

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,
CANBERRA, AUSTRALIA

OFFICIAL
YEAR BOOK
OF THE
COMMONWEALTH OF AUSTRALIA
No. 51—1965

Prepared under Instructions from
The Right Honorable the Treasurer

BY

K. M. ARCHER,
COMMONWEALTH STATISTICIAN

6 20

PREFACE

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to Census and statistics." In the exercise of the power so conferred, a Census and Statistics Act was passed in 1905, and in the year following the Commonwealth Bureau of Census and Statistics was created. The first Official Year Book was published early in 1908. The publication here presented is the fifty-first Official Year Book issued under the authority of the Commonwealth Government.

The Synopsis on pp. xi to xxix following shows the general arrangement of the work. The special index (preceding the General Index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, in order to conserve space, have been omitted or abbreviated in the present volume. Where, in the General Index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

Among the new matter included and existing matter revised or rearranged in this volume the following items may be especially mentioned.

Chapter II. Physiography. Section relating to Climate and Meteorology of Australia revised by the Director of the Commonwealth Bureau of Meteorology; includes added Climatological data for Selected Australian Country Towns and a new feature, The Weather of 1964, which will be advanced each year (pp. 28-66).

Chapter VIII. Water Conservation and Irrigation. Some Recent Developments in the Measurement of Australia's Water Resources—a survey specially prepared by officers of the Department of National Development (pp. 228-31).

Chapter XIV. Oversea Trade. New table, Values of Imports of Merchandise by Economic Classes (p. 525).

Chapter XIX. Education, Cultural Activities and Research. New and revised matter on museums and art galleries (pp. 743-8).

Chapter XXI. Private Finance. A summary of events leading up to the *Currency Act* 1963, a brief description of the major provisions of the Act, and an account of action taken by the Government and the Decimal Currency Board relative to the introduction of decimal currency; a special article providing a short history of Australian Coinage and minting, with a description of the Royal Australian Mint, Canberra (pp. 809-14).

Chapter XXV. Marine Industries. A map of Australia showing the principal ports and the locations of the fishery resources under exploitation (p. 1121).

Chapter XXVI. Mineral Industry. Maps of Australia showing the locations of principal mining centres, mineral discoveries, and mineral processing centres (facing p. 1154), and the main sedimentary basins and locations of oil and gas discoveries (p. 1189).

Appendix. Three conversion tables, as issued by the Decimal Currency Board, showing values in pounds, shillings and pence in terms of the new decimal currency; photo showing designs for Australian decimal coins (p. 1287).

PREFACE

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

The statistics contained in the majority of the chapters of this volume relate to the years ended June or December, 1964, and the Appendix contains a selection of the more significant data which have become available since the chapters were prepared. As with previous Year Books, the contents of this issue have already been published in separate parts as the successive chapters or groups of chapters were printed.

More detailed statistics on subjects dealt with in the Year Book are available in the various annual printed reports published by this Bureau. The more recent statistics published by the Bureau are contained in the *Digest of Current Economic Statistics* (monthly), the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and in other publications issued monthly, quarterly, half-yearly, or yearly. These publications are listed in Chapter XXX. Miscellaneous, § 7, Statistical Publications of Australia, and the last pages of this volume contain a list of current and recent printed publications, showing issue numbers, dates and prices.

The Deputy Commonwealth Statisticians in New South Wales, Victoria, Queensland and Western Australia publish Year Books concerning their respective States, and the Deputy Commonwealth Statisticians of all States issue a number of printed and mimeographed publications. These are listed on pages 1163-5 of the 1962 issue of this Year Book, and, together with publications of the central Bureau, in *Publications of the Commonwealth Bureau of Census and Statistics* issued by this Bureau.

My thanks are tendered to the Deputy Commonwealth Statistician in each State, who has collected and compiled the data on which a great part of the information given in the Year Book is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments and to others who have kindly, and often at considerable trouble, supplied information, and to the Government Printer and his staff for their services in printing this Year Book and in assisting and advising throughout its preparation.

K. M. ARCHER,
Commonwealth Statistician

SYNOPSIS

CHAPTER I. DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA

	PAGE		PAGE
§ 1. Early Knowledge and Discovery of Australia		§ 4. The Establishment of the Commonwealth of Australia	
1. Terra Australis	1	1. General	5
2. Discovery of Australia	1	2. Transfer of the Northern Territory to the Commonwealth	5
3. Discoveries by the English	2	3. Transfer of the Australian Capital Territory to the Commonwealth	5
§ 2. The Annexation of Australia		4. Present Composition of the Commonwealth	5
1. Annexation of the Eastern Part of Australia, 1770	2	§ 5. The Constitution of the Commonwealth	
2. Original Extent of New South Wales	2	1. Commonwealth Constitution Act	6
3. Extension of New South Wales Westward, 1825	3	2. The Royal Proclamation	23
4. Annexation of Western Australia, 1827	3	§ 6. The External Territories of Australia	
§ 3. The Creation of the Several Colonies		1. Transfer of Norfolk Island	23
1. New South Wales	3	2. Transfer of British New Guinea or Papua	23
2. Tasmania	4	3. Territory of New Guinea	23
3. Western Australia	4	4. Nauru	24
4. South Australia	4	5. Australian Antarctic Territory	24
5. New Zealand	4	6. Territory of Heard and McDonald Islands	24
6. Victoria	4	7. Territory of Cocos (Keeling) Islands	24
7. Queensland	4	8. Territory of Christmas Island	24

CHAPTER II. PHYSIOGRAPHY

§ 1. General Description of Australia		§ 2. Climate and Meteorology of Australia— <i>continued</i>	
1. Geographical Position	25	5. Evaporation	52
2. Area of Australia compared with Areas of other Countries	25	6. Sunshine and Cloud	52
3. Areas of States and Territories, Coastal Configuration and Standard Times	27	7. Wind	53
§ 2. Climate and Meteorology of Australia		8. Storms and Tropical Cyclones	53
1. Introduction	28	9. Climatological Tables	54
2. Precipitation	29	10. Rainfall and Temperatures, Various Cities	63
3. Temperature	49	11. Climatological Data for Selected Australian Country Towns	63
4. Humidity and Saturation Deficit	51	12. The Weather of 1964 (December, 1963 to November, 1964)	64

CHAPTER III. GENERAL GOVERNMENT

§ 1. Scheme of Parliamentary Government		§ 2. Parliaments and Elections— <i>continued</i>	
1. General	67	4. The Parliament of Western Australia	73
2. The Sovereign	67	§ 3. Administration and Legislation	
3. Powers and Functions of the Governor-General and of the State Governors	67	1. The Commonwealth Parliaments	73
4. The Cabinet and Executive Government	68	2. Governors-General and Commonwealth Ministries	74
5. Number and Salary of Members of the Legislatures, Australian Parliaments	70	3. Governors and State Ministers	77
6. Enactments of the Parliaments	70	4. Leaders of the Opposition, Commonwealth and State Parliaments	79
§ 2. Parliaments and Elections		5. The Course of Legislation	79
1. Commonwealth	70	6. Legislation during 1964	79
2. State Elections	72	§ 4. Commonwealth Government Departments	85
3. The Parliaments of the States	73	§ 5. Cost of Parliamentary Government	85

CHAPTER IV. LAND TENURE AND SETTLEMENT

§ 1. Disposal of Crown Lands		§ 3. Alienation and Occupation of Crown Lands	
1. Land Legislation and Tenures	87	1. General	91
2. Forms of Land Tenure	87	2-9. States and Territories	91-5
§ 2. Closer Settlement and War Service Settlement		10. Summary	95
1. Closer Settlement	89	§ 4. Advances to Settlers	
2. Settlement of Returned Service Personnel	89	1. General	95
		2-8. States and Northern Territory	95-98

CHAPTER V. THE TERRITORIES OF AUSTRALIA

	PAGE		PAGE
THE NORTHERN TERRITORY		PAPUA AND NEW GUINEA—continued	
§ 1. Area and Population	99	§ 4. Native Labour	121
1. Area	99	§ 5. Secondary Industries	122

SYMBOLS AND OTHER FORMS OF USAGE IN THIS YEAR BOOK

The following symbols, where shown in columns of figures, mean—

- n.a. —not available.
- . . —nil or less than half the final digit shown, or not applicable.
- p —preliminary—figure or series subject to revision.
- r —figure or series revised since previous issue.
- n.e.i.—not elsewhere included.
- n.e.c.—not elsewhere classified.
- n.s. —not stated.

A blank space in a column of figures means that the figure concerned is not yet available.

Yearly periods shown as, e.g., 1964, refer to the year ended 31st December, 1964; those shown as, e.g., 1963-64, refer to the year ended 30th June, 1964. Other yearly periods are specifically indicated.

Unless otherwise indicated, the British system of weights and measures is used.

Values are expressed in £ Australian, shown with or without the letter A., unless another currency is specifically stated.

DECIMAL CURRENCY

In accordance with the provisions of the *Currency Act* 1965, February 14th, 1966, has been determined as the date for commencement of the changeover of the Australian monetary system to a dollar/cent decimal currency system.

The relationship between pounds, shillings and pence, and dollars and cents, as prescribed in the Act, is as follows:—

- 1 pound = 2 dollars
- 1 shilling = 10 cents
- 1 penny = 5/6ths of a cent

For further information on this subject *see* Chapter XXI. Private Finance, pp. 809-14 of this Year Book.

Three conversion tables showing values in pounds, shillings and pence in terms of the new decimal currency have been issued by the Decimal Currency Board. They are:

An EXACT EQUIVALENTS table, which converts amounts of £ s. d. to their exact equivalents in dollars and cents;

A BANKING AND ACCOUNTING table, which converts amounts of whole pence to the nearest whole cent;

A COMPREHENSIVE CONVERSION TABLE which converts amounts of £ s. d. ending in half pence to the nearest whole cent.

These tables, accompanied by notes setting out when each table should be used, are set out in the Appendix to this Year Book (pp. 1319-20). A photo of the Australian decimal coins is shown on page 1287.

It is intended that, in consequence of the changeover to decimal currency, all monetary amounts in the next issue of this Year Book will in general be expressed in terms of the new currency.

OFFICIAL YEAR BOOK

OF THE

COMMONWEALTH OF AUSTRALIA

CHAPTER I

DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA

§ 1. Early Knowledge and Discovery of Australia

NOTE.—The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A more detailed summary of these facts may be found in Year Book No. 39 (see p. 1) and earlier issues.

1. *Terra Australis*.—There was, apparently, an early Chaldean tradition as to the existence of an Austral land to the south of India, and rumours to that effect found their way in the course of time to Europe. References to this *Terra Australis* are found in the works of Ælianus (A.D. 205–234), Manilius (probably a contemporary of Augustus or Tiberius Caesar), and Ptolemy (A.D. 107–161). Evidence pointing to knowledge of such a land appeared in maps and manuscripts of the Middle Ages and the fourteenth and fifteenth centuries, but there is no definite evidence connecting this so-called *Terra Australis* with Australia.

Reference by Marco Polo (1254–1324) to a land called Locac and several indications on maps and globes in the fifteenth and sixteenth centuries have been assumed to relate to Australia, but little weight can now be attached to these suppositions. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, although the oft-quoted passage in his *Descriptionis Ptolemaicæ Augmentum* describing the *Australis Terra* has been considered to have had its origin in the voyages through the Straits of Magellan and the discovery of Tierra del Fuego rather than that of Australia.

2. *Discovery of Australia*.—(i) *The Spaniards*. Disregarding the suggestion, for which there is no evidence, that the Arabs had come to Australia long before the Portuguese, the Spaniards, or the Dutch, and apart from the possibility that the Portuguese may have discovered part of the Australian coast before 1542, the coastal exploration of Australia may be taken as having begun with the Spaniards and the Dutch.

In 1606 the Spaniard Quiros, on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group *La Australia del Espiritu Santo*. After leaving the New Hebrides, Quiros sailed eastward, but Torres, his second-in-command, took a westerly course and passed through the strait that now bears his name. In all probability he sighted the Australian continent, but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas.

(ii) *The Dutch*. The Dutch discovered Australia when the Dutch East India Company sent the *Duyfken* from Bantam, Java, to explore the island of New Guinea. During March, 1606, the *Duyfken* coasted along the southern shores of New Guinea and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

In 1642 Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage, in 1644, Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

3. **Discoveries by the English.**—In the meantime the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the *Cygnets*, a trading vessel whose crew had turned buccaneers. In 1699 he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century it was uncertain whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it but themselves formed part of a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Tahiti, had also the objective of ascertaining whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burden carrying about 85 persons, and accompanied by Sir Joseph Banks the botanist, Dr. Solander the naturalist, Green the astronomer, draftsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned towards New Zealand, sighting that land on 7th October, 1769, in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20th April, 1770, at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards he discovered Botany Bay on 29th April, 1770. The *Endeavour* dropped anchor and Cook landed on the same day. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11th June, 1770, when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13th July, 1771. In 1772 Cook was put in command of the ships *Resolution* and *Adventure*, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance was the existence of a channel between Tasmania and Australia. This was made by Bass and Flinders in 1798.

§ 2. The Annexation of Australia

1. **Annexation of the Eastern Part of Australia, 1770.**—Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23rd August, 1770, that the history of Australia was brought into definite political connexion with western civilization. It was on that date that Captain Cook took possession "of the whole eastern coast, from latitude 38° S. to this place, latitude 10½° S., in right of His Majesty King George the Third". Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on 12th October, 1786, and amplified on 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet".

A full historical account of the period referred to may be found in the *Historical Records of New South Wales*, Vol. I., parts 1 and 2.

2. **Original Extent of New South Wales.**—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south".

Although Captain Cook had taken possession of the North Island of New Zealand in November, 1769, and of the South Island in January, 1770, it is doubtful whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean". The fact that under the Supreme

Court Act (Imperial) of 1823, British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have become British territory unequivocally until 1840. In that year, on 29th January, Captain Hobson arrived at the Bay of Islands. On the following day he read his commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5th February the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21st May, British sovereignty over the islands of New Zealand was explicitly proclaimed.

3. **Extension of New South Wales Westward, 1825.**—On 17th February, 1824, Earl Bathurst notified Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. *Tamar*, who was selected for the purpose, took possession on 20th September, 1824, of the coast from the 135th to the 129th degree of east longitude. On 16th July, 1825, the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.

4. **Annexation of Western Australia, 1827.**—An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George Sound, sailed from Sydney on 9th November, 1826, landed at the Sound on 26th December following, and on 21st January, 1827, hoisted the British flag. Captain Stirling, in command of H.M.S. *Success*, arrived at Sydney a few weeks after the departure of the expedition to King George Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17th January, 1827, and on his return in the following April submitted a glowing report on what he described as a "rich and romantic country", urging its occupation for the purpose of settlement. He left for England in July, 1827, continuing his advocacy— notwithstanding much discouragement—with unabated enthusiasm. He was at last successful, the result being due mainly to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship *Parmelia* in June, 1829. On the 2nd of the preceding month, Captain Fremantle, in command of H.M.S. *Challenge*, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of "all that part of New Holland which is not included within the territory of New South Wales". Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

§ 3. The Creation of the Several Colonies

1. **New South Wales.**—In Governor Phillip's commission of 1786 the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present State of Tasmania was actually joined to the mainland, and it was not until 1798 that the contrary was known. In that year Bass and Flinders proved that it was an island by sailing through Bass Strait. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840, consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th east meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles. Following the transfer of the Australian Capital Territory to the Commonwealth in 1911, the area was further reduced to 309,433 square miles.

Lord Howe Island, which is a dependency of New South Wales and for political purposes is included in one of the electorates of Sydney, is situated in latitude 31° 30' south, longitude 159° 5' east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formation of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia palm seed. The land belongs to the Crown and

is occupied rent-free on sufferance. Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 249 at the Census of 30th June, 1961.

2. **Tasmania.**—Van Diemen's Land, first settled in 1803, was politically separated from New South Wales in 1825, being constituted a separate colony on 14th June. The area of the colony was 26,215 square miles. The name of the colony was officially changed to Tasmania in 1856, when responsible government was established. Following a resurvey of local government areas, the area of Tasmania was determined at 26,383 square miles at the end of 1964.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December, 1911, five members of the Australasian Antarctic Expedition landed on the island and remained there until 1915. On 3rd March, 1948, another party was landed to man a new station which has since been maintained as a scientific base. The island is about 21 miles long and two miles wide.

3. **Western Australia.**—The territory westward of the 129th meridian, comprising 975,920 square miles, was constituted a colony under the name of Western Australia in June, 1829. It was always distinct and independent of New South Wales, except for the settlement on King George Sound (*see p. 3*), which remained under the jurisdiction of New South Wales until 1831.

4. **South Australia.**—On 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province", and settlement took place towards the end of the year 1836. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28th December, 1836, and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude and between the 141st and 132nd meridians of east longitude. On 10th December, 1861, by authority of the Imperial Act 24 and 25 Vict., cap. 44, the western boundary of South Australia was extended to coincide with the eastern boundary of Western Australia, namely, the 129th east meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6th July, 1863, the Northern Territory, comprising 523,620 square miles, was brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles. The Territory was transferred to the Commonwealth on 1st January, 1911 (*see p. 5*).

5. **New Zealand.**—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales by letters patent of 16th November of that year, was constituted a separate colony under the powers of the Act 3 and 4 Vict., cap. 62, of 7th August, 1840. Proclamation of the separation was made on 3rd May, 1841. The area of the colony was 103,862 square miles.

6. **Victoria.**—In 1851, what was known as the "Port Phillip District" of New South Wales was constituted the colony of Victoria, "bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia". The area of the new colony was 87,884 square miles, and its separate existence took effect from 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council.

7. **Queensland.**—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony under the name of Queensland by letters patent dated 6th June, 1859, although separation from New South Wales was not completed until 10th December of the same year, upon the assumption of office of the first Governor. The territory comprised by the new colony was "so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean". The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel

of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." With this addition, the area of Queensland became 670,500 square miles. Following a thorough revision of the area of each Local Government Area of Queensland, based on the most recent maps available, the Surveyor-General, in 1958, determined the area of Queensland as 667,000 square miles—a reduction of 3,500 square miles from the area previously determined.

§ 4. The Establishment of the Commonwealth of Australia

1. **General.**—On 1st January, 1901, the colonies mentioned, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies"—except in the case of the Northern Territory, to which the designation "Territory" is applied—being at the same time changed to that of "States".

2. **Transfer of the Northern Territory to the Commonwealth.**—On 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the transfer of the Northern Territory to the Commonwealth, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under The Northern Territory Surrender Act, 1907 (assented to on 14th May, 1908) and by the Commonwealth Parliament under the *Northern Territory Acceptance Act* 1910 (assented to on 16th November, 1910). The Territory was formally transferred to the Commonwealth on 1st January, 1911, and became the Northern Territory of Australia.

By Imperial Order in Council, dated 23rd July, 1931, Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth in the *Ashmore and Cartier Islands Acceptance Act* 1933, under the name of the Territory of Ashmore and Cartier Islands, on 10th May, 1934. The Act authorized the Governor of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July, 1938, annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.

The area of Ashmore Reef is approximately 60 square miles (to the limit of the reef), and it is situated 220 statute miles off the western coast of Australia and 520 statute miles west of Darwin. Cartier Islands are approximately 17 square miles in area (to the limit of the reef), and are situated 184 statute miles off the western coast of Australia and 490 statute miles west of Darwin.

3. **Transfer of the Australian Capital Territory to the Commonwealth.**—On 18th October, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the Seat of Government of the Commonwealth. In December, 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5th December, 1910, a proclamation was issued vesting the Territory in the Commonwealth on and from 1st January, 1911. By the *Jervis Bay Territory Acceptance Act* 1915, an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4th September, 1915.

4. **Present Composition of the Commonwealth.**—Following the revision of the area of Queensland, as mentioned in § 3 above, and of the areas of the Northern Territory and Tasmania during 1964, the total area of the Commonwealth of Australia has been determined as 2,967,909 square miles. The dates of creation and the areas of its component States and Territories are shown below.

THE COMMONWEALTH OF AUSTRALIA: AREA, ETC., OF COMPONENT STATES AND TERRITORIES

State or Territory	Year of formation into separate Colony or Territory	Present area in square miles	State or Territory	Year of formation into separate Colony or Territory	Present area in square miles
New South Wales	1786	309,433	Northern Territory	1863	520,280
Victoria ..	1851	87,884	Australian Capital Territory ..	1911	939
Queensland ..	1859	667,000	Commonwealth of Australia	2,967,909
South Australia ..	1834	380,070			
Western Australia	1829	975,920			
Tasmania ..	1825	26,383			

§ 5. The Constitution of the Commonwealth

NOTE.—Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the federal movement in Australia, was embodied in this chapter in issues of the Year Book up to and including No. 22.

1. **Commonwealth Constitution Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely: "An Act to constitute the Commonwealth of Australia", as amended by the *Constitution Alteration (Senate Elections)* 1906, the *Constitution Alteration (State Debts)* 1909, the *Constitution Alteration (State Debts)* 1928, and the *Constitution Alteration (Social Services)* 1946, is given *in extenso* hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31st December, 1964.

THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT, 63 & 64 VICT., CHAPTER 12.

An Act to constitute the Commonwealth of Australia. (9th July, 1900.)

WHEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australian colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.

6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.

"The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."

"Original States" shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

THE CONSTITUTION.

This Constitution is divided as follows:—

- Chapter I.—The Parliament:
 - Part I.—General:
 - Part II.—The Senate:
 - Part III.—The House of Representatives:
 - Part IV.—Both Houses of the Parliament:
 - Part V.—Powers of the Parliament:
- Chapter II.—The Executive Government:
- Chapter III.—The Judicature:
- Chapter IV.—Finance and Trade:
- Chapter V.—The States:
- Chapter VI.—New States:
- Chapter VII.—Miscellaneous:
- Chapter VIII.—Alteration of the Constitution.
- The Schedule.

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament", or "The Parliament of the Commonwealth".

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State.* The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*,† and the places of those of the second class at the expiration of [the sixth year] *six years*,† from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before*† the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July*† following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July*† preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified,

* The Parliament has otherwise provided, by means of the *Representation Act* 1948, that the number of senators shall be ten for each State from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18th May, 1948).

† As amended by Section 2 of the *Constitution Alteration (Senate Elections)* 1906. The words in square brackets have been repealed; amendments are shown in italics.

the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales ..	23	South Australia ..	6
Victoria ..	20	Tasmania ..	5
Queensland ..	8		

Provided that if Western Australia is an Original State, the numbers shall be as follows:—

New South Wales ..	26	South Australia ..	7
Victoria ..	23	Western Australia ..	5
Queensland ..	9	Tasmania ..	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.*

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

- (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
- (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.†

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

* The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1962*, Sections 39 and 39A (repealing an earlier provision made by the *Commonwealth Franchise Act 1902*). For present qualifications see Chapter III. General Government.

† The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1962*, Section 69. For present qualifications see Chapter III. General Government.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or
- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.*

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld;
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT.†

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) Trade and commerce with other countries, and among the States;
- (ii) Taxation; but so as not to discriminate between States or parts of States;
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth;
- (iv) Borrowing money on the public credit of the Commonwealth;
- (v) Postal, telegraphic, telephonic, and other like services;
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth;
- (vii) Lighthouses, lightships, beacons and buoys;
- (viii) Astronomical and meteorological observations;
- (ix) Quarantine:
 - (x) Fisheries in Australian waters beyond territorial limits;
 - (xi) Census and statistics;
 - (xii) Currency, coinage, and legal tender;
- (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money;
- (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned;
- (xv) Weights and measures;
- (xvi) Bills of exchange and promissory notes;
- (xvii) Bankruptcy and insolvency;
- (xviii) Copyrights, patents of inventions and designs, and trade marks;
- (xix) Naturalization and aliens:
 - (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth;
 - (xxi) Marriage:

* The Parliamentary allowance has been varied from time to time (see Chapter III., General Government). In 1964, it was increased to £3,500, while additional allowances of £2,000 and £4,250, respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, and an additional allowance of £1,000 to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party which has not less than ten members in the House of Representatives and of which no member is a Minister.

† Particulars of proposed laws which were submitted to referendums are referred to in the List of Special Articles at the end of this volume.

- (xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:
- (xxiii) Invalid and old-age pensions:
- (xxiiiA) **The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:*
- (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States:
- (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
- (xxvi) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws:
- (xxvii) Immigration and emigration:
- (xxviii) The influx of criminals:
- (xxix) External affairs:
- (xxx) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv) Railway construction and extension in any State with the consent of that State:
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:
- (xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:
- (xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
- (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
- (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

* Under Section 2 of the *Constitution Alteration (Social Services)* 1946, the Constitution was amended by the insertion of this paragraph.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.*

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.*

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones:		Lighthouses, lightships, beacons, and buoys:
Naval and military defence:		Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

* The number of Ministers of State has been increased from time to time and has been 25 since 1964. The annual appropriation for Ministers' salaries has been correspondingly increased and has been £95,650 since 1964.

CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.*

72. The Justices of the High Court and of the other Courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council:
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during their continuance in office.*

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
- (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
- (iii) Of the Inter-State Commission, but as to questions of law only:

and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty:
- (ii) Affecting consuls or other representatives of other countries:
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:
- (iv) Between States, or between residents of different States, or between a State and a resident of another State:
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth:

the High Court shall have original jurisdiction.

* The *Judiciary Act* 1903 provided for a Chief Justice and two other Justices, increased by subsequent amendments to six. The *Judiciary Act* 1903 also provided for the payment of a salary of £3,500 a year to the Chief Justice and of £3,000 a year to each other Justice, increased by subsequent amendments to £10,000 and £8,500 a year, respectively.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation:
- (ii) Arising under any laws made by the Parliament:
- (iii) Of Admiralty and maritime jurisdiction:
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court:
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary:
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth:
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament:
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

- (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii) The Commonwealth shall debit to each State—
 - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;
 - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two

years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

- (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State;
- (ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council;
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105A.† (1.) *The Commonwealth may make agreements with the States with respect to the public debts of the States, including—*

- (a) *the taking over of such debts by the Commonwealth;*
- (b) *the management of such debts;*
- (c) *the payment of interest and the provision and management of sinking funds in respect of such debts;*
- (d) *the consolidation, renewal, conversion, and redemption of such debts;*
- (e) *the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and*
- (f) *the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.*

(2.) *The Parliament may make laws for validating any such agreement made before the commencement of this section.*

(3.) *The Parliament may make laws for the carrying out by the parties thereto of any such agreement.*

(4.) *Any such agreement may be varied or rescinded by the parties thereto.*

(5.) *Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.*

(6.) *The powers conferred by this section shall not be construed as being limited in any way to the provisions of section one hundred and five of this Constitution.*

CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State as the case may be.

* Under Section 2 of the *Constitution Alteration (State Debts) 1909*, the words in square brackets were omitted.

† Under Section 2 of the *Constitution Alteration (State Debts) 1928*, the Constitution was amended by the insertion of this section.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the Seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

SCHEDULE.

OATH.

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

AFFIRMATION.

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

2. The Royal Proclamation.—The preceding Act received the Royal assent on 9th July, 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on 17th September, 1900, constituted the Commonwealth as from 1st January, 1901; it read as follows.

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of *New South Wales*, *Victoria*, *South Australia*, *Queensland*, and *Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales*, *Victoria*, *South Australia*, *Queensland*, *Tasmania*, and *Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

§ 6. The External Territories of Australia

1. *Transfer of Norfolk Island.*—In 1856, Norfolk Island was created a distinct and separate settlement under the jurisdiction of New South Wales. Later, in 1896, it was made a dependency under the Governor of that colony, and finally by the passage of the *Norfolk Island Act* 1913 it was accepted as a Territory of the Commonwealth of Australia. The island is situated in latitude 29° 3' 3" S., longitude 167° 57' 5" E., and comprises an area of approximately 14 square miles.

2. *Transfer of British New Guinea or Papua.*—Under the administration of the Commonwealth, but not included in it, is British New Guinea or Papua, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on 1st September, 1906, under the authority of the *Papua Act* 1905. The area of Papua is about 86,100 square miles.

3. *Territory of New Guinea.*—In 1919 it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on Australia for the government of the former German territories and islands situated in latitude between the Equator

and 8° S., and in longitude between 141° E. and 159° 25' E. The mandate was issued by the League of Nations on 17th December, 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the *New Guinea Act 1920*, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 92,160 square miles, and the administration under the mandate dated from 9th May, 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved on 13th December, 1946.

4. **Nauru.**—In 1919 the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude 0° 32' S., and longitude 166° 55' E. and is in area about 8½ square miles. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the *Nauru Island Agreement Act 1919*, and a supplementary agreement of 30th May, 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. So far, the administrators have been appointed by the Commonwealth Government. The administration under the mandate operated from 17th December, 1920, to 1st November, 1947, since when Nauru has been administered under a Trusteeship Agreement with the United Nations.

5. **Australian Antarctic Territory.**—An Imperial Order in Council of 7th February, 1933, placed under Australian authority "all the islands and territories other than Adelie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude."

The Order came into force with a proclamation issued by the Governor-General on 24th August, 1936, after the passing of the *Australian Antarctic Territory Acceptance Act 1933* by the Commonwealth Parliament. The boundaries of Adelie Land were definitely fixed by a decree of 1st April, 1938, as latitude 60° S., longitude 135° E. and longitude 142° E.

6. **Territory of Heard and McDonald Islands.**—Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26th December, 1947. Heard Island is approximately 27 miles long and 13 miles wide, and McDonald Islands, about 26 miles to the west of Heard Island, are small, rocky and precipitous.

7. **Territory of Cocos (Keeling) Islands.**—*The Cocos (Keeling) Islands Act 1955* provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts, Her Majesty, by Order in Council, specified 23rd November, 1955, as the date of transfer. From that date the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands. Their approximate area is about 5½ square miles.

8. **Territory of Christmas Island.**—*The Christmas Island Act 1958* provided for the acceptance of Christmas Island, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia. Complementary legislation having been passed by the Parliament of the United Kingdom, the island was transferred to the Australian administration on 1st October, 1958, and an Official Representative was appointed to administer the Territory. The area of the island is about 52 square miles.

CHAPTER II

PHYSIOGRAPHY

§ 1. General Description of Australia

1. **Geographical Position.**—(i) *General.* The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises an area of 2,967,909 square miles, the mainland alone containing 2,941,526 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 43° 39' S., or, excluding Tasmania, 39° 8' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Indian Ocean. The extreme points are Steep Point on the west, Cape Byron on the east, Cape York on the north, and South-East Cape or, if Tasmania be excluded, Wilson's Promontory, on the south. The difference in latitude between Cape York and Wilson's Promontory is 1,959 miles, and in longitude between Steep Point and Cape Byron 2,489 miles.

(ii) *Tropical and Temperate Regions.* Of the total area of Australia, nearly 39 per cent. lies within the tropics. Taking the latitude of the Tropic of Capricorn as 23° 30' S., the areas within the tropical and temperate zones are approximately as follows.

AUSTRALIA: AREAS OF TROPICAL AND TEMPERATE REGIONS (Square miles)

Area	N.S.W. (a)	Vic.	Qld	S. Aust.	W. Aust.	Tas.	N. Terr.	Total
Within tropical zone ..	310,372	87,884	360,642	380,070	364,000	26,383	422,980	1,147,622
" temperate zone ..			306,358		611,920		97,300	1,820,287
Total Area ..	310,372	87,884	667,000	380,070	975,920	26,383	520,280	2,967,909

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent. of Queensland lies within the tropical zone and 46 per cent. in the temperate zone; 37 per cent. of Western Australia is tropical and 63 per cent. temperate; while 81 per cent. of the Northern Territory is tropical and 19 per cent. temperate. All of the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent. of the whole of the continent.

2. **Area of Australia compared with Areas of other Countries.**—The area of Australia is almost as great as that of the United States of America excluding Alaska, four-fifths of that of Canada, more than half as large again as Europe excluding the U.S.S.R., and about 25 times that of Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the following page.

AREA OF AUSTRALIA AND OF OTHER COUNTRIES, *circa* 1962

('000 square miles)

Country	Area	Country	Area
Continental Divisions—		Africa—<i>continued</i>	
Europe (a)	1,912	Niger	489

Libya	679	New Zealand	104
Chad	496	New Guinea (d)	93
		Papua	91
		Other	42
		<i>Total</i>	<i>3,298</i>

(a) Excludes U.S.S.R., shown below. (b) Egypt only. Syria seceded September, 1961.
(c) Excludes State of Hawaii, which is included in Other Oceania. (d) Australian Trust Territory.
Western New Guinea (West Irian) is included in Other Asia.

The areas shown in the table are obtained from the *Demographic Yearbook*, 1963, published by the Statistical Office of the United Nations, and the countries have been arranged in accordance with the continental groups used therein.

3. Areas of States and Territories, Coastal Configuration and Standard Times.—As already stated, Australia consists of six States and the Northern Territory and Australian Capital Territory. Particulars of areas, coastline and standard times are shown in the following table.

AUSTRALIA: AREAS OF STATES AND TERRITORIES, COASTLINE AND STANDARD TIMES

State or Territory	Area	Percentage of total area	Coastline	Area per mile of coastline	Standard times	
					Meridian selected	Ahead of G.M.T.
	Sq. miles		Miles	Sq. miles		Hours
New South Wales	309,433	10.43	(a) 700	(a) 443	150° E.	10
Victoria	87,884	2.96	680	129	150° E.	10

Australia	2,967,909	100.00	12,446	238

(a) Includes Australian Capital Territory.

4. Geographical Features of Australia:—The following description is a broad summary of the main physical characteristics of the Australian continent.

A section through the Australian continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. It is of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, the average being roughly about forty to fifty miles. Bordering this plain is the Great Dividing Range, which extends from the north of Queensland to the south of New South Wales, and thence one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other, the main branch, terminates in Tasmania. This range, which rises, often abruptly, from the plain, frequently presents bold escarpments on its eastern face, but the descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level and occasionally even below it. Thence there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these lies another coastal plain. The mountains of Australia are relatively low, the highest peak, Mount Kosciusko, in New South Wales, being only about 7,300 feet. Three-quarters of the land-mass of Australia lies between the 600 and 1,500 feet contours in the form of a huge plateau, constituting the most distinctive feature of the Australian continent and to which the peculiarities of Australia's climate can probably be largely ascribed.

The rivers of Australia may be divided into two major classes, those of the coastal plains with moderate rates of fall and those of the central plains with very slight fall. Of the former, not many are navigable for any distance from their mouths, and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the eastern coast are the Burdekin and the Fitzroy in Queensland. The Hunter is the largest coastal river of New South Wales, and the Murray River, with its great tributary the Darling, drains part of Queensland, the major part of New South Wales and a large part of Victoria, debouching into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray is about 1,600 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Murray-Darling from the source of the Darling to the mouth of the Murray is about 2,300 miles. The rivers of the north-west coast of Australia (Western Australia), e.g. the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord are of considerable size. So also are those in the Northern Territory, e.g. the Victoria and Daly, and those on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell. The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the country.

The "lakes" of Australia may be divided into three classes—true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse. The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lakes Torrens, Gairdner, Eyre and Frome, are of considerable extent.

For further information on the geographical features of Australia earlier issues of the Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.

§ 2. Climate and Meteorology of Australia

NOTE.—This Section has been prepared by the Director of the Commonwealth Bureau of Meteorology, and the various States and Territories have been arranged in the standard order adopted by that Bureau.

1. **Introduction.**—Australia extends from about latitude 10°S. to latitude 44°S., but owing largely to the moderating effects of the surrounding oceans and the absence of very pronounced and extensive mountain masses it is less subject to extremes of climate than are regions of similar size in other parts of the world. The average elevation of the land surface is low—probably close to 900 feet above the sea; while the maximum altitude is just above 7,300 feet. Latitude for latitude the Australian climate is generally more temperate than that of the other large land masses of the earth, although it varies considerably from the tropical to the alpine.

The Australian meteorological seasons are: Summer, December, January, February; Autumn, March, April, May; Winter, June, July, August; Spring, September, October, November.

The following general discussion of the climate of Australia is necessarily brief. However, extensive records of Australian climatic data are held and published in various forms by the Bureau of Meteorology. A programme of regional climatic survey has been in progress for some years, and a large number of studies has been published by the Bureau of Meteorology and by the Department of National Development and State Development Authorities. The Bureau of Meteorology welcomes inquiries for climatic information, which may be made at its Central Office in Melbourne or through the Regional Offices which are situated in each of the State capital cities and in Darwin. Reference may also be made to various bulletins and research papers mentioned in this text for more detailed information on particular topics.

2. **Precipitation.**—(i) *General.* Precipitation of moisture from the atmosphere may take various forms depending chiefly on the thermal conditions existing at the time. Within the Australian region, precipitation occurs chiefly as rain because of the generally mild temperatures, but may also occur as snow or hail. Broadly, the immediate physical cause of rainfall may be said to be the lifting of moist air with resultant cooling, condensation into cloud, and eventual precipitation of the heavy water droplets as rain. This process may be achieved by three different means each of which may be combined with either or both of the others.

(a) Orographic lifting caused by winds blowing onto rising terrain;

(b) convectional lifting resulting in the development of individual rain clouds of the cumulus or cumulonimbus type producing showers and thunderstorms;

(c) lifting of a warm air mass as it rises over cooler air—known as a “frontal” process.

(ii) *Average Annual Rainfall.* The distribution of the average annual rainfall over Australia is shown in the map on page 33, while the map on page 34 shows the distribution in 1964.

While Australia is a continent of comparatively low relief, the orographic processes in rain production are very marked in the chain of the Great Dividing Range bordering the whole eastern coast of the continent, in the ranges of the south-western corner of Western Australia, and in Tasmania. Thus on the eastern coast the higher rainfall areas lie between the ranges and the Pacific Ocean in the region of prevailing south-east wind circulation. In Tasmania and the south-west of Western Australia the region of high rainfall lies between the ranges and the ocean to the west, these areas lying in a region of predominantly westerly wind flow.

The north-western part of the continent and to some extent the whole region of the Northern Territory and inland north Queensland comes under the influence of the Australian-Asian monsoon. This results in high rainfalls in a summer wet season with the inflow of moist air from the north-west, and a winter dry season with predominantly south-east winds blowing across the dry regions of the interior and producing little rainfall.

Tropical cyclones affect the waters adjacent to the north-east and north-west of Australia between December and April. Their frequency varies greatly from season to season, but on the average about three of these disturbances occur in the Coral Sea each season and about two in the eastern Indian Ocean adjacent to the western coast of the continent. When tropical cyclones move close to the tropical coast of the continent they cause very heavy rainfalls over the coastal regions. On occasions these cyclones move over the land and lose intensity, but may still continue to be accompanied by heavy rainfall along their path.

Southern Australia lies in the region of the mid-latitude westerlies for the winter half of the year and is subject to the rain-producing influences of the great depressions of the Southern Ocean and their associated frontal systems. The combined effects of these systems and the topography lead to high winter rainfalls in south-western and south-eastern Australia and in Tasmania, with the highest falls occurring on the windward side of the mountains.

The rainfall generally decreases inland with distance from the coast, although the 10-inch isohyet reaches the shore of the Great Australian Bight and the central western coast of Western Australia in regions which are of very flat relief and which because of their position and the orientation of the coastline are only rarely exposed to moist winds.

The region with the highest average annual rainfall is the eastern coast of Queensland between Port Douglas and Cardwell, where Tully has an annual average of 177 inches. A further very high rainfall region is the mountainous west coast of Tasmania, where Lake Margaret has the highest average annual total of 145 inches.

The area of lowest average annual rainfall is that of some 180,000 square miles surrounding Lake Eyre in South Australia, where on the average only 4 to 6 inches are received annually. The lowest average over a long period of record is at Troudaninna—4.13 inches. Rain occurs very irregularly, averaging only about one or two days a month in this region.

The proportional areas of each State of Australia as a whole which receive various amounts of average annual rainfall are set out in the following table.

AVERAGE ANNUAL RAINFALL: AREA DISTRIBUTION
(Per Cent.)

Average annual rainfall	W. Aust.	N. Terr.	S. Aust.	Q'land	N.S.W. (a)	Vic.	Tas. (b)	Total
Under 10 inches ..	58.0	24.7	82.8	13.0	19.7	Nil	Nil	39.0
10 and under 15 inches	22.4	32.4	9.4	14.4	23.5	22.4	Nil	20.6
15 and under 20 "	6.8	9.7	4.5	19.7	17.5	15.2	0.7	11.2
20 and under 25 "	3.7	6.6	2.2	18.8	14.2	17.9	11.0	9.0
25 and under 30 "	3.7	9.3	0.8	11.6	9.1	18.0	11.4	7.2
30 and under 40 "	3.3	4.7	0.3	11.1	9.9	16.1	20.4	6.1
40 inches and over ..	2.1	12.6	Nil	11.4	6.1	10.4	56.5	6.9
Total ..	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

(a) Includes Australian Capital Territory. (b) Over an area of 2,777 square miles no records are available.

Of all the continents (excluding Antarctica), Australia receives the least average depth of rainfall and has the least run-off from its rivers into the oceans. Only in relatively small areas of the continent could the rainfall be described as abundant.

(iii) *Seasonal Distribution of Rainfall.* The average monthly distribution of rainfall in the various Australian rainfall districts is shown by the histograms of the map on page 34. The following are the most marked features:

(a) The clearly defined wet summer and dry winter of the monsoon region of northern Australia.

(b) The more regular distribution of rainfall throughout the year in south-eastern Australia. In the region to the south and west of the Great Dividing Range a less pronounced maximum of rainfall is noticeable in the winter or early spring. On the Gippsland (eastern Victoria) coast the rainfall is fairly evenly distributed throughout the year but further along the east coast of the continent the rainfall minimum in late winter and early spring begins to appear and becomes more marked as the tropical regions are approached.

(c) The marked maximum of rainfall in the south-western districts of Western Australia in winter—the period of the most active southern depressions and frontal systems in this region.

For further information on monthly rainfalls reference may be made to the various Australian rainfall bulletins, to the Climatological Surveys of particular districts and to the annual rain maps and books of normals (standard 30 year periods), all published by the Bureau of Meteorology.

(iv) *Variability of Rainfall.* For most agricultural pursuits a more important criterion of the value of rainfall is its variability or reliability. The adequate description of rainfall variability over an extensive geographical area is a matter of some difficulty. Probably the best available measures are to be found in the tables which have been calculated for a number of individual stations in some of the Climatological Survey districts. These tables show the percentage chances of receiving specified amounts of rainfall in monthly seasonal or annual time spans. Statistical indexes of rainfall variation based on a number of different techniques have been used to produce maps which show the main features of the variability of annual rainfall over Australia. A discussion of these methods and the maps is given by F. Loewe in *Some Considerations Regarding the Variability of Annual Rainfall in Australia*, Bureau of Meteorology Bulletin No. 39 (1948).

In general it may be stated that the regions of most reliable rainfall are the south-west of Western Australia, western Tasmania, and western and southern Victoria south of the divide. These areas have one of the most reliable rainfalls in the world. Elsewhere in Australia the degree of variability, in general, increases inland, but the region of the highest variability for low average annual rainfalls extends across the central part of the continent from south-western Queensland to the central coast of Western Australia. Some outstanding examples of the numerous instances of high rainfall variability throughout Australia are given below.

At Onslow (Western Australia) annual totals vary from 0.05 inches to 28 inches, and in the four consecutive years 1921 to 1924 the annual totals were 22.25, 2.71, 26.82, and 2.18 inches respectively. At Whim Creek, where 29.41 inches have been recorded in a single day, only 17 points (0.17 inches) were received in the whole of 1924. Great variability can also occur in the heavy rainfall areas, e.g. at Tully the annual rainfalls have varied from 310.92 inches in 1950 to 104.98 inches in 1943.

The following table of monthly and annual rainfall for the Australian Capital cities for the past 30 years indicates the variation in rainfall at these sites.

(a) Commonwealth Forestry Bureau; records in issues of the Year Book prior to No. 36 were for the station at Acton which closed down in 1939. (b) Records taken from present site commenced 1883. (c) 1911-1940. (d) Thirty years to 1957 inclusive.

Prolonged dry spells are fairly common in much of Australia particularly in inland areas.

A detailed discussion of the history of droughts and the frequency in particular areas may be found in Foley, J. C., *Droughts in Australia*, Bureau of Meteorology Bulletin No. 43 (1957). A shorter account of droughts in Australia will be found in a special article in Year Book No. 45, pages 51-6.

(v) *Climate and Vegetation.* In general, the three main climatic zones of the continent exert a particular controlling influence on the general vegetation. These are the northern third of the continent where rainfall is almost always restricted to the warmer months of the year, the southern third where rainfall is predominantly a winter and spring event, and a transitional zone which experiences rainfall from both sources, although in greatly reduced quantity over the interior, which is subject to frequent drought.

The length of the growing season, or conversely the extent of dry periods during the year, decides the type of vegetation which establishes in a region. The climatic influence on vegetative response is primarily through soil moisture and temperature. Thus in colder south eastern areas, the growing season is mainly temperature dependent, but elsewhere the

availability of soil moisture is the prime factor. All rainfall is not equally effective in increasing the soil moisture, its availability from the soil storage to plants depending on the extent of surface run-off, seepage beyond the root zone, and loss by surface evaporation. Furthermore, the effectiveness of available soil moisture depends on the evaporative demand of the local climate; for example, an inch of stored moisture may maintain vigorous plant growth for twice as long in Tasmania as in the warmer, drier atmosphere of inland New South Wales. Thus it is not a sound practice to assess the agricultural potential of different areas simply by reference to average rainfall.

Generally speaking, the length of the growing season exceeds nine months over the far south-west of Western Australia and in all eastern coastal districts from Cape York Peninsula to Western Victoria, and within this region humid and semi-humid plant formations thrive. Soil types, of course, also play a part in the distribution of vegetation, but they too are to a considerable extent the result of climate and weather.

The climate of Arnhem Land (Northern Territory) is such that there is a considerable surplus of moisture for about five months of the warm season, followed regularly by a virtual drought which frequently reaches severe intensity, and this special combination of meteorological conditions results in annual and perennial vegetation adapted to this cycle.

Over the interior the position is more complex because of the lower levels of the rainfall, its greater variability, and the high evaporative power of the drier, warmer atmosphere. In this vast section of the continent the climatic demands are so severe that the vegetative formations of the moister zones (i.e. the mesophytes, requiring about five months or longer growing season) are unable to exist. Thus a plant species adapted to these very dry and variable conditions (xerophytes), e.g. spinifex, salt bush, blue bush and stunted eucalypts capable of maintaining a cattle population, predominates over the arid interior.

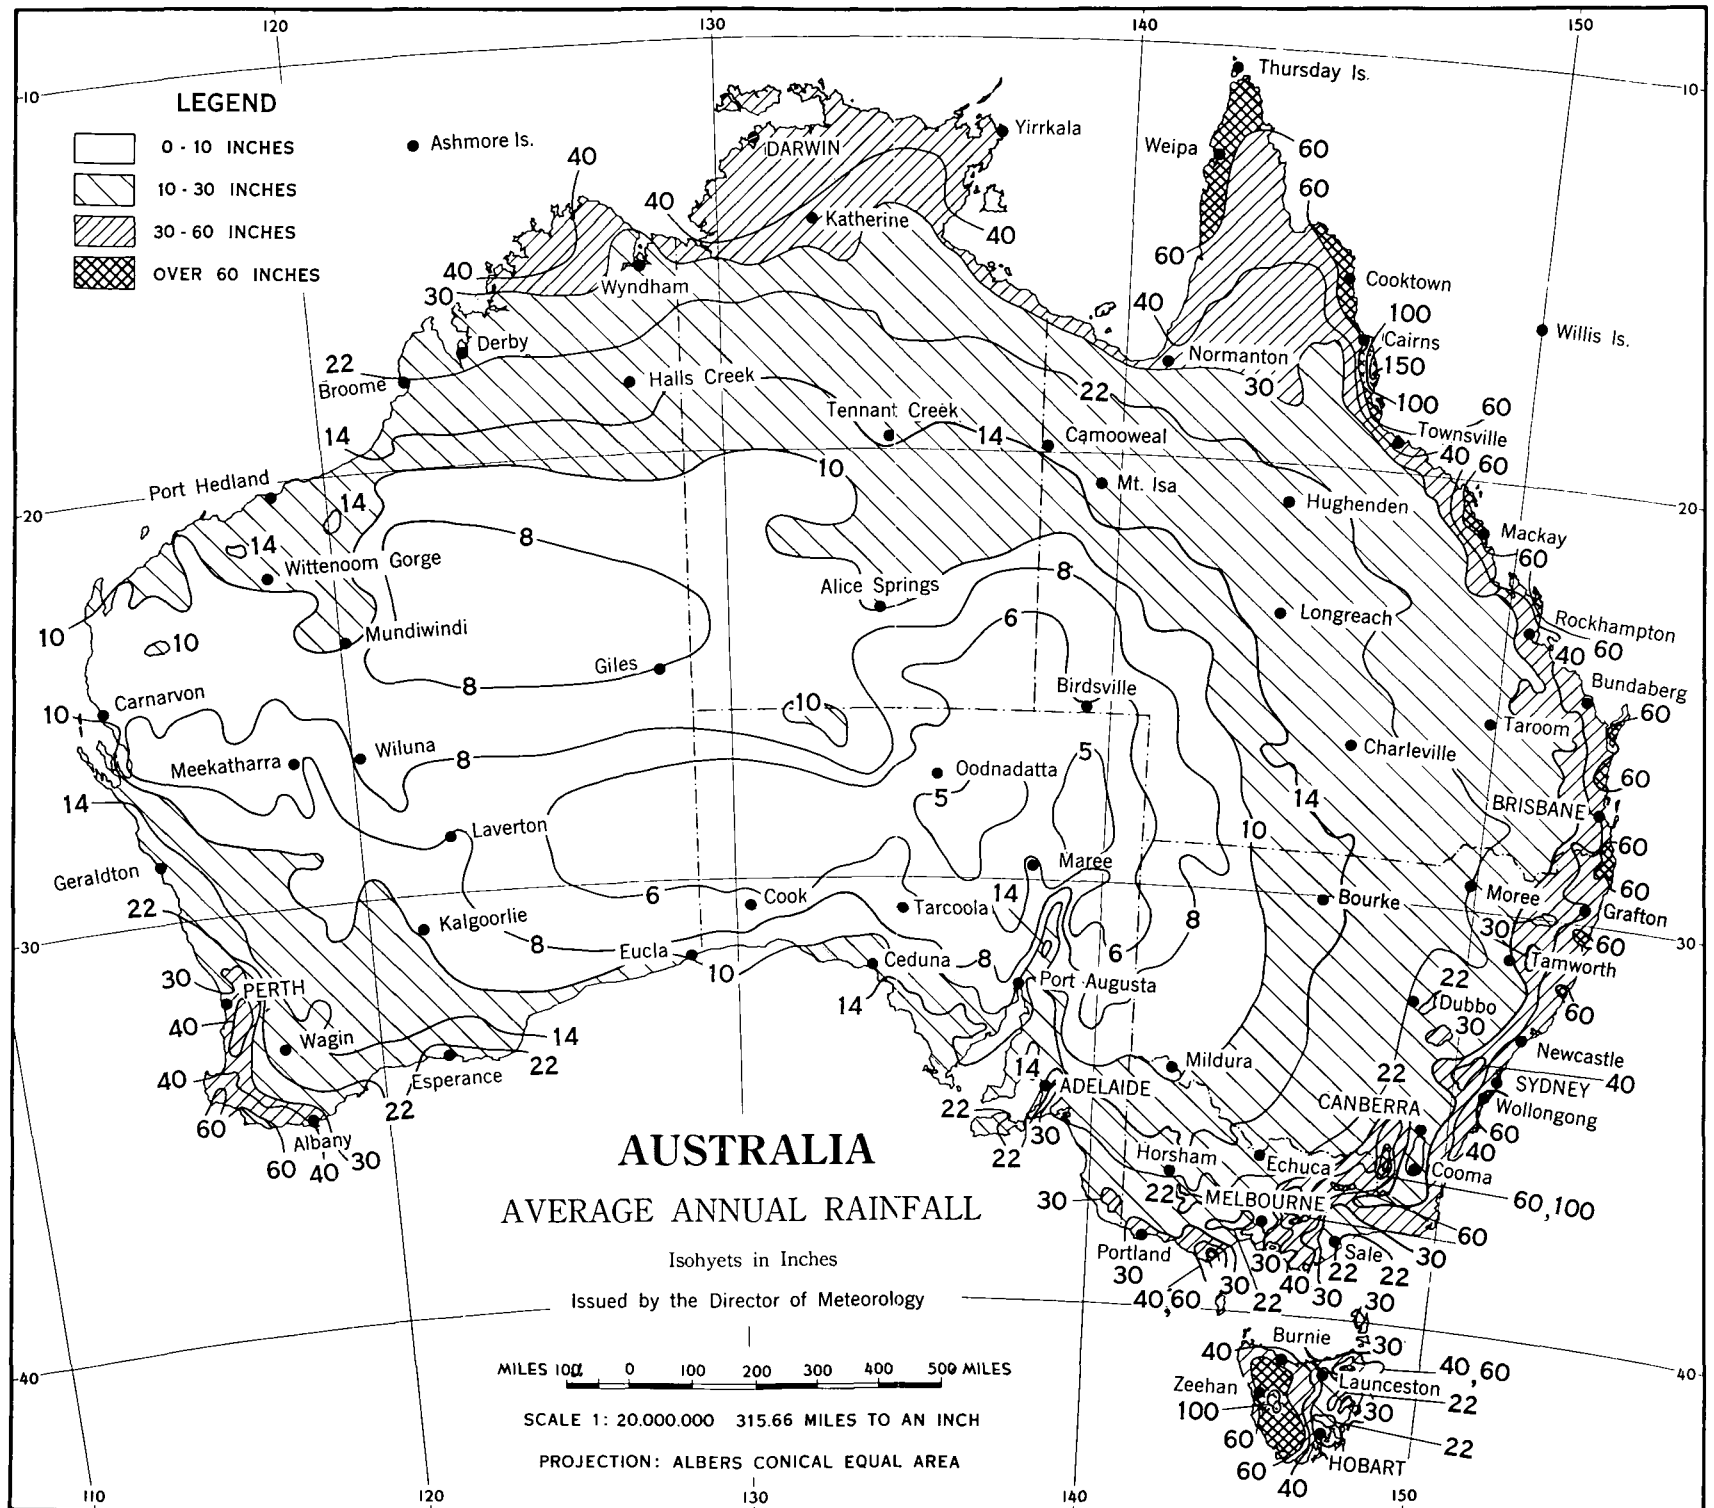

The arid and semi-arid lands of Western Australia and inland New South Wales which border the desert carry the majority of the sheep in these States. In New South Wales the most important vegetative formations in these areas are savannah (treeless plains), savannah woodland, mulga scrub and mallee scrub. In Western Australia sclerophyllous grass steppe and mulga scrub border the deserts and are succeeded to the south by zones of mallee scrub and mallee heath.

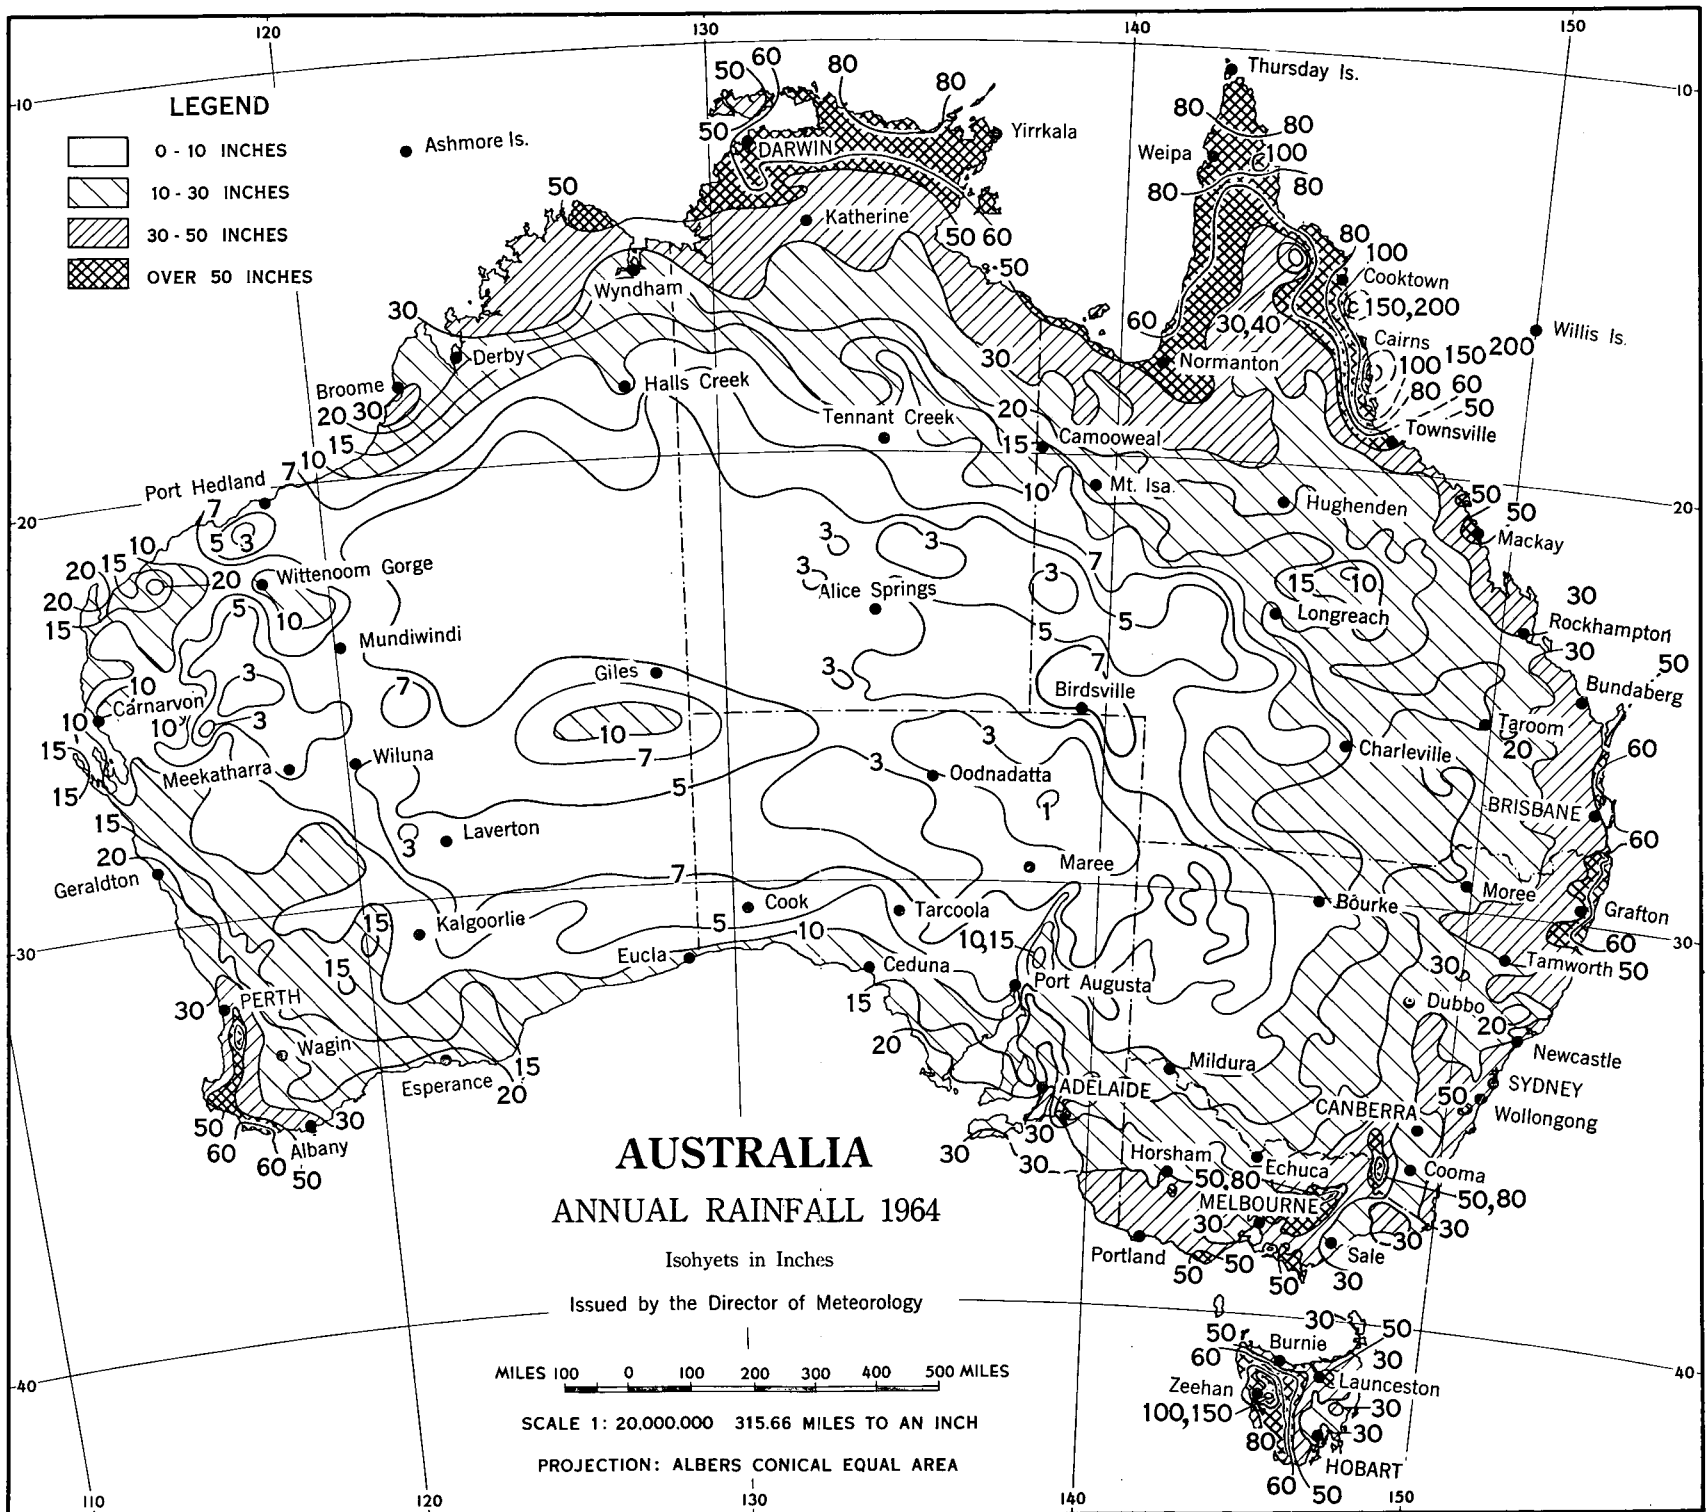

(vi) *Rainfall Intensity.* The study of extremely high rainfall intensities is important in the investigation of the flow characteristics of river systems and flood prevention measures, the design of irrigation works and hydro-electric schemes. Some of the more notable falls in a period of 24 hours are listed for the various States in the following tables. Most of the very high intensities have occurred in the coastal strip of Queensland, where the combination of a tropical cyclone moving close to mountainous terrain provides ideal conditions for spectacular falls. The highest fall recorded in 24 hours, 35.71 inches, occurred at Crohamhurst, Queensland on February 3rd, 1893,

Rainfall at most reporting stations in Australia is recorded only for the 24 hour period from 9 a.m. to 9 a.m. The data in this table are based on these records. Where automatic recording gauges are installed, more detailed intensity data are available for shorter and exactly measured time intervals. For other very heavy falls at various localities, reference may be made to Year Book No. 14, pages 60-4, No. 22, pages 46-8 and No. 29, pages 43, 44 and 51.

BUREAU OF METEOROLOGY.

