EXPLANATORY NOTES.

The condensed statistics contained in this volume, unless otherwise stated in connection with the individual tables, represent, or are based upon, official figures collated and published under the various laws of the United States or those of other countries to which they may relate. The sources to which the various tables are credited will indicate where application should be made for additional details, with the exception that certain tables for which no credit appears are derived from regular reports of the Bureau of Foreign and Domestic Commerce, Department of Commerce, and that Table No. 482 is derived largely from corresponding data presented for shorter periods in previous tables.

General imports.—Tables Nos. 307 and 308 embrace imported articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos. 314, 315, and 316, embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period should therefore differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "entry for consumption" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

Import value.—The value of imported merchandise as shown in the statistical tables up to and including May, 1921, represents the "actual market value or wholesale price thereof at the time of exportation to the United States, in the principal markets of the country from whence exported, including the value of all containers or coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States," as defined in section III, paragraph R of the Tariff Act of 1913.

Beginning with June, 1921, the import value represents either the actual foreign market value, as defined above, or "the export value, including any export tax imposed by the country of exportation" as defined in section 302 of the Emergency Tariff Act of May 27, 1921, whichever value is higher.

Domestic exports.—Tables Nos. 309 and 310 exhibit the exports of domestic products or manufactures also exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported. (Rev. Stat., 337, and act of Apr. 20, 1902.)

Foreign exports.—Table No. 311, called "foreign exports" or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Weights and measures.—The term "ton," as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton," as applied to vessel measurement, is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross," equal to 100 cubic feet of the entire carrying capacity inclusive of such space. "Dead-weight tonnage" is also applied to vessel measurement, and is intended to be a measure of cargo-carrying capacity. It is the difference between the displacement of the vessel when loaded and when light, in steaming condition, but without crew, stores, water, or fuel on board. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents. According to section 3249, Revised Statutes, "Proof spirits shall be held to be that alcoholic liquor which contains one-half its volume of alcohol of a specific gravity of 0.7939 at 60° Fahrenheit." The official gallon prescribed is one containing 231 cubic inches, or 58,372.2 grains, equal to 8.3389 pounds of distilled water at its maximum density, weighed in air of a temperature of 62° Fahrenheit and barometric pressure of 30 inches. The taxable gallon differs from the proof gallon by reason of the fact that in computing taxable gallons under section 3251, Revised Statutes, all fractional parts of a gallon less than one-tenth are excluded.

[3] Area Reclamation Service was prepared to supply water.
[4] Irrigated crops. Excludes small areas on few projects cropped by dry farming.
[5] Data furnished by Salt River Valley Water Users' Association, which operated the project.
[6] Includes 5,536 acres reported as vacant, 3,032 acres of "home tracts," and 3,146 acres within town sites, on which no crop was reported.
[7] Data furnished by King Hill Irrigation District, which operated the project. This was built under private auspices and is under reconstruction by the United States.
[8] Data furnished by Minidoka Irrigation District, which operated the division.
[9] Crop reports covered an additional area of 12,760 acres cropped by dry farming, producing crops worth $102,500, or $8 per acre.
[10] Figures are for 203 irrigated farms, which included small tracts farmed without irrigation. In addition 3 units farmed "dry" reported a value of $900 from 45 acres pastured or cropped.
[11] Figures are for 151 irrigated farms, which included small tracts farmed without irrigation. Pending construction of storage, a full water supply is not available.
[12] Approximate area under ditch. Pending construction of storage, the available water limits area that can be served.
[13] For crops in full production, excluding 9,720 acres of wild-grass pasture and 4,759 acres otherwise not in full production. For all crops, $37.80.

[1] *General note for irrigation tables.*—Source: The United States Reclamation Service, Department of the Interior. The figures given in these tables relate only to lands served in whole or in part by works controlled by this Service. In 1920 the area so served amounted to 2,205,420 acres (1,223,480 acres in the Reclamation Service projects proper, and 981,940 acres served by Reclamation Service works, usually a partial water supply through private canals under Warren Act contracts). Data are for calendar year (irrigation season) except on the Salt River project, Ariz., data are for corresponding "agricultural year," ended Sept. 30, 1920. Unless otherwise indicated, figures are restricted to irrigated areas covered by crop reports, excluding small areas cropped by dry farming on a few projects, the area served under Warren Act contracts, and the three Indian projects in Montana, the works for which were constructed by the Reclamation Service. All value figures are intended to show the value received by the farmer for his crops, whether sold on the farm or in town, with or without baling, boxing, etc. If fed by the farmer, the crop is given a value representing the average selling price on the farm.

