AREA, NATURAL RESOURCES, AND POPULATION.

EXPLANATION OF TERMS.

General imports.—Tables Nos. 224 and 225 embrace imported articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos. 234, 235, and 236 embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period will always differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "entry for consumption" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

The values of all imported articles subject to specific duties are ascertained in the manner in which the values of imports subject to duties ad valorem are ascertained.

The value of merchandise imported subject to ad valorem rates of duty and duty imposed upon and regulated in any manner by the value thereof is "the actual market value or wholesale price thereof, at the time of exportation to the United States, in the principal markets of the country from whence exported; that such actual market value shall be held to be the price at which such merchandise is freely offered for sale to all purchasers in said markets, in the usual wholesale quantities, and the price which the manufacturer or owner would have received, and was willing to receive, for such merchandise when sold in the ordinary course of trade in the usual wholesale quantities, including the value of all cartons, cases, crates, boxes, sacks, casks, barrels, hogsheads, bottles, jars, demijohns, carboys, and other containers or coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." (Rev. Stats. 836, secs. 18 and 11 of the act of June 10, 1890, as amended by act of Aug. 5, 1909, sec. 28, and Customs Regs., 1908, art. 1604.)

Domestic export values.—Tables Nos. 226 and 227 exhibit the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported, or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign export values.—Table No. 228, called "foreign exports," or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Values of foreign merchandise in transit or transshipped.—Table No. 239 exhibits foreign merchandise brought to the United States for immediate transit across the territory of the United States to a foreign country, or for transshipment in the ports of the United States to a foreign country. The value of the commodities returned in this table is determined in a similar manner to that of imports.

Values of warehoused merchandise.—Table No. 238 exhibits imported merchandise in warehouse. This merchandise has already appeared in the statement of *general imports*, Tables Nos. 224 and 225, for the year in which it was imported. The official values of the articles therein represented are the same as the *import values*.

Ton.—The term "ton" used in this volume, as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton" as applied to vessel measurement is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross," equal to 100 cubic feet of the entire carrying capacity inclusive of such deductions. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet, board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents. According to section 3249, Revised Statutes, "Proof spirits shall be held to be that alcoholic liquor which contains one-half its volume of alcohol of a specific gravity of 0.7939 at 60° Fahrenheit." The official gallon prescribed is one containing 231 cubic inches, or 58372.2 grains, equal to 8.3389 pounds of distilled water at its maximum density, weighed in air of a temperature of 62° Fahrenheit and barometric pressure of 30 inches. The taxable gallon differs from the proof gallon by reason of the fact that in computing taxable gallons under section 3251, Revised Statutes, all fractional parts of a gallon less than one-tenth are excluded.

No. 28.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1910: BY STATES.

[Source: Reports of the Bureau of the Census, Department of Commerce and Labor.]

[NOTE.—In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1890.]

[2] Estimated for Indian Territory and Indian reservations.
[3] Includes population of Indian Territory and Indian reservations.
[4] These States were organized from part of Dakota Territory, Nov. 2, 1889. The divorces granted in the counties then comprising Dakota Territory are distributed between North Dakota and South Dakota in accordance with the present division of those counties between the two States.
[5] The act of May 2, 1890, creating the Territory of Oklahoma gave the United States courts in Indian Territory jurisdiction over divorce; prior to that date there is no record of divorce.

No. 114.—SUMMARY OF MANUFACTURES: BY SPECIFIED INDUSTRIES, CALENDAR YEARS 1899, 1904, AND 1909.

[Source: Reports of the Bureau of the Census, Department of Commerce and Labor. The figures for some industries do not represent the total production, because important establishments that manufacture the same class of products may be included in other industries. Primary horsepower includes power generated in manufacturing establishments plus electric and other power rented from outside sources; it does not include electric power generated by primary units of the establishments reporting. In the statistics of power for 1899 there is a difference of 154,723 horsepower between the total and the sum of the figures for the various industries. This is due to the impossibility of making a correct revision of the figures for each industry for comparison with 1904 and 1909. A minus sign (—) denotes decrease.]

[1] Of not more than 31 gallons.

[2] Oklahoma was detached Feb. 6, 1911, from the district of Kansas and constituted a separate collection district, but there was no production of fermented liquors in either State during the fiscal year 1911.

[3] State of Mississippi detached from Louisiana and consolidated with Alabama June 1, 1908, to be known as the district of Alabama.

[4] After 1910 the two counties in Virginia are nominally with that State.

[1] By purity coefficient is meant the percentage of sugar in the total solids of the substance tested, whether it be beets, juice, or sirup. In this table it represents the average percentage of sugar in the total solids of the beets as determined by tests made at the factories.

[2] Based on reports from 27 factories and careful estimates for 14 others.