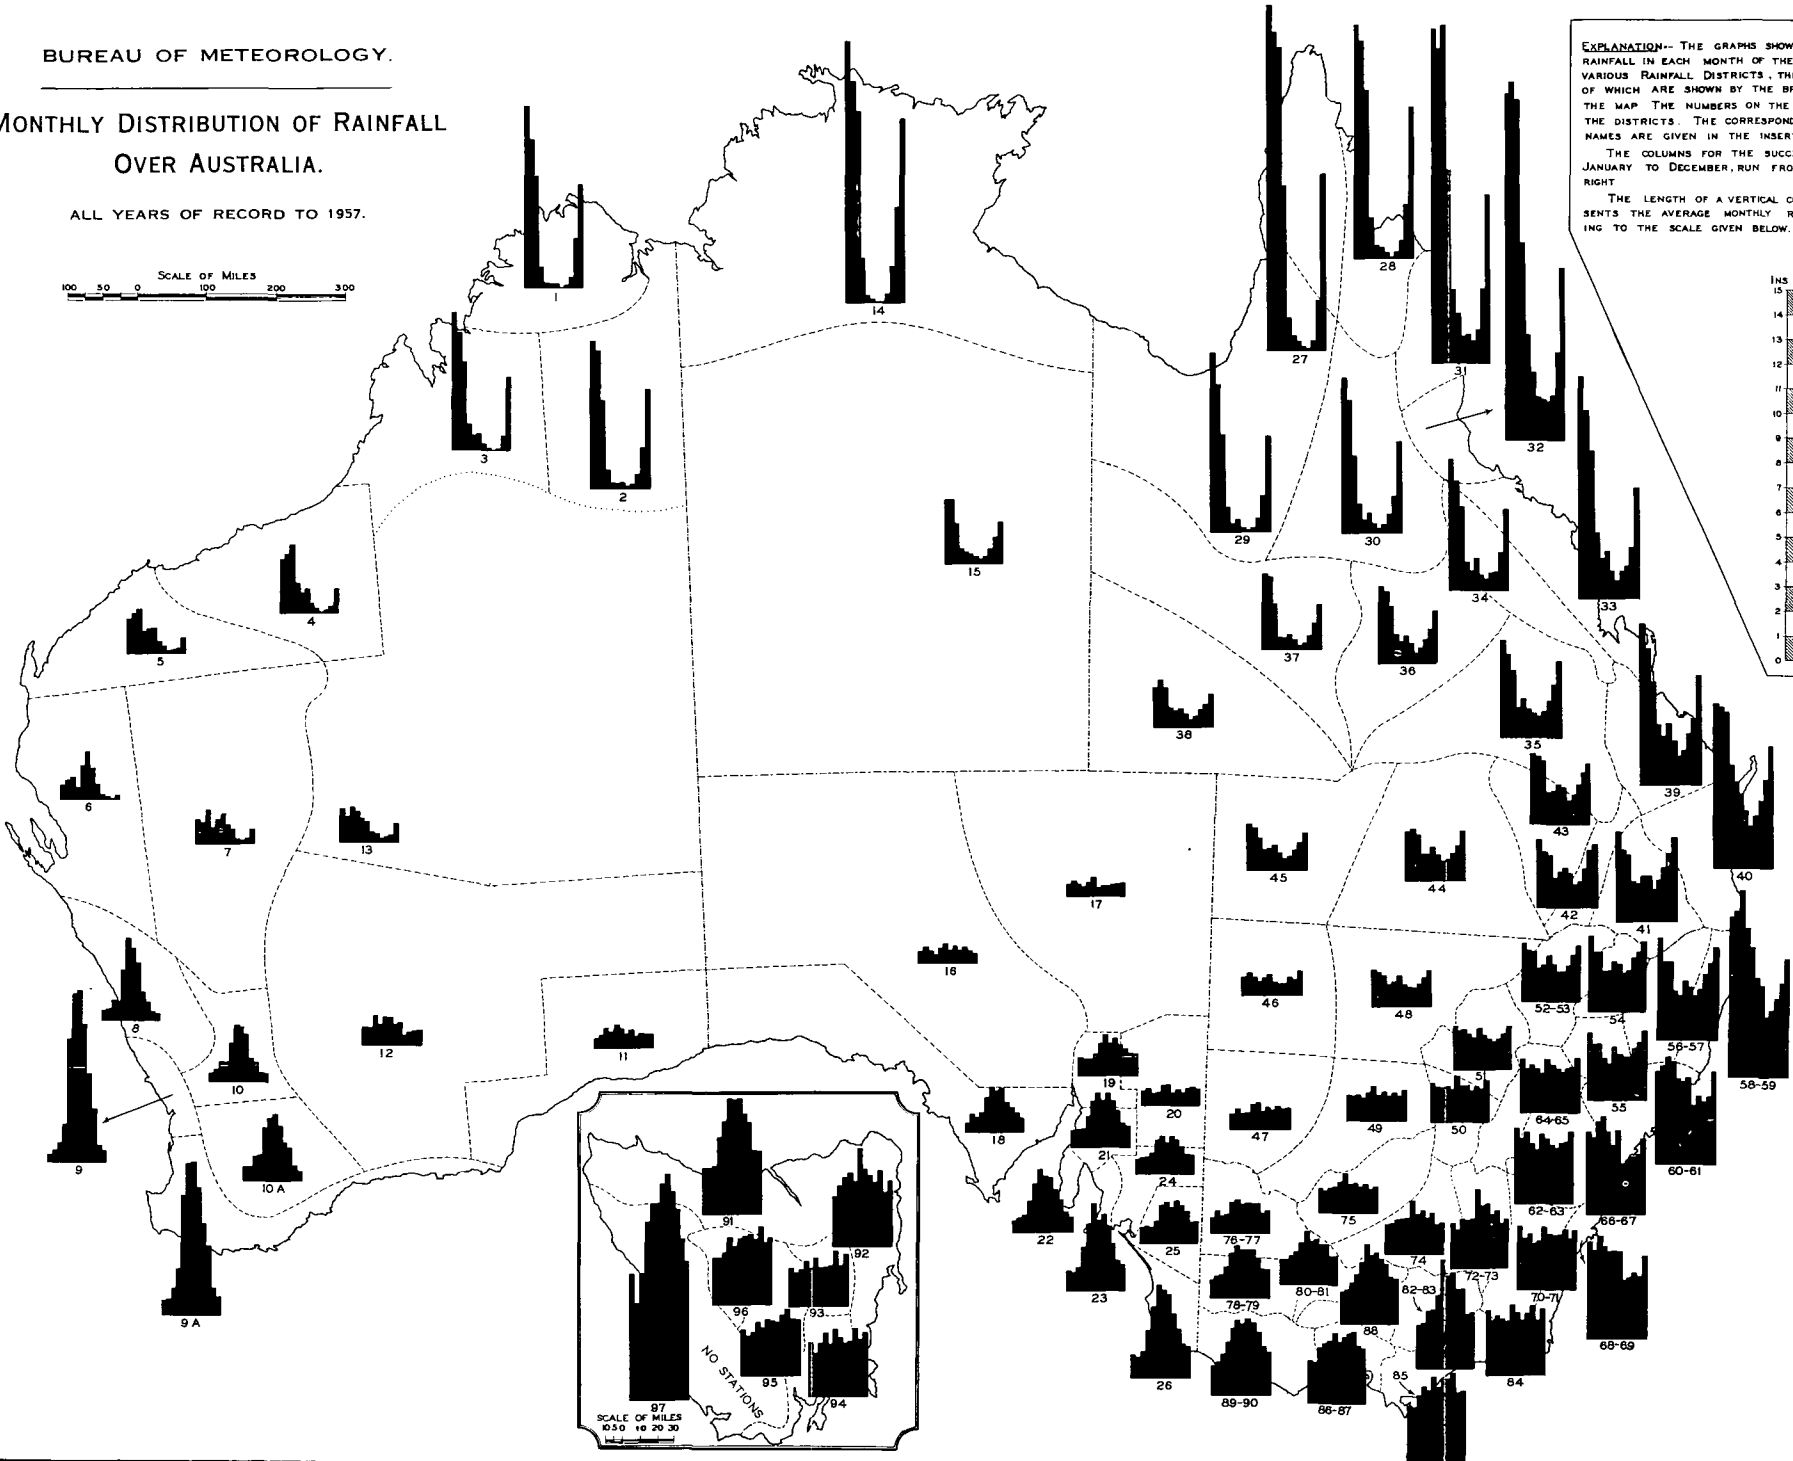

MONTHLY DISTRIBUTION OF RAINFALL OVER AUSTRALIA.

ALL YEARS OF RECORD TO 1957.

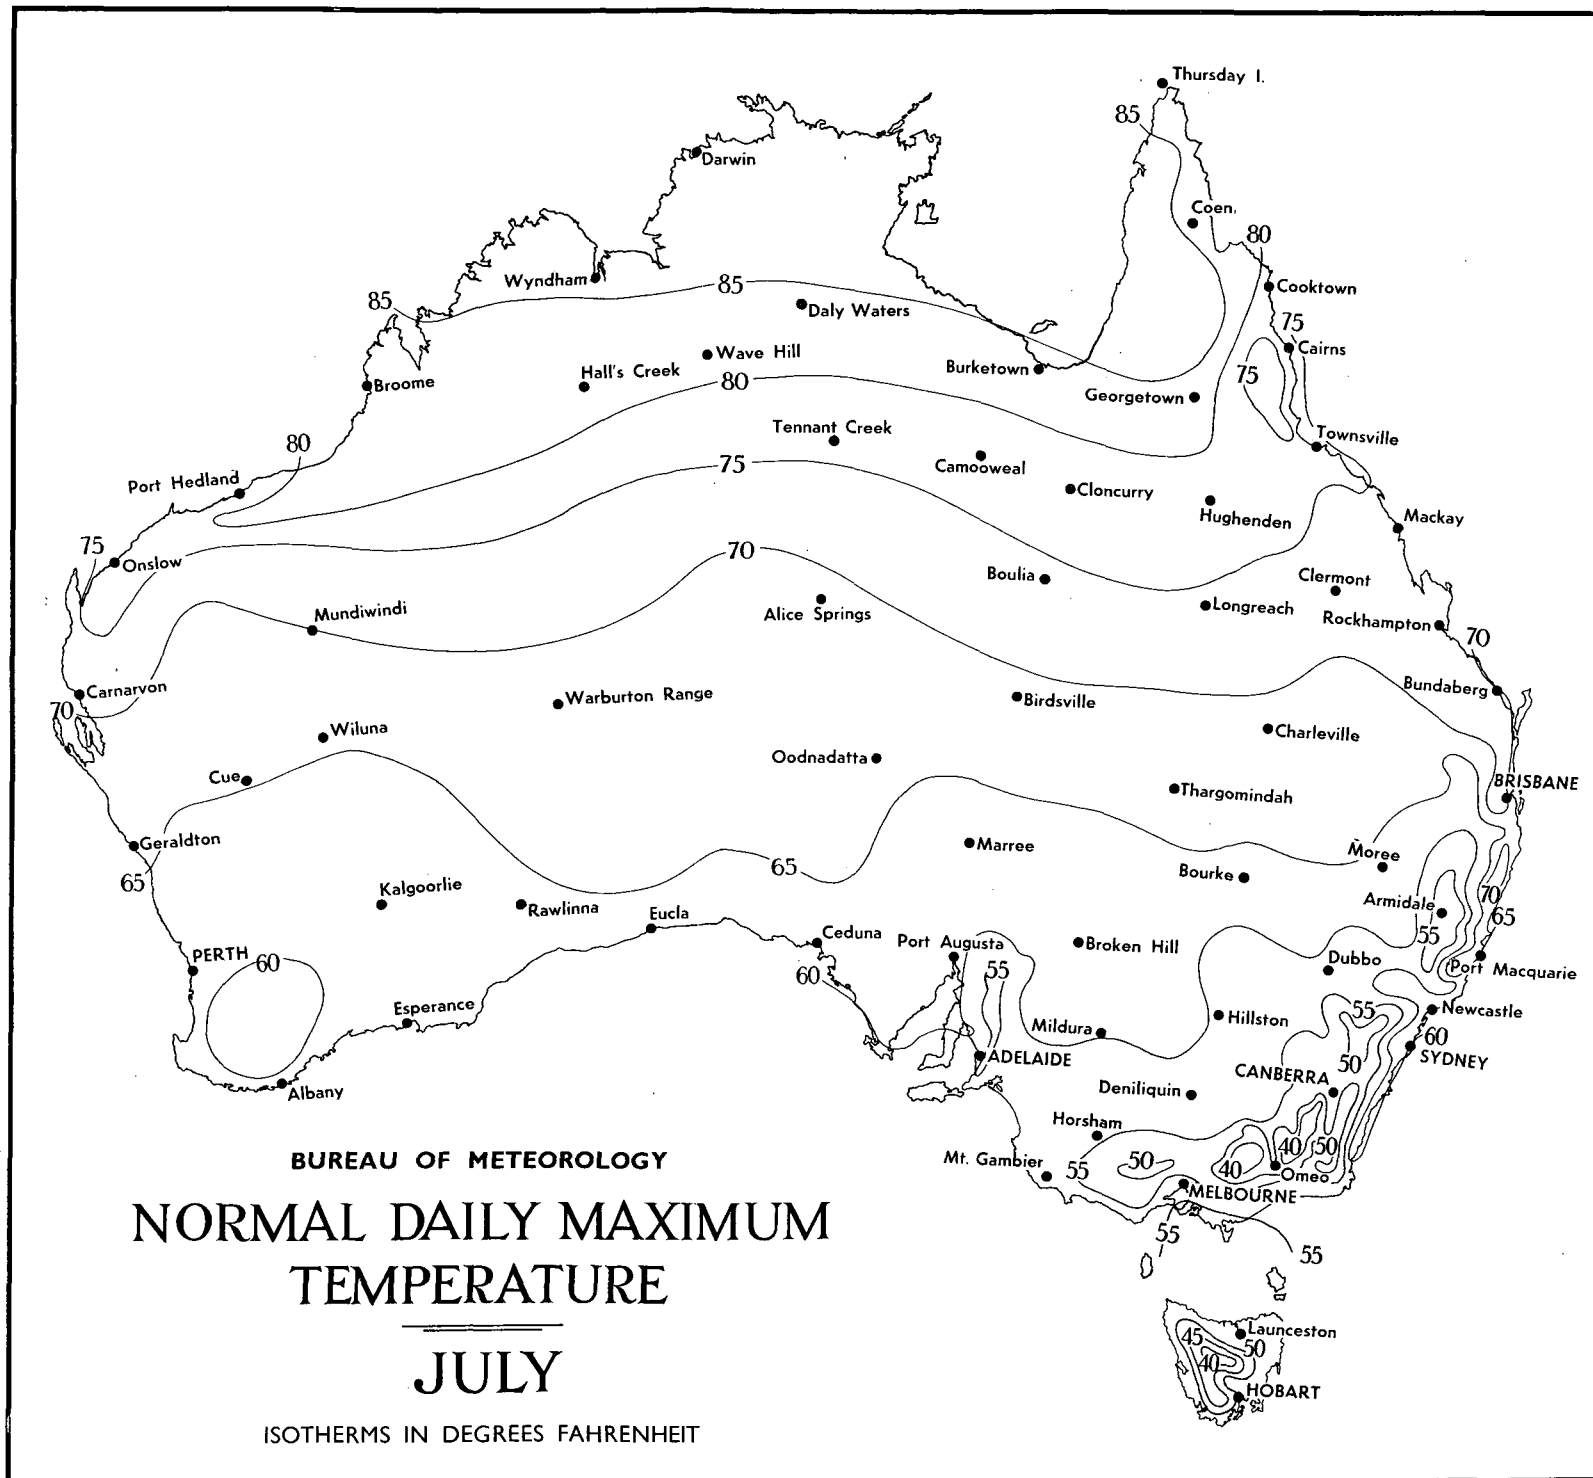

EXPLANATION-- THE GRAPHS SHOW THE AVERAGE RAINFALL IN EACH MONTH OF THE YEAR IN THE VARIOUS RAINFALL DISTRICTS. THE BOUNDARIES OF WHICH ARE SHOWN BY THE BROKEN LINES ON THE MAP. THE NUMBERS ON THE MAP REFER TO THE DISTRICTS. THE CORRESPONDING DISTRICT NAMES ARE GIVEN IN THE INSERT ON PAGE 89. THE COLUMNS FOR THE SUCCESSIVE MONTHS, JANUARY TO DECEMBER, RUN FROM LEFT TO RIGHT.

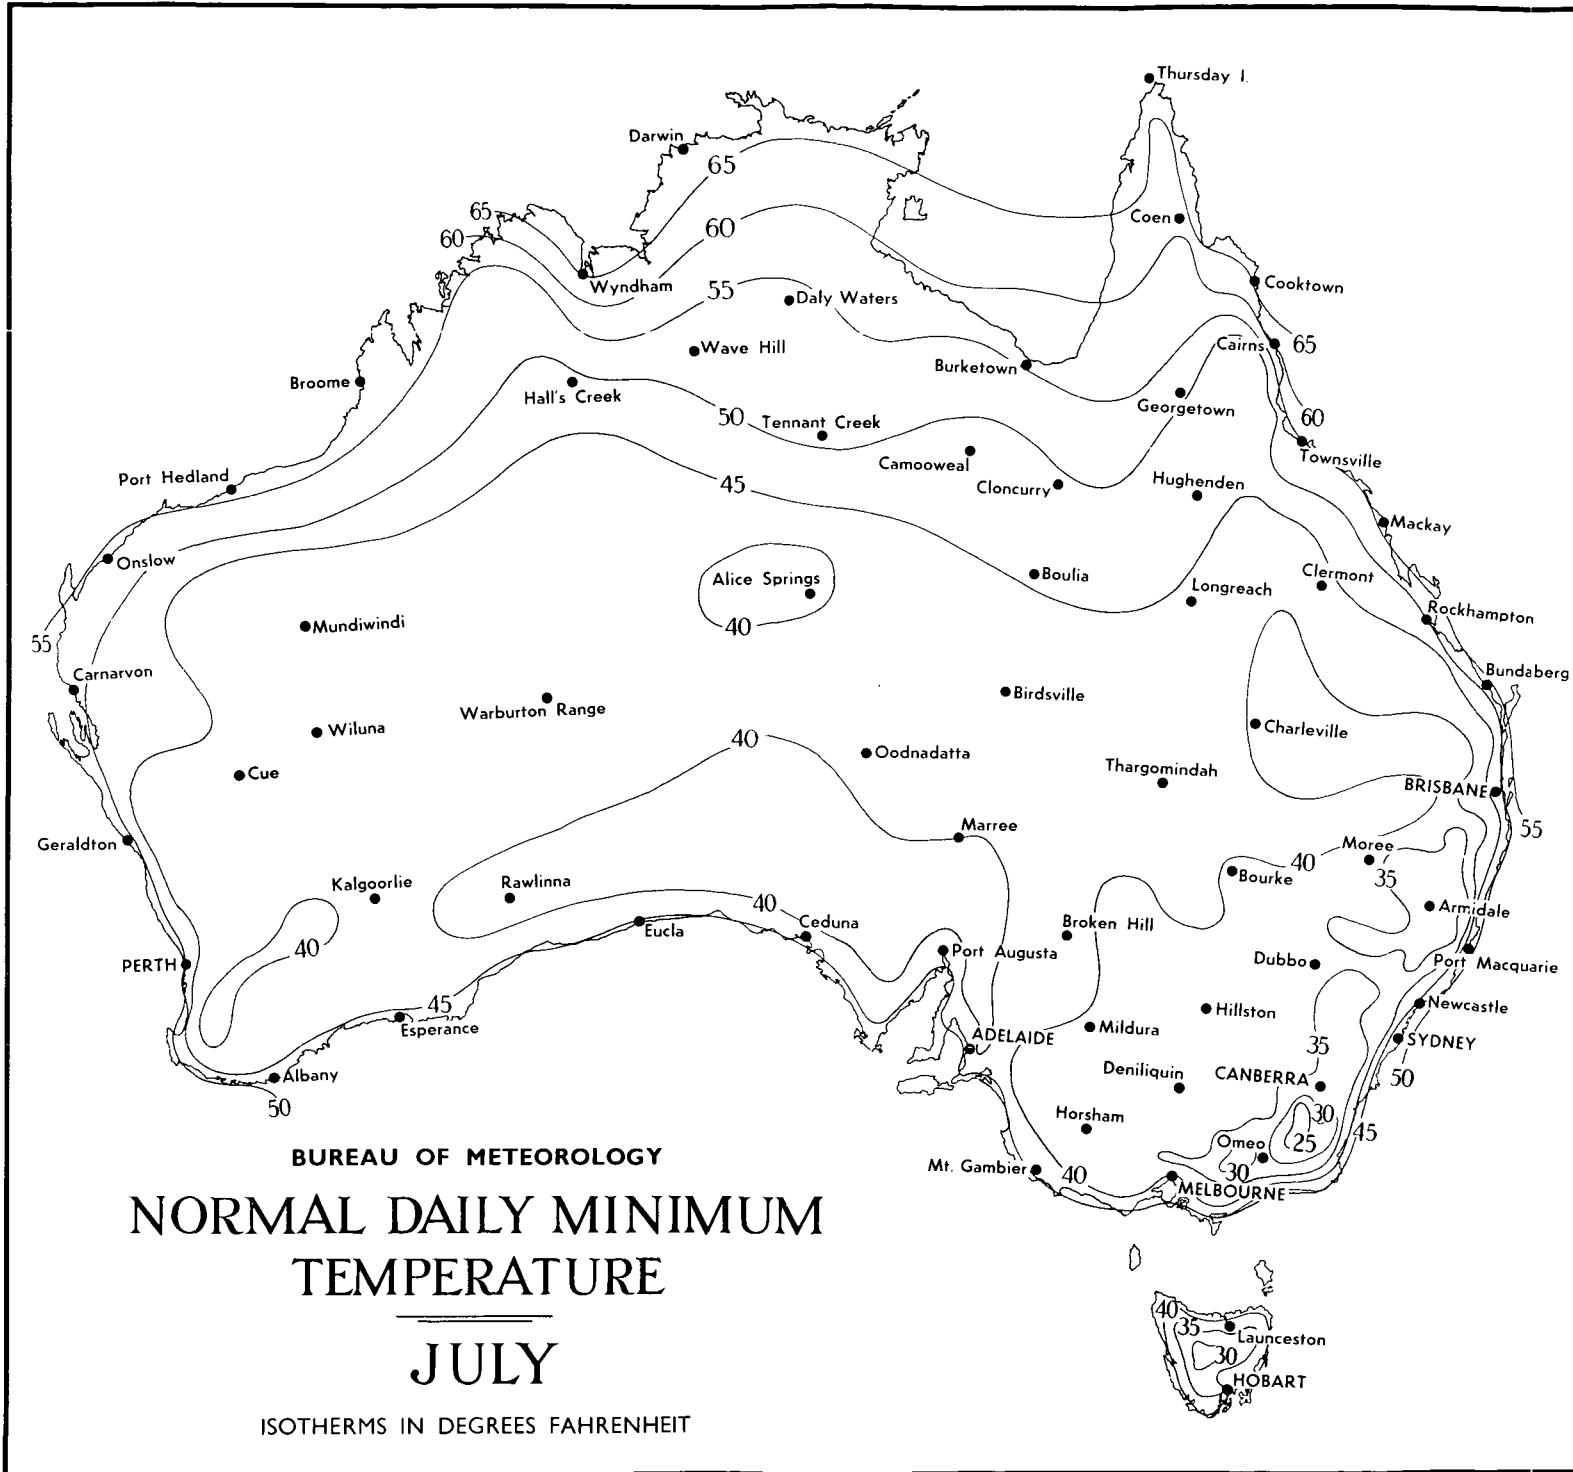

THE LENGTH OF A VERTICAL COLUMN REPRESENTS THE AVERAGE MONTHLY RAINFALL ACCORDING TO THE SCALE GIVEN BELOW.

SCALE OF FREQUENCIES PER CENT.

EXPLANATION.

The sides of the octagons face towards the cardinal and semi-cardinal points. Projecting from each side are twelve columns representing the twelve months of the year, and the lengths of the columns are proportional to the percentage frequencies of the winds from the given direction in the successive months, working round clockwise from January to December. The scale is shown above, and the outer octagons have been drawn, separated from the inner octagons by a distance representing 12%. The tops of the columns would all be on these outer octagons if winds from the eight directions were equally frequent and there were no calms. The percentage frequency of calms in the 12 months is shown by figures within the octagons. Small dashes within the inner octagons indicate months when the percentage of winds from that direction is practically zero.

(vii) *Snow and Hail.* For varying periods from late autumn to early spring snow usually covers the ground to a great extent on the Australian Alps above a level of about 4500 to 5000 feet, where in both New South Wales and Victoria ski-ing resorts operate throughout the season.

In Tasmania also, the highlands are frequently covered above the 3500 feet level for extended periods of the winter. There are, however, some years when snowfalls are much lighter than normal and even fail completely. Light snow has been known to fall occasionally as far north as the New England plateau in New South Wales (latitude 31°S.), and in exceptional seasons much of the dividing range from Victoria to Toowoomba (Queensland) has been covered above a level of about 4000 feet. In ravines around Mount Kosciusko small areas of snow may persist throughout the summer after a heavy winter fall. This winter snowfall of south-eastern Australia is important in aiding the reliable flow of many streams which are utilized in the hydro-electric schemes of the Snowy Mountains, northern Victoria, and Tasmania. Snowfall at low terrain elevations occurs from time to time, particularly in Tasmania and Victoria, but falls are usually light and rarely lie more than a few days.

Hail is most frequent in winter and spring along the south-eastern coastal region of the continent and in Tasmania, where it is usually of a relatively small size. Summer storms, however, which are quite frequent, particularly in the highland plateau regions of eastern Australia, often produce stones of large size and of destructive intensity. Very large stones capable of piercing light gauge galvanized iron are reported from time to time, and damage to fruit crops in south-eastern Australia from large hail stones is quite frequent.

(viii) *Floods.* In general, flooding in Australia is most pronounced on the shorter streams flowing from the Great Dividing Range into the Pacific Ocean along the seaboard of Queensland and New South Wales. These floods are particularly destructive on the more densely populated coast of New South Wales. The chief rivers in this area are the Tweed, Richmond, Clarence, McLeay, Nepean, Hawkesbury, Hunter and Shoalhaven, all of which experience quite frequent and considerable flooding. These floods occur chiefly in summer but may occur at any time of the year.

The great Fitzroy and Burdekin river systems in Queensland are also subject to floods during the summer wet season, while much of the heavy monsoon rain in northern Queensland flows southward through the normally dry channels of the network of rivers draining into Lake Eyre. This water may cause extensive floods over a vast area, but it is soon lost by seepage and evaporation and rarely reaches the lake in any quantity. The Condamine and the other tributaries of the Darling also carry considerable volumes of water south through western New South Wales to the Murray, and flooding along their courses occurs from time to time.

Flooding also occurs from time to time, usually in autumn, winter and spring, in the Murray-Murrumbidgee system of New South Wales and Victoria and on the smaller coastal streams of southern Victoria. In Tasmania, flooding of the north coast streams particularly the South Esk system, is common in the same seasons. In South Australia, some flooding has occurred in the lower reaches of the Murray owing to rainfall as far away as Queensland and south-eastern New South Wales. In the north of Western Australia and the Northern Territory, flooding of the coastal streams occurs frequently in summer but is not of such economic importance as the flooding of the eastern coastal streams of the continent, where many localities are more vulnerable to damage.

3. **Temperature.**—(i) *General.* The accurate measurement of the temperature of the air is not easy, as temperature sensitive devices also absorb radiant heat or can lose heat by radiation. Following international practice, air temperature measurements in Australia are made by thermometers freely exposed in a double louvered box (the Stevenson screen).

Maximum and minimum air temperatures during each day are measured by means of special thermometers exposed in the Stevenson screen. The minimum air temperature at the surface of the earth as the ground cools at night by outgoing radiation (the terrestrial or grass minimum) is also measured at many stations.

Such temperature recordings measure a theoretical physical quantity which bears only an indirect relation to the comfort or discomfort a person feels. Temperature measurements alone may be regarded only as a first approximation to a measurement of personal comfort. The actual degree of personal comfort is related to a number of meteorological factors such as air temperature, windspeed, humidity, exposure to the sun's rays, and the temperature of surrounding surfaces (i.e. the radiation balance of the body).

In addition to these quantities which are all physically measurable, a number of personal quantities are involved which vary greatly from person to person and which cannot be precisely expressed, e.g., race and acclimatization, age and state of health, type of clothing, and degree of physical activity in work and recreation.

Conditions thus vary very greatly for a particular individual even in a fixed location, so that it is difficult to describe general comfort variability uniquely throughout a region as varied climatically as Australia. A number of indexes which attempt to incorporate some of the factors described above have been used experimentally from time to time, and further research continues on this very difficult problem.

Generally speaking, however, there is an increase in discomfort northward within the tropical regions of Australia in summer, owing to the heat and high absolute humidity which reach a maximum in the extreme north of the continent. Such conditions are, however, ameliorated to a large extent in highland areas such as the Atherton Tablelands in Queensland. No part of Australia is uncomfortably hot in winter, and only in a small area of the Australian Alps and highland Tasmania does bodily strain due to cold exist in winter.

The history of the settlement of the northern regions of Queensland and the Northern Territory indicates that with accelerating development of studies and experience in the arrangement of living and working accommodation, clothing, and general way of life, the effects of extremes of climate can be minimized.

For some further discussion of the problems of temperature and comfort conditions reference may be made to Ashton, H. T., *Meteorological Data for Air conditioning in Australia*, Bureau of Meteorology Bulletin No. 47 (1964).

(ii) *Average Seasonal Temperature Distribution.* The maps on pages 36–9 show the normal daily maximum and minimum temperature for January and July, which may be taken as indicative respectively of the summer and winter seasons in Australia. Further detailed temperature data are presented on pages 55–64 for the capital cities and more important country towns of the Commonwealth.

On the basis of average annual mean temperatures, and latitude for latitude, Australia is somewhat cooler than the other land masses of the southern hemisphere and considerably cooler than the same latitudes in the large continental areas of the northern hemisphere. This is due to the insular nature of Australia and the stronger general circulation of the atmosphere in the southern hemisphere resulting in the transport of higher latitude (cooler) air into the subtropical regions.

July is the month with the lowest mean temperature in all parts of the continent, while the month with the highest mean temperature varies from February in Tasmania and southern Victoria to December in the northern part of the continent and November in Darwin.

The lateness of the month of highest average temperature in the extreme south of the continent is due in part to the effect of the south Indian Ocean, where the sea surface temperature reaches its maximum in February. The cooler period of the late summer in the north is due largely to increased cloudiness associated with the inflow of north-west winds with the onset of the monsoon season.

In January, average maximum temperatures exceed 95° F. over a vast area of the interior of the continent, and over large areas exceed 100° F. The hottest part of Australia is situated in the north of Western Australia around the Marble Bar and Nullagine area, where the daily maximum screen temperature during the summer frequently exceeds 100° F. for weeks at a time.

The marked change of maximum temperature in summer with distance from the sea, in areas close to the coasts, particularly along the Great Australian Bight and the Indian Ocean coast of Western Australia, is due to the penetration inland of the vigorous sea breezes which are initiated by the considerable temperature contrast between land and sea surface temperatures. The 75° F. isotherm of January mean maximum temperature skirts the southern coast of the continent from south-western Western Australia to Gippsland.

In January the mean minimum temperatures in the tropics, except for some highland regions, exceed 72° F. with a gradual decrease southward to values of 55° F. in Victoria and 50° F. in Tasmania. Highland regions in the south have mean values of 45° F. and lower.

In July a more regular latitudinal distribution of mean maximum temperature is evident, only the extreme north of the continent having mean maxima higher than 80° F. Values lower than 60° F. are general over the south-eastern part of the continent, with mean maxima falling below 40° F. in small alpine areas. Average night minimum temperatures in July fall below 45° F. in areas south of the tropics and away from the coast. Alpine regions again record the lowest temperatures with some areas experiencing means lower than 25° F.

(iii) *Extreme Variation and Daily Range.* Only at a few inland places in Australia does the absolute range of temperature (i.e. the range from the highest maximum to the lowest minimum) exceed 100° F. Generally it is in the range 70° F. to 90° F. in the inland areas and somewhat less on the coasts. The highest temperature recorded in Australia was 127.5° F. at Cloncurry (Queensland) on 16th January, 1889, and the lowest -8° F. at Charlotte Pass in the southern Alps on 14th July, 1945, and again on 22nd August, 1947. The world record maximum temperature is 136° F. at Azizia (Tripoli) on 13th August, 1922 and the world record minimum temperature -126.9° F. at Vostok on the Antarctic plateau on 24th August, 1960.

(a) *High Temperatures.* Heat waves with a number of successive days higher than 100° F. are relatively common in many parts of Australia. With the exception of the north-western coast of Western Australia, however, most coastal areas do not usually experience more than a few days in succession of such conditions. The frequency of such conditions increases inland, and periods of up to twenty days have been recorded over most of the settled areas. This figure increases in western Queensland and north-western Western Australia to more than 60 days in places. The central part of the Northern Territory and the Marble Bar-Nullagine area of Western Australia have recorded the most prolonged heat waves for the Australian region. The longest consecutive period of daily maxima greater than 100° F. was 160 consecutive days recorded in Marble Bar during the summer of 1923-24.

(b) *Frosts.* Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water (32° F.), and a ground frost is regarded as having occurred when the grass thermometer has fallen below 30.4° F. However, as terrestrial minima are not recorded at all stations, it is usual for statistical purposes to regard the registration of a screen thermometer of 36° F. as indicating a "light" frost. A map showing frequency of days with screen minima higher than 36° F. (i.e. the frost free period) is reproduced on page 40. A "heavy" frost is taken as a screen reading of less than 32° F. A "black" frost occurs with a combination of low temperature and low humidity, and, although frost crystals are not observed on the ground, damage takes place to the plant cells by the freezing and expansion of the moisture they contain.

The frequency of frost depends largely on altitude, latitude, and proximity to the sea, and locally, to a very large extent, on even minor variations in contour of the land. The parts of Australia which are most subject to frost are the eastern highlands from north-eastern Victoria to the western Darling Downs in southern Queensland. Most stations in this region experience more than ten nights a month with readings of 32° F. or under for three to five months of the year. On Tasmania's Central Plateau similar conditions occur for three to six months of the year. Heavy frosts are comparatively infrequent in Western Australia, except in parts of the south and south-west. In South Australia frosts are most frequent in the agricultural areas of the south-east.

Frosts may occur within a few miles of the coast over the whole continent except the Northern Territory and most of north Queensland. Regions subject to frost at all times of the year comprise the whole of Tasmania, the tablelands of New South Wales, much of inland Victoria particularly the north-east, and a small part of south-western Western Australia.

Over most of the interior of the continent, and on the highlands of Queensland as far north as the Atherton Plateau, frosts commence in April and end in September, but they are infrequent in these months. Minimum temperatures below 32° F., are experienced in most of the sub-tropical interior in June and July.

For further details of frost conditions in Australia reference should be made to Foley, J. C., *Frost in the Australian Region*, Bureau of Meteorology Bulletin No. 32 (1945).

4. Humidity and Saturation Deficit.—The amount of water vapour in the atmosphere is mainly determined by the temperature. The higher the temperature the more water vapour may be contained in a given mass of air. Vapour pressure is the pressure exerted by the water vapour of the atmosphere. At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the air. When this limit is reached the air is said to be saturated and the pressure of the water vapour is the saturation vapour pressure. Both these quantities may be expressed in millibars or in inches of mercury. The usual measure of humidity or moistness of the air is the relative humidity (which is measured by means of wet and dry bulb screen thermometers). This term is applied to the ratio of the existing vapour pressure to the saturated vapour pressure at the existing temperature and expressed as a percentage. However, from the point of view of physical comfort and in many industrial and agricultural problems, the more important measure of atmospheric water vapour is the absolute humidity or the actual mass of moisture contained in a fixed mass of air.

The annual variation of vapour pressure for regions outside the tropics closely follows that of temperature. However, the mean relative humidity in the temperate regions is generally highest in winter and lowest during the summer. In northern Australia the highest relative humidity occurs during the rainy summer season. The relative humidity variation during the day closely follows the diurnal variation of temperature, being highest with low temperatures and lowest with high temperatures. The relative humidity at 9 a.m. for Australian conditions may be considered as a close approximation to the mean for the whole day. In the tables for the capital cities, pages 55–62, the mean monthly vapour pressure and relative humidity for 9 a.m., together with the monthly extremes, are listed. The order of the stations in descending values of mean annual vapour pressure at 9 a.m. is Darwin, Brisbane, Sydney, Perth, Melbourne, Adelaide, Canberra, and Hobart, while the annual mean of the 9 a.m. relative humidities diminishes in the order Hobart, Melbourne, Sydney, Darwin, Brisbane, Canberra, Perth, and Adelaide.

Another method of humidity measurement which may be employed is the saturation vapour deficit. This may be defined as the difference between the saturation vapour pressure and the actual vapour pressure both referred to the dry bulb temperature. It is thus a measure of the drying power of the air and like vapour pressure may be expressed in millibars or inches of mercury.

In January the mean saturation deficit at the mean temperature for the month has a maximum value of over 0.90 inches in the central parts of Western Australia and in south-eastern Queensland. Gradual decreases occur towards the coast, where values close to the north, east, and south coastlines are around 0.20 inches. On the western coast values are somewhat higher, and a strong gradient exists in the saturation deficit in the narrow region bordering the Indian Ocean. In July the variation is less, with maxima of 0.40 inches in the dry north of the Northern Territory and Western Australia slowly decreasing generally to the south, with values over most of the south-east and extreme south-west of the continent being less than 0.10 inches. Extremely low values (less than 0.025 inches) exist in July over the highlands of south-eastern Australia and Tasmania.

5. **Evaporation.**—Evaporation is a process which results in the transfer of water vapour from the surface of the earth into the atmosphere and takes place from free water surfaces, from moist soil, and by the process of transpiration from plants. The figures quoted in this section, however, refer to evaporation as measured from an Australian standard evaporation tank. This instrument consists of a copper tank surrounded by a six-inch water jacket sunk in the ground to a depth of 36 inches and exposing at ground level a water surface 36 inches in diameter from which the evaporation loss of water is measured. Earlier estimates of Australian evaporation data were supplemented by calculations based on an empirical formula dependent on saturation deficit, but more recent measurements have enabled charts of monthly and annual evaporation to be constructed wholly from observational records. Such a map is that on page 41. The rate and quantity of evaporation in any territory are influenced by the net radiation, prevailing temperature, vapour pressure, and turbulent diffusion by wind.

In Australia the study of evaporation is of great importance, since in its drier regions water conservation must be practised by the use of tanks and dams. The magnitude of the economic loss by evaporation may be appreciated from the map on page 41, which shows that the yearly amount varies from 20 inches over the highland areas of central Tasmania to more than 130 inches in the northern and north-western part of South Australia.

Over an area of some 70 per cent. of the continent, comprising most inland districts and extending to the coast in the north-west of Western Australia and to the head of the Great Australian Bight, the rainfall does not exceed the evaporation loss in any month of the year. The central and north-western portions of the continent experience evaporation far in excess of their rainfall. Vegetation over these areas is characterized by acacia, scrub steppe, and arid scrub, while many areas are merely sand hills and stony desert.

Over many of the drier areas, however, particularly in the inland areas of south-eastern Australia, the loss of rainfall by evaporation is made good to some extent by the development of irrigation schemes. Some of these schemes, such as those at the Murrumbidgee Irrigation Area in New South Wales and at Mildura in Victoria and Renmark in South Australia, have been very successful. The Snowy Mountains Hydro-electric Scheme will also result in the large scale supply of water from the south-eastern highlands of Australia for use in the drier areas to the west of the ranges in New South Wales and Victoria. The future further development of such schemes as these holds promise for the reclamation of many marginal areas in Australia, which because of low rainfall and high evaporation are at present of little economic value.

Since the loss by evaporation depends largely on the net radiation absorbed and consequently on the extent of the exposed area, tanks and dams so designed that the surface area shall be a minimum are advantageous. Further, the more protected they are from the direct rays of the sun and from winds by means of suitable tree planting the less will be the evaporation loss.

The Mansfield process for the treatment of tanks and dams by a mono-molecular chemical film which materially reduces evaporation is a recent development which is already giving beneficial results, particularly on large water storage areas. Such improvements are of considerable importance to the pastoralists of the drier regions of Australia and to water supply authorities.

Further information on evaporation may be found in Hounam, C. E., "*Evaporation in Australia*", Bureau of Meteorology Bulletin No. 44 (1961).

6. **Sunshine and Cloud.**—The proportion of the sky covered by cloud is of considerable meteorological and climatological importance. A cloud cover inhibits both incoming and outgoing radiation and thus profoundly affects the temperature distribution and other factors at the earth's surface. Cloud amount is measured in eighths of the sky covered.

In Australia the seasonal changes in cloudiness correspond closely to that of rainfall. In the southern or more temperate parts of the continent, particularly in the coastal and low lying areas, the winter months are generally more cloudy than the summer. This is due to the formation of extensive areas of stratiform cloud and fog during the colder months, when the structure of the lower layers of the atmosphere favours the physical processes resulting in this type of cloud. A particularly strong annual periodicity exists in the monsoonal regions of northern Australia, where it is heavily clouded during the summer wet season and practically cloudless during the winter "dry". Cloudiness is higher near coasts and on the windward slopes of the mountains of eastern Australia and is a minimum over the dry interior parts of the continent.

A close relationship exists between cloud amount and number of sunshine hours, and it is possible to estimate from cloud data the equivalent number of sunshine hours over a given period. These data can be incorporated with records of direct measurement of sunshine hours, and approximate distribution maps produced for Australia. Maps of the mean sunshine distribution for January and July are reproduced on pages 42-3 and indicate the main features of the variation over Australia in these months.

Except for Tasmania and a narrow fringe bordering the southern, eastern, and northern coasts, the greater part of the continent receives more than 3,000 hours of sunshine each year, and in Central Australia and the mid-western coast of Western Australia, totals in excess of 3,500 hours occur. The extreme southern coast receives in the main 2,000 to 2,500 hours annually, while the eastern coast regions of New South Wales and Queensland receive 2,500 to 3,000 hours. A minimum of less than 1,750 hours occurs on the western coast and highlands of Tasmania.

Mean amounts of cloud for each month at the capital cities are included in the tables on pages 55-62, as are the mean daily hours of sunshine. The latter figure is a good single measure of the relative climatic characteristics of the individual cities for different months of the year.

7. Wind.—Australia lies in those latitudes of the southern hemisphere where it is influenced largely by two wind systems:

- (a) the south-east trade winds blowing on the equatorial side of the mid-latitude anticyclones; and
- (b) the westerlies south of the mid-latitude anticyclones in which successive low pressure systems move eastward over the south Indian Ocean.

The only pronounced seasonal variations of atmospheric pressure in the middle and high latitudes of the southern hemisphere are related to the latitudinal shift in the axes of the subtropical high pressure systems and to the change in the tracks of the migratory anticyclones. The latter systems move generally from west to east in the Australian region between the semi-permanent oceanic anticyclones of the Indian and Pacific Oceans. The mean path of these systems lies over southern Australia during the summer but moves northwards during the winter with the thermal equator. The movement is only of a few degrees of latitude but is of very great importance to the climate of the Australian continent. During the summer months, when the anticyclones move on a more southerly track, the south east trades affect the whole coast of eastern Australia north of around latitude 30° S., the westerlies retreating to higher latitudes, and conditions are more settled over southern Australia which then lies close to the axis of the anticyclones. In winter the anticyclones move further north, the trades affect only the northern parts of the continent, and southern Australia is exposed to the westerlies of the south Indian Ocean.

In summer, with the retreat of the anticyclones to the south, the whole of northern and north-western Australia is exposed initially to light wind systems, and then during the period from December to April to the effects of the north-west monsoon. This process, which is associated with an inflow of north-west winds and intensive rains, is not so regular or persistent as the south-west monsoon of South-East Asia. However, it is sufficiently regular a feature of the climate of northern Australia to be designated as the north-west season, or, as it is best known in the area, "the wet". Its influence affects areas as far south as central Queensland, but southern Queensland and the area east of the Great Dividing Range are largely still under the influence of the south-east trades. Fringe or marginal areas on the southern limits of the monsoonal penetration over the continent have a shorter and more uncertain "wet" season, which in some years fails to appear at all. With the northward advance of the anticyclones in autumn, the monsoon gives way again to the trades, and "the dry" of northern and north-western Australia commences.

The general features of these wind patterns may be seen in the wind rose diagrams of pages 44-5. It is important, however, to note the dynamic nature of the atmosphere, and that the continual growth, decay and motion of the pressure systems result in a wide diversity of wind-flow types. Descriptions of wind conditions for particular geographical areas and seasons can thus be only of a very generalized kind. Further, local features can also be imposed on the overall wind pattern-channelling of winds due to topography (e.g. the high frequency of north-west winds in Hobart) and the marked summer sea breeze characteristics of most of the Australian coast, particularly near the Great Australian Bight as shown in the diagrams of 3 p.m. wind frequencies.

8. Storms and Tropical Cyclones.—In general there are two types of weather system in Australia which produce very strong winds and heavy rainfalls over large areas of the continent:—

- (a) the active depressions which move westwards over the south Indian Ocean; and
- (b) the tropical cyclones or hurricanes of north-eastern and north-western Australia.

During the winter the southern shores of the continent are subject to the deep depressions of the southern low pressure belt. They are felt most severely over the south-west of Western Australia, the south-east of South Australia, southern Victoria, and Tasmania, and may move inland in all these regions bringing strong winds and heavy rainfall. Further extensions of this type of system frequently develop close to the coast of New South Wales, often bringing severe weather to this region and to southern Queensland. These are generally known as "east coast lows".

The frontal systems (i.e. the narrow zones characterized by cloud and bad weather separating two air masses of different density) which are associated with these depressions vary widely in character. A common type in south-east Australia is a cold front located in a Λ shaped trough. Such a system usually brings very strong north to north-west winds in advance of the front with a very abrupt backing of the wind to colder west to south-westerly winds after the frontal passage.

Such frontal passages are in their most severe form associated with thunderstorms and line squalls, heavy rain, and a change to cold winds and showers. These violent changes with the passage of a cold front and strong southerly winds frequently affect the New South Wales coast as far north as Newcastle during the winter, and are popularly known as "southerly busters".

The most extensive rains of inland Australia occur when moist tropical air which has moved inland is lifted by convergence ahead of a slow moving colder air mass moving from the south Indian Ocean.

The coast of Queensland, particularly the section from Cooktown to Mackay and the adjacent waters, is subject to visitations by tropical cyclones (the "hurricanes" of the Caribbean and "typhoons" of the China Sea). These destructive systems can affect this region from December to April, normally forming in the Coral Sea, moving south-west close to the coast and then passing away to the south-east into the Pacific. They may, however, from time to time cross the coast and bring torrential rain and violent winds (often more than 100 m.p.h.) to the coastal regions.

Similar systems affect the north-west coast of Western Australia where they bear the local name of "willy willies", a name which is, however, often used generally in Australia for minor local whirlwinds or dust devils. The season in this region generally lasts from November to April, the storms originating in the Timor or Arafura Seas travelling usually south-west and approaching the coast most commonly between latitudes 20°S. and 22°S. Thence the systems may move southward following the coast, or sometimes cross inland bringing high rainfalls in the otherwise dry interior of the continent. A further region which is affected somewhat less frequently by tropical cyclones is the coast of Arnhem Land in the Northern Territory and the waters and coasts of the Gulf of Carpentaria.

Tropical cyclones, in general, soon lose their intensity on crossing from sea to land, and although the wind force rapidly abates, they are still capable of producing the heavy rainfall which leads to flooding of coastal rivers, damage to stock and property, and general disruption of transport.

Thunderstorms which bring local heavy rain and strong winds are common to most of Australia. They are also of particular importance because of the lightning damage which they cause to power transmission lines, and have been extensively studied for the purpose of siting electrical installations as far as possible in areas of low thunderstorm occurrence.

The map on page 46 shows the number of days annually on which thunder is heard, which is a better observational criterion than lightning observed.

The region of maximum thunderstorm activity is the extreme north-west of the continent and the region south-east of the Gulf of Carpentaria. In the more settled areas, maximum thunderstorm occurrence is in central western and south-eastern Queensland and the high-land areas of New South Wales. The minimum number of storms occur over the interior of South Australia, western New South Wales, and eastern Tasmania.

9. **Climatological Tables.**—The averages and extremes for a number of elements which have been determined from long series of observations at the Australian capitals up to and including the year 1963 are given in the following pages, together with more limited data for the larger country towns of the Commonwealth.

NOTE.—The following points apply throughout.

- (a) Where records are available, mean or average values have been calculated on a standard period of 30 years from 1911 to 1940.
- (b) Extreme values have been extracted from all available years of actual record but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

CLIMATOLOGICAL DATA: PERTH, WESTERN AUSTRALIA

* NOTE.—The average index of mean relative humidity has been derived from the ratio of the average 9 a.m. vapour pressure to the saturation vapour pressure at the average mean temperature of the month. Being thus related to the mean temperature this value of relative humidity is a good approximation to the daily mean.

12. The Weather of 1964 (December, 1963 to November, 1964).—The following is a brief summary of weather experienced during the four seasons ended in November, 1964. A map showing the rainfall distribution for 1964 is to be found on page 34.

In the summer of 1963-64 temperatures were close to normal over most of the continent, but rainfall over most areas was less than 80 per cent. of the normal amount. The incidence of bush and grass fires was less than had been feared, and not many large fires occurred. Cyclone *Audrey* caused heavy rainfall and flooding in south-west Queensland and northern New South Wales, and wind damage to towns and station properties along its path between Windorah and Goondiwindi. Cyclone *Dora* caused further flooding and damage in the Gulf Country of Queensland, and *Bessie* produced torrential rain in the Kimberleys in Western Australia. The pastoral and agricultural conditions in Australia at the end of summer were, in general, reasonably good apart from a wide belt of the Northern Territory and western Queensland where conditions were poor and bordering in some areas on drought.

Autumn in 1964 was generally warmer than average throughout Australia with rainfall not markedly different from normal over most of the continent. Cyclone *Katie* brought excellent rains to parts of coastal Western Australia, but in western Queensland, central Australia, and the Finke district of South Australia the drought conditions had worsened. Pastoral and agricultural conditions were, however, good in most parts of the continent. A very large sugar crop was harvested in North Queensland and a record apple crop reported from Tasmania. Large bush fires in March caused damage in southern New South Wales and in Victoria, and widespread dust storms occurred in the Mallee on several days during the season. Northern coastal streams in New South Wales were flooded in early March and flash flooding occurred elsewhere in that State during the season. The first substantial snow of the year fell in the Snowy Mountains late in March.

In winter, 1964, conditions were warmer than normal over almost the whole continent and much higher than normal rainfall was recorded over most of the south-western and south-eastern parts of Australia.

In many parts of Victoria it was the wettest winter since 1955. However, the drought conditions in the interior of Queensland, South Australia, and the Northern Territory continued, though with some relief in parts of Queensland. By contrast, rain and wind caused some damage to citrus, vegetable and grain crops in Victoria, South Australia, and Tasmania, and there were heavy falls of snow on the Southern Alps and in Tasmania. From 9th to 13th June, disastrous flooding occurred on the Hawkesbury-Nepean and the Hunter rivers in New South Wales and on 12th and 13th July, Launceston and north-east Tasmania experienced the worst flooding since 1929. Winter flooding also occurred in the south-west of Western Australia and Victoria. Little bushfire damage occurred in Queensland and northern New South Wales.

Days in spring, 1964 were cooler than normal over most of the continent, and extensive and valuable rainfall over the greater part of Australia was the feature of the season, particularly in the eastern half where many areas recorded rainfall considerably in excess of normal. The rains relieved conditions to a large extent in many areas of the Northern Territory and Queensland, while in western New South Wales it was considered to have

been the best season for many years. However, dry conditions still continued in the north of Western Australia and in parts of the Northern Territory. Although rust appeared in some crops, an excellent wheat crop was harvested in all States and barley and oat crops were also good. Flooding occurred in many parts of Victoria in September and mid-October. A violent squall on Port Phillip resulted in the loss of three lives in boating disasters on September 22nd and extensive wind damage occurred at Healesville (Victoria) on November 30th.

CHAPTER III

GENERAL GOVERNMENT

§ 1. Scheme of Parliamentary Government

1. **General.**—Under Section 1 of the Commonwealth of Australia Constitution, the legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State, there is a State Governor who is the representative of the Sovereign for the State and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office and by the instructions which inform in detail of the manner in which his duties are to be fulfilled. The Legislature in each State was bi-cameral until 1922, when the Queensland Upper House was abolished and the Parliament became uni-cameral. In the bi-cameral Parliaments, the Upper House is known in the Commonwealth Parliament as the Senate, and in the State Parliaments as the Legislative Council, while the Lower House is known in the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly. In Queensland, the Legislative Assembly constitutes the legislature. The legislative powers of the Parliaments are delimited by the Commonwealth and State Constitutions. The Assembly, which is the larger House, is, in all cases, elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of the State concerned, the constituencies being differently arranged and, formerly, some property or special qualification for the electorate being required. In Victoria, however, under the *Legislative Council Reform Act 1950** adult suffrage was adopted for Legislative Council elections. In the case of New South Wales, the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament, the qualifications for the franchise are identical for both Houses, extending to adult British subjects who have lived in Australia for six months continuously.

For further information on each State Parliament and the qualifications for members and for electors see *Year Book No. 50, pages 69–72, and earlier issues.*

2. **The Sovereign.**—(i) *Accession of Queen Elizabeth II.* On 7th February, 1952, the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2nd June, 1953.

(ii) *Royal Style and Titles Act 1953.* Following a conference of Prime Ministers and other representatives of the British Commonwealth in London in December, 1952, the passing of the *Royal Style and Titles Act 1953* gave Parliament's assent to the adoption by the Queen, for use in relation to the Commonwealth of Australia and its Territories, of the following Royal Style and Titles:—"Elizabeth the Second, by the Grace of God of the United Kingdom, Australia and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith."

3. **Powers and Functions of the Governor-General and of the State Governors.**—

(i) *Governor-General of the Commonwealth.* As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen. Other powers and functions are conferred on the Governor-General by the Constitution. Powers which have been so assigned or conferred include, among others, the power to grant pardons and to remit fines for offences against the laws of the Commonwealth; to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth; to appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives; to cause writs to be issued for general elections of members of the House of Representatives; to assent in the Queen's name to a proposed law passed by both Houses of the Parliament or withhold assent, or to reserve the law for the Queen's pleasure, or to return the proposed law to the House in which it originated and transmit therewith any amendments which he may recommend; to exercise the executive power of the Commonwealth; to choose and summon Executive Councillors, who hold

* And in Western Australia under the *Constitution Acts Amendment Act (No. 2), 1963.*

office during his pleasure; to appoint Ministers of State for the Commonwealth. In addition, the command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General, as the Queen's representative.

Most Acts of the Commonwealth Parliament provide that the Governor-General may make regulations to give effect to the Act. The Governor-General may also be authorized by statute to issue proclamations—for example, to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. He has been given power by statute to legislate for certain Territories of the Commonwealth.

Under the conventions of responsible government obtaining in British Commonwealth countries, the Governor-General's functions are exercised generally on the advice of Ministers of State.

(ii) *Governors of the States.* The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates.

The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the Governor's Instructions given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition, they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown.

In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

(iii) *Holders of Office.* For the names of the Governors-General since the inception of the Commonwealth and the present State Governors, see § 3, page 74.

4. **The Cabinet and Executive Government.**—(i) *General.* Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as "Cabinet" or "responsible" government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates chiefly by means of constitutional conventions, customs, or understandings, and through institutions that do not form part of the legal structure of the government at all. The constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall either be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case, he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained below. The whole policy of a Ministry is, in practice, determined by some or all of the Ministers of State, meeting without the Governor-General or Governor under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

(ii) *The Cabinet.* This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, until January, 1956, all Ministers were members of the Cabinet. Since then, however, although in the States all Ministers are members of the Cabinet, the Commonwealth ministry is made up of twelve senior Ministers, who constitute the Cabinet, and other Ministers* of non-Cabinet rank who attend meetings of the Cabinet only when

* Thirteen, as from 4th March, 1964.

required, as, for example, when the business of the Cabinet concerns their departments. As Ministers are the leaders of the party or parties commanding a majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact that all Ministers are members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.

(iii) *The Executive Council.* This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State must be members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings, for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The meetings of the Executive Council are formal and official in character, and a record of proceedings is kept by the Secretary or Clerk. At Executive Council meetings, the decisions of the Cabinet are (where necessary) given legal form, appointments made, resignations accepted, proclamations issued, and regulations and the like approved.

(iv) *The Appointment of Ministers.* Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. When a Ministry resigns, the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to "form a Ministry"—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

(v) *Ministers in Upper and Lower Houses.* The following table shows the distribution of Ministers in the Houses of each Parliament in December, 1964.

AUSTRALIAN PARLIAMENTS: MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER, 1964

Ministers with seats in—	C'wealth (a)	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Total
The Upper House ..	5	2	5	(b) 13	3	2	1	17
The Lower House ..	20	14	9	13	5	8	8	75
Total ..	25	16	14	13	8	10	9	92

(a) By the *Ministers of State Act 1964*, the number of Ministers was increased to 25, of whom 5 were senators, as from 4th March, 1964. (b) Abolished in 1922.

For the names of the occupants of ministerial office in each of the Parliaments of Australia in December, 1964, see § 3 of this chapter, pages 76–9. Subsequent changes will be found in the Appendix to this volume.

(vi) *Numbers and Salaries of Commonwealth Ministers.* Under sections 65 and 66, respectively, of the Constitution of the Commonwealth, the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, "until the Parliament otherwise provides".

Subsequently, the number and salaries have been increased from time to time, and from 1964 the annual sum payable for salaries has been fixed at £95,650 and the number of Ministers at 25. An additional ministerial allowance of £4,000 a year has been payable to the Prime Minister since 1964, and an additional ministerial allowance of £1,800 a year for senior Ministers and £1,500 a year for junior Ministers.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (see para. 5 following).

5. Number and Salary of Members of the Legislatures, Australian Parliaments, December, 1964.—The following table shows the number and annual salary of members in each of the legislative chambers in December, 1964.

**AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES,
31st DECEMBER, 1964**

Members in—	C'wealth	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Total
NUMBER OF MEMBERS								
Upper House ..	60	60	34	(a)	20	30	19	223
Lower House ..	124	94	66	78	39	50	35	486
Total ..	184	154	100	78	59	80	54	709
ANNUAL SALARY (£)								
Upper House ..	(b)3,500	750	(c)2,800	(a)	(d)2,500	(e)2,520	(f)2,300	..
Lower House ..	(b)3,500	(g)2,650	(c)2,800	(h)2,650	(d)2,500	(e)2,520	(f)2,300	..

(a) Abolished in 1922. (b) Plus expense allowances—Senators, £1,050; Members of the House of Representatives, city electorates, £1,100, country electorates, £1,300. Certain additional allowances are also provided for holders of parliamentary offices, etc. (c) Plus allowances from £850 for metropolitan to £1,050 for urban, £1,150 for inner country, and £1,200 for outer country electorates. (d) Plus allowance of £600 where electorate is less than 50 miles from Adelaide or if a Minister; £800 if more than 50 miles, £950 if more than 200 miles. (e) Plus expense reimbursement ranging from £600 for a Metropolitan member to £950 for a North Province member. (f) Plus allowance according to area of electorate and distance from the capital varying from £300 to £550 in the case of the Legislative Council, and from £550 to £925 in the case of the House of Assembly. (g) Plus allowance varying from £750 to £1,050 according to location of electorate. (h) Plus individual electoral allowances ranging from £600 to £1,525.

6. Enactments of the Parliaments.—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States other than South Australia and Tasmania, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania, laws are expressed to be enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. Generally, assent to Bills passed by the legislatures is given by the Governor-General or State Governor acting on behalf of, and in the name of, the Sovereign. In certain special cases, Bills are reserved for the Royal assent. The Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former is, to the extent of the inconsistency, invalid.

§ 2. Parliaments and Elections

1. Commonwealth.—(i) *The Parliament of the Commonwealth of Australia.* A special article describing the Commonwealth Parliament, its functions and procedure, prepared by the Clerk of the Senate and the Clerk of the House of Representatives, appears in Year Book No. 49, pages 65–71.

(ii) *Qualifications for Membership and for Franchise—Commonwealth Parliament.* Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any

British subject, not under twenty-one years of age and not disqualified on other grounds, who has lived in Australia for six months continuously. Residence in a subdivision for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory except that the compulsory enrolment provisions do not relate to an Aboriginal native of Australia. A member of the Defence Forces on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections, whether enrolled or not.

The principal reasons for disqualification of persons otherwise eligible as members of either Commonwealth House are:—membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown (with certain exceptions), or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or persons who are holders of temporary entry permits under the *Migration Act* 1958 or are prohibited immigrants under that Act, are excluded from the franchise. In the main, these or similar grounds for disqualification apply also to State Parliament membership and franchise.

(iii) *Commonwealth Parliaments and Elections.* From the establishment of the Commonwealth until 1949, the Senate consisted of 36 members, six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament, and, as the population of the Commonwealth had more than doubled since its inception, the Parliament passed the *Representation Act* 1948 which provided that there should be ten Senators from each State instead of six, increasing the total to 60 Senators, thus enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation.

In accordance with the Constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Consequently, in terms of the Constitution and the Representation Act, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows:—New South Wales—from 28 to 47; Victoria—from 20 to 33; Queensland—from 10 to 18; South Australia—from 6 to 10; and Western Australia—from 5 to 8. Tasmania's representation remained at 5 and the total was increased from 74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and subdivisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30th June, 1954, necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia, and Western Australia. Representation as from the general election for the House of Representatives on 10th December, 1955, is New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9, Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 121 to 122. A redistribution of the States into electoral divisions was effected by Distribution Commissioners appointed for each State.

The population as disclosed by the Census taken on 30th June, 1961, revealed that, under the provisions of the Representation Act, New South Wales, Queensland, and Western Australia would each lose one member in the House of Representatives, while Victoria would gain a member. The Distribution Commissioners' reports were duly laid before both Houses of Parliament, but the Government decided not to proceed with the proposals and announced that it would amend the Representation Act. In November, 1964, the formula provided by Section 10 of the Representation Act for determining the number of members of the House of Representatives was amended so as to give a State an additional member for "any portion of a quota". The effect of this amendment will be that at the next redistribution (based on the population as at the 1961 Census), Victoria and South Australia will each gain one member, i.e. to 34 and 12 members respectively, while all other States will retain their existing representation, namely, New South Wales 46, Queensland 18, Western Australia 9, and Tasmania 5.

Since the general election of 1922, the Northern Territory has been represented by one member in the House of Representatives. The *Australian Capital Territory Representation Act 1948* gave similar representation to the Australian Capital Territory as from the elections of 1949. The members for the Territories may join in the debates but are not entitled to vote, except on any proposed law which relates solely to the respective Territories, on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion, or on a motion for the disallowance of a regulation under an ordinance. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory. As from the date of establishment of the Legislative Council, power to disallow ordinances was vested in the Governor-General in Council. In certain cases, ordinances passed must be reserved for the pleasure of the Governor-General.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators, the whole State constitutes the electorate. For the purpose of elections for the House of Representatives, the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Year Book.

There have been twenty-four complete Parliaments since Federation. Until 1927, the Parliament met in Melbourne; it now meets in Canberra, the first meeting at Parliament House, Canberra, being opened by the late King George VI., then Duke of York, on 9th May, 1927.

The *Commonwealth Electoral Act 1948*, introduced with the *Representation Act 1948* to enlarge the Commonwealth Parliament (*see p. 71*), changed the system of scrutiny and counting of votes in Senate elections from the alternative vote to that of proportional representation. For a description of the system, *see Year Book No. 38*, pages 82-3. The system of voting for both the Senate and the House of Representatives is preferential.

The twenty-fourth Parliament opened on 20th February, 1962, and was dissolved on 1st November, 1963. Elections for the House of Representatives were held on 30th November, 1963. An election was also held on the same date to fill a single casual vacancy in the Senate for the State of Queensland. Particulars of electors and voting are given on page 68 of Year Book No. 49. For particulars of electors enrolled and of electors who voted in the several States and Territories at previous Commonwealth elections, *see Year Book No. 48* and earlier issues. Particulars of electors and voting at the Senate Election which was held on 5th December, 1964, may be found in the Appendix to this volume.

The state of the parties in each House at the end of 1964 was:—*Senate*—Liberal Party, 25; Country Party, 6; Australian Labour Party, 27; Australian Democratic Labour Party, 1; Independent, 1. *House of Representatives*—Liberal Party, 52; Country Party, 20; Australian Labour Party, 52 (including Northern Territory and Australian Capital Territory members with restricted voting rights).

The twenty-fifth Parliament opened on 25th February, 1964.

(iv) *Commonwealth Referendums*. According to Section 128 of the Constitution, any proposed law for the alteration of the Constitution, in addition to being passed by an absolute majority of each House of Parliament, must be submitted to a referendum of the electors in each State, and must be approved also by a majority of the States and of the electors who voted, before it can be presented for Royal Assent. So far, 24 such proposals have been submitted to referendums and the consent of the electors has been received in four cases, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referendums and the voting thereon were given in previous issues of the Year Book (*see List of Special Articles preceding General Index to this volume*), and a brief summary was given in Year Book No. 41 (pp. 67-70).

2. *State Elections*.—(i) *Upper Houses*. The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia, Western Australia and Tasmania. In New South Wales, members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

STATE UPPER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled—whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Fe-males	Total	Males	Fe-males	Total	Males	Fe-males	Total
Victoria	1964	800,620	834,691	1,635,311	758,124	785,654	1,543,778	94.69	94.13	94.40
South Australia ..	1962	(a)	(a)	b118,218	(a)	(a)	98,786	(a)	(a)	83.56
Western Australia	1962	b117,858	b49,354	b167,212	31,707	14,307	46,014	42.11	40.71	41.66
Tasmania	1964	b4,137	b4,733	b8,870	3,444	3,913	7,357	83.25	82.67	82.94

(a) Not available. (b) Total electors enrolled in contested divisions.

(ii) Lower Houses. The following table shows particulars of the voting at the most recent election for the Lower House in each State.

STATE LOWER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled—whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Fe-males	Total	Males	Fe-males	Total	Males	Fe-males	Total
New South Wales	1962	1060,658	1113,110	2,173,768	960,514	996,894	1,957,408	94.38	93.52	93.94
Victoria	1964	800,620	834,691	1,635,311	758,124	785,654	1,543,778	94.69	94.13	94.40
Queensland	1963	416,507	422,816	839,323	388,773	394,261	783,034	94.53	94.06	94.29
South Australia ..	1962	(a)	(a)	b444,197	(a)	(a)	417,462	(a)	(a)	93.98
Western Australia	1962	189,517	192,288	381,805	146,788	150,732	297,520	93.26	92.93	93.09
Tasmania	1964	96,111	97,307	193,418	91,747	92,824	184,571	95.46	95.39	95.43

(a) Not available. (b) Total electors in contested districts.

Official Year Book No. 50 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above.

3. The Parliaments of the States.—Pages 67 and 70 of this chapter contain summarized information on the Parliaments of each State, the qualifications for members, the numbers of Houses and members and salaries payable. For greater detail, including some historical material, reference should be made to Year Book No. 50, pages 69–72, and to earlier issues.

4. The Parliament of Western Australia.—The *Constitution Acts Amendment Act (No. 2)*, 1963, which came into operation on the 26th March, 1964, provides for the division of the State into fifteen Electoral Provinces each returning two members of the Legislative Council, instead of ten provinces each returning three members as was formerly the case. The term of office of a member will continue to be six years, with half the members retiring every three years.

The Act provided also for the qualifications for election as a member of the Legislative Council to be identical with those for election as a member of the Legislative Assembly, and for the qualifications required for Council franchise to be those prescribed for electors of members of the Legislative Assembly.

§ 3. Administration and Legislation

1. The Commonwealth Parliaments.—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9th May, 1901, by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since federation.

