies born dead between 24 and 27 completed weeks gestation (216 in England and Wales, 35 in Scotland and 7 in Northern Ireland). If these babies were included in the stillbirth figures given, the stillbirth rate would be 4.7 for the UK and England and Wales, while Scotland and Northern Ireland stillbirth rate would remain as stated.

7 From 1981, data for the United Kingdom and Northern Ireland have been revised to exclude births in Northern Ireland to non-residents of Northern Ireland.

> Sources: Office for National Statistics: 01329 444410; General Register Office for Scotland; Northern Ireland Statistics and Research Agency

² Males per 1,000 females (calculated using whole numbers).

Rate per 1,000 population (calculated using whole numbers).
 Rate per 1,000 women aged 15 - 44.

⁵ Total fertility rate is the average number of children which would be born to a woman if she experienced the age-specific fertility rates of the period in question throughout her child-bearing life span. UK figures for the years 1970-72 and earlier are estimates.

⁶ On 1 October 1992 the legal definition of a stillbirth was changed from a baby born dead after 28 completed weeks gestation or more to one born

¹ The 'All ages' figure for Scotland includes births to mothers whose age was not known. There were 128 such births in 1996, 66 in 1997, 66 in 1998, 48 in 1999, 49 in 2000, 28 in 2001, 35 in 2002, 60 in 2003, 26 in 2004, 77 in 2005, 39 in 2006 and 57 in 2007.

From 1981 data for the United Kingdom and Northern Ireland have been revised to exclude births in Northern Ireland to non residents in Northern Ireland

Sources: Office for National Statistics: 01329 444410; General Register Office for Scotland; Northern Ireland Statistics and Research Agency

land.

³ The rates for women of all ages, under 20, and 45 and over are based upon the populations of women aged 15-44, 15-19 and 45 respectively.

5.18 Legal abortions¹: by age for residents

See chapter text.
 From 1937 to 1956 death rates are based on the births to which they relate in the current and preceding years.
 Deaths in pregnancy and childbirth.
 Deaths per 1,000 live and stillbirths. See chapter introduction.

Population and vital statistics

Note Column $\mathbf{I}_{\mathbf{x}}$ shows the number who would survive to exact $\mathbf{age}(\mathbf{x})$, out of 100,000 born, who were subject throughout their lives to the death rates experienced in the three-year period indicated. Column $\mathbf{e^0}_{\mathbf{x}}$ is 'the expectation of life', that is, the average future lifetime which would be lived by a person aged exactly \mathbf{x} if likewise subject to the death rates experienced in the three-year period indicated. See introductory notes.

Chapter 6

Educational establishments in the UK are administered and financed in several ways. Most schools are controlled by local authorities, which are part of the structure of local government, but some are 'assisted', receiving grants direct from central government sources and being controlled by governing bodies which have a substantial degree of autonomy. Completely outside the public sector are non maintained schools run by individuals, companies or charitable institutions.

For the purposes of UK education statistics, schools fall under the following broad categories:

Mainstream state schools (In Northern Ireland, grant-aided mainstream schools)

These schools work in partnership with other schools and local authorities and they receive funding from local authorities. Since 1 September 1999, the categories (typically in England) are:

Community – schools formerly known as 'county' plus some former grant-maintained (GM) schools

Foundation – most former GM schools

Voluntary Aided – schools formerly known as 'aided' and some former GM schools

Voluntary Controlled – schools formerly known as 'controlled'

Non-maintained mainstream schools These consist of:

(a) Independent schools

Schools which charge fees and may also be financed by individuals, companies or charitable institutions. These include Direct Grant schools, where the governing bodies are assisted by departmental grants and a proportion of the pupils attending them do so free or under an arrangement by which local authorities meet tuition fees. City Technology Colleges (CTCs) and Academies (applicable in England only) are also included as independent schools.

(b) Non-maintained schools

Run by voluntary bodies who may receive some grant from central government for capital work and for equipment, but their current expenditure is met primarily from the fees charged to the local authorities for pupils placed in schools.

Special schools

Special schools provide education for children with Special Educational Needs (SEN) (In Scotland, Record of Needs or a Coordinated Support Plan), who cannot be educated satisfactorily in an ordinary school. Maintained special schools are run by local authorities, while non-maintained special schools are financed as described at (b) above.

Pupil Referral Units

Pupil Referral Units (PRUs) operate in England and Wales and provide education outside of a mainstream or special school setting, to meet the needs of difficult or disruptive children.

Schools in Scotland are categorised as Education Authority, Grant-aided, Opted-out/Self-governing (these three being grouped together as 'Publicly funded' schools), Independent schools and Partnership schools.

The home government departments dealing with education statistics are:

Department for Children, Schools and Families (DCSF)

Department for Innovation, Universities and Skills (DIUS)

Welsh Assembly Government (WAG)

Scottish Government (SG)

Northern Ireland Department of Education (DENI)

Northern Ireland Department for Employment and Learning (DELNI)

Each of the home education departments in Great Britain, along with the Northern Ireland Department of Education, have overall responsibility for funding the schools sectors in their own country.

Up to March 2001, further education (FE) courses in FE sector colleges in England and in Wales were largely funded through grants from the respective FE funding councils. In April 2001, however, the Learning and Skills Council (LSC) took over the responsibility for funding the FE sector in England, and the National Council for Education and Training for Wales (part of Education and Learning Wales – ELWa) did so for Wales.

The LSC in England is also responsible for funding provision for FE and some non-prescribed higher education in FE sector colleges; it also funds some FE provided by local authority maintained and other institutions referred to as 'external institutions'. In Wales, the National Council – ELWa, funds FE provision made by FE institutions via a third party or sponsored arrangements. The Scottish Further Education Funding Council (SFEFC) funds FE colleges in Scotland, while the Department for Employment and Learning funds FE colleges in Northern Ireland.

Higher education (HE) courses in higher education establishments are largely publicly funded through block grants from the HE funding councils in England and Scotland, the Higher Education Council – ELWa in Wales, and the Department for Employment and Learning in Northern Ireland. In addition, some designated HE (mainly HND/HNC Diplomas and Certificates of HE) is also funded by these sources. The FE sources mentioned above fund the remainder.

Statistics for the separate systems obtained in England, Wales, Scotland and Northern Ireland are collected and processed separately in accordance with the particular needs of the responsible departments. Since 1994/95 the Higher Education Statistics Agency (HESA) has undertaken the data collection for all higher education institutions (HEIs) in the UK. This includes the former Universities Funding Council (UFC) funded UK universities previously collected by the Universities Statistical Record. There are some structural differences in the information collected for schools, FE and HE in each of the four home countries and in some tables the GB/UK data presented are amalgamations from sources that are not entirely comparable.

Stages of education

There are five stages of education: early years, primary, secondary, FE and HE, and education is compulsory for all children between the ages of 5 (4 in Northern Ireland) and 16. The non-compulsory fourth stage, FE, covers non-advanced education, which can be taken at further (including tertiary) education colleges, HE institutions (HEIs) and increasingly in secondary schools. The fifth stage, HE, is study beyond GCE A levels and their equivalent which, for most full-time students, takes place in universities and other HEIs.

Early years education

Children under 5 attend a variety of settings including state nursery schools, nursery classes within primary schools and, in England and Wales, reception classes within primary schools, as well as settings outside the state sector such as voluntary pre-schools or privately

run nurseries. In recent years there has been a major expansion of early years education, and the *Education Act 2002* extended the National Curriculum for England to include the foundation stage. The foundation stage was introduced in September 2000, and covered children's education from the age of 3 to the end of the reception year, when most are just 5 and some almost 6 years old. The Early Years Foundation Stage (EYFS), came into force in September 2008, and is a single regulatory and quality framework for the provision of learning, development and care for children in all registered early years settings between birth and the academic year in which they turn 5.

Children born in Scotland between March and December are eligible for early years education at the time the Pre-School Education and Day Care Census is carried out. In Scotland, early years education is called ante-pre-school education for those aged 3 to 4 years old, and pre-school education for those aged 4.

Primary education

The primary stage covers three age ranges: nursery (under 5), infant (5 to 7 or 8) and junior (up to 11 or 12) but in Scotland and Northern Ireland there is generally no distinction between infant and junior schools. Most public sector primary schools take both boys and girls in mixed classes. It is usual to transfer straight to secondary school at age 11 (in England, Wales and Northern Ireland) or 12 (in Scotland), but in England some children make the transition via middle schools catering for various age ranges between 8 and 14. Depending on their individual age ranges middle schools are classified as either primary or secondary.

Secondary education

Public provision of secondary education in an area may consist of a combination of different types of school, the pattern reflecting historical circumstance and the policy adopted by the local authority. Comprehensive schools largely admit pupils without reference to ability or aptitude and cater for all the children in a neighbourhood, but in some areas they co exist with grammar, secondary modern or technical schools. In 2005/06, 88 per cent of secondary pupils in England attended comprehensive schools while all secondary schools in Wales are comprehensive schools. The majority of education authority secondary schools in Scotland are comprehensive in character and offer six years of secondary education; however in remote areas there are several two-year and four-year secondary schools. In Northern Ireland, post-primary education is provided by grammar schools and non-selective secondary schools. In England, the Specialist Schools Programme helps schools,

in partnership with private sector sponsors and supported by additional government funding, to establish distinctive identities through their chosen specialisms and achieve their targets to raise standards. Specialist schools have a special focus on their chosen subject area but must meet the National Curriculum requirements and deliver a broad and balanced education to all pupils. Any maintained secondary school in England can apply to be designated as a specialist school in one of ten specialist areas: arts, business & enterprise, engineering, humanities, languages, mathematics & computing, music, science, sports and technology. Schools can also combine any two specialisms.

Academies, operating in England, are publicly funded independent local schools that provide free education. They are all ability schools established by sponsors from business, faith or voluntary groups working with partners from the local community. The DCSF Secretary of State announced in July 2007, that all new academies (that is, not including those with a signed agreement although they could if they wished), would be required to follow the National Curriculum programmes of study in English, mathematics, science and information and communication technology (ICT). This is different to the previous model whereby academies had to teach English, mathematics, science and ICT to all pupils and the curriculum had to be broad and balanced.

Special schools

Special schools (day or boarding) provide education for children who require specialist support to complete their education, for example because they have physical or other difficulties. Many pupils with special educational needs are educated in mainstream schools. All children attending special schools are offered a curriculum designed to overcome their learning difficulties and to enable them to become self-reliant. Since December 2005, special schools have also been able to apply for the Special Educational Needs (SEN) specialism, under the Specialist Schools Programme. They can apply for a curriculum specialism, but not for both the SEN and a curriculum specialism.

Further education

The term further education may be used in a general sense to cover all non advanced courses taken after the period of compulsory education, but more commonly it excludes those staying on at secondary school and those in higher education, that is, courses in universities and colleges leading to qualifications above GCE A Level, Scottish Certificate of Education (SCE) Higher Grade, GNVQ/NVQ level 3, and their equivalents. Since 1 April 1993, sixth

form colleges in England and Wales have been included in the further education sector.

Higher education

Higher education is defined as courses that are of a standard that is higher than GCE A level, the Higher Grade of the SCE/National Qualification, GNVQ/NVQ level 3 or the Edexcel (formerly BTEC) or SQA National Certificate/ Diploma. There are three main levels of HE course:

- (i) Postgraduate courses leading to higher degrees, diplomas and certificates (including postgraduate certificates of education (PGCE) and professional qualifications) which usually require a first degree as entry qualification.
- (ii) Undergraduate courses which includes first degrees, first degrees with qualified teacher status, enhanced first degrees, first degrees obtained concurrently with a diploma, and intercalated first degrees (where first degree students, usually in medicine, dentistry or veterinary medicine, interrupt their studies to complete a one-year course of advanced studies in a related topic).
- (iii) Other undergraduate courses which includes all other higher education courses, for example HNDs and Diplomas in HE.

As a result of the *Further and Higher Education Act 1992*, former polytechnics and some other HEIs were designated as universities in 1992/93. Students normally attend HE courses at HEIs, but some attend at FE colleges. Some also attend institutions which do not receive public grant (such as the University of Buckingham) and these numbers are excluded from the tables, however, the University of Buckingham is included in Table 6.10.

- 1 Scotland no longer has Special Educational Needs as the Education (Additional Support for Learning) (Scotland) Act 2004 (the Act) replaces the system for assessment and recording of children and young people with special educational needs. Nursery schools include the number of children registered for pre-school education with Additional Support Needs with a Coordinated Support Plan. Primary and secondary schools include pupils with a Record of Needs or a Coordinated Support Plan, including some who also had an individualised educational Programme (IEP).
- 2 Provisional
- 3 Includes new codes for recording SEN status following the introduction of a new SEN Code of Practice from January 2002.
- 4 Or nearest equivalent.
- 5 Incidence of pupils the number of pupils with statements within each school type expressed as a proportion of the total number of pupils on roll in each school type.
- 6 Grant-Aided schools in Northern Ireland.
- 7 Includes 6,535 pupils in Voluntary and Private Pre-School Centres in Northern Ireland funded under the Pre-School Expansion Programme which began in 1998/99.
- 8 In Scotland, pre-school registrations for places funded by the local authority, in centres providing pre-school education as a local authority centre or in partnership with the local authority only. Children are counted once for each centre they are registered with.

- 9 For Scotland, number of children registered for pre-school education and Additional Support Needs with a Coordinated Support Plan are likely to be an undercount as only centres that returned the full census form were asked about Coordinated Support Plans, and of those who were asked, not all completed them. Out of 2,702 centres, 713 did not provide this information.
- 10 Placement of pupils the number of pupils with statements within each school type expressed as a proportion of the number of pupils with statements in all schools.
- 11 Includes nursery classes (except for Scotland, where they are included with Nursery schools) and reception classes in Primary schools.
- 12 For Scotland, those with IEP only used for the 'without statement' category.
- 13 City Technology Colleges (CTCs) and Acadamies in England, previously included with Independent schools are included with State-funded secondary schools, therefore figures are not directly comparable with previous years.
- 14 England and Wales figures exclude dually registered pupils, where applicable.
- 15 Including general and hospital special schools.

- 1 From 1999/00, National Qualifications (NQ) were introduced in Scotland but are not all shown until 2001/01. NQs include Standard Grades, Intermediate 1 & 2 and Higher Grades. The figures for Higher Grades combine the new NQ Higher and the old SCE Higher and include Advanced Highers.
- 2 Pupils aged 15 at the start of the acadamic year, pupils in Year S4 in Scotland. From 2004/05, pupils at the end of Key Stage 4 in England.
- 3 Pupils in schools and students in further education institutions generally aged 16-18 at the start of the academic year in England, Wales and Northern Ireland as a percentage of the 17 year old population. Data from 2002/03 for Wales and Northern Ireland however, relate to schools only. Pupils in Scotland generally sit Highers one year earlier than those sitting A levels in the rest of the UK, and the figures relate to the results of the pupils in Year S5/S6.
- 4 Figures, other than for Scotland, include Vocational Certificates of Education (VCE) and, previously, Advanced level GNVQ which is equivalent to 2 GCE A level or AS equivalents.
- 5 2 AS levels or 2 Highers/1Adavanced Higher or 1 each in Scotland, count as 1 A level pass.
- 6 Standard Grades 1-3/Intermediate 2 A-C/Intermediate 1 A in Scotland.
- 7 Grades D-G at GCSE and Scottish Standard Grades 4-6/Intermediate 1 B and C/Access 3 (pass).
 8 3 or more SCE/NQ Higher Grades/2 or more Advanced Highers/1 Ad-
- 8 3 or more SCE/NQ Higher Grades/2 or more Advanced Highers/1 Advanced Higher with 2 or more Higher Passes in Scotland.
- 9 Provisional

All ages

¹ Includes Open University students. Part-time figures include dormant modes, those writing up at home and on sabbaticals.

² Full-time includes sandwich. Part-time comprises both day and evening, including block release and open/distance learning.

³ Ages as at 31 August 2006 (1 July in Northern Ireland and 31 December in Scotland)

⁴ Figures for higher education (HE) institutions are based on the HESA 'standard registration' count. Figure for further education (FE) institutions are whole year enrolments.

⁵ FE institution figures for England include Learning and Skills Council (LSC) funded students only.

⁶ Includes data for HE students in FE institutions in Wales which cannot be split by level.

6 9 Students in higher education by level, mode of study, sex and subject group, 2006/07^{3,4}

Labour market

Chapter 7

Labour market

Labour Force Survey

(Tables 7.1 to 7.3, 7.6, 7.9, 7.10 to 7.11, 7.13 and 7.16 to 7.18)

The impact of Census 2001 on LFS data

(Tables 7.1 to 7.3, 7.6, 7.9, 7.10 to 7.11, 7.16 to 7.18)

The first results of the 2001 Census, published on 30 September 2002, showed that previous estimates of the total UK population were about one million too high. Estimates of employment and unemployment levels from the Labour Force Survey (LFS) released before 30 October 2002 were therefore too high, with rates also affected. This led to the LFS needing to reweight its estimates to the new population figures.

Top-level seasonally adjusted interim reweighed figures were published in the 2003 edition of *Annual Abstract of Statistics*. LFS estimates for the UK, used in this chapter, continue to show seasonally adjusted data for these tables, in line with other headline publications. These figures are not directly comparable to the non -seasonally adjusted figures published in the *Annual Abstract of Statistics before 2003*.

Since 2003, the LFS aggregate estimates (that is, the key labour market indicators, for example, the levels and rates of employment, unemployment and economic inactivity) have been interim reweighted every year. Interim reweighting applies adjustments to the aggregate results to reflect how the latest available LFS household population estimates compare with those used for weighting the microdata. This amounts to an approximation of the effect that a full reweighting of the microdata would have.

A full reweighting exercise was carried out in 2007–08 and the results were published on 14 May 2008. The microdatasets were weighted to the latest (2007/08) population estimates whereas previously they were based on population totals published in 2003. For the previous reweighting exercise the microdata were weighted to Census 2001 population estimates published in spring 2003. In autumn 2003 these estimates were revised but it was too late to incorporate them into the reweighting without significantly delaying the project. Therefore, it was decided that the weights already produced using the spring 2003 estimates would be retained and that projections from the pre-revised Census would then be used to weight subsequent datasets until 2007.

Up-to-date population estimates that are in line with the revised Census figures have been used in the latest reweighting project. Analysis of the 2007 reweighted microdata produced aggregates at the UK level that are approximately 900,000 above the estimates produced from the datasets weighted to the 2003 population totals. The changes in the estimates are primarily due to overall differences between the 2003 and 2007 population totals used to weight the data. However, the underlying weighting methodology was changed for the 2007 reweighting exercise, which is another factor that has contributed to changes in the reweighted estimates.

For more information on the reweighting exercise, see 'Labour Force Survey: reweighting and seasonal adjustment review 2008' available at: www.statistics.gov.uk/CCI/article. asp?ID=2011 and 'Labour Force Survey: Interim reweighting 2008 available at: www.statistics.gov.uk/cci/article. asp?id=2061

Background

The LFS is the largest regular household survey in the UK LFS interviews are conducted continuously throughout the year. In any three-month period, a nationally representative sample of approximately 102,000 people aged 16 or over in around 52,000 households are interviewed. Each household is interviewed five times, at three-monthly intervals. The initial interview is done face-to-face by an interviewer visiting the address. The other interviews are done by telephone wherever possible. The survey asks a series of questions about respondents' personal circumstances and their labour market activity. Most questions refer to activity in the week before the interview.

The concepts and definitions used in the LFS are agreed by the International Labour Organisation (ILO) – an agency of the United Nations. The definitions are used by European Union member countries and members of the Organisation for Economic Co-operation and Development (OECD).

Labour Market

The LFS was carried out every two years from 1973 to 1983. The ILO definition was first used in 1984. This was also the first year in which the survey was conducted on an annual basis with results available for every spring quarter (representing an average of the period from March to May). The survey moved to a continuous basis in spring 1992 in Great Britain and in winter 1994/95 in Northern Ireland, with average quarterly results published four times a year for seasonal quarters: spring (March to May), summer (June to August), autumn (September to November) and winter (December to February). From April 1998, results are published 12 times a year for the average of three consecutive months.

The LFS collects information on a sample of the population. To convert this information to give estimates for the population the data must be grossed. This is achieved by calculating weighting factors (often referred to simply as weights) which

can be applied to each sampled individual in such a way that the weighted-up results match estimates or projections of the total population in terms of age distribution, sex, and region of residence.

Strengths and limitations of the LFS

The LFS produces coherent labour market information on the basis of internationally standard concepts and definitions. It is a rich source of data on a wide variety of labour market and personal characteristics. It is the most suitable source for making comparisons between countries. The LFS is designed so that households interviewed in each three month period constitute a representative sample of UK households. The survey covers those living in private households and nurses in National Health Service accommodation. Students living in halls of residence have been included since 1992 as information about them is collected at their parents' address.

However the LFS has its limitations. It is a sample survey and is therefore subject to sampling variability. The survey does not include people living in institutions such as hostels or residential homes. 'Proxy' reporting (when members of the household are not present at the interview, another member of the household answers the questions on their behalf) can affect the quality of information on topics such as earnings, hours worked, benefit receipt and qualifications. Around one-third of interviews are conducted 'by proxy', usually by a spouse or partner but sometimes by a parent or other near relation.

Sampling variability

Survey estimates are prone to *sampling variability*. The easiest way to explain this concept is by example. In the September to November 1997 period, International Labour Organisation (ILO) unemployment in Great Britain (seasonally adjusted) stood at 1,847,000. If we drew another sample for the same period we could get a different result, perhaps 1,900,000 or 1,820,000.

In theory, we could draw many samples, and each would give a different result. This is because each sample would be made up of different people who would give different answers to the questions. The spread of these results is the sampling variability. Sampling variability is determined by a number of factors including the sample size, the variability of the population from which the sample is drawn and the sample design. Once we know the sampling variability we can calculate a range of values about the sample estimate that represents the expected variation with a given level of assurance. This is called a confidence interval. For a 95 per cent confidence interval we expect that in 95 per cent of the samples (19 times out of 20) the confidence interval will

contain the true value that would be obtained by surveying the entire population. For the example given above, we can be 95 per cent confident that the true value was in the range 1,791,000 to 1,903,000.

Unreliable estimates

Very small estimates have relatively wide confidence intervals making them unreliable. For this reason, ONS does not publish LFS estimates below 10,000.

Non-response

Non-response can introduce bias to a survey, particularly if the people not responding have characteristics that are different from those who do respond. The LFS has a response rate of around 80 per cent to the first interview, and over 90 per cent of those who are interviewed once go on to complete all five interviews. These are relatively high levels for a household survey. Any bias from non-response is minimised by *weighting* the results.

Weighting (or grossing) converts sample data to represent the full population. In the LFS, the data are weighted separately by age, sex and area of residence to population estimates based on the census. Weighting also adjusts for people not in the survey and thus minimises non-response bias.

LFS concepts and definitions

Discouraged workers – a sub-group of the economically inactive population, defined as those neither in employment nor unemployed (on the ILO measure) who said they would like a job and whose main reason for not seeking work was because they believed there were no jobs available.

Economically active – people aged 16 and over who are either in employment or ILO unemployed.

Economic activity rate – the percentage of people aged 16 and over who are economically active.

Economically inactive – people who are neither in employment nor unemployed. This group includes, for example, all those who were looking after a home or retired.

Employment – people aged 16 or over who did at least one hour of paid work in the reference week (whether as an employee or self-employed); those who had a job that they were temporarily away from (on holiday, for example); those on government-supported training and employment programmes (from spring 1983); and those doing unpaid family work (from spring 1992).

Employees – the division between employees and self-employed is based on survey respondents' own assessment of their employment status.

Full Time – the classification of employees, self-employed and unpaid family workers in their main job as full-time or part-time is on the basis of self-assessment. Up until autumn 1995, people who were on government work-related training programmes are classified as full-time or part-time according to whether their usual hours of work per week were over 30 or 30 and under; from winter 1995/96 onwards, the full-time/part-time classification for this group has been changed to self-assessment, in line with the other groups outlined above. People on government-supported training and employment programmes who are at college in the survey reference week are classified, by convention, as part-time.

Government-supported training and employment programmes – comprise all people aged 16 and over participating in one of the government's employment and training programmes (Youth Training, Training for Work and Community Action), together with those on similar programmes administered by Training and Enterprise Councils in England and Wales, or Local Enterprise Companies in Scotland.

Hours worked – respondents to the LFS are asked a series of questions enabling the identification of both their usual hours and their actual hours. Total hours include overtime (paid and unpaid) and exclude lunch-breaks.

Unemployment – Unemployment figures from the LFS, which are based upon the ILO definition, were re-labelled 'unemployment' rather than 'ILO unemployment' in January 2003. This emphasises that the LFS figures provide the official and only internationally comparable measure of unemployment in the UK. For more details see: www. statistics.gov.uk/cci/nugget.asp?id=251

The ILO measure of unemployment used throughout this publication refers to people without a job who were available to start work in the two weeks following their LFS interview and who had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained. This definition of unemployment is in accordance with that adopted by the 13th International Conference of Labour Statisticians, further clarified at the 14th ICLS, and promulgated by the ILO in its publications.

Unemployment (rate) – the percentage of economically active people who are unemployed on the ILO measure.

Unemployment (duration) – defined as the shorter of the following two periods:

- duration of active search for work
- length of time since employment

Part-time – see full-time.

Second jobs – jobs which LFS respondents hold in addition to a main full-time or part-time job.

Self-employment - See Employees.

Temporary employees – in the LFS these are defined as those employees who say that their main job is non-permanent in one of the following ways: fixed period contract; agency temping; casual work; seasonal work; other temporary work.

Unpaid family workers – the separate identification from spring 1992 of this group in the LFS is in accordance with international recommendations. The group comprises persons doing unpaid work for a business they own or for a business that a relative owns.

Distribution of workforce

(Table 7.4)

Claimant unemployed – those people who were claiming unemployment-related benefits (contributions or income related Jobseeker's Allowance and/or National Insurance credits) at Jobcentre Plus local offices on the day of the monthly count. The seasonally adjusted claimant unemployment series allows for all relevant changes which, unless adjusted for, would distort comparisons over time.

Workforce jobs (formerly workforce in employment) – comprises employee jobs, self-employment jobs (from the LFS), HM Forces and government-supported trainees.

HM Forces (provided by Ministry of Defence) – represent the total number of UK service personnel, male and female, in HM Regular. Full Time Reserve personnel, mobilised reservists, the Ghurkhas and the Home Service battalions of the Royal Irish Regiment, wherever serving and including those on leave.

Self-employed jobs – estimates are based on the results of the Labour Force Survey. The Northern Ireland estimates are not seasonally adjusted.

Government-supported trainees – include all participants on government training and employment programmes who are receiving some work experience on their placement but who do not have a contract of employment (those with a contract are included in the employee jobs series). The numbers are not subject to seasonal adjustment.

