EXPLANATION OF TERMS.

General imports.—Tables Nos. 247 and 248 embrace imported articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos. 257, 258, and 259 embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period will always differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "entry for consumption" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

The values of all imported articles subject to specific duties are ascertained in the manner in which the values of imports subject to duties ad valorem are ascertained.

The value of merchandise imported subject to ad valorem rates of duty and duty imposed upon and regulated in any manner by the value thereof is "the actual market value or wholesale price thereof, at the time of exportation to the United States, in the principal markets of the country from whence exported; that such actual market value shall be held to be the price at which such merchandise is freely offered for sale to all purchasers in said markets, in the usual wholesale quantities, and the price which the manufacturer or owner would have received, and was willing to receive, for such merchandise when sold in the ordinary course of trade in the usual wholesale quantities, including the value of all cartons, cases, crates, boxes, sacks, casks, barrels, hogsheads, bottles, jars, demijohns, carboys, and other containers or coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." (Rev. Stats. 336, secs. 18 and 11 of the act of June 10, 1890, as amended by act of Aug. 5, 1909, sec. 28, and Customs Regs., 1908, art. 1604.)

Domestic export values.—Tables Nos. 249 and 250 exhibit the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported, or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign export values.—Table No. 251, called "foreign exports," or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Values of foreign merchandise in transit or transshipped.—Table No. 262 exhibits foreign merchandise brought to the United States for immediate transit across the territory of the United States to a foreign country, or for transshipment in the ports of the United States to a foreign country. The value of the commodities returned in this table is determined in a similar manner to that of imports.

Values of warehoused merchandise.—Table No. 261 exhibits imported merchandise in warehouse. This merchandise has already appeared in the statement of *general imports*, Tables Nos. 247 and 248, for the year in which it was imported. The official values of the articles therein represented are the same as the *import values*.

Ton.—The term "ton" used in this volume, as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton" as applied to vessel measurement is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross," equal to 100 cubic feet of the entire carrying capacity inclusive of such space. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet, board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents. According to section 3249, Revised Statutes, "Proof spirits shall be held to be that alcoholic liquor which contains one-half its volume of alcohol of a specific gravity of 0.7939 at 60° Fahrenheit." The official gallon prescribed is one containing 231 cubic inches, or 58372.2 grains, equal to 8.3389 pounds of distilled water at its maximum density, weighed in air of a temperature of 62° Fahrenheit and barometric pressure of 30 inches. The taxable gallon differs from the proof gallon by reason of the fact that in computing taxable gallons under section 3251, Revised Statutes, all fractional parts of a gallon less than one-tenth are excluded.

No. 29.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1910: BY STATES.

[Source: Reports of the Bureau of the Census, Department of Commerce and Labor.]

[NOTE.—In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1890.]

[2] Acreage reports for miscellaneous seeds were consolidated with those for minor field crops in 1900.

[3] Several crops or farm products produced considerable revenue, but for which the Census Bureau has no separate acreage reports. The acreage of cotton seed, if separately reported, would be a duplication of the acreage of cotton; that of grass seed, of hay and forage crops; and that of vegetable and flower seeds, of vegetables, and of flowers and plants. Such products as flax fiber, flax straw, other straw, and cornstalks and leaves come from the acreage reported under cereals. No acreage could be given for the maple sugar and sirup or forest products. The number of trees of bearing age and the number not of bearing age were thought to be more satisfactory as a measure of the extent of the fruit and nut industry than acreage, and, therefore, acreage reports are not shown except for small fruits.

No. 132.—SUMMARY OF MANUFACTURES: BY SPECIFIED INDUSTRIES, CALENDAR YEARS 1899, 1904, AND 1909.

[Source: Reports of the Bureau of the Census, Department of Commerce and Labor. The figures for some industries do not represent the total production, because important establishments that manufacture the same class of products may be included in other industries. Primary horsepower includes power generated in manufacturing establishments plus electric and other power rented from outside sources; it does not include electric power generated by primary units of the establishments reporting. In the statistics of power for 1899 there is a difference of 154,723 horsepower between the total and the sum of the figures for the various industries. This is due to the impossibility of making a correct revision of the figures for each industry for comparison with 1904 and 1909. A minus sign (−) denotes decrease.]