[1] In the tabulation for each State, crops for which the area reported was less than 500 acres were omitted. The crops omitted, however, form such a small part of the total as to be negligible. The figures given cover lands served by works controlled by the United States Reclamation Service. In 1909 the acreage so served constituted 2.9 per cent of the total acreage irrigated in the United States, since which time the latter acreage has increased to about 6½ per cent.

[2] No one crop reported with as much as 500 acres.

[1] The figures given cover lands served by works controlled by the United States Reclamation Service. In 1909 the acreage so served constituted 2.9 per cent of the total acreage irrigated in the United States, since which time the latter acreage has increased to about 6½ per cent.

[2] A minus sign (—) denotes decrease. Per cent not shown when more than 1,000.

No. 30.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1920: BY STATES.

[Source: Reports of the Bureau of the Census, Department of Commerce.]

[NOTE.—In computing density of population for the United States, the areas and population of Alaska, Hawaii, and Porto Rico in 1900 and 1910, of Alaska and Hawaii in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1899.]

[5] Net reduction of 269 square miles, as compared with the area stated by census of 1900, due to the drainage of lakes and swamps in Illinois and Indiana, to the building of the Roosevelt and Laguna Reservoirs, and to the overflow of the Colorado River into the Salton Sea in California.
[6] Net reduction of 116 square miles as compared with area stated by census of 1910, due to irrigation projects.

NOTE.—The populations used in computing the rates and percentages for 1910 to 1920 are estimated by the arithmetical method, based on the Federal censuses of 1910 and 1920.

NOTE.—"Tuberculosis of the lungs," "other forms of tuberculosis," and "violent deaths (suicide excepted)" for 1900 have been classified according to the second revision of Causes of Death in 1910, in order that the numbers and rates for these causes may be comparable with those for the other years shown. The populations used in computing the rates for 1910 to 1920 are estimated by the arithmetical method, based on the Federal censuses of 1910 and 1920.

[1] A minus sign (—) denotes decrease. Per cent not shown when base is less 100.

[2] Population residing outside incorporated places having 2,500 inhabitants or over. The rate of increase in the rural population between the two censuses is affected somewhat by the fact that certain places classified as rural by 1910 had become urban by 1920. The population in 1910 of the territory classified as rural in 1920 was 48,779,082. For this territory, the increase in population between 1910 and 1920 was 5.4 per cent, which percentage indicates the rate of growth of the rural population, leaving out of consideration the changes in classification of territory.

[3] Decrease in land area due to the building of the Pathfinder and Shoshone reservoirs in Wyoming and several reservoirs in connection with irrigation projects in Montana.

[4] Less than one-tenth of 1 per cent decrease.

[1] "Purchase area" is a definite tract within which purchases of land for national-forest purposes are made. Each purchase area is given a specific name; as, for example, the Alabama Purchase Area, the Savannah Purchase Area, the White Mountain Purchase Area. As lands are acquired they are put under administration and eventually proclaimed as national forests. The Allegheny purchase unit of 412,000 acres, located in Warren, McKean, Forest, and Elk Counties, is not included in this table.

[2] Figures do not include land created national forest from public domain in Arkansas or Alabama or the so-called "Olmstead lands" in North Carolina, transferred from the Treasury Department to the Department of Agriculture by the act of July 2, 1912.

[3] Figures do not include 18,040 acres of national forest created from public domain.

[4] Figures do not include 624,991 acres of national forest created from public domain.

[5] Figures do not include 278,563 acres of national-forest land created from public domain.

[6] The Olmstead lands of the Nantahala and Pisgah units transferred from the Treasury Department to the Department of Agriculture under the act of July 2, 1912, are not included.

[11] From all sources. Values excluded from metallic totals as the values of the antimony contained in antimonial lead are included in the antimonial lead values and the remainder under "Unspecified."

[12] Figures not available. Estimate of value, other than that entering into antimonial lead, included under "Unspecified."

[13] From both domestic and foreign ores.

[14] Manganese ore containing 35 per cent or more of manganese, manganiferous ore containing 5 to 35 per cent of manganese.

[15] By-product in electrolytic copper refining, 1916–1918; also from Missouri mixed ores in 1919 and 1920.