International Employment Comparisons

(Table 7.7)

All employment rates for European Union (EU) countries published by Eurostat (including the rate for the UK) are based on the population aged 15–64. The rates for Canada and Japan are also based on the population aged 15–64, but the rate for the US is for those aged 16–64. The employment rate for the UK published by ONS is based on the working age population aged 16–64 (men) and 16–59 (women) and therefore takes into account both the current school leaving age and state pension ages.

The unemployment rate published by Eurostat for most EU countries (but not for the UK), are calculated by extrapolating from the most recent LFS data using monthly registered unemployment data. A standard population basis (15–74) is used by Eurostat except for Spain and the UK (16–74). The unemployment rate for the US is based on those aged 16 and over, but the rates for Canada and Japan are for those aged 15 and over. All unemployment rates are seasonally adjusted.

The unemployment rate for the UK published by Eurostat is based on the population aged 16–74 while the unemployment rate for the UK published by ONS is based on those aged 16 and over. There are other minor definitional differences.

Jobseekers allowance claimant count

(Tables 7.14 and 7.15)

This is a count of all those people who are claiming Jobseeker's Allowance (JSA) at Jobcentre Plus local offices. People claiming JSA must declare that they are:

- out of work
- capable of work
- available for work
- actively seeking work

during the week in which the claim is made.

All people claiming JSA on the day of the monthly count are included in the claimant count, irrespective of whether they are actually receiving benefits. Also see Table 10.6 in the Social protection chapter.

Labour disputes

(Table 7.19)

These figures exclude details of stoppages involving fewer than ten workers or lasting less than one day except any in which the aggregate number of working days lost is 100 or more. There may be some under-recording of small or short stoppages; this would have much more effect on the total of stoppages than of working days lost. Some stoppages which affected more than one industry group have been counted under each of the industries but only once in the totals. Stoppages have been classified using the *Standard Industrial Classification (SIC) 2003*.

The figures for working days lost and workers involved have been rounded and consequently the sum of the constituent items may not agree with the totals. Classifications by size are based on the full duration of stoppages where these continue into the following year. Working days lost per thousand employees are based on the latest available mid-year (June) estimates of employee jobs.

Earnings

(Tables 7.20 to 7.25)

The total gross remuneration employees receive before any statutory deductions (tax, national insurance). Income in kind and pension funds are excluded.

Annual Survey of Hours and Earnings

(Tables 7.20, 7.21, 7.24 and 7.25)

The Annual Survey of Hours and Earnings (ASHE) replaced the New Earnings Survey (NES) in 2004. The ASHE includes improvements to the coverage of employees and to the weighting of earnings estimates. The data variables collected remain broadly the same, although an improved questionnaire was introduced for the 2005 survey. The change in methodology means that statistics on pay and hours published from the ASHE, including the calculation of ONS's low pay statistics, are discontinuous with previous NES surveys.

To improve coverage and make the survey more representative, supplementary information was collected for the 2004 ASHE survey on businesses not registered for Value Added Tax (VAT) and for people who changed or started new jobs between sample selection and the survey reference period. The 2004 ASHE results are therefore discontinuous with the results for 2003, for which no supplementary information was collected. However, for 2004 two sets of results are available; the headline results that include supplementary information and results that exclude this

Labour Market

information. These second set of results are given solely for comparison to earlier results.

The ASHE methodology includes imputation and weighting, the main impact of these changes when applied to existing NES data for 1997 to 2003 are:

- to increase the estimates of the level of average weekly pay over estimates published from the NES
- for males the increase in estimates of earnings is more than the increase for females. In particular this affects hourly pay excluding overtime, which is used in the calculation of ONS's preferred measure of the gender pay gap. The estimate of hourly pay for males is increased more then the estimate for females, which widens the estimate of the gap between male and female hourly pay
- estimates of the level of earnings for people working in London are increased more than estimates for other regions. This widens the estimate of the difference in pay between London and other regions of the UK

For information about methodological changes to the 2007 ASHE survey see: www.statistics.gov.uk/downloads/theme_labour/ASHE/ChangeInASHE07.pdf

Average Earnings Index

(Tables 7.22 and 7.23)

The Average Earnings Index (AEI) is designed to measure changes in the level of earnings, that is, wage inflation in Great Britain. Average earnings are calculated as the total wages and salaries paid by firms, divided by the number of employees paid. Like all indices, changes are measured against a base year, whose index value is set to 100. The current base year is 2000 for Tables 7.22 and 7.23.

Users should note that the data contained in Table 7.23 of the *Annual Abstract of Statistics* since 2003 are not comparable with that published up until 2002. Table 7.23 now shows the set of 20 industry sectors that better reflect the current state of the economy, and supersedes the previous set of 26 industry sectors. The new series are available in the format of excluding bonus index, including bonus index, and an annual percentage change for including and excluding bonuses. An article covering the reasons for the change can be found at: www.statistics.gov.uk/labour

The AEI is published monthly in the ONS Labour Market Statistics First Release. The main indicator of growth, the headline

rate, is based on the annual change in the seasonally adjusted index values for the latest three months compared with the same period a year ago. The use of a three-month average reduces the level of volatility seen in the data on a month-on-month basis

Strengths of the AEI

The AEI, based on monthly survey data, is a timely indicator of changes in the level of earnings.

Limitations of the AEI

The index is not adjusted for any changes in the composition of the workforce such as changes in the share of full-time and part-time workers, or in the share of skilled and unskilled workers. Similarly, the index does

not account for changes in the number of hours worked, or any temporary factors that affect earnings.

The sample of the Monthly Wages and Salaries Survey on which the AEI is based is not designed to provide information on the level of earnings. The sample is not completely representative of the economy as firms with fewer than 20 employees are excluded, as are the earnings of self-employed persons.

The AEI only covers earnings in Great Britain as earnings information is not collected for Northern Ireland and regional data are not available.

Trade unions

(Table 7.26)

The statistics relate to all organisations of employees known to Certification Officer with head offices in the UK that fall within the appropriate definition of a trade union in the Trade Union and Labour Relations (Consolidation) Act 1992. Included in the data are home and overseas membership figures of contributory and non-contributory members. Employment status of members is not provided and the figures may therefore include some people who are self-employed, unemployed or retired.

The membership part of this table was revised in 2001, so that statistics presented here are on a consistent basis with the Great Britain table produced by the Certification Officer in his Annual Report and with tables produced in the annual Trade Union membership article published by the Department for Business, Enterprise & Regulatory Reform (BERR).

³ People whose main job is full or part-time and based on respondents' self assessment.

⁴ Those on employment and training programmes are classified as in employment. Some of those on programmes may consider themselves to be employees or self employed so appear in other categories.

⁵ Second jobs reported in LFS in addition to person's main full or part-time job.

Thousand

¹ See chapter text. The data in this table have not been adjusted to reflect the 2001 Census population data.

² All figures have been revised. For further information see: http://www.statistics.gov.uk/cci/article.asp?id=1340

³ There is a discontinuity in the employee jobs series between December 2005 and September 2006 due to improvements to the annual benchmark. Further information can be found at: http://www.statistics.gov.uk/Stat-base/Product.asp?vlnk=9765

⁴ Head office and holding company local units were reclassified to Class 74.15 (within Section K) from December 2003 as a result of the SIC 2003 update.

1 See chapter text. In August 2007, ONS published the mid-year population estimates for 2006. These estimates have now been incorporated into the LFS estimates from 2001 onwards. Further details can be found at http://www.statistics.gov.uk/cci/article.asp?id=1919

359.9

26.6

- 2 Average hours actually worked in the reference week which includes hours worked in second jobs.
- worked in second jous.

 3 The Labour Force Survey has now moved to calendar quarters from May 2006. More information can be found on page 5 of the Concepts and Definitions.pdf by following this link:- www.statistics.gov.uk/downloads/theme_labour/Concepts_Definitions_HQS.pdf
- 4 Main and second job.

2008

5 Includes both paid and unpaid overtime.

- 6 People whose main job is full-time or part-time and based on respondents' self assessment.
- 7 Second jobs reported in the LFS in addition to persons' main full time job.

The latest national and regional seasonally adjusted claimant count figures are provisional and subject to revision in the following month.

Source: Office for National Statistics: 01633 456901

Thousands

¹ The figures are based on the number of claimants receiving unemployment related benefits and are adjusted for seasonality and discontinuities to be consistent with current coverage. See chapter text.

¹ See chapter text. In August 2007, ONS published the mid-year population estimates for 2006. These estimates have now been incorporated into the LFS estimates from 2001 onwards. Further details can be found at http://www.statistics.gov.uk/cci/article.asp?id=1919

² The Labour Force Survey has now moved to calendar quarters from May 2006. More information can be found on page 5 of the Concepts and Definitions.pdf by following this link: www.statistics.gov.uk/downloads/theme_labour/Concepts_Definitions_HQS.pdf

³ Total economically active as a percentage of all persons in the relevant age group.

¹ See chapter text. Employees on adult rates whose pay for the survey period was not affected by absence.

Was not allected by absence.

2 For 2004, two sets of figures are shown. The first does not include supplementary information and therefore is comparable with earlier years. The second includes supplementary information and so is discontinuous with previous years (where the two figures are equal, only one appears).

³ In 2006 additional methodology was introduced. Therefore the bottom data is comparable with 2007, whilst the top data is comparable with earlier years (where the two figures are equal, only one appears).

² For 2004, two sets of figures are shown. The first does not include supplementary information and therefore is comparable with earlier years. The second includes supplementary information and so is discontinuous with previous years (where the two figures are equal, only one appears).

³ In 2006 additional methodology was introduced. Therefore the bottom data is comparable with 2007, whilst the top data is comparable with earlier years (where the two figures are equal, only one appears).

² Data derived from trade union annual returns with periods which ended between October and September each year. The majority, however, ended

in December. In the case of year 2004/05, for example, the data derived from annual returns with periods which ended between October 2004 and September 2005 - approximately 73% ended in December.

Chapter 8

Distribution of total incomes

(Table 8.1)

The information shown in Table 8.1 comes from the Survey of Personal Incomes for the financial years 2003/04, 2004/05, 2005/06 and 2006/07. This is an annual survey that covers approximately 540,000 individuals across the whole of the UK. It is based on administrative data held by HM Revenue and Customs (HMRC) offices on individuals who could be liable to tax.

The table relates only to those individuals who are taxpayers. The distributions cover only incomes as computed for tax purposes and above a level which for each year corresponds approximately to the single person's allowance. Incomes below these levels are not shown because the information about them is incomplete.

Investment income from which tax has been deducted at source is not always known to local tax offices. Estimates of missing bank and building society interest and dividends from UK companies are included in these tables. The missing investment income is distributed, in a manner consistent with information from the Expenditure and Food Survey and the National Accounts, to individuals for whom there is no investment income already reported by the tax office.

Superannuation contributions are estimated and included in total income. They have been distributed among earners in the Survey of Personal Incomes sample by a method consistent with information about the number of employees who are contracted in or out of the State Earnings Related Pension Scheme and the proportion of their earnings contributed.

When comparing results of these surveys across years, it should be noted that the Survey of Personal Incomes is not a longitudinal survey. However, sample sizes have increased in recent years to increase precision.

Average incomes of households

(Table 8.2)

Original income is the total income in cash of all the members of the household before receipt of state benefits or the

deduction of taxes. It includes income from employment, self-employment, investment income and occupational pensions. Gross income is original income plus cash benefits received from government (retirement pensions, child benefit, etc). Disposal income is the income available for consumption. It is equal to gross income less direct taxes which include income tax, national insurance contributions, and council tax. By further allowing for taxes paid on goods and services purchased, such as VAT, an estimate of post-tax income is derived. These income figures are derived from estimates made by the Office for National Statistics, based largely on information from the Expenditure and Food Survey (EFS), and published each on the Office for National Statistics website.

For the purposes of Table 8.2, a retired household is defined as one where the combined income of retired members amounts to at least half the total gross income of the household, where a retired person is defined as anyone who describes themselves as 'retired' or anyone over the minimum NI pension age describing themselves as 'unoccupied' or 'sick or injured but not intending to seek work'.

Children are defined as persons aged under 16 or aged between 16 and 18, unmarried and receiving full-time nonadvanced further education.

Expenditure and Food Survey

(Tables 8.3 to 8.5)

The Expenditure and Food Survey (EFS) is a sample survey of 11,484 private households in the UK, with an achieved response of around 6,200 private households. The survey was introduced in April 2001 as a result of the amalgamation of the Family Expenditure and National Food Surveys (FES and NFS). The EFS sample is representative of all regions of the UK and of different types of households. The survey is continuous with interviews spread evenly over the year to ensure that estimates are not biased by seasonal variation. The survey results show how households spend their money - how much goes on food, clothing and so on - and how spending patterns vary depending upon income, household composition, and regional location of households. From January 2006, the survey has been conducted on a calendar year basis; therefore the latest results refer to the January to December 2007 period.

One of the main purposes of the EFS is to define the 'basket of goods' for the Retail Price Index (RPI) and the Consumer Price Index (CPI). The RPI has a vital role in the up rating of state pensions and welfare benefits, while the CPI is a key instrument of the Government's monetary policy. Information from the survey is also a major source for estimates of household expenditure in the UK National Accounts. In

addition, many other government departments use EFS data as a basis for policy making, for example in the areas of housing and transport. The Department for Environment, Food and Rural Affairs (Defra) uses EFS data to report on trends in food consumption and nutrient intake within the UK. Users of the EFS outside government include independent research institutes, academic researcher and business and market researchers. Like all surveys based on a sample of the population, its results are subject to sampling variability and potentially to some bias due to non-response. The results of the survey are published in an annual report, the latest being *Family Spending 2008* edition. The report includes a list of definitions used in the survey, items on which information is collected and a brief account of the fieldwork procedure.

¹ Data are based on the Family Expenditure Survey (FES) classification and not the Expenditure and Food Survey (EFS) standard classification: Classification of Individual Consumption by Purpose (COICOP). This has been done to preserve an historical time-series, as COICOP data are only available from 2001/02.

Sources: Expenditure and Food Survey and Family Expenditure Survey; Office for National Statistics; 01633 455282

² From 1998/99 figures shown are based on weighted data, including children's expenditure. Weighting is based on the population figures from the 1991 and 2001 Censuses.

³ From 2001/02 onwards, weighting is based on population estimates from the 2001 census.

⁴ From 2006 the survey has moved onto a calendar year basis.

⁵ From 1998/99 to 2005/06, the figures shown are based on weighted data using non-response weights based on the 1991 Census and population figures from the 1991 and 2001 Census. From 2006, figures shown are based on weighted data using updated weights, with non-response weights and population figures based on the 2001 Census.

⁶ An improvement to the implation of mortgage intrest payments has been implemented for 2006 and 2007 data which should lead to more accurate figures. This will lead to a slight discontinuity. An error was discovered in the derivation of mortgage capital repayments which was leading to double counting. This has been amended for the 2006 and 2007 data.

¹ Based on weighted data from 1998/99. 2 From 2001/02 onwards, weighting is based on the population estimates from the 2001 census.

³ Includes digital, satellite and cable receivers.

⁴ From 2006 the survey has moved onto a calendar year basis.

From 1998/99 to 2005/06, the figures shown are based on weighted data using non-response weights based on the 1991 Census and population figures from the 1991 and 2001 Census. From 2006, figures shown are based on weighted data using updated weights, with non-response weights and population figures based on the 2001 Census.

Health

Chapter 9

Health

Deaths: analysed by cause

(Table 9.6)

All figures in this table for England and Wales represent the number of deaths **occurring** in each calendar year. All data for Scotland and Northern Ireland relate to the number of deaths **registered** during each calendar year. From 2001, all three constituent countries of the UK are coding their causes of death using the latest, tenth, revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10). All cause of death information from 2001 (also for 2000 for Scotland) presented in this table is based on the revised classification.

To assist users in assessing any discontinuities arising from the introduction of the revised classification, bridge-coding exercises were carried out on all deaths registered in 1999 in England and Wales and also in Scotland. For further information about ICD-10 and the bridge-coding carried out by the Office for National Statistics, see the ONS Report: 'Results of the ICD-10 bridge-coding study, England and Wales, 1999', *Health Statistics Quarterly* 14 (2002), pages 75–83 or see the website at: www. ons.gov.uk

For information on the Scottish bridge-coding exercise, consult the Annual Report of the General Register Office for Scotland or see their website at: www.gro-scotland.gov.uk. No bridge-coding exercise was conducted for Northern Ireland.

Neonatal deaths and homicide and assault

For England and Wales, neonatal deaths (those at age under 28 days) are included in the number of total deaths but excluded from the cause figures. This has particular impact on the totals shown for the chapters covered by the ranges P and Q, 'Conditions originating in the perinatal period' and 'Congenital malformations, deformations and chromosomal abnormalities'. These are considerably lower than the actual number of deaths because it is not possible to assign an underlying cause of death from the neonatal death certificate used in England and Wales.

Also, for England and Wales only, the total number shown for Homicide and assault, X85–Y09, will not be a true representation because the registration of these deaths is often delayed by adjourned inquests.

Occupational ill-health

(Tables 9.8 and 9.9)

There are a number of sources of data on the extent of occupational or work-related ill health in Great Britain. For some potentially severe lung diseases caused by exposures which are highly unlikely to be found in a non-occupational setting, it is useful to count the number of death certificates issued each year. This is also true for *mesothelioma*, a cancer affecting the lining of the lungs and stomach, for which the number of cases with non-occupational causes is likely to be larger (although still a minority). **Table 9.9** shows the number of deaths for *mesothelioma* and *asbestosis* (linked to exposure to asbestos), *pneumoconiosis* (linked to coal dust or silica), *byssinosis* (linked to cotton dust) and some forms of *allergic alveolitis* (including farmer's lung). For asbestos-related diseases the figures are derived from a special register maintained by the Health and Safety Executive (HSE).

Most conditions which can be caused or made worse by work can also arise from other factors. The remaining sources of data on work-related ill health rely on attribution of individual cases of illness to work causes. In The Health and Occupation Reporting Network (THOR), this is done by specialist doctors – either occupational physicians or those working in particular disease specialisms (covering musculoskeletal, psychological, respiratory, skin, audiological and infectious disease). **Table 9.8** presents data from THOR for the last three years. It should be noted that not all cases of occupational disease will be seen by participating specialists; for example, the number of deaths due to *mesothelioma* (shown in Table 9.9) is known to be greater than the number of cases reported to THOR.

Injuries at work

(Table 9.10)

The appropriate 'responsible person' is required to report injuries arising from workplace activities to HSE or the local authority under the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 (RIDDOR 95). This includes fatal injuries, non-fatal major injuries, as defined by the Regulations, and other injuries causing incapacity for work for more than three days. As of 1 April 2001, reports are to be made to an Incident Centre (ICC), based at Caerphilly.

HSE gets to know about virtually all workplace fatalities. However, it is known that employers and others do not report all non-fatal reportable injuries. To estimate the level of underreporting by employers, HSE places questions each year with the Labour Force Survey (LFS), asking respondents if they have suffered a workplace injury in the past year.

The results from the latest LFS show that in Great Britain employers report around 54 per cent of reportable injuries (2006/07). When compared to the previous year, these results also indicate a drop of in the non-fatal injury rate of 3 per cent. The self-employed report between 5 and 10 per cent of reportable non-fatal injuries.

- 1 Excludes joint user and contractual hospitals.
- 2 In year to 31 March.
- 3 Includes transfers out and emergency inpatients treated in day bed units.
- 4 Including attendances at accident and emergency consultant clinics.
- 5 As at 30 September. Figures exclude officers holding honorary locum appointments. Part-time includes maximum part-time appointments. There is an element of double counting of "heads" in this table as doctors can hold more than one contract. For example, they may hold contracts of different type, eg part time and honorary. Doctors holding two or more contracts of the same type, eg part time, are not double counted. Doctors, whose sum of contracts amounts to whole time, are classed as such. Figures have been revised due to coding changes.
 6 The change in both collection and presentation of workforce data due to
- 6 The change in both collection and presentation of workforce data due to changes to staff groupings under Agenda for Change has inevitably meant that the amount of historical trend analysis of data is limited, though still available for some high level groupings.
- 7 As at 30 September. Comprises Therapeutic, Healthcare science, Technical 15 and Pharmacy staff.
- 8 As at 30 September. Includes Health Care Assistants. Figures post 2003 have been amended due to a coding error resulting in some staff previously in this group being moved to the admin and clerical group.

- 9 As at 30 September. Comprises Senior Management and Administrative and Clerical staff. Figures for 2003 onwards have been amended due to the inclusion of some staff previously in the nursing and midwifery staff group 10 As at 30 September. Comprises Ambulance, Works, Ancillary and Trades.
- 11 At 1 October for 1995/96 -2003/04 and 30 Sept for 2004-05 onwards. Source www.isdscotland.org/workforce
- 12 Performer GPs only (known prior to 2004/05 as Unrestricted and restricted principals).
- 13 For 1995/06-2003/04 this group comprises salaried GPs plus associates, assistants and 'other' GPs. Terminology changed with the introduction of the new GMS contract in April 2004.
- 14 Average number of registered patients for Performer (Principal) GPs only. Note this is based only on GP headcount, not Whole Time Equivalence (WTE). and does not take account of the fact that a significant number of non-principal/partner GPs also provide services to patients. Source: ISD Primary Medical Services Information Team.
- 15 Total expenditure on General Medical Services/Primary Medical Services Source: NHS Scotland Costs Book "R390" tables, www.isdscotland.org/costs Note, the contractual arrangements for payments to many general practises changed with the introduction of the new GMS contract in April 2004.
- 16 For prescriptions dispensed in calendar year by all community pharmacists (including stock orders), dispensing doctors and appliance suppliers. Gross total excludes patient charges.
- 17 Comprises of non-salaried GDS principal dentists only as at 31 March.
- 18 Figures represent sight tests paid for by health boards, hospital eye service referrals and GOD(s) ST (v) claimants.
- 19 Free NHS eye examinations were extended to all on 1st April 2006.
- 20 Does not include hospital eye service.
- 21 OPTIX, the electronic system for recording ophtalmic payment information, was introduced in 2002. Information for previous years is now not centrally available from ISD

- 1 Financial Year.
- 2 Average available beds in wards open overnight during the year.
- 3 Includes transfers to other hospitals.
- 4 Includes consultant outpatient clinics and Accident and Emergency departments.
- 5 At beginning of period for Dentists. Doctors numbers at 2002 (Oct), 2003 (Nov), 2004, 2005 & 2006 (Oct).
- 6 From 2003 onwards (UPE's).
- 7 These costs refer to the majority of non-cash limited services: further expenditure under GMS is allocated through HSS Boards on a cash limited basis. Change between 2002 and 2003 is due to advance payments being made in relation to the new GMS contract introduced in April 2004.
- 8 From 1995 onwards figures are taken from financial year.
- 9 Gross cost is defined as net ingredient costs plus on-cost, fees and other payments.
- 10 Excludes amount paid by patients for pre-payment certificates.
- 11 Due to changes in the Dental Contract which came into force in October 1990 dentists are paid under a combination of headings relating to Capitation and Continuing Care patients. Prior to this, payment was simply on an item of service basis.

- 12 Excluding sight tests given in hospitals and under the school health service and in the home.
- 13 Relates to the number of vouchers supplied and excludes repair/replace spectacles.
- 14 Figures relate to the costs of the hospital, community health and personal social services, and have been estimated from financial year data.
- 15 Workforce figures until 1999 refer to 31st December and are taken from the Trust and Board payroll system. Figures from 2000 onwards are at 30th September and are taken from the Trust and Board Human Resource Management Systems. Some figures for 2000 have been revised. Figures for 2000 onwards exclude all home helps and all agency /bank staff Figures include Ambulance and Works staff in the Ancillary & Other Staff category and from 2008 this category also includes staff grouped as 'Generic' who are multidisciplinary staff. Due to Agenda for Change new grade codes have been gradually introduced which have resulted in some staff moving between categories. This will be seen from 2007 onwards. Backward comparison of the workforce is therefore not advisable as definitions differ.

- 1 All doctors excluding GP retainers.
- 2 In order to avoid double counting these staff are excluded from the all doctors totals, as they are predominantly GPs that work part time in hospitals (applies to headcount data only).
- 3 GP Data as at 1 October 1999 and 30 September 2000 2008
- 4 Nursing and midwifery figures exclude students on training courses leading to a first qualification as a nurse or midwife.
- 5 Headcount Pratice Nurse figures are estimated for 1999 based on the 1997 FTE to headcount ratio.
- 6 To make the census data comparable with the Review Body for Nursing Staff and Other Health Professionals definitions, qualified Allied Health Speech & Language Therapists (previously these were included in Other Qualified ST &T staff). For comparability historical data has been reassigned to match the revised definition.
- 7 In 2006 ambulance staff were collected under new, more detailed, occupation codes. As a result, qualified totals and support to ambulance staff totals are not directly comparable with previous years.
- 8 GP Registrar count for 2008 represents an improvement in data collection processes and comparisons with previous years should be treated with caution.

Note: Enhanced validation processes have led to the removal of duplicate records from the non-medical census (from 2006 onwards). Although percentages were small (less than 1%), comparisons with years prior to this need to be treated with caution. This only effects headcount.