[1] By purity coefficient is meant the percentage of sugar in the total solids of the substance tested, whether it be beets, juice, or sirup. In this table it represents the average percentage of sugar in the total solids of the beets as determined by tests made at the factories.

[2] Based on reports from 27 factories and careful estimates for 14 others.

[3] These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total beet crops.

[4] No data reported.

[5] Grouped together to avoid giving publicity to data relating to individual factories.

[6] The average yield of beets per acre is found by dividing the total beets worked by the total acreage harvested; the average extraction of sugar by dividing the total sugar produced by the total beets worked; the average contents of sugar, coefficients of purity, and length of campaign by adding the figures reported by the different factories and dividing by the number of reporting factories.

[1] The figures given for the years ended June 30, 1908 to 1911, are not fully comparable with those shown for previous years, chiefly for the reason that they do not include data for roads classed as switching and terminal.

[2] Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

[3] Figures include an apportionment of unclassified tonnage.

[4] Includes 25 per cent of the total mileage of revenue mixed trains.

[5] For the years 1890 to 1899, 25 per cent of the mixed-train mileage was apportioned to passenger-train mileage and 75 per cent to freight-train mileage; but in computations for subsequent years the total mixed-train mileage was used both with passenger-train mileage and with freight-train mileage.

[6] Includes 75 per cent of the total mileage of revenue mixed trains.

[7] Includes a small amount of unclassified train mileage.

[8] Includes a small amount of special-train mileage formerly not separately reported.

[9] Includes a small amount of unclassified train mileage; also a small amount of special-train mileage formerly not separately reported.

No. 213.—NAVIGABLE STREAMS: POINTS CONNECTED, NAVIGABLE LENGTH, DEPTH AT LOW WATER, IN 1905, AND TRAFFIC MOVEMENT IN THE CALENDAR YEARS 1905 AND 1910, BY NAME, LOCALITY, AND TRIBUTARY CONNECTION.

[The original of this table was published in the report of the Inland Waterways Commission and was prepared and revised by the Bureau of Corporations, Department of Commerce and Labor, the data relating to rivers which had been the objects of Government improvement exclusive of those tributary to the Great Lakes. The present form retains the specific streams, with navigable lengths, depths, and traffic as stated in the original, to which figures of traffic movement for 1910, so far as practicable, have been added from the report of the Chief of Engineers, War Department, for 1911. For the most part the depths given show the maximum drafts that could be carried on June 30, 1906.]

[1] See also prior tables of "Merchandise imported into and exported from the United States, and excess of imports or exports, by countries" (p. 420).
[2] Figures of 1899 cover the period from Aug. 20, 1898, to June 30, 1899, and subsequent figures cover fiscal years.
[3] The marked discrepancy between the United States figures of exports to the Philippine Islands prior to 1911 and the Philippine figures of imports from the United States in corresponding periods is due chiefly to the fact that the Philippine import figures prior to that year omit merchandise imported free of duty for the use of the Government or for use in construction and equipment of railways in the islands, under the act of Feb. 6, 1905, while the United States returns omit only Government supplies carried by Government vessels.

NOTE BY MESSRS. MAUGER & AVERY.—This table exhibits in a concise form the prices of the three grades of a standard domestic fleece wool in the seaboard markets at the beginning of each quarter. In its present shape it is deemed to be intelligible to all interested in wool. In the special features of character and condition, "washed Ohio fleece wool" is less subject to variation than any other description, and thus is more a basis of value than any other class. Wool, owing to its wide variety, difference in character and condition, and liability to shrink in cleaning, is precluded from speculative operations which apply to products which may be dealt in as "futures." For these reasons the prices of wool are not liable to the same changes as cotton, wheat, etc.

[1] The price on board fixed at Baltimore by the Seaboard Coal Association.
[2] Price of soft-coal pool.
[3] Owing to unusual conditions in the coal market the association price for 1902 is not a correct guide as to the actual selling price, Clearfield coal selling as high as $7 at the mines and as high as $9 in New York Harbor. Unsettled conditions lasted until Mar. 1, 1903, or nearly so; then, on Apr. 1, prices were made $3.30 at Baltimore; later on in the year this price was discounted from 10 to 15 per cent.
[4] Shipments nominal. No sales made after 1908.
[5] Cumberland coal now includes "thin seam" as well as "big vein" coal, the former selling about 25 cents per ton lower than the latter.
[6] Freight on "big vein" coal to Baltimore having been reduced 15 cents, $2.60 in 1909 and subsequent years is equivalent to $2.75 in 1908 and previous years.

