<sup>1</sup> Total premium receipts prior to 1910.

<sup>2</sup> Payments to policy holders prior to 1924.

<sup>3</sup> Including taxes.

<sup>4</sup> Figures through 1931 and 1932 figures in italics include data for companies which transact life insurance in addition to accident and health insurance. Income and disbursement items include business of accident and health branches only of these life insurance companies, where companies were able to segregate data, while capital, assets, and net surplus include total amounts of these items for such companies, excluding, however, data for a few very large companies for which accident and health business is only a small proportion of the total business. Capital, assets, and net surplus are therefore overstated and in part duplicated in figures for life insurance companies in other tables. Figures for 1932 to 1934, except 1932 italic figures, include data for a few large life companies which transact a considerable amount of casualty business, but in general, relate to casualty, surety, and miscellaneous insurance companies only.

<sup>5</sup> Number of companies which show figures for the year.

<sup>6</sup> See note 4.

<sup>7</sup> Includes stock casualty, surety, and miscellaneous insurance companies, shown separately above, mutual companies, reciprocals, and Lloyds; number of companies and income and disbursement items also include accident and health departments of life insurance companies.

### No. 321.—COMMODITY EXCHANGE TRANSACTIONS: VOLUME OF TRADING IN PRINCIPAL GRAIN FUTURES AND AMOUNT OF FEDERAL TAXES COLLECTED ON SALES OF ALL COMMODITIES FOR FUTURE DELIVERY

NOTE.—Trading in wheat and corn futures usually accounts for around 90 percent of the total volume of trading in grain futures. Statistics of the volume of future trading are not collected for commodities other than grains. The value of all futures sales is roughly indicated, however, by the amount of taxes collected on such sales. Since Oct. 3, 1917, stamp taxes upon sales of products or merchandise on exchanges, boards of trade, or similar places, for future delivery, have been in effect as follows: On each \$100 of such sales or a fractional part thereof in excess of \$100, 2 cents prior to July 2, 1924; 1 cent July 2, 1924, to June 21, 1932; 5 cents June 21, 1932, to May 11, 1934; 3 cents thereafter

# No. 334.—COMMERCIAL FAILURES: NUMBER AND ASSETS AND LIABILITIES

NOTE.—In January 1936, statistics were revised to exclude failures of insurance and real estate agents and brokers, holding and finance companies, shipping agents, tourist companies, transportation terminals, and such, all of which were formerly included in the old group "Agents, brokers, and commercial service", and limited more strictly to commercial failures. These revisions make the failure record accord more nearly to the type of concerns included in the count of "Number of concerns in business", in which no changes were made. The following table and table 335 present revised statistics beginning with January 1933, and also figures for 1933 to 1935 on the old basis for comparison with earlier years

| Calendar year | Number of failures | Liabilities (1,000 dollars) | Average liability | Calendar year           | Total number of concerns in business | Number of failures | Assets (1,000 dollars) | Liabilities (1,000 dollars) | Average liability |

## No. 338.—COMMERCIAL FAILURES: BY INDUSTRIAL GROUPS AND INDUSTRIES

NOTE.—Liabilities in thousands of dollars. See headnote table 334 regarding elimination from the failure statistics of certain lines formerly included in the group "agents, brokers, etc." In the industrial classification of failures, shifts were also made within the groups in order to make the data more readily comparable with classifications in general use. The construction industry, shown separately in the new classification, was formerly included largely in the manufacturing group. Revised data by industrial groups are not available prior to 1934. In order to permit comparisons with data for earlier years, figures for 1934 and 1935 are also presented on the old basis

## 14. PRICES

GENERAL NOTE.—The wholesale price index of the Department of Labor is based on primary market quotations of 784 commodities beginning 1926; a smaller number of commodities was covered in earlier years. The price of each article is weighted by the approximate quantities marketed during intervals fairly close to the period covered by the indexes. Beginning with 1921, in computing indexes for commodity groups, articles falling under more than one of the classifications adopted were included under each classification. For example, articles produced on the farm which reach the consumer practically unchanged in form, such as potatoes, milk, and eggs, were included among both farm products and foods. However, in computing the index for all commodities such articles were counted only once.

The retail food index presented in this section, with the exception of certain data shown in table 347, is a revised series. The revised indexes are computed from aggregate costs of 42 foods in 51 large cities prior to January 1, 1935, and of 84 foods since that date. To obtain the aggregate cost in each city, the average prices of individual foods were combined by means of weights based on total purchases of wage earners and lower salaried workers in 1918. City costs were combined with the use of population weights to determine the cost for the United States as a whole. Prior to August 1933, prices were collected on the 15th of the month; thereafter they were collected every 2 weeks.