Malignant neoplasm of prostate Leukaemia Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism Endocrine, nutritional and metabolic diseases Diabetes mellitus	C61 C91-C95 D50-D89	31	37	20	29	16
Leukaemia Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism Endocrine, nutritional and metabolic diseases Diabetes mellitus	C91-C95 D50-D89	217	241	222	212	235
Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism Endocrine, nutritional and metabolic diseases Diabetes mellitus	D50-D89	85	95	92	91	94
certain disorders involving the immune mechanism Endocrine, nutritional and metabolic diseases Diabetes mellitus		03	90	32	91	34
Endocrine, nutritional and metabolic diseases Diabetes mellitus		37	34	36	31	39
Diabetes mellitus	E00-E90	246	248	302	281	299
	E10-E14	190	189	224	197	210
nontal and boliavioural alcordoro	F00-F99	341	370	408	418	514
Vascular and unspecified dementia	F01,F03	284	298	316	335	405
Alcohol abuse (inc. alcoholic psychosis)	F10	52	68	86	79	94
Drug dependence and non-dependent abuse of drugs	F11-F16,F18-F19	3	2	2	1	5
Diseases of the nervous system and sense organs	G00-H95	481	487	484	557	588
Meningitis (including meningococcal)	G00-G03	3	1	2	1	5
Alzheimer's disease	G30	224	251	207	265	291
Diseases of the circulatory system	100-199	5 448	5 272	5 002	4 879	4 838
Ischaemic heart diseases	120-125	2 843	2 775	2 708	2 556	2 494
Cerebrovascular diseases	160-169	1 531	1 435	1 307	1 326	1 325
Diseases of the respiratory system	J00-J99	2 082	1 950	1 921	1 982	1 992
Influenza	J10-J11	4	1	-	1	1
Pneumonia	J12-J18	1 025	909	895	895	859
Bronchitis, emphysema and other chronic						
obstructive pulmonary diseases	J40-J44	660	609	596	616	639
Asthma	J45-J46	32	44	32	35	28
Diseases of the digestive system	K00-K93	587	691	584	646	711
Gastric and duodenal ulcer	K25-K27	77	70	60	57	53
Chronic liver disease	K70,K73-K74	156	189	150	171	193
Diseases of the skin and subcutaneous tissue	L00-L99	15	19	20	21	26
Diseases of the musculo-skeletal system and connective tissue	M00-M99	93	66	95	79	76
Rheumatoid arthritis and juvenile arthritis	M05-M06,M08	26	15	28	36	25
Osteoporosis	M80-M81	16	10	12	11	12
Diseases of the genito-urinary system	N00-N99	327	364	351	359	381
Diseases of the kidney and ureter	N00-N29	225	252	210	219	232
Complications of pregnancy, childbirth and the puerperium	O00-O99	3	1	1	3	-
Certain conditions originating in the perinatal period	P00-P96	62	64	81	54	50
Congenital malformations, deformations and						
chromasomal abnormalities	Q00-Q99	69	61	82	84	61
Congenital malformations of the nervous system	Q00-Q07	12	10	10	9	8
Congenital malformations of the circulatory system	Q20-Q28	16	17	20	19	19
Symptoms, signs and abnormal clinical and laboratory						
findings not elsewhere classified	R00-R99	82	100	108	138	125
Senility without mention of psychosis (old age) Sudden infant death syndrome	R54 R95	63 -	70 -	71 2	98 1	95 4
Deaths from external causes	V01-Y89	550	643	761	853	773
All accidents	V01-X59,Y85,Y86	364	448	492	525	499
Land transport accidents	V01-V89	120	161	175	184	172
Accidental falls	W00-W19	44	63	99	117	112
Accidental poisonings	X40-X49	30	17	40	22	37
Suicide and intentional self-harm	X60-X84,Y87.0	132	128	186	249	215
Homicide and assault	X85-Y09,Y87.1	30	32	32	30	30
Event of undetermined intent	Y10-Y34, Y87.2	12	18	27	42	27

¹ The figures show the corrected number of notifications, incorporating revisions of diagnosis, either by the notifying medical practitioner or by the medical superintendent of the infectious diseases hospital. Cases notified in Port Health Authorities are included.

Sources: Health Protection Scotland; Communicable Disease Surveillance Centre (Northern Ireland); Health Protection Agency, Centre for Infections, IM&T Dept: 020 8200 6868

² Formal notifications of new cases only. The figures exclude chemoprophylaxis.
3 Figures include cases of tuberculosis not notified before death.

9 Estimated number of cases of work-related disease reported by specialist physicians to THOR¹ Great Britain

² For the inclusion into the Mesothelioma register the cause of death on the death certificate must mention the word Mesothelioma.

³ For inclusion into the Asbestosis register the cause of death on the death certificate must mention the word Asbestosis.

² Injuries causing incapacity for normal work for more than 3 days.

³ Excludes sea fishing.

⁴ Injuries arising from shore based services only. Excludes incidents reported under merchant shipping legislation.

Chapter 10

(Tables 10.2 to 10.11, 10.13 and 10.15 to 10.19)

Tables 10.2 to 10.6, 10.9 to 10.11 and 10.13 to 10.19 give details of contributors and beneficiaries under the National Insurance and Industrial Injury Acts, supplementary benefits and war pensions.

There are four classes of National Insurance Contributions (NICs):

Class 1 Earnings-related contributions paid on earnings from employment. Employees pay primary Class 1 contributions and employers pay secondary Class 1 contributions. Payment of Class 1 contributions builds up entitlement to contributory benefits which include Basic State Pension; Additional State Pension (State Earnings Related Pension Scheme SERPS and from April 2002, State Second Pension, S2P); Contribution Based Jobseeker's Allowance; Bereavement Benefits; and Incapacity Benefit.

Primary class 1 contributions stop at State Pension age, but not Class 1 secondary contributions paid by employers.

There are reduced contribution rates where the employee contracts out of S2P (previously SERPS). They still receive a Basic State Pension but an Occupational or Personal Pension instead of the Additional State Second Pension.

Class 2 Flat rate contributions paid by the self-employed whose profits are above the small earnings exception. Payment of Class 2 contributions builds up entitlement to the contributory benefits, which include Basic State Pension, Bereavement Benefits, Maternity Allowance and Incapacity Benefit, but not Additional State Second Pension or Contribution Based Jobseeker's Allowance (JSA).

Class 2 contributions stop at State Pension age.

Class 3 Flat rate voluntary contributions, which can be paid by someone whose contribution record is insufficient. Payment of Class 3 contributions builds up entitlement to contributory benefits which include Basic State Pension and Bereavement Benefits.

Class 4 Profit-related contributions paid by the self-employed in addition to Class 2 contributions. Class 4 contributions stop at State Pension age. Under some circumstances people who are not in employment do not have to make voluntary contributions to accrue a qualifying year for Basic State Pension.

Home Responsibilities Protection

Home Responsibilities Protection (HRP) helps to protect the basic State Pension of those precluded from regular employment because they are caring for children or a sick or disabled person at home. To be entitled to HRP, a person must have been precluded from regular employment for a full tax year. HRP reduces the amount of qualifying years a person would otherwise need for a Basic State Pension.

National Insurance Credits

In addition to paying, or being treated as having paid contributions, a person can be credited with National Insurance. Contribution credits help to protect people's rights to State Retirement Pension and other Social Security Benefits.

A person is likely to be entitled to contributions credits if they are: a student in full-time education or training, in receipt of Jobseeker's Allowance, unable to work due to sickness or disability, entitled to Statutory Maternity Pay or Statutory Adoption Pay, or they have received Carer's Allowance.

Credits are automatically awarded for men aged 60 to 65 provided they are not liable to pay Class 1 or 2 NICs, and to young people for the tax years containing their 16th, 17th and 18th birthdays.

Jobseeker's Allowance

(Table 10.6)

Jobseeker's Allowance (JSA) replaced Unemployment Benefit and Income Support for unemployed claimants on 7 October 1996. It is a unified benefit with two routes of entry: contribution-based, which depends mainly on National Insurance contributions, and income-based, which depends mainly on a means test. Some claimants can qualify by either route. In practice they receive income-based JSA but have an underlying entitlement to the contribution-based element.

Sickness Benefit, Invalidity Benefit and Incapacity Benefit

(Tables 10.7 and 10.8)

Incapacity Benefit replaced Sickness Benefit and Invalidity Benefit from 13 April 1995. The first condition for entitlement to these contributory benefits is that the claimants are incapable of work because of illness or disablement. The second is that they satisfy the contribution conditions, which depend on contributions paid as an employed (Class 1) or self-employed person (Class 2). Under Sickness and Invalidity Benefits the contribution conditions were automatically treated as satisfied if a person was incapable of work because of an industrial accident or prescribed disease. Under Incapacity Benefit those who do not satisfy the contribution conditions do not have them treated as satisfied. Class 1A contributions paid by employers are in respect of the benefit of cars provided for the private use of employees, and the free fuel provided for private use. These contributions do not provide any type of benefit cover.

Since 6 April 1983, most people working for an employer and paying National Insurance contributions as employed persons receive Statutory Sick Pay (SSP) from their employer when they are off work sick. SSP was payable for a maximum of eight weeks until 5 April 1986, and 28 weeks thereafter. Peopl who do not work for an employer, and employees who are excluded from the SSP scheme, or those who have run out of SSP before reaching the maximum of 28 weeks and are still sick, can claim benefit. Any period of SSP is excluded from the tables.

Spells of incapacity of three days or less do not count as periods of interruption of employment and are excluded from the tables. Exceptions are where people are receiving regular weekly treatment by dialysis or treatment by radiotherapy, chemotherapy or plasmapheresis where two days in any six consecutive days make up a period of interruption of employment, and those whose incapacity for work ends within three days of the end of SSP entitlement.

At the beginning of a period of incapacity, benefit is subject to three waiting days, except where there was an earlier spell of incapacity of more than three days in the previous eight weeks. Employees entitled to SSP for less than 28 weeks and who are still sick can get Sickness Benefit or Incapacity Benefit Short Term (Low) until they reach a total of 28 weeks provided they satisfy the conditions.

After 28 weeks of SSP and/or Sickness Benefit (SB), Invalidity Benefit (IVB) was payable up to pension age for as long as the incapacity lasted. From pension age, IVB was paid at the person's State Pension rate, until entitlement ceased when SP

was paid, or until deemed pension age (70 for a man, 65 for a woman). People who were on Sickness or Invalidity Benefit on 12 April 1995 were automatically transferred to Incapacity Benefit, payable on the same basis as before.

For people on Incapacity Benefit under State Pension age there are two short-term rates: the lower rate is paid for the first 28 weeks of sickness and the higher rate for weeks 29 to 52. From week 53 the Long Term rate Incapacity Benefit is payable. The Short Term rate Incapacity Benefit is based on State Pension entitlement for people over State Pension age and is paid for up to a year if incapacity began before pension age.

The long-term rate of Incapacity Benefit applies to people under State Pension age who have been sick for more than a year. People with a terminal illness, or who are receiving the higher rate care component of Disability Living Allowance, will get the Long Term rate. The Long Term rate is not paid for people over pension age.

Under Incapacity Benefit, for the first 28 weeks of incapacity, people previously in work will be assessed on the 'own occupation' test – the claimant's ability to do their own job. Otherwise, incapacity will be based on a personal capability assessment, which will assess ability to carry out a range of work-related activities. The test will apply after 28 weeks of incapacity or from the start of the claim for people who did not previously have a job. Certain people will be exempted from this test.

The tables exclude all men aged over 65 and women aged over 60 who are in receipt of State Pension, and all people over deemed pension age (70 for a man and 65 for a woman), members of the armed forces, mariners while at sea, and married women and certain widows who have chosen not to be insured for sickness benefit. The tables include a number of individuals who were unemployed prior to incapacity.

The Short Term (Higher) and Long Term rates of Incapacity Benefit are treated as taxable income. There were transitional provisions for people who were on Sickness or Invalidity Benefit on 12 April 1995. They were automatically transferred to Incapacity Benefit, payable on the same basis as before. Former IVB recipients continue to get Additional Pension entitlement, but frozen at 1994 levels. Also their IVB is not subject to tax. If they were over State Pension age on 12 April 1995 they may get Incapacity Benefit for up to five years beyond pension age.

Child Benefits

(Table 10.9)

Child Benefit (CB) is paid to those responsible for children (aged under 16) or qualifying young people. The latter includes:

- a) a person under the age of 19 in full-time non-advanced education or (from April 2006) on certain approved vocational training programmes
- a person who is aged 19 who began their course of full-time, non-advanced education or approved training before reaching age 19 (note: those reaching 19 up to 9 April 2006 ceased to qualify on their 19th birthdays)
- c) a person who has reached the age of 16 until the 31 August following their 16th birthday
- d) a person aged 16 or 17 who has left education and training who is registered with the Careers service or with Connexions and is awaiting a placement in employment or training for the limited period of up to 20 weeks from the date they left education or training

Entitlement for a qualifying young person continues until the terminal date following the date they leave full-time education or approved training. The terminal dates are at the end of August, November, February and May (there is a slight variation for Scotland). Entitlement is also maintained for a person who is entered for external examinations connected with their course throughout the period between a person leaving education or training and completing those examinations.

Entitlement in all cases ceases when a person reaches the age of 20.

Guardian's Allowance is an additional allowance for people bringing up a child because one or both of their parents has died. They must be getting Child Benefit (CB) for the child.

The table shows the number of families in the UK in receipt of CB. The numbers shown in the table are estimates based on a random 5 per cent sample of awards current at 31 August, and are therefore subject to sampling error. The figures take no account of new claims, or revisions to claims that were received or processed after 31 August, even if they are backdated to start before 31 August.

Family Credit/ Working Families' Tax Credit

(Table 10.10)

Working Families' Tax Credit (WFTC) replaced Family Credit from 5 October 1999.

Family Credit was, and Working Families' Tax Credit is, available to families with at least one adult in remunerative work for at least 16 hours per week and who is responsible for at least one child under 16 (under 19 if in full-time education up to A-level or equivalent standard). The rate of payment of WFTC depends on the number of such children and expenditure incurred on eligible childcare. It is also higher if the worker works for at least 30 hours per week, or if there are disabled children or severely disabled adults in the family. It is tapered away above an income threshold. Further details can be obtained from HM Revenue & Customs.

Child and Working Tax Credits (New Tax Credits)

(Table 10.11)

Child and Working Tax Credits (CTC and WTC) replaced Working Families' Tax Credit (WFTC) from 6th April 2003. CTC and WTC are claimed by individuals, or jointly by couples, whether or not they have children.

CTC provides support to families for the children (up to the 31 August after their 16th birthdays) and the 'qualifying' young people (in full-time non-advanced education until their 19th birthdays) for which they are responsible. It is paid in addition to CB.

WTC tops up the earnings of families on low or moderate incomes. People working for at least 16 hours a week can claim it if they: (a) are responsible for at least one child or qualifying young person, (b) have a disability which puts them at a disadvantage in getting a job or, (c) in the first year of work, having returned to work aged at least 50 after a period of at least six months receiving out-of-work benefits. Other adults also qualify if they are aged at least 25 and work for at least 30 hours a week.

Widow's Benefit and Bereavement Benefit

(Table 10.12 and 10.13)

Widow's Benefit is payable to women widowed on or after 11 April 1988 and up to and including 8 April 2001. There are three types of Widow's Benefits: Widow's Payment, Widowed Mother's Allowance and Widow's Pension. Women widowed before 11 April 1988 continue to receive Widow's Benefit based on the rules that existed before that date. Bereavement Benefit was introduced on 9 April 2001 as a replacement for Widow's Benefit, payable to both men and women widowed on or after 9 April 2001. There are three types of Bereavement Benefits available: Bereavement Payment, Widowed Parent's Allowance and Bereavement Allowance.

Government expenditure on social services and housing

(Table 10.20 to 10.25)

The tables of general government expenditure on social services and housing in the UK comprise a summary table followed by separate tables for each of the social services and housing categories. The definition of government expenditure used in the tables is consistent with Table 5.2.4S of the *Blue Book* 2008 edition, and covers both current and capital expenditure of central government (including the National Insurance Fund) and local authorities.

The figures in the tables have been compiled based on the United Nations Classification of the Functions of Government (COFOG) and are consistent with the European System of Accounts 1995 (ESA95). The format of the tables was revised in the 2007 edition. As such they may not be comparable with earlier editions of the *Annual Abstract of Statistics*, which were based on information supplied directly by government departments. This information from government departments is generally no longer available and, as such, the tables are compiled under the categories of National Accounts.

Useful links

National Accounts Blue Book: www.statistics.gov.uk/cci/article. asp?id=2055

UN CoFoG classification: http://unstats.un.org/unsd/cr/registry/regcst.asp?Cl=4

The main categories of expenditure now used are:

Final Consumption Expenditure – The expenditure on goods and services that are used for the direct satisfaction of individual needs or the collective needs of members of the community as distinct from their purchase for use in the productive process. It may be contrasted with actual final consumption, which is the value of goods consumed but not necessarily purchased by that sector.

Compensation of Employees – Total remuneration payable to employees in cash or in kind. Includes the value of social contributions payable by the employer

Net Procurement – current expenditure less receipts for sales and charges.

Gross Capital Formation – acquisition less disposals of fixed assets and the improvement of land.

Subsidies – current unrequited payments made by general government or the European Union to enterprises. Those

made on the basis of a quantity or value of goods or services are classified as 'subsidies on products'. Other subsidies based on levels of productive activity (for example, numbers employed) are designated ,Other subsidies on production.

Capital Transfers – transfers which are related to the acquisition or disposal of assets by the recipient or payer. They may be in cash or kind, and may be imputed to reflect the assumption or forgiveness of debt.

Non-produced financial or non financial assets – assets produced either through production or otherwise of a non-financial nature.

Non-market capital consumption – output of own account production of goods and services provided free or at price that are not economically significant. Non-market output is produced mainly by the general government and Non-profit Institutions Serving Household sectors.

Education

(Table 10.21)

Table 10.21 includes expenditure by the education departments, local education authorities and the University Grants Committee on education in schools, training colleges, technical institutions and universities. Compensation of employees' figures are based on revenue outturn returns produced by Department for Communities and Local Government, Welsh Assembly Government and the Scottish Government.

National Health Service

(Table 10.22)

Table 10.22 includes expenditure by central government on hospital and community health, family practitioner and other health services. The figures are based on departmental expenditure reported to HM Treasury.

Welfare services

(Table 10.23)

Personal social services: this table covers local authority and central government expenditure on such things as the aged, handicapped, homeless, child care, care of mothers and young children, mental health, domestic help, etc.

Social security

(Table 10.24)

Table 10.24 comprises both benefits under the Social Security schemes and non-contributory benefits and allowances, administered by the Department for Work and Pensions (DWP). Benefits paid overseas are also included, as are unfunded social benefits such as voluntary employer social contributions. The analysis by type of Income Support is not exact; the estimates are derived from average numbers in receipt of benefit and average amounts paid. War pensions which are now administered by the Ministry of Defence are included in this table. Child and Working Tax Credits (NTCs) replaced Working Families' Tax Credit (WFTC) from 6 April 2003 and are administered by the HMRC.

Housing

(Table 10.25)

The table shows government expenditure on housing. It includes expenditure made by the central and local government sectors, but excludes expenditure by public corporations. The Housing Revenue Account is classified as a quasi-public corporation, so that most of its current and capital expenditure and income is included in the corporate rather than government sector. All overhead and administration expenses are included in final current expenditure. Non-capitalised support for public corporations and other market bodies relating to housing is recorded as subsidies. Capital transfers are paid mainly by local government to individuals for repair and improvement of privately owned housing. Current transfers paid include insurance premiums. Gross capital formation includes that of the council houses administered by the Housing Revenue Account. This is net of any sales of housing either through Right to Buy or Large Scale Voluntary Transfers. Housing benefit in the form of rent rebates and rent allowances is not included in the table, as they are regarded as forms of social security.

¹ Based on all persons making contributions and not only if they have a qualifying year.

Source: HM:Revenue and Customs:020 7147 3045

² Includes Child's special allowance for Northern Ireland.

³ Includes personal pensions up to 2001/02.

² Estimates obtained from DWP Information Directorate: Lifetime Labour Market Data Tabulation Tool which uses a 1% sample of the National Insurance Recording System (NIRS2) summer 2008 extract.

³ Components may not sum to totals as a result of rounding.

⁴ The tax year commences on 6 April and ends on 5 April the following year.

⁵ Includes those persons with an Appropriate Personal Pension (such persons pay contributions at the not contracted out rate but then receive a rebate paid directly to their scheme).

⁶ Not included in the above rows.

⁷ Persons who paid a mixture of Class 2 contributions and others are not included in this category.

⁸ Persons who paid a mixture of Class 3 contributions and others are not included in this category.

Upper profits limit (UPL)	£30,420	£30,940	£31,720	£32,760	£33,540	34,840	£40040

Note: LEL: Lower Earnings Limit; UEL: Upper Earnings Limit. PT: Primary Threshold; ST: Secondary Threshold.

Earnings below the LEL and above the UEL are charged at the appropriate not-contracted out rate. The employers' contracted-out rate applies only between the LEL and the UEL.

- 5 The contracted-out rebate for secondary contributions is 3.5% of earnings between the LEL and the UEL up to 2006-07.
- 6 Since 2007-08 the contracted-out rebate for secondary contributions is 3.7% of earnings between the LEL and UEL.
- 7 If earnings from self-employment are below this annual limit and the contributor applies for and is granted a small earnings exception Class 2 contributions need not be paid. Class 2 or 3 contributions may be paid voluntarily.

Source: HM Revenue and Customs: 020 7147 3045

¹ Married women opting to pay contributions at the reduced rate at 3.85% before 2003-04 and 4.85% from 2003-04 earn no entitlement to contributory National Insurance benefits as a result of these contributions. No women have been allowed to exercise this option since 1977, but around 70,000 women who have been continually married or widowed and in the labour market since that time have retained their right to pay the reduced rate.

² The contracted-out rebate for employees' contributions is applied only between LEL and UEL. Earnings below LEL are charged at the appropriate not contracted-out rate (which depends on total earnings). Earnings above the UEL are not subject to employee NICs before 2003-04.

³ The rates shown only apply to Contracted-Out Salary Related schemes (COSR).

⁴ The contracted-out rebate for primary contributions is 1.6% of earnings between the LEL and the UEL for all forms of contracting-out.

- 1 See chapter text.
- 2 Persons under 18 are entitled to the appropriate adult rate.
- 3 From 12 April 1999 the personal allowance for couples where both members are not yet 18 or one of the couples is aged 18 or over depends on the 12 couple's circumstances. They may be entitled to a couple allowance or a single person's allowance dependant on certain criteria.
- 4 Incapacity benefit, introduced from 13 April 1995, has replaced sickness 13 Maximum award does not include the 30 hour credit. benefit and invalidity benefit.
- 5 The rate of child dependency increase is adjusted where it is payable for the eldest child for whom child benefit (ChB) is also paid. The weekly rate in such cases is reduced by the difference (less £3.65) between the ChB rates 15 Pension Credit replaced Minimum Income Guarantee (MIG) for Income Supfor the eldest and subsequent children.
- 6 The rate of age addition depends on age at date of onset of incapacity: higher rate for under age 35 and lower rate for age 35-44
- 7 Following a EU Directive, employee's maternity benefit is aligned with the state benefit they would receive if off work sick.
- 8 Women who were either not employed or self-employed received the lower

- 9 New Standard rate introduced from April 2000
- 10 MA Earnings Threshold introduced April 2000
- Retirement pensioners over 80 receive 25p addition.
- Family credit was replaced by In-work Families with Child or Working Child Tax Credit awards. Some children have protected rights. Further information is available from the Department for Work and Pensions.
- 14 In addition to personal allowances, a claimant may also be entitled to premiums. The types of premiums are family, lone parent, pensioner, higher pensioner, disability, severe disability and disabled child.
- port for those aged 60 and over on 6th Ocotober 2003

- 1 See chapter text. Figures as at May each year unless otherwise stated. Taken from DWP 100% Work and Pensions Longitudinal Study (WPLS) da-
- 2 JSA statistics have been completely revised since the last issue following improvements to the methodology in compiling the statistics. A paper detailing the improvements can be found at: http://www.dwp.gov.uk/asd/asd1/improvements_to_JSA.pdf
- 3 Totals include 'credits only' cases.
 4 AA and DLA figures based on WPLS data from 2002. Prior to 2002 a consistent series for caseload, based on WPLS levels, has been created by combining older information, available from the previously published 5% sample data, with the WPLS data.
- 5 Figures for Child Benefit in 2008 are delayed due to extraction system updates.
- $\,$ 6 Figures for IIDB include those receiving both IIDB and REA, at March.
- 7 Figures show REA only from 2000, at March.
- 8 Pension Credit replaced MIG on 6th October 2003 and extended Income Support entitlement to customers aged 60+. MIG claimants have been excluded from the IS figures in order to keep the series consistent.
- 9 In order to produce more up to date and accurate data, we are currently changing our data sources for HB/CTB. In the transition period there will be no new figures available for the publication and May 2007 will continue to be the latest.
- 10 Housing Benefit figures excludes any Extended Payment cases.
- 11 Social landlord figures include registered social landlord tenants.
- 12 Figure excludes Second Adult Rebate Claims.
- 13 Includes overseas cases. As at end of March.

¹ See chapter text. Jobseeker's Allowance (JSA) has two routes of entry: contribution-based which depends mainly upon national insurance contributions and income-based which depends mainly on a means test. Some claimants can qualify by either route. In practice they receive income-based JSA but have an underlying entitlement to the contribution-based element.

Crime and Justice

Chapter 11

Crime and Justice

There are differences in the legal and judicial systems of England and Wales, Scotland and Northern Ireland which make it impossible to provide tables covering the UK as a whole in this section. These differences concern the classification of offences, the meaning of certain terms used in the statistics, the effects of the several Criminal Justice Acts and recording practices.

Recorded crime statistics

(Table 11.3)

Crimes recorded by the police provide a measure of the amount of crime committed. The statistics are based on counting rules, revised with effect from 1 April 1998, which are standard for all the police forces in England, Wales and Northern Ireland and now include all indictable and triable-either-way offences together with a few summary offences which are closely linked to these offences. The new rules have changed the emphasis of measurement more towards one crime per victim, and have also increased the coverage of offences. These changes have particularly impacted on the offence groups of violence against the person, fraud and forgery, drugs offences and other offences.

For a variety of reasons many offences are either not reported to the police or not recorded by them. The changes in the number of offences recorded do not necessarily provide an accurate reflection of changes in the amount of crime committed.

In order to further improve the consistency of recorded crime statistics and to take a more victim oriented approach to crime recording, the National Crime Recording Standard (NCRS) was introduced across all forces in England, Wales and Northern Ireland from 1 April 2002. Some police forces implemented the principles of NCRS in advance of its introduction across all forces. The NCRS had the effect of increasing the number of offences recorded by the police.

Similarly, the Scottish Crime Recording Standard (SCRS) was introduced by the eight Scottish police forces with effect from 1 April 2004. This means that no corroborative evidence is required initially to record a crime-related incident as a crime if so perceived by the victim. Again, the introduction of this new recording standard was expected to increase the numbers of minor crimes recorded by the police, such as minor crimes of vandalism and minor thefts and offences of petty assault and breach of the peace. However, it was expected that the SCRS would not have much impact on the figures for the more

serious crimes such as serious assault, sexual assault, robbery or housebreaking.

The Sexual Offences Act 2003 introduced in May 2004 altered the definition and coverage of sexual offences. In particular, it redefined indecent exposure as a sexual offence, which is likely to account for much of the increase in sexual offences.

Further information is available from *Crime in England and Wales 2007/2008* (Home Office, Sian Nicholas, Chris Kershaw and Alison Walker, editors).

Court proceedings and police cautions

(Tables 11.4 to 11.8, 11.13 to 11.17, 11.20 to 11.22)

The statistical basis of the tables of court proceedings is broadly similar in England and Wales, Scotland and Northern Ireland; the tables show the number of persons found guilty, recording a person under the heading of the principal offence of which they were found guilty, excluding additional findings of guilt at the same proceedings. A person found guilty at a number of separate court proceedings is included more than once.