[3] These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total beet crops.

[4] No data reported.

[5] Grouped together to avoid giving publicity to data relating to individual factories.

[6] The average yield of beets per acre is found by dividing the total beets worked by the total acreage harvested; the average extraction of sugar by dividing the total sugar produced by the total beets worked; the average contents of sugar, coefficients of purity, and length of campaign by adding the figures reported by the different factories and dividing by the number of reporting factories.

[1] The figures given for the years ended June 30, 1908 to 1910, are not fully comparable with those shown for previous years, chiefly for the reason that they do not include data for roads classed as switching and terminal.

[2] Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

[3] Figures include an apportionment of unclassified tonnage.

[4] Includes 25 per cent of the total mileage of revenue mixed trains.

[5] For the years 1890 to 1899, 25 per cent of the mixed-train mileage was apportioned to passenger-train mileage and 75 per cent to freight-train mileage; but in computations for subsequent years the total mixed-train mileage was used both with passenger-train mileage and with freight-train mileage.

[6] Includes 75 per cent of the total mileage of revenue mixed trains.

[7] Includes a small amount of unclassified train mileage.

[8] Includes a small amount of special-train mileage formerly not separately reported.

[9] Includes a small amount of unclassified train mileage; also a small amount of special-train mileage formerly not separately reported.

[1] The figures of this table do not in most instances agree with those under corresponding heads in the table following, owing to the fact that the schedules of the tariff and the classifications of the Bureau of Statistics do not fully coincide as to the articles included. See note 2, p. 503.

[2] Figures for 1911 by schedules were compiled from data somewhat preliminary, but foot to agree with revised totals.

[1] See also prior tables of "Merchandise imported into and exported from the United States, and excess of imports or exports, by countries" (p. 390).
[2] Figures of 1899 cover the period from Aug. 20, 1898, to June 30, 1899, and subsequent figures cover fiscal years.
[3] The marked discrepancy between the United States figures of exports to the Philippine Islands and the Philippine figures of imports from the United States in corresponding periods is due chiefly to the fact that the Philippine import figures omit merchandise imported free of duty for the use of the Government or for use in construction and equipment of railways in the islands, under the act of Feb. 6,1905, while the United States returns omit only Government supplies carried by Government vessels.

NOTE BY MESSRS. MAUGER & AVERY.—This table exhibits in a concise form the prices of the three grades of a standard domestic fleece wool in the seaboard markets at the beginning of each quarter. In its present shape it is deemed to be intelligible to all interested in wool. In the special features of character and condition, "washed Ohio fleece wool" is less subject to variation than any other description, and thus is more a basis of value than any other class. Wool, owing to its wide variety, difference in character and condition, and liability to shrink in cleaning, is precluded from speculative operations which apply to products which may be dealt in as "futures." For these reasons the prices of wool are not liable to the same changes as cotton, wheat, etc.

[1] The price on board fixed at Baltimore by the Seaboard Coal Association.

[2] Price of soft-coal pool.

[3] Owing to unusual conditions in the coal market the association price for 1902 is not a correct guide as to the actual selling price, Clearfield coal selling as high as $7 at the mines and as high as $9 in New York Harbor. Unsettled conditions lasted until Mar. 1, 1903, or nearly so; then, on Apr. 1, prices were made $3.30 at Baltimore; later on in the year this price was discounted from 10 to 15 per cent.

[4] Shipments nominal. No sales made in 1909, 1910, or 1911.

[5] Cumberland coal now includes "thin seam" as well as "big vein" coal, the former selling about 25 cents per ton lower than the latter.

[6] Freight on "big vein" coal to Baltimore having been reduced 15 cents, $2.60 in 1909 and subsequent years is equivalent to $2.75 in 1908 and previous years.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. This table summarizes wholesale prices of 257 staple commodities. The commodities designated as "Raw" are such as are marketed in their natural state, and also such as have been subjected to only a preliminary manufacturing process; this group includes 50 articles from 1890 to 1907 and 54 articles in 1908, 1909, and 1910. The commodities designated as "Manufactured" are such as have been subjected to more than a preliminary factory manipulation and in which the manufacturing labor cost constitutes an important element in the price; this group includes 203 articles from 1890 to 1907, 204 articles in 1908, 203 articles in 1909 and 1910. A relative price, or index number, as it is technically called, of any article is the percentage which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for this compilation is the average price for the 10-year period 1890 to 1899. The relative prices shown under each group are simple averages of the relatives of all articles included within the group. Average price for 1890–1899=100.]

No. 272.—RELATIVE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD: 1890 TO 1907.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. The statements of prices collected by the Bureau of Labor in 1907 were from 1,014 retail merchants. The number has varied somewhat from year to year. The 1,014 merchants were located in 68 principal industrial centers. For each of the 30 articles the prevailing price each month was secured. As previously explained under the title of wholesale prices, the relative price of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for retail as well as for wholesale prices is the average price for the 10-year period 1890 to 1899. Average price for 1890–1899=100.]