COMMONWEALTH PARLIAMENTS

Number of Parliament	Date of opening	Date of dissolution
First	9th May, 1901	23rd November, 1903
Second	2nd March, 1904	5th November, 1906
Third	20th February, 1907	19th February, 1910
Fourth	1st July, 1910	23rd April, 1913
Fifth	9th July, 1913	30th July, 1914(a)
Sixth	8th October, 1914	26th March, 1917
Seventh	14th June, 1917	3rd November, 1919
Eighth	26th February, 1920	6th November, 1922
Ninth	28th February, 1923	3rd October, 1925
Tenth	13th January, 1926	9th October, 1928
Eleventh	9th February, 1929	16th September, 1929
Twelfth	20th November, 1929	27th November, 1931
Thirteenth	17th February, 1932	7th August, 1934
Fourteenth	23rd October, 1934	21st September, 1937
Fifteenth	30th November, 1937	27th August, 1940
Sixteenth	20th November, 1940	7th July, 1943
Seventeenth	23rd September, 1943	16th August, 1946
Eighteenth	6th November, 1946	31st October, 1949
Nineteenth	22nd February, 1950	19th March, 1951(a)
Twentieth	12th June, 1951	21st April, 1954
Twenty-first	4th August, 1954	4th November, 1955
Twenty-second	15th February, 1956	14th October, 1958
Twenty-third	17th February, 1959	2nd November, 1961
Twenty-fourth	20th February, 1962	1st November, 1963
Twenty-fifth	25th February, 1964	

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Cabinet and under section 57 of the Constitution.

2. **Governors-General and Commonwealth Ministries.**—(i) *Governors-General.* The following statement shows the names of the Governors-General since the inception of the Commonwealth.

GOVERNORS-GENERAL

- Rt. Hon. JOHN ADRIAN LOUIS, EARL OF HOPETOUN (afterwards MARQUIS OF LINLITHGOW), P.C., K.T., G.C.M.G., G.C.V.O. From 1st January, 1901, to 9th January, 1903.
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 17th July, 1902, to 9th January, 1903, (Acting).
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 9th January, 1903, to 21st January, 1904.
- Rt. Hon. HENRY STAFFORD, BARON NORTHCOTE, P.C., G.C.M.G., G.C.I.E., C.B. From 21st January, 1904, to 9th September, 1908.
- Rt. Hon. WILLIAM HUMBLE, EARL OF DUDLEY, P.C., G.C.B., G.C.M.G., G.C.V.O. From 9th September, 1908, to 31st July, 1911.
- Rt. Hon. THOMAS, BARON DENMAN, P.C., G.C.M.G., K.C.V.O. From 31st July, 1911, to 18th May 1914.
- Rt. Hon. SIR RONALD CRAUFURD MUNRO FERGUSON (afterwards VISCOUNT NOVAR OF RAITH), G.C.M.G. From 18th May, 1914, to 6th October, 1920.
- Rt. Hon. HENRY WILLIAM, BARON FORSTER OF LEPE, P.C., G.C.M.G. From 6th October, 1920, to 8th October, 1925.
- Rt. Hon. JOHN LAWRENCE, BARON STONEHAVEN, P.C., G.C.M.G., D.S.O. From 8th October, 1925, to 22nd January, 1931.
- Rt. Hon. SIR ISAAC ALFRED ISAACS, P.C., G.C.B., G.C.M.G., K.C. From 22nd January, 1931, to 23rd January, 1936.
- General the Rt. Hon. ALEXANDER GORE ARKWRIGHT, BARON GOWRIE, V.C., P.C., G.C.M.G., C.B., D.S.O., K.G.St.J. From 23rd January, 1936, to 30th January, 1945.
- His Royal Highness PRINCE HENRY WILLIAM FREDERICK ALBERT, DUKE OF GLOUCESTER, EARL OF ULSTER AND BARON CULLODEN, K.G., K.T., K.P., P.C., G.C.B., G.C.M.G., G.C.V.O., General in the Army, Air Chief Marshal in the Royal Air Force, One of His Majesty's Personal Aides-de-Camp. From 30th January, 1945 to 11th March, 1947.
- Rt. Hon. SIR WILLIAM JOHN MCKELL, G.C.M.G., Q.C. From 11th March, 1947, to 8th May, 1953.
- Field-Marshal SIR WILLIAM JOSEPH SLIM (afterwards VISCOUNT SLIM OF YARRALUMLA), K.G., G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C., K.St.J. From 8th May, 1953, to 2nd February, 1960.
- Rt. Hon. WILLIAM SHEPHERD, VISCOUNT DUNROSSIL, P.C., G.C.M.G., M.C., K.St.J., Q.C. From 2nd February, 1960, to 3rd February, 1961.
- Rt. Hon. WILLIAM PHILIP, VISCOUNT DE L'ISLE, V.C., P.C., G.C.M.G., G.C.V.O., K.St.J. From 3rd August, 1961.

(ii) *Administrators.* In addition to the holders of the office of Governor-General listed above, certain persons have, from time to time, been appointed as Administrator of the Government of the Commonwealth. Administrators are appointed in the event of the death, illness or absence from Australia of the Governor-General, or for the period between the departure of a Governor-General and the arrival of his successor. The following is a list of such appointments.

	Term of office
Rt. Hon. Frederic John Napier, Baron Chelmsford, K.C.M.G.	21st December, 1909, to 27th January, 1910
Lieut.-Colonel the Rt. Hon. Arthur Herbert Tennyson, Baron Somers, K.C.M.G., D.S.O., M.C.	3rd October, 1930, to 22nd January, 1931
Captain the Rt. Hon. William Charles Arcedeckne Vanneck, Baron Huntingfield, K.C.M.G., K.St.J.	29th March, 1938, to 24th September, 1938
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	5th September, 1944, to 30th January, 1945; 18th January, 1947, to 11th March, 1947
General* Sir John Northcott, K.C.M.G., C.B., M.V.O.†	19th July, 1951, to 14th December, 1951; 30th July, 1956, to 22nd October, 1956
General Sir Reginald Alexander Dallas Brooks, K.C.B., G.C.M.G., K.C.V.O., D.S.O. K.St.J.	8th January, 1959, to 16th January, 1959; 3rd February, 1961, to 3rd August, 1961; 5th June, 1962, to 4th October, 1962; 21st November, 1962, to 19th December, 1962
General Sir Eric Winslow Woodward, K.C.M.G., K.C.V.O., C.B., C.B.E., D.S.O.	16th June, 1964, to 30th August, 1964

(iii) *Commonwealth Ministries.* (a) *Names and Tenure of Office, 1901 to 1964.* The following list shows the name of each Commonwealth Ministry to hold office since 1st January, 1901, and the limits of its term of office.

COMMONWEALTH MINISTRIES

- (i) BARTON MINISTRY, 1st January, 1901, to 24th September, 1903.
- (ii) DEAKIN MINISTRY, 24th September, 1903, to 27th April, 1904.
- (iii) WATSON MINISTRY, 27th April, 1904, to 17th August, 1904.
- (iv) REID-MCLEAN MINISTRY, 18th August, 1904, to 5th July, 1905.
- (v) DEAKIN MINISTRY, 5th July, 1905, to 13th November, 1908.
- (vi) FISHER MINISTRY, 13th November, 1908, to 1st June, 1909.
- (vii) DEAKIN MINISTRY, 2nd June, 1909, to 29th April, 1910.
- (viii) FISHER MINISTRY, 29th April, 1910, to 24th June, 1913.
- (ix) COOK MINISTRY, 24th June, 1913, to 17th September, 1914.
- (x) FISHER MINISTRY, 17th September, 1914, to 27th October, 1915.
- (xi) HUGHES MINISTRY, 27th October, 1915, to 14th November, 1916.
- (xii) HUGHES MINISTRY, 14th November, 1916, to 17th February, 1917.
- (xiii) HUGHES MINISTRY, 17th February, 1917, to 10th January, 1918.
- (xiv) HUGHES MINISTRY, 10th January, 1918, to 9th February, 1923.
- (xv) BRUCE-PAGE MINISTRY, 9th February, 1923, to 22nd October, 1929.
- (xvi) SCULLIN MINISTRY, 22nd October, 1929, to 6th January, 1932.
- (xvii) LYONS MINISTRY, 6th January, 1932, to 7th November, 1938.
- (xviii) LYONS MINISTRY, 7th November, 1938, to 7th April, 1939.
- (xix) PAGE MINISTRY, 7th April, 1939, to 26th April, 1939.
- (xx) MENZIES MINISTRY, 26th April, 1939, to 14th March, 1940.
- (xxi) MENZIES MINISTRY, 14th March, 1940, to 28th October, 1940.
- (xxii) MENZIES MINISTRY, 28th October, 1940, to 29th August, 1941.
- (xxiii) FADDEN MINISTRY, 29th August, 1941, to 7th October, 1941.
- (xxiv) CURTIN MINISTRY, 7th October, 1941, to 21st September, 1943.
- (xxv) CURTIN MINISTRY, 21st September, 1943, to 6th July, 1945.
- (xxvi) FORDE MINISTRY, 6th July, 1945, to 13th July, 1945.
- (xxvii) CHIFLEY MINISTRY, 13th July, 1945, to 1st November, 1946.
- (xxviii) CHIFLEY MINISTRY, 1st November, 1946, to 19th December, 1949.

* Lieutenant-General Sir John Northcott was granted honorary rank of General while administering the Government of the Commonwealth. † K.C.V.O., 1954.

COMMONWEALTH MINISTRIES—*continued*

- (xxix) MENZIES MINISTRY, 19th December, 1949, to 11th May, 1951.
 (xxx) MENZIES MINISTRY, 11th May, 1951, to 11th January, 1956.
 (xxxii) MENZIES MINISTRY, 11th January, 1956, to 10th December, 1958.
 (xxxiii) MENZIES MINISTRY, 10th December, 1958, to 18th December, 1963.
 (xxxiii) MENZIES MINISTRY, 18th December, 1963.

(b) *Names of Holders of Ministerial Office, to 31st December, 1964.* In Year Book No. 17, 1924, the names are given of each Ministry up to the Bruce-Page Ministry (9th February, 1923, to 22nd October, 1929), together with the names of the successive holders of portfolios therein, and issue No. 39 contains a list, commencing with the Bruce-Page Ministry, which covers the period between the date on which it assumed power, 9th February, 1923, and 31st July, 1951, showing the names of all persons who held office in each Ministry during that period.

This issue shows only particulars of the latest Menzies Ministry, as constituted on 21st November, 1964.

MENZIES MINISTRY—from 18th December, 1963

(Portfolios from 21st November, 1964)

(The State in which each Minister's electorate is situated is shown in parenthesis.)

THE HON. A. C. ATKINS, M.H.A.	

4. **Leaders of the Opposition, Commonwealth and State Parliaments.**—The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in March, 1965.

Leader of the Opposition, Commonwealth and State Parliaments—

Commonwealth—The Hon. A. A. Calwell, M.P.

New South Wales—R. W. Askin, M.L.A.

Victoria—The Hon. C. P. Stoneham, M.P.

Queensland—J. E. Duggan, M.L.A.

South Australia—F. H. Walsh, M.P.

Western Australia—The Hon. A. R. G. Hawke, M.L.A.

Tasmania—The Hon. W. A. Bethune, M.H.A.

5. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament during 1964 is indicated in alphabetical order in *The Acts of the Parliament of the Commonwealth of Australia passed during the year 1964 in the First Session of the Twenty-fifth Parliament of the Commonwealth, with Appendix, Tables and Index.*

A chronological table of Acts passed from 1901 to 1964 showing how they are affected by subsequent legislation or lapse of time is also given, and, further, a table of Commonwealth legislation passed from 1901 to 1964 in relation to the several provisions of the Constitution is furnished in the same volume. Reference should be made to these for complete information.

6. **Legislation during 1964.**—The Acts passed by the Commonwealth Parliament during the year 1964 are listed hereunder. In many cases the title of the Act indicates the general scope of the Act, but brief explanatory notes have been added where necessary. Appropriate chapters of this Year Book should be referred to for further information which may be available there.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. Seventeen Acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939, 109 in 1952, and 130 in 1964.

Commonwealth Legislation passed during 1964.

- Acts Interpretation Act 1964* (No. 52), amended the *Acts Interpretation Act 1901-1963* so as to clarify the circumstances in which regulations may prescribe matters by reference to other instruments and provided for judicial notice to be taken of regulations under Commonwealth Acts and Territory Ordinances. In common with other Acts it provided that compliance with a standing order of either House of Parliament is compliance with any statutory provision that requires the presentation of papers to that House.
- Air Force Act 1964* (No. 94) amended the *Air Force Act 1923-1956* to provide for the formation of a voluntary Emergency Reserve for the Air Force and for the calling up of the Citizen Air Force to the extent necessary to meet the requirements of the Air Force in circumstances short of general war (*see* Chapter XXVII. Defence).
- Air Navigation Charges Act* (No. 95) 1964 increased the unit charge for an aircraft by 10 per cent.
- Apple and Pear Organization Act 1964* (No. 38) amended the *Apple and Pear Organization Act 1938-1960* to give the Australian Apple and Pear Board power to control directly the quantity of fruit to be shipped to a particular country.
- Appropriation Act* (No. 2) 1963-64 (No. 33); *Appropriation Act 1964-65* (No. 73); *Appropriation Act* (No. 2) 1964-65 (No. 122).
- Appropriation (Special Expenditure) Act 1964-65* (No. 74) appropriated funds for special expenditure, such as flood relief and special industry grants as set out in the Budget, not regarded as expenditure for the ordinary annual services of the Government.
- Appropriation (Works and Services) Act* (No. 2) 1963-64 (No. 34).
- Australian Capital Territory Supreme Court Act 1964* (No. 109) amended the *Australian Capital Territory Supreme Court Act 1933-1960* to provide for an appropriate right of appeal for persons pleading guilty to criminal charges before a magistrate and committed by him for sentence and sentenced by the Supreme Court.
- Australian Coastal Shipping Commission Act 1964* (No. 88) amended the *Australian Coastal Shipping Commission Act 1956-1962* to widen the borrowing powers of the Commission.
- Australian Institute of Aboriginal Studies Act 1964* (No. 56) provided for the establishment of an Institute in the Australian Capital Territory to promote Aboriginal studies, to publish the results of such studies, and to encourage co-operation between universities, museums and other institutions concerned with Aboriginal studies and assist such institutions in training research workers.
- Broadcasting and Television Act 1964* (No. 67) amended the *Broadcasting and Television Act 1942-1963* to provide for the issue of joint television and broadcast listeners' licences and increased licence fees.
- Broadcasting and Television Act* (No. 2) 1964 (No. 121) amended the last-mentioned Act by making the lessor of furnished premises liable for the licence fee in respect of radio or television sets included in such furniture, defining liability where back-dated licences are issued, and providing for refunds when licences are surrendered.
- Broadcasting and Television Stations Licence Fees Act 1964* (No. 120) repealed the *Broadcasting and Television Stations Licence Fees Act 1956*; and instead of a common basis for assessment of fees the *Broadcasting Stations Licence Fees Act 1964* (No. 119) and the *Television Stations Licence Fees Act 1964* (No. 118) provided for separate methods of fixing fees payable.
- Cattle and Beef Research Act 1964* (No. 12); *Cattle Slaughter Levy Repeal Act 1964* (No. 11).*
- Cellulose Acetate Flake Bounty Act 1964* (No. 48) extended the operation of the *Cellulose Acetate Flake Bounty Act 1956-1961* until 31st December, 1964.

* See page 84.

- Cellulose Acetate Flake Bounty Act (No. 2) 1964* (No. 114) extended the operation of the last-mentioned Act until 31st March, 1965.
- Commonwealth Aid Roads Act 1964* (No. 32) provided for grants to the States for roads in the five years from 1st July, 1964, up to a total of £375 million (see Chapter XXII. Public Finance).
- Commonwealth Bureau of Roads Act 1964* (No. 65) established a Commonwealth Bureau of Roads to investigate and report on matters relating to roads or road transport to assist consideration by the Commonwealth Government of grants of financial assistance to the States in connexion with roads or road transport or other matters referred to it by the Minister for Shipping and Transport.
- Commonwealth Employees Compensation Act 1964* (No. 101) increased the maximum sum payable to dependents of a deceased Commonwealth employee to £4,300 and provided for additional payments for dependent children under 16.
- Conciliation and Arbitration Act 1964* (No. 99) increased the number of judges of the Commonwealth Industrial Court, apart from the Chief Judge, from three to four.
- Copper and Brass Strip Bounty Act 1964* (No. 96) extended the operation of the *Copper and Brass Strip Bounty Act 1962* to 31st March, 1965.
- Crimes (Overseas) Act 1964* (No. 116) provides that if an Australian serving in a civilian capacity with a United Nations force commits breaches of the law the offender shall be returned to Australia and there charged with an offence.
- Customs Tariff 1964* (No. 17); *Customs Tariff (No. 2) 1964* (No. 21); *Customs Tariff (No. 3) 1964* (No. 58); *Customs Tariff (No. 4) 1964* (No. 123); *Customs Tariff (Canada Preference) 1964* (No. 18); *Customs Tariff (Canada Preference) (No. 2) 1964* (No. 22); *Customs Tariff (Canada Preference) (No. 3) 1964* (No. 59); *Customs Tariff (New Zealand Preference) (No. 1) 1964* (No. 19); *Customs Tariff (New Zealand Preference) (No. 2) 1964* (No. 23); *Customs Tariff (New Zealand Preference) (No. 3) 1964* (No. 60); *Customs Tariff (New Zealand Preference) (No. 4) 1964* (No. 124); *Customs Tariff (Papua and New Guinea Preference) 1964* (No. 20); *Customs Tariff (Papua and New Guinea Preference) (No. 2) 1964* (No. 61); *Customs Tariff Validation Act 1964* (No. 128).
- Dairy Produce Levy Act 1964* (No. 40) extended the operation of the *Dairy Produce Levy Act 1958* to cover butteroil and ghee.
- Dairy Produce Research and Sales Promotion Act 1964* (No. 41) made certain machinery amendments consequent on the last-mentioned Act.
- Defence Act 1964* (No. 92) amended the *Defence Act 1903-1956* by establishing a Regular Army Emergency Reserve of some 3,600 men to provide a readily available source of trained manpower which may be called out when the Governor-General considers it desirable; and provided that the Citizen Military Forces may be called up by proclamation after a state of defence emergency has been proclaimed (see Chapter XXVII. Defence).
- Dried Vine Fruits Contributory Charges Act 1964* (No. 43); and *Dried Vine Fruits Contributory Charges (Collection) Act 1964* (No. 44) imposed charges on dried vine fruits received for packing for the purposes of the *Dried Vine Fruits Stabilization Act 1964* (No. 42) (see below).
- Dried Fruits Export Charges Act 1964* (No. 90); and *Dried Fruits Export Control Act 1964* (No. 89) amended existing legislation by providing for the appointment of one additional member to the Dried Fruits Export Control Board, by removing the requirement that the Government's representative must be the chairman of the Board, and by substituting "raisins" for "lexias" in the definitions of the fruit controlled by the Board.
- Dried Vine Fruits Stabilization Act 1964* (No. 42) set up Stabilization Funds for the stabilization of returns to dried vine fruit growers for a period of five years, commencing with the 1964 crop (see Chapter XXIII. Rural Industry).
- Evidence Act 1964* (No. 53).†

† See page 84.

Excise Tariff 1964 (No. 125).

Explosives Act 1964 (No. 47) amended the *Explosives Act* 1961 to ensure that its provisions extend to defence explosives intended for dumping at sea, to enable orders to be made for the carriage of Commonwealth explosives by rail, to control storage, transport, etc., of Commonwealth explosives for other than defence purposes and to ensure that explosives manufactured by the Commonwealth for supply to Governments of other countries can be handled on the same basis as other Commonwealth explosives.

Export Payments Insurance Corporation Act 1964 (No. 104) amended the *Export Payments Insurance Corporation Act* 1956–1961 to empower the corporation to issue guarantees of payment to lending institutions, to increase the maximum contingent liability which the corporation may assume under its contracts and generally to strengthen and improve its ability to provide payments insurance.

Home Savings Grant Act 1964 (No. 51) provided for grants to be made subject to certain conditions to married persons under the age of 36 years to encourage and assist such young married persons to purchase or build their own homes. Grants under the act are matched against savings, with a maximum of £250 to any one couple.

Income Tax and Social Services Contribution Act 1964 (No. 69); *Income Tax and Social Services Contribution Act* (No. 2) 1964 (No. 111); *Income Tax and Social Services Contribution Assessment Act* 1964 (No. 46); *Income Tax and Social Services Contribution Assessment Act* (No. 2) 1964 (No. 68); *Income Tax and Social Services Contribution Assessment Act* (No. 3) 1964 (No. 110); *Income Tax (International Agreements) Act* 1964 (No. 112).

Interim Forces Benefits Act 1964 (No. 106).‡

Law Officers Act 1964 (No. 91) provided for the separation of the office of Solicitor-General from the office of permanent head of the Attorney-General's Department.

Live-stock Slaughter Levy 1964 (No. 8); *Live-stock Slaughter Levy Collection Act* 1964 (No. 9).*

Loan (Airlines Equipment) Act 1964 (No. 117) approved the borrowing by the Commonwealth of up to £13.4 million on behalf of Qantas Empire Airways Limited and Trans-Australia Airlines.

Loan (Housing) Act 1964 (No. 85) authorized the raising and expending of up to £51 million for housing purposes.

Loan (Qantas Empire Airways Limited) Act 1964 (No. 15) approved an agreement between the Commonwealth and the Morgan Guaranty Trust Company of New York as agent for certain United States Banks for the raising of a loan of \$25 million to be lent to Qantas Empire Airways Limited.

Loan (War Service Land Settlement) Act 1964 (No. 86) authorizes the raising and expending of up to £4.5 million for assistance to the States of South Australia, Western Australia and Tasmania in connexion with War Service Land Settlement.

Meat Agreement (Deficiency Payments) Act 1964 (No. 13); *Meat Export (Additional Charge) Act* 1964 (No. 14).*

Meat Export Charge Repeal Act 1964 (No. 10)* repealed the *Meat Export Charge Act* 1935–1954.

Meat Industry Act 1964 (No. 7) repealed the *Meat Export Control Act* 1935–1960 and reconstituted the Australian Meat Board to give effect to industry proposals for a plan of meat market development and diversification. It established a fund by way of levy on sheep, cattle, and lamb slaughterings to be used to develop overseas markets for Australian meat and to undertake additional meat promotion in Australia and overseas. It also provided for the Board to control meat exports, where necessary to the attainment of its objectives (see also Chapter XXIII. Rural Industry).

- Meat Inspection Arrangements Act 1964* (No. 100) made provision for the Commonwealth to enter into an arrangement with a State or a State meat authority for Commonwealth inspectors to undertake the inspection of meat for consumption in Australia.
- Migration Act 1964* (No. 87) amended the *Migration Act 1958* to enable the Minister for Immigration to facilitate the entry into Australia of important visitors and their parties and other persons and groups, such as delegates to international conferences, whose admission on a temporary basis it is desired to facilitate. It also simplified documentation required for sea-borne passengers arriving in Australia.
- Ministers of State Act 1964* (No. 1) increased the number of Ministers of State from twenty-two to twenty-five and the amount payable for ministerial salaries to £73,350.
- Ministers of State Act (No. 2) 1964* (No. 71) increased the amount payable for ministerial salaries to £95,650.
- Mint Employees Act 1964* (No. 45) set out conditions of transfer of Royal Mint employees to the Commonwealth Public Service and provided for continuation of leave rights and superannuation entitlement for such employees.
- National Health Act 1964* (No. 37) amended the *National Health Act 1953–1963* to provide for increased Commonwealth medical benefits to contributors to registered medical benefits funds (see Chapter XVIII. Public Health).
- National Service Act 1964* (No. 126) reintroduced national service training. It provided for registration by men aged 20 and selective call-up for five years, two years in the Regular Army Supplement and three years in the Regular Army Reserve (see Chapter XXVII. Defence).
- Naval Defence Act 1964* (No. 93) amended the *Naval Defence Act 1910–1952* to provide for the formation of a voluntary Naval Emergency Reserve Force and for the calling up of the Citizen Naval Forces in time of defence emergency (see Chapter XXVII. Defence).
- New South Wales Grant (Flood Mitigation) Act 1964* (No. 4) granted financial assistance to the State of New South Wales for the purpose of flood mitigation works in relation to the Macleay, Clarence, Richmond, Tweed, Shoalhaven and Hunter Rivers.
- Papua and New Guinea Act 1964* (No. 103) made provision for the office of a senior puisne judge on the Supreme Court of Papua and New Guinea.
- Parliamentary Allowances Act 1964* (No. 70); *Parliamentary Retiring Allowances Act 1964* (No. 72); provided for increased salaries and allowances for members of Parliament (see p. 70).
- Petroleum Search Subsidy Act 1964* (No. 57) amended the *Petroleum Search Subsidy Act 1959–1961* to extend its operations to include the sea-bed and sub-soil of the continental shelf contiguous to the coast of Australia and New Guinea and made more flexible provisions for determining the rate and amount of subsidy (see Chapter XXVI. Mineral Industry).
- Post and Telegraph Rates Act 1964* (No. 66) increased charges for some telegrams and provided for special postage rates for articles addressed to "The Householder".
- Processed Milk Products Bounty Act 1964* (No. 39) extended the operation of the *Processed Milk Products Bounty Act 1962–1963* until 30th June, 1965, and fixed the maximum amount payable for the year 1964–65 at £400,000.
- Public Service Act 1964* (No. 2) provided for changing the name of the Department of Trade to the Department of Trade and Industry, and adding the Department of Housing, in schedules to the Act.
- Repatriation Act 1964* (No. 62) provided for increased rates of pensions for ex-servicemen and their dependants (see Chapter XXVIII. Repatriation).
- Repatriation Act (No. 2) 1964* (No. 105); *Repatriation (Far East Strategic Reserve) Act 1964* (No. 107); *Repatriation (Special Overseas Service) Act 1964* (No. 108)†

† See page 84.

Representation Act 1964 (No. 97) provided that where redistribution was necessary following a Census, there should not be any reduction in the number of electorates in any one State (see p. 71).

Rules Publication Act 1964 (No. 55)†

Salaries (Statutory Offices) Adjustment Act 1964 (No. 75); *Salaries (Statutory Offices) Adjustment Act (No. 2) 1964* (No. 115) increased the amount of salary payable to the holders of certain statutory offices.

Sales Tax Act (No. 1) 1964 (No. 76); *Sales Tax Act (No. 2) 1964* (No. 77); *Sales Tax Act (No. 3) 1964* (No. 78); *Sales Tax Act (No. 4) 1964* (No. 79); *Sales Tax Act (No. 5) 1964* (No. 80); *Sales Tax Act (No. 6) 1964* (No. 81); *Sales Tax Act (No. 7) 1964* (No. 82); *Sales Tax Act (No. 8) 1964* (No. 83); *Sales Tax Act (No. 9) 1964* (No. 84).

Seamen's Compensation Act 1964 (No. 102) provided for increases in seamen's compensation rates similar to those provided for Commonwealth Employees under the *Commonwealth Employee's Compensation Act 1964* (see p. 81).

Seamen's War Pensions and Allowances Act 1964 (No. 64) increased the rates of pension payable to eligible persons under the Act.

Seamen's War Pensions and Allowances Act (No. 2) 1964 (No. 113)‡.

Social Services Act 1964 (No. 3) extended benefits to include student children aged 16 years but under 21, and increased rates payable for the third and subsequent children in a family (see Chapter XVI. Welfare Services).

Social Services Act (No. 2) 1964 (No. 63) increased rates of pensions paid to age, invalid and widow pensioners.

State and Territorial Laws and Records Recognition Act (1964) No. 54†.

States Grants (Mental Health Institutions) Act 1964 (No. 16); *States Grants (Science Laboratories and Technical Training) Act 1964* (No. 50); *States Grants (Special Assistance) Act 1964* (No. 98); *States Grants (Universities) Act 1964* (No. 130); *States Grants (Water Resources) Act 1964* (No. 127).

Sulphate of Ammonia Bounty Act 1964 (No. 49).

Supply Act 1964-65 (No. 35); *Supply (Special Expenditure) Act 1964-65* (No. 36) (see also *Appropriation (Special Expenditure) Act 1964-65*, p. 80).

Tasmania Grant (Gordon River Road) Act 1964 (No. 5) provided for the grant of up to £2.5 million to the State of Tasmania to assist with the construction of the Gordon River Road.

Universities (Financial Assistance) Act 1964 (No. 129) provided for increased financial assistance to universities to enable them to raise the level of professorial salaries.

Weights and Measures (National Standards) Act 1964 (No. 6) placed the examination and approval of measuring instruments under the authority of the National Standards Commission and clarified the method of verifying and checking measurements under the Act.

Wool Industry Act 1964 (No. 24) amended the method of financing of the Australian Wool Board and the Wool Research Trust Fund and gave the Wool Board power to borrow on overdraft money for temporary purposes.

Wool Tax (No. 1) Act 1964 (No. 25); *Wool Tax (No. 2) Act 1964* (No. 26); *Wool Tax (No. 3) Act 1964* (No. 27); *Wool Tax (No. 4) Act 1964* (No. 28); *Wool Tax (No. 5) Act 1964* (No. 29); *Wool Tax (Administration) Act 1964* (No. 30).

Wool Tax Legislation Repeal Act 1964 (No. 31) repealed Wool Tax legislation prior to 1964.

* These Acts were complementary to the *Meat Industry Act 1964* and provided for the necessary machinery to put the objects of that Act into effect. † These Acts made amendments consequential to the *Acts Interpretation Act 1964* clarifying the circumstances in which regulations may prescribe matters by reference to other instruments and providing for judicial notice to be taken of regulations. ‡ These Acts made amendments to existing legislation to remove certain anomalies and administrative difficulties in the interests of ex-servicemen and their dependants.

§ 4. Commonwealth Government Departments

In Year Book No. 49 (pp. 87-98) a list appears of the Commonwealth Government Departments, giving particulars for each Department of the principal matters dealt with and the Acts administered by the Minister concerned as at the end of 1962, and changes made during 1963 are shown on page 83 of Year Book No. 50.

§ 5. Cost of Parliamentary Government

The tables in this section are intended to show, in broad groups, the expenditure incurred in the operation of the Parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; they do not attempt to cover the expenditure on Commonwealth and State administration generally. Only broad groups are shown, but even these are not entirely comparable because of differences in accounting procedures and in the presentation of accounts. A very large part of the expenditure under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, carried out at the request of the Government. The item includes salaries of Government House staffs and maintenance of residences, official establishments, grounds, etc.

The following statement shows this expenditure for the Commonwealth and for each State for the year ended 30th June, 1964.

CHAPTER IV

LAND TENURE AND SETTLEMENT

§ 1. Disposal of Crown Lands

1. **Land Legislation and Tenures.**—Descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure, have appeared in earlier issues of the Year Book (*see* List of Special Articles, etc., preceding General Index to this volume).

Land tenures may be classified under broad headings indicating the nature of the tenure, namely:—Free Grants and Reservations, Unconditional Purchases of Freehold, Conditional Purchases of Freehold, Leases and Licences under Land Acts, Closer Settlement, Leases and Licences under Mining Acts, and Settlement of Returned Service Personnel. The following sections contain figures showing the extent of the different tenures in the several States and Territories, together with some general descriptive matter. Information in greater detail was provided in Year Book No 48 and previous issues (*see also* Year Book No. 50, p. 85).

2. **Forms of Land Tenure.**—(i) *Free Grants and Reservations.* Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and/or permanent reservation of Crown lands for public purposes. In the Northern Territory, any Crown lands not subject to any right of, or contract for, purchase, may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act 1910*, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

The following table shows the total areas reserved in each State (except Tasmania) and in the Northern Territory, and the grand totals, at the end of the years 1959 to 1963.

AREAS RESERVED
(’000 Acres)

Year	N.S.W. (a)	Victoria (b)	Old (b)	S. Aust. (a)	W. Aust. (a)	Nor. Terr. (a)	Total (c)

(a) At 30th June.
not available.

(b) At 31st December.

(c) Excludes Tasmania, for which details are

Details of the purposes for which areas at the end of 1963, as shown above, were reserved are given hereunder.

New South Wales. For travelling stock, 5,005,950 acres; forest reserves, 1,545,510 acres; water and camping reserves, 773,846 acres; mining reserves, 1,043,871 acres; for recreation and parks, 713,431 acres; other reserves, 6,875,645 acres; total, 15,958,253 acres.

Victoria. For roads, 1,705,129 acres; water reserves, 315,440 acres; agricultural colleges, 8,434 acres; forest and timber reserves, 5,731,211 acres; mallee reserves, 410,000 acres; other reserves, 639,494 acres; total, 8,809,708 acres.

Queensland. Timber reserves, 2,640,388 acres; for State forests and national parks, 6,462,253 acres; Aboriginal reserves, 6,604,349 acres; for streets, surveyed roads and stock routes, 3,908,391 acres; general reserves, 5,437,388 acres; total, 25,052,769 acres.

South Australia. Total area of surveyed roads, railways and other reserves, 22,754,071 acres, including 18,833,362 acres set apart as Aboriginal reserves.

Western Australia. For State forests, 4,454,309 acres; timber reserves, 1,839,351 acres; other reserves, 68,059,187 acres; total, 74,352,847 acres.

Northern Territory. For Aboriginal, defence and public requirements, 59,663,467 acres.

(ii) *Conditional and Unconditional Purchases of Freehold.* Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Year Book No. 48, pp. 91-2), and conditional purchases of various types may also be made. In the Northern Territory, only 0.1 per cent. of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory, about 18 per cent. of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

(iii) *Leases and Licences.* (a) *General.* Well over half the area of the States of New South Wales and South Australia and of the two Territories and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; and in Tasmania only one-twelfth is leased or licensed, while about half the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

(b) *Land Acts and Ordinances.* The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples:—grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and conditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 92-4.

The following table shows the areas held under lease or licence other than mining and forestry in the States, the total under lease or licence for the Territories, and the grand totals, at the end of the years 1959 to 1963.

AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY

(’000 Acres)

Year	N.S.W. (a)	Vic.	Q’land	S. Aust. (a)	W. Aust. (a)	Tas. (a)	N.T. (a) (b)	A.C.T. (a) (b)	Total

(a) Year ended 30th June.

(b) Leases and licences for all purposes.

(c) *Mining Acts and Ordinances.* In addition to the lands held under lease or licence under land legislation, there are also areas occupied under mining Acts for the purpose of prospecting or mining for gold and other minerals. Details of the various types of mining lease and licence are given in Year Book No. 48, pp. 94-5.

Areas occupied in the States at the end of the years 1959 to 1963 are shown in the following table.

AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES
(⁰00 Acres)

Year	N.S.W. (a)	Victoria	Q'land (b)	S. Aust. (a) (b)	W. Aust. (c)	Tasmania (b)	N. Terr.	Total (d)

(a) Year ended 30th June.

(b) Excludes lands held under miners' rights and dredging claims.

(c) Excludes holdings under miners' rights.

(d) Excludes Australian Capital Territory, included in previous table.

(d) *Oil Prospecting or Exploring.* The following table shows for each year from 1959 to 1963 the areas occupied in each State under authorities to prospect or explore for petroleum. The legislation relating to the search for petroleum differs from State to State, and the terminology of, and the conditions applying to, the forms of authorization differ accordingly. The figures below relate to the exploratory stage of operations.

**AREAS OCCUPIED UNDER AUTHORITIES TO PROSPECT OR EXPLORE

(a) Year ended 30th June.

§ 2. Closer Settlement and War Service Settlement

1. *Closer Settlement.*—Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (*see* No. 22, pp. 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30th June, 1960, of the areas and costs for those States for which separate information is available.

2. *Settlement of Returned Service Personnel, 1939-45 War and Korea-Malaya Operations.*—(i) *General.* The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects

of the Scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the Scheme, to find their own finance for the acquisition and development of properties. In 1954 Queensland abandoned the Scheme and made available for general settlement all unallotted lands held under it.

Detailed information about the agreements and the methods of operation and administration of the Scheme are contained in earlier Year Books (*see List of Special Articles, etc., preceding General Index to this volume*).

(ii) *Summary of Operations to 30th June, 1964.* The following table shows the operations of the War Service Land Settlement Scheme in each State up to 30th June, 1964.

WAR SERVICE LAND SETTLEMENT
SUMMARY TO 30TH JUNE, 1964

State	Land acquired	Farms allotted		Farms in course of development		Other
		No.	Acres	No.	Acres	
New South Wales ..	9,094,021	3,047	9,094,021
Victoria ..	1,181,599	3,048	1,181,599
Queensland ..	398,524	470	218,640	(a) 179,884
South Australia ..	755,873	1,024	679,672	(b) 76,201
Western Australia ..	2,053,972	998	1,902,475	(b) 151,497
Tasmania ..	447,624	523	421,000	40	20,000	(b) 6,624
Total ..	13,931,613	9,110	13,497,407	40	20,000	414,206

(a) War Service Land Settlement was discontinued in 1954, and unallotted lands were made available for general settlement. (b) Includes land disposed of outside the Scheme and discrepancies to be corrected upon survey.

(iii) *Expenditure.* The following table shows a dissection of the Commonwealth expenditure on War Service Land Settlement to 30th June, 1964.

WAR SERVICE LAND SETTLEMENT (1939-45 WAR AND KOREA-MALAYA OPERATIONS): COMMONWEALTH EXPENDITURE TO 30th JUNE, 1964
(£'000)

Advances to States	N.S.W.	Vic.	Qld	S. Aust.	W. Aust.	Tas.	Total
For acquisition of land	3,418	3,546	2,522	9,486
For development and improvement of land	14,713	19,745	16,118	50,576

Total ..	9,021	14,772	650	34,512	48,591	25,203	132,749

(iv) *Loans and Allowances (Agricultural Occupations) Scheme.* Full details of the measures taken for the re-establishment of ex-servicemen in rural occupations were given in an earlier Year Book (see List of Special Articles, etc., preceding General Index to this volume). These measures provide for a scheme of loans and allowances to assist ex-servicemen in establishing themselves in agricultural occupations.

The loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or discharge of a mortgage, bill of sale, etc. At 30th June, 1964, 14,307 loans had been approved and advances amounting to £10,177,284 had been made.

The allowances are payable only in respect of the period during which the income derived from the occupation by the ex-serviceman concerned is considered inadequate. At 30th June, 1964, 16,114 applications for allowances had been made, and the total amount paid in allowances was £2,276,597.

Year Book No. 48 contains details, on page 98, of the applications received and approved and the amounts involved for the individual States and Territories to 30th June, 1961. There has been little subsequent change.

(v) *War Service Land Settlement Branch—Total Expenditure.* The following table shows details of the total expenditure on various projects by the War Service Land Settlement Branch from the commencement of operations to 30th June, 1964.

**COMMONWEALTH WAR SERVICE LAND SETTLEMENT BRANCH:
EXPENDITURE TO 30th JUNE, 1964
(£'000)**

(a) Excludes interest, rent, and rates, £8,583,000.

(b) Includes expenditure on new loans of moneys repaid by borrowers.

(c) Includes Northern Territory, £10,000, and New Guinea, £7,000.

(d) Excludes interest, £1,472,000.

(e) Includes New Guinea, £1,000.

(f) Includes Northern Territory, £10,000, and New Guinea, £8,000.

(g) Excludes interest, rent, and rates, £10,055,000.

§ 3. Alienation and Occupation of Crown Lands

1. *General.*—The figures in the previous parts of this chapter show separate particulars of various forms of land settlement. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory, during 1963. A summary for each State and Territory and for Australia as a whole is also included. Particulars for each year from 1953 to 1963 appear in the bulletin *Rural Industries* No. 1, 1962-63, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases lands which are permanently reserved from alienation are occupied under leases or licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

2. *New South Wales.*—The total area of New South Wales is 198,037,120 acres, of which 29.4 per cent. had been alienated at 30th June, 1963; 4.2 per cent. was in process of alienation; 57.1 per cent. was held under leases and licences; and the remaining 9.3 per cent. was unoccupied, or held by the Crown.

ALIENATION AND OCCUPATION OF CROWN LANDS: NEW SOUTH WALES
30th JUNE, 1963
 (Acres)

Particulars	Area	Particulars	Area
1. Alienated	58,174,727	3. Held under leases and licences— Homestead selections and grants Alienable leases, long-term and perpetual	1,605,007 24,430,998
		Long-term leases with limited right of alienation	1,255,537
		Other long-term leases	81,372,748
		Short-term leases and temporary tenures	2,401,810
		Forest leases	1,687,175
		Mining and auriferous leases	210,784
		<i>Total</i>	112,964,059
2. In process of alienation— Conditional purchases	6,949,617	4. Unoccupied— Particulars of Lord Howe Island not being available, the area, 3,220 acres, is included under unoccupied (approximate)	18,487,583
Closer settlement purchases	958,064		
Soldiers' group purchases	126,193		
Other forms of sale	376,877		
<i>Total</i>	8,410,751	5. Total Area of State	198,037,120

3. Victoria.—The total area of Victoria is 56,245,760 acres, of which 56.4 per cent. had been alienated up to the end of 1963; 4.2 per cent. was in process of alienation under deferred payments and closer settlement schemes; 10.6 per cent. was occupied under leases and licences; and 28.8 per cent. was unoccupied or held by the Crown.

ALIENATION AND OCCUPATION OF CROWN LANDS: VICTORIA
31st DECEMBER, 1963
 (Acres)

Particulars	Area	Particulars	Area
1. Alienated	31,712,214	3. Leases and licences held— Under Lands Department— Perpetual leases	175,576
		Agricultural college leases	28,285
		Other leases and licences	1,679
		Temporary (yearly) grazing licences	5,730,317
2. In process of alienation— Exclusive of mallee and closer settlement lands	212,156	<i>Total</i>	5,935,857
Mallee lands (exclusive of closer settlement lands)	1,037,073	4. Occupied by the Crown or un- occupied	16,207,321
Closer settlement lands	1,141,139		
<i>Total</i>	2,390,368	5. Total Area of State	56,245,760

4. Queensland.—The total area of this State is 426,880,000 acres, of which, on 31st December, 1963, 6.2 per cent. was alienated; 0.6 per cent. was in process of alienation; and 85.8 per cent. was occupied under leases and licences. The remainder, 7.4 per cent., was either unoccupied or held as reserves or for roads.

ALIENATION AND OCCUPATION OF CROWN LANDS: QUEENSLAND
31st DECEMBER, 1963
 (Acres)

Particulars	Area	Particulars	Area
1. Alienated	26,262,579	3. Occupied under leases and licences—	
		Pastoral leases	243,753,600
		Occupation licences	14,386,721
		Grazing selection and settlement farm leases	95,435,277
		Leases—special purposes(a)	3,606,610
		Mining leases	2,282,763
		Perpetual lease selections	6,598,980
		Auction perpetual leases, etc.	44,863
		Forest grazing leases (of reserves)	306,240
		Development leases	7,231
		<i>Total</i>	366,422,285
		4. Reserves (net, not leased)	17,811,021
		5. Surveyed roads and surveyed stock routes	3,908,391
		6. Unoccupied	9,697,477
2. In process of alienation	2,778,247	7. Total Area of State	426,880,000

(a) Special leases of Crown land, 579,493 acres; special leases of reserves, 3,027,117 acres.

5. South Australia.—The area of South Australia is 243,244,800 acres and at 30th June, 1963, 6.5 per cent. was alienated; 0.2 per cent. in process of alienation, 60.4 per cent. occupied under leases and licences; and 32.9 per cent. occupied by the Crown or unoccupied.

ALIENATION AND OCCUPATION OF CROWN LANDS: SOUTH AUSTRALIA
30th JUNE, 1963
 (Acres)

Particulars	Area	Particulars	Area
1. Alienated	15,864,153	3. Held under lease and licence(a)—	
		Perpetual leases, including irrigation leases	20,545,506
		Pastoral leases	123,123,113
		Other leases and licences	3,138,231
		<i>Total</i>	146,806,850
		4. Area unoccupied(b)	80,114,158
2. In process of alienation	459,639	5. Total Area of State	243,244,800

(a) Mining leases and licences have also been issued over an area comprising 236,128,335 acres.
 (b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

6. Western Australia.—The total area of Western Australia is 624,588,800 acres, of which, at 30th June, 1963, 4.6 per cent. was alienated; 2.2 per cent. was in process of alienation; and 39.8 per cent. was occupied under leases and licences issued either by the Lands, Mines or Forests Departments. The balance of 53.4 per cent. was unoccupied.

ALIENATION AND OCCUPATION OF CROWN LANDS: WESTERN AUSTRALIA
30th JUNE, 1963
(Acres)

Particulars	Area	Particulars	Area

		Soldier settlement ..	42,359
		Short-term leases ..	1,128
		(ii) Issued by Mines Department ..	44,245
		<i>Total</i>	1,447,102
		4. Area occupied by the Crown or unoccupied	8,808,989
2. In process of alienation ..	198,863	5. Total Area of State	16,885,120
3. Leases and licences—			
(i) Issued by Lands Department for—			
Pastoral purposes ..	972,533		
Timber getting ..	370,375		
Closer settlement ..	16,462		

NOTE.—The total area of Tasmania has been adjusted in accordance with a resurvey of local government areas. This adjustment has been included in item 4 of the foregoing table.

8. **Northern Territory.**—The area of the Northern Territory is 332,979,200 acres, of which, at 30th June, 1963, only 0.1 per cent. was alienated; 53.5 per cent. was held under leases and licences; 17.9 per cent. was reserved for Aboriginal, defence and public requirements; and the remaining 28.5 per cent. was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30th June, 1963:—alienated, 328,294 acres; leased—pastoral leases, 157,202,169 acres; other leases, licences and mission stations, 20,814,402 acres; total leased, 178,016,571 acres; reserved for Aboriginal, defence and public requirements, 59,663,467 acres; unoccupied and unreserved, 94,970,868 acres; total 332,979,200 acres.

9. **Australian Capital Territory.**—Alienated land of the Territory at the end of 1963 comprised 11.0 per cent. of the total area; land in process of alienation 6.8 per cent.; land held under lease and licence 48.1 per cent.; land otherwise occupied, including city tenures, 8.5 per cent.; and unoccupied 25.6 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1963:—alienated 65,857 acres; in process of alienation 41,224 acres; leased—grazing, agricultural, etc., leases, 269,842 acres; grazing licences, 12,440 acres; total leased, 282,282 acres; otherwise occupied, including city area leases, 51,380 acres; unoccupied, 142,186 acres; total, 582,929 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,929 acres.

10. Summary.—The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1963.

ALIENATION AND OCCUPATION OF CROWN LANDS, 1963

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30th June. (c) At 31st December. (d) Includes Jervis Bay area.

§ 4. Advances to Settlers

1. General.—A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Year Book (see List of Special Articles, etc., preceding General Index to this issue).

The summaries of loans and advances under State authorities in the following paragraphs are compiled from returns supplied by the various State Government lending agencies in the several States. They include transactions in lands acquired under closer and soldier settlement schemes, but exclude balances owing on former Crown lands sold on the conditional purchase, etc., system. Advances made by general banking institutions in the course of their ordinary business are not included. For information on such advances see Chapter XXI. Private Finance.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of re-appraisements of land values and the writing down of debts. In general, they include both principal and interest outstanding.

A summary for Western Australia is not included, as practically the only governmental funds being made available are Commonwealth (see § 2, pp. 90-1).

In New South Wales and Victoria, expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland, no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States, this expenditure is provided for by the Commonwealth, and particulars are included in § 2, page 90.

Loans (Agricultural Occupations) under the *Commonwealth Re-establishment and Employment Act 1945* and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

2. New South Wales.—The following table shows particulars respecting advances, etc. under State authorities to 30th June, 1963.

Total	1,462,675	34,113,761	2,547	10,132,470

(a) After writing off of non-recoverable amounts totalling £745,803.

6. Western Australia.—The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1st October, 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate in similar manner to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown in § 2, page 90.

7. *Tasmania*.—The following table shows particulars of advances under State authorities to 30th June, 1963. Particulars of advances made for the purchase of land for closer and soldier land settlement were included in the table for earlier years but have now been omitted, as they are not regarded as outstanding advances by the Department of Agriculture; the areas so purchased have been leased on 99-year terms with an option of purchase which the leaseholder may exercise at any time.

ADVANCES TO SETTLERS, ETC.: TASMANIA

Advances, etc.	Advances, etc., made during 1962-63	Total advances, etc., to 30th June, 1963	Balances outstanding at 30th June, 1963	
			Number	Amount

Total	286,948	6,552,569	1,226	1,463,655

8. *Northern Territory*.—During the year 1962-63, 22 advances totalling £20,336 were approved and advances made totalled £21,942. At 30th June, 1963, the balance outstanding from 109 settlers, including interest, was £178,333.

CHAPTER V

THE TERRITORIES OF AUSTRALIA

NOTE.—The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are:—Norfolk Island; Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); Nauru (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, to which the laws, ordinances and regulations of the Northern Territory, of which it is deemed to form part, apply wherever applicable. Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 23 and 24 of Chapter I.

THE NORTHERN TERRITORY

§ 1. Area and Population

1. **Area.**—Upon the extension of New South Wales westward to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911. The total area is 520,280 square miles.

2. **Population.**—(i) *Population, excluding Full-blood Aborigines.* At the Census of 30th June, 1961, the population of the Territory, excluding full-blood Aborigines, was 16,206 males, 10,889 females, 27,095 persons. Corresponding figures at the Census of 30th June, 1954, were 10,288, 6,181 and 16,469 respectively.

The European population of the Territory increased slowly from 670 at the Census of 1881 to 3,767 in 1918. By 1921, it had decreased to 2,458, and in 1933 was still only 3,306. It had risen to 9,116 at the Census of 1947, to 14,031 at the Census of 1954 and to 23,599 at the Census of 1961. At 30th June, 1964, population, excluding full-blood Aborigines, was 32,317.

(ii) *The Aborigines.* For particulars relating to the Aboriginal population, see Chapter IX. Population. All Aborigines, by virtue of the *Nationality and Citizenship Act 1948–1960*, are British subjects and Australian citizens. Northern Territory Aborigines are not subject to special legislation, but the special welfare needs of individuals are met by the *Welfare Ordinance 1953–1963* (see § 9 below, p. 106). Reserves for Aborigines comprise an area of 94,025 square miles.

§ 2. Legislation and Administration

On 1st January, 1911, the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Year Book No. 15, page 940. For particulars of the administration up to the *Northern Territory (Administration) Act 1931*, by which it was, for the second time, placed in the hands of an Administrator, see Year Book No. 38 and earlier issues.

The *Northern Territory (Administration) Act 1910–1962* provides for the constitution of a Legislative Council consisting of the Administrator as President, six official members, three nominated non-official members and eight elected members. The Council makes ordinances for the Territory, which must be submitted to the Administrator for assent. The Administrator may or may not assent to them, or he may reserve them for the Governor-General. The Governor-General may disallow any ordinance assented to by the

Administrator within six months from the date of assent, and the operation of ordinances relating to certain matters, including Crown lands and Aboriginal affairs, is dependent on his approval. Money votes may be proposed in the Council only by the Administrator himself, or by his permission or direction.

The Territory elects a member to the House of Representatives, who has the right to take part in debates, but may vote only on matters that relate solely to the Northern Territory.

§ 3. Physiography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland, the country generally is destitute of conspicuous landmarks. From the coast, there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior systems. Towards the centre of the continent, the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

§ 4. Climate, Fauna and Flora

1. **The Seasons.**—There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer months. Further particulars appear in Year Book No. 6, page 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous) and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. A species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been reduced by indiscriminate shooting. Buffalo shooting is, however, now controlled by Ordinance.

3. **Flora.**—The vegetation is north Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. In the coastal regions, tropical vegetation grows luxuriantly to the water's edge. In the north, cypress pine, bloodwood and paper-bark timbers are now cut and milled for local building purposes. Cypress pine is resistant to termites. On the wide expanses of plain country in the interior, there is little vegetation, the principal orders represented being:—*Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae*, *Utricaceae*.

§ 5. Production

1. **Agriculture.**—Up to the present, agriculture has made little progress in the Territory, although rice, peanuts, tobacco, grain sorghum, bananas, pineapples, citrus fruits, cashew nuts, mangoes, papaws, vegetables, fodder plants and improved pastures can be grown in certain areas. At the present time, commercial agricultural production is practically confined to vegetables and small-scale fruit production (mainly pineapple and citrus) for local consumption. A small industry is being developed in Townsville lucerne seed production and in the production of hay.

In 1946, the Commonwealth Scientific and Industrial Research Organization commenced scientific surveys to determine more accurately the potentialities of the Territory. Surveys have been completed of the Katherine-Darwin, Barkly Tableland, Victoria River, and Alice Springs Regions. The survey of the Katherine-Darwin Region indicated that further investigations into agricultural possibilities were warranted. As a result, the C.S.I.R.O. established an agricultural research station at Katherine to investigate the possibilities of dry farming in a land system covering an area of about 7,000 square miles in the Katherine-Daly River basin. The research work at this station was sufficiently encouraging in respect of the production of peanuts, grain sorghum and pastures to warrant investigations into the application of the findings on a commercial scale. To further the investigations, the Commonwealth Government approved of the establishment by the Northern Territory Administration, in 1952, of an experimental farm at Katherine for the purpose of carrying out trials with these crops to determine the requirements for farming them on a commercial scale. In 1956, the Administration established an experimental farm at Berrimah, near Darwin. Investigations into fruit and vegetable growing and pasture production are being carried out under both dry land and irrigated conditions.

The survey of the Katherine-Darwin Region also indicated various soil types in other parts of the Region on which agricultural production tests would be worthwhile. Trials on soil types are carried out by agricultural field officers of the Administration in various areas of the Territory considered potentially suitable for agriculture.

Prospects for rice growing were indicated by the survey, and in 1952, the Administration established rice research stations at Humpty Doo and at a location known as Sixty Mile, on the Stuart Highway, 60 miles from Darwin. Since the 1959-60 season, rice research work on the sub-coastal plains has been carried out in the Territory by the C.S.I.R.O. at its Coastal Plains Research Station at Middle Point, near Humpty Doo. The Administration carries out rice investigational work outside the coastal plains at the Upper Adelaide River Agricultural Experiment Station. At the rice research stations, it has been demonstrated that rice can be grown in the Territory, but that the main problems are adequate water control and drainage, determination of cultivation techniques in the soil conditions, and the production of suitable rice varieties. Territory Rice Limited, a firm with Australian and American capital, carried out commercial scale operations near Humpty Doo from the 1954-55 season until the 1959-60 season. Under arrangements with the company, four former employees grew rice crops in the 1960-61, 1961-62 and 1962-63 seasons.

On 25th July, 1959, the Minister for Territories appointed an expert committee to investigate the prospects of promoting agricultural settlement in the Northern Territory on an economic basis and the major factors to be considered in shaping an agricultural policy for the Territory, including the areas best suited to agricultural settlement, the crops most likely to prove economic, the relationship of agriculture to the expansion of the pastoral industry, the availability of land and the distribution and tenure of land, credit and other forms of assistance to primary producers, marketing opportunities, research and agricultural extension work, and water use and conservation. The committee has presented its report, and some of its recommendations have been accepted and implemented, while others are under consideration.

A scientific liaison conference, convened jointly by the C.S.I.R.O. and the Northern Territory Administration, was held in Darwin during February, 1961. This conference was attended by various Commonwealth departments, universities, and the Australian Meat Board. Fifty-eight papers were presented to the conference, and all aspects of rural and pastoral activities in the Territory were covered.

Early in 1964, three pilot farms commenced operations in the Marrakai area, two being mixed farms based on rice growing and cattle fattening, and one on cattle fattening on native and improved pastures.

2. Pastoral Industry.—The pastoral possibilities of certain parts of the Territory were recognized at an early date, and both cattle and sheep raising have been attempted. For various reasons, sheep-raising has not been very successful, but the cattle industry has progressed steadily and is continuing to expand.

Cattle exported during 1963-64 numbered 107,872—65,605 to Queensland, 34,701 to South Australia, 4,295 to Western Australia and 3,271 to Hong Kong. Other livestock exports included 1,002 horses. Imports of livestock were—bulls, 912; other cattle, 18,518; horses, 150; sheep, 3,452; pigs, 341; and poultry, 17,724.

The estimated numbers of livestock in the Territory at 30th June, 1960 to 1964, are given in the following table.

NORTHERN TERRITORY: LIVESTOCK

At 30th June—				Horses	Cattle	Sheep	Pigs	Goats
1960	38,340	1,110,520	14,960	4,400	9,440
1961	40,054	1,154,656	16,089	2,845	5,958
1962	40,809	1,063,528	10,388	2,762	4,949
1963	38,191	1,086,627	9,469	1,842	4,275
1964	39,756	1,067,721	9,830	1,806	4,727

3. **Hides and Skins.**—The numbers of hides and skins exported from the Territory during 1963–64 were as follows: sheep, 2,563; crocodile, 13,416; cattle, 33,521; and buffalo 1,660.

4. **Mining.**—During 1963, the value of output of the mining industry in the Territory, excluding uranium mining, was £2,873,000.

The mining of copper ores and concentrates is the most important in terms of value of output, and accounts for more than two-thirds of the Territory's total recorded production. Prior to 1956, gold minerals, first mined in 1869, accounted for most of the value of output, but from 1956 onwards gold production has remained relatively constant while copper production has increased considerably. The bulk of the copper and gold is won at Tennant Creek, where, in 1958, the government battery was re-opened to encourage gold mining by smaller operators.

Although some oversea contracts held by uranium producers have recently terminated, the Moline mine operated by a private company and the Rum Jungle mine operated on behalf of the Commonwealth continue to produce, the uranium product from the latter mine being stockpiled at present. Prospecting and survey programmes are being continued by the Commonwealth Bureau of Mineral Resources. An important incidental outcome of this work was the discovery during 1962 of a large deposit of rock phosphate near Castlemaine Hill.

Production of mica and wolfram concentrates, both of which were important in the past, is now negligible. Increasing interest is being shown in tin mining, and production is expanding.

Plans are now being put into operation to work large bauxite deposits at Gove Peninsula.

The following table shows the value of output of the mining industry in the Territory for the years 1959 to 1963. Particulars of the value of output from quarries are not included.

**NORTHERN TERRITORY: VALUE OF OUTPUT^(a) OF THE MINING INDUSTRY
(EXCLUDING URANIUM)
(£'000)**

Year	Copper (b)	Gold	Manganese	Mica	Tin	Other	Total, all minerals
1959	.. 1,455	901	37	45	7	26	2,471
1960	.. 2,080	881	41	17	15	39	3,073
1961	.. 2,063	895	1	1	4	23	2,987
1962	.. 1,632	842	2	..	35	13	2,524
1963	.. 1,959	873	1	..	40	..	2,873

(a) Selling value at point of sale of mine products less transport costs from mine to point of sale.
(b) Ore and concentrate.

5. **Forestry.**—In August, 1958, the Commonwealth Government approved a six-year programme of forestry improvement and development to preserve existing forest areas and increase possible timber resources. The programme is being carried out by the Forestry and Timber Bureau. Experimental work in reforestation is being carried out in small plantation areas. Cypress pine appears the most promising species for large-scale commercial plantings. Local production of log timber, mainly cypress pine, amounted to 2,376,284 super. feet in 1963–64, but this was insufficient to meet local requirements, and about 2,950,000 super. feet of timber was imported from the States and overseas.

6. **Pearl Fisheries.**—In 1884, mother-of-pearl-shell was discovered in the harbour of Port Darwin. Since that time, the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast. Figures for production and value of shell for the seasons ended January, 1960 to 1964, are shown in the following table.

NORTHERN TERRITORY: PEARL FISHING(a)

Season ended January—	Boats engaged	Pearl-shell taken	
		Quantity ('000 lb.)	Value (£'000)
1960.. .. .	5	188	36
1961.. .. .	5	222	45
1962.. .. .	3	147	29
1963.. .. .	2	115	20
1964.. .. .	2	11	2

(a) Excludes operations of Queensland and Japanese pearlers operating in Northern Territory waters.

Competition from plastic materials has reduced the price being paid for pearl-shell to a low level, and pearling has declined in recent years. Experimental work is being conducted on pearl culture operations in territorial waters, and it is hoped that a new industry will be established to replace the old pearling industry.

7. **Secondary Industries.**—The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, for example, home building, electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Major industrial investments by private interests in recent years include two breweries and a factory for the manufacture of milk products, ice cream, and aerated waters. The total number of factories (i.e., establishments in which four or more persons are employed or where power—other than manual—is used in any manufacturing process) in 1962–63 was 141; the average number of employees, 967; the value of production (value added), £2,246,000; and the value of output, £3,964,000.

§ 6. Land Tenure

Almost half the land in the Territory is reserved or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described in Year Book No. 48, pages 111–12, and in more detail in Year Book No. 39, pages 329–30. Chapter IV. Land Tenure and Settlement of this issue contains up-to-date statistical information concerning areas occupied under various forms of tenure.

§ 7. Trade, Transport and Communication

1. **Trade.**—No record is kept of the trade between the States and the Territory. The following table shows the values of the total direct oversea trade into and from the Northern Territory during the years 1959–60 to 1963–64.

NORTHERN TERRITORY: OVERSEA TRADE

(£)

Year						Imports	Exports
1959-60	1,484,791	551,199
1960-61	1,206,246	435,069
1961-62	2,084,216	611,722
1962-63	1,192,321	544,462
1963-64	1,468,626	1,236,978

2. **Shipping.**—Shipping services to Darwin are provided from the eastern States at intervals of about four weeks by ships of the Australian National Line, and from Western Australia by three to four ships a month of the Western Australian State Shipping Service. Oversea tankers visit Darwin approximately ten times annually with supplies of aircraft fuel and other petroleum products. Other overseas vessels call at irregular intervals. During 1963-64, approximately 180,000 tons of merchandise were discharged at Darwin. A vessel operated from Thursday Island serves settlements on the Gulf of Carpentaria, and some mission-owned boats carry cargo from Darwin to mission stations and government settlements along the coast.

3. **Air Services.**—At 30th June, 1964, there were 10 government aerodromes and 118 licensed aerodromes in the Territory. The overseas passenger services using the Darwin international airport are Air India; Qantas/B.O.A.C. (Sydney to London); B.O.A.C. (Sydney to Hong Kong); and K.L.M. (Sydney to Amsterdam). Qantas also conducts a freight service from Sydney to London. Regular inland services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett-A.N.A. (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd. (from Perth and Derby). MacRobertson-Miller Airways Ltd. and Connellan Airways Ltd. operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

4. **Railways.**—The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of more than 750 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Maree, a distance of 217 miles, and 3 ft. 6 in. from Maree to Alice Springs. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft. 6 in. gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

5. **Roads.**—The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Larrimah and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. These highways are used for carrying various freights including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 11,200 miles of road in the Territory of which 1,430 miles are sealed.

Work on a programme for reconstruction of beef cattle roads, estimated to cost £4,570,000 over a period of three to four years, commenced in 1961-62. Expenditure to 30th June, 1964, was £2,235,000. The transport of cattle by road is expected to increase the number, quality and value of cattle turned off.

6. **Posts, Telegraphs, Telephones and Wireless.**—Postal communication is maintained by road, rail and air transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering a length of 2,230 miles, runs from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world.

Long-distance telephone communication is established between Darwin and the capital cities of Australia, and oversea telephone communication through Sydney or Perth is also available.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine, and there is a commercial station at Darwin. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia), Broken Hill (New South Wales), and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

§ 8. Education

1. **European.**—Schools for European and part-European children in the Territory are conducted for the Commonwealth, on an agreed basis of reimbursement, by the South Australian Department of Education, which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools.

At 30th June, 1964, there were 20 government schools in the Territory, with 4,858 pupils, and four private schools, with 934 pupils, providing instruction according to the South Australian curriculum. There were also three subsidized schools on pastoral properties with a total enrolment of 26. High schools have been established with classes to Leaving Certificate level at Alice Springs and Leaving Honours level at Darwin.

All children who live more than 10 miles from an established school receive an allowance of up to £160 (£100 plus £60 on a graduated scale according to family income) per annum plus fare concessions if they board away from home in order to attend school. Twelve Intermediate exhibitions or 10 per cent. of the number of candidates, whichever is the greater, are available annually, and carry benefits of £5. There are also book allowances ranging from £8 to £10 per annum for secondary students.

Approximately 353 children receive correspondence education under the South Australian Correspondence School system. The radio session "School of the Air" supplements normal correspondence instruction for certain children in isolated areas.

Thirteen pre-school centres are in operation in the Territory, the staff of all except one being officers of the Northern Territory Administration. A number of scholarships are offered each year for Territory girls to qualify as pre-school teachers.

2. **Special Aboriginal Schools.**—The social, cultural, and educational background of the Aboriginals has made necessary the establishment of special schools for them. It is envisaged that this necessity will ultimately pass. As from the beginning of the 1956 school year, control of these schools passed from the Commonwealth Office of Education to the Welfare Branch of the Administration. Nineteen schools have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk, and school clothes are supplied to the pupils. In addition to the 19 Administration schools, 15 schools for Aboriginal children are conducted by missions with the aid of Government subsidies. Also, five schools aided by Government subsidies have been established on pastoral properties, and the establishment of others along similar lines is planned. Five pre-school centres are operated by the Administration for Aboriginal children, and three others are organized by the missions.

3. **Theoretical Training of Apprentices.**—The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

§ 9. Aboriginal Welfare

The Commonwealth and State Governments have adopted a common policy of assimilation which aims at ensuring that "all Aborigines and part-Aborigines will attain the same manner of living as other Australians and live as members of a single Australian community, enjoying the same rights and privileges, accepting the same responsibilities, observing the same customs and influenced by the same beliefs, hopes and loyalties as other Australians". In the Northern Territory, Aborigines, as such, are not subject to special conditions, but the *Welfare Ordinance* 1953–1963 provides that any person, regardless of race, may be declared a ward if by any reason of his manner of living, his inability without assistance to manage his own affairs, his standard of social habits and behaviour, and his personal associations, he stands in need of the special care and assistance the Ordinance provides. An intensive welfare programme to prepare Aboriginal wards for the demands of modern living is being carried out, and 13 Government settlements and 14 mission stations have been established, where Aborigines are encouraged to adopt a settled way of life, and health services, particularly child welfare services, education, housing, vocational training and employment are provided. Aborigines are also encouraged to take part in the social activities of the community.

§ 10. Finance

Details of revenue and expenditure of the Territory for the years 1959–60 to 1963–64 are shown below. The information given covers the transactions of the Commonwealth Consolidated Revenue Fund relating to the Northern Territory.