The farm price index is based on prices paid to producers for 34 major crops and beginning 1924, also 13 commercial truck crops. Average quotations for the period, August 1909-July 1914, are used as a base, and each price series is weighted by the average annual marketings of farmers in the years 1924 to 1929.

## No. 344.—WHOLESALE PRICES: INDEX NUMBERS

NOTE.—Figures in boxes indicate number of quotations. As originally published, Bradstreet's "Index" is the sum of the prices per pound of 96 commodities; Dun's represents the aggregate cost per capita of a year's supply of the approximately 300 commodities included. In the following table, both series have been converted to a 1926 base by the Bureau of Foreign and Domestic Commerce. Indexes of the National Bureau of Economic Research for 1913 to 1928 are unweighted geometric means for approximately 490 commodities (converted from a 1913 base to a 1929 base by the Bureau of Foreign and Domestic Commerce); for subsequent years, they are weighted arithmetic means for over 600 commodities, the weights being based upon the average value of production in 1927 and 1931. For method of computing the Department of Labor Index see general note, p. 298.

## No. 347.—RETAIL COSTS OF ALL FOODS: INDEX NUMBERS, REVISED SERIES

NOTE.—The "old series" represents the series carried in previous issues of the Statistical Abstract converted from a 1913 base by the Bureau of Foreign and Domestic Commerce. The simple average of indexes for 1923, 1924, and 1925 on the 1913 base was used for converting. The "revised series" published for 1920 to 1935 incorporates certain changes in methods of weighting and computation (see last paragraph of general note, p. 238, for a brief description of this index)

## No. 352.—ANNUAL AVERAGE UNIT VALUES OF IMPORTANT ARTICLES IMPORTED INTO THE UNITED STATES

NOTE.—The values are required by law to represent the values of the goods in the foreign markets whence exported to the United States. "Ton" signifies long ton of 2,240 pounds. The averages are obtained by dividing the total value of imports of the specified article by the total quantity, and as in some commodities there may be considerable variations in price between different grades, methods of packing, etc., and as the proportions of the grades, etc., may vary from year to year, the averages in such cases may show the actual price movements only roughly.

[Data in this section relate to Continental United States, except as noted. For data relating to hours of labor, wages, and employment shown in other sections, consult the index]

## No. 353.—INDEX NUMBERS OF EARNINGS PER HOUR (EXCLUSIVE OF AGRICULTURE)

NOTE.—These index numbers are based on such information as afforded comparisons through a series of years. No one series of directly comparable data extends through the entire period, although many trades and industries are continuously represented in the table. Agricultural wages are not included in the indexes given in this table, but are presented separately in table 570; this separation was made because of the seasonal character of the industry, the wide differences in methods of hiring, and the perquisites so often forming a part of the farm wages. The figures in this table indicate the change in earnings per hour when wage workers were actually at work, with the 3-year average, 1923-25 taken as 100. These index numbers are now being revised by the United States Department of Labor and will be published later in the "Monthly Labor Review".

[1923-25 average = 100. On currency basis during Civil War period]

## No. 354.—INDEX NUMBERS OF EARNINGS PER HOUR, (EXCLUSIVE OF AGRICULTURE), COST OF GOODS PURCHASED, AND REAL EARNINGS

NOTE.—The general trend of earnings per hour presented in table 353 relate to money received per hour by the wage earner as compensation for his work. The real measure of his earnings, however, is not his money income, but what he is able to buy with it. In the following table, therefore, index numbers relating to earnings per hour and to the cost of goods purchased are brought together and from them a third index number is computed showing the change in the worker's "real earnings" per hour

[1923-25 average = 100]

## No. 355.—AVERAGE HOURS AND EARNINGS IN SPECIFIED MANUFACTURING INDUSTRIES

NOTE.—The base year for the general indexes is indicated by 100.0 in bold type. The general indexes and the averages for employees in all occupations for each industry are weighted according to the number of employees in each occupation. Data have not been collected annually for all of the industries, but at intervals; the first year for which comparable data were collected is shown, other years not shown in this table are available unless otherwise indicated by a footnote. Data are for a representative pay period of 1 week in each year. Data for the separate occupations for each industry, except as noted, represent the average hours per week and the average earnings per hour of persons while engaged in their primary occupations only.