The statistics on offenders cautioned in England and Wales cover only those who, on admission of guilt, were given a formal caution by, or on the instructions of, a senior police officer as an alternative to prosecution. Written warnings by the police for motor offences and persons paying fixed penalties for certain motoring offences are excluded. Formal cautions are not issued in Scotland. There are no statistics on cautioning available for Northern Ireland.

The Crime and Disorder Act 1998 created provisions in relation to reprimands and final warnings, new offences and orders which have been implemented nationally since 1 June 2000. They replace the system of cautioning for offenders aged under 18. Reprimands can be given to first-time offenders for minor offences. Any further offending results in either a final warning or a charge.

For persons proceeded against in Scotland, the statistics relate to the High Court of Justiciary, the sheriff courts and the district courts. The High Court deals with serious solemn (that is, Jury) cases and has unlimited sentencing power. Sheriff courts are limited to imprisonment of 3 years for solemn cases, or 3 months (6 months when specified in legislation for second or subsequent offences and 12 months for certain statutory offences) for summary (that is, non-Jury) cases. District courts deal only with summary cases and are limited to 60 days imprisonment and level 4 fines. Stipendiary magistrates sit in Glasgow District Court and have the summary sentencing powers of a sheriff.

In England and Wales, indictable offences are offences which are:

- triable only on indictment. These offences are the most serious breaches of the criminal law and must be tried at the Crown Court. 'Indictable-only' offences include murder, manslaughter, rape and robbery
- triable either way. These offences may be tried at the Crown Court or a magistrates' court

The Criminal Justice Act 1991 led to the following main changes in the sentences available to the courts in England and Wales:

- introduction of combination orders
- introduction of the 'unit fine scheme' at magistrates' courts
- abolishing the sentence of detention in a young offender institution for 14-year-old boys and changing the minimum and maximum sentence lengths for 15 to 17year-olds to 10 and 12 months respectively, and
- abolishing partly suspended sentences of imprisonment and restricting the use of a fully suspended sentence

The Criminal Justice Act 1993 abolished the 'unit fine scheme' in magistrates' courts, which had been introduced under the Criminal Justice Act 1991.

A charging standard for assault was introduced in England and Wales on 31 August 1994 with the aim of promoting consistency between the police and prosecution on the appropriate level of charge to be brought.

The Criminal Justice and Public Order Act 1994 created several new offences in England and Wales, mainly in the area of public order, but also including male rape (there is no statutory offence of male rape in Scotland, although such a crime may be charged as serious assault). The Act also:

- extended the provisions of section 53 of the Children and Young Persons Act 1993 for 10 to 13-year-olds
- increased the maximum sentence length for 15 to 17-yearolds to 2 years
- increased the upper limit from £2,000 to £5,000 for offences of criminal damage proceeded against as if triable only summarily
- introduced provisions for the reduction of sentences for early guilty pleas, and
- increased the maximum sentence length for certain firearm offences

Provisions within the Crime (Sentences) Act 1997 (as amended by the Powers of Criminal Courts Sentencing Act 2000) in England and Wales, and the Crime and Punishment (Scotland) Act 1997 in Scotland, included:

- an automatic life sentence for a second serious violent or sexual offence unless there are exceptional circumstances (this provision has not been enacted in Scotland)
- a minimum sentence of 7 years for an offender convicted for a third time of a class A drug trafficking offence unless the court considers this to be unjust in all the circumstances, and
- in England and Wales, the new section 38A of the Magistrates' Courts' Act 1980 extending the circumstances in which a magistrates' court may commit a person convicted of an offence triable-either-way to the Crown Court for sentence it was implemented in conjunction with section 49 of the Criminal Procedure and Investigations Act 1996, which involves the magistrates' courts in asking defendants to indicate a plea before the mode of trial decision is taken and compels the court to sentence or commit for sentence any defendant who indicates a guilty plea

Under the Criminal Justice and Court Service Act 2000 new terms were introduced for certain orders. Community rehabilitation order is the new name for a probation order. A community service order is now known as a community punishment order. Finally, the new term for a combination order is community punishment and rehabilitation order. In April 2000 the secure training order was replaced by the detention and training order. Section 53 of the Children and Young Persons Act 1993 was repealed on 25 August 2000 and its provisions were transferred to sections 90 to 92 of the Powers of Criminal Courts (Sentencing) Act 2000. Reparation and action plan orders were implemented nationally from 1 June 2000. The drug treatment and testing order was introduced in England, Scotland and Wales from October 2000. The referral order was introduced in England, Scotland and Wales from April 2000. These changes are now reflected in Table 11.8.

The system of magistrates' courts and Crown Courts in Northern Ireland operates in a similar way to that in England and Wales. A particularly significant statutory development, however, has been the Criminal Justice (NI) Order 1996 which introduces a new sentencing regime into Northern Ireland, largely replicating that which was introduced into England and Wales by the Criminal Justice Acts of 1991 and 1993. The order makes many changes to both community and custodial sentences, while introducing new orders such as the combination order, the custody probation order, and orders for release on licence of sexual offenders.

Expenditure on penal establishments in Scotland

(Table 11.19)

The results shown in this table are reported on a cash basis for financial years 1996/97 to 2000/01 in line with funding arrangements. Financial year 2001/02 is reported on a resource accounting basis in line with the introduction of resource budgeting. Capital charges were introduced with resource accounting and budgeting.

¹ Figures for England and Wales excluding those on career breaks or maternity/paternity leave. From 1999, figures for Northern Ireland reflect the position at the end of the financial year, prior to this figures were as at

- 8 Includes Scottish Crime and Drug Enforcement Agency.
- 9 Does not include officers on secondment.
- 10 Also includes student officers.
- 11 Includes part-time reserve and full-time reserve, FTR -664 as at 31 March 2008 (618 males and 46 females). Con PT 837 as at 31 March 2008 (501 males and 336 females).

Sources: Home Office: 020 7035 0289; Scottish Government Justice Department: 0131 244 4253; The Police Service of Northern Ireland: 028 9065 0222 ext 24070

³¹ December.

2 Figures exclude secondments outside the police service in England and Wales (eg to the private sector or to law enforcement agencies overseas).

3 From 31 March 2007 onwards details of officers seconded to NCIS and

NCS will no longer appear following the launch of Serious Organised Crime Agency (SOCA) in April 2006.

⁴ Figures include those officers on career breaks or maternity/paternity leave. Prior to 2003, these figures were not collected centrally.
5 Special constable figures are given as a headcount measure.
6 'Strength' is FTE police strength, only excluding special constables.
7 Instructors at Training Establishments, etc, formerly shown as second-

¹ At 1 September: number of prisoners, including pre-trial detainees/remand prisoners. 2 At 30 June. 3 At 1 January.

Sources: Ministries responsible for prisons, national prison administrations; national statistical offices, Council of Europe Annual Penal Statistics (SPACE); World Prison Population List and World Prison Brief;

(International Centre for Prison Studies King's College, London)

⁴ At 31 March. 5 At 31 August.

⁶ At 31 December.

⁷ Annual averages. Countries calculate these on the basis of daily, weekly or

monthly figures.

8 Annual averages by financial year (e.g. 2006=1 April 2005-31 March 2006).

Rate per 100,000 population reflects the position in 2006.

9 At 1 September (2001-03, 2005-06). At 16 December (2004). At 30 June

¹⁰ Metropolitan and overseas departments and territories.

¹¹ At 1 September (2001-06). Annual average (2007). 12 At 1 March.

¹³ At 1 September (2001-06). At 26 October (2007). 14 At third Wednesday in March (2001). At first Wednesday in September

¹⁵ At 1 October.

¹⁶ Based on estimates of national population.

6 Includes the British Transport Police (BTP) from 2002/03 onwards.

8 The offence groupings were revised in 2006/07 and backdated to 2002/03.

Source: Home Office: 020 7035 0307

² Estimates.

³ Figures from this period are not directly comparable with data prior to 1998/99 and from 2002/03 onwards.

⁴ The National Crime Recording Standard (NCRS) was introduced in England and Wales from 1 April 2002. These figures are not directly comparable with those for earlier years. For more details about the inflationary effects of the NCRS on the 2001/02 and 2002/03 figures see chapter text. A detailed explanation for the NCRS can be accessed via the following Home Office Research Development and Statistics website http://www.homeoffice.gov.uk/rds/countrules.html

⁵ Prior to 1 April 1998 the offence of drug trafficking was included in the 'Other offences' group. From 1 April 1999, under the new counting rules, drug trafficking became part of a new 'Drug offences' group which, now also includes possession and other drug offences. For 1998/99 under the old counting rules, drug trafficking has been separated out and listed under drugs offences.

The Sexual Offences Act 2003, introduced in May 2004, altered the definitions and coverage of sexual offences.

1114 Offenders found guilty: by offence group^{1,2,3}, England and Wales

² These data are on the principal offence basis.

³ Every effort is made to ensure that the figures presented are accurate and complete. However, it is important to note that these data have been extracted from large administrative data systems generated by the courts

² From 1 June 2000 the Crime and Disorder Act 1998 came into force nationally and removed the use of cautions for persons under 18 and replaced them with reprimands and final warnings.

³ These data are on the principal offence basis.

⁴ Every effort is made to ensure that the figures presented are accurate and complete. However, it is important to note that these data have been extracted from large administrative data systems generated by police forces. As a consequence, care should be taken to ensure data collection processes and their inevitable limitations are taken into account when those data are used.

¹ The data presented in this table are drawn from administrative IT systems. Where figures in the table have been rounded to the nearest whole number, the rounded components do not always add to the totals, which are calculated and rounded independently. Reconciliation exercises with published Home Office figures may demonstrate differences due to rounded components. A programme of work is currently being undertaken to audit the quality of the data and to identify priorities for improvements.

² Includes motorway and clearway offences.

³ Figures for 2007-08 for some categories dealt with by the High Court - including homicide, rape and major drug cases - may be underestimated slightly due to late recording of disposals on SCRO.

² All figures are now reported as financial years.

³ Including cases remitted to the High Court from the Sheriff Court. Figure for 2007/08 may be an underestimate due to late recording of disposals on the Scottish Criminal History System.

⁴ District Court figures from 2002/03 include the Stipendiary Magistrate Court.

⁵ Figure for 2007/08 includes Justice of the Peace courts in Lothian & Borders from 10 March 2008.

⁶ Includes court type not known.

² All figures are now reported as financial years.

 ³ A community sentence introduced by Section 5 of the Crime and Punishment (Scotland) Act 1995 and available on a pilot basis to 3 Scottish sheriff courts since August 1998. This sentence was made available to High Court, Sheriff Courts and Stipendiary Magistrates court from 1 May 2002.
 4 The pilot scheme under the Crime and Punishment (S) Act 1995, where

⁴ The pilot scheme under the Crime and Punishment (S) Act 1995, where fines for 16 & 17 year olds were replaced by supervised attendance orders, was discontinued in December 1999. The majority of supervised attendance orders recorded from the year 2000-01 onwards were disposals relating to the breach of an existing order.

⁵ Drug treatment and testing orders are new measures made available on a pilot basis to the High Court and to Sheriff Courts for residents in Glasgow (from October 1999), Fife (from July 2000) and Aberdeen/Aberdeenshire (from December 2001). They are now available to all Sheriff courts and the High Court. 6 Totals from 2002/03 include a small number of cases where penalty is unknown.

¹ See chapter text. For the purpose of criminal proceedings, prior to 30 August 2005, a juvenile refers to a person aged 10 years or more but under 17. From 30 August 2005, the youth justice system was extended to include those under the age of 18. The number of juveniles convicted in 2005 and 2006 refers to those aged 10 years or more but under 18.

Custody Probation Orders cannot be separately identified from 'prison' sentences from 1998 to 2002. Thus during this timeframe, figures for prison include custody probation orders.
 The Juvenile Justice Centre order replaced the training school order from 31st January 1999.

Source: Northern Ireland Office: 028 9052 7157

Numbers

Supervision orders were abolished with the introduction of the Criminal Justice (Children) Northern Ireland Order 1998.
 From 2000, fine incorporates 'fine plus disqualification' and 'fine plus penalty points'.

⁵ Refers to the number of youth conference orders completed.

Lifestyles

Chapter 12

Lifestyles

Expenditure by the Department for Culture, Media and Sport

(Table 12.1)

The figures in this table are taken from the department's Annual Report and are outturn figures for each of the headings shown (later figures are the estimated outturn). The department's planned expenditure for future years is also shown.

International tourism and holidays abroad

(Tables 12.8 and 12.9)

The figures in these tables are compiled using data from the International Passenger Survey. A holiday abroad is a visit made for holiday purposes. Business trips and visits to friends and relatives are excluded.

Domestic tourism

(Table 12.10)

The figures in this table are compiled using data from the United Kingdom Tourism Survey (UKTS) and represent trips of one or more nights away from home. The UKTS changed survey methodology in 2000 and 2005. Data from 1995 to 1999 were reworked to allow comparisons to be made with 2000–2004 data. 2004 data should be used and interpreted with caution. 2005 data is not comparable with previous years.

Attendances at leisure and cultural activities

(Table 12.11)

The definitions used in this table differ from those normally used to define regular attendees by the Department for Culture, Media and Sport.

Gambling

(Table 12.12)

The National Lottery figures in this table are the latest figures at the time of going to press which have been released by The National Lottery Commission, and represent ticket sales (money staked) for each of the games which comprise the

lottery. The figures have been adjusted to real terms using the Retail Prices Index.

The National Lottery commenced on 19 November 1994, with the first instant ticket being sold in March 1995. Various other games have been started since, the latest shown in the table being the Euromillions game. The sum of the individual games may not agree exactly with the figures for total sales. Total sales also include the Easy Play games which commenced in 1998, but were dropped in 1999.

The other gambling figures in this table are obtained from the Gambling Commission (formerly the Gaming Board) and HM Revenue and Customs. The figures have been adjusted to real terms using the Retail Prices Index.

The money staked at bingo clubs refers to licensed clubs only.

² Includes museums and galleries (England), libraries (UK) and museums library archives (UK) and culture online.

³ DCMS and Treasury undertook a complete overhaul of the way Lottery expenditure is recorded. For classification of the functions of the government (COFOG) purposes each lottery distrubution body is recorded separately, the exercise offered an opportunity to remove erroneously recorded data.

⁴ Data is estimated.

⁵ Data are forecasts.

Environment

Chapter 13

Environment

Environmental Taxes

(Table 13.1)

In 2007, government revenue from environmental taxes was £38 billion. As a proportion of Gross Domestic Product (GDP) this amounts to 2.7 per cent, and as a proportion of total taxes and social contributions, environmental taxes were 7.4 per cent in 2007. These proportions are lower than in previous years because growth in the economy and total taxes and social contributions has exceeded that of environmental taxes.

Air emissions

(Table 13.2 to 13.8)

Emissions of air pollutants arise from a wide variety of sources. The National Atmospheric Emissions Inventory (NAEI) is prepared annually for the Government and the devolved administrations by AEA Energy and Environment, with the work being co-ordinated by the Department for Food and Rural Affairs (Defra). Information is available for a range of point sources, including the most significant polluters. However, a different approach has to be taken for diffuse sources, such as transport and domestic emissions, where this type of information is not available and estimates for these are derived from statistical information and from research on emission factors for stationary and mobile sources. Although for any given year considerable uncertainties surround the emission estimates for each pollutant, trends over time are likely to be more reliable.

UK national emission estimates are updated annually and any developments in methodology are applied retrospectively to earlier years. Adjustments in the methodology are made to accommodate new technical information and to improve international comparability.

Three different classification systems are used in the tables presented here: a National Accounts basis (Table 13.2); the format required by the Inter-governmental Panel on Climate Change (IPCC) (Table 13.3); and the National Communications (NC) categories (Tables 13.5-13.7).

The NC source categories are detailed below, together with details of the main sources of these emissions:

Energy supply total: power stations, petroleum refining, manufacture of solid fuels and other energy industries, fossil fuel exploration, production, transport and offshore oil – venting and flaring.

Business total: iron and steel combustion, other industrial combustion and miscellaneous industrial and commercial combustion.

Transport total: road transport (passenger cars, light duty vehicles, buses, HGVs, mopeds, motorcycles) and gasoline evaporation from vehicles, tyre and brake wear.

Other transport: civil aviation (domestic cruise, take off and landing cycles); railway locomotives; railway – stationary combustion; shipping; national navigation; fishing vessels; and other mobile sources including agricultural machinery, gardening, construction and aircraft support equipment and mobile industrial equipment powered by diesel or petrol engines.

Residential total: residential plant, household and gardening (mobile).

Agriculture total: stationary combustion, manure liquid systems, manure solid storage and dry lot, other manure management, direct soil emission, and field burning of agricultural wastes.

Industrial process total: industrial process sinter production, iron and steel – flaring, nitric acid production, adipic acid production and metal production.

Solvent and other product use: paint application, degreasing and dry cleaning, chemical products, manufacture and processing wood impregnation, and tyre manufacture.

Land-use change: emissions from managed and unmanaged forests, and forest and grassland conversion.

Waste management total: treatment of domestic, industrial and other waste, including landfill and waste incineration.

Atmospheric emissions on a National Accounts basis

(Table 13.2)

The National Accounts figures in Table 13.2 differ from those on an IPCC basis in that they include estimated emissions from fuels purchased by UK resident households and companies either at home or abroad. These include emissions from UK international shipping and aircraft operators, and exclude emissions in the UK resulting from the activities of non-residents.

Greenhouse gases include carbon dioxide, methane, nitrous oxide, hydro-fluorocarbons, perfluorocarbons and sulphur hexafluoride which are expressed in thousand tonnes of carbon dioxide equivalent.

Acid rain precursors include sulphur dioxide, nitrogen oxides and ammonia which are expressed as thousand tonnes of sulphur dioxide equivalent.

Estimated total emissions of greenhouse gases on an IPCC basis

(Table 13.3)

The IPCC classification is used to report greenhouse gas emissions under the UN Framework Convention on Climate Change (UNFCCC) and includes land use change and all emissions from domestic aviation and shipping, but excludes international marine and aviation bunker fuels. Estimates of the relative contribution to global warming of the main greenhouse gases, or classes of gases, are presented weighted by their global warming potential.

Greenhouse gas emissions bridging table

(Table 13.4)

National Accounts measure to UNFCCC measure

There are a number of formats for the reporting and recording of atmospheric emissions data, including those used by the Department of Energy and Climate Control (DECC) for reporting greenhouse gases under UNFCCC and the Kyoto Protocol, and for reporting air pollutant emissions to the UN Economic Commission for Europe (UNRECE), which differ from the National Accounts consistent measure published by the Office for National Statistics (ONS).

Differences between the National Accounts measure and those for reporting under UNFCCC and the Kyoto Protocol, following the guidance of the IPCC, are shown in Table 13.4.

Emissions of carbon dioxide

(Table 13.5)

Carbon dioxide is the main man-made contributor to global warming. The UK contributes about 2 per cent to global manmade emissions which, according to the IPCC, was estimated to be 38 billion tonnes of carbon dioxide in 2004. Carbon dioxide accounted for about 85 per cent of the UK's manmade greenhouse gas emissions in 2007.

Emissions of methane

(Table 13.6)

Weighted by global warming potential, methane accounted for about 8 per cent of the UK's greenhouse gas emissions in 2007. Methane emissions, excluding those from natural sources, were 53 per cent below 1990 levels. In 2007, the main sources of methane were landfill sites (41 per cent of total) and agriculture (38 per cent). Emissions from landfill have reduced by 59 per cent and emissions from agriculture by 17 per cent since 1990.

Emissions of nitrous oxide

(Table 13.7)

Weighted by global warming potential, nitrous oxide emissions accounted for about 5 per cent of the UK's manmade greenhouse gas emissions in 2007. Nitrous oxide emissions fell by 47 per cent between 1990 and 2007. The largest reductions were in emissions from adipic acid production between 1998 and 1999. This leaves agriculture as the main source, accounting for over two-thirds of emissions, mainly from agricultural soils.

Annual Rainfall

(Table 13.9)

Regional rainfall is derived by the Met Office's National Climate Information Centre for the National Hydrological Monitoring Programme at the Centre for Ecology and Hydrology. These monthly area rainfalls are based initially on a subset of rain gauges (circa 350) but are updated after four to five months with figures using the majority of the UK's rain gauge network.

The regions of England shown in this table correspond to the original nine English regions of the National Rivers Authority (NRA). The NRA became part of the Environment Agency on its creation in April 1996. The figures in this table relate to the country of Wales, not the Environment Agency Welsh Region.

UK Weather Summary

(Table 13.10)

For 2008, initial averages use data available from about 180 observing sites available on 1 January 2009. They represent an initial assessment of the weather that was experienced across the UK during 2008 and how it compares with the 1961 to 1990 average.

Enviroment

For all other years, final averages use quality controlled data from the UK climate network of observing stations. They show the Met Office's best assessment of the weather that was experienced across the UK during the years and how it compares with the 1961 to 1990 average. The columns headed 'Anom' (anomaly) show the difference from, or percentage of, the 1961 to 1990 long-term average.

Biological and chemical quality of rivers and canals

(Table 13.11)

The chemical quality of river and canal waters is monitored in a series of separate national surveys in England, Wales and Northern Ireland. The General Quality Assessment Headline Indicator (GQAHI) and General Quality Assessment (GQA) schemes are used in surveys to provide a rigorous and objective method for assessing the basic chemical quality of rivers and canals. In England the GQAHI survey is based on two determinants: dissolved oxygen and ammoniacal nitrogen, in previous years this assessment included biochemical oxygen demand however in 2007 this was removed from the assessment and the historic data recalculated. In Wales and Northern Ireland the GOA assessment is based on three determinants: dissolved oxygen, biochemical oxygen demand and ammoniacal nitrogen. The GQA grades river stretches into six categories (A-F) of chemical quality, and these in turn have been grouped into four broader groups: good (classes A and B), fair (C and D), poor (E) and bad (F)

To provide a more comprehensive picture of the health of rivers and canals, biological testing has also been carried out. The biological grading is based on the monitoring of tiny animals (invertebrates) which live in or on the bed of the river. Research has shown that there is a relationship between species composition and water quality. Using a procedure known as the River Invertebrate Prediction and Classification System, species groups recorded at a site were compared with those which would be expected to be present in the absence of pollution, allowing for the different environmental characteristics in different parts of the country. Two different summary statistics (known as ecological quality indices) were calculated and then the biological quality was assigned to one of six bands based on a combination of these two statistics.

It should be noted that the monitoring network only covers selected stretches which the Environment Agency are required to monitor. In England and Wales 32,000 km of river network are monitored out of an estimated total river length of 150,000 km. No canals are classified in Northern Ireland.

Biological and chemical quality of rivers and canals Scotland

(Table 13.12)

Scotland's previous classification schemes focused on describing the pollution levels of the water environment. As required by the Water Framework Directive, the new classification scheme for surface waters now assesses:

- the quality of the aquatic ecosystems within rivers, lochs, estuaries and coastal waters
- the extent to which they have been adversely affected by the full range of pressures on the water environment

 from water resources and physical habitat to pollution and invasive non-native species

This new scheme which started in 2007 assesses the condition of each river, loch, estuary and coastal water and assigns it a 'status' from high, good, moderate, poor to bad.

The results on the current condition of our rivers, lochs, estuaries, coasts and ground waters are based primarily on monitoring data collected during 2007. However, as the new monitoring programmes have only been in place for one year, the Scottish Environment Protection Agency (SEPA) has supplemented the limited new monitoring data with data from previous assessments (where relevant and available). This is to ensure the classification results reflect the best current understanding of the status of the water environment. As more monitoring data are collected, SEPA expects its confidence in classification to progressively increase over the next five years.

Prior to 2007, river and canal water quality was based on the Scottish River Classification Scheme of 20 June 1997, which combined chemical, biological, nutrient and aesthetic quality using the following classes: excellent (A1), good (A2), fair (B), poor (C) and seriously polluted (D). The figures in the table are rounded to the nearest 10 km and may not sum to totals.

During 2000 a new digitised river network (DRN) was developed, based on 1:50,000 ordnance survey data digitised by the Institute of Hydrology. The DRN ensures consistency between all SEPA areas and includes the Scottish Islands which were not previously covered. Data based on this network were published for the first time in the 2004 edition of *Annual Abstract of Statistics* and are not consistent with data published previously. The DRN includes:

 All mainland and island rivers with a catchment area of 10 km2 or more. This is known as the 'baseline network' Mainland and island stream stretches with a catchment of less than 10 km² which are classified as fair, poor or seriously polluted and have been monitored. These are added to the baseline network to give a 'classification network'

It is intended that future emphasis will be placed on the baseline network, which will be the reportable network for the purposes of the European Commission Water Framework Directive. Efforts to improve the quality of the downgraded smaller streams will continue, but once this has been sustainably achieved, their monitoring may be reduced. Many of these streams are the subject of current attention because of their influence on the quality of larger classification network rivers.

Using the DRN scheme, data for every routine sampling point are automatically applied to an identified river stretch of predetermined length. The loss in total river length in moving to the DRN (that is despite the first time inclusion of island rivers) arises mainly from the exclusion from classification of thousands of small remote headwater streams which were never monitored, but assumed to be of excellent quality. The smaller reduction in length of downgraded waters arises mainly from using 1:50,000 maps for the DRN; in the former system lengths were hand measured from 1:10,000 maps, so more minor channel bends were included.

Reservoir stocks in England and Wales

(Table 13.13)

Data are collected for a network of major reservoirs (or reservoir groups) in England and Wales for the National Hydrological Monitoring Programme at the Centre for Ecology and Hydrology. Figures of usable capacity are supplied by the Water PLCs and the Environment Agency at the start of each month and are aggregated to provide an index of the total reservoir stocks for England and Wales.

Water industry expenditure

(Table 13.14)

The table is informed by the annual and regulatory accounts of water and sewerage companies and water companies of England and Wales. The elements that make up operating expenditure are as follows: manpower costs, other costs of employment, power, agencies, associated companies, Environment Agency charges, bulk supply imports, general and support, customer services, scientific services, other business activities, local authority rates, water charges, local authority sewerage agencies, materials and consumables, hired and contracted services, charge for bad and doubtful

debts, depreciation, infrastructure renewals expenditure, infrastructure renewals accrual, exceptional items and other operating costs. Capital expenditure figures are the addition to tangible fixed assets including management and general expenditure but excluding infrastructure renewals expenditure. Adopted assets at nil cost are also included.

Water pollution incidents

(Table 13.15)

The Environment Agency responds to complaints and reported incidents of pollution in England and Wales. Each incident is then logged and categorised according to its severity. The category describes the impact of each incident on water, land and air. The impact of an incident on each medium is considered and reported separately. If no impact has occurred for a particular medium, the incident is reported as a category 4. Before 1999, the reporting system was used only for water pollution incidents; thus the total number of substantiated incidents was lower, as it did not include incidents not relating to the water environment.