[16] Including brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania. The value of bituminous coal in 1919 and 1920 is an estimate based on average value (representing about 25 per cent of the total production of bituminous coal for 9 months) reported by the National Coal Association to the Committee on Manufactures of the United States Senate which considered the Calder Bill.

[17] Figures not available. Estimate of value included in total value of nonmetallic products.

[18] Of 42 gallons.

[19] Of 376 pounds net.

[20] Figures not available.

[21] Exclusive of value of slate granules included under "Unspecified."

[22] Of 280 pounds net.

[23] In addition to the arsenious oxide (white arsenic), metallic arsenic was produced in 1918 and 1919. The value of this is included under "Unspecified."

No. 160.—SUMMARY OF MANUFACTURES: BY SPECIFIED INDUSTRIES, CALENDAR YEARS 1919 AND 1914.

[Source: Reports of the Bureau of the Census, Department of Commerce. The figures for some industries do not represent the total production, because important establishments that manufacture the same class of products may be included in other industries. Primary horsepower includes power generated in manufacturing establishments plus electric and other power rented from outside sources; it does not include electric power generated by primary units of the establishments reporting.]

[1] Figures are as reported for the first of the month but really relate to the operations of the previous month. The number of reporting concerns varies from month to month, but the Bureau of the Census states that they represent practically 100 per cent of the wool manufacturing establishments of the country. The total number of looms and spindles reported in the earlier years does not represent the totals for the country but only such as furnished reports. Assuming that these were a fair sample of all machines, they furnish a basis to calculate the proportion of active machinery each year. The 1913 figures were collected by the National Association of Wool Manufacturers.

No. 207.—WAGES AND HOURS OF LABOR (UNION): Relative Hours of Labor per Week, Relative Rates of Wages per Hour, and Relative Rates of Wages per Week, Computed from Union Scales, Calendar Years 1914 to 1921.

[Source: Reports of the Bureau of Labor Statistics, Department of Labor. The figures are based on data obtained in the principal cities of the United States, 41 cities being covered for 1914, 47 cities for 1919, 48 cities for 1916, 56 for 1917, 58 for 1918, 61 for 1919, and 66 for 1920. The relative hours are percentages which indicate the change in the regular full-time working hours per week, account not being taken of loss of time from slack work or other causes. The relative wages are percentages which indicate the change in wages per hour and per full-time week. Hours and rates for 1913=100. The figures are based on the scale prevailing May 1, 1914 and 1915, and May 15, 1916, 1917, 1918, 1919, 1920, and 1921.]

[1] The census figures for the Bell System do not agree exactly with those contained in the annual reports of the directors of the company as given on the preceding page, because the former include certain affiliated and controlled companies that were not covered in the annual reports. The Bell System companies are located in 27 different States, and its local and long-distance service extends into all States. The miles of wire and number of telephones are the only features for which satisfactory comparison can be made between the Bell and other systems.

[2] Number for 1917 is that employed on Sept. 29, for 1912 on Sept. 16.

[1] During the first six months of the year 1914 rates paid on grain, flour, and provisions were quite low as compared with previous years; the European war, however, shortly after the beginning of hostilities, created a tremendous demand for tonnage and forced rates to the highest level known to this generation of shippers. Complete statements of freight averages for 1914 to 1916 are therefore impossible, and for 1917, 1918, and 1919 no figures are available.

[2] Rates for Liverpool may be applied to London and Glasgow.

[3] From this point on figures of this column relate to the last nine months of 1920.

[1] The figures of this table do not in most instances agree with those under corresponding heads in the table following, owing to the fact that the schedules of the tariff and the classifications of the Bureau of Foreign and Domestic Commerce do not fully coincide as to the articles included. See note 3, p. 584.

[2] Potatoes, dutiable under paragraph 581, and wheat and products, dutiable under paragraph 644, tariff act of 1913, are included beginning with 1914.

[2] The marked discrepancy between the United States figures of exports to the Philippine Islands prior to 1911 and the Philippine figures of imports from the United States in corresponding periods is due chiefly to the fact that the Philippine import figures prior to that year omit merchandise imported free of duty for the use of the Government or for use in construction and equipment of railways in the islands, under the act of Feb. 6, 1905, while the United States returns omit only Government supplies carried by Government vessels.

CONSUMPTION ESTIMATES.