THE AUSTRALIAN CAPITAL TERRITORY

§ 1. Population, Works and Services

1. **Population.**—From 1911 until 1921, the population of the Australian Capital Territory remained at about 2,000 persons. In 1922, it commenced to rise, and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, it passed 8,000.

Little growth was made thereafter until the later thirties, and at the outbreak of the 1939–45 War the population had reached just under 13,000 persons. During the war, growth was again slow, and at the Census of 30th June, 1947, the population was 16,905 persons. Subsequently, the population showed steady increases and at the Census of 30th June, 1954, it was 30,315 persons. With further transfers of departments from Melbourne, the population reached 58,828 persons (including 527 in Jervis Bay) at the Census of 30th June, 1961. At 30th June, 1964, the population was 80,413, made up of 77,644 in Canberra City and 2,769 in rural areas (including Jervis Bay).

2. **Progress of Works.**—(i) *National Capital Development Commission.* The *National Capital Development Commission Act 1957–1960* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1963–64 was the sixth year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Department of Works and private consultants.

Details of expenditure by the Commission in each year from 1959–60 to 1963–64 are included in the table on page 114.

(ii) *Department of Works.* Apart from the work it carries out for the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1963–64 on all operations amounted to £5,020,173 (£5,125,084 in 1962–63), comprising:—Building Works—Housing, £19,746, Other Building, £2,683,501; Engineering Works, £306,066; Repairs and Maintenance—Building, £826,706, Engineering, £1,112,077; Purchase of Plant, £72,077.

(iii) *Major Works.* The following major works were completed during 1964. *National Capital Development Commission:* The Australian National Mint; Watson Infants' School; Hackett Primary School; Russell Building, No. 5; Brassey House Extension; Zoology Building, Australian National University; Dickson Swimming Pool; and Hackett Reservoir.

Department of Works: A.B.C. Studios, Dickson; Land Research and Regional Surveys Laboratory; permanent officers' sleeping quarters, and communications and navigation building, R.A.A.F., Fairbairn; and mechanical workshop and store at civil aerodrome.

Works under construction at the beginning of 1965 included the following projects. *National Capital Development Commission.* Further buildings in the Defence Office Group at Russell and at the Canberra Technical College; National Library; Economics Building, Australian National University; Civic Auditorium; Commonwealth Hostel, Northbourne Avenue; Commonwealth Avenue Offices; Bureau of Mineral Resources Building; Anzac Parade West Building; Campbell High School; Curtin Primary School; Watson High School; Anzac Parade; Bachelor Flats (120 units); and New Oakey Hill Reservoir.

Department of Works: Additions and alterations to Canberra Community Hospital; computer building and laboratories for Council for Scientific and Industrial Research; Civic Telephone Exchange; and deep space tracking station, Tidbinbilla.

(iv) *Roads and Water Supply.* The total length of roads in the Territory at 30th June, 1964, was:—bitumen and concrete—379 miles; gravel—177 miles; and other formed roads—86 miles; total—642 miles.

At 30th June, 1964, about 17,500 homes were connected to the city water supply, drawn through nine service reservoirs from two storages on the Cotter River with a total capacity of nearly 3,500 million gallons. A third storage dam site is currently being investigated.

Treatment works at Weston Creek dispose of Canberra sewage. At 30th June, 1964, 283 miles of sewers were laid.

(v) *Housing Development.* To provide for additional home development three new suburbs are being opened in Yarralumla Creek Valley, south-west of the existing city area. The first of these, Hughes, is well advanced and 603 homes were completed by the end of 1964. In all parts of Canberra 1,609 houses and 248 flats were completed during 1964.

3. *Transport and Communication.*—Canberra is connected with the railway system of New South Wales at Queanbeyan by a line $4\frac{1}{2}$ miles long. This line was opened for goods traffic on 25th May, 1914, and for passenger traffic on 15th October, 1923. Direct or linking services operate between Canberra and Sydney and Canberra and Melbourne.

Two airlines provide several services daily each way on the Sydney—Canberra—Melbourne route.

Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia.

There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system, and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system, and CTC Channel 7, a commercial station.

4. *Education, Health and Justice.*—The *Education Ordinance 1937–1959* provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides the teaching staff. It is reimbursed for expenses incurred.

At 31st December, 1964, there were four public secondary schools in Canberra providing courses to the Leaving Certificate standard—Canberra High School, Telopea Park High School, Lyneham High School, and Narrabundah High School. One high school, Dickson, is proceeding to fifth form in 1965 and two new high schools, Campbell and Watson, are scheduled to commence with first and second form pupils. Twenty schools provided courses for children in infants and primary classes, including two in the Jervis Bay area and three in rural districts. There were also a school for mentally handicapped children; a therapy clinic for children suffering from speech defects; a clinic for educational guidance; and a class for deaf children.

At the same date, there were sixteen private schools in Canberra. Of these, St. Edmund's Christian Brothers' College, the Catholic Girls' High School, the Canberra Grammar School (Boys), and the Canberra Church of England Girls' Grammar School provide courses leading to the Leaving Certificate Examination. A fifth private secondary school, Daramalan College, is annually extending its courses to reach Leaving Certificate standard in 1966. A sixth private secondary school, the Griffith Catholic Girls' High School, commenced with first and second form pupils at the beginning of 1965.

Twenty-six pre-school centres, including two occasional care centres and a mobile unit which visits outlying areas, provide pre-school facilities for approximately 2,040 children between the ages of three and five years.

The Canberra Technical College, which follows generally the curriculum set by the New South Wales Department of Technical Education, provides trade, post-trade, certificate and some hobby courses. At present 80 separate courses are provided and the number of enrolments exceeds 3,500. The college is located in two areas, Reid and Kingston. Eventually the Reid College will replace the Kingston College.

An area of about 250 acres has been set aside at Acton for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research, and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Provision for undergraduate studies and some post-graduate study is made by the School of General Studies.

Further reference to education in the Australian Capital Territory appears in Chapter XIX. Education, Cultural Activities and Research.

The Canberra Community Hospital serves the population of Canberra and surrounding districts. At 30th June, 1964, it had 427 beds, an honorary medical staff of 78, seven salaried medical staff, and a nursing staff of 356. Extensions are being made to the hospital to enable it to cope better with the needs of Canberra's growing population. For further information see Chapter XVIII. Public Health.

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force, which at the end of 1963 numbered 115, including two policewomen.

§ 2. Production

1. **Lands.**—Reference has been made in earlier issues of the Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and Chapter IV. Land Tenure and Settlement of this issue contains statistical information on the subject. (See also § 1. Canberra: Fifty Years of Development, p. 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910, Crown lands in the Territory may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. Leases of land in the city area are granted under the *City Area Leases Ordinance* 1936–1961, and leases of other lands under the *Leases Ordinance* 1918–1958. Land is also leased for various purposes in the city area under the *Church Lands Leases Ordinance* 1924–1932 and the *Leases (Special Purposes) Ordinance* 1925–1943, while one lease under the *Church of England Lands Ordinance* 1926 has been granted for church purposes. As considerable portions of the Territory lands are not immediately required in connexion with the establishment of the city, large areas have been leased for agricultural or grazing purposes.

The Commonwealth acquired from the State of New South Wales sovereign rights over the area comprising about 28 square miles of land and water at Jervis Bay for possible use as a port in connexion with the Australian Capital Territory. The Royal Australian Naval College is situated in this area. Some 5,000 acres of land in the area, mostly of little value agriculturally, are used for grazing purposes. The natural forest is being utilized for the production of hardwood building material, and the area treated is being reforested with softwoods on an experimental basis.

2. **Forestry.**—A considerable amount of reforestation work has been undertaken, and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills and Kowen. Experimental plots have been established in the Brindabella mountains, and soil conservation areas at various locations throughout the Territory.

The total area of softwood plantations at 30th June, 1964, was 27,224 acres, of which 24,863 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus ponderosa* and *Pinus nigra*, and 409 acres of experimental planting at Jervis Bay, mainly *Pinus radiata* and *Pinus elliotii*.

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly on decorative lines, but since then a much wider programme has been undertaken. Sawmill timber is now being obtained, mainly from thinning operations. The yearly output of pine logs has increased from 2,500 cubic feet in 1930–31 to about 1.1 million cubic feet at the present time, the total amount cut to date being about 17.5 million cubic feet. The present output consists of approximately 45 per cent. case-making material, 40 per cent. logs yielding building material, and 15 per cent. cordwood, pulpwood, and fence posts.

In 1926, a comprehensive review was undertaken of the Territory's potentialities for forest development. The existing forest area has been placed under management and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection, to 100,000 acres of hardwood forests in the Cotter catchment area. Hardwood log production during 1963–64 was 99,226 cubic feet, approximately 75 per cent. of this being cut in the Tidbinbilla forest and used locally, the balance cut in Jervis Bay, and used in New South Wales. The total amount of hardwood cut from Australian Capital Territory forests to date is about 4,066,917 cubic feet and only small quantities now remain unexploited.

3. **Production.**—During 1963–64, the production of the more important items of the agricultural and pastoral industry was—wheat, 69,384 bushels; wool, 2,552,000 lb.; whole milk, 1,153,000 gallons; meat (carcass weight, fresh), 4,482 tons. The numbers of livestock depastured at 31st March, 1964, were—horses, 622; cattle, 14,399; sheep, 289,104; and pigs, 121.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory. For the year 1963–64, factories (i.e. establishments in which four or more persons are employed or where power—other than manual—is used in any manufacturing process) numbered 170, the average number of employees was 2,694; the value of production (value added) was £5,548,000; and the value of output, £10,103,000.

(a) Revenue collections in respect to water supply and sewerage are not available separately and are included in Rates and Other. (b) Electricity transactions included in Australian Capital Territory Electricity Supply Trust Account. (c) Other than Works and services. (d) Payment to Australian Capital Territory Transport Trust Account (loss on omnibus service). (e) Excludes repairs and maintenance.

NORFOLK ISLAND

1. **General.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude $29^{\circ} 3' 30''$ S., longitude $167^{\circ} 57' 5''$ E. Its total area is approximately 14 square miles, the island being about 5 miles long and 3 miles wide. It is 930 miles distant from Sydney and 660 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 49° and 85° F. with a mean of 68° F. The average annual rainfall is 53 inches.

Having served as a penal station from 1788 to 1813 and from 1826 to 1855, Norfolk Island in 1856 became the home of the remaining descendants of the *Bounty* mutineers. At the Census of 30th June, 1961, the population was 844, consisting of 421 males and 423 females. Total population at 30th June, 1964, was 896.

2. **Administration.**—In 1856 the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896 it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, it was accepted by the Commonwealth Parliament as a territory of Australia. It is controlled by the Minister for Territories through an Administrator. The *Norfolk Island Act* 1957 provided for a local government body, the Norfolk Island Council, which replaced the former advisory council, retaining its advisory functions, but in addition having a certain autonomy in local government matters on the island. The Council did not in fact exercise its local government powers, and at its request the Act was again amended in 1963 to make it once more a purely advisory body. The amendment provided, however, for fuller consultation with the Council in the administration of the Territory, particularly in regard to the raising and spending of revenues. The amendment came into operation after the election of the Council in 1964.

3. **Economic Activity.**—The major economic activities of the island are primary production, the tourist trade and Government instrumentalities.

(i) **Primary Industries.** The soil on the island is particularly fertile, the climate equable, and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties.

Bean seed is exported, but wide fluctuations in prices, as in recent years, react unfavourably against the industry. The conditions on Norfolk Island also favour the production of other types of seed.

Fish abound off the island. In the past, a number of ventures have been formed to exploit this resource. They have been short-lived owing, for the most part, to the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. The quota of 150 humpback whales in 1956, 120 in 1957 and in 1958, 150 in 1959, and 170 in 1960 and in 1961, was caught and processed at the station. Owing to a marked scarcity of whales, however, only four were caught in 1962, and the station has been closed down.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

(ii) **Tourists.** The unique history and unusual beauty of the island have always attracted a number of tourists. Before the 1939–45 War, the only means of transport to the island was by ship, but the building of the aerodrome in 1943 made the island far more accessible for tourists and the number of tourists has increased steadily during recent years. There are at present three licensed residential hotels and five guest houses; additional accommodation is being planned.

(iii) *Government Instrumentalities.* A large proportion of the population is employed by Commonwealth Government instrumentalities, namely:—Department of Civil Aviation, Norfolk Island Administration, and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.

4. *Trade, Transport and Communication.*—Imports to Norfolk Island since the 1939–45 War have risen from £32,402 in 1945–46 to £601,830 in 1963–64. In 1963–64 the major proportion (£420,949 or 70 per cent.) came from Australia, while New Zealand and Pacific Islands supplied £17,485 or 2·9 per cent. Exports rose from £9,024 in 1945–46 to £210,182 in 1960–61, but declined to £79,679 in 1963–64, when the whaling industry ceased operations. Australia was the principal market, exports thereto amounting to £67,874 in 1963–64, while exports to New Zealand and to Pacific Islands amounted to £10,477.

No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are the produce or manufacture of Norfolk Island, shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately seven-week intervals from Sydney via Norfolk Island to the New Hebrides, Solomon Islands and other island groups and thence back to Sydney, while other vessels plying between Sydney and Noumea call at Norfolk Island about every three weeks. Shipping between the island and New Zealand is infrequent.

A fortnightly passenger and air freight service between Sydney and Norfolk Island, maintained by Qantas Empire Airways Ltd., extends to New Zealand under charter to Tasman Empire Airways Ltd.

There are approximately 50 miles of usable road on the island. As a substantial section of the population possesses private motor cars, and taxi-cab and bus services are available, transport is almost exclusively by motor vehicle.

5. *Education.*—Education is free and compulsory up to the age of fifteen years. The school, which is conducted by the New South Wales Department of Education, conforms to the Australian standard of public education, ranging from kindergarten to the School Certificate examination. The teachers are provided by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30th June, 1964, was 174.

6. *Judiciary.*—The judicial system of the Territory was reconstituted by the *Norfolk Island Act 1957*, which was proclaimed in the Territory on 7th April, 1960. There is now a Supreme Court of Norfolk Island and a Court of Petty Sessions, which replaced the Court of Norfolk Island in its full and limited jurisdictions. The Supreme Court is the highest judicial authority in the Territory with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by a judge sitting in Court to the extent provided by the *Supreme Court Ordinance 1960* or any other Ordinance or by rules of Court, and in all matters of practice and procedure by a judge sitting in Chambers. The jurisdiction of the Court of Petty Sessions is exercised by a Chief Magistrate or any three Magistrates other than the Chief Magistrate. This Court has jurisdiction to hear and determine in a summary manner, under the provisions of the *Court of Petty Sessions Ordinance 1960*, cases arising under a law in force in the Territory where, under the law, an offence is punishable by summary conviction, a person is made liable to a penalty or punishment or to pay a sum of money for any offence, and no other provision is made for the trial of the person committing the offence, or jurisdiction is conferred upon a Court of Petty Sessions. The Court can also hear and determine civil claims in respect of a sum or matter or issue that does not exceed, or the value of which does not exceed, £200. There is right of appeal to the Supreme Court from the Court of Petty Sessions, and, in certain circumstances, a right of appeal to the High Court of Australia from judgments of the Supreme Court.

7. *Finance.*—The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the *Norfolk Island Trust Fund*, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1959–60 to 1963–64 were as follows.

NORFOLK ISLAND: REVENUE AND EXPENDITURE

PAPUA AND NEW GUINEA

NOTE.—The information under this heading is applicable to both the Territory of Papua and the Trust Territory of New Guinea. For details of the respective Territories see pages 124 (Papua) and 129 (New Guinea) and following pages.

§ 1. Administration

The *Papua-New Guinea Provisional Administration Act 1945-1946*, which provided for the transfer back of control from the military authorities to civil authorities after the 1939-45 War, was repealed by the *Papua and New Guinea Act 1949*, which came into force on 1st July, 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, one Supreme Court and one Public Service.

Provision was made for an Executive Council of not less than nine officers of the Territory, to be appointed by the Governor-General, and a Legislative Council consisting of twenty-nine members:—the Administrator; sixteen officers of the Territory (to be known as official members); three non-official members possessing such qualifications as are provided by Ordinance and elected, as provided by Ordinance, by electors of the Territory; three non-official members representing the interests of the Christian missions in the Territory; three non-official native members; and three other non-official members.

The Legislative Council was inaugurated on 26th November, 1951, by His Excellency Sir John Northcott, while Administrator of Australia.

In October, 1960, the Commonwealth Parliament passed amendments to the Papua and New Guinea Act to change the composition of the Legislative Council, the new Council consisting of 37 members, namely:—the Administrator; 14 official members (to be either indigenous or non-indigenous); 12 elected members (six elected by the native people); and 10 nominated members, of whom at least five will be indigenes. The Executive Council was replaced by the Administrator's Council, consisting of the Administrator and six persons, appointed from the Legislative Council by the Minister for Territories, on the recommendation of the Administrator.

In May, 1963, the Commonwealth Government passed a further amendment to the Act, which made provision for a House of Assembly to replace the Legislative Council. The House now consists of 64 members—10 official members appointed by the Governor-General on the advice of the Administrator; 44 members elected by the people of the Territory on a common roll in 44 open electorates; and 10 non-indigenous persons elected on a common roll in 10 special electorates comprising one or more open electorates.

The first elections for the House of Assembly were held in February-March, 1964.

The 1963 Act also provides for membership of the Administrator's Council to be increased from 7 to 11, seven of whom must be elected members of the House of Assembly.

§ 2. Judiciary

The courts which exercise jurisdiction within the Territory are:—

- (i) The Supreme Court of the Territory of Papua and New Guinea;
- (ii) Courts of Petty Sessions (Papua), District Courts (New Guinea);
- (iii) Courts for Native Matters (Papua), Courts for Native Affairs (New Guinea); and
- (iv) Warden's Courts.

The Supreme Court is the highest judicial authority in the Territory and has unlimited criminal and civil jurisdiction. Courts of Petty Sessions and District Courts have criminal jurisdiction over the less serious offences which are punishable on summary conviction, but have no jurisdiction to try treason crimes, misdemeanours and other indictable offences. They also exercise a limited civil jurisdiction. The jurisdiction of the Courts for Native Matters and Native Affairs covers offences by indigenous inhabitants against the Native Administration Regulations, and civil actions of any kind other than matters relating to the ownership of land or water if all parties are indigenes. The Administrator has power to establish, in respect of each gold field or mineral field, warden's courts with jurisdiction over civil cases respecting mining or mining lands held under the *Mining Ordinance 1937-1959* and offences against the mining laws of the Territory.

In addition, there are the Native Land Commission set up under the *Native Land Registration Ordinance 1952* and the Commissioner of Titles appointed under the *New Guinea Land Titles Restoration Ordinance 1951-1955*, whose function is to inquire into and determine what land in the Territory is the rightful and hereditary property of persons or communities by customary right; and the persons or communities by whom, and the shares in which, that land is owned.

§ 3. Agriculture and Animal Industry

1. Soils.—Although a large part of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur, suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far, these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the delta plains and other parts of the Gulf of Papua and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramu and Markham River

2. **Climate.**—The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking, the climate is moist and tropical, except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and no great variation in day-length over the year. The two seasons which are experienced are generally described as the "south-east" and the "north-west", corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, from the end of December to about March. During the periods between these seasons, November and early December, and about March to April, there are two short spells of calm weather.

Rainfall varies considerably, from an average annual rainfall of 245 inches at Gasmata in New Britain and 231 inches at Kikori in Papua, to about 88 inches at Wewak in New Guinea and 40 inches at Port Moresby.

Although the Territory has no summer and winter, it has a wide temperature range, due to differences in altitude, varying from an absolute highest temperature of about 100° F. along the coast to freezing point on its highest peak, Mt. Wilhelm (15,400 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent. are rare at coastal stations, average figures varying from 80 per cent. at 9 a.m. to 65 per cent. at noon and 75 per cent. at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

3. **Land Tenure.**—There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua and New Guinea is to introduce throughout the Territory a single system of land holding regulated by the central Government by statute, administered by the Department of Lands of the central Government, and providing for secure individual registered titles after the pattern of the Australian system.

Only the central Government (i.e., the Administration working through the Department of Lands and the Registrar of Titles) may issue and register land titles.

Land subject to native custom remains subject to native custom only until it is taken out of custom either by acquisition by the Administration or by a process, to be provided for by Ordinance of the Territory, of conversion of title to an individual registered title.

Upon either acquisition or conversion of title, compensation is to be provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration.

For the time being, land may not be acquired by the Administration unless the native owners are willing to sell and in the opinion of the Administration the land is not required by them; and conversion of title from native custom to individual registered title may take place only if the majority of those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance 1962*, which came into operation on 23rd May, 1963, are to be used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and, when legislative provision has been made, on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The aim is that all the time of the Commissioners should be taken up with this work. To the extent that at any time it is not, the Commissioners should continue investigations into the holding of land under native custom; the results of such investigations are to be recorded for use in connexion with future acquisitions or conversions of title, but are no longer to be registered.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

4. Suitable Crops.—The crops which can be grown in Papua and New Guinea include coconuts, rubber, tea, coffee, cocoa, fibres, rice, pepper, tobacco, peanuts, kapok, cassava, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago and tung oil, but of these the only crops of any commercial importance are coconuts, cocoa, rubber, coffee, peanuts and passion fruit.

5. Plantation Agriculture.—*Coconuts.* Territory coconut plantations suffered severely from damage and neglect during the 1939–45 War but rehabilitation was rapid. In 1962–63 about 680 plantations, together with native coconut stands, produced about 114,000 tons of copra and exported 72,499 tons valued at £4,718,000. In 1963–64, 21,096 tons of coconut oil, valued at £2,318,379, 11,742 tons of copra oilcake and meal, valued at £276,346, and 69,272 tons of copra, valued at £5,008,958 were exported. A copra crushing mill was established at Rabaul in 1952. Native stands produce about 25 per cent. of the copra exported.

Rubber. Exports of rubber have increased from 1,952 tons, valued at £802,177, in 1950–51 to 5,005 tons, valued at £1,226,031, in 1963–64.

Cocoa. Exports of cocoa beans increased from 317 tons, valued at £92,181, in 1950–51 to 15,640 tons, valued at £3,421,466, in 1963–64. Nearly 50 per cent. of the exports go to Australia. At present, native growers produce about 33 per cent. of the cocoa production in the Territory.

Coffee. Exports of coffee rose from 33 tons, valued at £8,359, in 1950–51, to 6,831 tons valued at £2,682,929, in 1963–64. Of the 25,000 acres planted to coffee in the Territory, about 60 per cent. is in native-owned groves and the rest grown by Europeans in plantations. More than half of the Territory coffee production is marketed in Australia.

6. Native Agriculture.—Most of the indigenous inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas, it is cut largely from naturally occurring stands. In other parts of the country, small areas of sago are grown along stream banks and in swampy patches, and are regarded as a reserve in times of poor harvest. In recent years, the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and cocoa and coffee for export. Some small-scale rubber growing is now being undertaken. In coconut areas, large quantities of copra are produced. In 1962–63, native production of copra was 30,157 tons, and that of cocoa and coffee 3,441 tons and 2,390 tons respectively. In many localities, the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48 and previous issues.

The growing of food is done by both the men and women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally it is found that felling the forests is always done by the men, and carrying the harvested food home to the village is nearly always done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply, and improved land use in village gardens as well as for economic production of crops for sale, have a high priority in Government policy for the Territory. A five-year (1962-63 to 1966-67) programme for intensification of agricultural work among the indigenous inhabitants of the Territory is being implemented.

7. Animal Industry.—Livestock in the Territory as at 31st March, 1963, included cattle, sheep, goats and pigs, approximate figures for each species being:—cattle, 27,120; sheep, 334; goats, 2,525; and pigs, 5,015. Other livestock includes horses, mules and poultry. These figures represent European-owned livestock only; native-owned livestock consists almost entirely of pigs and poultry.

A number of British breeds of cattle are represented in Territory herds. For dairying, Jersey and Australian Illawarra Shorthorns are most popular; Black Polled, Polled and Horned Shorthorns, and Red Polled cattle are raised for meat production. Under good management these breeds have done well in the Territory. There are a small number of Romney Marsh sheep at Nondugl in the highlands of New Guinea.

A central abattoir controlled by the Administration is under construction at Lae to provide slaughtering facilities for beef producers in the Wau-Bulolo Area, the Markham and Ramu Valleys, and part of the Eastern Highlands District. At first, provision will be made only for immediate needs, but the design and layout will make it possible to expand the abattoir to handle smallgoods manufacture, snap freezing, and canning as the need develops.

8. Co-operative Societies.—Co-operatives are under the supervision and guidance of a Registry of Co-operatives within the Department of Trade and Industry, and trained staff are stationed in districts throughout the Territory. Societies fall into two main categories, primary and secondary. The primary consist of marketing and consumer retailing bodies dealing directly with individual members. A society which combines both these activities is termed a dual purpose primary. Secondary organization is represented by associations of societies, formed to achieve an amalgamation of purchasing power in retail consumer store operation and marketing volume in relation to agricultural production, and to concentrate capital to facilitate the purchase of large assets such as shipping, land transport, agricultural machinery, etc.

For the year ended 31st March, 1964, primary societies numbered 280, with a membership of 85,699, a total capital of £643,795, and a turnover of £1,259,075. Secondary organizations numbered 14, with 236 member societies, a total capital of £304,375, and a turnover of £814,630.

§ 4. Native Labour

At 31st March, 1964, approximately 80,000 indigenous persons were engaged in wage employment, 57,000 of these being employed by private enterprise.

Minimum wages and conditions of employment for indigenous workers are prescribed under the *Native Employment Ordinance* 1958-1963. An employer is required to pay a minimum cash wage to every worker employed by him and provide the worker, and his family in appropriate cases, with accommodation, food, clothing, cooking and eating utensils, towels, soap and other articles, and medical attention. The major portion of the workers employed under the conditions prescribed under the Ordinance are unskilled rural workers.

In recent years an increasing number of workers in the urban areas have obtained employment under the conditions laid down in industrial agreements negotiated between representatives of workers and employers. These agreements, covering the majority of workers in the towns of Port Moresby, Rabaul, Lae, Madang, Wewak and Goroka, provide for the payment of a total cash wage, as distinct from the payment of cash-and-kind, to the workers covered by them. The agreements are registered as awards under the Territory's Industrial Relations Ordinance.

There has been a continued expansion of the trade union movement since industrial legislation for the Territory was introduced in March, 1963. In December, 1964, 10 associations with a membership of over 11,000 had been registered as industrial organizations of workers under the Industrial Organizations Ordinance.

Provision is made in other legislation for the establishment and maintenance of modern standards of industrial safety and for the payment of compensation for injury or disease arising out of, or in the course of, employment.

A local apprenticeship scheme was inaugurated in 1955. An Apprenticeship Board, comprising representatives of private enterprise and government, advises the Administrator on apprenticeship matters. At 30th June, 1964, a total of 177 apprentices had already received trade certificates and over 449 were currently being trained.

A Department of Labour handles matters relating to industrial organizations, industrial relations, industrial safety and workers' compensation, carries out labour inspections, and provides industrial services and training in industrial fields.

§ 5. Secondary Industries

Secondary industries which have been established in the Territory are most frequently of the type associated with the elementary processing for export of local products such as copra, rubber, cocoa, coffee, passion-fruit and timber on or near the plantations. There has been a gradual growth in the manufacture of more highly processed products, and industries already established include a paint factory, cigarette factory, twist tobacco factories, a copra crushing mill, a plywood factory, bakeries, biscuit factories, soft drink factories and breweries. Large service industries already well established include air, sea, and land transport services and the building industry, which is serviced by sawmilling, joinery, furniture and metal industries, concrete products manufactures, brickworks, etc.

A wide variety of maintenance facilities is also available to service the various Territory industries, including engineering workshops, slipways, etc.

The following table shows details of factory operations for the year ended 30th June, 1963.

TERRITORY OF PAPUA AND NEW GUINEA: FACTORY OPERATIONS, 1962-63

Particulars	Class of industry				
	Industrial metals, machines and conveyances	Food, drink and tobacco	Sawmills, plywood and joinery	Other industries (a)	Total
Number of factories	151	62	76	42	331
Employees—					
Non-indigenous	716	113	318	174	1,321
Indigenous	1,422	1,270	2,269	664	5,625
Total	2,138	1,383	2,587	838	6,946
	£'000	£'000	£'000	£'000	£'000
Salaries and wages paid	1,163	287	727	366	2,543
Value of output	3,444	2,635	3,227	3,893	13,199
power, fuel and light, etc. . .	71	74	97	195	437
materials and fuel used	1,607	1,532	1,562	2,876	7,577
production (b)	1,837	1,103	1,665	1,017	5,622

(a) Includes coconut oil processing, tyre retreading, paint manufacture, printing, powerhouses, etc.
 (b) Value added.

§ 6. Finance

1. General.—The following table shows particulars of the financial operations of the Papua and New Guinea Administration for the years 1959–60 to 1963–64. Further information on each Territory will be found on pages 129 and 135.

TERRITORY OF PAPUA AND NEW GUINEA: REVENUE AND EXPENDITURE

Particulars	1959–60	1960–61	1961–62	1962–63	1963–64
REVENUE					
Taxation—					
Income tax	1,812,963	2,347,978	2,211,929	2,578,706	3,255,830
Customs duties	2,411,529	2,433,732	2,678,514	3,053,995	3,530,733

Water supply and sewerage	120,416	128,107	139,039	149,881	172,142
Social expenditure—					
Education	1,290,592	1,641,296	2,138,048	2,763,260	3,471,902
Grants to missions for education	261,093	405,260	341,272	374,233	489,506
Public health, hospitals, etc.	2,113,460	2,401,447	2,783,561	3,236,629	3,677,756
Mission medical services—grants	286,233	305,264	304,583	240,487	144,691
Law, order and public safety	862,115	1,023,707	1,234,428	1,407,992	1,505,155
District services and native affairs	1,246,727	1,372,150	1,465,154	1,470,207	1,669,199
Capital works and services	4,822,424	5,133,965	5,381,834	6,584,986	8,341,407
All other	6,882,042	8,391,451	9,484,599	10,941,229	15,407,360
Total	19,332,647	22,331,058	25,000,800	29,037,916	36,626,054

(a) Subsequent to the takeover by the Electricity Commission of the complete operation of major power houses, the Administration is responsible for the operation of minor power houses only.

(b) Owing to changes in accounting practices affecting motor transport usage, output by the Government Printer, and stores issued by the Government Stores, this figure is not comparable with those for earlier years.

2. Taxation.—The main forms of taxation are income tax, personal tax and import duties.

Income Tax was imposed on 1st August, 1959, to operate from 1st July, 1959. The scale of taxation is about 50 per cent. of the tax payable on the same taxable income in Australia. Deductions for dependants the taxpayer is maintaining, and maximum deductions for medical, dental and educational expenses, are considerably higher than those allowed in Australia. The tax on public companies is at a flat rate of 4s. in the £1, which is a little over half the predominant rate of company tax in Australia, while on private companies the rate is 2s. 6d. in the £1 for the first £5,000 and 3s. 6d. for the remainder,

and generally comparable deductions are allowed. On 1st January, 1958, a Personal Tax was introduced for all males (including non-indigenous) of 18 years of age and over in Papua and New Guinea. The maximum tax is £2 per annum; the tax assessed is subject to the taxpayers' ability to pay, and consequently large areas have been exempted. Native Local Government Councils (which are formed voluntarily by the indigenes) are, however, empowered to levy taxes on villagers for the purpose of providing for local services carried out by the Councils. These taxes are set off against the indigene's Personal Taxation.

The present Customs Tariff provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods and jewellery, but allows entry of most necessities affecting living and building costs duty free, or at a low rate of duty. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant, machinery and chemicals to be used mainly for industrial and developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July, 1959.

Provision is made in the *Australian Customs Tariff (Papua and New Guinea Preference)* 1936 for the free entry into Australia of certain goods produced in and imported direct from the Territory (see Chapter XIV. Oversea Trade), and a proclamation of 25th September, 1935, exempted from primage duty goods produced or manufactured in the Territory.

PAPUA

§ 1. General Description

1. *Area, etc.*—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 920 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland, and 1,936 on the islands. The total area is 86,100 square miles, of which 83,325 are on the mainland, and 2,775 on the islands. A description of the physical characteristics of the Territory appears in previous issues of the Year Book (see No. 18, p. 633).

2. *Administration.*—Particulars of the early administration of Papua are given in Year Book No. 19, page 576. The Territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of 18th March, 1902, and was accepted by the Commonwealth by the *Papua Act* 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is under the control of the Commonwealth, but not included within it, and is divided into six magisterial districts, Southern Highlands, Western, Gulf, Central, Milne Bay and Northern.

§ 2. Population

1. *Non-indigenous Population.*—At the Census of 30th June, 1961, the non-indigenous population of Papua was 5,490 males, 4,304 females, 9,794 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947 and 1954 was, respectively, 2,078, 2,173, 3,239 and 6,313 persons. At 30th June, 1964, the total non-indigenous population was 12,888.

The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. At the 1961 Census, it amounted to 8,260 persons.

2. *Indigenous Population.*—It is not possible to give exact data regarding the number of indigenes because part of the interior is not as yet under complete Government control. However, the enumerated and estimated population of the Territory of Papua at 30th June, 1964, numbered 548,852 persons. This comprised 530,772 enumerated persons and 18,080 estimated. The total number was distributed through districts as follows:—Southern Highlands, 176,934; Western, 59,135; Gulf (including the former Delta district), 58,835; Central, 108,486; Milne Bay, 93,772; and Northern, 51,690.

§ 3. Land Tenure

The basic principle of the land laws of Papua is that all land not specifically alienated by due process from the native people, or established to be vacant and ownerless, is native land. At 30th June, 1964, of the total area of Papua, approximately 55,000,000 acres, only 1,888,172 acres had been alienated. The distribution of alienated land at 30th June, 1964, according to tenure, was as follows:—held by private non-indigenous inhabitants, freehold, 24,280 acres, leasehold, 369,299 acres; native reserves, 68,192 acres; other, including public reserves and land available for leasing, 1,426,401 acres.

Although a small amount of freehold land exists in Papua, no further estates in freehold can be granted under the provisions of the *Land Ordinance* 1911–1961 of Papua. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal, and, in general, leases may be granted for periods of up to 99 years. Rent is based on the unimproved value of the land.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the *Real Property Ordinance* 1913–1955 modelled on the Torrens system of land registration.

§ 4. Production

1. **General.**—The products of the Territory are obtained principally from its agricultural, forestry, mining and fishing industries. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, bananas and papaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Indigenous, however, produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g., cocoa and coffee, is undertaken. The principal agricultural products of Papua for the export trade are copra and rubber. Native production of copra is increasing. In 1963–64 nearly 3 million super. feet of logs were exported, valued at £60,700. The main products of fisheries exported from Papua are trochus shell and mother-of-pearl. Gold, manganese, zinc-lead and copper ores have been mined in commercial quantities in the past, but current production is limited.

For the sake of convenience, agricultural and pastoral conditions in Papua and New Guinea have been dealt with as a whole, and reference should be made to pages 118–21 for information on the soils, climate, crops, methods of cultivation, etc., throughout both Territories. The following paragraphs relate to forestry, mining, fisheries and water-power resources in Papua.

2. **Forestry.**—A general description of the forest policy which applies in Papua as well as in the Trust Territory of New Guinea is given under the heading, Timber, on pages 131–2.

Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Mangroves occur in large areas fringing the Gulf of Papua. Forestry field work is carried out in Papua with a view to assessing the forest resources available and also to survey areas subsequently made available for cutting.

At 30th June, 1964, 18 permits and 21 licences were current. The total areas of forest involved were 214,921 acres and 38,076 acres respectively. The total number of mills was 21, and the total sawn-timber produced for the year was 5.2 million super. feet, most of which was used locally.

3. **Mining.**—Although a large number of minerals have been found in Papua, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, and lignite, current mineral production is not of economic importance.

Gold was discovered in 1888 and has been found since in many parts of Papua. Before the 1939–45 War, gold was an important item in the Territory's production, but it has since dwindled to insignificance.

Large quantities of copper ore were mined and exported up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

Since the search for oil began in Papua in 1911, approximately £36 million has been spent. The existence of petroleum has been proved at scattered intervals over a large area, but commercial quantities have not been discovered. At 30th June, 1964, eight companies held interests in petroleum prospecting permits and licences under the provisions of the *Petroleum (Prospecting and Mining) Ordinance 1951–1962*. Oil prospecting is confined mainly to the Gulf and Western Districts, including off-shore areas in the Gulf of Papua.

4. **Fisheries.**—Surveys have been carried out of the fisheries resources of Papua. These have been demonstrated to be considerable, and efforts are being made to increase the present small degree of utilization. Assistance is also being given by the Administration in improving the indigenous methods of fishing, and the use of improved gear is being encouraged by extension workers. Shell fishing, particularly trochus, provides the main cash return, exports being valued at £12,000 in 1963–64.

5. **Water Power.**—Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that at least 10 million horse-power could be developed.

§ 5. Trade, Transport and Communication

1. **Imports and Exports.**—(i) *Total Values.* The table below summarizes the values of imports and exports for the years 1959–60 to 1963–64.

TERRITORY OF PAPUA: IMPORTS AND EXPORTS

(£)

Particulars	1959–60	1960–61	1961–62	1962–63	1963–64
<i>Imports(a)</i>	8,409,546	9,935,271	9,850,986	10,719,230	13,808,532
Exports—					
Domestic exports	2,986,448	2,468,161	2,389,825	2,524,738	2,659,004
Re-exports	871,111	1,420,992	729,892	812,633	928,290
<i>Total Exports</i>	3,857,559	3,889,153	3,119,717	3,337,371	3,587,294

(a) Includes outside packages.

(ii) *Imports.* The following table shows the countries of origin of imports.

TERRITORY OF PAPUA: COUNTRY OF ORIGIN OF IMPORTS (a)
(£)

Country of origin	1959-60	1960-61	1961-62	1962-63	1963-64
Australia	5,439,082	6,496,989	6,071,044	6,790,355	8,784,170
Canada	6,991	8,801	33,501	17,814	30,021

Hong Kong	278,796	335,999	416,614	425,076	482,990
Indonesia	365,920	332,358	320,979	403,650	431,176
Japan	407,997	502,695	523,660	508,980	787,717
United Kingdom	552,241	738,164	723,205	772,983	823,786
United States of America	754,548	697,646	676,974	577,086	887,736
Other countries	463,721	654,260	898,264	1,013,176	1,289,817
Total	8,409,546	9,935,271	9,850,986	10,719,230	13,808,532

(a) Includes outside packages except for 1958-59.

(iii) *Exports.* (a) *Countries of Destination.* The countries of destination of exports from Papua are shown below.

TERRITORY OF PAPUA: COUNTRY OF DESTINATION OF EXPORTS
(£)

Country of destination	1959-60	1960-61	1961-62	1962-63	1963-64
Australia	3,102,673	2,894,485	2,428,595	2,675,303	2,876,012
United Kingdom	603,453	447,368	423,097	363,800	324,883
Other countries	151,433	547,300	268,025	298,268	386,399
Total	3,857,559	3,889,153	3,119,717	3,337,371	3,587,294

(b) *Principal Commodities.* The following table provides details of the value of the principal domestic exports for the same years.

TERRITORY OF PAPUA: PRINCIPAL DOMESTIC EXPORTS
(£)

Commodity	1959-60	1960-61	1961-62	1962-63	1963-64
Rubber	1,500,197	1,292,151	1,203,786	1,165,370	1,216,948
Copra	1,362,650	1,032,724	945,578	1,042,087	983,805
Cocoa beans	19,185	30,264	22,127	24,066	49,761
Gold	2,003	1,171	295	745	446
Shell (marine)	37,970	19,556	27,486	10,269	12,227
Crocodile skins	21,360	51,577	126,962	157,529	264,337
Other	43,083	40,718	63,591	124,672	131,480
Total	2,986,448	2,468,161	2,389,825	2,524,738	2,659,004

2. **Shipping.**—In 1963–64, 197 British vessels and 40 of other nationalities called at Territory ports and discharged 154,019 tons of cargo and loaded 33,103 tons.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

3. **Other Forms of Transport and Communication.**—Scheduled flights provide a network of air transport throughout Papua and regular air services link the Territory with Australia and neighbouring Territories. There were 98 aerodromes and seaplane alighting areas in Papua at 30th June, 1964, and of these 11 were the responsibility of the Department of Civil Aviation, 46 were operated and maintained by the Administration, and 41 owned and maintained by Missions, plantation and mining interests. Much of the internal traffic and freight is carried on a charter basis.

At 30th June, 1964, there were 2,016 miles of road in Papua, of which 1,101 miles were suitable for medium and heavy traffic, the greater proportion being located in the Central, Milne Bay, and Northern Districts.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is jointly shared by the Overseas Telecommunications Commission and the Administration. The former provides a service between Papua, Australia and the Territory of New Guinea, while the latter operates radio telephone and radio telegraph services from Port Moresby, Samarai, Kerema, and Daru to 197 outstations.

Medium and short-wave programmes are broadcast from the Australian Broadcasting Commission stations 9PA and VLT6 located at Port Moresby.

§ 6. Education and Health

1. **Education.**—Education in the Territory is provided by the Administration and various Mission organizations. Schools for indigenes have been also established by Local Government Councils. The *Education Ordinance 1952–1957* enables the Administration to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and Missions. During the year ended 30th June, 1964, 169 schools were maintained by the Administration for 22,365 children, of whom 1,224 were Europeans, 137 Asian or of mixed race, and 21,004 indigenes. A further 1,522 children, all indigenes, were receiving tuition by correspondence. The total number of pupils in the various grades of mission schools was 49,636, of whom there were 256 Europeans, and 38 Asian or of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment, and text-books. In addition, the sum of £134,370 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1964.

2. **Health.**—The Department of Public Health of the Territory of Papua and New Guinea has the general oversight of all dental and medical services. The Department has the following seven functional divisions: medical services; preventive medicine; medical training; infant, child and maternal health; medical research; administration; and mental health. The services for the Territory of Papua are under the administrative control of a regional medical officer, with headquarters staff at Port Moresby.

At 30th June, 1964, the Administration had established 27 general hospitals, two hospitals (together with special wards in four general hospitals) for the treatment of Hansen's disease, one Hansenide-tuberculosis hospital, two tuberculosis hospitals and one mental hospital; the Missions had established 34 general hospitals, with special wards at Eroro, Sideia and Orokololo for the treatment of Hansen's disease and two Hansenide hospitals. There were 416 village aid posts or medical centres (100 Mission) and 145 maternal and child welfare clinics (5 Mission). School medical examinations, immunization, ante-natal and post-natal care and pre-school services are also provided. The Missions employ their own doctors and nurses in their medical establishments.

For some years, suitably qualified indigenes attended the Central Medical School at Suva, Fiji, to be trained as Assistant Medical Officers. In 1959, the Administration began training to a similar standard at the Papuan Medical College which is associated with the Port Moresby General Hospital. The College, planned to accommodate 600 students eventually, is being built in stages. The course consists of a preliminary year and five years further study. Training for nurses and medical auxiliaries in many categories is also being provided.

The cases treated in hospital are mainly malaria, tropical ulcers, pneumonia, tubercular infections and tuberculosis, bronchitis, and confinements.

§ 7. Finance

The following table shows the principal items of revenue and expenditure for the Territory for each year from 1959-60 to 1963-64.

TERRITORY OF PAPUA: REVENUE AND EXPENDITURE (£)

Item	1959-60	1960-61	1961-62	1962-63	1963-64
REVENUE					
Commonwealth grant	4,948,361	5,515,054	7,179,031	7,864,056	10,011,051
Customs duties(a)	868,813	1,023,644	1,089,571	1,269,993	1,554,320
Income tax	882,558	1,136,394	1,248,973	1,434,735	1,808,281
All other	1,017,446	1,162,620	1,173,730	1,499,561	1,881,929
Total Revenue	7,717,178	8,837,712	10,691,305	12,068,345	15,255,581
EXPENDITURE					
Public health	899,370	1,004,342	1,166,258	1,243,088	1,387,347
Native affairs	446,895	490,154	519,225	521,818	615,417
Education	672,504	754,051	913,156	1,166,377	1,503,601
Maintenance	862,487	1,026,019	1,252,818	1,320,114	1,570,351
Capital works and assets	1,996,824	2,277,046	2,662,845	3,490,684	4,977,893
All other	2,769,535	3,368,410	4,178,606	4,339,612	5,200,839
Total Expenditure	7,647,615	8,920,022	10,692,908	12,081,693	15,255,448

(a) Includes harbour dues and wharfrage.

For particulars of the finances of the combined Territory administration, *see* p. 123.

TRUST TERRITORY OF NEW GUINEA

§ 1. General Description

1. Area, etc.—The land area of the Territory of New Guinea is 92,160 square miles, and the area, including the sea, within the lines drawn through its extreme outer points is more than one million square miles. As the coastlines have not been completely surveyed, the areas of the various islands are known only approximately.

The approximate area of the New Guinea mainland is 69,095 square miles and that of adjacent islands, including the Solomon Islands and the Bismarck Archipelago is 23,065 square miles.

Information regarding physiography and climate will be found in Year Book No. 22 page 613, and in the *Official Handbook of the Territory of New Guinea*.

2. **Early Administration.**—On 17th September, 1914, the Acting Governor of German New Guinea signed terms of capitulation with the officer commanding a Naval and Military Expedition sent from Australia, and thereafter the Territory was under military administration until the establishment of Civil Government on 9th May, 1921.

In 1919, it was decided by the Principal Allied and Associated Powers that the Territory of New Guinea, which Germany gave up as one of the terms of peace, should be entrusted to the Government of the Commonwealth under Mandate from the League of Nations. However, the issuing of the Mandate was delayed, and it was not until 17th December, 1920, that its terms were settled, and the Mandate itself did not reach Australia until April, 1921.

The terms of the Mandate are given in Year Book No. 33 (*see* p. 264).

For particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration, *see* Year Book No. 36 and earlier issues, and for events following the outbreak of the Pacific War *see* Year Book No. 37 and subsequent issues up to No. 48.

3. **Trusteeship (1946).**—The Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13th December, 1946. The terms of the Agreement are shown in Year Book No. 39, pages 355–7.

For administrative purposes, the Territory is divided into the following nine districts:—New Britain, comprising New Britain and adjacent islands; Morobe, Madang, Eastern Highlands, Western Highlands, and Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

§ 2. Population

1. **Non-indigenous Population.**—At the Census of 30th June, 1961, the non-indigenous population of the Territory was 9,158 males, 6,378 females, 15,536 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947 and 1954 was, respectively, 3,173, 5,216, 6,200 and 11,442 persons. At the 1961 Census, the European population numbered 11,702 persons. At 30th June, 1964, the total non-indigenous population was estimated to be 16,920.

2. **Indigenous Population.**—The indigenes are divided into two main groups—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands, and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See* Year Book No. 16, p. 670, and *Official Handbook of the Territory of New Guinea*, Pt. V.)

The enumerated and estimated indigenous population of the Territory as at 30th June, 1964, numbered 1,522,156 persons, comprising enumerated, 1,505,586 (791,501 males and 714,085 females), and estimated, 16,570. The total population was distributed throughout the several districts as follows:—Eastern Highlands, 362,243 persons; Western Highlands, 291,718; Sepik, 257,486; Madang, 149,599; Morobe, 214,379; New Britain, 122,196; New Ireland, 41,438; Bougainville, 64,080; Manus, 19,017.

§ 3. Land Tenure

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua, and although, under the *Land Ordinance* 1922–1961, grants of freehold estates may be made, as a matter of policy all grants are now restricted to leaseholds. In New Guinea, however, the amount of freehold land of earlier origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase, subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,000,000 acres, of which at 30th June, 1964, only 1,534,638 acres were alienated. The following was the distribution of alienated land according to tenure at 30th June, 1964:—held by private non-indigenous inhabitants—freehold, 537,401 acres, leasehold, 371,973 acres; held by Administration, 588,637 acres; held by New Guineans 8,961 acres; native reserves, 27,666 acres.

Under German law there was a system of registration of titles in a Ground Book, but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in the *Lands Registration Ordinance* 1924–1955. The land registers were lost during the 1939–1945 War, but provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance* 1951–1955. A start has been made on the recording of native land interests under the *Native Land Registration Ordinance* 1952.

§ 4. Production

1. **General.**—The products of the Territory are obtained principally from its agricultural, mining, fishing and forestry industries. A copra crushing mill near Rabaul, established in 1952, commenced crushing at about 18,000 tons of copra per annum, and its capacity is now about 60,000 tons of copra per annum. Crushing of about 40,000 tons of copra was in view for 1964. At Bulolo, a company is producing high quality moisture-proof plywood in a factory whose capacity is 40 million square feet, on a $\frac{3}{8}$ -in. basis, per annum. Native subsistence agriculture, fishing, and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, produce copra for export, and in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. The principal agricultural products of New Guinea for the export trade are copra and coconut oil, cocoa, and coffee, but exports of timber and timber products are at a high level (see para. 2 below). The main products of fisheries exported from New Guinea are trochus and green snail shell, including that collected by indigenes. Gold is the principal mineral mined. Indigenes are taking an increasing interest in mining for alluvial gold on their own account, and production from this source is continually rising, in contrast to falling European production.

For information on the agricultural and pastoral industries, which for the sake of convenience covers the Territory of Papua and New Guinea as a whole, see pages 118–21. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea alone.

2. **Timber.**—Various species of timber are found in the Territory, and one accessible pure stand is the valuable pine forests of the Bulolo Valley. This timber is used mainly for the production of plywood and veneer by Commonwealth-New Guinea Timbers Ltd., which has an annual cut of about 10 million super. feet of logs. About 23.3 million square feet of plywood, on a $\frac{3}{8}$ -in. basis, were produced by the company in 1963–64 from these logs and from veneer produced by South Pacific Timbers Limited at Lae. In 1963–64, 20.7 million square feet of plywood valued at £974,199, and 4.5 million square feet of veneer, on a $\frac{1}{8}$ -in. basis, valued at £34,164, were exported. During the year, 16.3 million super. feet of logs, valued at £313,368, and 4.6 million super. feet of sawn timber, valued at £350,952, were also exported from the Territory. The Territory forests also provided fitches, battery veneer and egg-case parts for export.

The Administration operates a training centre for forestry workers, nurseries and a herbarium, and is establishing a research institute in Port Moresby.

The *Forestry Ordinance* 1936–1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation; the grant of emergency timber permits for limited quantities to assist in providing timber for Territory requirements; the disposal by public tender of timber areas designated by forest officials of the Territory; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. Timber growing on native lands cannot be acquired

by private purchasers direct from the native people, but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Reforestation of areas dedicated for forestry in perpetuity is carried out by the Administration.

At 30th June, 1964, 40 permits and nine licences were current, the total area of forest involved being 479,133 acres and 24,542 acres respectively.

3. Fisheries.—The wealth of the waters of the Territory has been little exploited, but as the result of surveys and the development of the Administration fisheries service, action is being taken to promote increased use of the resources. Fish are caught at many places along the coast to supply the small local demand of the natives and of Europeans. Trochus shell to the value of £14,862 and green snail shell to the value of £3,214 were exported during 1962–63.

4. Mining.—The production of gold and associated silver is the most important mining activity in New Guinea. Gold has been discovered on the Waria, the Ramu, the Francisco, and the Markham Rivers, and in tributaries of the Sepik River. Rich gold deposits were first discovered in the Morobe District in 1926. The field is situated about 80 miles (40 by air) inland from Lae, the nearest coastal port. Communication is established with the coast by regular air service and by road transport. Silver is usually found associated with the gold in these deposits. Osmiridium is reported to have been found on the upper tributaries of the Ramu, and platinum on the Kabenau River. Copper has been discovered in the form of chalcopyrite and malachite in the Baining District. Iron ore occurs as magnetite and haematite in the Baining District. Sulphur occurs in several localities in the volcanic regions of the Territory. Brown coal has been found on the mainland in the vicinity of Astrolabe Bay, and in the southern portion of New Ireland. The commercial production of minerals other than gold and associated silver has not been undertaken.

The granting of rights, leases and claims for mining purposes is provided for in the *Mining Ordinance 1928–1962* and regulations thereunder.

The production of gold in New Guinea since the 1939–45 War has been on a much smaller scale than before the war, averaging less than £700,000 in value per annum for the last five years. The 1963–64 production was valued at only £661,741.

The *Petroleum (Prospecting and Mining) Ordinance 1951–1961* has facilitated the carrying out of geological surveys and prospecting activities generally. There are, however, no prospecting permits for oil current at the present time.

§ 5. Trade, Transport and Communication

1. Imports and Exports.—(i) *Total Values.* The table below summarizes the values of imports and exports for the years 1959–60 to 1963–64.

TERRITORY OF NEW GUINEA: IMPORTS AND EXPORTS

(£)

Particulars	1959–60	1960–61	1961–62	1962–63	1963–64
<i>Imports(a)</i>	12,622,354	16,803,152	16,078,490	17,825,814	21,559,406
<i>Exports—</i>					
Domestic exports	14,117,463	11,788,503	11,932,091	13,844,472	15,671,145
Re-exports	844,893	928,386	849,235	960,300	1,185,921
<i>Total Exports</i>	14,962,356	12,716,889	12,781,326	14,804,981	16,857,066

(a) Includes outside packages.

(ii) *Imports.* The following table summarizes the countries of origin of imports.

TERRITORY OF NEW GUINEA: COUNTRY OF ORIGIN OF IMPORTS(a)
(£)

Country of origin	1959-60	1960-61	1961-62	1962-63	1963-64
Australia	7,836,181	9,741,714	8,710,921	9,724,175	12,014,433
Germany (Federal Republic) ..	286,545	511,325	615,541	644,774	716,344

Veneer	41,136	38,051	31,574	36,242	34,164
Other	197,247	175,437	276,301	291,410	359,618
Total	14,117,463	11,788,503	11,932,091	13,844,472	15,671,145

2. **Shipping.**—Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between the East and Australia and the Pacific Islands call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the *Shipping Ordinance 1951–1960* and the Coastal Shipping, Ports and Harbours Regulations.

Main ports of call for oversea vessels are Lae, Madang, Alexishafen, and Wewak (mainland), Rabaul (New Britain), Kavieng (New Ireland), Lorengau (Manus), and Kieta (Bougainville). Ports proclaimed under the Coastal Shipping, Ports and Harbours Regulations for the service of local vessels are, in addition to the main ports above-mentioned, Salamaua, Aitape and Vanimo (mainland), Gasmata and Talasea (New Britain), Namatanai (New Ireland), and Buka Passage (Bougainville).

There are no inland waterways and the natural river system is not generally suitable for vessels except those of small tonnage.

In 1963–64, 289 British vessels and 106 vessels of other nationalities called at Territory ports and discharged 226,594 tons of cargo and loaded 171,729 tons. Corresponding figures for 1962–63 were 268, 111, 199,509 and 177,524 respectively.

3. **Other Forms of Transport and Communication.**—There are no railways in New Guinea, but a road construction programme is being undertaken progressively to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mt. Hagen. The total mileage of roads in the Territory of New Guinea at 30th June, 1964, was 5,577, of which 3,650 were suitable for heavy and medium traffic.

Scheduled flights provide a network of air transport throughout New Guinea and regular air services link the Territory with Australia and neighbouring territories. There were 182 aerodromes and seaplane alighting areas in New Guinea at 30th June, 1964, and of these 11 were controlled by the Department of Civil Aviation, 68 by the Administration, and 103 by private interests.

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang, and service is available from subscribers' telephones in Port Moresby, Lae and Rabaul, and from the post office at Madang. Nine zone or group centres for radio telegraph communication with out-stations have been established at Lae, Rabaul, Kavieng, Lorengau, Madang, Mt. Hagen, Wewak, Sohano and Goroka. From these centres, radio telegraph services are also available to 508 out-stations.

§ 6. Education and Health

1. **Education.**—Education in the Territory is provided by the Administration and various Mission organizations. Schools for indigenes have also been established by Local Government Councils. The *Education Ordinance 1952–1957* enables the Administrator to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and the Missions. During the year ended 30th June, 1964, 316 schools were maintained by the Administration for 36,113 children, of whom 1,439 were Europeans, 369 Asians, 190 of mixed race and 34,115 indigenes. In addition, 1,819 indigenes were studying by correspondence. The total number of pupils in the various grades of mission schools was 134,494, of whom 239 were Europeans, 132 Asians and 322 of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment, and text-books. In addition, the sum of £355,136 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1964.

For details of the missions operating in the Territory, see Year Book No. 48 and earlier issues.

2. Health.—The cases treated in hospital are mainly malaria, pneumonia, tropical ulcers, bronchitis, tubercular infections and tuberculosis, skin infections and confinements. At 30th June, 1964, there were 70 Administration hospitals, including three Hansenié colonies, two tuberculosis hospitals and one Hansenié and tuberculosis hospital. The Missions have established an additional 79 hospitals, including two Hansenié colonies and one Hansenié and tuberculosis hospital. There are 1,198 village aid posts or medical centres (140 conducted by Missions) and 584 maternity and child welfare centres (110 provided by Missions). The Missions staff their own medical establishments but receive financial assistance from the Administration, which also provides much of their medical stores and supplies.

§ 7. Finance

The principal items of revenue and expenditure for the Territory of New Guinea during the years 1959-60 to 1963-64 are shown in the following table.

TRUST TERRITORY OF NEW GUINEA: REVENUE AND EXPENDITURE (£)

Item	1959-60	1960-61	1961-62	1962-63	1963-64

(a) Includes harbour dues and wharfage. (b) Includes expenditure chargeable to Loan Fund, £360,332 in 1960-61, £290,436 in 1961-62, £521,475 in 1962-63, and £1,059,679 in 1963-64.

For information on the finances of the combined Territory administration see Papua and New Guinea, § 6, page 123.

TRUST TERRITORY OF NAURU

1. **General.**—Nauru is an oval-shaped atoll about 12 miles in circumference, having an area of about $8\frac{1}{2}$ square miles, of which approximately two-thirds is phosphate-bearing. It is situated in latitude $0^{\circ} 32' S.$ and longitude $166^{\circ} 55' E.$ Portion of the island between the sandy beach and the coral cliffs is comparatively fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British Phosphate Commissioners, and the Missions, the whole of the island is owned by individual natives. The temperature range is from $76^{\circ} F.$ at night to $94^{\circ} F.$ during the day and the average humidity about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the annual average for twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.

2. **History.**—The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea.

In November, 1914, Nauru was occupied by a detachment from the Australian Naval and Military Expedition at Rabaul, and it was included in the cession of colonies made by Germany in 1919 to the Allied and Associated Powers, whose representatives agreed that a mandate for its administration should be conferred upon His Britannic Majesty. The mandate was confirmed by the Council of the League of Nations on 17th December, 1920. On 2nd July, 1919, the British, Australian and New Zealand Governments agreed that the administration (which, since 1915, had been in the charge of an official appointed by the British Colonial Office) should be vested in an Administrator, who took up duty in June, 1921. The agreement between the three Governments was approved by the Commonwealth Parliament in the *Nauru Island Agreement Act 1919* and is shown in the Schedule to that Act. A supplementary agreement concerning Nauru was drafted in May, 1923, and ratified by the Commonwealth Parliament by the *Nauru Island Agreement Act 1932*.

On 25th August, 1942, nine months after the outbreak of the war in the Pacific, the island was occupied by Japanese forces and communications with Nauru ceased. It was re-occupied by a joint Australian Naval and Military Force on 14th September, 1945, and civil administration was re-established on 1st November, 1945.

3. **Trusteeship Agreement.**—On 1st November, 1947, the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand, and the United Kingdom in substitution for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand, and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Year Book No. 39, pages 370-1.

4. **Administration.**—The administration of the island is vested in an Administrator, who is obliged to conform to instructions issued by the Government which appointed him. The Administrator is advised on matters affecting the Nauruan community by the Nauru Local Council, consisting of nine Nauruan Councillors elected by adult suffrage. This Council also carries out works and supplies certain services for the Nauruan community, and acts as the Board of Directors of the Nauru Co-operative Society. Until the Government of Australia ceases to exercise full powers of legislation, administration, and jurisdiction in and over the Territory on behalf of the Administering Authority in pursuance of Article 4 of the Trusteeship Agreement, all ordinances made by the Administrator are subject to confirmation or disallowance by the Governor-General of Australia acting on the advice of the Federal Executive Council. All administration expenses are met from local revenue and phosphate royalties.

5. **Population.**—The Nauruan component of the population numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August, 1942. In 1946, it numbered less than 1,400, but by 30th June, 1964, had risen to 2,661. Chinese have, for many years, formed a considerable part of the population of Nauru, but their numbers are not as great as formerly; at 30th June, 1964, they amounted to 835. The number of other Pacific Islanders in the early 1920's was almost 300, but they subsequently decreased, then rose again, and at 30th June, 1964, there were 1,023. The European population after 1921 fluctuated, but with a generally upward trend, between one and two hundred, and in recent years has gradually increased, reaching 395 at 30th June, 1964. The total population of Nauru at the Census of 30th June, 1961, was 3,019 males, 1,594 females, 4,613 persons.

Investigations were made to find a suitable alternative home for the Nauruan people after the exhaustion of the phosphate deposits towards the end of this century. After inspection of several islands, Curtis Island, off the Queensland coast, was agreed upon as a suitable location for resettlement purposes. The Nauruans subsequently expressed their intention to remain on Nauru and not resettle elsewhere.

6. **Phosphate Deposits.**—(i) *General.* From 1906 to 1919, the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administered by the Colonial Office). The quantity remaining on Nauru has been estimated at about 64 million net tons, and the exports average 85 per cent. to 88 per cent. of tricalcium phosphate.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments on 25th June, 1920, for £3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent. respectively. The Agreement of 2nd July, 1919, provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government, and the three countries are entitled to receive the output in the same proportions of 42, 42 and 16 per cent.

(ii) *Royalty on Phosphate.* Under an agreement between the British Phosphate Commissioners and the Nauruan landowners, a royalty has been payable since 1st July, 1953, for each ton of phosphate exported. As from 1st July, 1962, the rate was increased to 3s. 8d. a ton made up as follows:—

- 10d. to the Nauru Royalty Trust Fund to be used for the benefit of Nauruans;
- 1s. 10d. to the landowner, being an immediate payment of 1s. 2d. a ton, and 8d. a ton to be invested on his account;
- 1s. to the Nauruan Community Long Term Investment Fund.

From 1st July, 1962, the lump sums payable to landowners from whom phosphate-bearing lands are leased were also increased to £120 an acre in respect of land above the 80 ft. contour line.

(iii) *Phosphate Industry.* Exports of phosphate from Nauru in 1963–64 amounted to 1,654,980 tons, valued at £4,427,072, 58 per cent. to Australia, 29 per cent. to New Zealand and 13 per cent. to the United Kingdom. During the five years ended 30th June, 1964, 7,377,150 tons of phosphate were exported.

Apart from a limited number of Europeans, the employees of the Commissioners are Chinese and Pacific Islanders engaged under one year contracts. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

7. **Trade.**—The *Customs Tariff* of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider and perry. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. In 1963–64 imports were valued at £5,604,100 and exports, 1,654,980 tons of phosphate, at £4,427,072. Of the total imports in 1963–64, Australia supplied 94 per cent. valued at £5,253,508; the balance came mainly from Hong Kong, New Zealand and the United Kingdom.

In 1963–64, 961,530 tons of phosphate were exported to Australia, 480,650 tons to New Zealand and 212,800 tons to the United Kingdom.

8. **Transport.**—There is no regular air service to Nauru, but when the need arises charter flights are made to the island.

There is relatively frequent communication by sea with the island. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required. The total calls by vessels were 178 in 1963-64.

9. **Health.**—Cases of the usual diseases known in the Pacific occur, but the health of all sections of the population is generally satisfactory. An area has been set apart for the segregation of sufferers from Hansen's disease, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30th June, 1964, was 37, of whom, however, only three were in segregation at the Hansenside colony. Three hospitals are maintained on the island, one by the Administration for Nauruans, and two by the British Phosphate Commissioners, one for European and one for non-European employees. The Administration also conducts eleven maternity and child health centres. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo medical examination at intervals of three months.

10. **Education.**—The Administration assumed full responsibility for education on 1st October, 1923. Prior to that date, the education of Nauruan children was undertaken by the Missions, which were subsidized by the Administration. There are four infant schools, three primary schools, one Nauruan secondary school and one mission school providing primary and secondary classes. At 30th June, 1964, 1,019 Nauruans, 94 other Pacific Islanders, 13 Chinese and 80 Europeans were enrolled in the infant and primary schools, and 254 at the two secondary schools.

The curriculum is based generally on that used in Victorian schools, and the teaching is generally in English. Education is compulsory for Nauruan children from six to seventeen years of age. At 30th June, 1964, 58 Nauruans were studying in Australia. Of these, 44 were at secondary schools, and the remainder were receiving vocational training. Thirty-five held Administration scholarships, 12 were Administration cadets, and the remaining 11 were privately sponsored. In addition to these, there were three students at the Central Medical School, Suva, one at the Papuan Medical College, Port Moresby, and two apprentices and one tradesman in Victoria.

11. **Judiciary.**—The District Court is a court of record and consists of such magistrates as the Administrator appoints. Additionally, there is the Central Court which, as a superior court of record, consists of such judges or magistrates as are appointed and which, *inter alia*, may hear and determine appeals from judgments of the District Court. A Court of Appeal comprising a judge appointed by the Administrator has also been constituted, with jurisdiction to hear and determine appeals from judgments of the Central Court.

12. **Revenue and Expenditure.**—The revenue of the Administration for the year 1963-64 amounted to £919,921 and expenditure to £734,724.

Of the revenue, payments by the British Phosphate Commissioners amounted to £878,995, post office and radio receipts, £23,576, and import duties, £6,247. Expenditure comprised salaries, £294,933, general expenses, £56,458, miscellaneous services, £220,993, and capital works and services, £162,340.

HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26th December, 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act 1953*.

In December, 1947, an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March, 1955, following the establishment of Mawson station on the Antarctic mainland. Australian expeditions have since visited the island from time to time. Heard Island is about 27 miles long and 13 miles wide. The McDonald Islands are 26 miles to the west of Heard Island. They are small, rocky and precipitous.

AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7th February, 1933, placed under Australian authority all the islands and territories other than Adelie Land situated south of 60° S. lat. and lying between 160° E. long. and 45° E. long. The Order came into force with a Proclamation issued by the Governor-General on 24th August, 1936, after the passage of the *Australian Antarctic Territory Acceptance Act 1933*. The boundaries of Adelie Land were definitively fixed by a French Decree of 1st April, 1938, as the islands and territories south of 60° S. lat. lying between 136° E. long. and 142° E. long. The *Australian Antarctic Territory Act 1954* declared that the laws in force in the Australian Capital Territory are, so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory.

On 13th February, 1954, the Australian National Antarctic Research Expeditions (A.N.A.R.E.) established a base on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The base was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13th January, 1957, at latitude 68° 34' 36" S. and longitude 77° 58' 36" E. The station was named Davis in honour of Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. In February, 1959, the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on 16th January, 1957, on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 33' E. The station was named in honour of Lieut. Charles Wilkes, who commanded the 1838-40 United States expedition to the area. Scientists from both countries participate in the programme of research at Wilkes. A.N.A.R.E. have also operated a station, since the 1947-48 Antarctic season, at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

On 1st December, 1959, Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom and the United States of America. Poland and Czechoslovakia subsequently acceded to the Treaty. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23rd June, 1961. Since then, the Antarctic Treaty powers have held three consultative meetings under the Treaty, the first at Canberra in July, 1961, the second at Buenos Aires in July, 1962, and the third at Brussels in June, 1964. A meeting on telecommunications was held in Washington in June, 1963.

COCOS (KEELING) ISLANDS

1. **General.**—The Cocos (Keeling) Islands, two separate atolls comprising some 27 small coral islands with a total area of about 5½ square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about 6 miles from north to south, on which are the aerodrome and most of the European community; Home Island, the head-quarters of the Clunies-Ross Estate; Direction Island, on which are situated the Cable and Wireless Station and the Department of Civil Aviation's marine base; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about 15 miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and the average rainfall is 80 inches. There are occasional violent storms. The worst cyclone in the recorded history of the islands was in 1909, when about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

The population at 30th June, 1964, was 663.

2. **History.**—The islands were discovered in 1609 by Captain William Keeling of the East India Company. They were uninhabited and remained so until 1826 when the first settlement was established on the main atoll by an Englishman, Alexander Hare, who quitted the islands in about 1831. In the meantime, a second settlement was formed on the main atoll by John Clunies-Ross, a Scottish seaman and adventurer, who landed with several boat-loads of Malay seamen. In 1857, the islands were annexed to the Crown and formally declared part of the British Dominions, and in 1878 responsibility for their supervision was transferred from the Colonial Office to the Government of Ceylon, and subsequently, in 1882, to the Government of the Straits Settlements. By indenture in 1886 Queen Victoria granted the land comprised by the islands to John Clunies-Ross in perpetuity, and until 1946 the patriarchal rule of the head of the Clunies-Ross family was recognized. The head of the family had semi-official status as resident magistrate and representative of the Government. However, in 1946, when the islands became a dependency of the Colony of Singapore, a Resident Administrator responsible to the Governor of Singapore was appointed.

On 23rd November, 1955, the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the *Cocos (Keeling) Islands Act 1955* of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth to be known as the Territory of Cocos (Keeling) Islands.

3. **Administration.**—Responsibility for the administration of the Territory rests with the Minister for Territories. The first Official Representative was appointed on 23rd November, 1955, to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955-1961* of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955-1958* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955-1958*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

4. **Transport.**—There is an international airport at West Island under the control of the Department of Civil Aviation. This is a re-fuelling point for aircraft of Qantas Empire Airways Ltd., which operates a weekly service between Australia and South Africa, and also for South African Airways, which operates a fortnightly service on the same route. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals.

CHRISTMAS ISLAND

1. **General.**—Christmas Island is an isolated bank situated in the Indian Ocean in latitude 10° 25' 19" S., longitude 105° 42' 57" E. It is approximately 220 miles south from Java Head, at the south entrance to Sunda Strait, 810 miles from Singapore and 1,625 miles from Fremantle. Christmas Island covers an area of about 52 square miles. It

consists of a central plateau at about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove where the shore is formed of coral shingles.

The principal settlement is at Flying Fish Cove which is also the only known anchorage. Vessels are moored close inshore opposite two piers with extension conveyors, by which means direct loading to ships is carried out. The main installations of the phosphate industry are located here, together with the European married quarters and the Chinese and Malay settlements. There is a secondary settlement with maintenance shops, etc., at South Point, and several other small settlements or camps across the central plateau and at the small pumping plants at springs and wells. A stream at Waterfall Beach feeds a dam which supplies the settlement at Flying Fish Cove.

The climate is healthy and pleasant, the prevailing winds being from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round from north to north-east. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

The population of Christmas Island at 30th June, 1961, was 3,099 (1,963 males and 1,136 females). At 30th June, 1964, the total population was 3,382.

2. **Education.**—At 30th June, 1964, there were two school systems on the Island—the Christmas Island school system which serves the majority of the children, and a European school which serves a small number of children. The Christmas Island school system follows the Singapore curriculum, with 23 teachers, mostly Singapore trained, and 787 pupils (641 primary and 146 secondary). The European school follows the Western Australian primary school syllabus, with one teacher seconded from the Western Australian Department of Education, and 30 pupils.

Four Administration scholarships are available each year for Asian students who have completed a three year secondary course to enable them to receive further secondary education at Singapore or Malaya up to University Matriculation level. An education allowance of £145 per annum, plus annual return fare for the scholar, is paid to Europeans resident in the Territory who send their children to Australia for secondary education. The British Phosphate Commission awards scholarships from time to time.

3. **History and Administration.**—The first mention of Christmas Island appears in a map published in Holland in 1666, in which it is called Moni Island, although it is believed that Captain William Mynors of the East India Company had sighted the island on Christmas Day in 1643 and had named it accordingly.

In June, 1888, it was annexed by Captain H. W. May of H.M.S. *Imperieuse* as part of the British Dominions and placed under the supervision of the Straits Settlements Government for administrative purposes. Following upon this, a small settlement was established at Flying Fish Cove by Mr. G. Clunies-Ross of Cocos (Keeling) Islands. In February, 1891, Sir John Murray and Mr. Clunies-Ross were granted a 99-year lease of the Island. This lease was transferred to the Christmas Island Phosphate Co. Ltd. in 1897, following the discovery of large deposits of phosphate of lime on the island. In 1900, Christmas Island was incorporated for administrative purposes with the Settlement of Singapore and the laws of Singapore were generally applied to the island.

The Straits Settlements (Repeal) Act 1946, passed by the United Kingdom, repealed the Act establishing the whole of the Straits Settlements as a single colony. Subsequently, the Singapore Colony Order in Council, in 1946, decreed that the Island of Singapore and its dependencies, the Cocos or Keeling Islands and Christmas Island should be governed and administered as a separate Colony and called the Colony of Singapore. From 1st January, 1958, pending transfer to Australia, Christmas Island was administered by the United Kingdom as a separate Crown Colony. The Island was transferred to the Commonwealth of Australia on 1st October, 1958, by the *Christmas Island Act 1958*, and is now administered as a Territory under the authority of the Commonwealth.

Responsibility for the administration and government of the Territory rests with the Minister for Territories, and day to day affairs on the island are administered by an Official Representative under delegation from the Minister. The laws which were in force in the island at 30th September, 1958, were continued as the laws of the Territory after its transfer to Australia on 1st October.

4. Phosphate Deposits.—The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission.

There are three principal phosphate deposits on the island of which the largest is that now being worked at South Point. This field is situated on the 600 feet to 800 feet level and is approximately 11 miles from the drying and shipping plant at Flying Fish Cove. During 1963-64, 747,809 tons of phosphate ore were mined and exported to Australia; 4,202 tons of phosphate dust were shipped to Australia and 66,865 tons to Malaya. The extraction rate is being progressively increased.

There is little prospect of any economic development outside the phosphate industry.

5. Transport.—Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Fremantle and other Australian ports.

CHAPTER VI

MANUFACTURING INDUSTRY

NOTE.—Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Secondary Industries*, Parts I and II. Information is also published, as soon as the data can be prepared, in a series of 35 annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in Statistical Publications of Australia, of the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*. A preliminary annual statement (*Factory Statistics*) and monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of 48 *Monthly Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical Publications).

§ 1. General

1. **Introduction.**—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was engaged primarily in the production of goods for local use, mainly food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914-18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia. A factor in the post-war growth of manufacturing industry in Australia was the creation in 1921 of the Tariff Board (see Chapter XIV. Oversea Trade). As well as encouraging primary industries, the Board, by means of protective tariffs, assisted new manufacturing industries until they were soundly established, and local manufacturers who had been adversely affected by oversea competition.

This expansion was checked by the world-wide economic depression of 1929-33, but in 1933 returning general prosperity and the opportunities opened to local manufacturers by import restrictions, together with depreciation of Australian currency, gave renewed

stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez, and in meeting their demands, as well as those arising locally because of interruption of oversea imports, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibility for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945-46 onward there has been renewed expansion of the manufacturing industries, to which an inflow of capital from overseas contributed.

2. Decentralization of Manufacturing Industries.—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945, to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy affecting the development and location of industry, to investigate, in association with the States, the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth assisted decentralization by allocating munitions and other defence buildings in decentralized areas to private industry and by accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

In the last ten years the proportion of total factory employment engaged in metropolitan factories has been relatively steady, varying from 73.6% in 1953-54 to 73.8% in 1956-57, 73.9% in 1959-60 and 73.7% in 1962-63.

3. Customs and Excise Tariffs and Bounties on Manufactures.—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter XIV. Oversea Trade.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

Products on which bounties were paid in 1962-63 included tractors, certain processed milk products, sulphuric acid, sulphate of ammonia, cellulose acetate flake and rayon yarn.

4. Scientific Research and Standardization.—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research studentships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research. For further information concerning the work of the Organization, see Chapter XIX. Education, Cultural Activities and Research.

(ii) *The Standards Association of Australia.* The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice. For further information on this organization see Chapter XIX. Education, Cultural Activities and Research.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes testing facilities throughout Australia to serve private and governmental needs. For further information on this organization see Chapter XIX. Education, Cultural Activities and Research.

(iv) *Industrial Design Council of Australia.* The Industrial Design Council of Australia was established in June, 1958, for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. The decision to set up the Council arose from a realization on the part of representatives of industry and government, designers and educationists, that there was a pressing need in Australia for an independent and authoritative body to promote better design in the interests of trade development.

The Council has a membership fully representative of industry, commerce and government, together with designers and educationists. It is financed by donations from industry and by Commonwealth grants. In 1962, the Commonwealth Government announced a grant to the Council of up to £20,000 a year for the next three years. State Committees for Industrial Design are being set up in order to extend the Council's activities throughout Australia and to co-ordinate efforts for the promotion of better design.

The Australian Design Index provides a detailed, illustrated record of well-designed Australian products. Housed in visual index cabinets, this constantly growing record of good Australian design is freely available for reference. Products accepted for the Design Index carry the "Good Design" label.

The first Australian Design Centre, established at 21 Degraves Street, Melbourne, exhibits products included in the Design Index and presents exhibitions which show the meaning of good design in everyday things. Displays and exhibitions are also arranged in other States.

As part of its programme of assisting industry, the Council conducts lectures dealing with various aspects of design and issues information bulletins. Design counselling is available to manufacturing companies on request, and manufacturers seeking the services of designers are put in touch with qualified people. A Record of Designers has been set up to register information about industrial designers and their work.

The Council is also concerned, in co-operation with education authorities, with raising the standard of training in industrial design.

5. Definitions in Factory Statistics.—The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the statistical acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover small-goods makers, laundries, photography studios, florists and seedsmen, or most abattoirs. It should be noted that details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age, etc., of their employees, salaries and wages paid, the value of premises and equipment, the horse-power of machinery, the value of raw materials (including containers, tools replaced, etc., the values and in most cases the quantities of fuel used, and quantities and values of principal materials used and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

All persons employed in the manufacturing activities of a factory are counted as factory employees including working proprietors and "out-workers".

The average number of persons employed is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

Value of materials used includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

Value of fuel, etc., used includes also the cost of power and light used, of lubricants and of water.

The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw material of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, timber from the sawmills used in furniture factories and in joinery, and synthetic resins from chemical works used to make plastic products. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The rated horse-power of engines used for factories other than central electric stations relates to the rated horse-power of engines ordinarily in use.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are not included in the figures contained in this chapter.

6. Classification of Factories.—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian statisticians in 1902 and revised from time to time, was used until the year 1929-30. A new classification was introduced in 1930-31, and this in turn was revised and extended (principally in respect of the placement and composition of sub-classes) in accordance with decisions of the 1945 Conference of Statisticians.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below are published in the latter portion of this chapter, and full details for all sub-classes may be found in the bulletin *Secondary Industries, Part I—Factory and Building Operations*, published annually.

The classes and sub-classes in the current classification of factories are as follows.

CLASSIFICATION OF FACTORIES

CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

Coke works
Briquetting and pulverized coal
Carbide
Lime, plaster of paris, asphalt
Fibrous plaster and products
Marble, slate, etc.
Cement, portland
Asbestos cement sheets and mouldings
Other cement goods
Other

CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and tiles
Earthenware, china, porcelain and terracotta
Glass (other than bottles)
Glass bottles
Other

CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

Industrial and heavy chemicals and acids
Pharmaceutical and toilet preparations
Explosives (including fireworks)
White lead, paints and varnish
Oils, vegetable
Oils, mineral
Oils, animal
Boiling-down, tallow-refining
Soap and candles.
Chemical fertilizers
Inks, polishes, etc.
Matches
Other

CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES

Smelting, converting, refining, rolling of iron and steel
Foundries (ferrous)
Plant, equipment and machinery, including machine tools
Other engineering
Extracting and refining of other metals; alloys
Electrical machinery, cables and apparatus
Construction and repair of vehicles (9 groups)
Ship and boat building and repairing, marine engineering (government and other)
Cutlery and small hand tools
Agricultural machines and implements
Non-ferrous metals—
Rolling and extrusion
Founding, casting, etc.
Sheet metal working, pressing, and stamping
Pipes, tubes and fittings—ferrous
Wire and wire working (including nails)
Stoves, ovens and ranges
Gas fittings and meters
Lead mills
Sewing machines

CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—continued

Arms, ammunition (excluding explosives)
Wireless and amplifying apparatus
Other metal works

CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE

Jewellery
Watches and clocks (including repairs)
Electroplating (gold, silver, chromium, etc.)

CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS)

Cotton ginning
Cotton spinning and weaving
Wool—carding, spinning, weaving
Hosiery and other knitted goods
Silk, natural
Rayon, nylon and other synthetic fibres
Flax mills
Rope and cordage
Canvas goods, tents, tarpaulins, etc.
Bags and sacks
Textile dyeing, printing and finishing
Other

CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

Furriers and fur-dressing
Woolscouring and fellmongery
Tanning, currying and leather-dressing
Saddlery, harness and whips
Machine belting (leather or other)
Bags, trunks and other goods of leather and leather substitutes

CLASS VIII.—CLOTHING (EXCEPT KNITTED)

Tailoring and ready-made clothing
Waterproof and oilskin clothing
Dressmaking, hemstitching
Millinery
Shirts, collars, underclothing
Foundation garments
Handkerchiefs, ties and scarves
Hats and caps
Gloves
Boots and shoes (not rubber)
Boot and shoe repairing
Boot and shoe accessories
Umbrellas and walking sticks
Dyeworks and cleaning, etc.
Other

CLASS IX.—FOOD, DRINK AND TOBACCO

Flour-milling
Cereal foods and starch
Animal and bird foods
Chaffcutting and corncrushing
Bakeries (including cakes and pastry)
Biscuits
Sugar-mills
Sugar-refining

CLASS IX.—FOOD, DRINK AND TOBACCO—

continued

Confectionery (including chocolate and icing sugar)
Jam, fruit and vegetable canning
Pickles, sauces, vinegar
Bacon curing
Butter factories
Cheese factories
Condensed and dried milk factories
Margarine
Meat and fish preserving
Condiments, coffee, spices
Ice and refrigerating
Salt
Aerated waters, cordials, etc.
Breweries
Distilleries
Wine-making
Cider and perry
Malting
Bottling
Tobacco, cigars, cigarettes, snuff
Dehydrated fruit and vegetables
Ice cream
Sausage casings
Arrowroot
Other

CLASS X.—SAWMILLS, JOINERY, BOXES, ETC.,
WOOD TURNING AND CARVING

Sawmills
Plywood mills (including veneers)
Bark mills
Joinery
Cooperage
Boxes and cases
Woodturning, woodcarving, etc.
Basketware and wickerware (including sea-grass and bamboo furniture)
Perambulators (including pushers and strollers)
Wall and ceiling boards (not plaster or cement)
Other

CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.

Cabinet and furniture making (including billiard tables and upholstery)
Bedding and mattresses (not wire)
Furnishing drapery

CLASS XII.—FURNITURE OF WOOD, BEDDING, ETC.—
continued

Picture frames
Blinds

CLASS XIII.—PAPER, STATIONERY, PRINTING,
BOOKBINDING, ETC.

Newspapers and periodicals
Printing—
Government
General, including bookbinding
Manufactured stationery
Stereotyping, electrotyping
Process and photo engraving
Cardboard boxes, cartons and containers
Paper bags
Paper-making
Pencils, penholders, chalks, crayons
Other

CLASS XIII.—RUBBER

Rubber goods (including tyres made)
Tyre retreading and repairing

CLASS XIV.—MUSICAL INSTRUMENTS

Gramophones and gramophone records
Pianos, piano-players, organs
Other

CLASS XV.—MISCELLANEOUS PRODUCTS

Linoleum, leather-cloth, oil-cloth, etc.
Bone, horn, ivory and shell
Plastic moulding and products
Brooms and brushes
Optical instruments and appliances
Surgical and other scientific instruments and appliances
Photographic material (including developing and printing)
Toys, games and sports requisites
Artificial flowers
Other

CLASS XVI.—HEAT, LIGHT, AND POWER

Electric light and power
Gas works

7. Factory Development since 1901, Australia.—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table.

FACTORIES: AUSTRALIA

Year	Factories	Employment(a)	Salaries and wages paid(b)	Value of—				
				Materials and fuel used	Output	Production (c)	Land and buildings	Plant and machinery
	No.	'000.	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
1901 ..	11,143	198	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
1911 ..	14,455	312	27,528	81,763	133,022	51,259	32,701	31,516
1920-21 ..	17,113	367	62,932	213,559	323,993	110,434	60,831	68,655
1930-31 ..	21,751	339	62,455	172,489	290,799	118,310	112,211	124,498
1940-41 ..	27,300	650	137,919	386,881	644,795	257,914	144,094	161,356
1950-51 ..	43,147	969	491,718	1,306,963	2,150,835	843,872	302,785	336,615
1958-59 ..	54,888	1,088	970,553	2,649,331	4,491,932	1,842,601	947,899	1,108,385
1959-60 ..	56,657	1,132	1,086,359	2,948,814	5,023,696	2,074,882	1,063,852	1,220,064
1960-61 ..	57,782	1,145	1,143,836	3,047,344	5,217,148	2,169,804	1,193,590	1,391,490
1961-62 ..	58,450	1,121	1,142,519	3,047,151	5,242,089	2,194,938	1,403,838	1,524,787
1962-63 ..	59,146	1,167	1,222,466	3,332,149	5,728,163	2,396,014	1,502,180	1,642,028
1963-64p ..	59,362	1,210	1,325,971	3,684,267	6,319,040	2,634,773	1,602,181	1,739,633

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (b) Excludes drawings by working proprietors. (c) Value added in process of manufacture (i.e., value of output less value of materials and fuel, etc., used).

Note.—Revised figures for the motor engineering and electricity generating industries in Victoria were received too late for insertion in §§ 1-9 of this chapter. They have however, been incorporated in the individual industry tables in § 11, pages 187 and 202. Amended figures for the earlier sections will be found in the appendix.

§ 2. Number of Factories

1. Number of Factories in each State.—The following table shows the number of factories operating in each State in the years 1958-59 to 1962-63.

FACTORIES: NUMBER

Year	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
1958-59	22,684	16,527	5,651	4,235	4,125	1,666	54,888
1959-60	23,274	16,979	5,758	4,684	4,279	1,683	56,657
1960-61	23,585	17,173	5,882	5,042	4,334	1,766	57,782
1961-62	23,629	17,300	5,824	5,519	4,418	1,760	58,450
1962-63	23,729	17,500	5,895	5,766	4,492	1,764	59,146

2. Number of Factories in Industrial Classes.—(i) *Australia*. The next table shows the number of factories in Australia for the years 1958-59 to 1962-63 classified to the industrial classes agreed upon by the Conference of Statisticians in 1930. Details of some of the principal industries included in the table will be found in § 11.

FACTORIES: NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA

Class of industry	1958-59	1959-60	1960-61	1961-62	1962-63
I. Treatment of non-metalliferous mine and quarry products	1,344	1,374	1,434	1,454	1,493
II. Bricks, pottery, glass, etc.	663	682	694	694	692
III. Chemicals, dyes, explosives, paints, oils, grease ..	1,218	1,248	1,258	1,285	1,288
IV. Industrial metals, machines, conveyances	21,254	22,622	23,532	24,193	24,914
V. Precious metals, jewellery, plate	818	823	859	911	918
VI. Textiles and textile goods (not dress)	1,373	1,435	1,421	1,386	1,368

§ 3. Classification of Factories by Number of Persons Employed

NOTE.—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors).

1. *States, 1962-63.*—The following table shows, for each State, the number of factories classified by the average number of persons employed.

FACTORIES: CLASSIFICATION BY SIZE OF FACTORY, 1962-63

Size of factory (Persons employed)	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
NUMBER OF FACTORIES							
Under 4	10,357	6,332	2,186	2,674	2,235	759	24,543
4	1,872	1,347	542	491	355	180	4,787
5 to 10	5,283	4,124	1,550	1,228	950	425	13,560
11 to 20	2,773	2,424	731	621	440	179	7,168
21 to 50	1,977	1,856	524	429	328	140	5,254
51 to 100	761	709	172	171	111	40	1,964
101 to 200	381	397	99	82	42	22	1,023

§ 4. Employment in Factories

1. **Number Employed.**—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and "out-workers" (see para. 4, p. 155), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen, are excluded. From 1945-46 the occupational groupings collected were—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home; but from 1960-61 the last three categories were amalgamated into one group—(iv) foremen and overseers, workers in factory and others.

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to the number of persons employed (see § 3, p. 150), which is based on the average number employed over the period worked.

(ii) *Australia.* Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for the years 1958-59 to 1962-63 in the following table.

FACTORIES: EMPLOYMENT, AUSTRALIA

Year	Males			Females			Persons		
	Number employed	Increase on preceding year		Number employed	Increase on preceding year		Number employed	Increase on preceding year	
		Number	Per cent.		Number	Per cent.		Number	Per cent.

Grand Total	475,249	397,156	104,998	105,265	53,435	30,755	1,166,858

4. Persons Employed According to Occupational Grouping.—In the following table, the average number of persons employed in each State during 1962–63 is classified according to occupational grouping. As stated in para. 1 of this section (*see p. 152*), persons employed in factories are now classified on a basis different from that adopted prior to 1960–61.

FACTORIES: PERSONS EMPLOYED, OCCUPATIONAL GROUPING, 1962-63

State	Average number of persons employed				
	Working proprietors	Managerial and clerical staff, etc.(a)	Chemists, draftsmen, etc.	Foremen and overseers, workers in factory and others(b)	Total
New South Wales	14,299	62,300	8,771	389,879	475,249
Victoria	12,784	50,730	7,839	325,803	397,156
Queensland	4,717	11,806	1,339	87,136	104,998

Tasmania	1,080	3,407	674	25,594	30,755
<i>Total Males</i>	<i>33,886</i>	<i>90,245</i>	<i>19,110</i>	<i>744,872</i>	<i>888,113</i>
<i>Total Females</i>	<i>5,976</i>	<i>56,477</i>	<i>2,056</i>	<i>214,236</i>	<i>278,745</i>
Total Persons	39,862	146,722	21,166	959,108	1,166,858

(a) Includes salaried managers and working directors at home.

(b) Includes persons working regularly at home.

The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory and others, and separate details are not available.

5. Monthly Employment, 1958-59 to 1962-63.—(i) *Australia*. The following table shows the number of persons (excluding working proprietors) employed in factories on the last pay-day of each month during the years 1958-59 to 1962-63.

Tasmania	4,920	5,254	5,347	5,328	5,302
Australia	253,316	269,492	272,632	263,209	278,745

2. Rate of Variation for each Sex.—The percentages of increase or decrease on the average numbers of males and females employed in the preceding year are shown below for the years 1958-59 to 1962-63.

FACTORIES: ANNUAL PERCENTAGE INCREASES OF MALES AND FEMALES EMPLOYED

State	1958-59	1959-60	1960-61	1961-62	1962-63
MALES					
New South Wales	1.05	3.07	1.19	-1.76	2.57
Victoria	1.71	4.35	1.58	-2.23	4.27
Queensland	3.04	-0.54	-0.57	-2.73	2.86
South Australia	2.00	5.02	0.72	-0.12	5.93
Western Australia	-0.21	2.40	2.05	0.81	4.66
Tasmania	1.83	3.85	1.65	-0.28	2.87
Australia	1.51	3.26	1.15	-1.68	3.58
FEMALES					
New South Wales	0.16	6.59	0.64	-4.06	4.65
Victoria	1.43	7.13	1.47	-3.20	7.42
Queensland	1.92	2.36	1.50	-2.66	5.45
South Australia	1.06	5.78	1.98	-4.24	7.63
Western Australia	0.67	3.53	2.03	0.15	5.01
Tasmania	-1.66	6.79	1.77	-0.36	-0.49
Australia	0.81	6.39	1.17	-3.46	5.90

NOTE.—Minus sign (-) indicates decrease.

3. **Masculinity of Persons Employed in Factories.**—The following table shows, for the years 1958–59 to 1962–63, the proportion of males to females employed in factories in each State.

FACTORIES: MASCULINITY(a) OF PERSONS EMPLOYED

Year	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
1958–59	313	266	506	463	649	478	330
1959–60	303	259	491	459	642	465	320
1960–61	305	260	481	454	642	464	320
1961–62	312	262	481	473	650	467	326
1962–63	306	254	469	466	644	480	319

(a) Number of males per 100 females.

4. **Employment of Females in Particular Industries.**—(i) *General.* The majority of females in manufacturing industries are employed in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1962–63, these industries accounted for 78.27 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 139 females to every 100 males, and in Class VIII., Clothing, with 257 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes in 1962–63.

MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1962-63

Class	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of females per 100 males.

§ 6. Children Employed in Factories

1. Number of Children Employed, 1961 to 1963.—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The following table shows the number of children of each sex employed in manufacturing industries in June of the years 1961 to 1963.

FACTORIES: CHILDREN(a) EMPLOYED

State	June, 1961			June, 1962			June, 1963		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons
New South Wales	2,710	2,009	4,719	2,955	2,646	5,601	2,623	2,196	4,819
Victoria ..	2,707	2,586	5,293	2,625	3,049	5,674	2,444	2,653	5,097
Queensland ..	1,478	1,318	2,796	1,521	1,564	3,085	1,665	1,630	3,295

(a) Under sixteen years of age.

2. Industries Employing Children.—The distribution of children employed in factories in June, 1963, and the proportion of children employed to total employees are shown in the following table by the main classes of industry employing persons under sixteen years of age.

FACTORIES: CHILDREN^(a) EMPLOYED, BY CLASSES, AUSTRALIA, JUNE, 1963

Class of industry	Children employed (a)		Total employees (b)		Proportion (per cent.) of children employed to total employees (b)	
	Males	Females	Males	Females	Males	Females
Industrial metals, machines, conveyances	3,946	656	454,693	61,660	0.87	1.06
Textiles and textile goods (not dress)	408	1,352	29,627	41,499	1.38	3.26
Clothing (except knitted)	585	3,507	25,625	75,115	2.28	4.67
Food, drink and tobacco	1,092	880	90,294	34,026	1.21	2.59
Sawmills, joinery, boxes, etc.	801	72	49,974	3,352	2.39	2.15
Furniture of wood, bedding, etc.	397	99	15,572	4,264	2.55	2.32
Paper, stationery, printing, bookbinding, etc.	614	714	55,602	20,107	1.10	3.55
All other industries	893	572	141,192	31,974	0.63	1.79
Total	8,736	7,852	862,579	271,997	1.01	2.89

(a) Under sixteen years of age.

(b) Excludes working proprietors.

3. Apprenticeship.—Acts are in force in all States for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

§ 7. Power Equipment in Factories

1. General.—Since 1936–37, statistics of power equipment in factories relate to the "rated horse-power" of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of central electric stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between central electric stations and other classes of industries. In the following tables central electric stations have been treated separately from other factories.

2. Rated Horse-power of Engines in Factories other than Central Electric Stations.—The following table shows the total number of factories and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1962–63.

FACTORIES^(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1962-63

State	Factories ^(a)	Rated horse-power of engines and motors	
		Ordinarily in use ^(b)	In reserve or idle (omitting obsolete)
New South Wales	23,675	2,756,795	401,433
Victoria	17,465	1,679,254	225,852
Queensland	5,844	605,931	85,817
South Australia	5,737	499,139	62,991
Western Australia	4,400	292,425	43,518
Tasmania	1,750	302,742	43,298
Australia	58,871	6,136,286	862,909

(a) Includes gas works but excludes central electric stations, details of which are shown on p. 163.

(b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

3. Rated Horse-power of Engines and Electric Motors Ordinarily in Use.—(i) *According to Type, States.* Particulars of the types and the total rated horse-power of engines, etc., ordinarily in use in each State are given below.

FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, 1962-63

State	Steam		Internal combustion			Water	Motors driven by electricity		Total (b)(c)
	Reciprocating	Turbine	Gas	Petrol or other light oils	Heavy oils		Purchased	Own generation (d)	
N.S.W. ..	54,959	210,448	5,869	38,369	18,032	..	2,429,118	117,049	2,756,795
Victoria ..	19,154	91,877	1,760	43,816	1,320	890	1,520,437	58,334	1,679,254
Queensland ..	76,732	64,799	1,906	18,839	7,890	..	435,765	117,994	605,931

§ 8. Value of Production, Materials Used, Salaries and Wages

Note.—In all tables relating to salaries and wages paid in factories, the amounts drawn by working proprietors are excluded.

1. *General.*—The gross value of factory output for 1962-63 was £5,728 million, of which £3,130 million was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and £202 million the value of the power, fuel, light, water and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, £2,396 million, represents the net value of factory production, defined as “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production”. Depreciation, however, is not deducted (*see* para. 6 of this section, p. 171). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories. The net value of factory production indicates the relative importance of manufacturing in the Australian economy in current money terms. The total amount of salaries and wages paid in factories in 1962-63 was £1,222 million, excluding amounts drawn by working proprietors.

2. *Salaries and Wages Paid.*—(i) *In Classes of Industry, 1962-63.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table.

FACTORIES: SALARIES AND WAGES PAID, 1962-63

(£'000)

(ii) *Totals and Averages, 1958-59 to 1962-63.* The following table shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each year. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands are employed in Class VIII., Clothing, comprising a relatively high percentage of women and children.

FACTORIES: TOTAL AND AVERAGE SALARIES AND WAGES PAID

Year	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.

(a) Includes value of lubricants and water.

4. *Value of Materials Used.*—(i) *In Classes of Industry, 1962-63.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced, and repairs to plant) in factories in Australia in 1962-63 reached £3,130 million, or 54.6 per

cent. of the value of the final output (see para. 5). The following table shows the value of the materials used in various classes of industry in each State.

FACTORIES: VALUE OF MATERIALS USED, 1962-63
(£'000)

Class of industry	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.

5. *Value of Output.*—(i) *In Classes of Industry, 1962-63.* The value of the output of factories in the various classes in each State in 1962-63 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done, such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the net value of factory production (see paras. 1 and 6 of this section).

FACTORIES: VALUE OF OUTPUT, 1962-63

6. *Value of Production.*—(i) *In Classes of Industry, 1962-63.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items "value of materials used" and "value of fuel used" as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only "value of materials used" and "value of fuel used" from the "value of output". The value of factory production, therefore, approximates "net value added" in the manufacturing process.

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that, when wages and salaries are deducted from the value of production, the whole of the "surplus" is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows, for 1962-63, the value of production in each State for the various classes of industry.

FACTORIES: VALUE OF PRODUCTION, 1962-63

§ 9. Value of Land, Buildings, Plant and Machinery

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1962-63.

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY^(a), 1962-63
(£'000)

Value of—	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
Land and buildings	689,767	475,802	96,742	106,482	51,428	81,959	1,502,180
Plant and machinery	719,191	500,344	140,292	146,804	66,318	69,079	1,642,028
Total ..	1,408,958	976,146	237,034	253,286	117,746	151,038	3,144,208

(a) At end of year. Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) *Totals for Australia.* The following table shows, for Australia as a whole, the approximate value of land and buildings occupied in connexion with manufacturing industries for 1958-59 to 1962-63.

FACTORIES: VALUE OF LAND AND BUILDINGS(a), AUSTRALIA
(£'000)

Class of industry	1958-59	1959-60	1960-61	1961-62	1962-63
I. Treatment of non-metalliferous mine and quarry products	15,175	22,325	27,330	31,132	32,841
II. Bricks, pottery, glass, etc. ..	16,580	19,616	22,249	26,099	31,530

5. Land and Buildings, Plant and Machinery—Values, Additions and Replacements, Depreciation, 1958-59 to 1962-63.—The following table summarizes the recorded totals for Australia in this section and also includes particulars of additions and replacements.

**FACTORIES: VALUE OF LAND AND BUILDINGS, PLANT AND MACHINERY,
AUSTRALIA**
(£'000)

Year	Book values at 30th June(a)		Additions and replacements during year(a)		Depreciation allowed during year	
	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery
1958-59.. .. .	947,899	1,108,385	94,823	197,566	13,000	96,752
1959-60.. .. .	1,063,852	1,220,064	101,971	231,162	13,303	108,486
1960-61.. .. .	1,193,590	1,391,490	90,018	244,048	16,902	125,269
1961-62.. .. .	1,403,838	1,524,787	179,861	280,466	18,446	139,764
1962-63.. .. .	1,502,180	1,642,028	95,645	282,804	19,398	151,911

(a) Includes estimated value of rented premises, plant and machinery.

§ 10. Principal Factory Products

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories* (see NOTE at beginning of this chapter).

VALUE OF PRODUCTION AND AVERAGE EMPLOYMENT IN AUSTRALIAN FACTORIES, 1920-21 TO 1962-63

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1961 to 1964. A more complete list, together with values, where available, is published in the bulletin *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories.*

Preliminary figures for a restricted number of major commodities for the year 1964—65 are shown in the Appendix to this volume.

Zinc oxide (see pigments)				
Zinc, refined(e)	tons 125,936	153,742	175,850	186,386

(a) Subject to revision. (b) Not yet available. (c) Excludes wheatmeal for baking included with flour; includes wheatmeal for porridge and stock food. (d) Includes mixtures predominantly the fibre mentioned. (e) Primary origin only—includes small quantities of zinc dust.

§ 11. Individual Industries

1. **General.**—Particulars on pages 149-76, §§ 2-9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this publication, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour or capital, or for other features of special interest.

In order to make room for a wider range of industries, tables showing particulars for each State which were included in previous issues of the Year Book have been discontinued. These details are available from publications issued by the Deputy Commonwealth Statistician in each State and, for selected industries, in the Central Office series *Manufacturing Industries*.

Details of some of the principal articles produced in factories in Australia during the years 1960-61 to 1963-64 are shown in the table on the preceding pages (§ 10).

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class 1. Particulars for the three industries under this general heading are shown for 1962-63 and for the years 1958-59 to 1962-63 in the following table.

PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS

AUSTRALIA, 1962-63

Particulars	Portland cement	Asbestos cement sheets and mouldings	Other cement goods	Total
Number of factories	16	16	607	639
Number of persons employed	3,130	2,963	7,484	13,577
Salaries and wages paid	£'000 3,959	3,567	9,043	16,569
Value of power, fuel, etc., used	£'000 5,264	584	583	6,431

Horse-power of engines ordinarily in use	h.p. 93,403	97,471	101,389	108,491	118,673

4. Glass and Glass Bottles.—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63.

GLASS AND GLASS BOTTLES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	208	229	242	248	255
Number of persons employed	8,659	9,189	9,444	9,651	10,510
Salaries and wages paid	£'000 7,859	9,361	9,992	10,688	11,585
Value of power, fuel, etc., used	£'000 2,775	2,899	2,945	2,697	2,788
Value of materials used	£'000 13,794	16,705	16,263	16,268	17,961
Value of production	£'000 15,225	17,892	19,238	20,212	22,239
Total value of output	£'000 31,794	37,495	38,444	39,177	42,988
Value of land and buildings	£'000 6,784	8,514	9,626	12,826	15,677
Value of plant and machinery	£'000 4,024	4,565	5,665	7,137	10,694
Horse-power of engines ordinarily in use	h.p. 27,011	33,565	32,058	35,969	40,627

5. **Industrial and Heavy Chemicals.**—The following table shows particulars of the industrial and heavy chemical industry for Australia for the years 1958–59 to 1962–63. In order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

**INDUSTRIAL AND HEAVY CHEMICALS AND ACIDS (INCLUDING EXPLOSIVES):
AUSTRALIA**

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	302	287	297	308	320
Number of persons employed	15,813	14,423	13,945	13,746	14,165
Salaries and wages paid	£'000 17,242	17,146	17,475	17,724	18,783
Value of power, fuel, etc., used	£'000 4,616	4,874	4,652	6,015	6,652
Value of materials used	£'000 46,604	46,212	43,810	50,586	58,724
Value of production	£'000 42,513	43,497	41,066	46,627	55,800
Total value of output	£'000 93,733	94,583	89,528	103,228	121,176
Value of land and buildings	£'000 22,948	24,657	28,509	34,059	34,337
Value of plant and machinery	£'000 38,137	41,326	44,518	70,576	68,063
Horse-power of engines ordinarily in use	h.p. 130,928	117,311	124,629	165,055	174,380

6. **Pharmaceutical and Toilet Preparations.**—The following table shows particulars of the pharmaceutical and toilet preparations industry for Australia for the years 1958–59 to 1962–63. The bulk of the output of this industry comes from New South Wales and Victoria.

PHARMACEUTICAL AND TOILET PREPARATIONS: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	210	216	212	211	209
Number of persons employed	6,976	7,791	7,805	7,910	8,058
Salaries and wages paid	£'000 5,886	7,074	7,448	7,864	8,470
Value of power, fuel, etc., used	£'000 754	810	842	797	925
Value of materials used	£'000 19,575	23,311	23,630	25,585	27,588
Value of production	£'000 23,130	28,985	32,155	33,129	31,998
Total value of output	£'000 43,459	53,106	56,627	59,511	60,511
Value of land and buildings	£'000 10,750	11,528	13,431	14,544	17,087
Value of plant and machinery	£'000 4,519	5,347	6,003	5,732	6,319
Horse-power of engines ordinarily in use h.p.	16,702	18,084	19,237	20,322	22,772

7. **White Lead, Paints and Varnish.**—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63.

WHITE LEAD, PAINTS AND VARNISH: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	188	181	182	188	184
Number of persons employed	5,532	5,475	5,208	5,096	5,144
Salaries and wages paid	£'000 5,448	5,710	5,746	5,669	5,830
Value of power, fuel, etc., used	£'000 419	416	393	404	436
Value of materials used	£'000 25,448	26,892	24,924	26,762	28,732
Value of production	£'000 13,184	15,446	15,407	15,467	17,317
Total value of output	£'000 39,051	42,754	40,724	42,633	46,485
Value of land and buildings	£'000 6,327	6,942	7,736	7,745	8,400
Value of plant and machinery	£'000 3,696	4,219	4,177	5,440	5,392
Horse-power of engines ordinarily in use h.p.	25,093	25,879	27,952	28,780	29,262

8. **Mineral Oil Extraction and Refining.**—Particulars of factories engaged in the extraction and refining of mineral oil products are shown in the following table for Australia for the years 1958-59 to 1962-63. Victoria, New South Wales, and Western Australia produce most of the refined mineral oil and by-products.

MINERAL OILS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	70	70	76	77	79
Number of persons employed	4,888	4,972	5,020	5,028	5,044
Salaries and wages paid £'000	5,990	6,514	7,062	7,356	7,745
Value of power, fuel, etc., used £'000	7,531	7,848	7,537	7,990	8,795
Value of materials used £'000	123,526	133,417	136,503	136,357	143,504
Value of production £'000	39,149	43,724	44,405	36,338	47,786
Total value of output £'000	170,206	184,989	188,445	180,685	200,085
Value of land and buildings £'000	19,154	18,261	18,493	19,517	20,122
Value of plant and machinery £'000	85,504	84,954	86,755	95,475	109,194
Horse-power of engines ordinarily in use h.p.	106,771	108,231	132,640	145,383	183,935

9. **Soap and Candle Factories.**—The following table shows particulars of factories in the soap and candle industry for Australia for the years 1958-59 to 1962-63. New South Wales and Victoria are the major centres of production in this industry.

SOAP AND CANDLES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	89	(a) 120	119	117	117
Number of persons employed	2,929	3,210	3,234	3,290	3,340
Salaries and wages paid £'000	2,822	3,220	3,538	3,568	3,771
Value of power, fuel, etc., used £'000	387	383	430	420	419
Value of materials used £'000	15,253	15,835	16,279	16,138	16,438
Value of production £'000	11,941	14,131	15,210	15,003	16,377
Total value of output £'000	27,581	30,349	31,919	31,561	33,234
Value of land and buildings £'000	2,039	2,652	2,965	3,000	2,982
Value of plant and machinery £'000	3,118	3,054	3,220	3,440	3,218
Horse-power of engines ordinarily in use h.p.	12,632	13,689	14,452	14,495	16,256

(a) The increase in the number of factories is due mainly to the reclassification of a number of factories in New South Wales.

10. **Chemical Fertilizers.**—The following table shows particulars of the factories engaged in the manufacture of chemical fertilizers in Australia for the years 1958-59 to 1962-63.

CHEMICAL FERTILIZERS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	48	49	44	47	48
Number of persons employed	4,959	4,763	4,567	4,525	4,432
Salaries and wages paid £'000	5,207	5,369	5,475	5,469	5,508
Value of power, fuel, etc., used £'000	995	994	1,001	970	920
Value of materials used £'000	25,756	26,348	26,930	27,718	29,680
Value of production £'000	11,440	11,520	12,325	12,334	12,458
Total value of output £'000	38,191	38,862	40,256	41,022	43,058
Value of land and buildings £'000	7,633	7,508	6,072	6,280	6,356
Value of plant and machinery £'000	10,808	10,257	8,651	8,734	9,380
Horse-power of engines ordinarily in use h.p.	57,587	58,519	53,194	55,089	55,894

11. **Iron and Steel Works and Engineering.**—(i) *General.* The first group included under this heading (Smelting, converting, refining and rolling of iron and steel) covers blast furnaces, steel works and rolling mills. The second group (Foundries, ferrous) covers those engaged in the founding of iron and steel. The third group (Plant, equipment and machinery, including machine tools) covers those industries engaged in the production of

boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other engineering) includes jobbing and general engineering not elsewhere included. Detailed statistics for the four groups mentioned are shown in the following tables.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table, particulars are shown for Australia for the years 1958-59 to 1962-63 for the group Smelting, converting, refining and rolling of iron and steel. The greater part of the output of this industry comes from New South Wales, with Western Australia, Victoria, and South Australia producing nearly all the remainder.

**SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL:
AUSTRALIA**

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	34	35	34	34	33
Number of persons employed	29,982	31,825	33,804	34,504	35,605
Salaries and wages paid £'000	34,220	38,793	45,721	44,237	47,545
Value of power, fuel, etc., used £'000	23,539	30,202	33,929	33,953	36,774
Value of materials used £'000	153,563	162,677	174,276	163,778	184,437
Value of production £'000	78,154	86,256	100,618	97,653	108,252
Total value of output £'000	255,256	279,135	308,823	295,384	329,463
Value of land and buildings £'000	11,400	14,417	31,660	36,972	39,380
Value of plant and machinery £'000	82,451	95,110	147,676	180,428	194,903
Horse-power of engines ordinarily in use h.p.	633,180	690,291	757,451	778,470	872,050

Particulars of the production of pig-iron and steel will be found on page 178 and in Chapter XXVI. Mineral Industry.

(iii) *Foundries (Ferrous).* Particulars covering those industries classified as founding of iron and steel are shown for Australia for the years 1958-59 to 1962-63 in the following table. Tasmanian foundry output is relatively small and details are included in "Other engineering" (see p. 186).

FOUNDRIES—FERROUS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	346	312	245	239	231
Number of persons employed	7,376	7,853	7,797	7,183	7,711
Salaries and wages paid £'000	7,293	8,504	8,776	8,089	8,970
Value of power, fuel, etc., used £'000	955	1,121	1,114	1,016	1,160
Value of materials used £'000	6,687	7,905	8,654	7,398	8,978
Value of production £'000	10,615	12,325	12,756	11,243	12,485
Total value of output £'000	18,257	21,351	22,524	19,657	22,623
Value of land and buildings £'000	3,912	4,866	5,128	5,040	5,474
Value of plant and machinery £'000	2,963	3,791	3,727	3,579	3,730
Horse-power of engines ordinarily in use h.p.	31,612	32,455	31,471	31,506	32,617

(iv) *Plant, Equipment and Machinery (including Machine Tools).* The next table shows particulars for this group for Australia for the years 1958-59 to 1962-63.

**PLANT, EQUIPMENT AND MACHINERY (INCLUDING MACHINE TOOLS):
AUSTRALIA**

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	2,345	2,518	2,587	2,744	2,857
Number of persons employed	70,905	76,096	77,733	77,464	80,758
Salaries and wages paid £'000	70,371	81,885	86,669	86,794	93,146
Value of power, fuel, etc., used £'000	3,161	3,574	3,789	3,759	4,115
Value of materials used £'000	122,408	144,405	152,329	148,464	167,358
Value of production £'000	115,472	138,402	143,925	142,741	155,671
Total value of output £'000	241,041	286,381	300,043	294,964	327,144
Value of land and buildings £'000	49,927	56,116	66,337	74,008	81,407
Value of plant and machinery £'000	36,400	39,407	43,122	46,178	49,132
Horse-power of engines ordinarily in use h.p.	250,580	267,497	278,138	293,577	303,606

(v) *Other Engineering.* Details covering jobbing and general engineering works not elsewhere included are shown for Australia for the years 1958-59 to 1962-63 in the following table.

OTHER ENGINEERING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	2,220	2,318	2,439	2,457	2,472
Number of persons employed	23,467	25,780	27,997	27,897	28,997
Salaries and wages paid £'000	21,682	23,858	28,794	29,561	31,732
Value of power, fuel, etc., used £'000	806	1,018	1,048	1,111	1,249
Value of materials used £'000	26,059	31,110	35,141	35,958	41,099
Value of production £'000	34,829	42,264	47,369	47,192	52,219
Total value of output £'000	61,694	74,392	83,558	84,261	94,567
Value of land and buildings £'000	16,655	19,233	24,015	26,423	28,187
Value of plant and machinery £'000	12,201	13,782	16,441	17,590	18,300
Horse-power of engines ordinarily in use h.p.	76,109	89,374	93,019	101,245	107,735

12. *Extracting and Refining of Non-ferrous Metals; Alloys.*—The following table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore, in Australia for the years 1958-59 to 1962-63. Ore dressing and elementary smelting of metallic minerals (e.g. in the case of gold), when these are carried out in an associated plant at or near the mine, are included in the mineral industry (*see* Chapter XXVI. Mineral Industry).

EXTRACTING AND REFINING OF NON-FERROUS METALS; ALLOYS:
AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	68	71	69	62	64
Number of persons employed	7,269	7,438	7,545	7,974	8,277
Salaries and wages paid £'000	8,880	9,535	9,842	10,642	11,452
Value of power, fuel, etc., used £'000	4,724	4,833	4,703	5,281	6,665
Value of materials used £'000	61,060	64,376	74,673	71,691	97,143
Value of production £'000	18,129	20,502	21,984	21,714	26,045
Total value of output £'000	83,913	89,711	101,360	98,686	129,853
Value of land and buildings £'000	7,326	10,105	10,724	11,956	14,026
Value of plant and machinery £'000	15,764	21,495	23,918	31,950	39,753
Horse-power of engines ordinarily in use h.p.	76,680	86,776	90,216	94,081	93,482

13. *Electrical Machinery, Cables and Apparatus.*—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63. New South Wales factories account for almost two-thirds of the output of this industry.

ELECTRICAL MACHINERY, CABLES AND APPARATUS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,213	1,360	1,339	1,349	1,404
Number of persons employed	50,069	53,089	54,072	52,918	55,692
Salaries and wages paid £'000	46,979	54,011	57,179	57,020	61,556
Value of power, fuel, etc. used £'000	2,493	2,685	2,821	2,835	3,077
Value of materials used £'000	94,964	108,712	110,680	112,737	116,070
Value of production £'000	76,808	90,199	93,897	93,017	100,904
Total value of output £'000	174,265	201,596	207,398	208,589	220,051
Value of land and buildings £'000	32,958	38,679	42,775	46,007	51,663
Value of plant and machinery £'000	23,627	27,602	26,830	27,728	28,743
Horse-power of engines ordinarily in use h.p.	111,980	118,299	122,609	128,326	134,043

14. **Railway and Tramway Workshops (Government and Local Authority).**—The railway and tramway workshops, which form an important part of Class IV., are owned chiefly by State governments and local authorities. *Workshops (fourteen in 1962-63) controlled by non-public bodies are not included in the figures below.*

TRAMCARS AND RAILWAY ROLLING STOCK(a): AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	139	129	126	122	122
Number of persons employed	37,993	36,746	35,323	35,466	34,653
Salaries and wages paid	£'000 33,599	34,208	34,795	35,995	35,332
Value of power, fuel, etc., used	£'000 1,080	1,112	1,097	1,085	1,072
Value of materials used	£'000 19,563	19,414	19,390	19,624	19,685
Value of production	£'000 41,557	41,473	42,889	43,685	42,747
Total value of output	£'000 62,200	61,999	63,376	64,394	63,504
Value of land and buildings	£'000 12,374	12,761	13,681	14,654	14,679
Value of plant and machinery	£'000 16,547	17,174	17,657	17,699	18,583
Horse-power of engines ordinarily in use h.p.	115,162	116,443	116,063	115,416	116,027

(a) Government and local authority only.

15. **Motor Vehicles.**—The industries catering for the motor trade are included in Class IV., Industrial metals, machines and conveyances. In the following table, a summary is given of the principal statistics for 1962-63 for each branch of industry associated with the motor trade of Australia.

**MOTOR VEHICLES—CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.: AUSTRALIA
1962-63**

Particulars	Construction and assembly	Repairs	Motor bodies (a)	Motor accessories	Total
Number of factories	45	11,076	2,199	303	13,623
Number of persons employed	22,693	65,857	30,948	16,081	135,579
Salaries and wages paid	£'000 28,954	57,526	35,918	18,147	140,545
Value of power, fuel, etc., used	£'000 2,274	1,901	1,483	1,234	6,892
Value of materials used	£'000 68,105	63,016	85,208	29,362	245,691
Value of production	£'000 47,526	91,848	53,568	31,111	224,053
Total value of output	£'000 117,905	156,765	140,259	61,707	476,636
Value of land and buildings	£'000 29,571	86,966	30,414	13,986	160,937
Value of plant and machinery	£'000 24,159	14,999	24,786	15,292	79,236
Horse-power of engines ordinarily in use h.p.	87,605	78,492	85,140	59,281	310,518

(a) Includes motor body repairing, panel beating, duco spraying, etc.

In the next table, similar details are shown for Australia for these industries combined for the years 1958-59 to 1962-63. Victoria, New South Wales, and South Australia account for about four-fifths of the output of these industries. Most of the output of the other States is from repair work.

**MOTOR VEHICLES—CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.:
AUSTRALIA**

Particulars	1958-59	1959-60 r	1960-61 r	1961-62 r	1962-63

16. Ship and Boatbuilding and Repairing, Marine Engineering.—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63, and includes Government factories as well as those owned privately and by municipal authorities. About half the output of this industry comes from New South Wales shipyards, with Victoria and South Australia accounting for the greater part of the balance.

**SHIP AND BOAT BUILDING AND REPAIRING, MARINE ENGINEERING:
AUSTRALIA**

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	274	297	318	318	353

19. Non-ferrous Metals; Founding, Casting, etc.—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63.

NON-FERROUS METALS—FOUNDING, CASTING, ETC.: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	471	480	490	477	462
Number of persons employed	10,142	10,602	10,510	9,833	10,467
Salaries and wages paid £'000	9,435	10,885	11,036	10,395	11,307
Value of power, fuel, etc., used £'000	805	906	909	897	982
Value of materials used £'000	16,627	20,637	20,148	19,936	23,351
Value of production £'000	16,859	18,415	18,459	18,367	20,457
Total value of output £'000	34,291	39,958	39,516	39,200	44,790
Value of land and buildings £'000	5,768	6,963	8,196	9,338	9,827
Value of plant and machinery £'000	4,988	5,508	6,539	6,720	7,308
Horse-power of engines ordinarily in use h.p.	29,282	31,150	34,082	34,285	36,561

20. Sheet Metal Working, Pressing and Stamping.—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63.

SHEET METAL WORKING, PRESSING AND STAMPING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,010	1,076	1,111	1,142	1,156
Number of persons employed	24,902	26,843	27,474	26,545	27,924
Salaries and wages paid £'000	22,753	26,851	28,582	27,833	29,927
Value of power, fuel, etc., used £'000	1,411	1,628	1,549	1,608	1,771
Value of materials used £'000	52,858	60,801	65,226	66,105	69,884
Value of production £'000	39,909	48,433	50,480	51,152	56,854
Total value of output £'000	94,178	110,862	117,255	118,864	128,509
Value of land and buildings £'000	17,503	20,865	24,900	27,885	29,906
Value of plant and machinery £'000	13,312	15,041	17,369	18,054	20,231
Horse-power of engines ordinarily in use h.p.	71,956	77,233	80,020	79,963	84,487

21. Pipes, Tubes and Fittings—Ferrous.—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63. New South Wales, South Australia, and Victoria produce most of the output of this industry.

PIPES, TUBES AND FITTINGS—FERROUS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	40	49	55	62	58
Number of persons employed	7,651	8,332	8,547	8,272	8,784
Salaries and wages paid £'000	8,419	9,655	10,339	10,122	11,197
Value of power, fuel, etc., used £'000	1,252	1,357	1,350	1,288	1,606
Value of materials used £'000	22,996	26,454	25,530	25,878	27,387
Value of production £'000	14,967	19,544	20,021	18,891	19,376
Value of output £'000	39,215	47,355	46,901	46,057	48,369
Value of land and buildings £'000	3,756	6,301	6,818	7,345	8,796
Value of plant and machinery £'000	4,038	6,955	7,183	7,741	9,789
Horse-power of engines ordinarily in use h.p.	46,237	50,038	52,300	47,547	59,619

22. Wire and Wire Working (including Nails).—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63. New South Wales and Victoria predominate in this industry.

WIRE AND WIRE WORKING (INCLUDING NAILS): AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	275	286	282	283	289
Number of persons employed	9,035	9,974	10,195	9,804	10,377
Salaries and wages paid £'000	8,722	10,418	11,298	10,614	11,910
Value of power, fuel, etc., used £'000	778	905	923	881	944
Value of materials used £'000	28,636	35,875	37,301	34,968	40,290
Value of production £'000	16,701	20,986	21,050	19,361	21,955
Total value of output £'000	46,115	57,766	59,274	55,210	63,189
Value of land and buildings £'000	7,289	8,122	8,958	9,785	10,600
Value of plant and machinery £'000	5,266	6,127	6,588	6,994	8,084
Horse-power of engines ordinarily in use h.p.	35,261	37,162	37,233	39,010	43,818

23. **Wireless and Amplifying Apparatus.**—This industry is confined mainly to New South Wales, Victoria and South Australia. Details for Australia for the years 1958–59 to 1962–63 are shown in the following table.

WIRELESS AND AMPLIFYING APPARATUS: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	257	289	301	327	330
Number of persons employed	16,482	19,559	17,273	14,707	16,586
Salaries and wages paid £'000	14,264	17,644	17,092	14,602	16,620
Value of power, fuel, etc., used £'000	550	621	648	585	657
Value of materials used £'000	39,255	50,129	40,259	35,995	39,470
Value of production £'000	23,431	30,304	25,504	23,587	27,219
Total value of output £'000	63,236	81,054	66,411	60,167	67,346
Value of land and buildings £'000	7,897	8,941	10,479	11,564	12,052
Value of plant and machinery £'000	5,018	5,744	6,468	6,446	6,633
Horse-power of engines ordinarily in use h.p.	12,952	14,302	14,850	15,353	15,216

24. **Cotton.**—(i) *General.* The growing of cotton, which is confined mainly to Queensland, is treated in some detail in Chapter XXIII. Rural Industry. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (in 1962–63) from the United States of America, Mexico, Brazil and Colombia.

(ii) *Spinning and Weaving.* The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1958–59 to 1962–63.

COTTON SPINNING AND WEAVING: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	97	92	88	88	88
Number of persons employed	9,770	9,780	9,121	8,980	9,313
Salaries and wages paid £'000	8,116	8,853	8,122	8,245	8,631
Value of power, fuel, etc., used £'000	988	997	958	1,033	1,134
Value of materials used £'000	19,403	20,631	18,336	19,161	20,818
Value of production £'000	14,751	16,224	15,169	14,827	16,760
Total value of output £'000	35,142	37,852	34,463	35,021	38,712
Value of land and buildings £'000	10,625	9,706	10,392	12,909	14,430
Value of plant and machinery £'000	9,949	9,414	10,105	10,805	12,191
Horse-power of engines ordinarily in use h.p.	38,779	37,240	36,193	40,592	41,581

25. **Wool Carding, Spinning and Weaving.**—Details for Australia for the years 1958–59 to 1962–63 are shown in the following table. Victoria produces more than half the output of this industry.

WOOL CARDING, SPINNING AND WEAVING: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	141	134	135	134	134
Number of persons employed	20,809	22,433	21,400	20,102	21,131
Salaries and wages paid £'000	15,714	18,052	17,372	17,081	18,230
Value of power, fuel, etc., used £'000	1,445	1,563	1,484	1,456	1,507
Value of materials used £'000	37,252	47,440	40,629	43,122	48,513
Value of production £'000	26,458	29,131	28,119	26,594	29,326
Total value of output £'000	65,155	78,134	70,232	71,172	79,346
Value of land and buildings £'000	10,519	10,625	10,904	10,911	11,575
Value of plant and machinery £'000	12,082	12,599	12,552	13,235	13,720
Horse-power of engines ordinarily in use h.p.	72,301	70,811	69,488	70,610	71,354

26. **Hosiery and Other Knitted Goods.**—Details for Australia for the years 1958–59 to 1962–63 are shown in the following table. Victorian mills produce about three-quarters of the Australian output of knitted goods, most of the balance being produced in New South Wales.

HOSIERY AND OTHER KNITTED GOODS: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	663	701	687	658	625
Number of persons employed	22,851	24,414	24,741	23,403	24,627
Salaries and wages paid	£'000 16,421	18,791	19,101	18,495	20,323
Value of power, fuel, etc., used	£'000 787	798	810	794	807
Value of materials used	£'000 34,701	41,479	42,228	41,773	46,259
Value of production	£'000 31,325	34,629	36,085	35,948	38,089
Total value of output	£'000 66,813	76,906	79,123	78,515	85,155
Value of land and buildings	£'000 12,144	12,962	14,606	15,229	15,750
Value of plant and machinery	£'000 9,353	9,171	9,967	10,610	11,376
Horse-power of engines ordinarily in use h.p.	23,290	22,019	22,738	23,250	23,106

27. **Rayon, Nylon and Other Synthetic Fibres.**—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63. Victoria produces nearly two-thirds of the total Australian output of synthetic fibre textiles, most of the balance being produced in New South Wales.

RAYON, NYLON AND OTHER SYNTHETIC FIBRES: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	31	33	40	44	45
Number of persons employed	2,888	3,072	3,878	3,947	4,329
Salaries and wages paid	£'000 2,502	2,918	3,876	3,933	4,540
Value of power, fuel, etc., used	£'000 328	401	470	516	572
Value of materials used	£'000 4,672	6,819	8,658	9,884	12,867
Value of production	£'000 3,892	5,005	6,171	6,823	8,044
Total value of output	£'000 8,892	12,225	15,299	17,223	21,483
Value of land and buildings	£'000 2,151	2,247	3,217	3,675	4,298
Value of plant and machinery	£'000 2,605	2,855	3,821	3,978	4,571
Horse-power of engines ordinarily in use h.p.	9,298	10,669	12,161	13,632	14,202

28. **Rope and Cordage.**—Particulars of factories manufacturing rope and cordage are shown in the following table for Australia for the years 1958–59 to 1962–63. Most of the production takes place in New South Wales and Victoria.

ROPE AND CORDAGE: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	29	28	27	26	26
Number of persons employed	2,239	2,387	2,335	2,146	2,307
Salaries and wages paid	£'000 1,995	2,285	2,272	2,189	2,431
Value of power, fuel, etc., used	£'000 133	158	171	173	184
Value of materials used	£'000 3,790	4,167	5,121	4,240	4,795
Value of production	£'000 4,065	4,407	4,257	4,122	4,752
Total value of output	£'000 7,988	8,732	9,549	8,535	9,731
Value of land and buildings	£'000 2,447	2,625	2,629	2,701	2,754
Value of plant and machinery	£'000 1,441	1,558	1,694	1,718	1,784
Horse-power of engines ordinarily in use h.p.	13,935	14,057	15,015	15,153	15,240

29. **Woolscouring and Fellmongery.**—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63. Most of the production comes from New South Wales and Victoria.

WOOLSCOURING AND FELLMONGERY: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	61	59	58	58	56
Number of persons employed	2,959	3,014	2,740	2,803	2,842
Salaries and wages paid	£'000 3,015	3,351	3,088	3,154	3,297
Value of power, fuel, etc., used	£'000 645	641	555	585	619
Value of materials used	£'000 12,491	15,544	12,459	14,031	15,964
Value of production	£'000 4,726	4,960	4,421	4,433	4,636
Total value of output	£'000 17,862	21,144	17,436	19,049	21,219
Value of land and buildings	£'000 2,163	2,196	2,068	2,401	2,844
Value of plant and machinery	£'000 1,446	1,348	1,362	1,361	1,535
Horse-power of engines ordinarily in use h.p.	18,280	17,479	16,926	16,779	17,544

30. Tanning, Currying and Leather Dressing.—The following table shows particulars of the tanning industry in each State for Australia for the years 1958-59 to 1962-63. New South Wales, Victorian and Queensland factories produce most of the output of this industry.

TANNING, CURRYING AND LEATHER DRESSING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	123	118	112	108	102
Number of persons employed	4,617	4,435	4,245	4,159	4,215
Salaries and wages paid	£'000 4,510	4,612	4,575	4,612	4,736
Value of power, fuel, etc., used	£'000 490	484	484	488	501
Value of materials used	£'000 12,635	15,766	14,421	14,281	12,578
Value of production	£'000 6,919	6,967	6,748	7,392	8,114
Total value of output	£'000 20,044	23,217	21,653	22,161	21,193
Value of land and buildings	£'000 2,535	3,399	3,418	3,537	3,665
Value of plant and machinery	£'000 2,223	2,152	2,230	2,241	2,266
Horse-power of engines ordinarily in use h.p.	30,749	33,516	31,516	31,278	27,598

31. Leather Goods (including Saddlery and Belting).—Particulars of the leather goods industry in Australia for the years 1958-59 to 1962-63 are shown in the following table. As with other industries of this class, New South Wales and Victorian factories dominate the industry.

LEATHER GOODS (INCLUDING SADDLERY AND BELTING): AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	430	433	418	392	386
Number of persons employed	4,727	4,873	4,658	4,315	4,519
Salaries and wages paid	£'000 3,140	3,471	3,419	3,276	3,475
Value of power, fuel, etc., used	£'000 59	66	66	66	74
Value of materials used	£'000 5,670	6,607	6,504	6,032	6,576
Value of production	£'000 5,280	6,063	5,878	5,679	6,168
Total value of output	£'000 11,009	12,736	12,448	11,777	12,818
Value of land and buildings	£'000 2,351	2,821	3,084	3,192	3,444
Value of plant and machinery	£'000 607	645	834	846	742
Horse-power of engines ordinarily in use h.p.	2,738	3,769	3,678	3,155	3,387

32. Tailoring and Ready-made Clothing.—Statistics of this industry for Australia for the years 1958-59 to 1962-63 are shown in the following table. New South Wales and Victorian factories account for more than 90 per cent. of the output of this industry.

TAILORING AND READY-MADE CLOTHING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,841	1,860	1,871	1,839	1,847
Number of persons employed	31,406	33,170	33,890	32,496	33,234
Salaries and wages paid	£'000 19,533	22,133	23,542	23,050	24,271
Value of power, fuel, etc., used	£'000 440	467	495	500	513
Value of materials used	£'000 36,253	40,791	42,674	41,085	44,077
Value of production	£'000 31,371	35,166	36,970	37,585	40,021
Total value of output	£'000 68,064	76,424	80,139	79,170	84,611
Value of land and buildings	£'000 11,948	13,287	15,183	16,189	17,793
Value of plant and machinery	£'000 3,063	3,147	3,446	3,451	3,516
Horse-power of engines ordinarily in use h.p.	10,143	10,899	11,820	12,618	12,939

33. **Dressmaking and Millinery Establishments.**—Particulars of dressmaking and millinery establishments in Australia for the years 1958-59 to 1962-63 are shown in the following table. About two-thirds of the total Australian output comes from Victorian establishments.