Bathing waters

(Table 13.16)

Under the EC Bathing Water Directive 76/160/EEC, 11 physical, chemical and microbiological parameters are measured including total and faecal coliforms which are generally considered to be the most important indicators of the extent to which water is contaminated by sewage. The mandatory value for total coliforms is 10,000 per 100 ml, and for faecal coliforms 2,000 per 100 ml. For a bathing water to comply with the coliform standards, the Directive requires that at least 95 per cent of samples taken for each of these parameters over the bathing season are less than or equal to the mandatory values. In the UK a minimum of 20 samples are normally taken at each site. In practice this means that where 20 samples are taken, a maximum of only one sample may exceed the mandatory value for the bathing water to comply, and where less than 20 samples are taken none may exceed the mandatory value for the bathing water to comply.

The bathing water season is from mid-May to end-September in England and Wales, but shorter in Scotland and Northern Ireland. Bathing waters which are closed for the season are excluded for that year.

The table shows Environment Agency regions for England and Wales, the boundaries of which are based on river catchment areas and not county borders. In particular, the figures shown for Wales are the Environment Agency Welsh Region, the boundary of which does not coincide with the boundary of Wales.

Surface and groundwater abstractions

(Table 13.17)

Significant changes in the way data is collected and/or reported were made in 1991 (due to the Water Resources Act 1991) and 1999 (commission of National Abstraction Licensing Database). Figures are therefore not strictly comparable with those in previous/intervening years. From 1999, data have been stored and retrieved from one system nationally and are therefore more accurate and reliable. Some regions report licensed and actual abstracts for financial rather than calendar years. As figures represent an average for the whole year expressed as daily amounts, differences between amounts reported for financial and calendar years are small.

Under the Water Act 2003, abstraction of less than 20 m3/day became exempt from the requirement to hold a licence as of 1 April 2005. As a result over 22,000 licences were deregulated, mainly for agricultural or private water supply purposes. However, due to the small volumes involved, this has had a minimal affect on the estimated licensed and actual abstraction totals.

The following changes have occurred in the classification of individual sources:

Spray irrigation: this category includes small amounts of non-agricultural spray irrigation

Mineral washing: from 1999 this was not reported as a separate category; licences for 'Mineral washing' are now contained in 'Other industry'

Private water supply: this was shown as separate category from 1992 and includes private abstractions for domestic use and individual households

Fish farming, cress growing, amenity ponds: includes amenity ponds, but excludes miscellaneous from 1991

Estimates of remaining recoverable oil and gas reserves

(Table 13.18)

Only a small proportion of the estimated remaining recoverable reserves of oil and gas are known with any degree of certainty. The latest oil and gas data for 2007 shows that the upper range of total UK oil reserves was estimated to be around 2.8 billion tonnes, while UK gas reserves were around 1979 billion cubic metres. Of these, proven reserves of oil were 0.5 billion tonnes and proven reserves of gas were 343 billion cubic metres. Compared with a year earlier, proven reserves were 5.6 per cent lower for oil and 16.7 per cent

lower for gas. The monetary value of oil reserves increased from £120.9 billion in 2006 to £177.9 billion in 2007, a rise of 47.1 per cent reflecting rising oil prices. At £68.3 billion, the value of gas reserves decreased by 1.6 per cent from £69.4 billion between 2006 and 2007.

Municipal waste disposal

(Table 13.19)

Municipal waste includes household and non-household waste that is collected and disposed of by local authorities. It includes regular household collections, specific recycling collections, special collections of bulky items, waste received at civic amenity sites, and waste collected from non-household sources that come under the control of local authorities.

Amounts of different materials from household sources collected for recycling

(Table 13.20)

Household recycling includes those materials collected for recycling, composting or reuse by local authorities and those collected from household sources by 'private/voluntary' organisations where this material comes under the possession or control of local authorities. It includes residual waste from the household stream which was diverted for recycling by sorting or further treatment.

'Bring sites' are facilities where members of the public can bring recyclable materials (such as paper, glass, cans, textiles, shoes, etc). These are often located at supermarkets or similar locations, but exclude civic amenity sites.

'Civic Amenity sites' refers to household waste collected at sites provided by local authorities for the disposal of excess household and garden waste free of charge, as required by the Refuse Disposal (Amenity) Act 1978. These are also known as Household Waste Recycling Centres.

Noise incidents

(Table 13.21)

The table shows trends in the number of incidents reported by local authority Environmental Health Officers (EHO). The figures are from those authorities making returns and are calculated per million people based on the population of the authorities making returns. Environmental health has changed from calculating complaints per million of population to incidents per million of the population in 2004/05. The reason for asking about incidents is to better reflect both the

local noise environment and investigatory workloads during the reporting year, while avoiding the double counting which occurs with complaints (that is, multiple complaints about the same incident). This change is reflected in the data, which shows a drop in numbers across all categories.

Most complaints about traffic noise are addressed to highways authorities or Department for Transport (DfT) Regional Directors, and will not necessarily be included in the figures. Similarly, complaints about noise from civil aircraft are generally received by aircraft operators, the airport companies, the DfT or Civil Aviation Authority. Complaints about military flying are dealt with either by Station Commanding Officers or by Ministry of Defence headquarters. It is also true that railway noise will be reported elsewhere. Thus the figures in this table will not necessarily include these complaints and are likely to be considerably understated. Therefore, the information reported to the EHO is considered to give, at best, only a very approximate indication of the trend in noise complaints from these sources.

Over time some of the categories shown in this table have changed. These have included, up until 1996/97, Section 62 of the Control of Pollution Act 1974 which covered noise in the streets; it primarily included the chimes of ice-cream vendors and the use of loudspeakers other than for strictly defined purposes. From 1997/98, all complaints about noise in the street are included with 'vehicles machinery and equipment in streets'. From 1997/98, complaints about roadworks are included with 'vehicles machinery and equipment in streets'.

Material flows

(Table 13.22)

Economy-wide material flow accounts record the total mass of natural resources and products that are used by the UK economy, either directly in the production and distribution of products and services, or indirectly through the movement of materials which are displaced in order for production to take place.

The direct movement of materials into the economy derives primarily from domestic extraction, that is from biomass (agricultural harvest, timber, fish and animal grazing), fossil fuel extraction (such as coal, crude oil and natural gas) and mineral extraction (metal ores, industrial minerals such as pottery clay, and construction material such as crushed rock, sand and gravel). This domestic extraction is supplemented by the imports of products, which may be of raw materials such as unprocessed agricultural products, but can also be of semi-manufactured or finished products. In a similar way the

UK produces exports of raw materials, semi-manufactured and finished goods which can be viewed as inputs to the production and consumption of overseas economies.

Indirect flows of natural resources consist of the unused material resulting from domestic extraction, such as mining and quarrying overburden and the soil removed during construction and dredging activities. They also include the movement of used and unused material overseas which is associated with the production and delivery of imports. Water, except for that included directly in products, is excluded.

There are three main indicators used to measure inputs. The Direct Material Input measures the input of used materials into the economy, that is all materials which are of economic value and are used in production and consumption activities (including the production of exports). Domestic Material Consumption measures the total amount of material directly used in the economy, that is it includes imports but excludes exports. The Total Material Requirement (TMR) measures the total material basis of the economy, that is the total primary resource requirements of all the production and consumption activities. It includes not only the direct use of resources for producing exports, but also indirect flows from the production of imports and the indirect flows associated with domestic extraction. Although TMR is widely favoured as a resource use indicator, the estimates of indirect flows are less reliable than those for materials directly used by the economy, and the indicator therefore needs to be considered alongside other indicators.

- 1 Net emissions weighted by global warming potential. Emissions inventories based on the methodology developed by the Intergovernmental Panel on Climate Change (IPCC) are used to report UK emissions to the Climate Change Convention.
- See chapter text.
 Figures for each individual gas include the Land use, Land-Use Change and Forestry sector (LULUCF) but exclude emissions from UK overseas
- 4 Emissions are presented as carbon dioxide equivalent in line with international reporting and carbon trading. To convert Carbon Dioxide into carbon equivalents, divide figures by 44 /12.
- 5 Kyoto basket total differs slightly from sum of individual pollutants above as the basket uses a narrower definition for the Land Use Change and Forestry sector, and includes emissions from UK Overseas Territories.
- 6 The entire time series is revised each year to take account of methodological improvements in the UK emissions inventory.
- 7 Figures shown do not include any adjustment for the effect of the EU Emissions Trading Scheme (EUETS), which was introduced in 2005.

¹ See chapter text. Substantiated incidents to water, unless otherwise specified.

Sources: Environment Agency; Scottish Environment Protection Agency; Environment and Heritage Service, Nothern Ireland

² From 1999, categories 1-3 do not include all substantiated incidents to water. An additional category (Category 4) was introduced which includes all incidents which were substantiated, but which had no impact on the water environment. Therefore, data are not comparable to previous years.

³ Data for all years refer to financial years.

⁴ Category 4 and Total substantiated incidents include incidents to other media (air, land), which did not involve the water environment.

Increased electricity supply abstraction from 2002 due to increased production from power station in Anglian Region and two new licences issued in Southern Region

³ Three abstraction licences re-assigned to other industry from electricty supply in Midlands Region (2003).

⁴ Reduction in agricultural abstraction due to deregulation of licences with effect from 1 April 2005.

¹ The lower end of the range of total reserves has been calculated as the sum of proven reserves and the lower end of the range of undiscovered reserves.

Sources: Office for National Statistics and Department of Energy and Climate Change; environment.accounts@ons.gsi.gov.uk

² The upper end of the range of total reserves is the sum of proven, probable and possible reserves and the upper end of the range of undiscovered re-

³ Expected reserves are the sum of proven reserves, probable reserves and

the lower end of the range of undiscovered reserves.

4 Based on expected level of reserves at year end and current extraction rates (source: ONS).

⁵ Negative extraction is shown here for the purposes of the calculation only. Of itself, extraction should be considered as a positive value.

¹ From 2004/05 Data reported is for incidents per million where previously complaints per million was reported.

Sources: The Chartered Institute of Environmental Health; 020 7827 6322

² Total amount of household waste collected for recycling is greater than that sent for recycling as some material is subsequently rejected during sorting or by the reprocessor.

³ Includes household waste collected from municipal parks, community skips and other methods of capture for recycling/composting.

² See chapter text.
3 Before 2005/06 data is for England and Wales only.
4 Includes railway noise and airports (non aircraft).
5 From 2004/05 includes 'traffic' which consists of commercial vehicles, cars motorbikes, fixed-wing aircraft in flight and helicopters in flight. From 2005/06 this data is recorded separately as 'traffic'.

¹ See chapter text. Components may not sum to totals due to rounding. 2 Indirect flows from domestic extraction relate to unused material which is moved during extraction, such as overburden from mining and quarrying.

³ A positive physical trade balance indicates a net import of material into the UK. This calculation of the PTB differs from the National Accounts formula (exports - imports) because flows of materials and products are considered the inverse of the flows of money recorded in the National Accounts.

Housing

Chapter 14

Housing

Permanent dwellings

(Table 14.1, 14.3)

Local housing authorities include the Commission for the New Towns and New Towns Development Corporations, Communities Scotland and the Northern Ireland Housing Executive. The figures shown for housing associations include dwellings provided by housing associations other than the Communities Scotland and the Northern Ireland Housing Executive and provided or authorised by government departments for the families of police, prison staff, the Armed Forces and certain other services.

Mortgage possession actions by region

(Table 14.6)

The table shows mortgage possession actions in the county courts of England and Wales and excludes a small number of mortgage actions in the High Court.

A claimant begins an action for an order for possession of a property by issuing a claim in the county court, either by using the Possession Claim Online system or locally through a county court.

In mortgage possession cases, the usual procedure is for the claim being issued to be given a hearing date before a district judge. The court, following a judicial hearing, may grant an order for possession immediately. This entitles the claimants to apply for a warrant to have the defendant evicted. However, even where a warrant for possession is issued, the parties can still negotiate a compromise to prevent eviction.

Frequently, the court grants the claimant possession but suspends the operation of the order. Provided the defendant complies with the terms of suspension, which usually require the defendant to pay the current mortgage instalments plus some of the accrued arrears, the possession order cannot be enforced.

The mortgage possession figures do **not** indicate how many houses have actually been repossessed through the courts. Repossessions can occur without a court order being made while not all court orders result in repossession.

A new mortgage pre-action protocol (MPAP), approved by the Master of the Rolls, was introduced for possession claims in the county courts with effect from 19 November 2008. The

MPAP gives clear guidance on what the courts expect lenders and borrowers to have done prior to a claim being issued. Evidence from administrative records from Quarter 4, 2008 suggests that this date coincided with a fall of around 50 per cent in the daily and weekly numbers of new mortgage repossession claims being issued in the courts.

It therefore seems highly likely that the launch of the MPAP has led to a fall in the number of new claims being issued since introduction of MPAP (19 November to 31 December 2008).

Mortgage possession orders are typically made (where necessary) around eight weeks after the corresponding claims are issued. For this reason, the impact of the MPAP is yet to have visible effect on the statistics on possession orders made.

At this early stage is not clear to what extent the launch of the MPAP has led to a permanent fall in the numbers of new mortgage possession claims being issued, as opposed to some merely being postponed. This will become clearer as statistics for 2009 become available.

Households in temporary accommodation under homelessness provisions

(Table 14.9)

This comprises households in accommodation arranged by local authorities pending enquiries or after being accepted as owed a main homeless duty under the Housing Act 1996 Act (includes residual cases awaiting re-housing under the 1985 Housing Act). Excludes 'homeless at home' cases.

- 1 For detailed definitions of all tenures, see Definitions of housing terms in Housing Statistics home page.
- 2 April data for census years are based on census output.
- 3 Series from 1992 to 2001 for England has been adjusted so that 2001 total dwellings estimate matches the 2001 census. Estimates from 2002 are based on local authority and Registered Social Landlord dwelling counts, and the Labour force survey (LFS). Estimates may not be strictky comparable between periods.
- 4 Information from 1997 onwards uses information from the Labour Force Survey (LFS) Wales.
- 5 Estimates up to 2000 are based on the 1991 Census. Estimates from 2001 onwards are based on the 2001 General Register Of scotland (GROS) dwelling counts and Scottish Household Survey (SHS) tenure splits are not strictly comparable.
- 6 To include estimates for vacant dwellings, stock figures in Northern Ireland Statistics 2006/07 table 1.3 have been apportioned according the % of occupied dwellings for each of the tenures given in table 1.4.
- UK totals from 2002 are derived by summing country totals at 31st March. For 1991-2001 Scotland and Northern Ireland stock levels from the year before is added to the UK total. Data for earlier years are less reliable and definitions may not be consistent throughout the series. Components may not sum to totals due to rounding.

All Tenures	23	31	28	82	15	3	18

- 1 Results for 2007 include longitudinal data.
- 2 Tables for type of accommodation exclude households living in caravans.
- 3 Council includes local authority.
- 4 Since 1996, housing associations are more correctly described as Registered Social Landlords (RSLs).
- 5 Unfurnished includes the answer 'partly furnished'.
- 6 Tenants whose accommodation goes with the job of someone in the household have been allocated to 'rented privately'. Squatters are also included.

See chapter text.
 Including the Commission for the New Towns Development Corporations, Communities Scotland, the Northern Ireland Housing Executive.
 Dwellings provided by housing associations other than Communities Scotland and the Northern Ireland Housing Trust and provided or authorised by government departments for families of police, prison staff, the armed forces and certain other services.

⁴ Includes non-registered social landlords.

⁶ Northern Ireland private enterprise completions are statistically adjusted to correct, as far as possible, the proven under recording of private sector completions in NI. This calculation has been revised for 2007/08, as such the figures and not comparable with previous years.

¹ Figures for 2001/02 onwards for England only are based on just NHBC figures, so there is some degree of variability owing to partial coverage.

Sources: Communities and Local Government; Welsh Assembly Government

 ¹ Conversion figures prior to 1997/98 include change of use.
 2 Figures for 2000/01 conversions, change of use and non permanent dwellings are based on reported figures and do not include estimates for missing returns.

³ Series has been adjusted so that the 2000/01 estimates matches the 2001 Census.

² Figures for all years for Wales are based on the reports of local authority building inspectors and the National House Building Council (NHBC). It does not include information from private approved inspector.

¹ Households in temporary accommodation arranged by the local authority pending enquiries, or after being accepted as owed a main duty under homelessness legislation. Excludes 'homeless at home' cases who have remained in their existing accommodation after acceptance but have the same rights to suitable alternative housing as those in accommodation arranged directly by authorities.

2 Local authorities' and Registered Social Landlords' own stock.

4 Includes 'homeless at home' for Wales.

Sources: Communities and Local Government; Welsh Assembly Government; Scottish Government

account for 98 per cent of all mortgages outstanding.
2 Includes new mortgages advanced by building societies, banks and other major lenders. Includes sitting tenants.

³ Includes interest only, PEP/ISA and pension.

³ Includes private sector properties leased by social sector landlords, households placed directly with a private sector landlord and other accommodation. From 2002 some self-contained B&B Annexe-style units, previously recorded under B&B have been more appropriately attributed to private sector accommodation.

Chapter 15

Road data

(Tables 15.4, 15.5, 15.6 and 15.7)

Traffic estimates are disaggregated for roads in urban and rural areas rather than between built-up and non built-up roads. The urban/rural split of roads is largely determined by whether roads lie within the boundaries of urban areas with a population of 10,000 or more with adjustments in some cases for major roads at the boundary.

Traffic estimates are based on the results of many 12hour manual counts in every year, which are grossed up to estimates of annual average daily flows using expansion factors based on data from automatic traffic counters on similar roads. These averages are needed so that traffic in off-peak times, at weekends and in the summer and winter months (when only special counts are undertaken) can be taken into account when assessing the traffic at each site. For this purpose roads are sorted into 22 groupings and this allows a better match of manual count sites with automatic count sites. These groupings are based on a detailed analysis of the results from all the individual automatic count sites and take into account regional groupings, road category (that is both the urban/rural classification of the road and the road class) and traffic flow levels. The groupings range from lightlytrafficked, rural minor roads in holiday areas such as Cornwall and Devon, to major roads in central London.

Road class

(Tables 15.5 and 15.6)

Urban major and minor roads, from 1993 onwards, are defined as being within an urban area with a population of more than 10,000 people, based on the 2001 urban settlements. The definition for urban settlement can be found on the CLG web site at:

www.communities.gov.uk/planningandbuilding/planningbuilding/planningstatistics/urbanrural

Rural major and minor roads, from 1993 onwards, are defined as being outside an urban settlement.

National Travel Survey data

(Tables 15.1, 15.11)

TThe National Travel Survey (NTS) is designed to provide a databank of personal travel information for Great Britain. It has been conducted as a continuous survey since July 1988, following ad hoc surveys since the mid-1960s. The survey is designed to identify long-term trends and is not suitable for monitoring short-term trends.

In 2006, a weighting strategy as introduced to the NTS and applied retrospectively to data back to 1995. The weighting methodology adjusts for non-response bias and also adjusts for the drop-off in the number of trips recorded by respondents during the course of the travel week. All results now published for 1995 onwards are based on weighted data, and direct comparisons cannot be made to earlier years or previous publications.

During 2005, over 8,400 households provided details of their personal travel by filling in travel diaries over the course of a week. The drawn sample size from 2002 was nearly trebled compared with previous years following recommendations in a National Statistics Review of the NTS. This enables most results to be presented on a single year basis from 2002.

Travel included in the NTS covers all trips by British residents within Great Britain for personal reasons, including travel in the course of work. A trip is defined as a one-way course of travel having a single main purpose. It is the basic unit of personal travel defined in the survey. A round trip is split into two trips, with the first ending at a convenient point about half-way round as a notional stopping point for the outward destination and return origin. A stage is that portion of a trip defined by the use of a specific method of transport or of a specific ticket (a new stage being defined if either the mode or ticket changes). The main mode of a trip is that used for the longest stage of the trip. With stages of equal length, the mode of the latest stage is used. Walks of less than 50 yards are excluded.

Travel details provided by respondents include trip purpose, method of travel, time of day and trip length. The households also provided personal information, such as their age, sex, working status, driving licence holding, and details of the cars available for their use.

Because estimates made from a sample survey depend on the particular sample chosen, they generally differ from the true values of the population. This is not usually a problem when considering large samples (such as all car trips in Great Britain), but it may give misleading information when considering data from small samples even after weighting.

The most recent editions of all NTS publications are available on the DfT website at: www.dft.gov.uk/transtat/personaltravel. Bulletins of key results are published annually. The most recent bulletin is *National Travel Survey: 2007*.

Households with regular use of cars

(Table 15.12)

The mid-year estimates of the percentage of households with regular use of a car or van are based on combined data from the NTS, the Expenditure and Food Survey (previously the Family Expenditure Survey) and the General Household Survey (GHS). The method for calculating these figures was changed slightly for 2006, to incorporate weighted data from the NTS and the GHS. Figures for 2005 have also been revised to incorporate weighted data. Results by area type are based on weighted data from the NTS only.

Continuing Survey of Road Goods Transport

(Tables 15.3, 15.18, 15.19)

The estimates are derived from the Continuing Survey of Road Goods Transport (CSRGT) which is based on a sample of about 350 heavy goods vehicles each week. The samples are drawn from the computerised vehicle licence records held by the Driver and Vehicle Licensing Agency. Questionnaires are sent to the registered keepers of the sampled vehicles asking for a description of the vehicle and its activity during the survey week. The estimates are grossed to the vehicle population and, at the overall national level, have a 2 per cent margin of error (at 95 per cent confidence level). Further details and results are published in *Road Freight Statistics 2007* available at: www.dft.gov.uk/pgr/statistics/datatablespublications/ freight/goodsbyroad/

Methodological changes

A key component of National Statistics outputs is a programme of quality reviews carried out at least every five years to ensure that such statistics are fit for purpose and that their quality and value continue to improve. A quality review of the Department for Transport's road freight surveys, including the CSRGT, was carried out in 2003. A copy of the report can be accessed at:

 $www.statistics.gov.uk/nsbase/methods_quality/quality_review/downloads/NSQR30FinalReport.doc$

The quality review made a number of recommendations about the CSRGT. The main methodological recommendation was that, to improve the accuracy of survey estimates, the sample strata should be amended to reflect current trends in vehicle type, weight and legislative groups. These new strata are described more fully in Appendix C of the survey report. For practical and administrative reasons, changes were also made to the sample selection methodology (see Appendix B of the report). These changes have resulted in figures from 2004 not being fully comparable with those for 2003 and earlier years. Detailed comparisons should therefore be made with caution.

Activity at civil aerodromes

(Table 15.27)

Figures exclude Channel Island and Isle of Man airports. Other covers local pleasure flights, scheduled service, positioning flights and non-transport charter flights for reward (for example: aerial survey work, crop dusting and delivery of empty aircraft). Non-commercial covers test and training flights, private, aeroclub, military and official flights, and business aviation, etc.

Postal services and television licences

(Table 15.30)

The letters posted category includes printed papers, newspapers, postcards and sample packets. Airmail includes letters without special charge for air transport. Business reply and freepost is now known as Response Services.

¹ The decline in the use of cars and taxis in 2000 was due to the fuel dispute.

Source: Department for Transport: 020 7944 3095

² Excluding travel by water.

² Figures affected by the impact of Foot and Mouth disease during 2001. 3 Rural roads; Major and minor roads, from 1993 onwards, are defined as being outside an urban area. (see definition below).

⁴ Urban roads; Major and minor roads, from 1993 onwards, are defined as within an urban area with a population of 10,000 or more. These are based on the 2001 urban settlements. The definition for 'urban settlement' is in Urban and Rural area definitions: a user guide which can be found on the Department for Communities and Local Government web site at: http://www.communities.gov.uk/publications/planningandbuilding/urbanrural 5 Figures for trunk and principal 'A' roads in England, from 2001 onwards are affected by the detrunking programme.

² Tax class change from 'Hackney' to 'Bus' with effect from July 2005. Only Vehicles with 9 or more seats are included in 'Bus' class. Vehicles with 8 seats or less previously recorded in ' Hackney ' class moved into 'Private Light Goods' class.

³ Taxation classes have been revised

⁴ New Tax Class 36 introduced.

¹ The most popular activity of recent Internet users was sending or receiving emails at 87 per cent. This proved to be the most popular activity for the oldest age group and the youngest age group. While the youngest age group was often the most likely to be involved in Internet activities, it was the least likely to use the Internet for services related to travel and accommodation (50 per cent), and seeking health related information (22 per cent).

Sources: Office for National Statistics; Omnibus survey, Internet Access 2008; 01633 456769

² The survey is conducted in the first quarter of each year but should not be confused with being quarterly figures as they relate to use at a point in time.

Chapter 16

National accounts

(Tables 16.1 to 16.22)

The tables which follow are based on those in the *Blue Book* 2008 Edition. Some of the figures are provisional and may be revised later; this applies particularly to the figures for 2006 and 2007.

The accounts are based on the European System of Accounts 1995 (ESA95). The *Blue Book* contains an introduction to the system of the UK accounts outlining some of the main concepts and principles of measurement used. It explains how key economic indicators are derived from the sequence of accounts and how the figures describing the whole economy are broken-down by sector and by industry. A detailed description of the structure for the accounts is provided in a separate Office for National Statistics publication *United Kingdom National Accounts: Concepts, Sources and Methods* (TSO 1998). Further information on the financial accounts is given in the *Financial Statistics Explanatory Handbook*.

In the tables in this chapter on national income, analyses by industry are based, as far as possible, on the Standard Industrial Classification Revised 2003. The principal aggregate measured in these tables is the Gross Domestic Product (GDP). This is a concept of the value of the total economic activity taking place in UK territory. It can be viewed as incomes earned, as expenditures incurred, or as production. Adding all primary incomes received from the rest of the world and deducting all primary incomes payable to non-residents produces Gross National Income (GNI) (previously known as Gross National Product). This is a concept of the value of all incomes earned by UK residents.

ESA95, the internationally compatible accounting framework, provides a systematic and detailed description of the UK economy. It includes the sector accounts which provide, by institutional sector, a description of the different stages of the economic process from production through income generation, distribution and use of income to capital accumulation and financing; and the input—output framework, which describes the production process in more detail. It contains all the elements required to compile such aggregate measures as GDP, GNI and saving.

Gross Domestic Product and Gross National Income

(Tables 16.1, 16.2, 16.3)

Table 16.1 shows the main national accounts aggregates, both at current prices and chained volume measures.

Table 16.2 shows the various money flows which generate the GDP and GNI. The output approach to GDP shows the total output of goods and services, the use of goods and services in the production process (intermediate consumption) and taxes and subsidies on products. The expenditure approach to GDP shows consumption expenditure by households and government, gross capital formation and expenditure on UK exports by overseas purchasers. The sum of these items overstates the amount of income generated in the UK by the value of imports of goods and services. This item is therefore subtracted to produce GDP at market prices.