No. 284.—RELATIVE WHOLESALE PRICES OF RAW AND OF MANUFACTURED COMMODITIES: CALENDAR YEARS 1890 TO 1911, AND PER CENT OF INCREASE IN PRICES FOR 1911 OVER PRICES FOR EACH PRECEDING YEAR.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. This table summarizes wholesale prices of 257 staple commodities. The commodities designated as "Raw" are such as are marketed in their natural state, and also such as have been subjected to only a preliminary manufacturing process; this group includes 50 articles from 1890 to 1907 and 54 articles in 1908 and 1909 to 1911. The commodities designated as "Manufactured" are such as have been subjected to more than a preliminary factory manipulation and in which the manufacturing labor cost constitutes an important element in the price; this group includes 208 articles from 1890 to 1907, 204 articles in 1908, 203 articles in 1909 to 1911. A relative price, or index number, as it is technically called, of any article is the percentage which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for this compilation is the average price for the 10-year period 1890 to 1899. The relative prices shown under each group are simple averages of the relatives of all articles included within the group. Average price for 1890–1899=100.]

No. 288.—RELATIVE RETAIL PRICES OF PRINCIPAL ARTICLES OF FOOD: CALENDAR YEARS 1890 TO 1911, AND BY MONTHS, JANUARY, 1911, TO AUGUST, 1912, BY ARTICLES.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. The statements of prices collected by the Bureau of Labor were from retail merchants selling largely to the families of American, English, Irish, German, and Scandinavian wage earners. Reports were secured from several merchants in each of 39 important industrial cities, representing 32 States. In a general way the city selected in each section of the country was the city having the largest population in that section. Within the 39 cities live one-fifth of the total number of people, two-fifths of the urban population, and approximately one-third of the total number engaged in gainful occupations (not including those in agricultural pursuits) in continental United States. As previously explained under the title of "Wholesale Prices" (p. 576), the relative price of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for retail as well as for wholesale prices is the average price for the 10-year period, 1890 to 1899. Average price for 1890–1899=100.0.]

In the second section of the table is shown for each of the 5 geographic divisions and for the United States the relative price computed by giving to the relative price of each of the 15 articles its proper weight as determined by the average consumption in 2,567 families of workingmen studied by the Bureau of Labor in 1901. The 15 articles of food represent approximately two-thirds of the average total expenditure for food in the 2,567 workingmen's families. Average price for 1890-1889=100.0.]

No. 291.—APPROXIMATE COST OF A YEAR'S FOOD SUPPLY FOR AN AVERAGE WORKINGMAN'S FAMILY: AVERAGE PRICES, CALENDAR YEARS 1890 TO 1911, BY GEOGRAPHIC DIVISIONS.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. This table is based on the average food cost per family, as reported in 1901, by the workingmen's families studied by the Bureau of Labor in each geographic division, and the course of retail prices of food as indicated by the relative prices weighted according to family consumption in that geographic division. In each of the geographic divisions it is assumed that the expenditure for each of the various articles bore the same relation to the total expenditure for food in each of the other years in the 22-year period covered by this investigation as in 1901. The average food cost in 1901 was $338.10 for 1,415 families in the North Atlantic division, $298.64 for 219 families in the South Atlantic division, $321.60 for 721 families in the North Central division, $292.68 for 122 families in the South Central division, and $308.53 for 90 families in the Western division. Cents are not shown in entering the approximate amounts in this table.]

No. 292.—RELATIVE RETAIL PRICES OF COAL IN TON LOTS, FOR HOUSEHOLD USE: CALENDAR YEARS 1907 TO 1911, BY KINDS AND BY GEOGRAPHIC DIVISIONS.

[Source: Reports of the Bureau of Labor, Department of Commerce and Labor. The first section of this table compares the average price of coal for each year, 1908 to 1911, with the average price for 1907. The average for each year was found by dividing the sum of the prices on Jan. 15, Apr. 15, July 15, and Oct. 15, by 4. The second section of this table compares the midwinter price on Jan. 15 of each year, 1908 to 1911, with the price on Jan. 15, 1907. Statements of prices were furnished by 168 coal dealers in 35 cities. The cities included are the same as those from which statements of retail prices of food were secured, excepting that no coal-price statements were received from Atlanta, Ga., Charleston, S. C., Portland, Oreg., and Scranton, Pa.]