DRESSMAKING AND MILLINERY: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,249	1,228	1,194	1,183	1,189
Number of persons employed	15,048	15,021	14,403	14,466	15,093
Salaries and wages paid	£'000 8,599	9,205	9,191	9,471	10,186
Value of power, fuel, etc., used	£'000 184	190	190	196	210
Value of materials used	£'000 11,272	11,758	11,666	12,038	13,028
Value of production	£'000 13,766	14,764	15,063	15,172	16,697
Total value of output	£'000 25,222	26,712	26,919	27,406	29,935
Value of land and buildings	£'000 6,937	7,623	8,277	8,661	9,115
Value of plant and machinery	£'000 1,171	1,114	1,085	1,083	1,182
Horse-power of engines ordinarily in use h.p.	5,159	4,880	4,398	4,543	4,831

34. **Shirts, Collars and Underclothing.**—Particulars of this industry are shown below for Australia for the years 1958-59 to 1962-63. Victorian and New South Wales factories produce most of the output of this industry.

SHIRTS, COLLARS AND UNDERCLOTHING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	394	376	368	353	351
Number of persons employed	13,589	12,891	12,864	12,276	13,304
Salaries and wages paid	£'000 8,223	8,326	8,424	8,242	8,983
Value of power, fuel, etc., used	£'000 147	137	148	156	166
Value of materials used	£'000 16,410	15,823	15,795	15,638	16,302
Value of production	£'000 13,271	13,572	13,360	13,276	14,557
Total value of output	£'000 29,828	29,532	29,303	29,070	31,025
Value of land and buildings	£'000 3,924	4,050	4,445	4,567	5,164
Value of plant and machinery	£'000 1,317	1,206	1,334	1,344	1,352
Horse-power of engines ordinarily in use h.p.	5,357	5,090	5,454	5,529	5,649

35. **Foundation Garments.**—The following table shows particulars of the foundation garment industry for Australia for the years 1958-59 to 1962-63.

FOUNDATION GARMENTS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	69	70	71	66	64
Number of persons employed	3,490	3,589	3,663	3,981	4,012
Salaries and wages paid	£'000 2,263	2,479	2,469	2,672	2,785
Value of power, fuel, etc., used	£'000 42	43	46	50	51
Value of materials used	£'000 5,230	5,231	5,030	5,779	5,814
Value of production	£'000 4,477	4,642	4,866	5,352	5,466
Total value of output	£'000 9,749	9,916	9,942	11,181	11,331
Value of land and buildings	£'000 1,384	1,612	1,891	2,005	2,297
Value of plant and machinery	£'000 415	420	470	534	690
Horse-power of engines ordinarily in use h.p.	1,604	1,739	1,995	2,023	1,987

36. **Boots and Shoes.**—The following tables for the boot and shoe industry in Australia for the years 1958-59 to 1962-63 refer to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand-shoes, goloshes and gum, etc., boots of rubber are not included here, being classified under Rubber Goods, see para. 60, page 201. More than two-thirds of the output of boots and shoes is produced in Victoria.

BOOTS AND SHOES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	482	455	460	447	439
Number of persons employed	20,449	20,201	20,782	20,084	20,502
Salaries and wages paid £'000	15,148	16,101	16,913	16,718	17,449
Value of power, fuel, etc., used £'000	275	289	314	327	328
Value of materials used £'000	25,222	28,138	29,325	29,096	30,582
Value of production £'000	22,530	24,059	26,564	26,846	27,411
Total value of output £'000	48,027	52,486	56,803	57,169	58,321
Value of land and buildings £'000	5,254	5,551	6,158	6,713	7,119
Value of plant and machinery £'000	4,307	4,651	5,359	5,384	7,049
Horse-power of engines ordinarily in use h.p.	17,572	17,674	14,599	14,805	15,341

37. **Flour-milling.**—The following table shows particulars of the flour-milling industry in Australia for the years 1958-59 to 1962-63.

FLOUR-MILLING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	135	135	132	125	118
Number of persons employed	4,301	4,410	4,463	4,405	4,219
Salaries and wages paid £'000	4,281	4,657	4,917	4,964	4,840
Value of power, fuel, etc., used £'000	827	928	944	951	937
Value of materials used £'000	51,806	57,955	62,826	61,931	60,396
Value of production £'000	9,816	11,100	11,837	11,728	11,954
Total value of output £'000	62,449	69,983	75,607	74,610	73,287
Value of land and buildings £'000	6,711	6,982	7,359	7,114	7,885
Value of plant and machinery £'000	5,902	6,175	5,684	5,461	5,848
Horse-power of engines ordinarily in use h.p.	48,684	49,253	50,265	48,586	47,393

38. **Other Grain Mills.**—The following table shows particulars of cereal foods and starch factories and animal and bird food factories for Australia for the years 1958-59 to 1962-63.

OTHER GRAIN MILLS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	220	234	237	242	244
Number of persons employed	4,551	4,740	4,988	5,106	5,289
Salaries and wages paid £'000	4,205	4,607	4,978	5,211	5,477
Value of power, fuel, etc., used £'000	863	955	983	1,050	1,082
Value of materials used £'000	26,958	29,136	32,200	32,794	34,983
Value of production £'000	11,639	13,019	13,298	14,723	16,200
Total value of output £'000	39,460	43,110	46,480	48,567	52,265
Value of land and buildings £'000	5,027	5,549	5,802	6,234	6,980
Value of plant and machinery £'000	5,587	5,905	6,135	6,826	7,411
Horse-power of engines ordinarily in use h.p.	43,788	45,351	45,708	48,674	51,600

39. **Bakeries.**—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on is given in the table below for Australia for the years 1958-59 to 1962-63. Since the details refer only to establishments coming within the definition of a factory as explained at the beginning of this chapter, the table does not give complete details of the industry, as a large number of bakeries, etc. not coming within the definition are excluded.

BAKERIES (INCLUDING CAKES AND PASTRY): AUSTRALIA

Particulars	1958-59 (a)	1959-60 (a)	1960-61 (a)	1961-62	1962-63
Number of factories	4,150	3,999	3,895	3,855	3,779
Number of persons employed	20,994	21,253	21,743	20,566	21,061
Salaries and wages paid £'000	13,729	14,936	16,446	15,950	16,854
Value of power, fuel, etc., used £'000	2,546	2,624	2,737	2,669	2,739
Value of materials used £'000	45,612	48,387	51,507	48,877	50,005
Value of production £'000	32,182	35,395	38,309	38,532	41,529
Total value of output £'000	80,340	86,406	92,553	90,078	94,273
Value of land and buildings £'000	22,220	23,950	26,280	27,538	29,237
Value of plant and machinery £'000	13,551	15,122	17,601	16,892	18,704
Horse-power of engines ordinarily in use h.p.	33,716	34,953	40,899	35,934	37,589

(a) Includes confectionery in Tasmania.

40. **Biscuits.**—The following table shows particulars of the biscuit industry for Australia for the years 1958-59 to 1962-63. Three-quarters of the output of biscuits comes from New South Wales and Victoria.

BISCUITS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	48	51	52	53	52
Number of persons employed	5,993	6,079	6,153	6,092	6,199
Salaries and wages paid £'000	4,574	4,909	5,142	5,452	5,618
Value of power, fuel, etc., used £'000	542	538	544	553	573
Value of materials used £'000	11,057	11,623	12,085	12,724	13,026
Value of production £'000	8,375	9,171	9,829	10,335	10,480
Total value of output £'000	19,973	21,332	22,458	23,612	24,079
Value of land and buildings £'000	4,422	4,758	5,002	5,266	5,706
Value of plant and machinery £'000	3,277	3,727	4,001	4,171	4,231
Horse-power of engines ordinarily in use h.p.	13,259	13,290	13,720	14,017	13,443

41. **Sugar-mills and Sugar Refineries.**—Sugar-cane is grown in New South Wales and Queensland, and particulars of area, yield, etc., are given in detail in the chapter Rural Industry. The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment.

The following table shows the number of sugar-mills and the number of persons employed therein in New South Wales and Queensland for the years 1958-59 to 1962-63.

SUGAR-MILLS

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
NEW SOUTH WALES					
Number of factories	3	3	3	3	3
Number of persons employed	254	243	200	219	261
QUEENSLAND					
Number of factories	31	31	31	31	31
Number of persons employed	6,621	6,197	6,014	6,053	6,387

In 1962-63, there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia.

42. **Confectionery.**—Particulars for Australia for the years 1958–59 to 1962–63 are shown hereunder. New South Wales, Victoria and Tasmania produce most of the output of the industry.

CONFECTIONERY: AUSTRALIA

Particulars	1958–59 (a)	1959–60 (a)	1960–61 (a)	1961–62	1962–63
Number of factories	209	214	209	197	189
Number of persons employed	6,704	6,765	6,890	7,978	8,015
Salaries and wages paid £'000	5,037	5,393	5,666	7,138	7,277
Value of power, fuel, etc., used £'000	536	555	591	725	771
Value of materials used £'000	16,842	17,674	17,883	22,478	23,213
Value of production £'000	10,586	11,139	12,391	14,830	15,802
Total value of output £'000	27,964	29,368	30,865	38,033	39,786
Value of land and buildings £'000	4,812	5,309	5,590	7,634	8,632
Value of plant and machinery £'000	4,572	4,745	5,428	7,635	8,477
Horse-power of engines ordinarily in use h.p.	30,504	30,571	32,006	38,948	42,665

(a) Excludes Tasmania.

43. **Jam, Fruit and Vegetable Canning, Pickles, Sauces, Vinegar.**—The following table shows particulars of factories included in this class for Australia for the years 1958–59 to 1962–63.

**JAM, FRUIT AND VEGETABLE CANNING, PICKLES, SAUCES, VINEGAR:
AUSTRALIA**

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	180	177	172	172	170
Number of persons employed	10,762	10,793	10,865	12,092	11,897
Salaries and wages paid £'000	9,186	9,894	10,077	11,826	12,076
Value of power, fuel, etc., used £'000	949	992	1,037	1,201	1,206
Value of materials used £'000	38,358	39,953	41,867	50,817	47,648
Value of production £'000	17,458	20,254	21,076	27,902	27,882
Total value of output £'000	56,765	61,199	63,980	79,920	76,736
Value of land and buildings £'000	11,630	12,095	13,149	14,419	14,920
Value of plant and machinery £'000	9,573	10,162	11,211	12,236	13,229
Horse-power of engines ordinarily in use h.p.	48,539	42,250	44,819	45,852	48,574

44. **Bacon-curing.**—The table hereunder shows particulars of factories engaged in bacon-curing in Australia for the years 1958–59 to 1962–63.

BACON-CURING: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	80	83	83	83	87
Number of persons employed	4,162	4,068	4,215	4,482	4,675
Salaries and wages paid £'000	3,649	3,853	4,135	4,416	4,658
Value of power, fuel, etc., used £'000	431	432	440	493	521
Value of materials used £'000	25,037	28,218	29,045	27,095	30,995
Value of production £'000	6,473	6,779	7,962	9,525	9,781
Total value of output £'000	31,941	35,429	37,447	37,113	41,297
Value of land and buildings £'000	3,104	3,388	3,963	4,023	4,273
Value of plant and machinery £'000	1,806	2,050	2,244	2,479	2,728
Horse-power of engines ordinarily in use h.p.	14,108	13,670	16,044	17,537	18,236

Bacon and ham and other pig products are dealt with more fully in Chapter XXIII. Rural Industry.

45. **Butter, Cheese and Condensed and Processed Milk.**—The following table shows particulars of butter, cheese and condensed and dried milk factories in Australia for the years 1958–59 to 1962–63. Victoria produces more than half the total Australian output of this industry.

BUTTER, CHEESE AND CONDENSED AND PROCESSED MILK: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	363	363	361	353	348
Number of persons employed	10,897	11,139	11,072	11,317	11,320
Salaries and wages paid £'000	10,270	11,042	11,524	12,238	12,441
Value of power, fuel, etc., used £'000	2,816	2,920	2,825	2,932	2,980
Value of materials used £'000	101,929	112,307	106,607	111,924	113,346
Value of production £'000	21,446	24,816	24,487	25,793	26,212
Total value of output £'000	126,191	140,043	133,919	140,649	142,538
Value of land and buildings £'000	13,518	14,022	14,702	15,277	15,516
Value of plant and machinery £'000	15,819	16,169	17,046	17,722	18,898
Horse-power of engines ordinarily in use h.p.	107,880	111,149	114,392	114,643	118,087

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXIII. Rural Industry.

46. Meat and Fish Preserving.—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Most abattoirs are excluded, except in Queensland and Western Australia. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. In recent years, there has been considerable expansion in the canning of meat and fish. The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63.

MEAT AND FISH PRESERVING: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	115	128	143	149	159
Number of persons employed	10,142	9,326	9,031	9,491	10,032
Salaries and wages paid £'000	10,699	9,914	9,319	10,524	10,958
Value of power, fuel, etc., used £'000	1,292	1,244	1,199	1,312	1,427
Value of materials used £'000	61,816	65,116	62,686	66,811	71,035
Value of production £'000	15,354	14,195	15,386	18,843	19,133
Total value of output £'000	78,462	80,555	79,271	86,966	91,595
Value of land and buildings £'000	7,459	8,617	9,347	10,430	10,312
Value of plant and machinery £'000	5,261	5,579	6,756	7,081	7,723
Horse-power of engines ordinarily in use h.p.	38,994	39,390	44,731	49,253	53,652

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XXIII. Rural Industry.

47. Condiments, Coffee, Spices.—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63.

CONDIMENTS, COFFEE, SPICES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	262	250	254	258	260
Number of persons employed	4,170	4,407	4,487	4,463	5,283
Salaries and wages paid £'000	3,114	3,487	3,771	3,851	4,903
Value of power, fuel, etc., used £'000	256	276	283	299	343
Value of materials used £'000	16,782	18,512	19,214	19,735	21,970
Value of production £'000	8,207	9,890	10,538	10,606	13,779
Total value of output £'000	25,245	28,678	30,035	30,640	36,092
Value of land and buildings £'000	5,250	5,854	6,826	7,642	9,259
Value of plant and machinery £'000	2,125	2,412	2,831	3,571	4,165
Horse-power of engines ordinarily in use h.p.	13,086	12,941	14,231	14,625	16,811

48. Breweries.—The following table gives particulars of breweries for Australia for each of the years 1958-59 to 1962-63.

BREWERIES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	27	25	25	25	24
Number of persons employed	5,830	5,701	5,626	5,512	5,741
Salaries and wages paid £'000	6,232	6,438	6,654	6,878	7,000
Value of power, fuel, etc., used £'000	1,488	1,491	1,494	1,531	1,559
Value of materials used £'000	22,416	22,731	24,303	25,748	27,156
Value of production £'000	16,964	18,620	19,789	21,556	22,805
Total value of output(a) £'000	40,868	42,842	45,586	48,835	51,520
Value of land and buildings £'000	12,716	12,924	13,003	13,574	14,841

Horse-power of engines ordinarily in use h.p.	47,199	48,396	49,172	50,083	50,237

(a) Excludes excise duty

49. *Aerated Waters and Cordials.* The following table shows particulars of aerated water and cordial factories in Australia for the years 1958-59 to 1962-63.

AERATED WATERS AND CORDIALS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	559	552	548	535	525
Number of persons employed	4,877	5,021	5,275	4,960	5,190
Salaries and wages paid £'000	3,722	4,102	4,458	4,330	4,527
Value of power, fuel, etc., used £'000	367	406	410	404	439
Value of materials used £'000	11,328	12,765	13,400	12,771	14,029
Value of production £'000	10,024	11,355	11,658	11,993	13,346
Total value of output £'000	21,719	24,526	25,468	25,168	27,814
Value of land and buildings £'000	5,359	6,232	7,488	7,835	8,626
Value of plant and machinery £'000	3,874	4,516	5,162	5,701	5,995
Horse-power of engines ordinarily in use h.p.	14,988	15,799	16,363	16,350	17,116

50. *Wineries and Distilleries.*—The following table shows particulars of the operations of wineries and distilleries for Australia for the years 1958-59 to 1962-63. South Australia is the principal wine producing State, and produces more than half the Australian output. Most of the remainder comes from New South Wales and Victoria.

WINERIES AND DISTILLERIES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	158	165	164	153	161
Number of persons employed	2,021	2,058	2,095	2,111	2,084
Salaries and wages paid £'000	1,827	1,890	2,017	2,068	2,050
Value of power, fuel, etc., used £'000	396	402	383	405	386
Value of materials used £'000	7,900	7,987	9,328	9,767	9,136
Value of production £'000	3,889	4,900	4,427	4,864	4,733
Total value of output £'000	12,185	13,289	14,138	15,036	14,255
Value of land and buildings £'000	2,588	2,759	3,081	3,041	3,294
Value of plant and machinery £'000	2,573	2,808	3,015	3,330	3,715
Horse-power of engines ordinarily in use h.p.	10,773	11,604	16,450	16,676	17,601

51. *Tobacco, Cigars and Cigarettes.*—Particulars of establishments engaged in the manufacture of tobacco, cigars or cigarettes are shown below for Australia for the year 1958-59 to 1962-63. There were no such factories in South Australia or Tasmania, and Queensland and Western Australian production is relatively small.

TOBACCO, CIGARS AND CIGARETTES: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	22	21	20	18	18
Number of persons employed	4,779	5,046	5,178	4,914	4,671
Salaries and wages paid £'000	4,178	4,774	5,232	5,282	5,138
Value of power, fuel, etc., used £'000	160	176	225	234	256
Value of materials used £'000	35,775	36,578	40,716	38,568	39,296
Value of production £'000	13,451	16,889	18,378	19,491	20,189
Total value of output(a) £'000	49,386	53,643	59,319	58,293	59,741
Value of land and buildings £'000	2,700	3,620	3,551	4,307	4,640
Value of plant and machinery £'000	4,178	4,961	6,209	6,859	7,094
Horse-power of engines ordinarily in use h.p.	10,384	10,417	10,342	11,203	12,033

(a) Excludes excise duty.

52. Ice Cream.—The following table shows particulars of the ice cream industry for Australia for the years 1958–59 to 1962–63.

ICE CREAM: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	47	52	55	55	54
Number of persons employed	2,046	2,080	2,124	2,237	2,295
Salaries and wages paid	£'000 1,663	1,784	1,865	2,192	2,395
Value of power, fuel, etc., used	£'000 363	381	394	412	453
Value of materials used	£'000 6,165	6,176	6,461	7,162	7,637
Value of production	£'000 4,435	5,055	4,908	5,986	5,838
Total value of output	£'000 10,963	11,612	11,763	13,560	13,928
Value of land and buildings	£'000 3,257	3,395	3,536	3,593	4,827
Value of plant and machinery	£'000 2,962	3,166	3,260	3,750	6,734
Horse-power of engines ordinarily in use h.p.	12,714	15,959	15,068	16,071	18,468

53. Sawmills, etc.—The most important industry in Class X. is sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the following table, together with plywood and veneer mills. The figures, covering the years 1958–59 to 1962–63, exclude particulars of a small number of itinerant and travelling sawmills.

SAWMILLS AND PLYWOOD AND VENEER MILLS: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	2,805	2,791	2,703	2,585	2,514
Number of persons employed	35,891	36,040	34,701	32,382	31,993
Salaries and wages paid	£'000 29,478	31,172	31,593	29,816	30,108
Value of power, fuel, etc., used	£'000 2,382	2,604	2,621	2,598	2,629
Value of materials used	£'000 70,253	76,676	75,056	71,677	73,033
Value of production	£'000 53,649	58,412	56,526	53,493	53,215
Total value of output	£'000 126,284	137,692	134,203	127,768	128,877
Value of land and buildings	£'000 14,545	16,656	18,548	18,014	18,795
Value of plant and machinery	£'000 18,737	19,635	20,517	20,222	20,286
Horse-power of engines ordinarily in use h.p.	395,630	407,440	425,280	417,084	428,421

54. Joinery.—The following table shows particulars of the joinery industry for Australia for the years 1958–59 to 1962–63.

JOINERY: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	2,031	2,149	2,217	2,256	2,247
Number of persons employed	15,564	17,203	17,912	17,239	17,509
Salaries and wages paid	£'000 13,036	15,431	17,191	17,026	17,670
Value of power, fuel, etc., used	£'000 367	413	456	460	482
Value of materials used	£'000 24,468	29,704	32,835	31,587	32,046
Value of production	£'000 20,874	24,445	27,218	26,712	27,880
Total value of output	£'000 45,709	54,562	60,509	58,759	60,408
Value of land and buildings	£'000 9,873	11,699	13,658	14,336	15,272
Value of plant and machinery	£'000 4,062	4,443	4,825	5,048	5,100
Horse-power of engines ordinarily in use h.p.	76,199	80,902	86,375	86,240	89,459

55. Cabinet and Furniture Making and Upholstery.—These industries constitute the principal manufactures in Class XI. The following table shows particulars for Australia for the years 1958–59 to 1962–63.

CABINET AND FURNITURE MAKING AND UPHOLSTERY: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,629	1,664	1,633	1,617	1,625
Number of persons employed	16,012	16,475	15,711	15,132	15,726
Salaries and wages paid £'000	12,963	14,187	14,218	14,083	14,697
Value of power, fuel, etc., used £'000	334	346	350	368	388
Value of materials used £'000	22,222	26,123	25,999	26,555	28,121
Value of production £'000	21,228	23,501	23,135	23,048	24,369
Total value of output £'000	43,784	49,970	49,484	49,971	52,878
Value of land and buildings £'000	10,457	11,618	12,719	13,623	14,654
Value of plant and machinery £'000	2,679	2,869	2,964	3,158	3,491
Horse-power of engines ordinarily in use h.p.	46,539	45,955	45,313	46,000	45,641

56. Printing Works.—The following table gives particulars of establishments engaged in general printing in Australia for the years 1958-59 to 1962-63. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping, and Government printing works.

GOVERNMENT AND GENERAL PRINTING WORKS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	1,518	1,573	1,641	1,706	1,738
Number of persons employed	26,827	27,744	29,080	29,936	30,614
Salaries and wages paid £'000	23,705	26,711	29,365	30,912	32,296
Value of power, fuel, etc., used £'000	729	797	893	942	1,029
Value of materials used £'000	32,420	35,175	38,249	37,472	41,197
Value of production £'000	41,036	46,567	51,123	55,067	58,636
Total value of output £'000	74,185	82,539	90,265	93,481	100,862
Value of land and buildings £'000	19,041	21,599	25,613	29,682	30,523
Value of plant and machinery £'000	17,535	19,351	21,889	23,709	25,252
Horse-power of engines ordinarily in use h.p.	40,751	43,561	47,269	50,129	52,182

The following table gives similar particulars in respect of establishments producing newspapers and periodicals.

NEWSPAPERS AND PERIODICALS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	423	429	420	421	415
Number of persons employed	14,878	15,437	15,789	15,491	15,500
Salaries and wages paid £'000	15,291	17,056	19,005	18,874	19,070
Value of power, fuel, etc., used £'000	590	615	654	676	696
Value of materials used £'000	27,746	29,726	30,737	27,817	29,077
Value of production £'000	27,738	30,767	33,997	34,544	35,192
Total value of output £'000	56,074	61,108	65,388	63,037	64,965
Value of land and buildings £'000	13,739	15,193	16,016	16,618	17,198
Value of plant and machinery £'000	11,595	13,960	14,416	15,719	16,200
Horse-power of engines ordinarily in use h.p.	37,440	40,116	45,815	45,776	44,094

57. Manufactured Stationery.—The following table shows particulars of the Manufactured Stationery industry for Australia for the years 1958-59 to 1962-63. New South Wales and Victoria produce about 90 per cent. of the output of this industry.

MANUFACTURED STATIONERY: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	133	143	142	153	150
Number of persons employed	4,782	5,088	5,148	5,221	5,436
Salaries and wages paid £'000	4,095	4,541	4,763	5,131	5,473
Value of power, fuel, etc., used £'000	175	185	195	225	232
Value of materials used £'000	10,845	12,451	13,180	15,164	16,650
Value of production £'000	9,557	11,309	10,756	12,645	13,409
Total value of output £'000	20,577	23,945	24,131	28,034	30,291
Value of land and buildings £'000	4,626	5,187	5,509	6,421	7,164
Value of plant and machinery £'000	3,015	3,510	3,709	4,397	5,137
Horse-power of engines ordinarily in use h.p.	8,749	9,132	9,462	10,853	10,936

58. **Cardboard Boxes, Cartons and Containers and Paper Bags.**—The following table shows particulars of these industries for Australia for a series of years.

**CARDBOARD BOXES, CARTONS AND CONTAINERS AND PAPER BAGS:
AUSTRALIA**

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	210	226	231	239	243
Number of persons employed	8,569	9,429	10,041	10,133	10,832
Salaries and wages paid	£'000 7,558	8,901	9,676	10,216	11,118
Value of power, fuel, etc., used	£'000 326	378	412	446	482
Value of materials used	£'000 26,983	31,580	33,497	35,687	39,926
Value of production	£'000 17,018	20,085	21,407	22,412	24,101
Total value of output	£'000 44,327	52,043	55,316	58,545	64,509
Value of land and buildings	£'000 7,904	8,801	10,595	11,443	13,541
Value of plant and machinery	£'000 6,858	8,083	10,200	10,924	12,541
Horse-power of engines ordinarily in use h.p.	17,020	19,594	21,613	22,961	26,217

59. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred. The number of factories operating in 1962-63 comprised four in New South Wales, eleven in Victoria, two in Queensland, two in South Australia, one in Western Australia, and four in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States, wrappings, other papers and boards. Particulars for this industry are shown in the following table for the years 1958-59 to 1962-63.

Mills producing pulp from eucalypt timber are operating in Victoria and Tasmania, while in South Australia pulp is being produced from locally-grown softwoods.

PAPER MAKING, INCLUDING PULP MILLS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	18	20	22	23	24
Number of persons employed	8,406	8,775	8,822	8,147	8,678
Salaries and wages paid	£'000 10,422	11,980	12,055	11,218	12,347
Value of power, fuel, etc., used	£'000 3,341	3,906	4,200	4,109	4,653
Value of materials used	£'000 25,025	26,601	27,924	26,505	29,900
Value of production	£'000 25,817	28,326	27,658	26,456	30,204
Total value of output	£'000 54,183	58,833	59,782	57,070	64,757
Value of land and buildings	£'000 12,317	13,307	13,982	15,904	17,168
Value of plant and machinery	£'000 22,482	27,018	33,377	33,735	36,955
Horse-power of engines ordinarily in use h.p.	179,364	189,774	216,539	215,927	256,291

60. **Rubber Goods.**—The following table shows particulars of this industry for Australia for the years 1958-59 to 1962-63. Victorian and New South Wales factories produce about 90 per cent. of the output of this industry.

RUBBER GOODS: AUSTRALIA

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of factories	122	118	116	114	117
Number of persons employed	15,227	15,620	15,416	13,993	15,702
Salaries and wages paid	£'000 15,442	17,142	17,038	15,719	18,741
Value of power, fuel, etc., used	£'000 2,205	2,318	2,382	2,281	2,556
Value of materials used	£'000 36,339	43,382	42,038	35,942	43,010
Value of production	£'000 27,108	26,072	28,026	26,223	30,717
Total value of output	£'000 65,652	71,772	72,446	64,446	76,283
Value of land and buildings	£'000 7,288	7,585	9,121	9,490	10,343
Value of plant and machinery	£'000 7,632	9,543	10,265	10,307	11,598
Horse-power of engines ordinarily in use h.p.	126,901	128,393	131,947	134,428	140,956

61. Tyre Retreading and Repairing.—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63.

TYRE RETREADING AND REPAIRING: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	484	502	513	536	542
Number of persons employed	3,240	3,043	2,979	3,181	3,214
Salaries and wages paid	£'000 2,722	2,686	2,746	3,061	3,217
Value of power, fuel, etc., used	£'000 396	406	416	443	448
Value of materials used	£'000 5,558	5,934	6,336	6,892	7,253
Value of production	£'000 5,696	6,066	6,899	8,064	8,445
Total value of output	£'000 11,650	12,406	13,651	15,399	16,146
Value of land and buildings	£'000 5,534	5,853	6,411	7,385	8,361
Value of plant and machinery	£'000 2,700	2,697	2,724	2,768	2,680
Horse-power of engines ordinarily in use h.p.	10,742	11,494	12,039	13,079	13,865

62. Plastic Moulding and Products.—The following table shows particulars of this industry for Australia for the years 1958–59 to 1962–63.

PLASTIC MOULDING AND PRODUCTS: AUSTRALIA

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of factories	337	375	398	421	430
Number of persons employed	9,480	10,180	10,658	10,496	11,801
Salaries and wages paid	£'000 8,774	10,160	10,753	10,651	12,541

CHAPTER VII

ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts:—the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory. A Statistical Summary is appended.

The information contained in the chapter relates to situations existing and projects contemplated in December, 1964, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

INTRODUCTION

1. **Distribution of Population and Location of Power Resources.**—The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1963, thermal power equipment represented 72 per cent., hydro plant 25 per cent., and internal combustion equipment 3 per cent. of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent. receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland.

The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW within the next 25 years. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal in Tasmania it is water.

2. **Electric Power Generation and Distribution.**—(i) *Ownership of Undertakings.* At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety and to define the scope and obligations of the private organizations. A trend towards public ownership commenced during the 1914–18 War and became more pronounced after the 1939–45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organizations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organizations which undertake reticulation.

In addition to the private, local government and statutory organizations which generate and/or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly produced for such internal consumption is, in any case, a relatively small proportion of the total power produced.

(ii) *Power Production and Generating Capacity.* Since the 1939-45 War the demand for power has increased considerably, industry and commerce have expanded rapidly, many new houses have been built, the population has increased by approximately 50 per cent., electricity supply has been extended to rural areas, and the use of domestic electric appliances has increased. The measures taken by the various authorities to satisfy the demand created by these developments are described in the following pages.

At 30th June, 1963, installed generating capacity in Australia was 7.50 million kW compared with 7.22 million kW in 1962 an increase of nearly 4 per cent. In 1962-63 each kW of installed capacity produced an average of 3,904 kWh. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed. In 1962-63 the production of electric power in Australia was 29,279 million kWh. In 1963-64 production increased to 32,124 million kWh.

SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME*

1. *Snowy Mountains Hydro-electric Power Act 1949.*—In July, 1949, the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Authority is constituted by a Commissioner and two Associate Commissioners, the three appointments being made by the Governor-General. It is empowered to construct, maintain, operate, protect, manage and control works:—

- (a) for the collection, diversion and storage of water in the Snowy Mountains Area;
- (b) for the generation of electricity in that area;
- (c) for the transmission of the electricity generated;
- (d) incidental or related to the construction, maintenance, operation, protection, management or control of any works otherwise specified in the Act.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

2. *Geography of the Area.*—The Snowy Mountains area in south-eastern New South Wales is the only part of the continent in which altitudes exceed 7,000 feet and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 150 inches a year in the vicinity of Mt. Kosciuszko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy River, which flows southward to Bass Strait.

3. *Description of the Scheme.*—(i) *General.* The broad basis of the scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut

* See also Chapter VIII, Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-1130.

Development and the Snowy-Murray Development (*see* map p. 209). For purposes of both power production and irrigation it is necessary to regulate run-off, and this will be achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other smaller storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers for the Snowy-Tumut Development and of the Snowy and Geehi Rivers for the Snowy-Murray Development. A sectional diagram of the Scheme appears on page 210.

(ii) *Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene, the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel. The 14-mile Eucumbene-Tumut Tunnel is used during periods of high flow to divert waters of the Tumut River from Happy Jacks Shaft or the combined waters of the Tumut and Tooma Rivers from Tumut Pond Reservoir back to Lake Eucumbene for storage.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

Tumut 3 Power Station, the largest station of the scheme (capacity 1,500,000 kW of which 500,000 kW will be provided by pump turbines) will be constructed below Talbingo Reservoir and will discharge into Jounama Pondage on the Tumut River. This pondage will provide a downstream pumping pool and also re-regulate discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage will then enter Blowering Reservoir formed by Blowering Dam. This dam is under construction by the Snowy Mountains Authority as an agent for the State of New South Wales and will provide for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority will construct a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

(iii) *Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development will be as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, will have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water will be returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and the construction of a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it will join the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme will be increased by the construction of subsidiary hydro-electric projects on the Upper Snowy River above Island Bend and on Windy Creek, a tributary of the Upper Geehi.

4. **Utilization of Power.**—The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilize the potential of the Snowy Mountains Scheme most effectively, the order of development is being arranged so that the early stations operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States.

Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2 : 1.

5. **Progress and Future Programme.**—The scheme's first power station, Guthega, of 60,000 kW initial capacity, came into operation in February, 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground power station in 1962. The total installed capacity of the scheme at present is 660,000 kW. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May, 1958. Tumut Pond Dam, completed in September, 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June, 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity has been concentrated on the Snowy-Murray development. Construction is well advanced on the 15-mile Eucumbene-Snowy Tunnel, the 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the 1-mile Pressure Pipeline and the 950,000 kW Murray 1 Power Station. These works, together with the Khancoban Dam, which will regulate power station releases before discharge into the Murray River, are to be substantially completed in 1966. At this time, the first trans-mountain diversion of water from the Snowy River to the Murray River and the first generation of electricity from the Murray 1 Power Station will occur.

STATES AND TERRITORIES

§ 1. New South Wales

1. **General.**—In Year Book No. 39, an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present, the following three main Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Electricity Development Act, 1945–1964, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950–1961, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

2. Organization.—(i) *The Electricity Commission of New South Wales.* The Commission, which is directly responsible to the Minister for Local Government, consists of five members, of whom one is full-time Chairman and one is full-time Vice-Chairman.

The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways, and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

(ii) *Other Electricity Supply Authorities.* The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of groups of shire and/or municipal councils), or private franchise holders. At 30th June, 1964, there were 51 supply authorities throughout the State, of which 13 also generated part or all of their power requirements. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

Over recent years there has been a distinct trend towards the consolidation of supply areas, many of which have been individually too weak to form satisfactory areas for distribution. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped only for electricity supply purposes, and administered by a county council of representatives elected by the constituent councils. Of the 225 cities, municipalities and shires in New South Wales, 215 are included in one or other of the 34 electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30th June, 1964, was supplying 515,634 consumers in the Sydney Metropolitan Area.

(iii) *The Electricity Authority of New South Wales.* The Electricity Authority was constituted for the purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. A regulatory body, it consists of seven members of whom one is a full-time Chairman. Like the Electricity Commission, it is responsible to the Minister for Local Government.

The following are the main functions of the Authority.

Distribution. The approval of the Authority is required for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.

In exercising these powers, the Authority is concerned mainly with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts.

Rural Electrification. The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see para. 4, p. 211).

Safety. The Electricity Development Act, 1945–1964, contains provisions for the making of regulations relating to most aspects of safety, and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumers' installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.

Generation and Transmission. The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

3. Generation and Transmission.—(i) *General.* Except in the Snowy Mountains district and in one or two other areas New South Wales is lacking in major water power potential, and for the generation of electricity the State is dependent mainly on steam power

stations. During the year ended 30th June, 1964, coal-fired stations generated 92.4 per cent. of the State's energy requirements, hydro-electric stations 7.1 per cent. and internal combustion plants 0.5 per cent. In addition, 934 million kWh were purchased from the Snowy Mountains Hydro-Electric Authority during the year.

With the future plant development of the Snowy Mountains scheme, an increasing amount of power will be generated by the Authority, but at no stage of its development will the scheme supply more than 15 per cent. of the State's energy requirements. Coal-fired steam power stations, therefore, will continue to supply the greater part of requirements for the foreseeable future.

(ii) *Major Generating Stations.* In New South Wales the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through interconnected transmission networks. Whereas until a few years ago the greater part of the coal-fired generating plant was located in the industrial areas of Sydney, Newcastle and Wollongong, where most of the population is also located, major power stations are now being located on the coalfields to the north, south and west of Sydney, and power is transmitted to the load centres through high voltage transmission lines.

At 30th June, 1963, the major power stations of the State system of the Electricity Commission of New South Wales and their installed capacities were as follows:—*Steam*—Vales Point (Lake Macquarie), 400,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 60,500 kW; Zarra Street (Newcastle), 42,500 kW; Muswellbrook, 30,000 kW; Lithgow, 27,000 kW; Tamworth, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume—(near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 27,470 kW. The total installed capacity of the Electricity Commission's system was 2,538,470 kW.

The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

(iii) *Major Transmission Network.* The retailing of electricity to 97 per cent. of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

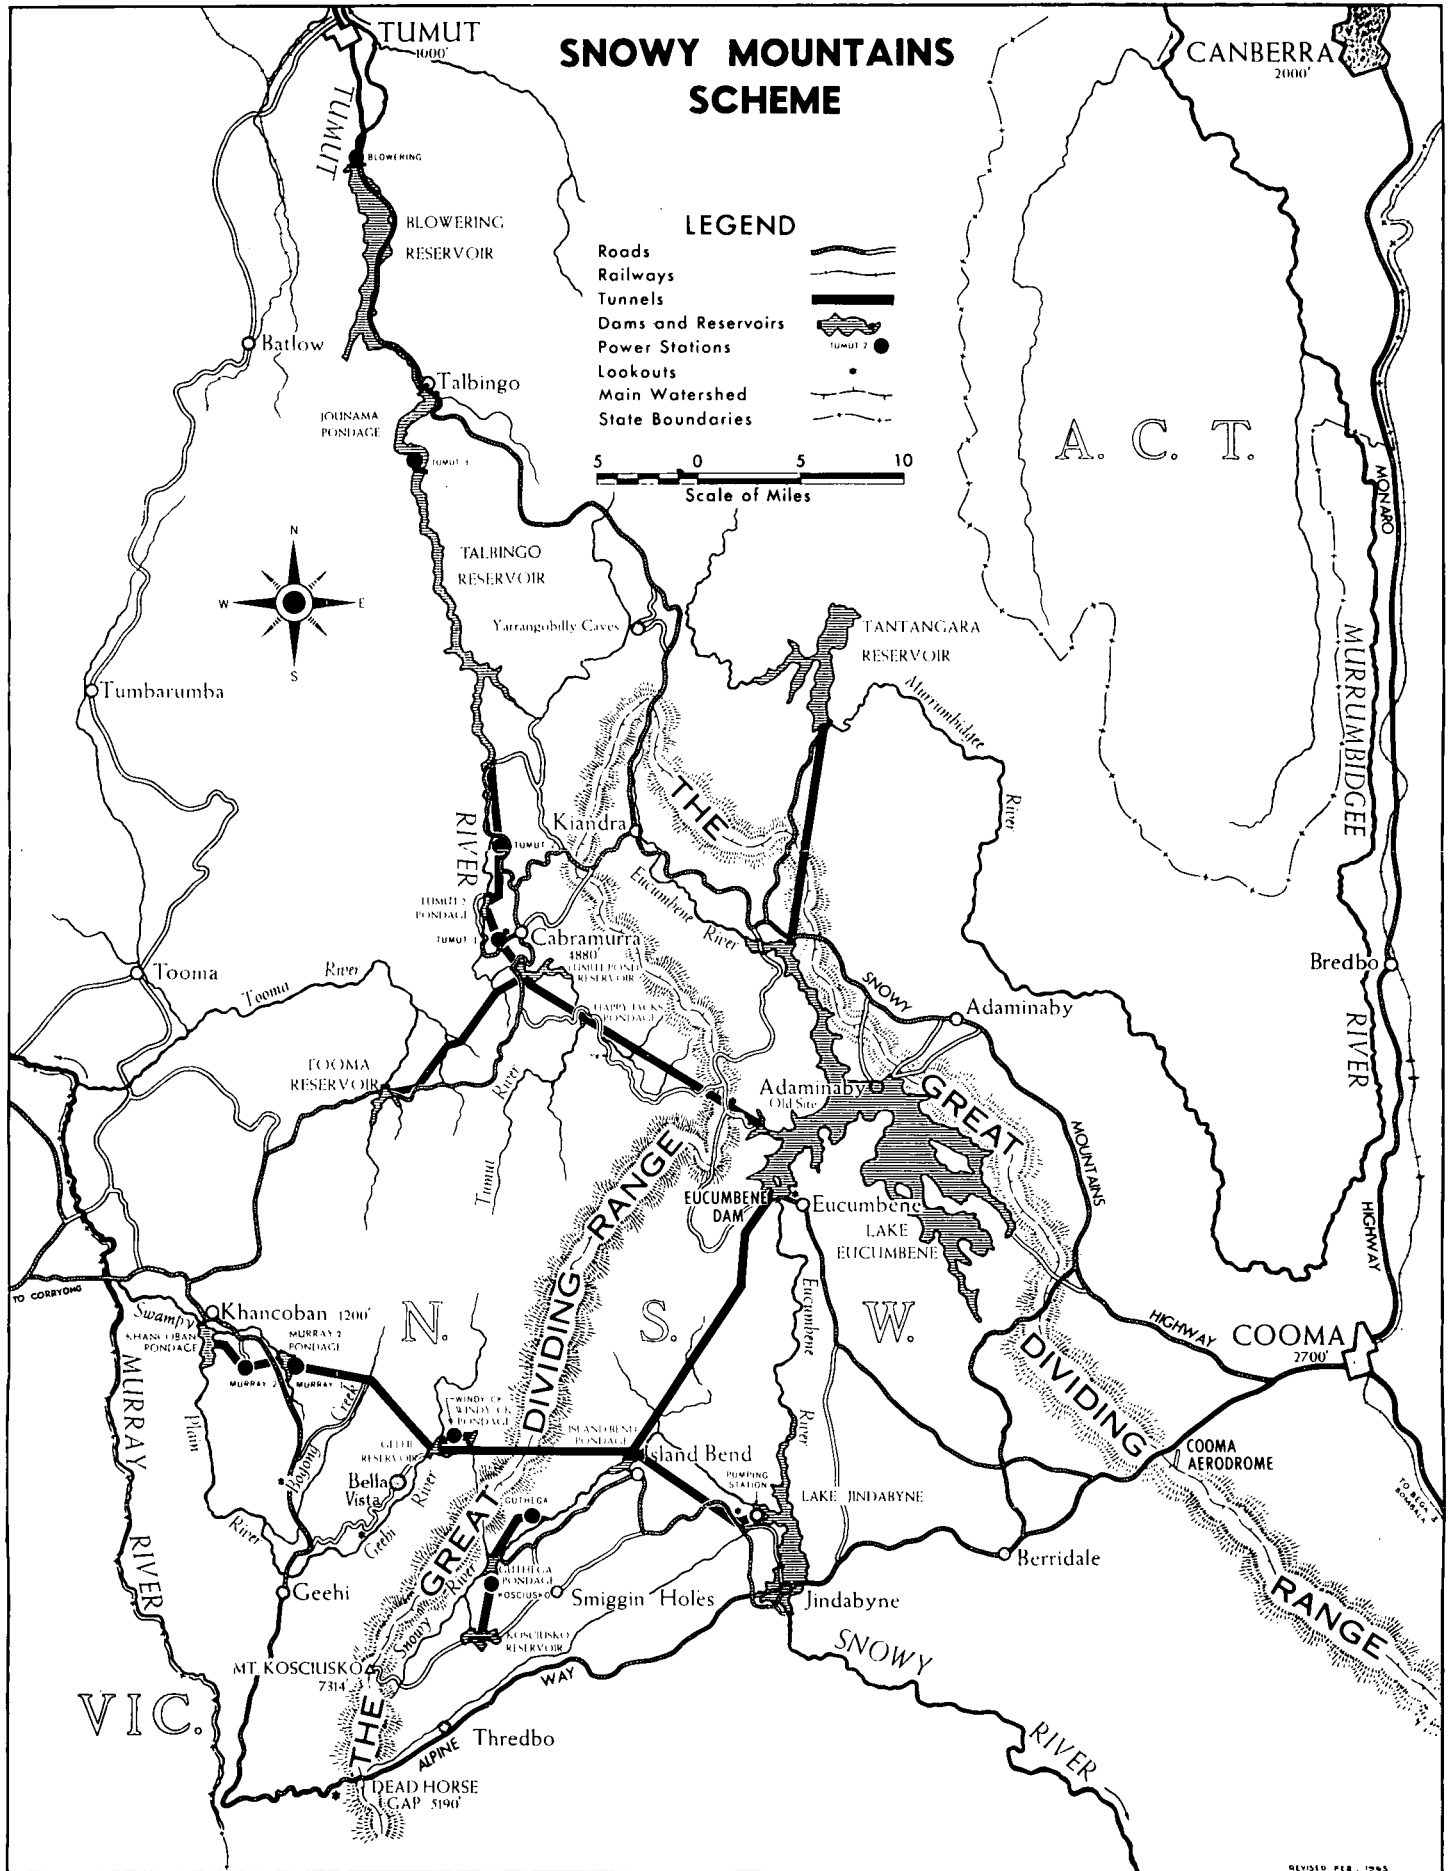

At 30th June, 1964, there were in service 838 route miles of 330 kV (including 153 miles operating for the time being at 132 kV) and 1,811 miles of 132 kV transmission lines (including 243 miles operating for the time being at 66 kV or lower). There were also in service 2,399 miles of transmission line of 66 kV and lower voltages.

The installed transformer capacity at the Commission's 103 sub-stations was 7,751,080 kVA.

(iv) *Separate Systems and Total State Installed Capacity.* A number of small plants which supply isolated towns and villages have not yet been interconnected with the main network.

Some local government bodies have undertaken the development of independent power stations. Of these, the more important are:—the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 12,500 kW steam power station on the Ashford coalfield.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 2,703,757 kW at 30th June, 1964, and the number of ultimate consumers at this date was 1,295,353.

(v) *Future Development.* The major new thermal stations already built and those now being developed on the coalfields will become the main base load centres for the northern, southern and western regions. Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

At Vales Point, on Lake Macquarie, work is in progress on a large thermal station with a designed capacity of 875,000 kW. The plant will consist of three 200,000 kW units and one 275,000 kW unit. Two 200,000 kW units have been commissioned and construction of the remaining two is progressing.

Construction of the Munmorah Power Station, located between Lakes Munmorah and Budgewoi (on the central coast), has commenced. The plant at Munmorah will comprise four 350,000 kW generating units, coming into operation from 1967 onwards.

The development of the 330 kV main system is continuing. With duplicate transmission completed over the whole distance from the Snowy Mountains to the northern coalfields, the main work now in hand is the construction of a third circuit between the Snowy area and Yass and between the Vales Point-Munmorah area and Sydney. Development of the 330 kV network around the Sydney metropolitan area is proceeding.

Work is considerably advanced on the Sydney West 330 kV Substation which is located near Mount Druitt. Plans to augment the transmission system during the next five years provide for the construction of 400 route miles of 330 kV lines and four associated substations, over 1,000 route miles of 132 kV line and 20 substations, as well as additions to existing substations and a number of lower voltage works.

(vi) *Hydro-electricity.* The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains Area (see Snowy Mountains Hydro-electric Scheme, p. 204). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW), Burrinjuck Dam (20,000 kW), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney Metropolitan Area, and the output of the other stations on the release of water for irrigation.

Of the remaining hydro installations, the largest is that of the New England County Council on the Oakey River, a tributary of the Macleay River, which has a capacity of 5,250 kW.

The Northern Rivers County Council operates a hydro-electric power station on the Nymboida River, a tributary of the Clarence River. This station has a capacity of 4,500 kW.

The Bega Valley County Council has constructed a hydro-electric scheme at Brown Mountain utilizing the headwaters of the Bemboka River. This installation has a capacity of 3,950 kW.

The Mullumbimby Municipal Council has in operation two 150 kW hydro units on Wilson's Creek, a tributary of the Richmond River.

4. Rural Electrification.—When the Electricity Authority of New South Wales was constituted in 1946 only 16,000 New South Wales farms were being served with electricity—less than one-quarter of those within reasonable reach of public electricity supply systems. Under a subsidy scheme approved in August, 1946, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidized. Originally this limit was £250 per consumer when averaged over the cost of the whole extension, but the limit was raised to £400 in December, 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of £400 was not subsidized.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State the subsidy scheme was extended from May, 1959, to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of £600-£800.

Between August, 1946, and June, 1964, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing £35 million to give supply to some 55,000 farming properties and 33,500 other rural consumers and involving 51,000 miles of line. The greater part of this work had been completed at 30th June, 1964. At this date the Authority was committed to the payment of £14,524,623 in subsidies, of which £7,497,735 had been paid.

§ 2. Victoria

1. **General.**—In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

2. **State Electricity Commission of Victoria.**—(i) *Power and Fuel Authority.* Since it began operating in 1919, the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves nearly 98 per cent. of the population.

Development of Victoria's electricity system is based on the utilization for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria is entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for its purposes. Victoria also shares with New South Wales in the electricity generated at Hume Hydro Station on the River Murray. About 75 per cent. of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. All the brown coal and briquette fuel is supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1963-64 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 18,165,267 tons, of which 12,567,455 tons were used in the Commission's own power stations, and 5,191,919 tons were manufactured into 1,882,626 tons of brown coal briquettes, 38 per cent. of the briquette output then being used for electricity production in metropolitan and provincial steam power stations.

The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel consumed in the power stations, the process of briquette manufacture results also in the generation of electricity, since the steam needed for processing the raw coal for briquetting is first used to operate turbo-generators.

(ii) *Status and Power.* Constituted by the *Electricity Commissioners Act 1918*, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own, and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own, and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn. It also owns large housing estates in the surrounding area, but is progressively selling houses in these estates to Commission employees. In the Kiewa hydro-electric works area it has built the two townships of Mount Beauty and Bogong, municipal administration of the former now being vested in the Shire of Bright. With construction at Kiewa now complete, many houses at Mount Beauty have been sold for holiday homes.

(iii) *Electricity Supply.* At 30th June, 1964, the number of ultimate consumers in Victoria was 1,017,355. Of these, 1,005,694 were served by the State system and 11,661 by local country undertakings. The State system supplies all the Melbourne metropolitan area and over 1,900 other centres of population.

Complete electrification of the State is now within sight. By 30th June, 1964, about 855,000 of the 888,000 homes in the State and 57,300 of Victoria's 71,750 farms were supplied with electricity. By 1970-71, allowing for extensions then in progress, only about 6,000 homes and fewer than 1,250 farms in remote areas will be out of reach of public electricity supply, but efforts will be continued to supply as many of these as possible.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. The number of consumers served by the State system outside the Melbourne metropolitan area is 454,916. Of the new consumers connected to supply each year, more than two-thirds are outside the metropolitan area. New farm connexions average about 3,000 a year.

The Commission's retail consumers numbered 804,304 at 30th June, 1964. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches (Ballarat, Eastern Metropolitan, Geelong, Gippsland, Midland, Mildura, Northern, North-Eastern, South-Western and Wimmera). At 30th June, 1964, there were branch and district supply offices in Melbourne and 89 other cities and towns in Victoria.

(iv) *Electricity Production.* Electricity generated in the State system or purchased by it totalled 8,647 million kWh in 1963-64 or more than 99 per cent. of all Victoria's electricity. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30th June, 1964, was 1,888,000 kW. Power stations are interconnected, and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates nearly half of Victoria's electricity. Other power stations in the interconnected system comprise two further base load brown coal burning power stations, Morwell and Hazelwood (which began partial operation, with one generating set in service, late in 1964); steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat and also at Red Cliffs, which has, in addition, some internal combustion plant; hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston Rivers near Eildon, and at Cairn Curran; and an internal combustion station at Warnambool. All within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system. A 330 kV transmission line links the Victorian system with the Snowy Mountains undertaking, and also provides facilities for interconnexion between the Victorian and New South Wales State generating systems. Also linked with the Victorian interconnected system is the hydro station at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales.

In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system is assigned a predetermined function dependent upon the availability of power from each group and the economics of generation. The various stations are utilized in the combination that will meet the system load most economically at a given time.

(v) *Transmission and Distribution.* The electrical transmission and distribution system in the State supply network at 30th June, 1964, comprised 42,432 miles of power-lines, 19 terminal receiving stations, 89 main transmission sub-stations and nearly 38,000 distribution sub-stations. Main transmission is by 220 kV, 132 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnexion between the power stations. The 220 kV system now totals 1,054 miles.

(vi) *Future Development.* Major new construction is concentrated on the erection of a large new brown coal burning power station (Hazelwood) on the brown coal fields of the Latrobe Valley, which is designed to operate on raw brown coal fuel supplied by belt conveyor direct from the Morwell open cut. Hazelwood Power Station is the largest project yet undertaken by the Commission and is designed to have a capacity of 1,200,000 kW in 1969. By that year the State's power resources, including Victoria's share of the output of the Snowy scheme, will have increased by 78 per cent. to 3,200,000 kW. The first of Hazelwood's six 200,000 kW turbo-generators was commissioned in October, 1964. A second generating set of the same capacity is due to go into service in 1965, and four other 200,000 kW sets will follow at yearly intervals. Power generated at Hazelwood Power Station is transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network.

3. **Local Country Electricity Undertakings.**—At 30th June, 1964, there were 14 independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. All except three of these undertakings were in the west and north-west of the State. Under the State Electricity Commission's rural electrification programme, almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1963-64 the total production of the independent undertakings was 37 million kWh. The number of consumers at 30th June, 1964, was 11,661. With the exception of the Wonthaggi undertaking (which is operated by the State Coal Mine), the operation of the independent undertakings is governed by the *Electric Light and Power Act* 1958, which is administered by the State Electricity Commission.

§ 3. Queensland

1. **General.**—In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland.

The generation and distribution of electric power in Queensland in earlier years had tended to lag behind developments in this field in other States of Australia. By 1935 a total of 62 Orders in Council to supply electricity had been issued (41 to local authorities and other public bodies and 21 to private companies). With only four exceptions these were in respect of circumscribed areas which extended only to the limits of the cities or towns within which the generating facilities had been established. The exceptions were areas around Brisbane, Ipswich, Toowoomba and Cairns.

Because of the unco-ordinated and isolated development which had occurred, the Queensland Government, in 1935, appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland (an account of the results of its investigations and of alternative proposals put before it will be found on page 1182 of Year Book No. 39). The Commission recommended that a commission to control the generation and distribution of electric power be vested in the State; but if the establishment of an operating commission was not found practicable, then electrification under public control with ultimate public ownership should be implemented by means of a controlling commission capable of being converted into an operating commission. In 1937 the State Government constituted the State Electricity Commission of Queensland.

2. **The State Electricity Commission of Queensland.**—The Commission commenced to function in January, 1938. Generally, the Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organization and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own directly and operate generating stations and transmission lines and to sell electricity in bulk, but up to the present it has not been found necessary or desirable to implement this power.

3. **Legislation.**—Electricity supply in Queensland is governed by the following Acts which are administered by the Commission.

“*The State Electricity Commission Acts, 1937 to 1964.*” These Acts constituted the Commission and define its powers, duties and responsibilities.

“*The Electric Light and Power Acts, 1896 to 1964.*” These Acts relate to the constitution of electric authorities, and define their powers, duties and responsibilities, and the conditions under which electricity is to be supplied and used, and also provide for the making of regulations governing safety and other matters.

“*The Regional Electric Authorities Acts, 1945 to 1964.*” These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.

“*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*” These Acts established the Southern Electric Authority as a public authority and successor to the City Electric Light Co. Ltd., and define the powers and responsibilities of the Authority.

"*The Northern Electric Authority Acts, 1963 to 1964.*" These Acts established the Northern Electric Authority with responsibility for the generation and main transmission of electricity in north Queensland and for its sale in bulk to regional distributing authorities. They also define its powers and responsibilities.

"*The Electrical Workers and Contractors Acts, 1962 to 1964.*" These Acts deal with the execution of electrical works, the competency of electrical workers, and the licensing of electrical contractors.

4. Development and Organization.—Following the 1939–1945 War, regional systems of electricity supply were established in and adjacent to the eastern coastal area which is over 1,300 miles long. Five Regional Electricity Boards were established to replace the numerous individual electricity undertakings which had supplied only the larger centres of population. Under this system supply was delivered from central generating stations at or near the principal load centres. Each region comprised a homogeneous area, possessing relatively common interests, within which *integrated transmission and distribution systems* were established. Transmitted supply was taken to load centres previously served by relatively costly local generating stations and a vigorous policy of rural electrification was pursued. In south-eastern Queensland regional electrification was undertaken by the Southern Electric Authority and the Dalby Town Council. The Brisbane City Council supplies the metropolitan area.

In the pastoral areas west of the Great Dividing Range supply has been provided by means of small diesel-operated generating stations run by local authorities. These independent units are fairly uniformly scattered throughout western Queensland and no town or village with more than 50 potential consumers is without electricity. With increasing consumption there has been a trend in this area for local generating stations to be superseded by transmitted supply from larger centres. From such transmission lines it has been possible to provide electricity to many otherwise isolated rural properties.

Continued load growth led naturally to the interconnexion of regional systems and by this means the production of electricity was concentrated on the cheapest sources of power. The three northern Regional Electricity Boards (Cairns, Townsville and Mackay) were consolidated into one interconnected grid. In the south, the supply systems of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board and the Dalby Town Council also form an interconnected grid. The central Queensland network which is operated by the Capricornia Regional Electricity Board is not yet connected with either the northern or southern grids.

The natural sequel to the interconnexion of regional supply systems has been the severance of the production and distribution functions. For the northern grid, the Northern Electric Authority (which commenced operations on 1st July, 1964) is responsible for the operation of generation and main transmission facilities, with the Cairns, Townsville and Mackay Regional Electricity Boards buying in bulk and acting as distributing authorities. In the south, the Southern Electric Authority is responsible for generation and transmission, with the other authorities purchasing in bulk and performing the distribution function. However, the Southern Electric Authority also distributes over a large rural area surrounding Brisbane and the Wide Bay-Burnett Board generates on a small scale. The Capricornia, Townsville and Cairns Boards operate a number of small isolated diesel generating stations.

All electricity undertakings in Queensland are now publicly owned, and with the exception of the Southern Electric Authority are controlled by representatives of local authorities within the areas concerned. Further interconnexions and amalgamations within the electricity supply industry will be effected as soon as they will produce greater efficiency and lower costs to consumers. A major co-ordinating factor has been the inclusion of the Commissioner for Electricity Supply on the Boards of the Southern Electric Authority, the Northern Electric Authority and the five Regional Electricity Boards since their inception.

5. Generation.—Electricity generated in the State is based primarily on black coal, 83.4 per cent. of the total production during 1963–64 being derived from this fuel. Hydro-electric stations, located mainly in north Queensland, provided 15 per cent., and the balance of the production, 1.6 per cent., was from internal combustion plants located mainly in western Queensland, utilizing oil, wood, coal or natural gas as fuel. Natural gas is the principal fuel used at the Roma power station. Electricity generated in Queensland in power stations in 1963–64 totalled 3,330 million kWh. At 30th June, 1964, the major power stations within the State were as follows:—*Steam*—Bulimba A (Brisbane), 92,500 kW; Bulimba B (Brisbane),

180,000 kW; New Farm (Brisbane), 75,000 kW; Tennyson A (Brisbane), 120,000 kW; Tennyson B (Brisbane), 120,000 kW; Howard (near Maryborough), 37,500 kW; Rockhampton, 52,000 kW; Mackay, 12,250 kW; Townsville, 37,500 kW; *Hydro*—Kareeya (Tully Falls), 72,000 kW; Barron Gorge (near Cairns), 60,000 kW.

The Mackay station also contains 3,000 kW of internal combustion plant. The Southern Electric Authority also operates two packaged plants each of 10,000 kW capacity.

The total installed capacity of all Queensland generating stations was 1,007,984 kW which comprised 834,750 kW of steam plant, 139,015 kW of hydro-electric plant and 34,219 kW of internal combustion plant.

6. **Transmission and Distribution.**—The electrical transmission and distribution systems within the State comprised 30,600 miles of power lines at 30th June, 1964. The main transmission voltages are 132 kV, 110 kV, 66 kV and in certain areas 33 kV. Extensive rural electrification has been undertaken by means of the single wire earth return system. At 30th June, 1964, the total number of electricity consumers was 457,600 of whom 185,000 were in metropolitan Brisbane. The total number of farming properties supplied with electricity was 24,182.

7. **Future Development.**—Major new construction is concentrated on the development of three new power stations sited on coalfields. These are at Swanbank (360,000 kW) on the West Moreton coal field near Ipswich, Callide (150,000 kW) on the Callide open-cut coalfield near Biloela, and at Collinsville (180,000 kW) on the Collinsville coalfield. These stations will supply the southern, central and northern network, respectively. Cooling water for the Callide station will be provided from a multipurpose dam on Callide Creek which will also satisfy irrigation needs. A similar multipurpose dam on the Broken River will serve the Collinsville station. The water requirements of the Swanbank power station will be pumped from the Bremer River and supplied from the Moogerah Dam via Warrill Creek.

The Swanbank station will consist of six 60,000 kW generating sets, the first of which will be commissioned in 1966, two more in 1967 and one each year until 1970. The first stage of the Callide station consists of two 30,000 kW sets, the first to be commissioned in mid-1965 and the second a year later. A third similar set is planned for installation in 1968. At Collinsville the first stage of two 30,000 kW sets is planned for commissioning in 1968.

Subsequent development will depend upon the outcome of current investigations. For southern and central Queensland the alternatives are a further power station on the West Moreton coalfield or a new station at Callide to serve both the southern and central grids. In north Queensland the choice lies between further development at Collinsville or further development of the area's hydro-electric resources.

The electrical development in the west of Queensland is being assisted by the progressive extension westwards of the boundaries of the major regional electricity undertakings to include smaller western undertakings, bringing with it the advantages of incorporation within larger authorities, lower tariffs and greater financial and technical resources. Organizational changes involving amalgamation of isolated undertakings and their inter-connexion by transmission lines are being implemented as and when economic benefits to the consumers will result. In the extreme far west the isolated undertakings must inevitably continue to remain as such for the foreseeable future.

§ 4. South Australia

1. **General.**—An account of the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the Electricity Act, 1943 was passed, which, *inter alia*, established the South Australian Electricity Commission.

2. **The Electricity Trust of South Australia.**—In 1946 the assets of the Adelaide Electric Supply Co. Ltd. were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897–1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organizations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organizations, and give or receive supplies of electricity in bulk.

3. **Capacity and Production.**—Three main categories of organizations generate electric power in South Australia, namely:—(a) governmental, which include the Electricity Trust; (b) local authorities, e.g. municipal and district councils, and the Renmark Irrigation Trust; and (c) other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

Of the total installed capacity in South Australia, the Electricity Trust operated plant with a capacity of 606,000 kW, and is the most important authority supplying electricity in the State. There were approximately 352,000 ultimate consumers of electricity in the State, of whom 328,600 were supplied directly and approximately 11,000 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne "A" (60,000 kW), Osborne "B" (180,000 kW), and Port Augusta Playford "A" (90,000 kW) and Playford "B" (240,000 kW), the balance of the capacity controlled consisting of house sets and regional stations at Port Lincoln and Mount Gambier, where the Trust operates steam power stations of 5,000 kW and 21,800 kW capacity respectively, the former burning fuel oil and the latter either wood waste or fuel oil. Mt. Gambier is connected with the Metropolitan system by a 132 kV line.

No hydro-electric potential exists in South Australia. Steam generating units comprise 98 per cent. of installed capacity and the balance is internal combustion equipment.

4. **Leigh Creek and other New Capacity.**—With a view to reducing the dependence on external sources of fuel, steps have been taken to produce local coal and to install plant to use it. Fairly extensive deposits of low grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act, 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30th June, 1964, 1,617,973 tons of coal were produced, practically all of which was used by the electricity undertaking at the Port Augusta Playford Power Stations which use Leigh Creek coal exclusively.

A further 60,000 kW turbo-alternator with an associated oil fired boiler is being installed at Osborne "B" station and is due to be commissioned early in 1965.

A large power station is to be constructed on Torrens Island near Adelaide and two 120,000 kW turbo-alternators and associated oil fired boilers have been ordered, the first to be commissioned early in 1967.

§ 5. Western Australia

1. **General.**—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board, and other metropolitan, municipal and road board supply authorities have been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area, see Year Book No. 39, page 1189.

2. **The State Electricity Commission of Western Australia.**—The State Electricity Commission of Western Australia was established by the *State Electricity Commission Act, 1945*, and, as at present constituted, consists of nine members, including the Chairman, appointed by the Governor. Four of the Commissioners are representatives of consumers, one for the metropolitan area, two for the rest of the State and one representing commercial consumers. Of the remaining five, one is the Under Treasurer of the State or his deputy, one represents employees of the Commission and three are required to be qualified engineers.

The Commission is empowered to co-ordinate all State and other power undertakings in the State; to encourage and promote the use of electricity and other power, especially for industrial, manufacturing and rural purposes, and to carry out investigations to determine the safest, most economical and effective means for promoting, establishing, extending and improving works for the generation, transmission, distribution, supply and use of electricity or other power throughout the State. No person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and that their proposals are not inconsistent with the Commission's plans.

3. General Pattern of Electricity Supply.—(i) General. The State Electricity Commission gives central power station supply to the metropolitan area and an area of approximately 25,000 square miles defined in the report which formed a basis for the *South West State Power Scheme Act, 1945*. These areas include the more highly developed rural districts with a greater population density, which can more readily be connected to a central power station system. The policy of extending power supplies to rural consumers is continuing and at 30th September, 1964, some 4,753 rural consumers were connected. A similar scheme known as the Northern Areas State Power Scheme will be developed and a depot is being established in the Geraldton area. It is the intention of the Commission to purchase power in bulk from the Geraldton Town Council to supply surrounding districts as far north as Northampton.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes. The number of ultimate consumers at 30th June, 1964, was 182,094.

(ii) Interconnected System. At the request of the Government, the Electricity Advisory Committee, in 1945, submitted a report which recommended, among other things, a national power scheme for the south-west. The plan provided for acquisition of the existing Collie Power Station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connexion of the south-west scheme with the metropolitan system. In 1946, the State Electricity Commission acquired the Collie Power Station, and since then it has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie, and most of the south-west towns as well as towns in the eastern wheat belt area as far east as Merredin have now been connected by transmission line to the interconnected system.

Statistics relating to activities of the interconnected system are shown in the following table.

WESTERN AUSTRALIA: INTERCONNECTED SYSTEM

Particulars	1962-63	1963-64
Plant capacity kW	289,500	289,500
Maximum load kW	231,000	263,000
Units generated Million kWh	987	1,094
Fuel used per unit (kWh) generated lb.	1.49	1.49
Coal used tons	583,496	617,150

In Kalgoorlie, the large gold mines generate their own power requirements. The Power Corporation has ceased operations, and the Kalgoorlie Town Council operates a new 50 cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Council will continue to operate for some time at least.