No. 273.—RELATIVE RETAIL PRICES OF FOOD, SIMPLE AND WEIGHTED AVERAGES: BY GEOGRAPHIC DIVISIONS,[1] 1890 TO 1907.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. This table summarizes for each of the 5 geographic divisions and for the United States the relative retail prices of food for each year from 1890 to 1907. In the first column under each division is shown the simple average of the relative prices of the 30 articles. In the second column under each division is shown the relative prices computed by giving to the relative price of each article its proper weight as determined by the average consumption in 2,567 families of workingmen investigated by the Bureau of Labor in 1901. No. 275.—AVERAGE FOOD COST PER WORKINGMAN'S FAMILY: BY GEOGRAPHIC DIVISIONS,[1] 1890 TO 1907.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. This table is based on the average food cost per family in 1901, as reported by the workingmen's families investigated in each geographic division, and the course of retail prices of food as indicated by the relative prices, weighted according to family consumption in that division. In each of the geographic divisions and in the United States as a whole it is considered in this table that the expenditure for each of the various articles bore the same relation to the total expenditure for food in each of the other years of the 17-year period covered by this investigation as in 1901.]

[1] The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1860 to 1898. Census figures have, however, been used when available, including those for 1899 to date.

[2] The value of lint per pound shown since 1902 relates to the average grade of upland cotton marketed prior to Apr. 1 of the following year; from 1890 to 1901, the average price of middling cotton on the New Orleans Cotton Exchange; and from 1860 to 1889, as published in reports of the United States Department of Agriculture.

[3] Compiled from publications of the United States Department of Agriculture for 1860 to 1894; from the reports of Latham, Alexander & Co., for 1895 to 1903. Census figures have been taken when available. Discrepancies in the figures for census years as compared with those of the table entitled "Statistical Record of the Progress of the United States" are caused mainly by difference of method in the making up of the respective tables.

[4] Compiled from "Commerce and Navigation of the United States," 1860 to date. The export year begins July 1, 1860 to 1866, and Sept. 1 for 1867 to date. The period for consumption, exports, and imports is designated by the year in which the record begins rather than that in which it ends.

[5] Equivalent bales of 400 pounds.

[6] Excess of foreign exports over total imports.

No. 291.—DISTILLED SPIRITS, WINES, AND MALT LIQUORS: QUANTITIES CONSUMED AND AVERAGE ANNUAL CONSUMPTION PER CAPITA IN THE UNITED STATES, 1850 TO 1911.[1]

[Sources: The production of domestic wines was estimated by the Department of Agriculture, by Mr. Charles McK. Leoser, president of the Wine and Spirit Traders' Society of New York, and other well-informed persons, except that the production for 1889 (opposite the year 1890) is that officially reported by the Bureau of the Census, Department of Commerce and Labor. The consumption of domestic spirituous and malt liquors derived from reports of the Commissioner of Internal Revenue. The above table does not include for any year withdrawals of distilled spirits for scientific purposes and for use of the United States, or since 1906 withdrawals of alcohol for denaturation, free of tax. For 1911, these amounts were 2,364,543 and 11,682,888 tax gallons, respectively.]

[1] Gold coin became available for circulation Jan. 1, 1879, as a result of the resumption act of Jan. 14, 1875.
[2] Silver certificates were authorized by acts of Feb. 28, 1878, and Aug. 4, 1886.
[3] Subsidiary silver, which disappeared from circulation in 1862, was reintroduced under operation of the act of Jan. 14, 1875.
[4] As the result of special investigation by the Director of the Mint, a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years.
[5] The Director of the Mint recently made a revised estimate of the stock of subsidiary silver coin; as a consequence of such revision there has been a reduction of $9,700,000.

NOTE 1.—For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government.

NOTE 2.—This table has been revised and shows slight changes from previous figures in some of the items.

[1] The law provides for a tax on wine made in imitation of champagne, etc., but no internal revenue was derived from the same during the fiscal years 1884–1898. The amounts thus received in some of the subsequent years are so small as to be negligible in the following table, except in 1905, when they amounted to nearly $700.

[2] From 1884 to 1890, inclusive, year ended Apr. 30.

[3] Fourteen months ended June 30.

[This table is based upon the number of positions shown in the Official Register of 1903, and changes in the service since reported by the departments and offices. Some of the reports were not made in such manner as to permit of a definite distinction as to employment in Washington and elsewhere. The figures are therefore to be regarded as approximate only. Omissions to report certain changes, as explained in the detailed tables, and neglect of details necessary only for statistical purposes also contribute to making the figures approximate only.]