### No. 357.—AVERAGE FULL-TIME HOURS OF LABOR PER WEEK AND AVERAGE EARNINGS PER HOUR IN MINING INDUSTRIES

NOTE.—Nearly all coal mines operate on a 48-hour week, but contract miners and their laborers in anthracite mines, and loaders, hand or pick miners, and machine miners in bituminous mines, generally work fewer hours. General averages are weighted according to the number of employees in each occupation in the industry. Data are for a representative pay period of 1 week in each year; they are not collected annually, but at intervals, and comparable figures are available only for the years shown, except for bituminous coal mines, for which 1926 data are also shown in the 1933 Statistical Abstract

### No. 358.—AVERAGE HOURLY WAGE RATES PAID COMMON LABOR

NOTE.—Rates in cents per hour as of July 1 of each year. Data are based on entrance rates paid unskilled adult males in important industries requiring considerable numbers of common laborers. Some establishments reported two rates—one for the 10-hour and one for the 8-hour day, or one for white and one for colored or Mexican workers; these distinctions have not been maintained in the tabulated data, although it is apparent that the lowest rates are shown for sections where there are large numbers of colored or Mexican workers, and the highest, for localities where an 8-hour day is more or less prevalent.

Indexes are currently based on monthly reports from establishments representing 89 industries beginning 1931 (52 to 61 industries in earlier years) and employing approximately 55 percent of all factory employees in the United States. The indexes in the following table and in tables 361 to 364 have been adjusted to conform with the Federal Biennial Census data on employment and pay rolls through the year 1933. Indexes are weighted according to the average number of employees and the average weekly pay rolls in the base period 1923-25 in each of the component industries and are without seasonal adjustment. A detailed description of the construction of these indexes is given in Bulletin No. 610, published by the Bureau of Labor Statistics, and in a supplement to Bulletin 610, which is now being prepared. See table 361 for seasonally adjusted indexes of employment.

<sup>1</sup> Compiled by Massachusetts Department of Labor and Industries, based upon monthly returns from approximately 1,660 manufacturing establishments employing about 55 percent of the factory wage earners in the State. Office workers assigned to productive departments are included, but not executives, salaried officers, etc. The employment indexes are adjusted to the annual State census of manufactures through 1924. Pay-roll indexes are based upon a computation of employment times average weekly earnings.

<sup>2</sup> Compiled by the New York State Department of Labor, based upon monthly reports from approximately 1,919 manufacturing firms who employ about 33 percent of all the factory workers in the State. Reports cover employees in both office and shop, including foremen. Executives and salesmen are omitted, and administrative and sales offices located away from the plants are not covered.

<sup>3</sup> Compiled by the Federal Reserve Bank of Philadelphia. For New Jersey, indexes are based upon monthly reports to the bank from 1923 to 1926 and since then, to the New Jersey Bureau of Statistics and Records of the Department of Labor. Current reports are from about 754 manufacturing plants which account for approximately 55 percent of all wage earners engaged in manufacturing industries of the State and 71 percent of the total wage payments. For Pennsylvania, indexes are based upon reports collected by the bank in cooperation with the U. S. Bureau of Labor Statistics and the Pennsylvania Department of Labor and Industry. Current reports are from around 2,200 manufacturing plants and represent about 54 percent of all workers and their earnings in the manufacturing industries of the State. Indexes are based upon reports collected by the bank in cooperation with the U. S. Bureau of Labor Statistics. Current reports are from about 68 manufacturing plants and represent approximately 56 percent of all workers engaged in manufacturing industries of the State and 62 percent of the total wage payments. The indexes for the three States have been adjusted to conform with the Federal Census of Manufactures data through 1931 and will be similarly adjusted to subsequent censuses.

<sup>4</sup> Compiled by the Illinois Department of Labor, based upon monthly reports from about 2,042 manufacturing plants covering wage earners (production employees) only. Reports represent approximately 47 percent of all wage earners engaged in manufacturing industries of the State and 45 percent of the total wage payments.

<sup>5</sup> Compiled by the Industrial Commission of Wisconsin, based upon monthly reports from a representative list of manufacturers who employ about two-thirds of the total factory wage earners (manual employees only) in the State. The indexes are weighted averages of relatives.