4. New Projects.—Since its inception in 1946, the State Electricity Commission has made the provision of an adequate reserve of generating plant its primary object. With the commissioning of the first unit at South Fremantle Power Station in May, 1951, the lag

caused by shortages during the war and early post-war years was overcome. The system then developed rapidly to keep pace with the expansion of industry and housing. Generating plant has increased five-fold in the past eighteen years. The three major power stations have been interconnected with the South West Power Station at Collie enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is being undertaken to keep pace with the growth in consumer demand, which is being maintained at a high level.

Work has commenced on two 60,000 kW turbo alternators, boilers and buildings for the first section of a new station at Muja near Collie, adjacent to a source of open-cut coal. Contracts for a further two units have been completed and the overall construction of the new power station at Muja is running to schedule. The first unit is planned to be in service in 1965 with similar units to be ready for commercial service in 1967, 1968 and 1969. On the completion of this phase of construction the installed capacity of the system will be increased by 240,000 kW.

§ 6. Tasmania

1. General.—A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The cheap power has led to the establishment in Tasmania of several large electro-chemical and metallurgical works with high load factor, and as a consequence the system load factor is also very high (at present 67.0 per cent.).

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

2. The Hydro-Electric Commission.—(i) *Present System.* In 1929, the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorizes it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department. For details of projects undertaken by the Commission prior to 1957 see Year Book No. 48, pp. 243-4, and earlier issues.

Preliminary construction of the Catagunya Power Development began early in 1957. The scheme utilizes the whole of the waters flowing through Tarraleah and Tungatinah Power Stations and successively through the Liapootah and Wayatinah Power Stations plus water from the Florentine River. Four miles below Wayatinah, a diversion dam was constructed at Catagunya, and a power station with an installed capacity of 48,000 kW was completed at the end of June, 1962. The dam was designed and built as a pre-stressed concrete structure, 147 feet in height, and it is notable as being only the second of its type and the largest yet undertaken by this technique anywhere in the world.

In the Great Lake Power Development the water of the Great Lake, by its diversion to the north-east in the direction of the most precipitous fall, is used to much greater advantage than previously through Shannon and Waddamana. Eventually reaching the South Esk River, it is used again through the machines of the Trevallyn Power Station. The works consist of an intake at the Great Lake, a four-mile headrace tunnel through the Western Tiers, one mile of high pressure pipeline on the face of the Tiers, a vertical shaft leading to the Poatina Power Station some 500 feet underground, a two-mile tailrace tunnel discharging into a canal, and then a channel to the Lake River, a tributary of the South Esk. In this development the power is generated by the fall of water through a vertical distance of 2,730 feet to the underground Poatina Power Station. Three 50,000 kW generators had commenced operation by mid-1964 and a fourth in September, 1964. A fifth generator will be commissioned early in 1965 and a sixth at a later date will bring the station's installed capacity to 300,000 kW. A further section of the scheme, now nearing completion, includes a dam at Arthur Lakes from which water will be pumped via conduit into the Great Lake, thus increasing the storage for use through the Poatina Power Station.

With the commissioning of Poatina Power Station, Shannon Power Station was taken out of service in June, 1964. It is expected that the original Waddamana "A" Power Station will be taken out of service early in 1965. Waddamana "B" Station will be retained to provide peak load capacity and spare plant.

The total installed capacity of the present system throughout Tasmania in June, 1964, was as follows.

Power station	Installed capacity of alternators
	kW
Waddamana " A "	49,000
Waddamana " B "	48,000
Tarraleah	90,000
Butler's Gorge	12,200
Trevallyn	80,000
Tungatinah	125,000
Lake Echo	32,400
Liapootah	83,700
Wayatinah	38,250
Catagunya	48,000
Poatina	150,000
Total	756,550
King Island (diesel plant)	390

Approved construction will bring this total to approximately 1,240,000 kW by 1974. The number of ultimate consumers at 30th June, 1964, was 128,642.

(ii) *New Capacity.* Investigations are continuing into the very considerable resources as yet untouched, principally in the west and north-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 2,400,000 kW to the system.

The Hydro-Electric Commission is engaged on a construction programme which comprises the Lower Derwent Power Development and the Mersey-Forth Power Development. In the first-named, a three-stage development is under construction below Catagunya on the River Derwent. With dams and power stations named Repulse, Cluny and Meadowbank, the completion of this project by 1967 will add a further 85,000 kW to the system, and it will also bring to an end the exploitation of the power potential of the River Derwent and its tributaries.

The Mersey-Forth Power Development has been sanctioned for construction and is scheduled to be completed by 1974. In this development, the Mersey River will be diverted westward to the Forth River by the construction of the Parangana Dam about half a mile below the junction of the Mersey and Fisher Rivers. Thence the flow will be conducted by a tunnel and penstock to LEMONTHYME Power Station on the Forth River. The combined flow will be used for power generation at three power stations on the Forth River situated at the foot of dams at Cethana, Devil's Gate, and Palooa. The Wilmot River will be diverted to the east by a dam through a tunnel to a power station on the Forth River upstream from Cethana Dam. The diverted flow of the Wilmot River will also be used to produce power at Cethana, Devil's Gate, and Palooa. A sixth power station will result from the development of the Fisher River, where a rapid fall from Lake Mackenzie on the plateau to the Mersey River enables a head of some 2,100 feet to be exploited.

The principal storage in the development, Lake Rowallan, will be situated on the upper Mersey River at Walters Marsh, and Rowallan Power Station will exploit the water released from this storage. Smaller storages will be provided by Lake Mackenzie and by Parangana, Wilmot, Cethana and Devil's Gate Dams.

The six stages of the development are to be completed progressively between 1969 and 1974 and will add a total of 298,500 kW to the system.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme.

3. **Power Usage by Secondary Industry.**—The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries for which energy costs constitute a large proportion of the total cost of production. The continuous power demands of these organizations when plant is in full operation aggregates 276,000 kW, and a number of industrial undertakings are contemplating expansion of their activities.

§ 7. Commonwealth Territories

1. **Internal Territories.**—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

(ii) *Australian Capital Territory.* The supply authority is the A.C.T. Electricity Authority which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1st July, 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connexion to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies.

The total number of ultimate consumers at 30th June, 1964, was 23,473. During the year 1963-64, the bulk electricity purchased was 243,863,000 kWh and the system maximum demand was 63,000 kW.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but during April, 1937, responsibility for generation and supply was transferred to the Northern Territory Administration. The power station is now equipped with turbo alternators with a total capacity of 15,000 kW. A tender was let during 1964 for an additional 15,000 kW turbo alternator and boiler for installation at Stokes Hill, Darwin, power station. In addition, diesel generating plant of approximately 6,500 kW is available. A 66 kV transmission system is used.

At Alice Springs the power station is equipped with a diesel generating plant of 3,800 kW capacity.

At Katherine the power station is equipped with a diesel generating plant of 960 kW capacity, with an additional 1,100 kW planned to be commissioned early in 1965.

The diesel station at Tennant Creek was closed down in 1957, supply for the township being purchased in bulk from Peko Mines N.L.

During the early part of 1964 two small package fully automatic non-attended plants of 45 kW capacity were opened at Pine Creek and Elliott. The total number of ultimate consumers served in the Territory at 30th June, 1964, was 5,990.

2. *External Territories—Papua and New Guinea.*—Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1st July, 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works.

The Commission, on its own behalf, operates the public supplies in the main centres of population, and, on behalf of the Administration, operates the supply in the minor centres and patrol posts, hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply.

The Commission also has regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory. The Appliance Approval By-laws will be based upon complete reciprocity with the Australian approval authorities.

The generating capacity in the centres under the control of the Commission is as follows:—Port Moresby—diesel, 2,223 kW, hydro, 5,500 kW; Rabaul—diesel, 3,000 kW; Lae—diesel, 2,640 kW; Madang—diesel, 870 kW; Wewak—diesel, 870 kW; Goroka—hydro, 400 kW; Samarai—diesel, 300 kW; Kavieng—diesel, 204 kW; Kokopo—diesel, 64 kW.

On behalf of the Administration, the Commission operates generating sets totalling some 4,000 kW distributed over 130 centres, with capacities between 5 and 100 kW.

The townships of Wau and Bulolo are supplied by power generated by Bulolo Gold Dredging Limited, which operates hydro-electric plant of 5,500 kW capacity. Power produced by this plant is used mainly in the plywood mill and gold dredges at Bulolo.

The Commission has a policy to take increasing advantage of the hydro potential existing in the Territory. Work has been completed on the Sirinumu Dam on the Laloki River near Port Moresby, which will provide regulation of the river to give a minimum flow of 200 cusecs.

Tenders have been let for the supply of three 6,000 kW generating sets, which will be installed in an underground power station, which will take advantage of the fall in the Laloki River over the Rouna Falls. This station will have an ultimate capacity of 30,000 kW. It is planned to commission the station in August, 1967.

Preliminary investigations have indicated the economics of developing the potential of the Upper Ramu River adjacent to Kainantu in New Guinea, to provide a regional supply to Lae, Madang, Kainantu, Goroka and Mount Hagen. The present planning is to provide a station designed for ultimate capacity of 48,000 kW, and for the installation of two 8,000 kW generators in the first stage.

Some 400 miles of 66 kV and 132 kV transmission line will be constructed to bring power to the centres of consumption.

To meet the growing needs of the Territory, pending the commissioning of the hydro-electric power stations on the Laloki and Upper Ramu Rivers, the Commission is adopting the policy of installing skid-mounted diesel generating sets of a capacity which will permit their transfer at a later date to other growing centres. Trends indicate that a total of seven 500 kW sets will be needed at Port Moresby. These will later be transferred to Lae and Madang.

Extensive investigations have been made to locate a suitable source of hydro-electric power to supply the township of Rabaul and the quickly developing area along the Gazelle Peninsula. However, the geological reports on those sites so far investigated have not been encouraging, and at present no firm proposal has been put forward.

Several small hydro-electric installations have been made or are in process of construction to serve isolated centres. These are—Aiyura Agricultural Station—30 kW; Mount Hagen—120 kW; Mendi (under construction)—100 kW; Tapini (under construction)—30 kW.

The Commonwealth Department of Works has a Stream Gauging Section and maintains records of many of the main rivers in order to provide material for future investigations into some of the major hydro-electric potential which exists in the Territory.

In 1950, the Commonwealth Government joined with the British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A company was formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth Government held 51 per cent. of the shares, and had a controlling interest on the Board of five members, but it later sold its interest to a company formed by Consolidated Zinc Pty. Ltd. and British Aluminium Co. Ltd., both of London. This company carried out very extensive investigations into the rivers of the Gulf of Papua and, in particular, into the Purari River.

The number of consumers served by the Commission as at 30th June, 1964, was 8,000. The consumers in minor centres approximate 2,000.

STATISTICAL SUMMARY

The following table shows statistics for each State separately and for the six States combined for the year 1962-63.

Statistics of the electricity supply industry for the years 1958-59 to 1962-63 are given in Chapter VI. Manufacturing Industry.

CENTRAL ELECTRIC STATIONS, 1962-63

Particulars	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Australia
Generating stations—							
Government .. No.	27	13	..	10	10	11	71

Total	54	35	51	29	92	14	275
Installed capacity of generators—							
Steam .. '000 kW	2,484	1,291	745	596	305	..	5,421
Hydro	809	333	79	..	2	627	1,850
Internal combustion ..	73	33	34	13	74	1	228
Total	3,366	1,657	858	609	381	628	7,499
Persons employed(b) No.	4,279	3,379	1,682	1,548	(a)	(a)	12,272
Value of output(c) £'000	59,693	32,663	17,991	9,897	(a)	(a)	135,570
Value of production(d) ..	42,961	21,257	8,866	5,516	(a)	(a)	89,556
Electricity generated(e) million kWh	12,188	7,187	3,137	2,335	1,219	3,213	29,279
Ultimate consumers(f) No.	1,257,445	984,129	434,022	337,000	173,883	125,572	3,312,051

(a) Not available for publication; included in the total for Australia. (b) Average employment in generating station, over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. (f) Approximate figures supplied by the electricity authority in each State. An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household.

CHAPTER VIII

WATER CONSERVATION AND IRRIGATION

RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS

§ 1. Introduction

This issue of the Year Book contains, on pages 228-31, a description of recent developments in the measurement of Australia's water resources prepared by officers of the Department of National Development. For information concerning general, descriptive and historical matter reference should also be made to Year Book No. 37, pages 1096-1141.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II. Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XX. Local Government; and on the generation of hydro-electric power to Chapter VII. Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

§ 2. Water Resources and their Utilization

1. **Surface Supplies.**—An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 1,780; Mississippi, 474; Danube, 228; Volga, 148; Nile, 72; and the ten major rivers of the United States of America in the aggregate; 900.

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June, 1964. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS				
Eucumbene ..	Eucumbene River, New South Wales	3,500,000	381	Part of Snowy Mountains Hydro- electric Scheme
Eildon	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume	Murray River near Albury	2,500,000	142	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. Hydro- electric power also developed
Menindee Storage Lakes	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River Water Con- servation Scheme for irrigation and possible hydro-electric power generation
Warragamba ..	Warragamba River, New South Wales	1,670,000	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation

(a) Useful storage only.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS— <i>continued</i>				
Miena	Great Lake, Tasmania	a1,300,000	40	Storage for Poatina hydro-electric power station
Burrinjuck	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Lake Victoria	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo	Lake Echo, Tasmania	(a)412,200	60	Storage for Lake Echo, Tungatinah, Liapootah, Wayatinah and Catagunya hydro-electric power stations
Keepit	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation
Arthur Lakes	Source of Lake River near Great Lake, Tasmania	(a)343,000	50	Part of Great Lake hydro-electric power development
Waranga	Goulburn River, Victoria	333,400	..	Irrigation storage
Tinaroo Falls	Barron River, north Queensland	330,000	136	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands	Glenelg River, Victoria	272,000	..	Part of Wimmera-Mallee domestic and stock water supply system
Clark	Derwent River, Tasmania	(a)253,400	200	Storage for Tarraleah, Liapootah, Wayatinah, and Catagunya hydro-electric power stations
Eppalock	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Wyangala	Lachlan River, New South Wales	(b)245,000	200	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. (See also under Dams and Reservoirs under Construction)
Tantangara	Murrumbidgee River, New South Wales	(a)193,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon	Avon River, New South Wales	173,800	232	Part of Sydney water supply
Glenmaggie	Gippsland, Victoria	154,300	100	Storage for irrigation
Lake St. Clair	Central Highlands, Tasmania	(a)154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington	Collie River, Western Australia	150,100	112	For supply of water to irrigation districts and to agricultural areas and country towns
Serpentine	Serpentine River, Western Australia	144,000	171	For Perth water supply
Lake Brewster	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran	Loddon River, Victoria	120,600	..	Storage for irrigation
Upper Yarra	Yarra River, Victoria	110,000	270	For Melbourne water supply
DAMS AND RESERVOIRS UNDER CONSTRUCTION				
Burrendong	Macquarie River, near Wellington, New South Wales	1,361,000	250	For rural water supplies, flood mitigation and possible hydro-electric power generation
Wyangala	Lachlan River, New South Wales	1,000,000	270	Strengthening and enlarging of existing dam for increased water supply and hydro-electric power generation. (See also under Existing Dams and Reservoirs)
Koomboooloomba	Tully River, north Queensland	146,000	123	For hydro-electric and possible irrigation purposes

(a) Useful storage only.

(b) Temporary reduced level.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—continued

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
DAMS AND RESERVOIRS PROJECTED				
Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	For generation of hydro-electric power, irrigation and flood mitigation
Chowilla ..	Murray River, in South Australia, near Victorian border	5,000,000	41	Regulation of the lower Murray River
Ord River ..	Near Wyndham, Western Australia	3,500,900	200	For irrigation, generation of hydro-electric power and flood mitigation. (Additional 6,000,000 acre-feet flood control proposed)
Blowering ..	Tumut River, New South Wales	1,300,000	364	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for power generation
Maraboon ..	Nogoa River, Central Queensland	1,170,000	148	For irrigation and probable thermal power station
Buffalo ..	Buffalo River, near Myrtleford, Victoria	800,000	260	For irrigation
Talbingo ..	Tumut River, New South Wales	600,000	500	Part of Snowy Mountains Hydro-electric Scheme
Jindabyne ..	Snowy River, New South Wales	560,000	210	Part of Snowy Mountains Hydro-electric Scheme
Warkworth ..	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for the Hunter Valley
Winton ..	Winton Swamp near Benalla, Victoria	300,000	35	To store flood flows in Broken River for irrigation
Wuruma ..	Nogo River, Central Queensland	150,000	120	For irrigation storage
Rowallan ..	Mersey River, North Tasmania	110,000	140	Storage for Mersey-Forth power development

(a) Subject to final survey.

3. Irrigation.—(i) *History*. For some brief remarks on the history of irrigation in Australia see issues of the Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Year Book No. 37, page 1099.

(ii) *Extent and Nature of Irrigated Culture*. The following table shows the area of land irrigated in each State during the seasons 1959-60 to 1963-64, and the nature of irrigated culture in each State in 1963-64.

AREA OF LAND IRRIGATED (Acres)

Season and crop	N.S.W. (a)(b)	Vic. (c)	Q'land	S. Aust.	W. Aust.	Tas.	N.T. (d)	A.C.T.	Aust. (e)

(a) Source: Water Conservation and Irrigation Commission. (b) Includes total area irrigated by licensed diversions, but details for individual crops, etc., in 1963-64 (233,761 acres), are not available. (c) Source: State Rivers and Water Supply Commission. (d) Incomplete, excludes area of rice irrigated. (e) See footnote (b) to New South Wales. (f) Not available separately; included in Other crops. (g) Not available for publication; included in Other crops. (h) Incomplete; see footnotes to individual States. (i) Includes vineyards. (j) Not available for publication; excluded from totals. (k) Included with Orchards.

(iii) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilization of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; the potability of saline waters for stock; the de-salting of brackish waters; and cloud-seeding over catchments.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Irrigation Research Laboratory at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, wine grapes and lucerne. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Adelaide (South Australia) and Merbein (Victoria), the Horticultural Research Section is working on problems of the dried-fruit industry. The Division of Land Research and Regional Survey conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connexion with the utilization of underground water for irrigation. The Division of Soils and the Soil Mechanics Section are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River. The Division of Physical Chemistry is investigating methods of minimizing evaporation losses from water storages by the use of monomolecular layers.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including extension groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. *Preservation of Catchments.*—Since water conservation commences on the catchments it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects

of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. **Sub-surface Supplies.**—(i) *General.* Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes. These supplies are indispensable in most inland areas. The quality of the water ranges from usable to very saline. In inland areas a considerable amount of water has been tapped that is unusable because of its high salt content. Because of this, development of an economic desalting process would provide the interior with additional large quantities of usable water.

Considerable use is also made of sub-surface water, other than pressure water, from local storages, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies, but its use for these purposes is increasing.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. The following are the principal defined water-bearing basins in Australia.

PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

Name	State	Geological age of chief aquifers	Approximate area	Depth to pressure water
			Square miles	Feet
Great Artesian ..	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	676,250	Up to 7,000
Canning ..	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Murray ..	Victoria, New South Wales and South Australia	Miocene-Eocene ..	109,000	100 to 1,300
Georgina (including Barkly and Daly) ..	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian and Upper Proterozoic	108,000	150 to 1,000
Eucla	Western Australia, South Australia	Pliocene-Miocene ..	74,000	300 to 2,000
Carnarvon ..	Western Australia	Cretaceous, Permian ..	45,000	200 to 4,000
Perth	Western Australia	Recent, Jurassic ..	21,000	200 to 2,500
Western District (Otway)	Victoria ..	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian and Permian	12,000	200 to 1,000
Pirie-Torrens ..	South Australia ..	Recent, Pleistocene ..	9,000	Up to 600
East Gippsland ..	Victoria ..	Pleistocene-Eocene ..	3,500	200 to 3,500
Adelaide ..	South Australia ..	Recent, Oligocene ..	1,100	200 to 600

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or bore drains and the careless use of water. (For greater detail on this subject *see* Year Book No. 37, pp. 1103-4 and § 4, para. 3.)

(iii) *Shallow Groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two examples of use of these shallow supplies for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 35,000 acre feet per annum (about 25 million gallons a day).

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

§ 3. Some Recent Developments in the Measurement of Australia's Water Resources*

1. *Introduction.*—There has been a growing awareness in recent years that Australia does not have a reliable estimate of how much water is now available, and how much will be available in the future. Such an estimate is necessary so that the planning of water resources development projects can proceed on a sound basis. With the establishment of the Australian Water Resources Council in 1962 (*see* para. 5, p. 230) a means was provided of securing the highest level of basic information on Australian water resources and of making it readily available.

The following paragraphs offer some comments on the sources of water, the methods of assessing water resources, and the role of various authorities, including the Australian Water Resources Council, involved in the assessment which is currently proceeding.

2. *Sources of Water.*—The source of water can most generally be explained in terms of the hydrologic or water cycle. The cycle may be defined as the continuous movement of water between the ocean, the atmosphere and the land. This movement involves the physical processes of evaporation, transportation of water vapour in air masses, condensation leading to precipitation, the flow of water in streams and underground, and transpiration by vegetation.

* The following survey of recent developments in the measurement of Australia's water resources was specially prepared for this issue of the Year Book by officers of the Department of National Development.

Knowledge of the occurrence of water in the form of precipitation (rain and snow), rivers, streams and lakes and underground in the interstices of soils and rocks is a starting point in any inventory or assessment of resources. In Australia such an inventory broadly discloses that in this dry continent there is low and variable rainfall, high evaporation and low topography, with a dearth of cheap dam sites. Fortunately, underground water is fairly widespread both as pressure (artesian and sub-artesian) and non-pressure water.

3. Assessment and Measurement of Resources.—(i) *General.* A comprehensive national assessment of a country's water resources must show in quantitative terms the availability of water and indicate the possibilities of development of these resources by modern technology to meet specific needs such as irrigation, hydro-electric power generation, and urban, rural and industrial water supplies. Rainfall, evaporation and other meteorological elements, surface water and underground water must be measured by observations extending over long periods of fifty or more years at fixed locations or stations. Measurement of the quality of the water, particularly in the case of underground water, is essential. Although analytical methods are available for estimating water resources, there is no real alternative to direct measurement as a basis for the planning of water development projects or for the design of culverts, bridges and flood mitigation and drainage projects.

The Commonwealth Bureau of Meteorology is primarily responsible, *inter alia*, for the measurement of rainfall in Australia. The Bureau currently maintains some 7,500 rain gauges, but it is estimated that over 13,000 are required to provide an adequate national network. A continuous record of the intensity of rainfall is made by an instrument called a pluviograph. About 500 of the existing 7,500 gauges are pluviographs and a further 1,200 pluviographs are estimated to be required.

(ii) *Surface Water.* Surface water is assessed wherever possible by direct measurement of river flow (discharge) at stream gauging stations. Various authorities in each of the States and the Commonwealth are responsible for the measurement of stream flow in Australia (*see* para. 4, p. 230). The stream gauging requirements of these authorities have been compiled by the Australian Water Resources Council (*see* para. 5, p. 230), and it is estimated that a basic network of about 2,800 gauging stations is required to provide for an adequate assessment of the surface water resources of Australia. At present some 1,300 gauges are installed. Current plans call for the completion of the basic network within ten years.

Basically, stream gauging entails (a) obtaining records of water levels and (b) establishing a relationship or "rating" between the water level and the discharge.

Water levels can be recorded continuously by installing instruments at the gauging site. The discharge is obtained by visiting the site and measuring the velocity of the stream in vertical sections across the stream. Knowing the sectional area enables the discharge corresponding to the height of the stream at that particular time to be calculated. Measurement of the discharge over a range of water levels enables a relationship between discharge and water level to be established. In order to determine this relationship it is necessary to carry out measurements at the gauging site over a range of discharge conditions including periods of flood. "Rating" of the station can therefore require many years of measurement under arduous conditions before the records of water level can be correlated with discharge.

(iii) *Underground Water.* The measurement of underground water is a more complex task than is the measurement of rainfall and river discharge. The location of water beneath the ground entails surface and sub-surface geological investigations including geophysical exploration and the drilling of bores. Measurement involves controlled pumping tests and, over long periods, recording of water levels in observation bores to indicate the effects of continued pumping and the recharge capabilities of the aquifer. Quality testing is an important part of underground water investigations.

As in the case of surface water, the Water Resources Council has considered the deficiencies in underground water measurements, and many new underground water investigations extending over wide areas have been commenced. However, the large area involved and the problems encountered in attempting to measure precisely water flow in rocks mean that it could be more than fifty years before knowledge of Australia's resources becomes adequate.

4. **Authorities Responsible for Water Measurement.**—Surface and underground water resources are measured by both Commonwealth and State Government authorities. However, the greater part of the measurement programmes are undertaken by State Government authorities. As previously mentioned, meteorology (e.g. rainfall and evaporation measurement) is primarily a Commonwealth Government responsibility.

Commonwealth Government authorities carry out gauging in the Northern Territory (Water Resources Branch, Northern Territory Administration), and in the Australian Capital Territory and the Territory of Papua and New Guinea (Department of Works). In the Snowy Mountains Area and the Murray River basin both Commonwealth and State Government authorities have interests in stream gauging. The Commonwealth Bureau of Meteorology maintains river height stations which are used solely for flood warning.

State Government authorities are responsible for stream-gauging in their respective States. The principal authorities in each State are as follows.

New South Wales: Water Conservation and Irrigation Commission.

Victoria: State Rivers and Water Supply Commission; State Electricity Commission.

Queensland: Irrigation and Water Supply Commission.

South Australia: Engineering and Water Supply Department.

Western Australia: Public Works Department.

Tasmania: Hydro-Electric Commission; Rivers and Water Supply Commission.

Underground water resources are investigated by a number of the authorities that have responsibilities for stream-gauging, and by State Departments of Mines and the Bureau of Mineral Resources of the Commonwealth Department of National Development. The following are the principal authorities in each State and Territory.

New South Wales: Water Conservation and Irrigation Commission; Department of Mines.

Victoria: Department of Mines.

Queensland: Irrigation and Water Supply Commission; Department of Mines.

South Australia: Department of Mines.

Western Australia: Department of Mines.

Tasmania: Department of Mines.

Northern Territory: Water Resources Branch, Northern Territory Administration; Bureau of Mineral Resources.

Australian Capital Territory: Bureau of Mineral Resources.

Territory of Papua and New Guinea: Papua and New Guinea Administration; Bureau of Mineral Resources.

These authorities are assisted by various scientific and industrial foundations. In New South Wales, for example, the Hunter Valley Research Foundation is carrying out scientific investigations, including an integrated study of water, soils, and climate, in the catchment area of the Hunter River. In addition, the University of New South Wales recently formed the Water Research Foundation which has, among its objectives, research into underground water.

5. **Australian Water Resources Council.**—The assessment of Australia's water resources entered upon a new phase with the establishment, by joint action of the Commonwealth and State Governments, of the Australian Water Resources Council in 1962. The Council comprises the Minister for National Development as Chairman, the Minister for Territories and the Ministers for Water Supply in each State. It has as its principal objective the provision on a continuing basis of a comprehensive assessment of Australian water resources and the extension of measurement and research so that future planning can be carried out on a sound and scientific basis.

An important factor is that the Council is not concerned with particular works projects, normally the responsibility of the States or the Commonwealth, for which there are established channels for the exchange of views and allocation of funds such as the Premiers' Conference and Loan Council.

Assisting the Council is a Standing Committee of senior officers from Commonwealth and State water authorities, and there are a number of committees advising the Standing Committee, namely: Water Research and Education Steering Committee, Technical Committee on Surface Water, Technical Committee on Underground Water, Advisory Committee on Hydraulics Laboratory Facilities and several *ad hoc* panels.

The Water Resources Council has given close attention to a number of important matters of which the more urgent are the publication of a *Review of Australia's Water Resources (Stream Flow and Underground Resources)* 1963 (which was issued early in 1965) and the recommendation of accelerated programmes of stream-gauging and underground water investigations.

Australian Governments have adopted an accelerated programme of stream-gauging (surface water measurement) to extend over the next ten years, and have recognized the need for a continuous programme of underground water investigations. Under the *States Grants (Water Resources) Act 1964*, the Commonwealth Government grants financial assistance to the States in connexion with the measurement and investigation of their water resources. This means that £1,846,000 of additional funds (a sixty per cent. increase on current rates of expenditure) could be made available over the next three years relative to these programmes.

All authorities represented on the Council and its committees have agreed to work towards a common, nation-wide system of recording hydrologic data in a digital form suitable for rapid analysis by computer. The Council is also giving attention to the extent to which particular kinds of water research, and specialized training of research workers, can assist in bringing about the comprehensive water resources assessment envisaged as the Council's objective.

§ 4. National and Interstate Aspects

1. **General.**—As the Commonwealth Constitution makes special reference to water rights, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources rests with the individual State Governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

2. **Australian Water Resources Council.**—For information regarding the constitution, establishment, functions and objects of the Australian Water Resources Council see § 3, para. 5, p. 230.

3. **Murray River Scheme.**—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,623,000 acre feet; Darling River, 2,896,000 acre feet; Goulburn River (including Broken River), 2,570,000 acre feet; Murrumbidgee River, 2,054,000 acre feet; and Ovens River, 1,222,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

(ii) *River Murray Waters Agreement.* For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. Under the Agreement, construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949, see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see para. 5, Snowy Mountains Hydro-electric Scheme, p. 233) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6th November, 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30th April, 1964. The dam will be located some six miles downstream from the border between Victoria and South Australia, and will consist of concrete outlet structures and a bank forty-one feet high across the flood plain. The overall length of the dam will be three and one-third miles, and the lake formed behind it will extend to Wentworth Weir, a distance of about one hundred and twenty miles by river.

The quantity (in acre feet) of water diverted during 1963-64 from the Murray and its tributaries for irrigation and other purposes was as follows:—New South Wales, 1,908,000; Victoria, 2,765,000; South Australia, 269,000; a total of 4,942,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 56,000 acres. The design comprises a mass concrete spillway and outlet works extending for 1,000 feet, and an earthen embankment 142 feet high extending for 4,000 feet across the river flats, the length of the total structure being approximately one mile. Work on the enlargement of the reservoir to its approved capacity of 2,500,000 acre feet was completed in 1961.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, to serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, to serve 270,000 acres. Only a portion of each area will be irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Burrinjuck (Murrumbidgee), Keepit (Namoi), Burrendong (Macquarie) and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Cairn Curran (Loddon) and Eppalock (Campaspe). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia at present, but the construction of a large storage at Chowilla is proposed (*see sub-para. (ii) above*).

4. **New South Wales-Queensland Border Rivers Agreement.**—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the Macintyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi. The cost of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station homestead, which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams, and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. This report is at present under consideration.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. Bonshaw and Cunningham Weirs on the Dumaresq River were completed in 1953 and 1954 respectively.

A weir and regulator have been constructed on the Barwon River at the offtake of the Boomi River. A low level weir to establish a pumping pool at Glenarban on the Dumaresq River was also constructed. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

5. **Snowy Mountains Hydro-electric Scheme.***—Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act 1949* setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

* See also Chapter VII. Electric Power Generation and Distribution, p. 204. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. Miscellaneous, of Year Book No. 42.

The Scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in Chapter VII. Electric Power Generation, and Distribution (see pp. 204-6).

An additional 500,000 acre feet of water per annum is now available for irrigation in the Murrumbidgee Valley. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land which is expected to result in a substantial increase in annual primary production.

§ 5. International Aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-four countries, including Australia, have already been admitted to membership.

The Central Office of the International Commission is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain and Japan, in that order. The sixth Congress will be held in India in January, 1966.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, "that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms and individuals actively interested in irrigation and drainage". The Committee meets annually.

STATES AND TERRITORIES

§ 1. Australian Local Pattern of Water Conservation and Use

The foregoing sections deal with water conservation and irrigation in Australia generally and with international, national and interstate projects. The following survey covers the local pattern of water resources and the steps taken by the State governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

§ 2. New South Wales

1. **General.**—(i) *Rainfall and History.* On page 1110 of Year Book No. 37, information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also Chapter II. Physiography, p. 29, of this issue.)

(ii) *Administration.* The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912–1955, the right to the use and flow and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 233 of this chapter.

2. **Schemes Summarized.**—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and a head storage on the Macquarie River is nearing completion. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are:—The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembled Weir; the Coomealla Irrigation Area of 34,672 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,393 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,693 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (125,886 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) below.

(ii) *Works.* The capacities of the main storages (in acre feet) are:—

Darling—Menindee Lakes Storages (2,000,000);

Murray—Half share of Hume Reservoir, weirs and locks to Wentworth (1,361,420); Stevens Weir, Edward River (7,165);

Murrumbidgee—Burrinjuck Dam (837,000); Berembled Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

Namoi—Keepit Dam (345,000);

Lachlan—Wyangala Dam (temporary reduced level 245,000); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200); and

Hunter—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 4,833 miles. This comprises 3,397 miles of supply channels (including main canals), 1,367 miles of drains and escape channels, and 69 miles of pipe lines.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems in 1963-64 and particulars of the areas under irrigated culture in New South Wales during the seasons 1959-60 to 1963-64.

AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous; in 1963-64, deciduous amounted to 10,260 acres, of which 9,983 acres were in the Murrumbidgee Irrigation Areas. (c) Includes total area irrigated by Licensed Diversions, but details for individual crops, etc., are not available. (d) Includes lands outside irrigation areas supplied under special agreement. (e) Incomplete. (f) Details for individual crops, etc., are not available.

3. **Irrigation Areas.**—(i) *Murrumbidgee.* (a) *Description.* These areas, together with adjacent lands supplied under agreement, received 376,824 acre feet, or nearly a quarter of the total water (1,711,180 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, 40 miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerembah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September-May irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30th June, 1964, its population was approximately 27,500, that of Leeton Shire being 10,500 and that of Wade Shire 17,000.

(b) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1964, was 413,714 acres, including 37,278 acres held for short lease grazing, agriculture, etc.

(c) *Production.* The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season, the water supplied for rice represents about half the total delivered to the Areas.

(ii) *Other Irrigation Areas.* The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

4. **Irrigation Districts.**—These Districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30th June, 1964, the total

length of completed canals and channels in Berriquin District was 994 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 783 miles, escape channels 104 miles and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day.

Wakool, with 387 miles of channel, contains 313 holdings, and the area developed by irrigation includes about one acre in six of the total area. Sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying and wheat growing are the main industries.

5. Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.—The Water Act, 1912–1955 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis)—*Murray River*—Little Merran Creek (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajeel Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condobolin West Weir (4,480); *Miscellaneous*—Great Anabranche of Darling River (959,184), Nidgerly Weir (46,880), Algdudgerie Creek (9,760), Collarenebri town water supply (117)—making in all a total area of 2,829,791 acres. Twelve of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

6. River and Lake, and Farm Water Supplies.—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in dry months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, flood and spray irrigation systems.

7. Underground Water.—Extensive use is made of artesian, sub-artesian, and shallow underground water. The Great Artesian Basin underlies an area of some 81,250 square miles in north-western New South Wales. Eighty-seven Bore Water Trusts and 12 Artesian Wells Districts have been constituted. Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts the settlers maintain the drains. Bore Trusts and Artesian Districts cover 5,597,202 acres and distribute water through 3,652 miles of open earth drains.

As at 30th June, 1964, 1,123 artesian bores had been constructed in the New South Wales section of the Basin. At that date, 650 bores were flowing and were capable of producing about 65,000,000 gallons per day. Conservation measures control this to about 50,000,000 gallons per day. The total length of bore drains, including those for Trusts and Districts, is approximately 8,000 miles.

Of other structural basins of sedimentary rocks, e.g., Murray, Sydney, Oxley and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and,

in some instances, small scale irrigation, are obtained from porous sandstone in the Moss Vale-Picton area, but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin, but the centre of this basin lies under the Liverpool range. The Clarence Basin is relatively unimportant from a groundwater viewpoint, but stock supplies are obtained from some sections.

In other parts of the State, the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western-flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 80,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation and town water supply. The Government is carrying out investigations to determine the ground-water potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan Valley. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter.

Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney's water supply, the Botany sands are now utilized mainly by industry. The Tomago sands provide a considerable proportion of the Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their ground-water potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain, they yield useful stock supplies, mostly at depths between 50 and 250 feet.

It is necessary under the Water Act, 1912-1955 that all wells and bores be licensed, and details of over 20,500 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

8. Future Programme.—The programme of development in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction of Burrendong Dam on the Macquarie River is nearing completion, and work has commenced on a dam at Blowering on the Tumut River. Legislation has been passed authorizing the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyangala Dam, on the Lachlan River, the fixed crest of the dam spillway has been lowered temporarily to enlarge the spillway for passage of greater floods. Construction has commenced on a new earth and rock-fill dam which will be built behind the present dam to give a storage of 1,000,000 acre feet. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At 30th June, 1964, 183 large area farms and 8 horticultural farms had been allotted south of the Murrumbidgee River, whilst 47 large area farms had been allotted north of the river and now form part of the Murrumbidgee Irrigation Areas.

9. Hydro-electricity.—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (*see p. 211*).

§ 3. Victoria

1. General.—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (*See also* Chapter II. Physiography, p. 29, of this issue.)

(ii) *Administration.* The passing of the *Irrigation Act* 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. The *Water Act* 1905 established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies, and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted waterworks trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust, the waterworks trusts and local governing bodies administering town water supplies, the river improvement and drainage trusts and the various sewerage authorities which control sewerage undertakings in country towns are also subject to general supervision by the Commission.

2. Works Summarized.—In 1902, a great drought emphasized the need for a concerted attack on water problems. Subsequent to the establishment of the State Rivers and Water Supply Commission, the total capacity of storages controlled by that Commission has increased from 172,000 acre feet in 1906 to 4,528,318 acre feet at 30th June, 1964. In addition, Murray River storages with a combined capacity of 2,722,840 acre feet are shared equally by New South Wales and Victoria under the River Murray Waters Agreement, subject to certain obligations to South Australia. The total storage capacity available to Victoria is thus some 5,889,738 acre feet. Most of the water from these storages is used for irrigation. The area actually irrigated has risen from 105,000 acres in 1906 to 1,137,241 acres in 1963-64, to which 1,701,468 acre feet of water were delivered. The Commission estimated the value of irrigated production in 1962-63 at £64,950,000, representing about one-fifth of the value of Victoria's total rural production.

Besides supplying water to its own irrigation districts, the Commission supervises the diversion of water for irrigation by private persons by means of licences and permits. In the last ten years, the area so licensed has doubled, and private diverters now provide a fifth of total irrigation production.

3. Storages.—The capacities of the main storages in the various systems (in acre feet) at 30th June, 1964, were as follows:—

Goulburn System:—Eildon Reservoir, 2,750,000; Waranga Reservoir, 333,400; Total, 3,104,100; *Murray-Loddon System*:—Half share of Murray River storages, 1,361,420; Cairn Curran, 120,600; Tullaroop, 60,000; Total, 1,690,230; *Campaspe River*:—Eppalock Reservoir, 252,860; *Wimmera-Mallee*:—Rocklands, 272,000; Total, 563,800; *Gippsland*:—Glenmaggie, 154,300; Total 154,340; *Coliban*:—62,730; *Werribee-Bacchus Marsh*:—34,900; *Mornington Peninsula*:—17,640; *Orway*:—1,080; *Miscellaneous*:—8,058; *Grand Total*:—5,889,738.

4. Extent of Systems and Nature of Irrigated Culture.—The following table shows the areas of the various irrigation systems in 1963-64, and the areas under irrigated culture during the seasons 1959-60 to 1963-64.

AREAS OF SYSTEMS AND OF LAND IRRIGATED: VICTORIA

(Source: State Rivers and Water Supply Commission)

(Acres)

Season and system	Total area (a)	Area irrigated									Total

(a) Excludes Other northern systems and Private diversions.

(b) Includes First Mildura Irrigation Trust.

(c) Excludes private diverters in the Torrumbarry System, but includes all other private diverters along the Murray River.

5. **Irrigation Systems.**—(i) *Goulburn.* The storage capacity for this system is provided principally by Eildon Reservoir, the enlargement of which was completed in 1956. Large-scale works have been in progress for several years to distribute the extra water available from this and other major storages.

Water from Eildon Reservoir flows down the Goulburn River to the Goulburn Weir, located near Nagambie. This raises the summer level of the river about 45 feet for the purpose of diversion. From this weir, water is diverted via the East Goulburn Main Channel direct to the irrigation areas around Shepparton. The western main channels from the weir convey water to the Waranga Reservoir near Murchison in addition to supplying part of the large Rodney area directly.

Two main outlet channels issue from Waranga Reservoir. One serves the western section of Rodney area, while the other serves irrigation areas as far west as Boort.

Water is also supplied to part of the Goulburn-Loddon system from Cairn Curran Reservoir on the Loddon River, and from Tullaroop Reservoir on one of its tributaries, together with the new Eppalock Reservoir on the Campaspe River. Eildon itself may be used to supplement supply to the districts along the Murray River.

The main products of the Goulburn system are dairy produce, fruit, wool and fat lambs. Annual production of deciduous canning fruits in the area is about two-thirds of Australia's total.

(ii) *Murray River System.* The waters of the Murray River are used to supply the area between Yarrowonga and Merbein. The districts between Yarrowonga and Swan Hill, except Tresco near Swan Hill, are supplied by gravitation and those west of Swan Hill by pumping.

The main items produced in the Murray Valley Irrigation Area, which is served from Yarrowonga Weir, are dairy products, fat lambs and canning fruit.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves the area around Cohuna, Kerang, Koondrook and Swan Hill. (Also included in the Torrumbarry System is the Tresco District supplied by pumping from Lake Boga.) Dairying and fat lamb raising are the major industries. Vine and orchard fruits and vegetables are grown extensively around Swan Hill.

West of Swan Hill lie four Commission districts with a pumped supply—Nyah, Robinvale, Red Cliffs and Merbein. These contain about 1,500 holdings devoted mainly to dried vine fruit, although citrus fruit and table and wine grapes are of some importance. The area around Mildura is controlled by the First Mildura Irrigation Trust, the only irrigation trust operating in Victoria. It serves an irrigated area about half the combined size of the four Commission districts and has similar major products.

(iii) *Southern Systems.* The most important southern system is the area around Maffra and Sale, devoted mainly to dairying. This is supplied from Glenmaggie Reservoir on the Macalister River and from the natural flow of the Thomson River when the flow is adequate. Other important irrigation districts, located quite close to Melbourne around Werribee and Bacchus Marsh, are intensively developed for dairying and vegetable growing. An additional storage, Devilbend Reservoir (to serve the Mornington Peninsula system), was completed in 1964.

6. **Wimmera-Mallee Domestic and Stock Supply System.**—This system serves an area of 11,000 square miles or about one-eighth of the State. Without the artificial supply of water, development in this area would be meagre and hazardous owing to the constant threat of drought. The main supply is drawn from the Grampians storages and can be supplemented by surplus water drawn from the Goulburn and Loddon Rivers, via the Waranga Western Channel referred to previously. In addition, some 300 farmers in the north of the system are provided with a domestic and stock supply direct from pumps on or near the Murray River.

As far as possible, water is distributed in the winter and spring to reduce evaporation losses in 6,500 miles of Commission channels and 3,000 miles of farm channels. It is the responsibility of the 7,000 farmers served to provide sufficient storage capacity on their farms to meet their domestic and stock needs for the year. In addition to meeting rural and domestic demand, together with stock requirements, the Grampians storages provide a water supply for more than 40,000 people in 47 towns, and are used to irrigate a small area near Horsham.

7. **Town Water Supplies and Sewerage.**—Details of the operations of the State Rivers and Water Supply Commission with respect to water supplies and sewerage for country towns and local government authorities are given in Chapter XX. Local Government, of this Year Book.

8. *Drainage, Flood Protection and River Improvement.*—The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million pounds each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and, since 1950, 24 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

9. *Finance.*—The net capital liability of the Commission at 30th June, 1964 for works under its direct control was £119 million. Of this amount, nearly £81 million were expended on irrigation and £9.5 million on domestic and stock supply systems. Both these amounts were financed entirely by the State. The total liability for urban supply was £18.5 million, which was shared almost equally between the State and the districts concerned. The remaining £10 million were due for expenditure on flood protection and drainage (£2 million) and items such as loan flotation expenses, surveys and investigations, and buildings, plant and stores (£8 million).

10. *Underground Resources.*—A survey of these resources is being carried out by the Victorian Department of Mines. Their deep drilling plant has located water suitable for town supplies at Portland, Heywood, Port Fairy, Timboon and Petersborough during exploration to 5,500 feet in the Western District basin. Other drilling plants are engaged in other parts of the State, and up to date over 100 wells have been successfully completed.

The Murray Artesian Basin underlies an area of 109,000 square miles, of which 27,000 square miles are in Victoria, 28,000 square miles in South Australia and 54,000 square miles in New South Wales. The quality of the water varies, and is suitable for domestic purposes in much of the south-western part of the basin in Victoria, but elsewhere is suitable only for limited stock use. Maximum depth of development of underground water in Victoria is approximately 4,500 feet. Some individual bores can yield up to 2,000,000 gallons a day. In the last few years the Department of Mines has considerably expanded the work of exploration for underground water.

11. *Future Programme.*—In July, 1963, the Government announced plans for a long-term storage programme to cost a total of £37.5 million between 1963-64 and 1973-74. Three storages, namely Chowilla Reservoir (a River Murray Commission Storage), Buffalo Reservoir, and Winton Reservoir, appear in the list of dams and reservoirs projected in the table on page 225.

Other works are:—

- (a) Bellfield Reservoir on Fyans Creek (Grampians Mountains) to supplement the supply to the Wimmera-Mallee system (*see* paragraph 6, p. 241);
- (b) An extensive channel enlargement and remodelling project in the Goulburn system (*see* paragraph 5 (i), p. 241);
- (c) Tarago Reservoir on the Tarago River to supplement supply to the Mornington Peninsula area;
- (d) Nillahcootie Reservoir on the Broken River below Mansfield, to be used for irrigation;
- (e) Lerderderg Reservoir on Coimadai Creek, to be filled mainly from the Lerderderg River and Goodmans Creek, and used to supplement irrigation water supplies at Werribee and Bacchus Marsh; and
- (f) Corop Lakes, two natural lakes near Rochester to be used as an adjunct to Waranga Basin for off-river storages for irrigation.

§ 4. Queensland

1. *General.*—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* Chapter II. *Physiography*, page 29, of this issue.)

(ii) *Administration.* In Queensland, the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply.

For a description of the development of the present administration *see* Year Book No. 42 and earlier issues.

(iii) *Water Utilization.* In Queensland, private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner.

2. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production continues to receive attention in Queensland. As a large portion of Queensland is tropical, the State's crops differ considerably from those of other States. Sugar cane is the greatest individual crop, representing in value nearly half of the total agricultural production. In 1963-64, 19 per cent. of the sugar cane acreage was irrigated. This represented 39 per cent. of the total irrigated area in the State. Queensland is also Australia's major tobacco-producing State, and in recent years annual production of this crop has been greatly increased by means of development under irrigation. The area of tobacco irrigated during 1963-64 represented 96 per cent. of the total plantings of this crop in the State.

Most irrigation in Queensland is undertaken by private farmers operating under licence to obtain water by pumping from streams or from natural underground storages. During recent years there has been considerable development of individual water conservation projects (water harvesting) to provide storage for irrigation of pastures, fodder crops and small crops, and orchards. Where available, electricity is the most popular source of power for pumping, and the principal areas supplied with electricity are the Burdekin Delta, the Lockyer Valley, and the Darling Downs.

It has been estimated that about two-thirds of the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley and Redland Bay. Similar development is taking place in other areas such as parts of the Darling Downs.

Furrow irrigation is used for cotton, sugar cane, some tobacco, and miscellaneous row crops. Spray irrigation is used widely on fruit, vegetables, fodder crops, and the major part of the tobacco crop. Spraying is well suited for the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Use of the border check method in the irrigation of pasture and fodder crops has proved successful.

The following table shows the number of irrigators and the areas irrigated for the years ended 31st March, 1960 to 1964, and for each division for the year ended 31st March, 1964.

AREA OF LAND IRRIGATED: QUEENSLAND

Season and division	No. of irrigators	Area irrigated (acres)							Total
		Vegetables	Fruit and vineyards	Sugar cane	Tobacco	Cotton	Other crops	Pastures	
1959-60	6,889	27,207	5,212	62,346	9,256	2,579	36,115	9,421	152,136
1960-61	7,932	29,698	5,758	68,987	13,789	2,675	50,139	15,651	186,697
1961-62	8,433	32,139	6,537	74,541	13,671	2,040	59,947	20,544	209,419
1962-63	8,562	34,258	7,020	81,506	15,801	2,206	58,029	22,341	221,161
1963-64									
Southern Queensland ..	6,292	29,833	6,014	29,896	3,098	860	50,997	19,813	140,511
Central Queensland ..	635	1,280	385	80	15	1,781	9,588	4,053	17,182
Northern Queensland ..	1,988	5,216	916	68,228	11,253	76	4,493	3,494	93,676
Total, 1963-64 ..	8,915	36,329	7,315	98,204	14,366	2,717	65,078	27,360	251,369

The pattern of irrigation in Queensland is unlike that in southern States. The spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, as round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

Two of the more important areas of development by irrigation by private pumping are the Lockyer Valley and Burdekin River Delta.

(a) *Lockyer Valley.* West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30 inches, the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that of some 60,000 acres of land highly suitable for irrigation only about a third is under irrigation. Most of the farmers operate electric pumps for irrigation purposes, and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,340 acre feet. These also tend to augment and conserve underground supplies. The Irrigation Research Station established at Gatton has been converted to a Regional Experimental Farm under the control of the Department of Primary Industry.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(b) *Burdekin River Delta.* The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of north Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage. On the other hand, the fertile delta area, with its groundwater supplies at shallow depth, has contributed greatly to the agricultural prosperity of north Queensland. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently, sugar growers and other farmers have tapped the groundwater resources of the delta to obtain supplies in the dry periods. Sugar is the main crop irrigated, together with citrus fruits, pineapples, vegetables, and tobacco. The irrigated area is in excess of 56,000 acres.

In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the delta from erosion and floods. An irrigation research station studies the development of pastures and irrigated crops under local conditions.

(ii) *Government Projects.* The Irrigation and Water Supply Commission has constructed and operates three dams and forty-two weirs with a storage capacity of 491,826 acre feet. Water from these storages supplies four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

(a) *Mareeba-Dimbulah Irrigation Area.* The large areas of sandy soils in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah are suitable for tobacco production, and in 1952 an irrigation undertaking was established.

Construction of Tinaroo Falls Dam on the Barron River has been completed, and construction of irrigation works which will serve a total of 78,000 acres is proceeding. Of this area, 49,000 acres will be irrigated. It is expected that 910 tobacco farms and 180 mixed

farms will be served. While tobacco will be the basic crop, peanuts, vegetables, maize, seed production, and stock fattening also appear suitable. One hundred and sixty-five miles of channels have been constructed, and irrigation water from Tinaroo Falls Dam is available to 549 farms.

In 1963-64 the value of tobacco leaf sold was £6.9 million from 518 farms.

(b) *Burdekin River Irrigation Area.* While construction of the major part of the Burdekin River Irrigation, Hydro-electric and Flood Mitigation Project has been deferred indefinitely, three sections associated with the Project have been completed. These are the Clare, Millaroo and Dalbeg sections, all of which were originally developed for tobacco production. However, following the recent expansion in the sugar industry, 132 of the 149 existing farms were granted cane assignments and it is expected that sugar production will be predominant in future years. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 18,862 acres, and obtain irrigation waters from central pumping stations drawing on the flow of the Burdekin. Two storages of 7,670 acre feet and 2,550 acre feet capacity have been constructed, about 79 miles and 72 miles respectively upstream from the mouth of the Burdekin, to augment supplies. At 30th June, 1964, 149 farms were occupied, but with the changeover to sugar production only 90 farms produced limited crops valued at £182,000.

(c) *Dawson Valley Irrigation Area.* A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923. Much investigation and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of the work. However, the initial step in construction was completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 10,280 acre feet and covering some 61 farms in production, returning an estimated £328,000. Pasture, vegetables, cotton, wheat, sorghum and dairy products are the principal produce. Recently, further attention has been given to the former plans for the valley, and earlier work has been under close scrutiny as a prelude to future development.

(d) *St. George Irrigation Area.* The St. George irrigation area comprises 19 farms. Water supply for the area is obtained by pumping from the combined weir and road bridge on the Balonne River at St. George. A cotton crop yielding 3,100 lb. of seed cotton per acre during the year 1963-64 has paved the way for increased plantings in future years. Fat lambs, wool, and fodder crops were the main production and total returns were £91,600.

(e) *Warrill Valley Project.* Moogerah Dam on Reynolds Creek (a tributary of Warrill Creek) is of double curvature thin arch construction 105 feet high to spillway crest level, and will serve some 11,000 acres of the Valley by private diversion of water released from its 73,000 acre feet storage into Reynolds and Warrill Creeks.

(f) *Mary Valley Project.* Borumba Dam on Yabba Creek was recently completed. This is a rock-fill structure with an upstream impermeable concrete membrane 144 feet high above stream bed. In its initial stage, storage capacity is 34,500 acre feet with provision for later increase to 80,000 acre feet. In this first stage, water released from the dam is available to maintain the town water supply for Gympie, and will allow extension of the area irrigated by private diversion from the Mary River to some 18,000 acres.

(g) *Upper Condamine Project.* Work is continuing on the construction of Leslie Dam on Sandy Creek, a tributary of the Condamine River. This will be a mass concrete gravity dam 95 feet above foundation level. In its initial stage, storage capacity will be 38,500 acre feet with provision for later increase to 87,000 acre feet. Water released from the dam will be available for irrigation of sections of the Darling Downs downstream the Condamine River as far as Cecil Plains. In addition, the city of Warwick will be supplied by pipeline from Leslie Dam.

(h) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission, on which each State is represented. For information on the project, see page 233.

(i) *Macintyre Brook Project.* Construction of an earth and rock-fill dam at Codmunda on Macintyre Brook commenced in 1964. The dam will have a capacity of 61,000 acre feet and will allow irrigation of up to 8,000 acres.

(f) *Upper Burnett Project.* Approval has recently been given to the construction of a 120 feet high mass concrete gravity dam on the Nogo River to regulate water supplies available in the Upper Burnett River. This structure, to be known as Wuruma Dam, will have a storage capacity of 150,000 acre feet and will provide an assured supply for 11,000 acres of irrigation along 100 miles of the Burnett River.

3. *Underground Water.*—(i) *General.* The use of underground water supplies has been a very important factor in agricultural and pastoral development in Queensland. Detailed information is given below concerning the Great Artesian Basin, which is the major source of stock water supplies over more than half of the State. Elsewhere, supplies obtained at shallower depths, in porous, fractured or fissured rocks, are extensively used for domestic and stock purposes. Underground water also supports more than half the irrigated area in the State, supplies being obtained chiefly from alluvial formations along river valleys, and from river deltas, the most conspicuous example of which is the Burdekin River Delta. Reference has been made to these areas in para. 2, page 244.

(ii) *Great Artesian Basin.* (a) *General.* Western Queensland, beyond the 20 inch rainfall belt, is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry mineral field and the Barkly Tableland. It comprises 421,000 square miles or nearly two-thirds of the total State area of 667,000 square miles.

(b) *Artesian Water.* Although the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons a day. A report on the nature and structure of the Great Artesian Basin, presented in 1954, indicated that the output would continue its decline during the next sixty years, at which stage the flow from the remaining flowing bores would be of the order of 110 million gallons a day. The discharge from windmills, springs and other leakages, together with the underflow past the Queensland borders, would then be about 20 million gallons a day. It was further expected that the total discharge, of the order of 130 million gallons a day, would be in equilibrium with the recharge of the basin. It was anticipated that numbers of bores on higher ground would cease to flow during the next sixty years and the area served by the flowing bores would contract by perhaps twenty per cent.

Up to 30th June, 1964, 2,856 artesian bores had been drilled, of which 1,836 were still flowing. The total depth drilled amounted to 4,001,249 feet and the estimated daily flow was 196 million gallons. Although very few bores exceed 2,000 feet in depth (the average depth is 1,404 feet) and a new bore greater than 3,000 feet deep is exceptional, the deepest bore recorded was sunk to 7,009 feet. Some bores which had been classified as "ceased" have been inspected and found to be still flowing, while other ceased bores have responded to deepening and have recommenced flowing. Both the pressure and flow of artesian bores are steadily diminishing, the rate of decrease varying widely throughout the basin. Present average rates of diminution are:—pressure, 1–2 feet of head; total flow, 2–3 per cent. per annum. The greater part of the artesian discharge is distributed by some 15,500 miles of open earth channels, from which a large proportion of water is lost by soakage and evaporation, less than 10 per cent. being actually used by stock.

Although artesian beds underlie a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores do not provide economical watering facilities because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. The quality of artesian water from the greater part of the basin is not suited for prolonged use for irrigation on most soils, nor are the supplies sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

Shallower supplies, which come from beds unconnected with artesian beds, are of variable quality and volume. These supplies are available at depths of less than 1,000 feet over a large area of the basin. Some 11,299 sub-artesian bores within the Great Artesian Basin have been registered in Queensland. An important practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

(c) *Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity, and to conserve artesian supplies by fully utilizing flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by local boards or by the Commissioner of Irrigation and Water Supply, acting as a board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1963-64 are:—areas constituted, 74; administered by the Commissioner, 56; administered by local boards, 6; number abolished, 12; area benefited, 4,193,237 acres; average rate per acre, 1.29d.; number of flowing bores, 56; total flow, 25,411,000 gallons a day; drains served, 2,541 miles.

(iii) *Other Sources.* Outside the Great Artesian Basin, ground water supplies can conveniently be divided into two broad groupings, (a) those obtained in porous, weathered, fissured or fractured rocks, and (b) those obtained in unconsolidated sediments of Cainozoic age.

In the first group, supplies, often within short distances, are widely variable both in quantity and quality, but are normally sufficient only for stock-watering purposes. Because storage is generally small, seasonal fluctuation of water level tends to be high, and this can have a significant effect on the supply available during dry seasons.

Small to moderate irrigation supplies (up to a few thousand gallons an hour) are sometimes obtained and, in exceptional cases, particularly with basalts and limestones, supplies may be as much as 10,000 gallons an hour.

The second group comprises the main irrigation supplies and, although it is common to find a wide range in the supply normally available from individual bores in any area, pumping rates as high as 10,000 gallons an hour are not uncommon. The availability of underground water has been investigated in a considerable number of alluvial valleys in south eastern Queensland and in a number of coastal areas, particularly in the vicinity of the estuaries of the Burnett, Pioneer and Burdekin Rivers, where underground water is the main source for irrigation of sugar cane.

Reference has already been made to the importance of underground water for irrigation in the Lockyer Valley (see para. 2 (i) (a) p. 244), and other areas in which irrigation supplies from alluvial formations have been extensively utilized include the Callide Valley, the Monto area, parts of Barker and Barambah Creeks, Warrill Creek, Cressbrook Creek, the Upper Logan River, and parts of the Upper Condamine River and its tributaries.

Government authorities do not normally undertake private drilling for landholders, but, as discussed below, assistance is given in the location and development of ground water supplies through the provisions of "The Farm Water Supplies Assistance Act of 1958". This assistance has considerably accelerated the use of underground water for irrigation, and there is no doubt that there are many areas with a large potential for future expansion.

4. *Stock Watering.*—(i) *General.* A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about a seventh of the sheep. In addition to the stabilization of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

(ii) *Main Stock Routes.* The Queensland Irrigation and Water Supply Commission acts as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance. From 1935, when the scheme was inaugurated, to 30th June, 1964, 615 facilities had been completed, and at 30th June, 1964, 31 facilities were under construction or investigation. A State-wide investigation is being carried out by the two authorities mentioned above to ascertain the general movement of stock, determine primary and secondary routes, register existing water facilities, and formulate a co-ordinated plan in regard to the provision of new watering facilities.

(iii) *Channel Country Stock Routes.* Under the *State Grants (Encouragement of Meat Production) Act 1949-1954*, the Commonwealth Government agreed to meet half the cost of providing additional watering facilities in stock routes leading into, along, and out of, the Channel country and on the route from Camooweal to Mount Isa. These routes connect with the main far-western route included in the State scheme inaugurated in 1935.

This scheme was completed during 1962-63. The total number of watering facilities constructed since the commencement of the scheme was 37, at a total cost of £299,592.

5. **Technical and Financial Assistance to Farmers.**—“*The Farm Water Supply Assistance Acts, 1958 to 1963*” are designed to improve the standard of water supply installations on individual holdings, encourage greater development of individual irrigation schemes, and provide greater stability of production and avoid losses in time of drought together with generally increasing production.

To achieve this purpose, the Acts authorize the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Acts are carried out under Commission supervision, and for the payment of a small charge the Commission will supervise the construction of works designed by its staff, but for which the landowners do not require financial assistance under the Acts.

During 1963-64, 907 requests (636 for technical assistance only, and 271 for technical and financial assistance) were dealt with in addition to advice on a further 498 requests on groundwater supplies. An amount of £458,507 was approved for advances under the Acts in 1963-64, and the amount advanced was £311,678.

§ 5. South Australia

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (See also Chapter II. Physiography, page 29, of this issue.)

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1886 governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act, 1886 provides for the construction of storages in non-reticulated areas, and authorizes the Minister concerned to “divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district”.

(iii) *Methods of Catchment and Conservation.* Early in the history of the State, the rights to all running streams, springs and soaks were vested in the Crown. The Water Conservation Act was passed in 1886 and, up to 30th June, 1964, more than 550 dams, tanks and rainsheds, together with 460 wells and 340 bores, had been built or acquired by the State at a total cost of £1,860,746. The rainsheds are timber frameworks roofed with galvanized iron to collect rainfall, which is delivered to storage tanks and is available for surrounding settlers and travellers. Rainshed catchments vary from a few hundred square feet to four acres in extent. Over most of the State, extraordinary precautions are taken to counteract evaporation, and pipelines in preference to open channels and covered storages are used for this purpose. Meters are attached to practically all services to check usage by individual consumers.

2. **Irrigation.**—Australian irrigation originated in the upper Murray of South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in South Australia during the seasons 1959-60 to 1963-64.

AREA OF LAND IRRIGATED: SOUTH AUSTRALIA
(Acres)

Season and authority	Vine fruits	Tree fruits	Citrus fruits	Other crops(a)	Pastures	Total
1959-60	26,014	22,315		33,183	19,387	100,899
1960-61	26,071	22,706		34,198	19,048	102,023
1961-62	27,167	25,236		36,653	19,344	108,400

Private landowners	6,173	13,723		37,736	14,056	71,688
Total, 1963-64	27,954	28,787		38,193	22,936	117,870

(a) Includes fodder and fallow land.

3. Water Supply Schemes.—(i) *Adelaide Metropolitan Water Supply.* Adelaide derives its water from six reservoirs in the nearby Mount Lofty Ranges, and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 87,400 acre feet and the pipeline has a capacity of 65,000 acre feet a year.

To the north, the new city of Elizabeth receives water from South Para Reservoir in the Barossa system and from the metropolitan storages. The consumption for the whole area for the year 1963-64 was 96,900 acre feet, equivalent to a consumption of 105 imperial gallons per head per day. The capital cost to 30th June, 1964 was £45,497,320.

(ii) *Country Reticulated Supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa, and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. There is a supplementary supply from the Mannum-Adelaide pipeline through the Warren Reservoir. The 223-mile pipeline from Morgan to Whyalla can carry up to 10,000 acre feet of water a year from the Murray River. Work is commencing on a second main of more than double that capacity. A large part of Eyre Peninsula is supplied through the 240-mile Tod River Main and the 104-mile East Coast Main with water from the Tod River reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and the newly developed Polda Basin. Along the Murray River, all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes.

Water conservation and distribution works in country districts to 30th June, 1964, have cost £48,436,965 (exclusive of river control and irrigation works on the Murray River) and contain 7,630 miles of water mains.

4. Underground Water.—The occupied portion of South Australia is, on the whole, well endowed with underground water, and the extent of the several artesian basins is reasonably well known. There are also considerable areas in which groundwater occurs, notably in the south-east of the State where, in the Keppoch district, supplies exceeding 100,000 gallons an hour are not uncommon. Quality varies widely, but a great deal is at least useful for watering stock, and this is the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government to provide watering places along stock routes, and pressure waters have been developed around the basin margin. These waters occur at comparatively shallow depth, as at Marree township, where the deepest flowing bore is 575 feet. In addition to the pressure waters, the non-pressure aquifers of the subsidiary basins provide pastoralists with stock water supplies which can be readily and economically developed.

The use of the waters of the Murray Basin is essential to settlement in the Murray-Mallee country and in the south-east of the State, especially for farms and township supplies. Mount Gambier draws its water from Blue Lake, which is fed from the Basin. Bores supply a number of towns in this Basin, the deepest bore being 1,805 feet.

On Eyre Peninsula, the Uley-Wanilla Basin has been in use since 1949, the Lincoln Basin since 1960, and the Polda Basin since 1962, to supplement surface water supplies. Investigations are being made in another basin south-west of the Uley-Wanilla Basin.

The Lincoln Basin is now fully developed and is yielding up to 20 million gallons a week which provide a water supply for the town of Port Lincoln on Eyre Peninsula.

The Polda Basin near the township of Lock was brought into operation late in 1962. The present pumping plant has a capacity of 7 million gallons a week. The water is reticulated to townships and farming properties on the upper Eyre Peninsula. Investigations are currently proceeding for the further development of this basin.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, and the Government maintains and operates 25 drilling plants which to date have developed an underground water supply potential in excess of 150 million gallons of water a day throughout the State. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and considerable tracts of previously undeveloped country in the upper south-east and Yorke Peninsula have been found to have usable water and are now being opened up.

Groundwater resources surveys are undertaken continually by geologists of the Department of Mines, the results being published in various bulletins and reports issued from time to time. The *Groundwater Handbook* published in 1959 by the Department provides a comprehensive detailed review of the State's groundwater resources.