The income approach to GDP shows gross operating surplus, mixed income and compensation of employees (previously known as income from employment). Taxes are added and subsidies are deducted to produce the total of the income based components at market prices.

Table 16.2 also shows the primary incomes received from the rest of the world, which are added to GDP, and primary incomes payable to non-residents, which are deducted from GDP, to arrive at GNI. Primary income comprises compensation of employees, taxes less subsidies on production, and property and entrepreneurial income.

Table 16.3 shows the expenditure approach to the chained volume measure of GDP. When looking at the change in the economy over time the main concern is usually whether more goods and services are actually being produced now than at some time in the past. Over time changes in current price GDP show changes in the monetary value of the components of GDP and, as these changes in value can reflect changes in both price and volume, it is difficult to establish how much of an increase in the series is due either to increased activity in the economy or to an increase in the price level. As a result, when looking at the real growth in the economy over time, it is useful to look at volume estimates of GDP. In chained volume series, volume measures for each year are produced in prices of the previous year. These volume measures are then 'chain-linked' together to produce a continuous time series.

Industrial analysis

(Tables 16.4, 16.5)

The analysis of gross value added by industry at current prices shown in Table 16.4 reflects the estimates based on the

Standard Industrial Classification, revised 2003 (SIC2003). The table is based on current price data reconciled through the input–output process for 1992 to 2006. The estimates are valued at basic prices, that is, the only taxes included in the price will be taxes paid as part of the production process, such as business rates, and not any taxes specifically levied on the production of a unit of output, for example VAT. Table 16.5 shows chained volume measures of gross value added at basic prices by industry. Chained volume measures of gross value added (output approach) provides the lead indicator of economic change in the short term. The output analysis of gross value added is estimated in terms of change and expressed in index number form. It is therefore inappropriate to show as a statistical adjustment any divergence of an output measure of GDP derived from other measures of GDP. Such an adjustment does, however, exist implicitly.

Sector analysis – Distribution of income accounts and capital account

(Tables 16.6 to 16.13)

The National Accounts accounting framework includes the sector accounts which provide, by institutional sector, a description of the different stages of the economic process, from production through income generation, distribution and use of income to capital accumulation and financing.

Tables 16.6 to 16.12 show the allocation of primary income account and the secondary distribution of income account for the non-financial corporations, financial corporations, government and households sectors. Additionally, Table 16.12 shows the use of income account for the households sector and Table 16.13 provides a summary of the capital account. The full sequence of accounts is shown in the *Blue Book*.

The allocation of primary income account shows the resident units and institutional sectors as recipients rather than producers of primary income. It demonstrates the extent to which operating surpluses are distributed to the owners of the enterprises. The resources side of the allocation of primary income accounts includes the components of the income approach to measurement of GDP. The balance of this account is the gross balance of primary income (B.5g) for each sector, and if the gross balance is aggregated across all sectors of the economy the result is *Gross National Income*.

The secondary distribution of income account describes how the balance of income for each sector is allocated by redistribution; through transfers such as taxes on income, social contributions and benefits and other current transfers. The balancing item of this account is Gross Disposable Income (GDI) (B.6g). For the households sector, the chained volume measure of GDI is shown as real household disposable income.

Table 16.12 shows, for the households sector, the use of disposable income where the balancing item is saving (B.8g). For the non-financial corporations sector the balancing item of the secondary distribution of income account, gross disposable income (B.6g) is equal to saving (B.8g).

The summary capital account (Table 16.13) brings together the saving and investment of the several sectors of the economy. It shows saving, capital transfers, gross capital formation and net acquisition of non-financial assets for each of the four sectors.

Household and non-profit institutions serving households consumption expenditure at current market prices and chained volume measures

(Tables 16.14 to 16.17)

Household and non-profit institutions serving households (NPISH) consumption expenditure is a major component of the expenditure measure of GDP, both at current prices (Table 16.2) and chained volume measures (Table 16.3).

Household final consumption expenditure includes the value of income-in-kind and imputed rent of owner-occupied dwellings, but excludes business expenditure allowed as deductions in computing income for tax purposes. It includes expenditure on durable goods, for instance motor cars, which from the point of view of the individual might more appropriately be treated as capital expenditure. The only exceptions are the purchase of land and dwellings and costs incurred in connection with the transfer of their ownership and expenditure on major improvements by occupiers, which are treated as personal capital expenditure.

The estimates of household consumption expenditure include purchases of second-hand as well as new goods, *less* the proceeds of sales of used goods.

The most detailed figures are published quarterly in *Consumer Trends* (available as a web-only publication on the Office for National Statistics website: www.statistics.gov.uk).

Change in inventories (previously known as value of physical increase in stocks and work in progress)

(Table 16.18)

This table gives a broad analysis by industry and, for manufacturing industry, by asset, of the value of entries less withdrawals and losses of inventories (stocks).

Gross fixed capital formation

(Table 16.19 to 16.22)

Gross fixed capital formation comprises expenditure on the replacement of, and additions to, fixed capital assets located in the UK, including all ships and aircraft of UK ownership.

¹ See chapter text. Components may not sum to totals as a result of rounding.

² Because of differences in the annual and monthly production inquiries, estimates of current price output and value added by industry derived from the current price input-output supply-use balances are not consistent with the equivalent measures of constant price growth given in Table 16.5. These differences do not affect GDP totals. For further information see "Experimental Constant Price Input-Output Supply-Use Balances: An approach to improving the quality of the national accounts" Nadim Ahmad, Economic Trends, July 1999 (No. 548).

¹ See chapter text. The weights are in proportion to total gross value added (GVA) in 2003 and are used to combine the industry output indices to calculate the totals for 2004 and 2005. For 2003 and earlier, totals are calculated using the equivalent weight for the previous year (eg totals for 2002 use 2001 weights).

² As GVA is expressed in index number form, it is inappropriate to show as a statistical adjustment any divergence from the other measures of GDP. Such an adjustment does, however, exist implicitly.

³ See footnote 2 to Table 16.4.

⁴ The GVA for PAD, education and Health and social work in this table follows the SIC(92) and differs from that used in Table 2.3 in United Kingdom National Accounts (the Blue Book) which is based on Input-Output groups. The administration costs of the NHS are included in PAD in this table but are included in Health and social work in Table 2.3.

¹ See chapter text.

2 "Purpose" or "function" classifications are designed to indicate the "socieconomic objectives" that institutional units aim to achieve through various kinds of outlays. COICOP is the Classification of Individual Consumption by Purpose and applies to households. COPNI is the Classification of the Purposes of Non-Profit Institutions Serving Households and COFOG the Classification of the Functions of Government. The introduction of ESABS coincides with the redefinition of these acceptances and details. cides with the redefinition of these classifications and data will be available on a consistent basis for all European Union member states.

³ Package holidays data are dispersed between components (transport etc).

¹ See chapter text. Estimates are given to the nearest £ million but cannot be regarded as accurate to this degree.

^{2 &}quot;Purpose" or "function" classifications are designed to indicate the "socieconomic objectives" that institutional units aim to achieve through various kinds of outlays. COICOP is the Classification of Individual Consumption by Purpose and applies to households. COPNI is the Classification of the Purposes of Non-Profit Institutions Serving Households (NPISH) and COFOG the Classification of the Functions of Government. The introduction of ESA95 coincides with the redefinition of these classifications and data will be available on a consistent basis for all European Union member states.

³ Package holidays data are dispersed between components (transport etc).

³ Wholesaling and retailing estimates exclude the motor trades. 4 Quarterly alignment adjustment included in this series

² Components may not sum to totals due to rounding.

Prices

Chapter 17

Prices

Producer price index numbers

(Tables 17.1 and 17.2)

The producer price indices (PPIs) were published for the first time in August 1983, replacing the former wholesale price indices. Full details of the differences between the two indices were given in an article published in *British Business*, 15 April 1983. The producer price indices are calculated using the same general methodology as that used by the wholesale price indices.

The high level index numbers in Tables 17.1 and 17.2 are constructed on a net sector basis. That is to say, they are intended to measure only transactions between the sector concerned and other sectors. Within sector transactions are excluded. Index numbers for the whole of manufacturing are thus not weighted averages of sector index numbers.

The index numbers for selected industries in Tables 17.1 and 17.2 are constructed on a gross sector basis, that is, all transactions are included in deriving the weighting patterns, including sales within the same industry.

All the index numbers are compiled exclusive of Value Added Tax (VAT). Excise duties on cigarettes, manufactured tobacco and alcoholic liquor are included, as is the duty on hydrocarbon oils.

The indices relate to the average prices for a year. The movement in these prices are weighted to reflect the relative importance of the composite products in a chosen year (known as the base year), currently 2005.

Since July 1995, PPIs have been published fully reclassified to the 1992 version of the Standard Industrial Classification (SIC).

Further details are available from the National Statistics website: www.statistics.gov.uk/ppi.

Purchasing power of the pound

(Table 17.3)

Changes in the internal purchasing power of a currency may be defined as the 'inverse' of changes in the levels of prices; when prices go up, the amount which can be purchased with a given sum of money goes down. Movements in the internal purchasing power of the pound are based on the consumers' expenditure deflator (CED) prior to 1962 and on the General index of retail prices (RPI) from January 1962 onwards. The

CED shows the movement in prices implied by the national accounts estimates of consumers' expenditure valued at current and at constant prices, while the RPI is constructed directly by weighting together monthly movements in prices according to a given pattern of household expenditure derived from the Expenditure and Food Survey. If the purchasing power of the pound is taken to be 100p in a particular month (quarter, year), the comparable purchasing power in a subsequent month (quarter, year) is:

100 × earlier period price index later period price index

where the price index used is the CED for years 1946–1961 and the RPI for periods after 1961.

Consumer prices index

(Table 17.4)

The Consumer Prices Index (CPI) is the main UK domestic measure of inflation for macro-economic purposes. Like the RPI (see below) it measures the average change from month to month in the prices of consumer goods and services purchased in the UK, but there are differences in coverage and methodology. A detailed description of these differences is given in the paper entitled 'The New Inflation Target: the Statistical Perspective'. This paper is available at: www. statistics.gov.uk/StatBase/Product.asp?vlnk=10913.

Since 10 December 2003, the Government inflation target for the UK has been defined in terms of the CPI measure of inflation. Prior to that the CPI had been published in the UK as the Harmonised Index of Consumer Prices (HICP); the two shall remain one and the same index

The HICPs are calculated in each member state of the European Union (EU), according to rules specified in a series of European regulations developed by the EU statistical office in conjunction with the EU Member States. The HICPs are used to compare inflation rate across the EU. Since January 1999 it has also been used by the European Central Bank (ECB) as the measure of price stability across the euro area. Additional

information on HICPs is available at: www.statistics.gov. uk/hicp

Further details on the CPI are available from the Office for National Statistics website at: www.statistics.gov.uk/cpi

Retail prices index

(Table 17.5)

The Retail Prices Index (RPI) is the most familiar general purpose measure of inflation in the UK, measuring the percentage changes month by month in the average level of prices of the goods and services purchased by the great majority of households in the UK. The uses of the RPI include indexation of pensions, state benefits and index-linked gilts. The expenditure pattern on which the index is based is revised each year using information from the Expenditure and Food Survey. The expenditure of certain higher income households and households of retired people dependent mainly on social security benefits is excluded.

The index covers a large and representative selection of more than 650 separate goods and services, for which price movements are regularly measured in around 150 locations throughout the country. Around 120,000 separate price quotations are used in compiling the index.

Further details are available from the Office for National Statistics website: www.statistics.gov.uk/rpi

Tax and price index (TPI)

(Table 17.6)

The purpose and methodology of the TPI were described in an article in the August 1979 issue (No. 310) of *Economic Trends*. The TPI measures the change in gross taxable income needed for taxpayers to maintain their purchasing power, allowing for changes in retail prices. The TPI thus takes account of the changes to direct taxes (and employees' National Insurance (NI) contributions) facing representative cross-section of taxpayers as well as changes in the RPI.

When direct taxation or employees' NI contributions change, the TPI will rise by less than or more than the RPI according to the type of changes made. Between Budgets, the monthly increase in the TPI is normally slightly larger than that in the RPI, since all the extra income needed to offset any rise in retail prices is fully taxed.

Index numbers of agricultural prices

(Tables 17.7 and 17.8)

The indices of producer prices of agricultural products are currently based on the calendar year 2000. They are designed to provide short-term and medium-term indications of movements in these prices. All annual series are base-weighted Laspeyres type, using value weights derived from the *Economic Accounts for Agriculture* prepared for the Statistical Office of the European Union. Prices are measured exclusive of VAT. For Table 17.7, it has generally been necessary to measure the prices of materials (inputs) ex-supplier. For Table 17.8, it has generally been necessary to measure the prices received by producers (outputs) at the first marketing stage. The construction of the indices enables them to be combined with similar indices for other member countries of the EU to provide an overall indication of trends within the Union which appears in the Union's Eurostat series of publications.

Index numbers at a more detailed level and for earlier based series are available from the Department for Environment, Food and Rural Affairs, SSP, Room 146 Foss House, Kingspool 1–2 Peasholme Green, York, YO1 7PX, tel: +44 (0)1904 455249.

See chapter text. These figures are calculated by taking the inverse ratio of the respective annual averages of the Retail Prices Index (RPI).
 To find the purchasing power of the pound in 1995, given that it was 100 pence in 1990, select the column headed 1990 and look at the 1995 row. The result is 85 pence.

Published as the Consumer Prices Index (CPI) in the UK (UK 2005=100, others 1996=100).
 The EICP (European Index of Consumer Prices)is the official EU aggre-

gate. It covers 15 member states until April 2004, 25 member states from May 2004, and 27 members from Jan 2007, the new member states being

³ The coverage of the European Union was extended to include Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia from 1 May 2004 and Bulgaria and Romania from 1 Jan 2007.

Chapter 18

Public sector

(Tables 18.1 to 18.3 and 18.5)

In Table 18.1 the term public sector describes the consolidation of central government, local government and public corporations. General government is the consolidated total of central government and local government. The table shows details of the key public sector finances' indicators, consistent with the European System of Accounts 1995 (ESA95), by sub-sector.

The concepts in Table 18.1 are consistent with the format for public finances in the Economic and Fiscal Strategy Report (EFSR), published by HM Treasury on 11 June 1998, and the Budget. The public sector current budget is equivalent to net saving in national accounts plus capital tax receipts. Net investment is gross capital formation, plus payments less receipts of investment grants, less depreciation. Net borrowing is net investment less current budget. Net borrowing differs from the net cash requirement (see below) in that it is measured on an accruals basis whereas the net cash requirement is mainly a cash measure which includes some financial transactions. Table 18.2 shows the public sector key fiscal balances. The table shows the component detail of the public sector key fiscal balance by economic category. The tables are consistent with the Budget.

Table 18.3 shows public sector net debt. Public sector net debt consists of the public sector's financial liabilities at face value, minus its liquid assets – mainly foreign currency exchange reserves and bank deposits. General government gross debt (consolidated) in Table 18.3 is consistent with the definition of general government gross debt reported to the European Commission under the requirements of the Maastricht Treaty.

More information on the concepts in Table 18.1, 18.2 and 18.3 can be found in a guide to monthly public sector finance statistics, *GSS Methodology Series* No 12, the ONS First Releases *Public Sector Finances and Financial Statistics Explanatory Handbook*.

Table 18.6 shows the taxes and National Insurance contributions paid to central government, local government, and to the institutions of the European Union. The table is the same as Table 11.1 of the *National Accounts Blue Book*. More information on the data and concepts in the table can be found in Chapter 11 of the *Blue Book*.

Consolidated Fund and National Loans Fund

(Tables 18.4, 18.5 and 18.7)

The central government embraces all bodies for whose activities a Minister of the Crown, or other responsible person, is accountable to Parliament. It includes, in addition to the ordinary government departments, a number of bodies administering public policy, but without the substantial degree of financial independence which characterises the public corporations. It also includes certain extra-budgetary funds and accounts controlled by departments.

The government's financial transactions are handled through a number of statutory funds or accounts. The most important of these is the Consolidated Fund, which is the government's main account with the Bank of England. Up to 31 March 1968 the Consolidated Fund was virtually synonymous with the term 'Exchequer', which was then the government's central cash account. From 1 April 1968 the National Loans Fund, with a separate account at the Bank of England, was set up by the National Loans Act 1968. The general effect of this Act was to remove from the Consolidated Fund most of the government's domestic lending and the whole of the government's borrowing transactions, and to provide for them to be brought to account in the National Loans Fund.

Revenue from taxation and miscellaneous receipts, including interest and dividends on loans made from votes, continue to be paid into the Consolidated Fund.

After meeting the ordinary expenditure on Supply Services and the Consolidated Fund Standing Services, the surplus or deficit of the Consolidated Fund (Table 18.4), is payable into or met by the National Loans Fund. Table 18.4 also provides a summary of the transactions of the National Loans Fund. The service of the National Debt, previously borne by the Consolidated Fund, is now met from the National Loans Fund which receives: (a) interest payable on loans to the nationalised industries, local authorities and other bodies, whether the loans were made before or after 1 April 1968; and (b) the profits of the Issue Department of the Bank of England, mainly derived from interest on government securities, which were formerly paid into the Exchange Equalisation Account. The net cost of servicing the National Debt after applying these interest receipts and similar items is a charge on the Consolidated Fund as part of the standing services. Details of National Loans Fund loans outstanding are shown in Table 18.5. Details of borrowing and repayments of debt, other than loans from the National Loans Fund, are shown in Table 18.7.

Income tax

(Table 18.11, 18. 12)

Following the introduction of Independent Taxation from 1990/91, the Married Couple's Allowance was introduced. It is payable in addition to the Personal Allowance and between 1990/91 and 1992/93 went to the husband unless the transfer condition was met. The condition was that the husband was unable to make full use of the allowance himself and in that case he could transfer only part or all of the Married Couple's Allowance to his wife. In 1993/94 all or half of the allowance could be transferred to the wife if the couple had agreed beforehand. The wife has the right to claim half the allowance. The Married Couple's Allowance, and allowances linked to it, were restricted to 20 per cent in 1994/95 and to 15 per cent from 1995/96. From 2000/01 only people born before 6 April 1935 are entitled to Married Couple's Allowance.

The age allowance replaces the single allowance, provided the taxpayer's income is below the limits shown in the table. From 1989/90, for incomes in excess of the limits, the allowance is reduced by £1 for each additional £2 of income until the ordinary limit is reached (before it was £2 for each £3 of additional income). The relief is due where the taxpayer is aged 65 or over in the year of assessment.

The additional Personal Allowance could be claimed by a single parent (or by a married man if his wife was totally incapacitated) who maintained a resident child at his or her own expense. Widow's Bereavement Allowance was due to a widow in the year of her husband's death and in the following year provided the widow had not remarried before the beginning of that year. Both the additional Personal Allowance and the Widow's Bereavement Allowance were abolished from April 2000.

The Blind Person's Allowance may be claimed by blind persons (in England and Wales, registered as blind by a local authority) and surplus Blind Person's Allowance may be transferred to a husband or wife. Relief on life assurance premiums is given by deduction from the premium payable. From 1984/85, it is confined to policies made before 14 March 1984.

From 1993/94 until 1998/99 a number of taxpayers with taxable income in excess of the lower rate limit only paid tax at the lower rate. This was because it was only their dividend income and (from 1996/97) their savings income which took their taxable income above the lower rate limit but below the basic rate limit, and such income was chargeable to tax at the lower rate and not the basic rate.

In 1999/2000 the 10 per cent starting rate replaced the lower rate and taxpayers with savings or dividend income at the basic rate of tax are taxed at 20 per cent and 10 per cent respectively. Before 1999/2000 these people would have been classified as lower rate taxpayers.

Rateable values

(Table 18.13)

Major changes to local government finance in England and Wales took effect from 1 April 1990. These included the abolition of domestic rating (replaced by the Community Charge, then replaced in 1993 by the Council Tax), the revaluation of all non-domestic properties, and the introduction of the Uniform Business Rate. Also in 1990, a new classification scheme was introduced which has resulted in differences in coverage. Further differences are caused by legislative changes which have changed the treatment of certain types of property. There was little change in the total rateable value of non-domestic properties when all these properties were revalued in April 1995. Rateable values for offices fell and there was a rise for all other property types shown in the table.

With effect from 1 April 2000, all non-domestic properties were revalued. Overall there was an increase in rateable values of over 25 per cent compared to the last year of the 1995 list. The largest proportionate increase was for offices and cinemas, with all property types given in the table showing rises.

The latest revaluation affecting all non-domestic properties took effect from 1 April 2005. In this revaluation the overall increase in rateable values between 1 April of the first year of the new list and the same day on the last year of the 2000 list was 17 per cent. The largest proportionate increase was for theatres and music halls with, again, all property types in the table showing rises.

Local authority capital expenditure and receipts

(Table 18.17)

Authorities finance capital spending in a number of ways, including use of their own revenue funds, borrowing or grants and contributions from elsewhere. Until 31 March 2004, the capital finance system laid down in Part 4 of the Local Government and Housing Act 1989 (the '1989 Act') provided the framework within which authorities were permitted to finance capital spending from sources other than revenue – that is by the use of borrowing, long-term credit or capital receipts.

Until 31 March 2004, capital spending could be financed by:

- revenue resources either the General Fund Revenue Account, the Housing Revenue Account (HRA) or the Major Repairs Reserve – but an authority could not charge council tenants for spending on general services, or spending on council houses to local taxpayers
- borrowing or long-term credit as authorised by the credit approvals issued by central government. Credit approvals were normally accompanied by an element of Revenue Support Grant (RSG) covering most of the costs of borrowing
- grants received from central government
- contributions or grants from elsewhere including the National Lottery and NDPBs such as Sport England, English Heritage and Natural England, as well as private sector partners, capital receipts (that is, proceeds from the sale of land, buildings or other fixed assets) and sums set aside as Provision for Credit Liabilities (PCL). This required the use of a credit approval, unless the authority was debt-free

From 1 April 2004, capital spending can be financed in the same ways, except that central government no longer issues credit approvals to allow authorities to finance capital spending by borrowing. However, it continues to provide financial support in the usual way, via RSG or HRA subsidy, towards some capital spending financed by borrowing that is Supported Capital Expenditure (Revenue). Authorities are now free to finance capital spending by self-financed borrowing within limits of affordability set, having regard to the 2003 Act and the CIPFA Prudential Code. The concept of PCL has not been carried forward into the new system, although authorities which were debt-free and had a negative credit ceiling at the end of the old system could still spend amounts of PCL built up under the old rules.

In 2007/08 capital expenditure of almost £3.1 billion (about 16 per cent) was financed by self-financed borrowing, an increase of 37 per cent from the amount financed in 2006/07. In 2001/02 credit approvals were the principal financing source for capital expenditure, accounting for 26 per cent of the total. By 2006/07, government grants accounted for 25 per cent of the total financing. Financing by government grant in 2007/08 was affected by the grant of £1.7 billion paid by the Department for Transport to the Greater London Authority (GLA) in respect of Metronet liabilities; this caused government grants to account for 34 per cent of the total financing for 2007/08.

Local authority financing for capital expenditure

(Table 18.18)

Capital spending by local authorities is mainly for buying, constructing or improving physical assets such as:

- buildings schools, houses, libraries and museums, police and fire stations
- land for development, roads, playing fields
- vehicles, plant and machinery including street lighting and road signs

It also includes grants and advances made to the private sector or the rest of the public sector for capital purposes, such as advances to Registered Social Landlords

Local authority capital expenditure more than doubled between 2001/02 and 2007/08.

The underlying trend in capital expenditure (excluding an exceptional event) by local authorities in England increased by 12 per cent, from £16.3 billion in 2006/07 to £18.2 billion in 2007/08. The exceptional event was the payment by the Greater London Authority (Transport for London) of £1.7 billion to Metronet. The underlying trend was also affected by Liverpool's transfer of its housing stock to a registered social landlord, which had the effect of increasing expenditure in 2007/08 by £500 million.

New construction, conversion and renovation forms the major part of capital spending.

Excluding the GLA's repayment of Metronet liabilities in 2007/08, Education's share of capital expenditure fell from 23 per cent in 2003/04 to 20 per cent in 2007/08. Transport and Other services increased their share over the same period.

- 1 The total is not always equal to the sum of the individual taxes due to rounding.
- 2 Income tax and Capital gains tax combined.
- 3 Figures for income tax treat payments of the personal tax credits as negative tax to the extent that the credits are less than or equal to the tax liability of the family. Payments exceeding this liability are treated as public expenditure.
- 4 Including net advance corporation tax receipts shown separately in the final column.
- 5 Including net advance petroleum revenue tax.
- 6 Payments into the consolidated fund are not directly comparable to receipts Over the year payments into the consolidated fund will always be lower than total receipts because the public expenditure element of payments of tax being recorded in receipts. Because the public expenditure element of payments of tax credits (both personal and company) are deducted from the payments into the consolidated fund but have no impact on receipts. In addition, there is a timing difference between payments taking value and hence paid over to the consolidated fund and being recorded in receipts.

¹ The government guaranteed securities of nationalised industries only. A relatively small amount of other government guaranteed securities is excluded

² Securities with optional redemption dates are classified according to the final redemption date. The nominal value of index-linked British Government Stock has been raised by the amount of accrued capital uplift.

³ Official holdings were changed following the introduction of the central bank sector in the UK national accounts. These holdings now principally include those of the Debt Management Office and other government departments. The Issue and Banking Departments of the Bank of England are classified within the central bank sector and are therefore part of market holdings.

¹ Taxable income is defined as gross income for income tax purposes less any allowances and reliefs available at the taxpayer's marginal rate.

2 The starting rate also applies to savings and dividends.

Source: HM Revenue & Customs: 020 7147 3045

² The allowance was restricted to 20 per cent in 1994-95, 15 per cent from 1995-96 and 10 per cent from 1999-00.

³ In the 2009-10 tax year all Married Couples Allowance claimants in this category will become 75 at some point during the year and will therefore be entitled to the higher amount of allowance, for those aged 75 and over.

⁴ If the total income, less allowable deductions of a taxpayer aged 65 or over exceeds the limit, the age-related allowances are reduced by £1 for each £2 of income over the aged income level until the basic levels of the personal and married couple's allowances are reached.

³ The basic rate of tax on dividends is 10% and savings income is 20%.

⁴ The higher rate of tax on dividends is 32.5%.5 From 2008/09 there is a 10% starting rate for savings income only. If non-savings income is above this limit the 10% rate does not apply.