**No. 367.—AVERAGE WEEKLY AND HOURLY EARNINGS: ALL WAGE EARNERS AND CLASSIFIED GROUPS OF LABOR, 25 MANUFACTURING INDUSTRIES**

NOTE.—Index numbers based on 1923 as 100. Data cover a representative number of plants which employed 1,532,000 workers during June 1936. The earnings are computed by weighting the average earnings in each industry according to the relative importance of the industry as revealed by the Federal Biennial Census of Manufactures for 1923. In addition, each labor group is weighted according to the relative proportion of the group in each industry as revealed in the Conference Board's studies during the 3-year period 1927-29. The pay-roll data are based upon the first full week in each month, or, if a generally recognized holiday falls in that week, upon the succeeding week

# No. 369.—UNION WAGE RATES PER HOUR AND HOURS PER WEEK IN SELECTED TRADES, AS OF MAY 15

NOTE.—Data, except for longshoremen, are compiled from a survey made of 70 cities for 1934 and 1935, and of 67 cities for prior years, which were selected on the basis of size, geographical distribution, and presence of trade-union organization. Rates were obtained for each of the principal time-work trades in all cities covered in which there were local unions and represent rates provided for in union agreements. The union membership covered by these agreements in 1935 was approximately 574,000. The averages for each trade are weighted according to the number of members in the various local unions.

<sup>1</sup> Figures are not available.

<sup>2</sup> Includes conductors, motormen, and beginning 1934, bus drivers on lines operated by street railways.

<sup>3</sup> Includes dirt-truck drivers (with different rates for trucks of different sizes), coal-truck drivers, transfer, delivery, and express drivers. Salesmen drivers who are paid on a guaranteed salary plus commission basis have been excluded for 1934 and 1935, but included for prior years.

<sup>4</sup> Rates are the regular and overtime rates (the lower figure representing the regular rate and the higher the overtime rate) for longshoremen in the major unionized ports in foreign and intercoastal traffic. Rates are shown as of May 15; most of them went into effect, however, in October of the previous year. The hours shown are those specified in union agreements; they have little relation to actual hours of work which are of necessity very irregular, but furnish the basis for computation of overtime pay.

<sup>5</sup> Portland, Boston, New York, Philadelphia, and Baltimore, except as noted.

<sup>6</sup> Rate for all except Baltimore. The rate in effect in Baltimore was \$0.85-\$1.20.

<sup>7</sup> Rate for Portland, Boston, and Philadelphia. The rate for New York and Baltimore was \$0.85-\$1.20.

<sup>8</sup> Working week 48 hours during August to March, and 44 hours during the remainder of the year.

<sup>9</sup> Seattle, San Francisco, and Los Angeles, and beginning with 1934, Portland. In Los Angeles the rate was not maintained from 1930 through 1934.

<sup>10</sup> Working week reduced to 30 hours by the arbitration award in the fall of 1934.

## No. 370.—STRIKES: NUMBER OF STRIKES, NUMBER OF WORKERS INVOLVED, AND MAN-DAYS IDLE

NOTE.—The term "strike" is here used in the generic sense to include all stoppages of work due to labor disputes, whether initiated by the employers (lock-outs) or by the workers. Strikes involving fewer than 8 workers or lasting less than 1 day are not included.

# **No. 373.—UNEMPLOYMENT RELIEF: FAMILIES AND SINGLE PERSONS RECEIVING EMERGENCY RELIEF AND OBLIGATIONS INCURRED FOR EMERGENCY RELIEF FROM ALL PUBLIC FUNDS AS REPORTED TO THE FEDERAL EMERGENCY RELIEF ADMINISTRATION**

NOTE.—Figures for the latter part of 1935 reflect the absorption of relief cases by the new Works Program inaugurated in July under authority of the Emergency Relief Appropriation Act of 1935, and the gradual withdrawal of the Federal Emergency Relief Administration from the financing of relief operations. In a majority of States, emergency relief operations were continued by the State and local emergency relief administrations or by similar agencies which superseded them, using the balances of Federal funds and other public funds, and reports through December covered the same type of relief as was reported previously. In some States, however, these agencies discontinued or greatly curtailed their operations and the responsibility for cases dropped from their rolls devolved upon local authorities whose activities are not reflected in this table.