(In the preparation of the tables which follow no attempt, as a rule, has been made to consider stocks carried over from year to year, nor in any of them has consideration been given to the separation of industrial consumption, as illustrated by distilled spirits used in the manufacture of drugs and chemicals (to be consumed at home or abroad) from actual consumption, as illustrated by such spirits consumed (at home) as beverages.)

[1] Estimates of leading refiners with respect to the loss in weight of sugar in the process of refining range from 2 to 7 per cent. The figures of this table, particularly in the case of imports and foreign exports, relate to sugar in various degrees of refinement, and conditions are not at all the same from year to year. It is therefore obviously impossible to make any accurate distinction in the table between "raw" and "refined" sugar or to apply any percentage that will satisfactorily reduce the former to the latter.

[2] Production is of the season preceding the fiscal year.

[3] Exclusive of small amounts coming from Alaska, and involved in Samoan commerce, and in the fiscal years 1917, 1918, 1919, 1920, and 1921 of sugar which came from the Virgin Islands, 26,406,776 pounds, dutiable, 23,921,591 pounds, free, 18,055,674 pounds, free, 12,323,710 pounds, free, and 19,757,119, respectively.

[5] Figures relate to continental United States after 1900.

[6] Expressed mainly in terms of raw sugar.

[7] The Sugar Equalization Board states that large quantities of sugar were bought by the British Government in Cuba in 1918 and brought to the United States for refining. Such amounts, of course, would augment both imports and exports and practically counterbalance. Similar conditions quite likely prevailed in other years.

[8] Figures of production and those based thereon are somewhat preliminary and are subject to correction.

[1] The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1870 to 1898. Census figures have, however, been used when available, including those for 1899 to date. For 1870 to 1913, inclusive, import and export statistics relate to the 12 months beginning with Sept. 1; and for 1914 to date to the 12 months beginning with Aug. 1.

[2] For 1910 to date the price per pound shown for upland cotton represents the average price received for cotton by growers as computed by the Department of Agriculture; for 1902–1909 it is the average price of the average grade marketed in New Orleans prior to Apr. 1 of the following year; for 1890–1901, inclusive, it is the average price of middling cotton on the New Orleans Cotton Exchange; and for 1870–1889, inclusive, it is taken from reports of the United States Department of Agriculture.

[3] Statistics of consumption for 1863–1894, inclusive, have been compiled from publications of the United States Department of Agriculture, and those for 1895–1903, inclusive, from the reports of Latham, Alexander & Co. Census figures are used for 1904 to date as well as for other years when available. The statistics, of course, relate to the 12 months during which the crop of the specified year was chiefly marketed, and not to the calendar year specified.

[4] The figures represent percentage of growth year stated in the stub exported in the following commercial cotton year.

[5] Statistics for August, 1914, are included in both 1914 and 1915.

[1] The slaughter each year is accurate so far as the number of animals slaughtered under United States inspection is concerned. Ratios were established for the remaining slaughter at the census of 1909, and these have been changed since the publication of certain data of the last census, covering the year 1919, which recently became available. The annual ratios of cattle and calf slaughter are estimated by Dr. Wright of the Animal Husbandry Division, Department of Agriculture. The data throughout are computed from a dressed-weight basis. The edible offal (liver, pluck, etc.) is not included in the dressed weights and so is disregarded. In the aggregate it represents a large quantity of edible material, but it is more than offset by the bones and waste trimmings of the dressed carcasses. The figures in the tables, therefore, represent approximately actual meat. Lard is estimated separately from the dressed weights of swine. Figures of consumption include differences between quantities in storage at beginning and end of year.

[1] Studies involved in this table were begun in 1909 but were not completed until 1913, a period of 12 months being made the basis for each State. The material is mostly lumber but includes small quantities of veneer, bolts, and dimension stock. Lath, shingles, cooperage, veneer pulp, distillation poles, and ties industries are not included. For further explanation see Bulletin 605, referred to in the credit line above.

No. 347.—DISTILLED SPIRITS, WINES, AND MALT LIQUORS: Quantities Consumed and Average Annual Consumption per Capita in the United States, 1850 to 1921.[1]

[Source: The production of domestic wines prior to 1918 has been estimated by the Department of Agriculture, by J. W. Schopp, of Bonfort's Wine and Spirit Circular (Inc.), New York, and other well informed persons, and figures relate to the calendar year. The production of domestic spirituous and malt liquors has been derived from the reports of the Commissioner of Internal Revenue: as has also that of wine after 1917, the figures relating to the fiscal year. The table does not include for any year withdrawals of distilled spirits for scientific purposes and for use of the United States, nor since 1906 withdrawals for denaturation, free of tax. For 1921 these amounts were 16,316 tax gallons and 38,812,139 proof gallons, respectively.]