[1] One hundred and thirty-seven positions in the Government Hospital for the Insane and 75 in the Freedmen's Hospital, under "Miscellaneous," have been transferred from the unclassified to the classified columns, as they are now subject to registration tests under the rules.

[2] Most of the unclassified appointments and separations were of persons appointed under the Thirteenth Census Act, outside of the provisions of the Civil Service Act and Rules.

[3] Mechanics and laborers in navy yards are unclassified according to an opinion of the Attorney General, July 6, 1909. Separations are not reported. The number of appointments was 10,140, and the total number of positions was estimated by the department at 25,000 on June 30, 1911.

[4] The positions are those of the Post Office Inspection Service, and postage stamp and card agencies. Changes are included under Post Office Department, Washington, D. C.

[5] The 7,994 presidential positions are those of postmasters, the increase during the year being 372. Of the unclassified positions 12,850 were reported in 1907 as clerks in post *offices having no free delivery.*

[6] Changes in the force of unclassified fourth-class postmasters are not reported, but the total number diminished during the year by 301. The number of classified fourth-class offices was diminished by advancements to the presidential class so that the number on June 30, 1910, was actually 14,648, or 545 less than given in the last report. Of the 1,365 separations 382 were due to advancement of fourth-class offices to the presidential class.

[7] The number (4,597) under excepted positions indicates pension examining surgeons and specialists for pensions, a net loss of 63 during the year.

[1] Special agents of the bureaus of Census, Manufactures, Fisheries, and Navigation, and field officers of the Coast and Geodetic Survey.
[2] This number is 470 smaller than in the report for 1910, because of 75 employees in the Freedmen's Hospital now treated as competitive, and 545 fourth-class postmasters made presidential.
[3] The number of unclassified employees on June 30, 1910, appears smaller by 212 than in the last report, because 75 in Freedmen's Hospital have been placed in the competitive columns, and 137 are no longer carried as unclassified in the Government Hospital for the Insane, being now subject to registration tests.
[4] Only changes in the force subject to examination are included in the body of this table.

[1] The civil-service rules prior to Apr., 1903, defined the Departmental Service as including all classified positions except those in the Post Office, Customhouse, Internal Revenue, and Government Printing Services. The majority of such positions is found in the field, not in the departments at Washington, but all former reports have shown them as "Departmental," following the civil-service rule referred to. In this report for the first time an effort has been made to limit "Departmental" to its original meaning, showing field-service examinations under a separate heading; hence the apparent great discrepancy in the "Departmental" figures as compared with those in previous reports.

No. 335.—CIVIL SERVICE: NUMBER OF PERSONS EXAMINED, ETC.—Continued.

Branch of service and period covered.	Approximate number of classified competitive positions.	Examined.	Passed.	Per cent that passed.	Appointed.	Per cent appointed of those that passed.

* Fiscal years. † Calendar years.

[6] Figures for the years 1800 to 1855 include the total public debt.

[7] Gold and silver can not be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about $25,000,000, and this estimate is continued for the three following years under the head of gold. After that period gold was available for circulation.

[8] Total specie in circulation; gold and silver were not separately stated prior to 1876.

[9] Estimated.

[10] As the result of special investigation by the Director of the Mint a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years, and on Sept. 1, 1910, a reduction of $9,700,000 was made in the estimate of silver coin.

* Fiscal years.

[1] Based on total exports prior to 1866, after that on domestic exports only.

[2] Gold and silver can not be separately stated in domestic exports prior to 1864, but it is probable that the greater portion of the exports was gold, under which head the exports in question are included. Gold and silver contained in ore are included under gold and silver since 1894.

† The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1858 to 1898. Census figures have, however, been used when available, including those for 1899 to date.

[1] Census figures for census years.

[2] Cleaned rice; 1890 to 1903, commercial movement, as given by Dan Talmage's Sons Co.; 1904 to date, as reported by the Department of Agriculture.

[3] Commercial value. To ascertain coining value multiply number of fine ounces as shown in Tables Nos. 118 and 119 by $1.2929+.

[6] Excluding tonnage received from connecting roads and other carriers after 1898.

[7] Overvalued by reason of depreciation of Brazilian paper milreis.

[8] Information for 1901 and 1902 relative to noncontiguous customs districts is somewhat fragmentary.

[9] Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

[10] Excludes mileage of switching and terminal companies not heretofore segregated.

[1] Includes data for Government savings banks in the Australian and the Federated Malay States. It has been thought proper to include among the postal savings banks also those savings banks in the Australian States which prior to the transfer of the State post offices to the Federal Government were operated by the respective State post offices. All these banks continue at present to be operated as Government savings banks.

[2] Including the value of accrued interest on the securities held to the credit of the depositors since 1902.