- 1 Budget estimates.
- 2 Produced on a non-Financial Reporting Standard 17 (FRS17) basis.
- 3 The sum of government grants, business rates and local taxes does not normally equal revenue expenditure because of the use of reserves.
- 4 1993-94 to 2003-04 includes City of London Offset.
- 5 Gross revenue expenditure is total local authority expenditure on services, plus capital charges, but net of any income from sales, fees, and charges and other non-grant sources. It includes expenditure funded by specific grants. The figures have been adjusted to account for FRS17 pension
- 6 Includes all unhypothecated grants, namely revenue support grant, police grant, council tax reduction scheme grant, transitional grant and the adjustment to reverse the transfer.
- 7 Comprises specific and supplementary grants, excluding police grant.
- 8 This includes community council precepts, and income covered by charge/council tax benefit grant, but excludes council tax reduction scheme.
- 9 This includes use of, or contributors to, local authority reserves and other minor adjustments.

External trade and investment

Chapter 19

External trade and investment

External trade

(Table 19.1 and 19.3 to 19.6)

The statistics in this section are on a Balance of Payments (BoP) basis, compiled from information provided to HM Revenue and Customs (HMRC) by importers and exporters on an Overseas Trade Statistics (OTS) basis, which values exports 'f.o.b.' (free on board) and imports 'c.i.f.' (including insurance and freight). In addition to deducting these freight costs and insurance premiums from the OTS figures, coverage adjustments are made to convert the OTS data to a BoP basis. Adjustments are also made to the level of all exports and European Union (EU) imports to take account of estimated under-recording. The adjustments are set out and described in the annual *United Kingdom Balance of Payments Pink Book* (Office for National Statistics (ONS)). These adjustments are made to conform to the definitions in the 5th edition of the IMF Balance of Payments Manual.

Aggregate estimates of trade in goods, seasonally adjusted and on a BoP basis, are published monthly in the ONS First Release UK Trade. More detailed figures are available from time series data on the Office for National Statistics website (www.ons.gov.uk) and are also published in the Monthly Review of External Trade Statistics (Business Monitor MM24). Detailed figures for EU and non-EU trade on an OTS basis are published in *Overseas trade statistics: United Kingdom trade with the European Community and the world* (HMRC).

A fuller description of how trade statistics are compiled can be found in *Statistics on Trade in Goods* (Government Statistical Service Methodological Series) available at: www.statistics.gov. uk/STATBASE/Product.asp?vlnk=14943.

Overseas Trade Statistics

HM Revenue and Customs provide accurate and up to date information via the website: www.uktradeinfo.com
They also produce publications 'Overseas Trade Statistics'.

Import penetration and export sales ratios

(Table 19.2)

The ratios were first introduced in the August 1977 edition of *Economic Trends* in an article 'The Home and Export

Performance of United Kingdom Industries'. The article described the conceptual and methodological problems involved in measuring such variables as import penetration.

The industries are grouped according to the 1992 Standard Industrial Classification. The four different ratios are defined as follows:

Ratio 1: percentage ratio of imports to home demand

Ratio 2: percentage ratio of imports to (home demand plus exports)

Ratio 3: percentage ratio of exports to total manufacturers' sales

Ratio 4: percentage ratio of exports to (total manufacturers' sales plus imports)

Home demand is defined as total manufacturers' sales plus imports minus exports. This is only an approximate estimate as different sources are used for the total manufacturers' sales and the import and export data. Total manufacturers' sales are determined by the Products of the European Community inquiry, and import and export data are provided by HM Revenue and Customs.

Ratio 1 is commonly used to describe the import penetration of the home market. Allowance is made for the extent of a domestic industry's involvement in export markets by using Ratio 2; this reduces as exports increase.

Similarly, Ratio 3 is the measure normally used to relate exports to total sales by UK producers, and Ratio 4 makes an allowance for the extent that imports of the same product are coming into the UK.

International trade in services

(Tables 19.7 and 19.8)

These data relate to overseas trade in services and cover both production and non-production industries (excluding the public sector). In terms of types of services traded, this equates to trade in royalties, various forms of consultancy, computing and telecommunications services, advertising and market research and other business services. A separate inquiry covers the film and television industries. The surveys cover receipts from the provision of services to residents of other countries (exports) and payments to residents of other countries for services rendered (imports).

Sources of data

The International Trade in Services (ITIS) surveys (which consist of a quarterly component addressed to the largest businesses and an annual component for the remainder) are based on a sample of companies derived from the Interdepartmental Business Register. The companies are asked to show the amounts for their imports and exports against the geographical area to which they were paid or from which they were received – irrespective of where they were first earned.

The purpose of the ITIS survey is to record international transactions which impact on the UK's BoP; hence companies are asked to exclude from their earnings trade expenses such as the cost of services purchased abroad. Exports and imports of services are excluded where they are included within an invoice for the import or export of goods; in this case they will already be counted in the estimate for Trade in Goods. However, earnings from third country trade – that is, from arranging the sale of goods between two countries other than the UK and where the goods never physically enter the UK (known as merchanting) – are included. Earnings from commodity trading are also included. Together, these two comprise 'Trade Related Services'.

'Royalties' are the largest part of the total trade in services collected in the ITIS survey. These cover transactions for items such as printed matter, sound recordings, performing rights, patents, licences, trademarks, designs, copyrights, manufacturing rights, the use of technical 'know-how' and technical assistance.

Balance of payments

(Tables 19.9 to 19.12)

Tables 19.9 to 19.12 are derived from *United Kingdom Balance of Payments: The Pink Book* 2008 edition. The following general notes to the tables provide brief definitions and explanations of the figures and terms used. Further notes are included in the *Pink Book*.

Summary of Balance of Payments

The BoP consists of the current account, the capital account, the financial account and the International Investment Position (IIP). The current account consists of trade in goods and services, income and current transfers. Income consists of investment income and compensation of employees. The capital account mainly consists of capital transfers and the financial account covers financial transactions. The IIP covers balance sheet levels of UK external assets and liabilities. Every credit entry in the balance of payments accounts should, in theory, be matched by a corresponding debit entry so that

total current, capital and financial account credits should be equal to, and therefore offset by, total debits. In practice there is a discrepancy termed net errors and omissions.

The current account

Trade in goods

The goods account covers exports and imports of goods. Imports of motor cars from Japan, for example, are recorded as debits in the trade in goods account, whereas exports of vehicles manufactured in the UK are recorded as credits. Trade in goods forms a component of the expenditure measure of Gross Domestic Product (GDP).

Trade in services

The services account covers exports and imports of services (for example, civil aviation). Passenger tickets for travel on UK aircraft sold abroad, for example, are recorded as credits in the services account, whereas the purchases of airline tickets from foreign airlines by UK passengers are recorded as debits. Trade in services, along with trade in goods, forms a component of the expenditure measure of GDP.

Income

The income account consists of compensation of employees and investment income and is dominated by the latter. Compensation of employees covers employment income from cross-border and seasonal workers which is less significant in the UK than in other countries. Investment income covers earnings (for instance, profits, dividends and interest payments and receipts) arising from cross-border investment in financial assets and liabilities. For example, earnings on foreign bonds and shares held by financial institutions based in the UK are recorded as credits in the investment income account, whereas earnings on UK company securities held abroad are recorded as investment income debits. Investment income forms a component of Gross National Income (GNI) but not GDP.

Current transfers

Current transfers are composed of central government transfers (for instance, taxes and payments to, and receipts from, the EU) and other transfers (for instance, gifts in cash or kind received by private individuals from abroad or receipts from the EU, where the UK government acts as an agent for the ultimate beneficiary of the transfer). Current transfers do not form a component either of GDP or of GNI. For example, payments to the UK farming industry under the EU Agricultural Guarantee Fund are recorded as credits in the current transfers account, while payments of EU agricultural

levies by the UK farming industry are recorded as debits in the current transfers account.

Capital account

Capital account transactions involve transfers of ownership of fixed assets, transfers of funds associated with acquisition or disposal of fixed assets, and cancellation of liabilities by creditors without any counterparts being received in return. The main components are migrants transfers, EU transfers relating to fixed capital formation (regional development fund and agricultural guidance fund) and debt forgiveness. Funds brought into the UK by new immigrants would, for example, be recorded as credits in the capital account, while funds sent abroad by UK residents emigrating to other countries would be recorded as debits in the capital account. The size of capital account transactions are quite minor compared with the current and financial accounts.

Financial account

While investment income covers earnings arising from cross-border investments in financial assets and liabilities, the financial account of the balance of payments covers the flows of such investments. Earnings on foreign bonds and shares held by financial institutions based in the UK are, for example, recorded as credits in the investment income account, but the acquisition of such foreign securities by UK-based financial institutions are recorded as net debits in the financial account or portfolio investment abroad. Similarly, the acquisitions of UK company securities held by foreign residents are recorded in the financial account as net credits or portfolio investment in the UK.

International Investment Position

While the financial account covers the flows of foreign investments and financial assets and liabilities, the IIP records the levels of external assets and liabilities. While the acquisition of foreign securities by UK-based financial institutions are recorded in the financial account, as net debits, the total holdings of foreign securities by UK-based financial institutions are recorded as levels of UK external assets. Similarly, the holdings of UK company securities held by foreign residents are recorded as levels of UK liabilities.

Foreign direct investment

(Tables 19.13 to 19.18)

Direct investment refers to investment that adds to, deducts from or acquires a lasting interest in an enterprise operating in an economy other than that of the investor, the investor's purpose being to have an effective voice in the management of the enterprise. (For the purposes of the statistical inquiry, an effective voice is taken as equivalent to a holding of 10 per cent or more in the foreign enterprise.) Other investments in which the investor does not have an effective voice in the management of the enterprise are mainly portfolio investments and these are not covered here. Cross-border investment by public corporations or in property (which is regarded as direct investment in the national accounts) are not covered here, but are shown in the BoP. Similarly, foreign direct investment earnings data are shown net of tax in Tables 19.15 and 19.18 but are gross of tax in the BoP.

Direct investment is a financial concept and is not the same as capital expenditure on fixed assets. It covers only the money invested in a related concern by the parent company, and the concern will then decide how to use the money. A related concern may also raise money locally without reference to the parent company.

The investment figures are published on a net basis; that is, they consist of investments net of disinvestments by a company into its foreign subsidiaries, associate companies and branches.

Definitional changes from 1997

The new European System of Accounts (ESA(95)) definitions were introduced from the 1997 estimates. The changes were as follows:

- Previously for the measurement of direct investment, an effective voice in the management of an enterprise was taken as the equivalent of a 20 per cent shareholding. This is now 10 per cent.
- ii) The Channel Islands (Jersey, Guernsey, etc.) and the Isle of Man have been excluded from the definition of the economic territory of the UK. Prior to 1987, these islands were considered to be part of the UK.
- iii) Interest received or paid was replaced by interest accrued in the figures on earnings from direct investment. There is deemed to be little or no impact arising from this definitional change on the estimates.

New register sources available from 1998 have led to revisions for the figures from that year onwards. These sources gave an improved estimate of the population satisfying the criteria for foreign direct investment.

The definitional changes have been introduced from 1997 and the register changes from 1998. The data prior to these

years have not been reworked in Tables 19.13 to 19.18. For clarity, the Offshore Islands are identified separately on the tables. The breaks in the series for the other definitional changes are not quantified but are relatively small. More detailed information on the effect of these changes appears in the business monitor MA4 – Foreign Direct Investment 2002, which was published in February 2003 and is available from the Office for National Statistics website.

Sources of data

The figures in Tables 19.13 to 19.18 are based on annual inquiries into foreign direct investment for 2007. These were sample surveys which involved sending around 1,250 forms to UK businesses investing abroad, and 2,250 forms to UK businesses in which foreign parents and associates had invested. The tables also contain some revisions to 2006 as a result of new information coming to light in the course of the latest surveys. Further details from the latest annual surveys, including analyses by industry and by components of direct investment, are available in business monitor MA4. Initial figures were published on the Office for National Statistics website in a First Release *Foreign Direct Investment 2007* in December 2008. Data for 2008 will be published in a First Release in December 2009, followed by the full business monitor MA4 in February 2009.

Country allocation

The analysis of inward investment is based on the country of ownership of the immediate parent company. Thus, inward investment in a UK company may be attributed to the country of the intervening overseas subsidiary, rather than the country of the ultimate parent. Similarly, the country analysis of outward investment is based on the country of ownership of the immediate subsidiary. As an example, to the extent that overseas investment in the UK is channelled through holding companies in the Netherlands, the underlying flow of investment from this country is overstated and the inflow from originating countries is understated.

Further information

More detailed statistics on foreign direct investment are available on request from Richard Tonkin, Office for National Statistics, International Transactions Branch, Room 2.354, Government Buildings, Cardiff Road, Newport, South Wales, United Kingdom, NP10 8XG. Telephone: +44 (0)1633 456082, fax: +44 (0)1633 812855, email Richard.tonkin@ons.gov.uk.

See chapter text.
 Division 13 (Mining of metal ores) has not been published since 1995. Division 23 (Coke, refined petroleum products and nuclear fuel) and SIC 24610 (Manufacture of explosives) are excluded from the analysis. SIC 27100 (Basic iron and steel and ferro-alloys) is not incorporated in PRODCOM and therefore also does not form part of the analysis.

See chapter text. A minus sign indicates net losses.
 Net earnings equal profits of UK branches plus overseas investors' receipts of interest and their share of the profits of UK subsidiaries and associates.

Earnings are after deducting provisions for depreciation and withholding tax on profits and interest.

3 From 2003 includes Albania, Bosnia & Herzegovina, Bulgaria, Croatia, FYR of Macedonia, Romiania and Serbia & Montenegro. Prior to 2003 Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovakia and Slovenia also included.

Research and development

Chapter 20

Research and development

Research and experimental development (R&D) is defined for statistical purposes as 'creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of man, culture and society, and the use of this stock of knowledge to devise new applications'.

R&D is financed and carried out mainly by businesses, the Government, and institutions of higher education. A small amount is performed by non-profit-making bodies. Gross Expenditure on R&D (GERD) is an indicator of the total amount of R&D performed within the UK: it has been approximately 2 per cent of GDP in recent years. Detailed figures are reported each year in a Statistical Bulletin (Formally First Release) published in March. Table 20.1 shows the main components of GERD.

ONS conducts an annual survey of expenditure and employment on R&D performed by Government, and of Government funding of R&D. The survey collects data on outturn and planning years. Until 1993 the detailed results were reported in the *Annual Review of Government Funded R&D*. From 1997 the results have appeared in the Science, Engineering and Technology (SET) Statistics published by the Department for Innovation, Universities and Skills (DIUS). Table 20.2 gives some broad totals for gross expenditure by Government (expenditure before deducting funds received by Government for R&D). Table 20.3 gives a breakdown of net expenditure (receipts are deducted).

ONS conducts an annual survey of R&D in business. Tables 20.4 and 20.5 give a summary of the main trends up to 2007. The latest set of results from the survey became available in a First Release dated 30 January 2009.

Revisions were made to the business data for the period 2001 to 2006 and were published at the same time as the 2007 Business Enterprise R&D (BERD) First Release on 30 January 2009. The format of this report was used as it covers all aspects of the R&D data published by ONS.

Statistics on expenditure and employment on R&D in Higher Education Institutions (HEIs) are based on information collected by Higher Education Funding Councils and the Higher Education Statistics Agency (HESA). In 1994 a new methodology was introduced to estimate expenditure on R&D in HEIs. This is based on the allocation of various Funding

Council Grants. Full details of the new methodology are contained in SET Statistics available on the DIUS website at: www.dius.gov.uk/science/science_funding/set_stats

The most comprehensive international comparisons of resources devoted to R&D appear in Main Science and Technology Indicators published by the Organisation for Economic Co-operation and Development (OECD). The Statistical Office of the European Union and the United Nations also compile R&D statistics based on figures supplied by member states.

To make international comparisons more reliable the OECD have published a series of manuals giving guidance on how to measure various components of R&D inputs and outputs. The most important of these is the Frascati Manual, which defines R&D and recommends how resources for R&D should be measured. The UK follows the Frascati Manual as far as possible.

For information on available aggregated data on Research and Development please contact Mark Pollard on 01633 456769 (email Mark.Pollard@ons.gsi.gov.uk).

Agriculture, fisheries and food

Chapter 21

Agriculture, fisheries and food

Output and input

(Tables 21.1 and 21.2)

For both tables, output is net of VAT collected on the sale of non-edible products. Figures for total output include subsidies on products, but not other subsidies. Unspecified crops include turf, other minor crops and arable area payments for fodder maize. Eggs include the value of duck eggs and exports of eggs for hatching. Landlords' expenses are included within Farm maintenance, Miscellaneous expenditure and Depreciation of buildings and works. Also included within 'Other farming costs' are livestock and crop costs, water costs, insurance premia, bank charges, professional fees, rates, and other farming costs.

Other subsidies

Agri-Environment schemes include Environmentally and Nitrate Sensitive Areas, Countryside Stewardship, Countryside Premium, Tir Cymen, Tir Gofal, Moorland, Habitat, Farm Woodland and Organic Farming Schemes. Included in 'Other' subsidies are guidance premium for beef and sheep meat production, Pilot Beef and Sheep Extensification Scheme, nonagricultural horse grazing and farm accounts grant as well as historic data for fertiliser and lime grant and payments to small scale cereal producers.

Compensation of employees and interest charges

Total compensation of employees excludes the value of work done by farm labour on own account capital formation in buildings and work. 'Interest' relates to interest charges on loans for current farming purposes and buildings, less interest on money held on short-term deposit.

Rent

Rent paid (after deductions) is the rent paid on all tenanted land including 'conacre' land in Northern Ireland, less landlords' expenses and the benefit value of dwellings on that land. Rent received (after deductions) is the rent received by farming landowners from renting of land to other farmers, less landlords' expenses and the benefit value of dwellings on that land. Total net rent is the net rent flowing out of the agricultural sector paid to non-farming landowners, including

that part of tenanted land in Northern Ireland. (Although there has been some updating of the technical procedures for calculating this figure, it corresponds with the previous net rent variable.)

Agricultural censuses and surveys

(Tables 21.3, 21.5 and 21.13)

The coverage for holdings includes all main and minor holdings for each country. Northern Ireland data are now based on all active farm business.

Estimated quantity of crops and grass harvested

(Table 21.4)

The estimated yields of sugar beet and hops are obtained from production figures supplied by British Sugar plc, and the main hop producers in England and Wales. In Great Britain potato yields are estimated in consultation with the British Potato Council.

Forestry

(Table 21.6)

Statistics for state forestry are from Forestry Commission and Forest Service management information systems. For private forestry in Great Britain, statistics on new planting and restocking are based on records of grant aid and estimates of planting undertaken without grant aid, and softwood production is estimated from a survey of the largest timber harvesting companies. Hardwood production is estimated from deliveries of roundwood to primary wood processors, data provided by trade associations and estimates provided by the Expert Group Timber and Trade Statistics.

Average weekly earnings and hours of agricultural and horticultural workers

(Tables 21.11 and 21.12)

Prior to 1998, data were collected from a monthly postal survey, which mainly covered male full-time workers. Between 1998 and 2002 the survey collected information on an annual basis via a telephone survey. The survey was reviewed in 2002 and it was concluded that the frequency of the survey should

be increased to four times per year to enable the production of more representative annual estimates. The annual sample size has been retained and has been split between four quarterly telephone surveys. Results for other quarters can be found on the Department for Environment, Food and Rural Affairs (DEFRA) website at: www,defra.gov.uk

The survey covers seven main categories of workers and provides data which are used by the Agricultural Wages Board when considering wage claims and in considering the cost of labour in agriculture and horticulture.

Data on earnings represents the total earnings of regular full-time male workers aged 20 and over. Figures include all payments-in-kind, valued where applicable in accordance with the Agricultural Wages Order. The earnings and hours of hire farm managers are excluded. Part-time workers are defined as those working less than 39 basic hours per week. Casual workers are those employed on a temporary basis.

Fisheries

(Table 21.15)

Fishing fleet information is obtained from vessel registers maintained by DEFRA in England and Wales and the Scottish Executive Agriculture and Fisheries Department.

Estimated average household food consumption – 'Family Food' Expenditure and Food Survey

(Table 21.16)

The Expenditure and Food Survey (EFS) started in April 2001, having been preceded by the National Food Survey (NFS) and the Family Expenditure Survey (FES). Both surveys were brought into one to provide value for money without compromising data quality. The EFS is effectively a continuation of the FES extended to record quantities of purchases. Estimates from the NFS prior to 2000 have been adjusted by aligning estimates for the year 2000 with corresponding estimates from the FES. The survey is a voluntary sample survey of private households throughout the UK. The basic unit of the survey is the household which is defined as a group of people living at the same address and sharing common catering arrangements.

The survey is continuous, interviews being spread evenly over the year to ensure that seasonal effects are covered. Each household member over the age of seven keeps a diary of all their expenditure over a 2 week period. A simplified version of the diary is used by those aged between 7 and 15. The diaries record expenditure and quantities of purchases of food and drink rather than consumption of food and drink.

Items of food and drink are defined as either household or eating out and are recorded in the form the item was purchased not how it was consumed. 'Household' covers all food that is brought into the household. 'Eating out' covers all food that never enters the household, for example restaurant meals, school meals and snacks eaten on the hoof.

From 2006 the survey moved onto a calendar year basis (from the previous financial year basis) in preparation for its integration to the Integrated Household Survey (IHS) from January 2008.

In 2007 the Expenditure and Food Survey collected the diaries of 14,647 people within 6,141 households across the UK. The response rate for 2007 was 53 per cent in Great Britain and 54 per cent in Northern Ireland.

- 1 See chapter text.
- 2 Provisional.
- 3 Output is net of VAT collected on the sale of non-edible products. Figures for total output include subsidies on products, but not other subsidies.
- 4 Includes straw and minor crops.
- 5 Landlords' expenses are included within 'Total maintenance', 'Other goods and services' and 'Total consumption of Fixed Capital of buildings'.
- 6 Includes livestock and crop costs, water costs, insurance premiums, bank 11 charges, professional fees, rates and other farming costs.
- 7 A more empirically based methodology for calculating landlords' consumption of fixed capital was introduced in 2000. The new series has been linked 12 Rent received by farming landowners from renting of land to other farmers less with the old one using a smoothing procedure for the transition year of landlords' expenses. This series starts in 1996 following a revision to the
- mation in buildings and works.
- 9 Includes Environmentally and Nitrate Sensitive Areas, Countryside Stewardship and other management schemes, and Moorland, Habitat, Farm Woodland and Organic Farming Schemes.
- 10 Land area based schemes which replaced the Hill Livestock Compensatory Allowance Scheme in 2001. These are Tir Mynydd in Wales, Less Favoured Area Compensatory Scheme in Northern Ireland, Less Favoured Areas Support Scheme in Scotland and Hill Farm Allowance in England.
- Rent paid on all tenanted land (including 'conacre' land in Northern Ireland) less landlords' expenses, landlords' consumption of fixed capital and the benefit value of dwellings on that land.
- methodology of calculating net rent.
- 8 Excludes the value of work done by farm labour on own account capital for- 13 Interest charges on loans for current farming purposes and buildings and works less interest on money held on short term deposit.

² Output is net of VAT collected on the sale of non-edible products. Figures for total output include subsidies on products, but not other subsidies.

³ Includes straw and minor crops.

⁴ Landlords' expenses are included within 'Total maintenance', 'Other goods and services' and 'Total consumption of Fixed Capital of buildings'.

 $^{{\}bf 5}$ Includes livestock and crop costs, water costs, insurance premiums, bank

charges, professional fees, rates, and other farming costs.

6 A more empirically based methodology for calculating landlords' depreciation was introduced in 2000. The new series has been linked with the old one using a smoothing procedure for the transition year of 1996.

¹ Includes estimates for minor holdings for all countries. See chapter text. 2 The area of bare fallow has shown an increase of 378% in 2006. The rise in

Source: Agricultural Departments: 01904 455333

the bare fallow area in England is believed to be due to the way the farmers have described their land following the introduction of the Single Payment Scheme.

³ Includes all uncropped arable land i.e. bare fallow and arable land not in production managed under GAEC12 conditions.
4 Figures are for England and Wales only.
5 Figures are for England only from 2005. From 2007 are included in Other

Crops.

⁶ Includes non-commercial orchards.

Source: Forest Service Agency; Forestry Commission: 0131 314 6171

² Areas as at 31 March.

³ For England, Wales and Scotland, 1980 woodland area figures are the published results from the 1979-1982 Census of Woodlands and Trees and figures for 1990 are adjusted to reflect subsequent changes. From 1998 onwards they are based on results from the 1995-1999 National Inventory of Woodlands and Trees, adjusted to reflect subsequent changes.

⁴ Includes private woodland and non-Forestry Commission / Forest Service public woodland.

⁵ Broadleaved includes coppice. For data based on 1979-82 Census, all scrub and other non-plantation woodland have been assumed to be broadleaved.

⁶ Figures shown are for the areas of new planting and restocking in the year to 31 March.

⁷ Includes grant aided planting on non-Forestry Commission/ Forest Service woodland and estimates for areas planted without the aid of grants.

⁸ Figures have been rounded to the nearest 10 thousand green tonnes.

⁹ Hardwood is timber from broadleaved species. Most hardwood production comes from non-FC/FS woodland; the figures are estimates based on reported deliveries to wood processing industries.

Note: The figures for cereals and for animals slaughtered relate to periods of 52 weeks.

- 1 Flour millers' receipts of home-grown wheat.
- 2 Oatmeal millers' receipts of home-grown oats.
- 3 Total sales for human consumption in the UK. Figures for 2007 are provisional.
- 4 Data to 1994 sourced from the Milk Marketing Boards. Data from 1995 sourced from surveys run by the agricultural departments. 1994 includes two months of data sourced from the surveys run by the agricultural department.
- 5 The totals of liquid consumption and milk used for manufacture may not add up to the total available for domestic use because of adjustments for dairy wastage, stock changes and other uses, such as farmhouse consumption, milk fed to stock and on farm waste.
- 6 Total fowls, ducks, geese and turkeys.

See chapter text. Includes estimates for minor holdings for all countries.
 Figures exclude schoolchildren but include trainees employed under an offi-

² Figures exclude schoolchildren but include trainees employed under an official youth training scheme and paid at Agricultural Wages Board rates or above.

³ Results from 1998 onwards are not comparable with previous years, due to changes in the labour questions on the June Agricultural and Horticultural Census in England, Wales and Scotland.

⁴ From 1998, all farmers managing holdings for limited companies or other institutions in England and Wales were asked to classify themselves as salaried managers.

⁵ Due to an English register improvement only the top figure for 2001 is directly comparable with 2000, while the bottom figure for 2001 is only comparable with data from 2002.

¹ GDP for fish includes landings abroad.

Source: Fisheries Statistics Unit: 020 7272 8096

² Year on year comparisons may be affected by changes in the industrial classification of some contributors. For most businesses data are appropriate to a single activity heading; where information covers a mixture of activities, the business is classified according to the main activity.

³ The number of vessels excludes those registered in the Channel Islands and the Isle of Man.