[1] With respect to units of quantity, see explanatory notes, p. XX. The table is based upon official figures of production, imports and exports, but, owing to complications in the way of preparation, particularly for recent years, gives results only approximate.

[2] Since 1885 includes domestic spirits exported and returned.

[3] Figures for all except recent years do not include liquors specially imported for use of diplomatic officers, that of the United States, nor for supplies of vessels.

[4] Data relate to the United States as a whole, except that figures of production of noncontiguous territory are incomplete.

[5] Product less domestic exports.

[6] Included with "All other."

[7] Average for the period.

[8] Figures of production for States outside of California and New Jersey in 1917 have been estimated.

[9] Owing to changes in the internal-revenue laws, spirits distilled from fruits can not be separately stated after 1917.

[10] The figures represent mainly cereal beverages containing less than one-half of 1 per cent alcohol by volume less exports of domestic malt liquors.

[1] Figures are somewhat preliminary. The quantities in the tables are based on returns received from about 3,200 power plants producing 10,000 kilowatt hours or more per month, engaged in public service, including central stations, electric railways, and certain other plants which contribute to the public supply. The capacity of plants submitting reports of their operations is about 90 per cent of the capacity of all plants listed. The output of plants which do not report is estimated.
[2] The kilowatt equals 1,000 watts, the practical units of power. Watt hours and kilowatt hours are the units of energy used in commercial electrical work.
[3] Of 42 gallons.

NOTE BY MESSRS. MAUGER & AVERY.—This table exhibits in a concise form the prices of the three grades of a standard domestic fleece wool in the seaboard markets at the beginning of each quarter. In its present shape it is deemed to be intelligible to all interested in wool. In the special features of character and condition, "washed Ohio fleece wool" is less subject to variation than any other description, and thus is more a basis of value than any other class. Wool, owing to its wide variety, difference in character and condition, and liability to shrink in cleaning, is precluded from speculative operations which apply to products which may be dealt in as "futures." For these reasons the prices of wool are not liable to the same changes as cotton, wheat, etc.

[1] Includes United States notes less amount in reserve fund. For purposes of uniformity this has been considered as $150,000,000 prior to 1900 and a like amount deducted from cash in the Treasury, although the act authorizing a separate fund was not passed until 1900.

[2] Does not include gold and silver certificates or Federal Reserve gold fund for payment of which an equal amount of money is held in trust and not included as cash in Treasury.

[3] Estimated amounts. Includes matured interest obligations, discount accrued on War Savings Securities, Treasury warrants and disbursing officers' checks outstanding. No estimate of matured coupons was made prior to 1916. Includes only Treasury warrants outstanding for years prior to 1914.

[4] Consists of balance in the general fund before deducting disbursing officers' credits which are merely book credits or authorizations to draw on the Treasurer.

[5] Cash in Treasury deducted from amounts shown under gross debt plus matured interest obligations, etc.

[6] Estimates of the Government Actuary.

[1] The large increase in field-service figures for 1913 is due to the inclusion of navy-yard artisans' positions to the number of about 16,000 in the competitive classified service.

[2] 11,635 fourth-class postmasters, appointed in 1914 and 18,238 in 1915, under the Executive order of May 7, 1913, requiring examinations at offices whose incumbents had not been appointed under the regulations are not included in this table.

[1] The figures relate to continental United States.

[2] For other than census years prior to 1890 the figures represent estimates of the Treasury Department; subsequently, for all years, estimates of the Bureau of the Census.

[3] The figures are based upon the land area of continental United States and upon population as given in the preceding column.

[4] True valuation of real and personal property; the figures are those of the Bureau of the Census, Department of Commerce, relate to continental United States, and cover census years.

[5] Prior to 1897 figures include gold and silver certificates, Treasury notes of 1890, and gold reserve against United States notes. This practice was discontinued in 1915 and revision has been carried back only as far as 1897.

[6] 1800 to 1855, outstanding principal of the public debt Jan. 1.

[7] Figures for the years 1800 to 1855 include the total public debt.