# No. 376.—ACTIVITIES OF OFFICES OF THE STATE EMPLOYMENT SERVICES AND THE NATIONAL REEMPLOYMENT SERVICE

NOTE.—Data represent United States Employment Service which operated about 670 urban and district offices, and about 970 additional branches and temporary offices during June 1936. The operating organization is composed of 2 major branches. The first consists of State employment services, affiliated with the United States Employment Service, under the terms of the Wagner-Feysor Act whereby State appropriations are matched within limits, after the State service has conformed to the Federal operating standards. These State employment services functioned in 34 States during June 1936. The second operating division is the National Reemployment Service, a Federal organization. Offices of this service provide employment service in portions of the affiliated States not covered by the State employment services and give complete coverage in all other States. By agreement with the Works Progress Administration, from May 1935 through May 1936 all certified relief recipients were registered and were included in the active file. Field visits represent the number of employer contacts. Data by States, industries, etc., are shown in the Monthly Labor Review published by the United States Department of Labor.

NOTE.—For revenues from money orders, see table 378. For value of orders issued for other years, see table 377. Money orders are exchanged on a domestic basis not only within this country, but with its outlying possessions, Canada, Cuba, and numerous islands and minor countries neighboring the United States. International-basis orders are exchanged between the United States and its outlying possessions, on the one hand, and other than "domestic basis" foreign countries, on the other. In this table, however, "International" includes money orders exchanged between the United States and "domestic basis" foreign countries, and these are not included in "Domestic"

**No. 381.—TRANSPORTATION OF DOMESTIC MAILS**

NOTE.—Amounts, except as indicated, in thousands of dollars. Since Nov. 1, 1916, all service on steam railroads is authorized and paid for under the space basis system; formerly, payments were based on a system of quadronal weighings. Railway mail space units of service vary in size and character and may consist of a car, a section of a car, or a closed pouch carried on a car. Some cars are railway post offices, others are for storage only, over 20 classes of units being distinguished. The "equated unit" represents a calculation of the equivalent of all the different units in terms of a 60-foot car. Annual rate of expenditure (regular authorizations) represents estimated cost for transporting normal mail traffic over regular routes only, based on contracts outstanding at the end of each fiscal year. "Annual cost" includes emergency and side and transfer service. Average rates are based on "regular authorizations"

## No. 395.—ANNUAL SUPPLY OF ENERGY FROM MINERAL FUELS AND WATER POWER IN THE UNITED STATES

NOTE.—The figures, except coal equivalent, represent the equivalent of the heating power of the classes of fuel in trillions of British thermal units. Data represent production, except those for oil imports, and take no account of exports, imports, or changes in stocks

<sup>1</sup> Not including bootleg or stolen coal, estimated at about 4,000,000 net tons in 1935; if this were included the total energy from anthracite in 1935 would be 1,406 trillion British thermal units.

<sup>2</sup> The fuel equivalent for water power is calculated from the reported horsepower of installed water wheels. Prior to 1890 data were unsatisfactory, but estimates are included in the total.

<sup>3</sup> Calculated at 26,200,000 British thermal units per ton.

<sup>4</sup> Based on the amount of coal displaced by gas, as estimated by the gas companies.

## No. 396.—ELECTRICITY PRODUCED, CONSUMPTION OF FUEL, AND CAPACITY OF GENERATORS IN PUBLIC-UTILITY POWER PLANTS

NOTE.—Data prior to 1919 are totals for central stations and electric railways as reported by Bureau of the Census; thereafter, they are estimated totals for all plants, based on returns from about 3,600 plants in 1919 to about 3,800 in 1935, each producing 10,000 kilowatt-hours or more per month, engaged in public service, including central stations, electric railways, steam railroads generating electricity for traction, and certain other plants. The capacity of plants reporting is about 95 percent of that of all plants

# No. 399.—CENTRAL ELECTRIC STATIONS: EQUIPMENT, EMPLOYEES, OUTPUT AND SALES

NOTE.—A central electric station, commercial or municipal, is one either generating and selling electrical energy, or selling only, to public or private consumers. Figures do not include establishments which consume all current generated, such as mines, factories, hotels, and other enterprises not in the nature of public utilities, nor plants operated by the Federal Government or by States unless energy is sold commercially. No data are included for electric-railway power plants unless part of the current generated is sold. There is considerable duplication in total sales, since they include energy sold for resale. Amount sold is considerably less than current generated due to line losses, etc.

## No. 405.—DEVELOPED AND POTENTIAL WATER POWER

NOTE.—In thousands of horsepower. Data for developed water power cover capacity of actual installation of water wheels and turbines in plants of 100 horsepower or more. Figures for potential power are revised estimates showing the 24-hour horsepower available 90 percent of the time and 50 percent of the time at an over-all efficiency of 70 percent at all developed and undeveloped sites. Data for potential power are not directly comparable with those for developed power, because developed power is usually given in terms of the capacity of installed water wheels or turbines, which may be several times the potential power available 90 percent of the time. Probably with complete development of the water-power resources of the whole country the installed capacity would amount to 80,000,000 horsepower or more.