[1] The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1860 to 1898. Census figures have, however, been used when available, including those for 1899 to date.

[2] The value of lint per pound shown since 1902 relates to the average grade of upland cotton marketed prior to Apr. 1 of the following year; from 1890 to 1901, the average price of middling cotton on the New Orleans Cotton Exchange; and from 1860 to 1889, as published in reports of the United States Department of Agriculture.

[3] Compiled from publications of the United States Department of Agriculture for 1860 to 1894; from the reports of Latham, Alexander & Co., for 1895 to 1903. Census figures have been taken when available. Discrepancies in the figures for census years as compared with those of the table entitled "Statistical Record of the Progress of the United States" are caused mainly by difference of method in the making up of the respective tables.

[4] Compiled from "Commerce and Navigation of the United States," 1860 to date. The export year begins July 1 of the year specified from 1860 to 1866, and Sept. 1 for 1867 to date. The period for consumption, exports, and imports is designated by the year in which the record begins rather than that in which it ends.

[5] Excess of foreign exports over total imports.

[6] Equivalent bales of 400 pounds.

[3] After 1900 includes exports, domestic and foreign, from continental United States and shipments therefrom to noncontiguous customs districts.
[4] Average for the period.
[5] Import prices for 1891 and 1892 were overvalued by reason of depreciation of Brazilian paper milreis.
[6] Information for 1901 and 1902 relative to noncontiguous customs districts is somewhat fragmentary.

No. 309.—DISTILLED SPIRITS, WINES, AND MALT LIQUORS: QUANTITIES CONSUMED AND AVERAGE ANNUAL CONSUMPTION PER CAPITA IN THE UNITED STATES, 1850 TO 1912.[1]

[Sources: The production of domestic wines has been estimated by the Department of Agriculture, by Mr. Charles McK. Leoser, president of the Wine & Spirit Traders' Society of New York, and other well-informed persons. The production of domestic spirituous and malt liquors has been derived from reports of the Commissioner of Internal Revenue. The table does not include for any year withdrawals of distilled spirits for scientific purposes and for use of the United States, or since 1906 withdrawals for denaturation, free of tax. For 1912 these amounts were 2,488,675 and 13,955,904 tax gallons, respectively.]

[1] Gold coin became available for circulation Jan. 1, 1879, as a result of the resumption act of Jan. 14, 1875.
[2] Silver certificates were authorized by acts of Feb. 28, 1878, and Aug. 4, 1886.
[3] Subsidiary silver, which disappeared from circulation in 1862, was reintroduced under operation of the act of Jan. 14, 1875.
[4] As the result of special investigation by the Director of the Mint, a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years.
[5] The Director of the Mint made a revised estimate of the stock of subsidiary silver coin Sept. 1, 1910; as a consequence of such revision there was a reduction of $9,700,000.

NOTE 1.—For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government.

[1] The law provides for a tax on wine made in imitation of champagne, etc., but no internal revenue was derived from the same during the fiscal years 1884–1898. The amounts thus received in some of the subsequent years are so small as to be negligible in this or the table following, except in 1905, when they amounted to nearly $700.

[2] From 1884 to 1890, inclusive, year ended Apr. 30.

[3] Fourteen months ended June 30.

CIVIL SERVICE, ARMY, NAVY, PENSIONS, CONGRESSIONAL APPORTIONMENT, AND PRESIDENTIAL ELECTIONS.

No. 356.—CIVIL SERVICE: Number of Positions, by Status, on July 1, 1911, Additions by Appointments, etc., and Subtractions by Separations, etc., During the Fiscal Year, and Number of Positions on June 30, 1912.

[Source: The Civil Service Commission.]

[This table is based upon the number of positions shown in the Official Register of 1903, and changes in the service since reported by the departments and offices. Some of the reports were not made in such manner as to permit of a definite distinction as to employment in Washington and elsewhere. The figures are therefore to be regarded as approximate only. Omissions to report certain changes, as explained in the detailed tables, and neglect of details necessary only for statistical purposes also contribute to making the figures approximate only.]

[1] Figures in the presidential column are from Senate Document No. 836, Sixty-first Congress, third session, furnished in response to Senate resolution of Dec. 21, 1910.