* Fiscal years. † Calendar years.

[8] Gold and silver can not be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about $25,000,000, and this estimate is continued for the three following years under the head of "Gold." After that period gold was available for circulation.

[9] Total specie in circulation; gold and silver were not separately stated prior to 1876.

[10] According to census of 1890, 62,947,714, including population of Indian Territory and Indian reservations. [11] Estimated. [12] According to census of 1900, 75,994,575.

[13] As the result of special investigation by the Director of the Mint a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years, and on Sept. 1, 1910, a reduction of $9,700,000 was made in the estimate of silver coin.

[14] According to census of 1910, 91,972,266. [15] According to census of 1920, 105,710,620.

*Statistics of national banks are as of reports nearest to June 30 of each year. Those of other banks combine reports of various dates within the year.

[1] Postal savings deposits are not included.

[2] From 1896 to 1908, inclusive, includes Illinois State banks having savings departments. Returns from the banking departments of several States include stock savings banks with commercial banks. It was estimated for a recent year that 300 stock savings banks with 815,000 depositors and $250,000,000 deposits were included with the figures furnished by the State banking departments for State banks. This estimate included the so-called stock savings banks of Michigan.

[3] Includes all private banks from 1875 to 1882; from 1887 to date includes only those voluntarily reporting, estimated at one-fourth of total private banks.

[4] "Ordinary receipts" include receipts from customs, internal revenue, direct tax, public lands, and "Miscellaneous," but do not include receipts from loans, premiums, or Treasury notes, or revenues of Post Office Department. The figures cover actual receipts as of Treasury accounts.

[5] Actual collections on account of duties and tonnage tax.

[4] Gold and silver can not be separately stated in domestic exports prior to 1864, but it is probable that the greater portion of the exports was gold, under which head the exports in question are included. Gold and silver contained in ore are included under gold and silver since 1894.

[1] The statistics since 1913 represent the commerce of the districts named in the boxhead, as rearranged July 1, 1913. The former limits in almost all cases were more restricted, and the statistics are accordingly not strictly comparable. Prior to 1914 the statistics given in this table for Massachusetts and Maryland were returned as for the (former) districts of Boston and Baltimore, respectively.

[1] Prior to 1875 the customs district of Texas.

[2] The statistics since 1913 represent the commerce of the districts named in the boxhead as rearranged July 1, 1913. The former limits in almost all cases were more restricted, and the statistics are accordingly not strictly comparable. Prior to 1914, the statistics given in this table for Buffalo and Michigan were returned as for the (former) districts of Buffalo Creek and Detroit, respectively.

*Calendar years.

† The production statistics (those for cotton being exclusive of linters) relate, when possible, to the year of growth, but, when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1858 to 1898.

[1] Cleaned rice; 1800 to 1903, commercial movement, as given by Dan Talmage's Sons Co.; 1904 to date, as reported by the Department of Agriculture.

* Fiscal years to and including 1916; subsequently, calendar years.

[7] Exclusive of fast freight line service.

[8] Overvalued by reason of depreciation of Brazilian paper milreis.

[9] Information for 1901 and 1902 relative to commerce between continental United States and noncontiguous customs districts in coffee and tea is somewhat fragmentary.

[10] Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

[11] Figures for railroads exclude switching and terminal companies not segregated prior to 1908; also, 1913 to date, except for "miles in operation," the mileage of so-called small roads having operating revenues below $100,000 for the year.

No. 485.—MONETARY SYSTEMS AND APPROXIMATE STOCKS OF MONEY, IN THE AGGREGATE AND PER CAPITA, IN THE PRINCIPAL COUNTRIES OF THE WORLD, DEC. 31, 1919 AND 1920.[1]

[Source: Director of the Mint, Treasury Department. The following compilations have been made from such data as are available, avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given. For the United States the figures given cover all domestic gold and silver coined but only such bullion and foreign coin as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.]

No. 488.—COMMERCIAL AND OTHER STATISTICS OF THE PRINCIPAL COUNTRIES OF THE WORLD.

[Compiled from official reports of Governments. Foreign currencies for 1913 have been converted at par. On account of fluctuations in rates of exchange and depreciation of currency of some countries for later years, the commercial figures are considerably lacking in significance and comparability. These faults are so conspicuous in case of financial information included in this table in former issues of the Abstract that it has been deemed best to omit that feature from the present volume.]