<sup>1</sup> Low type includes top-soil, sand-clay, gravel, chert, shale, etc., waterbound macadam, and low-cost bituminous mix; high type includes bituminous macadam, bituminous concrete, sheet asphalt, portland cement concrete, block pavements, and timber flooring on bridges.

<sup>2</sup> Includes 11,303 miles of unclassified roads. <sup>3</sup> Includes mileage partially graded and drained.

<sup>4</sup> Includes original and reconstructed surfacing. <sup>5</sup> Includes 368 miles of unclassified roads.

<sup>6</sup> Excludes funds transferred. <sup>7</sup> Excludes balance on hand at beginning of year; not reported in 1921.

<sup>8</sup> For road and bridge purposes under supervision of State highway department only.

<sup>9</sup> Includes an undetermined amount of municipal street mileage on State highway systems or connecting these systems. For 1933 and 1934 such mileage is included, however, for only a few States. Figures prior to 1934 also include mileage of secondary road systems under State control for a number of States.

<sup>10</sup> Includes 20,171 miles of local roads in Pennsylvania under jurisdiction of State highway department for construction and maintenance; this mileage was excluded in 1933 and for years prior to 1932.

<sup>11</sup> Primary systems only. See also note 9. <sup>12</sup> Includes funds transferred to or from local units.

<sup>13</sup> Includes data for Hawaii for all items except those for projects approved for construction which include Hawaii beginning 1929 only. For 1935 data regarding Federal-aid road construction, also emergency road construction in 1935, see table 411.

## No. 407.—RURAL ROAD MILEAGE AS OF DECEMBER 31

NOTE.—Data include all rural roads. In some cases variations in mileage from that of the previous year shown are partly because of more accurate survey of road mileage. Data in most cases relate to Dec 31; there are, however, some exceptions. Data for local roads subsequent to 1930 are not available. For mileage of State highway systems as of Dec. 31, 1934, see table 408

# No. 419.—AUTOMOBILE FATALITIES IN STATES AND LARGE CITIES HAVING DEATH REGISTRATION

NOTE.—Figures include all deaths from accidents caused by motor vehicles except motor cycles, but exclude deaths from collisions of automobiles with railroad trains and street cars. See table 74 for percent of total population included in the registration area for each year prior to 1933; in 1933 and 1934 the entire population is included. See also third paragraph of general note, p. 80, regarding population estimates used in computing rates

## 20.—TRANSPORTATION, AIR AND LAND—STEAM AND ELECTRIC RAILWAYS, EXPRESS COMPANIES, MOTOR BUSES, AND CIVIL AERONAUTICS

[Data in this section relate to continental United States unless otherwise stated]

**GENERAL NOTE.**—The total steam railroad mileage of the United States includes: (a) Regular interstate carriers (and their nonoperating subsidiaries) reporting to the Interstate Commerce Commission, (b) switching and terminal railroads, also reporting to the commission; and (c) private railroads (defined by the commission as "circular" because they report on brief circulars and as "unofficial"). Except in certain mileage data the circular and unofficial companies are not included in any of the statistics. The switching and terminal roads were formerly included with operating railroads, but are now separated, and data for them do not appear in most of the tables.

Nonoperating subsidiaries include proprietary companies, which are covered by the reports of operating carriers, and lessor companies which have no traffic and whose reports appear only in statistics of capitalization, dividends, and investment.

Operating railroads are divided into three classes, according to the amount of their annual operating revenues, class I, having more than \$1,000,000 of such revenue; class II, from \$100,000 to \$1,000,000; and class III, less than \$100,000. During recent years more detailed reports are required from class I carriers than from smaller companies. The basis of the figures in each table is indicated by notes. Omission of class II and class III railroads affects very little the comparability of statistics with those of earlier years as regards most items, since the bulk of the business is done by class I.

The Interstate Commerce Commission divides railroads geographically into three districts and eight subsidiary regions. Each railroad is treated as a unit and placed wholly in some one district or region. Broadly speaking, the eastern district includes territory east of Chicago and north of the Ohio and Potomac Rivers; southern district, territory east of the Mississippi River and south of the Ohio and Potomac Rivers; and western district, the remainder of the country.

Class I companies make monthly reports and the yearly totals from these become available earlier than the sometimes slightly corrected totals from the final annual reports. The latest figures in these tables are in many cases from the monthly reports.