⁴ The quantity of landed fish is expressed in terms of liveweight. The figures relate to landings both into the UK and abroad.

⁵ Imports are valued at cost, including insurance and freight terms whereas exports are valued at free on board terms

ports are valued at free on board terms.

6 Data are derived from the National Food Survey prior to 2001, and from the Expenditure and Food Survey from 2001 onwards. Figures for 2001 onwards are based on financial year data.

⁷ Including non-alcoholic beverages.

⁸ The fish component of the RPI which includes canned and processed fish. The index is calculated on a monthly basis with January 1987 = 100.

 Including also school and welfare milk.

Chapter 22

Annual Business Inquiry

(Table 22.1)

The Annual Business Inquiry (ABI) estimates cover all UK businesses registered for Value Added Tax (VAT) and/or Pay As You Earn (PAYE), classified to the 2003 Standard Industrial Classification (SIC(2003)) headings listed in the tables. The ABI obtains details on these businesses from the Office for National Statistics (ONS) Inter-Departmental Business Register (IDBR).

As with all its statistical inquiries, ONS is concerned to minimise the form-filling burden of individual contributors and as such the ABI is a sample inquiry. The sample was designed as a stratified random sample of about 66,500 businesses, the inquiry population is stratified by SIC(2003) and employment using the information from the register.

The inquiry results are grossed up to the total population, so that they relate to all active UK businesses on the IDBR for the sectors covered.

The results meet a wide range of needs for government, economic analysts and the business community at large. In official statistics the inquiry is an important source for the National Accounts and input-output tables, but also provides weights for the indices of production and producer prices. Inquiry results also enable the UK to meet statistical requirements of the European Union.

Manufacturers' sales by industry

(Table 22.2)

This table shows the total manufacturers' sales for products classified to SIC(2003) and collected under the Products of the European Community Inquiry since its introduction in 1993. Some data are not available for confidentiality reasons or where data have not been published for a given period. Detailed product sales data together with exports and imports data are available in ONS's *Product Sales and Trade* quarterly and annual reports (PRQ and PRA series).

Number of local units in manufacturing industries in 2003

(Table 22.3)

The table shows the number of local units (sites) in manufacturing by employment size-band. The classification breakdown

is at division level (2 digit) as classified to SIC(2003) held on the Inter-Departmental Business Register (IDBR). This register became fully operational in 1995 and combines information on VAT traders and PAYE employers in a statistical register comprising

2.1 million enterprises (businesses), representing nearly 99 per cent of economic activity. *UK Business: Activity, Size and Location* provides further details and contains detailed information on enterprises in the UK including size, classification and local units.

For further information on the IDBR see the Office for National Statistics website at: www.statistics.gov.uk/idbr

Production of primary fuels

(Table 22.4)

This table shows indigenous production of primary fuels. It includes the extraction or capture of primary commodities and the generation or manufacture of secondary commodities. Production is always gross; that is, it includes the quantities used during the extraction or manufacturing process. Primary fuels are coal, natural gas (including colliery methane), oil, primary electricity (that is, electricity generated by hydro, nuclear, wind and tide stations and also electricity imported from France through the interconnector) and renewables (includes solid renewables such as wood, straw and waste and gaseous renewables such as landfill gas and sewage gas). The figures are presented on a common basis, expressed in million tonnes of oil equivalent. Estimates of the gross calorific values used for converting the statistics for the various fuels to these are given in the Digest of United Kingdom Energy Statistics available at: www.berr.gov.uk/whatwedo/energy/statistics/ publications/dukes/page45537.html

Total inland energy consumption

(Table 22.5)

This table shows energy consumption by fuel and final energy consumption by fuel and class of consumer. Primary energy consumption covers consumption of all primary fuels (defined above) for energy purposes. This measure of energy consumption includes energy that is lost by converting primary fuels into secondary fuels, that is, the energy lost burning coal to generate electricity or the energy used by refineries to separate crude oil into fractions, in addition to losses in distribution. The other common way of measuring energy consumption is to measure the energy content of the fuels supplied to consumers. This is called final energy consumption. It is net of fuel used by the energy industries, conversion, transmission and distribution losses. The figures are presented on a common basis, measured as energy

supplied and expressed in million tonnes of oil equivalent. Estimates of the gross calorific values used for converting the statistics for the various fuels to these are given in the *Digest* of *United Kingdom Energy Statistics* available at:

www.berr.gov.uk/whatwedo/energy/statistics/publications/dukes/page45537.html

So far as practicable, the user categories have been grouped on the basis of the SIC(2003) although the methods used by each of the supply industries to identify end users are slightly different. Chapter 1 of the Digest of United Kingdom Energy Statistics gives more information on these figures.

Coal

(Table 22.6)

Since 1995, aggregate data on coal production have been obtained from the Coal Authority. In addition, main coal producers provide data in response to an annual Department of Energy and Climate Change (DECC) inquiry which covers production (deep-mined and opencast), trade, stocks and disposals. HM Revenue & Customs (HMRC) also provide trade data for solid fuels. DECC collects information on the use of coal from UK Iron and Steel Statistics Bureau, and consumption of coal for electricity generation is covered by data provided by the electricity generators.

Gas

(Table 22.7)

Production figures, covering the production of gas from the UK Continental Shelf offshore and onshore gas fields and gas obtained during the production of oil, are obtained from returns made under the DECC's Petroleum Production Reporting System. Additional information is used on imports and exports of gas and details from the operators of gas terminals in the UK to complete the picture.

Chapter 4 of the *Digest of United Kingdom Energy Statistics*, contains more detailed information on gas production and consumption in the UK.

DECC carry out an annual survey of gas suppliers to obtain details of gas sales to the various categories of consumer. Estimates are included for the suppliers with the smallest market share, since the DECC inquiry covers only the largest suppliers (that is, those known to supply more than 1,750 GWh per year).

Electricity

(Tables 22.8 to 22.10)

Tables 22.8 to 22.10 cover all generators and suppliers of electricity in the UK. The relationship between generation, supply, availability and consumption is as follows:

Electricity generated

less electricity used on works
equals electricity supplied (gross)

less electricity used in pumping at pumped

storage stations

equals electricity supplied (net)

plus imports (net of exports) of electricity

equals electricity available

less losses and statistical differences

equals electricity consumed

In Table 22.8 'major power producers' are those generating companies corresponding to the old public sector supply system:

- AES Electric Ltd.
- Baglan Generation Ltd.
- Barking Power Ltd.
- British Energy plc
- Centrica Energy
- Coolkeeragh ESB Ltd.
- Corby Power Ltd.
- Coryton Energy Company Ltd.
- Derwent Cogeneration Ltd.
- Drax Power Ltd.
- EDF Energy plc
- E.ON UK plc
- Energy Power Resources Ltd.
- Immingham CHP
- International Power plc.
- Magnox Electricity Ltd.
- Premier Power Ltd.
- RGS Energy Ltd.
- Rocksavage Power Company Ltd.
- RWE Npower plc
- Scottish Power plc

- Scottish and Southern Energy plc
- Seabank Power Ltd.
- SELCHP Ltd.
- Spalding Energy Company Ltd.
- Teesside Power Ltd.
- Uskmouth Power Company Ltd.
- Western Power Generation Ltd.

In Table 22.10 all fuels are converted to the common unit of million tonnes of oil equivalent, that is, the amounts of oil which would be needed to produce the output of electricity generated from those fuels.

More detailed statistics on energy are given in the *Digest of United Kingdom Energy Statistics*. Readers may wish to note that the production and consumption of fuels are presented using commodity balances. A commodity balance shows the flows of an individual fuel through from production to final consumption, showing its use in transformation and energy industry own use.

Oil and oil products

(Tables 22.11 to 22.13)

Data on the production of crude oil, condensates and natural gases given in Table 22.11 are collected by DECC direct from the operators of production facilities and terminals situated on UK territory, either onshore or offshore, that is, on the UK Continental Shelf. Data are also collected from the companies on their trade in oil and oil products. These data are used in preference to the foreign trade as recorded by HMRC in *Overseas Trade Statistics*.

Data on the internal UK oil industry (that is, on the supply, refining and distribution of oil and oil products in the UK) are collected by the UK Petroleum Industry Association. These data, reported by individual refining companies and wholesalers, and supplemented where necessary by data from other sources, provide the contents of Tables 22.12 and 22.13. The data are presented in terms of deliveries to the inland UK market. This is regarded as an acceptable proxy for actual consumption of products. The main shortcoming is that, while changes in stocks held by companies in central storage areas are taken into account, changes in the levels of stocks further down the retail ladder (such as stocks held on petrol station forecourts) are not. This is not thought to result in a significant degree of difference in the data.

Iron and steel

(Tables 22.14 to 22.16)

Iron and steel industry

The general definition of the UK iron and steel industry is based on groups 271 'ECSC iron and steel', 272 'Tubes', and 273 'Primary Transformation' of the UK SIC(92), except those parts of groups 272 and 273 which cover cast iron pipes, drawn wire, cold formed sections and Ferro alloys.

The definition excludes certain products which may be made by works within the industry, such as refined iron, finished steel castings, steel tyres, wheels, axles and rolled rings, open and closed die forgings, colliery arches and springs. Iron foundries and steel stockholders are also considered to be outside of the industry.

Statistics

The statistics for the UK iron and steel industry are compiled by the Iron and Steel Statistics Bureau (ISSB) Ltd from data collected from UK steel producing companies with the exception of trade data which is based on HMRC data.

Crude steel is the total of usable ingots, usable continuously cast semi-finished products and liquid steel for castings.

Production of finished products is the total production at the mill of that product after deduction of any material which is immediately scrapped.

Deliveries are based on invoiced tonnages and will include deliveries made to steel stockholders and service centres by the UK steel industry.

For more detailed information on definitions etc please contact ISSB Ltd on +44 (0)20 7343 3900.

Minerals

(Table 22.19)

Table 22.19 gives, separately for Great Britain and Northern Ireland, the production of minerals extracted from the ground. The figures for chemicals and metals are estimated from the quality of the ore which is extracted. The data come from an annual census of the quarrying industry which, for Great Britain, is conducted by ONS for Communities and Local Government and BERR.

Building materials

(Table 22.20)

Table 22.20 gives the production of a number of building materials which are closely associated with material extracted from the ground. The data come from surveys conducted by ONS on behalf of BERR.

Construction

(Tables 22.21 and 22.22)

Figures for the construction industry are based on SIC(2003).

The value of output represents the value of construction work done during the quarter in Great Britain and is derived from returns made by private contractors and public authorities with their own direct labour forces. The series (and the accompanying index of the volume of output) include estimates of the output of small firms and self-employed workers not recorded in the regular quarterly output inquiry.

The new orders statistics are collected from private contractors and analysed by the principal types of construction work involved. The series includes speculative work for eventual sale or lease undertaken on the initiative of the respondent where no formal contract or order is involved.

Engineering turnover and orders

(Tables 22.23 and 22.24)

The figures represent the output of UK-based manufacturers classified to subsections DK and DL of the SIC(2003). They are derived from the Monthly Production Inquiry (MPI) and include estimates for non-responders and for establishments which are not sampled.

Passenger cars

(Table 22.25)

The figures represent the output of UK-based manufacturers classified to class 34.10 (motor vehicles) of the SIC(2003). They are derived from the Motor Vehicle Production Inquiry (MVPI). This inquiry ceased at July 2007.

These figures include vehicles produced in the form of kits for assembly. The value of the kit must be 50 per cent or more of the value of a corresponding complete vehicle.

Drink and tobacco

(Tables 22.26 and 22.27)

Data for these tables are derived by HMRC from the systems for collecting excise duties. Alcoholic drinks and tobacco products become liable to duty when released for consumption in the UK. Figures for releases include both home-produced products and commercial imports. Production figures are also available for potable spirits distilled and beer brewed in the UK.

Alcoholic drink

(Table 22.26)

The figures for imported and other spirits released for home consumption include gin and other UK-produced spirits, for which a breakdown is not available.

Since June 1993 beer duty has been charged when the beer leaves the brewery or other registered premises. Previously duty was chargeable at an earlier stage (the worts stage) in the brewing process, and an allowance was made for wastage.

Made wine with alcoholic strength from 1.2 per cent to 5.5 per cent is termed 'coolers'. Included in coolers are alcoholic lemonade and similar products of appropriate strength. From 28 April 2002, duty on spirit-based 'coolers' (ready to drink products) is charged at the same rate as spirits per litre of alcohol. Made wine coolers include only wine based 'coolers' from this period.

Tobacco products

(Table 22.27)

Releases of cigarettes and other tobacco products tend to be higher in the period before a Budget. Products may then be stocked, duty paid, before being sold. 22.1

¹ See chapter text. The breakdown of consumption by industrial users is made according to the 2003 Standard Industrial Classification.

³ This is the balance between supply and consumption, shipments and changes in known distributed stocks.

² Excludes distributed stocks held in merchant yards etc., mainly for the domestic market, and stocks held by the industrial sector.

Natural gas plus colliery methane.
 Heat generation data are not available before 1999. For earlier years gas used to generate heat for sale is allocated to final consumption by the sector producing the heat.

- 1 See chapter text.
- 2 Nuclear generators are now included under "major power producers" only.
- 3 Capacity figures for other generators are as at end-December of the previous year.
- 4 For other generators, conventional steam stations cover all types of stations not separately listed.
- Maximum load in year to end of March.
- 6 The average hourly quantity of electricity available during the year ending March expressed as a percentage of the maximum demand.

¹ See chapter text. Crude and process oils comprise all feedstocks, other than distillation benzines, for treatment at refinery plants. Refinery production does not cover further treatment of finished products for special grades such as in distillation plant for the preparation of industrial spirits.

² Crude oil plus condensates and petroleum gases derived at onshore treatment plants.

³ Includes process (partly refined) oils.

⁴ Foreign trade as recorded by the petroleum industry and may differ from figures published in *Overseas Trade Statistics*.

- 1 Unwrought copper (electrolytic, fire refined and blister).
- 2 Reported stocks of refined copper held by consumers and those held in London Metal Exchange (LME) warehouses in the United Kingdom.
- 3 2001 figures only cover the period January to June.
- Consumption for high-conductivity copper and cadmium copper wire representation of which for export is also sented by consumption of wire rods, production of which for export is also sented by consumption of wire rods, production of which for export is also 12 Including re-exports on toll transactions.

 13 Predominantly from old scrap.

 6 Lead reclaimed from secondary and scrap material and lead refined from 14 Predominantly using recycled scrap from fabrication.
- bullion and domestic ores.
- 7 Figures for production and consumption of refined lead include antimonial lead, and for scrap and remelted lead, exclude secondary antimonial lead.
- $\, 8 \,$ Including toll transactions involving fabrication.
- 9 Excluding goverment stocks.
- 10 Including production from imported scrap and residues refined on toll.
 11 Primary and secondary metal.

- 15 Excluding forging bars.

² Includes rock salt, salt from brine and salt in brine.

² Roofing and vertically hanging slates, includes 'true' slate and stone slates produced from thinly bedded sandstones and limestones. Also includes 'true' and stone slates sold as sawn slabs for decorative cladding.

⁴ Prior to 1993 the 'Sandstone' heading was called 'Grit and conglomerate'. The new heading is all encompassing and was confirmed as correct with the Geo-

² Potable spirits distilled.

³ Made wine with alcoholic strength 1.2% to 5.5%. Includes alcoholic lemonade of appropriate strength and similar products. From 28 April 2002, duty on spirit-based "coolers" is charged at the same rate as spirits per litre of alcohol. Coolers for calendar year 2002 includes only wine based "coolers".

Chapter 23

Other banks balance sheet

(Table 23.3)

The table includes the business of all monthly and quarterly reporting banks in the UK.

The Channel Islands and Isle of Man are not treated as part of the UK for statistical purposes. Banking institutions in the Channel Islands and Isle of Man no longer have the option of being within the UK banking sector and their business, along with the business of offshore island branches of UK mainland banks, is excluded from the figures within this table. Additionally, the business of the UK banking sector with offshore island residents and entities are classified as 'non-residents'.

The table also contains details of business with building societies.

The aggregate balance sheet of the banking sector is reported on an accrual basis (accrued amounts that are payable and receivable are shown under liabilities and assets respectively). Additionally, acceptances are shown under both liabilities and assets.

The balance sheet of the Banking Department of the Bank of England is excluded from this table, and other banks business with the Issue Department is classified as 'UK banks'.

Data for 1999 reflect the acquisition of Birmingham Midshires Building Society by Halifax during that year.

Data for the end of 2000 reflect the entry of Bradford and Bingley plc to the banking sector during the year. Data for the end of 2000 also reflect the new reporting during the year of agency business as a result of collateral management via repurchase agreements (repos) and reverse repos.

Bank lending to, and bank deposits from, UK residents

(Tables 23.4 and 23.5)

These are series statistics based on the Standard Industrial Classification (SIC) 1992 (which was revised slightly in 2003).

Table 23.4. Until the third quarter of 2007, the analysis of lending covered loans, advances (including under reverse repos), finance leasing, acceptances and facilities (all in Sterling and other currencies) provided by reporting banks to their UK resident non-bank non-building society customers, as well as bank holdings of sterling and euro commercial paper issued by these resident customers. Following a review of statistical data collected, acceptances and holdings of sterling and euro commercial paper are no longer collected at the industry level detail with effect from fourth quarter 2007 data. Total lending therefore reflects loans and advances (including under reverse repos) only, from fourth quarter 2007 data.

Table 23.5 includes borrowing under sale and repo. Adjustments for transit items are not included.

Figures for both tables are supplied by monthly reporting banks and grossed to cover quarterly reporters. Following the transition of building societies' statistical reporting from the Financial Services Authority to the Bank of England on 1st January 2008, both tables will include data reported by building societies from the first quarter of 2008 onwards. They exclude lending to building societies and to residents of the Channel Islands and Isle of Man.

Building societies

(Table 23.13)

Building society figures are sourced from societies' annual returns and for each year relate to accounting years ending on dates between 1 February and 31 January of the following year. Figures are society-only as opposed to group consolidated.

Consumer credit

(Table 23.14)

Figures for net lending refer to changes in amounts outstanding adjusted to remove distortions caused by

revaluations of debt outstanding, such as write-offs. Class 3 loans are advanced under the terms of the Building Societies Act 1986.

A high proportion of credit advanced in certain types of agreement, notably on credit cards, is repaid within a month. This reflects use of such agreements as a method of payment rather than a way of obtaining credit. As from December 2006 the Bank of England has ceased to update the separate data on consumer credit provided by other specialist lenders, retailers and insurance companies previously contained in these tables. These categories have been merged into 'other consumer credit lenders'.

- 1 See chapter text.
- 2 Data for 1999 reflect the acquisition of Birmingham Midshires Building Society by Halifax during that year.
- 3 Data for 2000 reflect the entry of Bradford & Bingley plc to the banking sector during the year.
- 4 Data for 2000 reflect the new reporting during the year of agency business as a result of collateral management via repos and reverse repos.
- 5 Sterling sight deposits from UK banks and sterling market loans to UK banks in 2003 were depressed by £19 bn following the consolidation of two 11 banks balance sheets.
- 6 Sterling deposits (sight plus time) from, and lending to banks in 2007 were 12 Sterling investments in other UK residents in 2000 were boosted by Lloyds
- Management Office (an executive agency of HM Treasury) of responsibility
- not available after 2006.

- 9 Foreign currency sight and time deposits from UK banks and foreign currency market loans and advances to UK banks in 2001, 2003 and 2004 were each depressed by £14.5 bn, £0.5 bn and £4.7 bn respectively as a result of positions being consolidated out on the merger of two banks.
- 10 During 2000, 2001, 2002, 2003, 2004 and 2005 sterling advances to other UK residents were reduced by £10.3 bn, £12.9 bn, £16.2 bn, £29.1bn, £30.4bn and £33.6 bn respectively as a result of securitisations and other loan transfers to non-banks or non-residents.
- Sterling investments in UK banks in 2000 were boosted by Barclay's £5.8 bn investment in Woolwich.
- reduced by £386bn following changes in the reporting population.

 7 From 2000 the UK public sector series reflects assumption by the Debt 13 Changes in the reporting populations in 1998, 1999, 2000, 2001, 2003 and
 - 2004 account for a net decrease of £7.3 bn, £11.3 bn £0.8 bn, £0.7bn, £0.2 bn
- for government cash management.

 8 Due to changes to the forms completed by reporting institutions, the breakdown of sale and repurchase agreements into gilt and non-gilt collateral is

 and £4.5 bn respectively in sterling assets outstanding.

 4 Changes in the reporting populations in 1998, 1999, 2000, 2001, 2003 and 2004 account for a net decrease of £4.6 bn, £6.6 bn, £0.2 bn, £0.2 bn £0.2 bn and £5.2 bn of foreign currency assets outstanding.

hoarding, etc.

² Including sterling lending to non-residents sector.

² Non-interest bearing deposits are confined to those with institutions included in the United Kingdom banks sector (See Table 23.3).

¹ The estimates of levels of coin in circulation include allowance for wastage, 3 M2 comprises the UK non-monetary financial institutions and non-public sector, i.e. M4 private sector's holdings of notes and coin together with its sterling denominated retail deposits with UK monetary financial institutions.

⁴ As far as possible the changes exclude the effect of changes in the number of contributors to the series, and also of the introduction of new statistical returns. Changes are not seasonally adjusted.

² The figures for each year relate to accounting years ending on dates between 1 February of that year and 31 January of the following year.

³ The societies which have converted to the banking sector, namely Cheltenham & Gloucester (August 1995), National & Provincial (August 1996), Alliance & Leicester (April 1997), Halifax (June 1997), Woolwich (July 1997), Bristol & West (July 1997), Northern Rock (October 1997), and Birmingham Midshires (April 1999) have been included in flow figures (using flows up to the date of conversion), but have been excluded from the end of year balances.

⁴ Bradford & Bingley, which converted to the banking sector in December 2000, is included within flow figures and the end of year balances.

23.15 End-year assets and liabilities of investment trust companies, unit trusts¹ and property unit trusts²

Annual Business Inquiry

(Tables 24.1, 24.3 and 24.4)

For details of the Annual Business Inquiry, see the text accompanying Table 22.1.

Retail trade: index numbers of value and volume

(Table 24.2)

The main purpose of the Retail Sales Inquiry (RSI) is to provide up-to-date information on short period movements in the level of retail sales. In principle, the RSI covers the retail activity of every business classified in the retail sector (Division 52 of the 2003 Standard Industrial Classification) in Great Britain. A business will be classified to the retail sector if its main activity is one of the individual 4 digit SIC categories within Division 52. The retail activity of a business is then defined by its retail turnover, that is, the sale of all retail goods (note that petrol, for example, is not a retail good).

The Retail Sales Index is compiled from the information returned to the statutory inquiries into the distribution and services sector. The inquiry is addressed to a stratified sample of 5,000 businesses classified to the retail sector, the stratification being by 'type of store' (the individual 4 digit SIC categories within Division 52) and by size. The sample structure is designed to ensure that the inquiry estimates are as accurate as possible. In terms of the selection, this means that:

- each of the individual 4 digit SIC categories are represented, their coverage depending upon the relative size of the category and the variability of the data
- within each 4 digit SIC category, the larger retailers tend to be fully enumerated with decreasing proportions of medium and smaller retailers

The structure of the inquiry is updated periodically, by reference to the more comprehensive results of the Annual Business Inquiry (ABI). The monthly inquiry also incorporates a rotation element for the smallest retailers. This helps to spread the burden more fairly, as well as improving the representativeness between successive benchmarks.

During 2003, the Retail Sales Index was rebased using detailed information from the 2000 Annual Business Inquiry. The reference year is currently set at 2000=100. A review of

the retail Sales Inquiry was published in October 2008. The findings are available at: www.statistics.gov.uk/StatBase/ Product.asp?vlnk=13527

The latest summary statistics are published each month by First Release. More disaggregated indices (not seasonally adjusted) are published each month in the Business Monitor SDM28. See: www.statistics.gov.uk/rsi

⁴ The total turnover figure used to calculate these data excludes VAT. 5 Includes figures for managed public houses owned by breweries.

This index of sources gives the titles of official publications or other sources containing statistics allied to those in the tables of this *Annual Abstract*. These publications provide more detailed analyses than are shown in the *Annual Abstract*. This index includes publications to which reference should be made for short-term (monthly or quarterly) series. Further advice on published statistical sources is available from the National Statistics Public Enquiry Service on the numbers provided on page ii.

Table number in Abstract	Government department or other organisation	Official publication or other source
Chapter 1: Are	a	
1.1	Ordnance Survey	
	Ordnance Survey of Northern Ireland	
	Office for National Statistics	Regional Trends (annual, Palgrave Macmillan)
Chapter 2: Parl	liamentary elections	
Elections		
2.1	University of Plymouth for the Electoral Commission	British Electoral Facts 1832-2006 (Ashgate) Dod's Parliamentary Companion (annual)
By-elections

Annual Abstract Navigation Instructions

Overview

This PDF file of the Annual Abstract has been created from the pages of the book. These brief instructions will help you find your way around the electronic publication.

Navigation

The PDF file has a 'bookmarks' panel down the left hand side, which allows you to jump from one section to another. The main chapters have lower levels of bookmarks enabling you to jump to the tables and explanatory text contained in each chapter. You can show and hide the bookmarks panel using the Show/ Hide Navigation Pane toolbar to the right of the printer icon. Similarly, the contents, sources and index pages are linked to the relevant places in the publication.

In the contents pages, clicking on a chapter or table number/ title will take you to the associated place in the file. If you are unsure whether a particular item is in the publication, the index at the back of the file can be visited.

Searching

The first large binoculars (find) button at the top of the screen will do a simple search on a word in the current document. To see if the word appears again in the publication click again on the binoculars button.

Spreadsheets

Clicking anywhere on a table number, table title or the main body of a table will launch an Excel file. A number of the tables in this pdf document are spread over more than page. Efforts have been made to combine these into a single worksheet in each of the corresponding Excel files. Where this has not been possible, as where units or periodicity differ from page to page, each page has been accorded its own separate worksheet within the same Excel file. The worksheet tabs and the instructions appearing in red at the top of the affected tables indicate how each has been treated. To permit the data in the Excel spreadsheets to be used in calculations, it has also been necessary to remove "flags" and footnote indicators from the numbers in the files.

In the event of differences between the data appearing in the Excel files and those presented in the corresponding pdf tables, the pdf versions are to be regarded as definitive.

Index

Clicking on an index entry will take you automatically to the relevant table.

Screen Resolution

Adobe Acrobat works with any screen resolution. For this product 800x600 is acceptable, but 1024x768 works better if the monitor and graphics card will support it. To change the view type to one which best suits your screen, use the View menu.

Other

If the text looks blurry on screen, this may be improved by visiting File Menu, Preferences, General and switching 'Smooth Text and Monochrome images' off.