[2] Most of the unclassified appointments and separations in the Department of Commerce and Labor were of persons appointed under the Thirteenth Census Act, outside of the provisions of the Civil Service Act and Rules.

[3] Mechanics and laborers in navy yards are unclassified according to an opinion of the Attorney General, July 6, 1909. Separations are not reported. The number of appointments was 12,807, and the total number of positions has remained for several years about 25,000.

[4] The positions are in the Post Office Inspection Service and the envelope agencies.

[5] The 8,228 presidential positions are those of postmasters, the increase during the year being 234. The larger number of the unclassified positions are those of clerks and assistant postmasters in third-class post offices. The number of competitive positions on July 1, 1911, in this table is larger than that given in the table for last year by 3,778 positions of assistant postmasters and clerks classified by executive order of Sept. 30, 1910, in effect Dec. 1, 1910, and the number of unclassified positions is correspondingly smaller.

[6] Changes in the force of unclassified fourth-class postmasters are not reported, but the total number diminished during the year by 786.

[7] The number (4,601) under excepted positions indicates pension examining surgeons and specialists for pensions.

[1] On account of the abundance of eligibles remaining from the previous year few examinations were held; percentage upon the basis of these figures would therefore be deceptive.

[2] The railway mail papers were not rated in time to give number passed, and it is therefore not possible to give figures.

[1] The civil-service rules prior to Apr., 1903, defined the Departmental Service as including all classified positions except those in the Post Office, Customhouse, Internal Revenue, and Government Printing Services. The majority of such positions is found in the field, not in the departments at Washington, but all former reports have shown them as "Departmental," following the civil-service rule referred to. In this report for the first time an effort has been made to limit "Departmental" to its original meaning, showing field-service examinations under a separate heading; hence the apparent great discrepancy in the "Departmental" figures as compared with those in previous reports.

[7] Gold and silver can not be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about $25,000,000, and this estimate is continued for the three following years under the head of gold. After that period gold was available for circulation.

[8] Total specie in circulation; gold and silver were not separately stated prior to 1876.

[9] Estimated.

[10] As the result of special investigation by the Director of the Mint a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years, and on Sept. 1, 1910, a reduction of $9,700,000 was made in the estimate of silver coin.

[4] Gold and silver can not be separately stated in domestic exports prior to 1864, but it is probable that the greater portion of the exports was gold, under which head the exports in question are included. Gold and silver contained in ore are included under gold and silver since 1894.

*Calendar years.

†The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1858 to 1898.

[1] Cleaned rice; 1800 to 1903, commercial movement, as given by Dan Talmage's Sons Co.; 1904 to date, as reported by the Department of Agriculture.

[2] Commercial value.

*Calendar years.

[1] The figures relate only to establishments which operate blast furnaces, steel works, and rolling mills, and forges and bloomeries.

[2] The figures are those of the Bureau of the Census and cover census years, which as regards manufactures, are calendar years preceding those in which the censuses were taken. For explanation of cases of disagreement with other tables of manufactures in this volume, due to variation in branches of industry covered, see census reports.

[3] Includes custom work and repairing.

[1] Estimates for the United Kingdom prior to that for 1910 were for coin only; these figures include $100,000,000 for bullion in the Bank of England, also $12,200,000 gold belonging to Indian gold standard reserve.

[2] This is the amount in the currency reserves. Fred. J. Atkinson, accountant general of India, in 1908 estimated the active rupee circulation at 2,040,000,000 rupees: small silver coin at 140,000,000 rupees.

[3] Includes Straits Settlements, the Malay States, and Johore.

[4] This estimate is based upon a calculation made by P. Arminjon and B. Michel in 1908, who estimated the stock of gold in the country at from 33,000,000 to 41,000,000 Egyptian pounds. The mean of these figures was adopted in this table last year. Since their estimate was made the net imports of gold into Egypt to Dec. 31, 1911, have amounted to $28,919,061; but as there is said to be a considerable absorption of gold for ornaments, no change in the estimate of the monetary stock has been made.

[5] Estimate of A. De Foville, 1909.

[6] German war fund and Imperial Bank of Germany. No definite information as to other holdings.

[7] Gold conversion value.

[8] This amount has been reduced to a gold basis; that is, 100 pesos equal 1 United States gold dollar.

[9] Except Costa Rica and British Honduras (gold standard countries).