### No. 420.—RAILWAY MILEAGE OWNED AND MILEAGE OPERATED CLASSIFIED BY TRACKAGE

**NOTE.**—Beginning with 1908 switching and terminal roads are omitted (they operate about 2,300 miles of main tracks). The first and second columns cover all railroads, including "circular" and "unofficial" lines; the last five columns omit "circular" and "unofficial" lines. Mileage owned excludes all duplication and covers continental United States only. Mileage operated includes some duplication under trackage rights and some mileage in Canada operated by United States companies

## No. 426.—RAILWAY EQUIPMENT IN SERVICE, ALL REPORTING COMPANIES

NOTE.—"All reporting companies" include switching and terminal but not circular and unofficial lines. Data for tractive effort and capacity of cars exclude switching roads, also smaller roads during recent years; they would not be materially different if all carriers were included. The large number of cars owned by private car lines is not included

<sup>1</sup> Data exclude switching and terminal companies beginning 1910. Class III roads are excluded in 1913. Exclusion of the latter has practically no effect on the comparability of the figures. Information for 1915 is incomplete, as 20 of the larger railways did not report, and is not shown.

<sup>2</sup> Calculated for all classes of employees, including those not paid on an hourly basis.

<sup>3</sup> Data cover Federal reports, reports of companies not under Federal control, and corporate reports.

## No. 442.—REVENUE FREIGHT CARRIED, BY COMMODITY GROUPS

NOTE.—All figures in thousands of tons of 2,000 pounds. Data relate to years ended June 30 prior to 1916, to calendar years thereafter. Switching and terminal roads excluded beginning with 1908. Figures for 1911 to 1915, inclusive, exclude class III roads but this affects the comparability very slightly; those after 1916 exclude both class II and class III, thereby reducing the grand total about 6 percent. Non-revenue freight is excluded; this is a large item in the case of a few commodities, notably coal

## No. 446.—PERSONS KILLED AND INJURED IN RAILWAY ACCIDENTS

NOTE.—For various reasons, including the fact that returns were required under different acts, the statistics are not strictly comparable. Prior to 1921, train accidents were those causing damage to railway property in excess of \$150 or any damage and a resulting casualty. Thereafter they were considered as such when the damage exceeded \$150 with or without a casualty. Where the damage is less than \$150 and there is a reportable casualty it is classified as a train-service accident. Figures for years 1911-1915 include industrial and other nontrain accidents to employees only, and for years 1908-1910 do not cover switching and terminal roads. Otherwise the statement covers all reportable accidents

<sup>1</sup> The ratio of fuel oil to coal is based upon the experience of the various roads; 1 cord of hardwood equals two-thirds ton of coal; 1 cord of softwood equals one-half ton of coal.

<sup>2</sup> Totals include equivalent of a small amount of miscellaneous fuel.

<sup>3</sup> The total charges shown do not include the labor cost of applying the rails or ties.

**No. 451.—ELECTRIC RAILWAYS: SUMMARY OF OPERATIONS**

NOTE.—This table does not include the electric operations of steam railway companies nor motor-bus operations of electric railways; for motor-bus statistics see table 450. Many electric railway companies also engage in other operations, especially in the sale of current for light and power; wherever possible, such light and power business has been excluded, but for numerous companies this is impossible. No distribution can be made in the statistics between purely urban street railways and suburban and interurban lines. The insignificant amount of business still conducted by cable and animal traction is included, as well as some operations conducted by primarily electric railways by means of steam traction and gasoline engine cars. <sup>1</sup> Includes companies maintaining separate organizations, though leased to and controlled through stock ownership by other companies, largely in Pennsylvania. In 1912 these companies were treated as merged and not included in the number reported.

<sup>2</sup> Includes small mileage of track lying outside the United States.

<sup>3</sup> Compressed air.

<sup>4</sup> Includes 1.26 miles of nonelectric track in 1922, 1.20 miles in 1927.

<sup>5</sup> Complete data not available. In 1927 a number of composite companies included the value of electric railway road and equipment in the value of their entire plant and equipment reported on their combined balance sheet on the light and power schedule and advised that this could not be separated. Statistics for Central Light and Power Stations include their combined figures.

<sup>6</sup> Including revenues and expenses from auxiliary operations, except in 1932. Prior to 1927, auxiliary operations include data for electric light and power departments of electric railways; beginning with 1927, such data for most companies have been reported on separate schedules and are included in the statistics for "Central Electric Light and Power Stations."

<sup>1</sup> Mileage expressed in nearest mile. Figures include track lying outside the United States (1912, 32 miles; 1917, 1922, and 1927, 27 miles; 1932, 24 miles).

<sup>2</sup> In 1927 overhead trolley includes 25 miles of surface lines operated by both overhead trolley and gas-electric motor cars; in 1932, includes 2 miles operated by both overhead trolley and conduit and 2 miles operated by both overhead trolley and oil-electric motor cars.

<sup>3</sup> Figures for power-plant equipment, capacity of generators, and output of stations in 1927 and 1932 are not comparable with those in prior years, as companies that formerly reported these data as auxiliary operations on railway schedules furnished separate and complete reports for light and power operations in 1927 and 1932. These are included in the statistics for "Central Electric Light and Power Stations". The number of companies that reported power-plant equipment in 1912 was 494; in 1917, 355; in 1922, 232; in 1927, 70; in 1932, 39.

<sup>4</sup> Includes 33 units with 41,100 horsepower of idle equipment in 1927 and 18 units with 63,167 horsepower of idle equipment in 1932.

<sup>5</sup> Not shown separately.

<sup>6</sup> Not including passengers carried by motor busses operated by electric railway companies (16,120,000 in 1922; 214,694,000 in 1927; 380,543,000 in 1932).

<sup>7</sup> Exclusive of idle track and freight and switching roads for all years except 1932.

## 21.—WATERWAYS, WATER TRAFFIC, AND SHIPPING

[Data in this section cover the following areas unless otherwise indicated: From Board of Engineers of the United States Army and Bureau of Foreign and Domestic Commerce, United States customs area which includes Alaska, Hawaii, and Puerto Rico, and, beginning Jan. 1, 1935, Virgin Islands; from United States Shipping Board, continental United States]

*General note as to units of measurement.*—"Cargo tonnage" represents weight of cargo in long tons (2,240 pounds) or short tons (2,000 pounds). All other tonnage figures refer to capacity of vessels. The terms gross and net tonnage refer to space measurement, 100 cubic feet being called 1 ton. Gross tonnage is the capacity of the entire space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers or crew, with certain minor exemptions. Net or registered tonnage is what remains after deducting from the gross tonnage the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. It represents substantially space available for cargo and passengers. The net tonnage capacity of a ship recorded as "entered with cargo" may bear little relation to actual weight of cargo. Dead-weight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board) to load line. It is therefore the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety. Displacement tonnage (naval vessels) has reference to weight of the vessel itself with its normal equipment, fuel, etc.

<sup>1</sup> Includes the following, with figures for 1934: Harbor traffic of New York, Philadelphia, and San Francisco (37,470,000 tons); local traffic of other seaports (21,731,000); local traffic of lake ports (1,797,000).

<sup>2</sup> Excluding St. Marys Falls Canal traffic (42,248,000 tons in 1934) and additional Detroit River traffic (30,499,000 tons in 1934), both of which are already counted in Great Lakes traffic; also excluding duplications relating to rivers and canals themselves.

<sup>3</sup> Principally coastwise and lake traffic passing through canals and connecting channels, other than the St. Marys Falls Canal and the Detroit River.

<sup>4</sup> Estimated from data in this table on the assumption that all the duplications deducted from the grand total represent duplications in domestic traffic; there are, however, some minor cases of duplication connected with foreign traffic.

## No. 463.—COMMERCE OF PRINCIPAL UNITED STATES OCEAN PORTS, 1934

NOTE.—In thousands of short tons of 2,000 pounds. In addition to the commerce here shown, many of the ports have (1) commerce with ports on internal rivers and canals; (2) purely local port traffic, including in the case of New York, Philadelphia, and San Francisco, what is called intraport traffic between parts of a harbor for which separate statistics are maintained. These forms of traffic, although the aggregate tonnage is large, are of much less economic importance than foreign and coastwise traffic

<sup>1</sup> Sailing vessels, canal boats, and barges.<sup>2</sup> Dec. 31.<sup>3</sup> The decrease of tonnage arises principally from the registered tonnage having been corrected in 1818, 1829, and 1830 by striking off all vessels the registers of which were granted prior to 1815, which were supposed by the collectors to have been lost at sea, captured, etc.<sup>4</sup> Sept. 30.<sup>5</sup> Including Puerto Rico in all years shown and Virgin Islands beginning 1920.<sup>6</sup> Including Hawaii and Alaska.<sup>7</sup> Motor vessels included in steam in 1910.