5. Farm Water Schemes.—The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs, on farms, and on the use and suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied with water under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. South-Eastern Drainage.—In the south-east of South Australia it has been necessary to construct costly drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage.

The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of £720,876. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek, and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,100,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work is in progress on the northern section of 140,000 acres, where 56 miles of drains, involving the excavation of 2,878,770 cubic yards of material, have been completed. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. As part of the first stage of the work (which involves the construction of a main diversion drain from Beachport to Struan), an existing drain from Beachport to Legges Lane (a distance of over 24 miles) has been enlarged, and work is proceeding between Legges Lane and Struan (a distance of 33 miles). A total of 5,133,726 cubic yards of material has been excavated.

The capital cost of drainage in the South-Eastern Drainage Area System to 30th June, 1964, was £7,585,000, and the length of drains constructed was 763 miles.

An extensive system of private drains (many of which are connected to the drains constructed under Government authority) also exists in the south-east of the State.

§ 6. Western Australia

1. General.—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also Chapter II. Physiography, p. 29, of this issue.)

(ii) *Administration.* The Minister for Water Supply, Sewerage and Drainage administers the Departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1954*; he is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. The Minister for Works administers, under the *Country Areas Water Supply Act, 1947-1960*, the water supplies to about 190 towns and 4,200,000 acres of reticulated farmland, and also controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. Five town supplies are administered by local boards under the *Water Boards Act, 1904-1954* which provides a large degree of autonomy with ultimate Ministerial control.

2. Irrigation.—The main irrigation areas are situated in the south of the State along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth).

The Public Works Department controls three irrigation districts in the south-west of the State, Waroona, Harvey and Collie River, the total area irrigated in these districts during 1963-64 being 29,708 acres and the total water used 106,010 acre feet. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie River Irrigation District.

The Waroona Irrigation District (3,511 acres) is supplied from Samson Brook Dam (7,437 acre feet capacity) and Drakes Brook Dam (1,855 acre feet); the Harvey Irrigation District (13,821 acres) from Stirling Dam (46,191 acre feet), Logue Brook Dam (19,717 acre feet) and the Harvey Weir (8,372 acre feet); and the Collie River Irrigation District (12,376 acres) from the Wellington Dam (150,107 acre feet).

There are also three Irrigation Districts in the north of the State, Ord River, Camballin and Carnarvon.

The Ord District is served by the Bandicoot Bar Diversion Dam (80,000 acre feet capacity) completed in 1963. The principal crops are cotton, rice and safflower. Construction of channels and drains to serve 30,000 acres is proceeding. The Western Australian Government is considering a proposal to build a dam on the Ord River equipped with a hydro-electric plant, to conserve 3½ million acre feet of water, which will supply water for an area of some 200,000 acres agriculturally and topographically suitable for irrigation. Investigations show that the climate and soil conditions are suitable for the cultivation of sugar cane, rice, cotton, safflower and various oil seeds. The economic production of these and other crops, as well as the possible use of such irrigation areas for fattening cattle, is being examined at the Kimberley Research Station on the Ord River.

The Camballin District is situated adjacent to the Fitzroy River and is served by the Fitzroy Weir which diverts the wet season flow of this river. Total storage behind this weir, and a further small storage known as the 17-mile dam, is 5,700 acre feet. Rice and *sorghum alnum* are grown by a company which is carrying out land development under an agreement with the Government.

At Carnarvon approximately 1,600 acres are under irrigated cultivation, water being pumped from shallow aquifers located principally in the sand bed of the Gascoyne River, which is dry for most of the year. The growers' activities are controlled by the Public Works Department to prevent the drawing in of the saline groundwaters which surround the area. A total of 3,100 acre feet was pumped by the growers during 1963-64. A pilot irrigation scheme serving 20 growers by pumping from aquifers located 5 miles from the plantation area has been in operation since 1963.

Particulars of the areas of crops and pastures irrigated in Western Australia in the seasons 1959-60 to 1963-64 are given in the table below.

AREA OF LAND IRRIGATED: WESTERN AUSTRALIA
(Acres)

Season	Vegetables	Fruit	Vineyards	Cotton	Other crops (a)	Pastures	Total
1959-60 ..	8,447	7,642	705	(b)	3,668	25,427	45,889
1960-61 ..	9,076	8,335	897	(b)	5,591	24,652	48,551
1961-62 ..	9,596	8,840	972	(b)	4,235	25,036	48,679
1962-63 ..	9,375	9,588	924	(b)	4,447	27,167	51,501
1963-64 ..	9,166	10,425	966	1,546	6,153	26,958	55,214

(a) Includes fodder and fallow land.

(b) Not available for publication, included with Other crops.

3. Water Supply Schemes.—(i) *Metropolitan*. Particulars relating to the Metropolitan Water Supply are given in Chapter XX. Local Government.

(ii) *Goldfields and Agricultural Water Supply*. Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Year Book No. 37. Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 62,435 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main pipeline, mostly steel and 30 inches in diameter, equipped with eight pumping stations.

Maximum pumping capacity from Mundaring Pumping Station is 13.75 million gallons a day with provision to increase this to 18.5 million gallons a day. The total capacity of all receiving, regulating, standby and service tanks along the main pipeline is 154 million gallons and includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipelines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 103 miles. The system serves some 88 towns, and water is reticulated to 4,200,000 acres of mixed farming lands. The total length of pipelines is 3,919 miles and the number of services is 24,114. The total quantity of water pumped from Mundaring Reservoir in 1963-64 was 3,315 million gallons. The total cost of the scheme to the end of 1963-64 was £19,425,091, of which the Commonwealth Government contributed £3,609,278 under the terms of the Comprehensive Water Supply Scheme.

(iii) *Comprehensive Water Supply Scheme.* A programme consisting of enlargements of and extensions to the existing Goldfields and Agricultural Water Supply, and the creation of a new system now known as the Great Southern Towns Water Supply, was agreed to in 1947 as a work to be financed jointly by the Commonwealth and State Governments. This so called Comprehensive Water Supply programme was completed in 1961. The Great Southern Towns Water Supply originates at Wellington Dam (built as an irrigation dam on the Collic River). Water is pumped thence through a system of three pumping stations and 87 miles of 30-inch pipes to Narrogin, thence north to Brookton and south to Katanning, thus serving all towns between these points on the Great Southern Railway. The raising of Wellington Dam to increase its capacity to about 150,100 acre feet was completed in 1960. Expenditure on the Scheme to 30th June, 1964 amounted to £10,257,902. Subsequent to the completion of the Commonwealth and State Governments' agreement referred to above, the State Government has financed and built an extension westwards from Katanning to Kojonup and has currently under construction extensions from Katanning south-eastwards to Gnowangerup and from a point north of Narrogin north-eastwards to Wickiepin.

Further extensions, covering an additional area of approximately 3.7 million acres, are planned. The cost will be in the region of £10,500,000 and the Commonwealth has agreed to assist the development by the provision of an interest-bearing loan up to a maximum of £5,250,000 over a period of 7 years, the first advances to be made during 1965-66.

(iv) *Local Water Supplies.* Local schemes other than as above comprise those in the remaining agricultural and mining areas, including the North-west and Kimberley Divisions. Ninety-five separate reticulated water supplies serve country towns and districts. Of these, 86 are controlled by the Water Supply, Sewerage and Drainage Department and the remainder by local authorities.

(v) *Commonwealth and State Government Railways.* Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the Railways from other sources, e.g., Public Works and Metropolitan Water Supply Departments.

(vi) *Catchments.* The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores.

There are 85 discharge measuring stations operating in the South-west, North-west, and Kimberley Divisions. Three types of catchment peculiar to this State developed in connexion with local water supplies and deserving special mention are:—rock catchments, which consist mainly of clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.

4. *Underground Water.*—Considerable use is made of underground water by individual farmers, pastoralists, market gardeners, etc., and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of the water is suitable only for stock. However, artesian aquifers are tapped to supply or augment the town supplies of Perth, Bunbury, Busselton, Eaton and Denham, and non-pressure water is used in the public supplies of thirty-five other towns.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins has been made as a result of extensive geological surveys by oil exploration companies in recent years. The Hydrology Division of the Geological Surveys of Western Australia is investigating and assessing the underground water resources of the State. A detailed survey of the Perth Basin, including systematic exploratory drilling, is in progress. The Geological Survey undertakes geological investigations in connexion with new town water supplies or extensions of existing town water supplies, and arranges for the drilling of

recommended exploratory bores. Projects are in progress, or have recently been completed, for the towns of Northampton, Geraldton, Morawa, Lancelin, Mandurah, Albany, Halls Creek and Gingin. The Geological Survey advises local government authorities, private industry and individuals on underground water problems, and supervises departmental exploratory drilling.

§ 7. Tasmania

1. **General.**—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (*See also* Chapter II. Physiography, page 29 of this issue.)

(ii) *Main Purposes of Conservation and Utilization.* Bureau of the generally more adequate rainfall in Tasmania scarcity of water is not such a problem as it is in most mainland areas, though not all streams are by any means permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests, and by municipal authorities for town water supplies.

Until a few years ago irrigated areas were negligible except for long-established hop fields, but there is a rapidly extending use of spray irrigation on orchards and pastures, and to some extent on potatoes and beans. Up to the present there has been almost complete dependence on natural stream flows, but the need for some regulating storages is now apparent. A few farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works and for limited domestic use is exploited in the south-east, the midlands and north-western Tasmania. Supplies are mainly derived from fractured rocks by means of shallow bores which yield between 200 and 400 gallons an hour. On King and Flinders Islands water of variable quality suitable for stock and limited domestic use is obtained from aeolian sands. The township of Currie on King Island obtains up to 200,000 gallons a day for domestic use from this source. Underground water investigations, and almost all of the water boring in Tasmania, is carried out by the Mines Department.

(iii) *Administration.* In 1962 a new authority, the Metropolitan Water Board, assumed overall control of water supplies to the cities of Hobart and Glenorchy and the municipalities of Kingborough and Clarence, all of which, however, retain primary responsibility for reticulation. Water supplies to other areas are primarily the responsibility of local councils, subject to approval of plans and finance by the Rivers and Water Supply Commission.

While the Commission does not own the waters of streams and lakes, it is empowered to take them, or issue licences, subject to pre-existing statute and common law rights. These include water reserved for specific industries, municipal requirements, and ordinary riparian rights. The Commission is also concerned with drainage trusts' operations, river improvement, including repairs after flood damage, and stream gauging.

2. **Hydro-electricity.***—With the exception of a small diesel plant on King Island, electricity generation in Tasmania has resulted entirely from the development of its plentiful waters, and on a world basis this State ranks second to Norway in electricity consumption per head of population. The Hydro-Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration.

3. **Regional Water Schemes.**—Three regional water schemes are in operation. The first draws water from the east bank of the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities, and the second, which increases existing supplies to Hobart, pumps water from the west bank of the River Derwent at Lawitta. These two schemes are controlled by the Metropolitan Water Board. In addition, the State government has constructed a regional water scheme to serve the aluminium refinery at Bell Bay on the River Tamar and to supply several municipalities with bulk water for domestic and industrial purposes.

* See also Chapter VII. Electric Power Generation and Distribution, pp. 219-20.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. Diversion to the eastern half of the watersheds is not regarded as practicable.

4. **Industrial.**—Three principal industrial schemes have been installed privately. About 10 million gallons of water a day are being pumped from the Derwent River at Lawitta for use in a nearby paper mill. Another paper mill at Burnie uses several million gallons of water a day from the Emu River, and a factory at Heybridge reticulates water from Chasm Creek.

The State Government has constructed some water schemes for use primarily for industrial purposes. The scheme serving the aluminium refinery at Bell Bay is referred to in para. 3, p. 254. A new wood-pulping plant near Geeveston uses several million gallons of water a day and, in order to supplement the summer flows of the Kermadie River for use by the industry, the State Government in 1962, through the Hydro-Electric Commission, constructed a storage on Riley's Creek by means of a 37-foot high rock-fill dam. The Prosser River Scheme, now nearing completion, is designed to supply water to a sodium alginate industry at Louisville near Orford and to supplement the water supply of the township of Orford.

5. **Irrigation.**—There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a scheme near Cressy. The *Water Act* 1957 provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose, but no such works have been undertaken to date. All systems operating are privately owned, and with one exception (at Bushy Park) are single farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by pumping systems.

Details of the areas of crops and pastures irrigated in Tasmania in the seasons 1959–60 to 1963–64 are shown in the following table.

AREA OF LAND IRRIGATED: TASMANIA

(Acres)

Season	Vegetables	Fruit	Hops	Other crops (a)	Pastures	Total
1959–60.. ..	1,235	2,350	1,311	1,873	11,339	18,108
1960–61.. ..	2,103	3,311	1,364	1,787	10,369	18,934
1961–62.. ..	3,388	3,930	1,447	2,711	11,713	23,189
1962–63.. ..	4,100	4,446	1,465	2,839	11,435	24,285
1963–64.. ..	6,319	5,933	1,463	4,162	15,693	33,570

(a) Includes fodder and fallow land.

§ 8. Northern Territory

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II. Physiography, and a brief outline of contour and physical characteristics in Chapter V. The Territories of Australia.

2. **Administration.**—Under the *Control of Waters Ordinance* 1938–1962 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under prescribed conditions. There is a Water Resources Branch of the Northern Territory Administration under the control of a Director. The functions of the branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, and flood prevention and control.

Under the *Water Supplies Development Ordinance 1960-1963* the Water Resources Branch gives financial assistance to landholders for the development and improvement of water supplies on agricultural and pastoral leases. Another function of the branch, which is increasing in importance as it builds up a body of technical data and information about the Territory's water resources, is the dissemination of this knowledge by the provision of advice and technical assistance to professional drillers and to landholders.

3. **Underground Water.**—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry, which provides a large proportion of the Territory's income. The inadequacy of surface water during the dry season emphasizes the importance of underground water supplies in the Territory, where most of the cattle numbers are dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle numbers, but geological features, controlling both soils and the storage of underground water, are equally important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, the area has a comparatively low carrying-capacity for cattle, and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in winter, despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an average annual rainfall of only 5 inches at the margins of the Simpson Desert in the south-east corner. In the lower rainfall areas the search for potable underground water becomes exacting, but in the Ord-Victoria region and the Barkly Tablelands the best pastures are generally in areas where sub-surface conditions are suitable for the storage of underground water.

In the Ord-Victoria region the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Outcrops of sandstone, limestone and shale also occur in this area and underlie the volcanic rocks in most places. In general, these sedimentary rocks dip gently to the east, and sub-artesian conditions prevail. Underground water in this region is obtained from sandstone aquifers which yield supplies ranging up to 4,000 gallons an hour. Most of the bores are required in areas where the sediments are overlain by basalts; selection of bore sites is usually difficult. Supplies of shallow groundwater from joints, cracks and faults in the basalt are insignificant and virtually all the bores obtain water from the sub-basalt sandstone aquifers. Successful bores in this area have ranged in depth from 200 feet to more than 600 feet. There are also small basins of younger sedimentary rocks in the region, some of which yield sub-artesian, and in places artesian, water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian), but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

In the Alice Springs district, valuable pastures occur on a great variety of rock types, and from some of these very little underground water is available. Many shallow bores obtain water from alluvium near stream channels. There are also many successful bores in porous sands and limestone in Mesozoic and Cainozoic sedimentary basins and in some Upper Proterozoic and Palaeozoic limestones and sandstones. Small supplies of underground water are obtained from bores intersecting joint zones in metamorphic rocks and granite of archaean age. However, except in areas close to recharge, the water quality varies from moderate to poor.

The Water Resources Branch of the Northern Territory Administration has intensified research aimed at increasing the water supplies for Alice Springs and Darwin. Bores into the Palaeozoic Mereenie sandstone, 12 miles South of Alice Springs, have intersected sub-artesian aquifers at depths between 500 and 1,000 feet, and water from these bores is now used to supplement the existing town supply from alluvial basins. High-yielding dolomite aquifers of Lower Proterozoic age in the area 16 miles south of Darwin are being developed to augment the Darwin water supply. Tennant Creek now has a water supply pumped from Cabbage Gum Basin, a small basin of alluvium and deeply weathered Precambrian rocks, 15 miles south of the town. A continuous check on the hydrological results of such pumping is maintained in order to adjust future yields from the basin.

Up to 30th June, 1964, 5,533 bores and wells were registered in the Territory. Of these 3,158 were for pastoral use, 246 for agricultural use, 258 served town and domestic water supplies, 19 were in use on mining fields, 252 were investigation bores, 386 were Government established stock route bores, and 114 were classified under other uses.

Registered bores which have been abandoned total 1,100. These include successful bores which have collapsed, and bores which were unsuccessful owing to drilling difficulties, insufficient quantity or poor quality of underground water.

4. Irrigation.—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for a further dam site to augment Darwin's water supply and to provide reticulated water to properties without natural waters have commenced in the Berry Springs area.

Hydrological investigations are being carried out by the Administration to determine the supply of water and the best methods of control and use in the potential rice-growing areas of the Territory. At 30th June, 1964, 187 gauging stations were in operation in the Territory, under the control of the Administration's Water Resources Branch. Of these, 155 measure the volume of discharge from rivers and streams, 21 measure the level of flooding of the north sub-coastal plains, 7 record tide levels (one of these being the Darwin Harbour Tide gauge, which is operated on behalf of the Harbour and Marine Branch) and the remaining 4 measure storage water levels.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River and Alice Springs areas, with only small acreages being utilized. In these areas, a total of 320 acres on 49 farms is under irrigation. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and for dairying and mixed farming.

The Katherine River appears to offer irrigation potentialities on the level soil below the township. Approximately 14 properties in and around Katherine are at present drawing water from the Katherine River for irrigation purposes, vegetables and pastures being the usual crops grown. The Katherine River passes through a gorge upstream of the town under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production.

The possibility of using the Daly and Adelaide Rivers for irrigation is also being investigated. The Commonwealth Government recently approved the establishment of three pilot farms on the Marrakai Land System along the Adelaide River to ascertain whether rice and fodder crops could be grown on a commercial scale in this area.

§ 9. Papua and New Guinea

1. **Rainfall.**—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).

2. **General.**—For a general description of these territories *see* Chapter V. The Territories of Australia, pages 118–19, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (700 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in the previous chapter.

CHAPTER IX

POPULATION

Statistics in this chapter cover, in the main, the year 1963. More detailed figures will be found in the annual bulletin, *Demography*, and current statistics are published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and the mimeographed series *Australian Demographic Review* and *Oversea Arrivals and Departures*.

All statistics in this chapter, except for those in § 14. The Aboriginal Population of Australia, are exclusive of particulars of full-blood Aboriginals.

§ 1. Population Statistics

Population statistics for Australia or the component States and Territories at specific dates are of two types.

- (i) *Those ascertained by census enumeration.* These results attain a very high degree of accuracy and may generally be accepted without reservation.
- (ii) *Estimates derived by the application of vital and migration statistics to census data.* In general, three estimates are made for any specific date.

(a) Original estimates for dates subsequent to a census made before another census is taken. These estimates represent the population ascertained at the census, plus natural increase and recorded net migration since the census. As complete records of interstate migration are not available, the estimated State or Territory populations so derived are approximate, and are subject to revision when the actual population of each State or Territory is ascertained at the next census. For some States, such revisions are substantial.

(b) Two-stage revision of the original estimates for each newly completed intercensal period to adjust for the difference between the new census result and the comparable estimate. This is to bring intercensal estimates into line with the two census populations and thus effect adjustment for unrecorded movement of population in the intercensal period. The first revision is reconciled with preliminary census results and the second revision with final census results.

Final revised figures become the permanent population estimates. For purposes requiring a mean population for any twelve-month period, such mean is calculated as described in § 4, p. 269. As populations at specific dates are used in these calculations, consequential revisions are made to mean populations when the estimates for specific dates are revised as described above.

In accordance with this policy, all Australian population statistics shown in this issue of the Year Book for dates up to 30th June, 1961, and all mean populations for calendar years up to 1960 and financial years up to 1960-61, are final. Population statistics for dates or years subsequent to these will be revised in accordance with the results of the next census.

Since the establishment of the Commonwealth Bureau of Census and Statistics, the populations of the States and Territories have been estimated in a comparable manner and attention has been given to the improvement of the basic data from which the estimates are compiled. The principal source of error in early estimates lay in the migration

records, both oversea and interstate, and post-censal revisions were made to these figures. With the improvement of records of oversea migration, however, such post-censal revision of the records of oversea migration was not found necessary after the 1933 census. The same level of improvement has not been achieved in respect of records of interstate movement, which cover travel by sea, air, rail and some movements by road.

§ 2. The Census

1. *Census-taking*.—Although “musters” of the population were carried out at least annually from 1788 to 1825, the first regular census in Australia was not taken until 1828, when a count of the population of the Colony of New South Wales was made. Subsequent censuses were taken sporadically in the various colonies until 1881, when a census was taken on the same date throughout Australia.

In 1891 and 1901, census-taking was still in the hands of the Government Statisticians of the States, but, in 1911, under the provisions of the *Census and Statistics Act 1905* which provided for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first census of the Commonwealth of Australia. The second was taken in 1921, the third in 1933, the fourth in 1947, the fifth in 1954, and the sixth in 1961.

The Australian census is on the *de facto* basis, i.e., it records the population actually resident at a specific date, and not according to place of usual residence (the *de iure* basis).

2. *Population recorded at Censuses*.—State and Territorial populations recorded at the Australia-wide censuses taken over the period 1881 to 1961 are shown in the following table. The figures relate to the political boundaries of the several States (or Colonies) and Territories as they existed at the date of each census, except that the Northern Territory has been shown separately from South Australia for the censuses prior to its transfer from that State. The years of formation of the separate Colonies and transfer of the Territories are shown in Chapter 1, § 3 and § 4. The total populations recorded at the censuses taken in the Colonies from 1828 to 1881 were shown in Year Book No. 40, page 326.

(a) Includes Australian Capital Territory prior to 1911. (b) Part of New South Wales prior to 1911.

NOTE.—Minus sign (—) denotes decrease.

§ 3. Growth and Distribution of Population

1. **Growth of Population.**—The table which follows shows the growth in the population of each sex in the various States and Territories as measured by the estimated population at 31st December in 1900 and thereafter at decennial intervals to 1960, and for each year from 1960 to 1964.

ESTIMATED POPULATION

At 31st Dec.—	N.S.W.	Victoria	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T. (a)	Australia

(a) Part of New South Wales prior to 1911. (b) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment.

Estimates of population for intercensal years are obtained in the manner outlined in § 1, p. 259.

The estimated population at 31st December each year from 1788 to 1946 was shown in *Demography*, Bulletin No. 67, 1949, and for the period 1886 to 1963 in *Demography*, Bulletin No. 81, 1963. A graph illustrating the growth of the population of Australia and of each State and Territory appears on page 275.

2. **Proportion of Area and Population, Density and Masculinity.**—The previous table shows the estimated number of persons in each of the States and Territories at 31st December, 1964. In the following table, the proportions of the total area and of the total population represented by each State and Territory are given, together with the density and the masculinity of the population.

DENSITY AND MASCULINITY OF POPULATION, 1964

State or Territory	Proportion of total area (per cent.)	Proportion of estimated population, 31st December, 1964 (per cent.)			Density (a)	Masculinity (b)
		Males	Females	Persons		
New South Wales	10.43	36.83	37.10	36.96	13.44	100.90
Victoria	2.96	28.00	28.20	28.10	35.97	100.92
Queensland	22.47	14.27	14.08	14.18	2.39	103.05
South Australia	12.81	9.29	9.28	9.28	2.75	101.74
Western Australia	32.88	7.16	7.06	7.11	0.82	103.03
Tasmania	0.89	3.35	3.32	3.34	14.22	102.53
Northern Territory	17.53	0.32	0.23	0.28	0.06	140.75
Australian Capital Territory	0.03	0.78	0.73	0.75	90.19	107.93
Australia	100.00	100.00	100.00	100.00	3.79	101.63

(a) Number of persons per square mile.

(b) Number of males per 100 females.

Additional information regarding density and masculinity of population appears in later sections of this chapter.

3. **Urban and Rural Distribution.**—The table on pages 264–5 shows the distribution of the population among metropolitan, other urban and rural areas in each State and Territory at the 1954 and 1961 censuses. Corresponding details for previous censuses were shown in earlier issues of the Year Book.

Metropolitan Urban divisions comprise the capital cities of the States and the City of Canberra, the National Capital, and include, together with the cities proper, a number of adjacent municipalities and shires. The boundaries of the Metropolitan Urban divisions are determined for census purposes by the Statisticians of the States in collaboration with the Commonwealth Statistician, and in order to conform to the growth of the Metropolitan Urban population the boundaries are reviewed at each census and adjustments made, wherever necessary, to embrace contiguous urban areas that have developed since the previous census. Amendments were made, prior to the census of 1961, to the boundaries of the Metropolitan Urban divisions of Victoria, Queensland and Tasmania.

Other Urban divisions comprise (i) all separately incorporated municipalities (or cities, towns or boroughs) outside the Metropolitan Urban division (including Darwin, the capital city of the Northern Territory) except for any municipality or part of a municipality which was specifically regarded as rural for census purposes; and (ii) towns, not separately incorporated, with a population of 1,000 persons or more (750 persons or more in Tasmania).

Rural divisions comprise the remaining portions of each State and Territory.

The term "Migratory" used in the following tables refers to persons not elsewhere enumerated who at midnight between 29th and 30th June, 1961, were on ships in Australian waters or were travelling on long-distance trains, motor coaches or aircraft.

Before comparisons are made between the populations of the Metropolitan Urban, Other Urban, and Rural divisions at various censuses, consideration must be given to the changes which have taken place in the composition of these divisions from census to census. In the following table the comparative figures for 1954 have been adjusted to the boundaries used in 1961.

URBAN AND RURAL POPULATION(a): CENSUS, 30th JUNE, 1961

Division	1961 Census			Proportion of total population of State (per cent.)		Percentage increase since the 1954 census

(a) See letterpress preceding this table for definitions of urban, rural, etc., and for reference to the adjustments to 1954 census figures in order to provide approximate comparisons on the 1961 census basis.

NOTE.—Minus sign (—) denotes decrease.

A feature of the metropolitan population is its relatively higher femininity, but this has become less marked over the last 20 years owing to the excess of males in the high annual number of births and in the oversea migration flow in that period. In 1933 the masculinity ratio of metropolitan population was only 90.35 males per 100 females, but in succeeding censuses the ratios have been: 1947, 92.76; 1954, 96.04; and 1961, 97.67. There is little difference in the ratios between the several metropolitan areas, the ratio of males per 100 females ranging from 95.39 in Perth (Western Australia) to 98.71 in Melbourne (Victoria).

4. Principal Urban Areas.—The following table shows the population of the principal cities and towns (population 6,000 or more) in each State and Territory of Australia at 30th June, 1964, or at 30th June, 1961, where later figures are not available.

(a) Metropolitan area. (b) Entire urban area. (c) Non-municipal town, i.e., a town not separately incorporated for purpose of local government. (d) 30th June, 1961. (e) Population count, 30th June, 1964. (f) As defined by South Australian Housing Trust.

5. **Urban Population Outside Metropolitan Areas.**—The aggregate urban population at the 1961 census of all cities and towns outside the metropolitan area of each State with 2,000 or more and 3,000 or more urban inhabitants, irrespective of whether such centres were incorporated separately or not, together with the proportion of the aggregate urban population of these cities and towns to the total population of the State, is shown in the following table.

AGGREGATE URBAN POPULATION OF NON-METROPOLITAN CITIES AND TOWNS OF SPECIFIED SIZE: CENSUS, 30th JUNE, 1961

State or Territory	Cities and towns outside metropolitan area with urban population of—					
	2,000 and over			3,000 and over

Total	264	2,467,132	23.48	182	2,269,539	21.60

(a) The only city or town is Canberra, the capital city of Australia, classed as metropolitan.

In the foregoing table, "Urban Areas" comprising two or more local government areas, or portions thereof, are treated as units. The "Urban Areas" so treated are: in New South Wales, Newcastle; in Victoria, Ballarat, Bendigo, Geelong, Latrobe Valley (Urban); in Western Australia, Kalgoorlie; and in Tasmania, Launceston. With the exception of Latrobe Valley (Urban), the areas in each instance are composed of the nucleus town and neighbouring local government areas, either in whole or in part, to form one continuous built-up area. In Latrobe Valley (Urban) there is no nucleus town, but all urban localities are closely associated with the development of the Latrobe Valley brown coal deposits.

A table showing similar data for the 1954 census was given in Year Book No. 47, page 295 and one for the 1947 census in Year Book No. 40, page 334. Comparisons between these various tables can be made only if allowance is made for changes in the status and structure of local government areas and for changes in the manner of determining urban population at each census.

6. **Principal Cities of the World.**—The following table shows the population of the world's largest cities at the latest available date. Since the way in which cities are delimited differs from country to country, the table shows data for the urban agglomeration, if such exists, as well as data for the so-called city proper. The urban agglomeration is defined in the United Nations *Demographic Yearbook* 1963 (page 35), from which most of the figures in the table have been taken, as the suburban fringe or thickly settled territory lying outside of, but adjacent to, city boundaries. (See also the Technical Notes on Statistical Tables and footnotes to the table in the *Demographic Yearbook*.)

§ 4. Mean Population

1. *General.*—Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods.

From 1901 onwards, the mean population for any year has been calculated by the formula:—

$$\text{Mean Population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where *a*, *b*, *c*, *d* and *e*, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31st December of the preceding year and 31st March, 30th June, 30th September and 31st December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population progressing smoothly through the five values *a*, *b*, *c*, *d*, and *e*.

2. *Results.*—(i) *Calendar Years.* The following table shows the mean population of each State and Territory for the calendar years 1955 to 1964.

MEAN POPULATION: CALENDAR YEARS

§ 5. Elements of Increase

1. *General.*—The two factors which contribute to the growth of a population are "natural increase", i.e., the excess of births over deaths, and "net migration", i.e., the excess of arrivals over departures. The "total increase" of the population is obtained by combining natural increase with the increase by net migration. However, comparison of the total increase so obtained with that derived by subtracting the population recorded at one census from that recorded at the next census reveals differences which can be attributed partly to differences in the coverage of the census enumerations, and partly to deficiencies in the records of the elements of increase.

2. Elements of Increase, 1936-1964, Australia.—In the following table, particulars are given of the elements of increase for each five-year period from 1936 to 1960 and for each of the years 1960 to 1964. The numbers of males, females and persons are shown separately.

POPULATION: ELEMENTS OF INCREASE, AUSTRALIA

Period	Natural increase(a)	Net migration(b)	Intercensal adjustment(c)	Total increase

1964.. .. .	128,555	99,342	(d)	227,897

(a) Excess of births over deaths. For the period September, 1939, to June, 1947, deaths of defence personnel, whether overseas or in Australia, have been included. (b) Excess of arrivals over departures. Excludes troop movements for the period September, 1939, to June, 1947. (c) Adjustment of population on the basis of the final results of the 1947, 1954 and 1961 censuses. (d) For periods subsequent to the census of 30th June, 1961, the intercensal adjustment will not be known until after the next census has been taken.

3. Analysis of Intercensal Increase, 30th June, 1954, to 30th June, 1961.—In the following table, particulars are given for States and Territories of the recorded elements of increase and the intercensal adjustment for the whole of the seven-year intercensal period from 30th June, 1954, to 30th June, 1961.

As stated in § 1. of this chapter (*see* p. 259), complete records of interstate migration are not available. For this reason the differences between the estimated populations and those recorded at the census of 30th June, 1961, i.e. the intercensal adjustments, were substantial for some States.

POPULATION: ANALYSIS OF INTERCENSAL INCREASE, 30th JUNE, 1954, TO 30th JUNE, 1961

State or Territory	Population at 30th June, 1954(a)	Natural increase(b)	Net migration (c)	Total recorded increase	Intercensal adjustment (d)	Population at 30th June, 1961(a)

(a) Census. (b) Excess of births over deaths. (c) Excess of arrivals over departures for recorded interstate and overseas migration. (d) Adjustment of population on the basis of the census of 30th June, 1961.

4. Rate of Population Growth.—In the following two tables natural increase refers to the excess of births over deaths (including deaths of Australian defence personnel), net migration refers to excess of overseas arrivals over departures excluding overseas movement of defence personnel for the period September, 1939 to June, 1947, and total increase is the sum of natural increase and net migration together with differences disclosed by results of population censuses up to 30th June, 1961.

Annual rates of natural increase, net migration and total increase, for single years, represent the increase during the year expressed as a proportion (per cent.) of the population at the beginning of the year. These rates are slightly higher than those calculated as a proportion (per cent.) of the mean population for the year.

Average annual rates of increase for periods greater than one year have been calculated in the following manner.

The average annual rate of total increase is computed by the formula—

$$P_t = P_0 (1+r)^t$$

where P_0 and P_t are the populations at the beginning and end of a t -year period, respectively and r is the average annual rate of growth.

The average annual rate of natural increase and net migration is computed by dividing the average annual rate of total increase between its components in proportion to the fraction of total increase due to each component during the period. Differences between the sum of the rates of natural increase and of net migration and the rate of total increase are due to the intercensal adjustment.

POPULATION: RATE OF GROWTH, AUSTRALIA
(Per cent.)

Period	Annual rate of population growth		
	Natural increase	Net migration	Total increase
AVERAGE ANNUAL RATE			
1936-40	0.79	0.13	0.94
1941-45	0.94	0.02	0.98
1946-50	1.36	0.91	2.26
1951-55	1.38	0.95	2.31
1956-60	1.40	0.83	2.22
ANNUAL RATE			
1960.. .. .	1.39	0.89	2.27
1961.. .. .	1.45	0.59	2.04
1962.. .. .	1.36	0.59	1.95
1963.. .. .	1.30	0.67	1.97
1964.. .. .	1.17	0.90	2.07

The average annual rate of population growth during the present century has been 1.72 per cent., but the results from year to year have deviated widely from this figure. In the following table, the period 1st January, 1901, to 31st December, 1964, has been arranged into certain defined groups of years according to the occurrence of influences markedly affecting the growth of population.

POPULATION: PERIODICAL RATES OF GROWTH: AUSTRALIA

Period	Interval (years)	Total increase ('000)	Average annual numerical increase ('000)	Average annual rate of population growth (per cent.)		
				Natural increase	Net migration	Total
1901 to 1913	13	1,128	87	1.55	0.49	2.04
1914 to 1923	10	862	86	1.49	0.15	1.64
1924 to 1929	6	680	113	1.26	0.62	1.88
1930 to 1939	10	569	57	0.82	0.02	0.85
1940 to 1946	7	513	73	0.98	0.01	1.01
1947 to 1952	6	1,222	204	1.37	1.19	2.54
1953 to 1964	12	2,511	209	1.37	0.77	2.13

Rates of population growth from 1886 are shown for each State and Territory of Australia in the annual bulletin, *Demography*.

Estimated rates of growth of the population of Australia in comparison with those for other countries of the world for the years 1958-1962 are shown in the table in § 15. International Statistics of Population.

§ 6. Density

From certain aspects, population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,967,909 square miles and an estimated population at 31st December, 1964, of 11,250,708, excluding full-blood Aborigines, has a density of only 3.79 persons to the square mile, and is, therefore, one of the most sparsely populated countries of the world. For other continents and sub-continent, the densities in 1962 were approximately as follows:—Europe (excluding U.S.S.R.), 227; Asia (excluding U.S.S.R.), 166; U.S.S.R., 26; Africa, 23; Northern and Middle America, 30; and South America, 22. The population density of Australia in 1962 was 3.64; about one-sixth of that of South America and of Africa; about one-seventh of that of U.S.S.R.; about one-eighth of that of Northern and Middle America; about one-forty-sixth of that of Asia (excluding U.S.S.R.); and about one sixty-second of that of Europe (excluding U.S.S.R.).

Because of the large area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole, the figure has increased from 1.29 per square mile in 1901 to 3.79 in 1964. The rise in density from 1901 to 1964 in each State and Territory was:—New South Wales 4.45 to 13.44, Victoria 13.77 to 35.97, Queensland 0.76 to 2.39, South Australia 0.95 to 2.75, Western Australia 0.20 to 0.82, Tasmania 6.68 to 14.22, Northern Territory 0.01 to 0.06, and Australian Capital Territory 2.05 (in 1911) to 90.19. When comparing the density of population of the several States, consideration should be given to the average annual rainfall distribution in each State as an indication of the climatic influence upon probable population numbers. The proportion of the area of Australia receiving less than 10 inches of rainfall is 39 per cent.; that of the various States is:—New South Wales, 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; and Tasmania, nil.

The number and density of population of the principal countries and continental groups of the world are shown in the table in § 15. International Statistics of Population.

§ 7. General Characteristics

NOTE.—Particulars of the characteristics of the population of Australia at the 1961 census compared with the 1954 census are shown in this section, and for the individual States and Territories at the 1961 census in Year Book No. 49 (*see pp. 317-35*). Information concerning the industry, occupational status and occupations of the population as recorded at the 1961 census is given in Chapter XII. Employment and Unemployment, and on dwellings and householders in Chapter XI. Housing and Building.

1. **Sex Distribution.**—The number of males to each hundred females has been adopted as a measure of the "masculinity" of the population. The masculinity of the population of each of the States may be obtained for each year from 1796 to 1907 from the table on pages 163-5 of Year Book No. 2 and for the years 1900 to 1910 from the table on page 123 of Year Book No. 5.

With the exception of some dislocation arising from the two World Wars, there was a continuous diminution of the masculinity of the population until 1945. This resulted from the increasing proportion of the population in the higher age groups, in which females preponderate owing to their greater longevity, and the general long-term fall in the birth rate. At the 1947 census, the numbers of the sexes were practically equal, but during the following decade there was an increase in masculinity owing to the greater number of males as compared with females in net oversea migration, and the recovery of the birth rate in the post-war period from the low levels of the 1930s.

The following table shows the masculinity of the population at ten-year intervals from 1900 to 1960 and for each of the years 1960 to 1964.

POPULATION: MASCULINITY
(NUMBER OF MALES PER 100 FEMALES)

At 31st December—	N.S.W.	Victoria	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

(a) At the 1954 and 1961 censuses unspecified ages were distributed over all ages prior to tabulation.

NOTE.—Minus sign (-) denotes decrease.

POPULATION OF AUSTRALIA, 1788 TO 1964

RATIO GRAPH

NOTE:- THE VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO THE RATE OF INCREASE OR DECREASE; ACTUAL NUMBERS ARE INDICATED BY THE SCALE.

OVERSEA ARRIVALS AND DEPARTURES

AUSTRALIA, 1925 TO 1964

Of the 10,508,186 persons enumerated at the 1961 census, 39.3 per cent. were under 21 years of age; 52.2 per cent. were 21 to 64 years; and 8.5 per cent. were aged 65 years and over. At the 1954 census, 36.3 per cent. were under 21 years of age; 55.4 per cent. were 21 to 64 years; and 8.3 per cent. were aged 65 years and over.

(ii) *Proportional Distribution, Censuses, 1871 to 1961.* The next table shows the changes which have taken place in the age distribution of the population of Australia since 1871.

POPULATION: PROPORTIONAL AGE DISTRIBUTION, AUSTRALIA
(Per cent.)

75-79	74,549	105,459	180,008	77,291	110,441	187,732
80-84	34,707	56,325	91,032	35,517	57,759	93,276
85 and over ..	16,440	31,459	47,899	16,508	32,189	48,697
Total	5,506,466	5,409,783	10,916,249	5,615,020	5,520,489	11,135,509

(a) Based on the age distribution at the census of 30th June, 1961, and on subsequent births, recorded ages at death and recorded ages of migrants.

3. Conjugal Condition.—Of the total population of Australia at the 1961 census, 48.0 per cent. were never married, 46.2 per cent. were married (including 1.4 per cent. married but permanently separated), 5.0 per cent. were widowed, and 0.8 per cent. were divorced. Between 1954 and 1961 the number never married increased by 19.8 per cent., those married (including permanently separated) by 14.8 per cent., the widowed by 13.0 per cent., and the divorced by 18.7 per cent.

The ratio of widowed females to widowed males increased from 311 : 100 in 1954 to 352 : 100 in 1961. This disparity between the number of widowed males and widowed females is the result of two influences. The first is the greater longevity of females coupled with the usually younger age at marriage; and the second is that a larger proportion of widowed males remarry.

The ratio of males to females in the never married group "15 years of age and over" increased from 141 : 100 in 1954 to 143 : 100 in 1961.

The numbers of males, females and persons recorded at the censuses of 30th June, 1954 and 1961, are shown in the following table according to their conjugal condition.

POPULATION: CONJUGAL CONDITION, AUSTRALIA

Conjugal condition	Census, 30th June, 1954			Census, 30th June, 1961			Increase, 1954-61

(a) In processing the 1961 census data a conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

NOTE.—Minus sign (-) denotes decrease.

4. Countries of Birth.—At 30th June, 1961, the Australian-born element of the population of Australia represented 83.1 per cent. as compared with 85.7 per cent. at the 1954 census. The number of Australian-born increased by 1,029,342 or 13.4 per cent. between 1954 and 1961, while the over-sea-born population increased by 492,314 or 38.3 per cent. The latter resulted mainly from the increase of 441,148 in the number of persons of European birthplace between 1954 and 1961—principally persons born in Italy (an increase of 108,399); United Kingdom and Republic of Ireland (91,197); Greece (51,471); and the Netherlands (50,048).

Of persons born outside Australia, 55.5 per cent. were males and 44.5 per cent. females.

The following table shows the countries of birth of the population recorded at the census of 30th June, 1961, as compared with the census of 30th June, 1954. There have been minor revisions to the figures for 1961 in respect of males born outside Australia, with consequent revision of relevant totals.

NOTE.—Minus sign (—) denotes decrease.

6. **Nationality.**—At 30th June, 1961, 9,984,709 persons, or 95.0 per cent. of the Australian population, were of British nationality (consisting of 83.1 per cent. born in Australia and 11.9 per cent. born outside), compared with 95.5 per cent. in 1954 (85.7 per cent. born in Australia and 9.8 per cent. born outside). Of the oversea-born population in 1961, 70.6 per cent. were British subjects, compared with 68.6 per cent. in 1954.

The following table shows the numbers of males, females and persons at the 1954 and 1961 censuses classified by nationality (i.e. allegiance). The figures for nationals of foreign countries have had a few minor revisions made since the previous issue.

(a) All persons of individual citizenship status who, by virtue of the *Nationality and Citizenship Act 1948*, are deemed to be British subjects. Includes naturalized British. For purposes of this table Irish nationality is included with British.

NOTE.—Minus sign (—) denotes decrease.

7. Religion.—At the 1921 census, 92,258 persons, or 1.7 per cent. of the Australian population gave no reply to this question, but at the censuses of 1933, 1947, 1954 and 1961, when the public was informed that there was no legal obligation to answer the question, 848,948 persons (12.8 per cent.), 824,824 (10.9 per cent.), 855,819 (9.5 per cent.) and 1,102,929 (10.5 per cent.) respectively, gave no reply. Of males, 11.2 per cent., and of females 9.8 per cent., did not state their religion in 1961.

Among the denominations with the larger numbers of adherents, the greatest proportional increase since 1954 was recorded by Roman Catholic and Catholic combined, 27.1 per cent.; then Presbyterian, 12.2 per cent.; Methodist, 10.1 per cent.; Church of England, 7.6 per cent. The largest proportional increase was that of the Greek Orthodox denomination, 107.3 per cent.

At the 1961 census, as at earlier censuses, 99 per cent. of those who stated their religion professed the Christian faith. Between 1954 and 1961 the number who stated they were of non-Christian religion increased by 26 per cent., while those specifically stating they had no religion increased by 59 per cent.

The following table shows the number of adherents of the various religions as recorded at the censuses of 30th June, 1954, and 30th June, 1961.

POPULATION: RELIGION, AUSTRALIA

§ 8. Oversea Arrivals and Departures

NOTE.—More detailed statistics of overseas arrivals and departures, covering country of residence, country of embarkation/intended disembarkation, mode of travel, month of arrival or departure, etc., are shown in the tables of Section II., Oversea Arrivals and Departures, of the annual bulletin, *Demography*.

1. Oversea Arrivals and Departures since 1936.—Earlier issues of the Year Book contain, in summary form, tables showing the increase of population by net migration from 1861 to the latest date, while information for individual years from 1881 is published in the annual bulletin, *Demography*. The following table shows, for Australia, arrivals and departures since 1936, and refers to total movement irrespective of length of stay. Air crews and ships' crews and persons passing through Australia on board the same ship or aircraft are excluded from Australian statistics of overseas arrivals and departures. A graph showing arrivals and departures from 1925 to 1964 appears on page 276.

OVERSEA ARRIVALS AND DEPARTURES: AUSTRALIA

(a) Excludes movements of defence personnel from September, 1939, to June, 1947.

2. Excess of Arrivals over Departures.—(i) *General*. The excess of total overseas arrivals over total departures is one of the elements of population increase taken into account in preparing the estimated population for other than census dates (see § 5 of this chapter, pp. 269-73). It is necessary to use statistics of total overseas arrivals and departures for this purpose, because Australian population statistics relate to the total population present in Australia at the date of the census or estimate, and not the population normally resident in Australia (which would include those temporarily overseas and exclude those temporarily visiting Australia). In the following paragraphs are set out particulars of the net gain or loss of population due to overseas migration, according to age and conjugal condition and country of birth.

(ii) *Age Distribution and Conjugal Condition*. The net gain to the population of Australia due to total migration movement for the years 1962 and 1963 according to age and conjugal condition, was as follows.

EXCESS OF ARRIVALS OVER DEPARTURES: AGE DISTRIBUTION AND CONJUGAL CONDITION, AUSTRALIA

NOTE.—Minus sign (—) indicates excess of departures over arrivals.

3. **Stated Purpose of Travel.**—Since 1st July, 1924, oversea travellers have been classified according to declared intention in regard to residence into two principal categories, distinguishing movements for short terms from movements for longer periods (including permanently). Prior to 1957, these categories were *temporary* and *permanent*. Thereafter the categories were entitled *short-term* and *permanent and long-term*, but the basis of classification was not changed and the figures are directly comparable for the whole period. For short-term movements, oversea visitors and Australian residents have been identified separately.

Revised questions for travellers were introduced in mid-1958, and these enabled the separation, from 1st January, 1959, of permanent from other long-term movements and also the identification of former settlers departing among the permanent departures.

The principal categories of travellers according to stated purpose of travel are as follows:—

Permanent movement—consisting of persons arriving with stated intent to settle permanently in Australia, and Australian residents departing with stated intent to reside permanently abroad;

Long-term movement—consisting of the arrival of visitors and the departure of residents with stated intent to stay (in Australia or in a country abroad respectively) for twelve months or more; and the departure of visitors and the return of residents who have stayed (in Australia or in a country abroad respectively) for twelve months or more;

Short-term movement—consisting of all other movements, including the movement of Australian troops irrespective of period of stay;

Settlers—persons who, on arrival in Australia, indicated that they came intending to settle;*

Former Settlers—persons who, on departure from Australia, stated that they had come to Australia intending to settle, had stayed for a period of twelve months or more and were now departing permanently.*

* Included in *Permanent movement*.

This classification is based on the purpose of travel stated by travellers on arrival in, or departure from, Australia. These statements represent the traveller's intention at that time. Many travellers subsequently change their intentions, and this must be borne in mind in interpreting the statistics.

The numbers so classified since 1st January, 1936, on the basis of declared intention as to residence, and since 1st January, 1959, on this basis supplemented by additional particulars as to stated purpose of travel, are as follows.

5. Long-term and Short-term Movement—Oversea Visitors Arriving and Residents Departing.—The number of oversea visitors arriving in Australia and the number of Australian residents departing from Australia are shown in the following table classified by mode of transport. The figures exclude persons classified to permanent movement. Visitors arriving and residents departing who are classified to short-term movement are shown according to stated purpose of travel also.

§ 9. Assisted Migration into Australia

1. *General.*—Since 1945 successive Commonwealth Governments have pursued a vigorous immigration policy which has included the granting of financial assistance to selected assisted migrants from overseas countries. This assistance has in some cases been matched or partly matched by contributions from the government of the emigration country and from international funds. The basis of operation has varied from country to country—in some cases bilateral migration agreements have been negotiated, in some migration arrangements have been made through the Intergovernmental Committee for European Migration (ICEM), and in others unilateral assistance has been given by the Australian Government.

In the following table, particulars are shown of the total numbers of persons who were assisted to come to Australia by the Australian Government under all assisted passage schemes during the period 1946 to 1964.

“ ASSISTED ” MIGRATION: AUSTRALIA

Period							Nominated and selected (assisted) arrivals
1946–50	273,195
1951–55	275,241
1956–60	305,517
1959	64,146
1960	68,254
1961	55,685
1962	45,276
1963	62,914
1964	79,604

2. *Joint Commonwealth and States Scheme.*—Details of the joint scheme of assisted immigration arrived at by agreement between the Commonwealth and State Governments,

which operated from 1920 to 1939, were published in earlier issues of the Year Book (see No. 38, p. 576). After the outbreak of hostilities in 1939 it was decided to discontinue the grant of assisted passages for the duration of the war.

3. *Migration from Britain.*—(i) *General.* At the conclusion of the 1939–45 War two migration agreements were negotiated between the Commonwealth and British Governments and signed on 5th March, 1946. These agreements came into operation on 31st March, 1947, and provided respectively for granting free passages to British ex-servicemen and their dependants and assisted passages to other residents of Britain wishing to settle permanently in Australia. The free passage agreement was terminated on 28th February, 1955, but the assisted passage agreement has continued in operation by renewal from time to time. The current assisted passage agreement came into force on 1st June, 1962, and continues until 31st March, 1967.

(ii) *Assisted Passages.* Under the present agreement, the British Government contributes £150,000 Sterling per annum towards the cost of the movement of migrants to Australia. Each migrant 19 years of age or over contributes £10 Sterling towards his passage costs. Migrants under 19 years of age make no contribution. The Commonwealth Government meets the balance of the overall transport costs.

Eligibility for consideration for assisted passages under current arrangements is confined generally to citizens of the United Kingdom and colonies, normally resident in Britain. Subject to those broad conditions of eligibility, there are six categories of applicants who may be granted assisted passages under current arrangements.

Personal nominees—persons sponsored by relatives or friends already established in Australia who provide accommodation for their nominees.

Group nominees—workers and their dependants sponsored or selected to fulfil nominations lodged by public and private employers.

Commonwealth nominees—workers and their dependants selected to meet labour requirements within industry generally in Australia.

"Bring out a Briton" nominees—migrants sponsored by special voluntary committees formed throughout Australia to stimulate the flow of British migrants through community effort.

Single men and women and married couples without children—migrants selected without specific nomination who are prepared to make their own accommodation arrangements upon arrival.

"Nest-egg families"—unnominated families having a minimum capital of £Stg.1,000 and prepared to make their own accommodation arrangements on arrival.

Hostels are provided by the Commonwealth Government for the initial accommodation of Commonwealth nominees. State Governments provide transit accommodation for certain groups of migrants.

(iii) *Number of Arrivals.* The numbers of British migrants who came to Australia under the Free and Assisted Passage Agreement during the years January, 1947, to June, 1964, are given in the following table according to the State of proposed destination.

UNITED KINGDOM FREE AND ASSISTED PASSAGE AGREEMENT: NUMBER OF MIGRANTS(a)

Period	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	A.C.T.	Commonwealth nominees (b)	Total
1958–59 ..	4,375	4,931	2,449	2,912	1,853	706	210	11,070	28,506
1959–60 ..	6,341	6,324	2,862	3,988	1,442	873	277	11,790	33,897
1960–61 ..	6,313	6,186	2,579	3,308	1,613	637	234	13,830	34,700
1961–62 ..	5,804	4,433	2,595	3,317	2,094	509	157	8,161	27,070
1962–63 ..	8,093	6,118	2,980	4,512	5,294	677	271	13,755	41,700
1963–64 ..	12,272	10,791	4,272	10,509	4,894	909	316	10,667	54,630
Total, January, 1947, to June, 1964 ..	108,848	115,278	53,181	51,091	45,577	14,069	4,654	131,570	524,268

(a) Includes child migrants as shown in para. 4, p. 291.

(b) See text above for explanation.

4. **Child Migration from Britain.**—The pre-war arrangements under which child migrants were brought to Australia under the sponsorship of various religious denominations and voluntary organizations were resumed in 1947. Under current arrangements these young migrants receive assisted passages and special maintenance provisions involving the British Government and the Commonwealth and State Governments.

From the beginning of 1947 to 30th June, 1964, a total of 7,108 British child and youth migrants arrived under sponsorship, 4,717 to New South Wales, 1,372 to Western Australia, 567 to Victoria and 452 to the other States. These arrivals are included in the table in para. 3 on page 290.

5. **Maltese Migration.**—The Commonwealth Government and the Government of Malta entered into an agreement on 31st May, 1948, under which financial assistance is granted jointly towards the movement to Australia of approved migrants from Malta. The agreement has been extended progressively and the current extension is effective until 30th June, 1965. ICEM (*see* para. 15) is associated with the assisted migration arrangements under this agreement.

Up to 30th June, 1964, a total of 31,609 Maltese had arrived under the assisted passage scheme.

6. **Netherlands Migration.**—On 1st April, 1951, a migration agreement between the Netherlands and Australia came into operation under which selected Dutch workers and their dependants could receive assisted passages to Australia. This superseded an earlier arrangement, made in 1946, between the Netherlands Emigration Foundation and the Commonwealth (*see* Year Book No. 39, p. 56). The 1951 agreement continued in operation under extensions until 31st March, 1964. Negotiations are well advanced for a revised agreement and, in the meantime, assisted migration has continued under the previous arrangements.

Contributions to passage costs under the agreement are made by the migrant and the Netherlands and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see* para. 15) is associated with the assisted migration arrangements under this agreement.

Up to 30th June, 1964, 66,650 Dutch assisted migrants had arrived in Australia.

7. **Italian Migration.**—On 1st August, 1951, a migration agreement between Italy and Australia came into operation under which selected Italian workers and their dependants could receive assisted passages to Australia. The agreement was temporarily suspended at the end of 1952 but was resumed at the end of 1954. It continued in operation under extensions until 31st January, 1964. Negotiations are in course for a revised agreement and, in the meantime, provision has been made for assisted migration to continue under the previous arrangements.

Contributions to passage costs under the agreement are made by the migrant and the Italian and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see* para. 15) is associated with the assisted migration arrangements under this agreement.

Up to 30th June, 1964, 40,870 Italian assisted migrants had settled in Australia.

8. **German Migration.**—On 29th August, 1952, a migration agreement was signed between the Federal Republic of Germany and Australia under which selected German workers and their dependants could receive assisted passages to Australia. The agreement was renewed for five years from 29th August, 1957. Negotiations are well advanced for a revised agreement and, in the meantime, assisted migration has continued under the previous arrangements.

Contributions to passage costs under the agreement are made by the migrant and the Governments of the Federal Republic of Germany and Australia. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see* para. 15) is associated with the assisted migration arrangements under this agreement.

Up to 30th June, 1964, 72,801 German assisted migrants had settled in Australia.

9. **Austrian Migration.**—Late in 1952 arrangements were made between the Austrian Government, the Australian Government and ICEM (*see* para. 15) under which selected Austrian workers and their dependants could receive assisted passages to Australia. These arrangements still apply.

The contribution formula towards passage costs has varied from time to time but at present contributions are made by the migrant and the Australian Government. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia.

Up to 30th June, 1964, 17,716 Austrian assisted migrants had settled in Australia.

10. Greek Migration.—Late in 1952 arrangements were made between the Greek Government, the Australian Government and ICEM (*see* para. 15) under which selected Greek workers and their dependants could receive assisted passages to Australia. These arrangements still apply.

Contributions to passage costs are made by the migrant, the Greek and Australian Governments and ICEM. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia.

Up to 30th June, 1964, 36,241 Greek assisted migrants had settled in Australia.

11. Spanish Migration.—In 1958 arrangements were made between the Spanish Government, the Australian Government and ICEM (*see* para. 15) under which selected Spanish workers and their dependants could receive assisted passages to Australia. At the request of the Spanish authorities, these arrangements, so far as workers are concerned, were temporarily suspended in March, 1963. Since then certain female dependants nominated by Spanish assisted migrants already in Australia have continued to arrive in Australia as assisted migrants, and negotiations are in course with a view to restoring the previous assisted passage arrangements for workers and their dependants.

Contributions to passage costs are made by the migrant, the Spanish and Australian Governments and ICEM. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia.

Up to 30th June, 1964, 7,958 Spanish assisted migrants had settled in Australia.

12. Belgian Migration.—On 1st February, 1961, arrangements were made between the Belgian Government, the Australian Government and ICEM (*see* para. 15) under which selected Belgian workers and their dependants could receive assisted passages to Australia. These arrangements still apply.

Contributions to passage costs are made by the migrant and the Belgian and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia.

Up to 30th June, 1964, 1,470 Belgian assisted migrants had settled in Australia.

13. Refugee Migration.—By agreement with the International Refugee Organization, Geneva, on 21st July, 1947, Australia undertook to provide resettlement opportunities for Displaced Persons. A total of 170,000 Displaced Persons arrived in Australia under this agreement in the following years.

The International Refugee Organization was terminated in 1951 and refugee problems became the responsibility of the United Nations High Commissioner for Refugees, whose office was created by the United Nations specifically for this purpose. At about the same time ICEM was established (*see* para. 15) partly to provide arrangements for the actual resettlement overseas of refugees, particularly in regard to transport.

Australia has continued to provide resettlement opportunities for refugees, European or otherwise. In the period from 1951 to 30th June, 1964, 114,885 refugees had been resettled in Australia additional to the 170,700 Displaced Persons mentioned above. Of the total number of refugees received by Australia up to 30th June, 1964, since the end of World War II, 209,656 have received financial assistance from the Australian Government towards their passage costs.

14. General Assisted Passage Scheme.—This scheme has operated since 10th September, 1954, and provides for passage assistance to be granted to selected workers and their dependants from a number of countries including the United States of America, Switzerland, the Scandinavian countries, Eire, France and the Latin American countries. It also covers certain British subjects resident outside the United Kingdom and certain European nationals outside their countries of origin.

Under the scheme Australia contributes towards passage costs an amount of £A71 8s. 6d. (U.S. \$160) per adult and proportionate amounts for children according to the fares paid. Australia provides for the reception of assisted migrants and for general assistance towards their settlement in Australia.

Up to 30th June, 1964, 23,515 assisted migrants had settled in Australia under the General Assisted Passage Scheme.

15. **The Intergovernmental Committee for European Migration (ICEM).**—This Committee, like the office of the United Nations High Commissioner for Refugees, was established to perform functions that had formerly been carried out by the International Refugee Organization. In addition to assuming responsibility for the resettlement of refugees, ICEM has been concerned also with the movements of national migrants from Europe.

Australia was one of the 16 foundation members of the Committee; there are now 29 member countries including the British Commonwealth countries of Australia, New Zealand, the United Kingdom and Malta.

The three main functions of ICEM are:

- (a) the movement of national migrants and the provision of related services;
- (b) the resettlement of refugees and the provision of related services; and
- (c) development activities and technical co-operation (this includes activities such as language teaching, vocational and orientation training and in particular measures to facilitate the acceptance of European migrants by Latin American countries).

Each member government is required to contribute an agreed percentage of the Committee's administrative expenditure. Contributions to its operational expenditure are voluntary and governments may stipulate the terms and conditions under which they are to be used.

Up to 30th June, 1964, ICEM had moved 1,319,500 persons, of whom 393,400—294,800 nationals and 98,600 refugees had departed for Australia.

16. **Summary of Arrivals of Assisted Migrants.**—The following table shows the number of assisted migrants who arrived in Australia in each of the last six financial years and since January, 1947.

ARRIVALS UNDER ASSISTED MIGRATION SCHEMES

Assisted migration scheme	1958-59	1959-60	1960-61	1961-62	1962-63	1963-64	January, 1947, to June, 1964

Other schemes ..	623	406	323	28,682
Total ..	58,020	69,317	66,996	42,062	57,159	71,052	1,061,436

(a) Mostly Scandinavians, U.S. Americans, and British nationals from countries other than the United Kingdom.

NOTE.—(i) All arrivals indicated in this table have obtained some financial assistance from the Australian Government towards payment of their passage money. Transport to Australia for the migrants concerned has been arranged on (a) ships under charter to the Department of Immigration, (b) ships and aircraft under charter to the Intergovernmental Committee for European Migration, and (c) normal commercial shipping and airlines.

(ii) The arrivals under these schemes include a small number of nationals of countries other than those referred to, and stateless persons.

§ 10. The Regulation of Immigration into Australia

1. Powers and Legislation of the Commonwealth.—(i) *Constitutional*. Under section 51 (xxvii.) and (xxviii.) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration, emigration, aliens and the influx of criminals.

(ii) *Legislation*. Immigration into Australia is regulated by the *Migration Act 1958–1964* which came into force on 1st June, 1959, and repealed the *Immigration Act 1901–1949* and the *Aliens Deportation Act 1948*.

Any immigrant entering Australia after the commencement of the Act without having been granted an "entry permit" or who is not within an exempted class is a prohibited immigrant. Exempted persons include diplomatic, consular and trade representatives of other countries, and seamen who enter on leave while their ships are in Australian ports. For the purposes of the Migration Act an immigrant includes a person entering for temporary stay.

An entry permit is normally granted at the port of entry by means of a stamp in the traveller's passport or equivalent travel document. There is no form of application involved. Temporary entry permits are granted to persons who have been authorized to enter for a limited period only. Persons eligible to enter for indefinite residence are granted permits of unrestricted validity. A person who is refused an entry permit must be kept on board the ship on which he arrives; otherwise, the shipping company is liable to a fine of £500.

The Act abolished the "Dictation Test" as a means of excluding or deporting ineligible persons. Other deportation powers which were contained in the repealed legislation were largely re-enacted, although with some revision.

The Act revised the law relating to the emigration of Aborigines and children, repealing the *Emigration Act 1910*.

The Act does *not* affect passport or visa requirements for entry to Australia. All persons who, prior to the 1958 Act, had been required before embarkation to obtain visas or other kinds of authority to proceed to Australia, are still required to obtain them. Likewise, persons who have not had to obtain prior authority to proceed to Australia are not now required to obtain such authority solely as a result of the Act. Persons previously allowed to enter without production of passports—notably British people arriving from New Zealand—are still able to do so.

The *Aliens Act 1947–1959* provides that a register of aliens shall be maintained for every State or mainland Territory of the Commonwealth. Unless exempted, aliens 16 years of age and over are required to register with the Department of Immigration and to notify the Department of any change of address, occupation or employment, and of their marriage. The Act provides also that the consent of the Department must be obtained before an alien may change his surname.

The *Immigration (Guardianship of Children) Act 1946–1952* provides that the Minister for Immigration becomes the legal guardian of every person under the age of 21 years who enters Australia (except for certain groups exempted) other than in charge of, or for the purpose of living in the care of, a parent or adult relative. It is primarily administered through the Child Welfare authorities in each State and mainland Territory who, as the Minister's delegates under the Act, supervise the welfare of each "immigrant child".

2. **Conditions of Immigration into Australia.**—(i) *Admission of Non-Europeans.* Australia's immigration policy is directed towards maintaining a predominantly homogeneous population. It is fundamental to this policy that people coming to Australia for permanent residence should be capable, both economically and socially, of ready integration into the community.

The Australian practice is not one of the total exclusion of persons of other than European origin. The immigration laws governing residence in Australia permit the Minister to exercise discretion. The policy so administered takes into account the qualifications of persons wishing to settle here and the merits of each case, including considerations of a humanitarian nature and broad national interest.

In addition to the indigenous people, there are in Australia some 37,300 non-Europeans. Of those 15,300 are Australian citizens (10,300 by birth and 5,000 by naturalization and registration), while 4,000 have permanent residence status but have not sought or qualified for citizenship.

The remaining 18,000 comprise 4,400 non-Europeans who have been admitted, in some instances with their families, on a temporary basis in a variety of categories, 1,200 visitors, and an Asian and other non-European student population of 12,400, including both government-sponsored and private students.

The present immigration policy provides, *inter alia*—

- (a) that non-Europeans, who are the spouses, unmarried minor children or aged parents of Australian citizens, or of British subjects permanently resident here, may be admitted for permanent residence;
- (b) that a European British subject proceeding from overseas to Australia for permanent residence may be accompanied by his non-European spouse and unmarried minor children;
- (c) that non-Europeans who have been admitted for temporary residence may qualify, on residential and other grounds, for permanent resident status and subsequently for naturalization;
- (d) that, in addition to those non-Europeans admitted for temporary residence for commerce and trade, highly qualified and distinguished people who seek to reside here (including those non-Europeans who have taken educational courses at the tertiary level in Australia, who have spent at least five years in their own countries after having completed their courses, and who have qualifications from which the Australian community would benefit) may be admitted on a selective basis for indefinite stay.

Those non-Europeans, whose continued residence in Australia was induced by political events in their own countries, have been permitted to remain here indefinitely.

(ii) *Persons of European Race.* Maltese, Cypriots and aliens of European race desiring to settle permanently in Australia are required to obtain authority for admission from the Department of Immigration or an Australian oversea post. Their admission under the present policy is subject to their compliance with the Commonwealth's requirements with regard to health, character, freedom from security risk and general suitability as settlers.

(iii) *General Information.* General information as to conditions of entry into Australia may be obtained from the following officers:—

- (a) in Australia—the Secretary, Department of Immigration, Canberra, Australian Capital Territory, and Commonwealth Directors of Migration in the capital cities of the various States;
- (b) in overseas countries—from migration officers or from Australian diplomatic posts (a complete list of these is given in Chapter XXIX. International Relations).

§ 11. Passports

Australian passports are issued, under the *Passports Act 1938–1948* and *Passport Regulations*, to Australian citizens.

Diplomatic passports are issued to persons travelling on official missions of a diplomatic character. Official passports are granted to persons travelling on the official business of the Commonwealth or a State Government.

Australian passports are obtainable on application at offices of the Commonwealth Department of Immigration in each State and internal Territory of Australia or from overseas offices of that Department, from any Australian diplomatic or consular mission abroad, or from the office of any Australian Government Trade Commissioner overseas.

Applicants for passports must furnish evidence of their identity and nationality and pay a fee of £1.

Approximately 70,000 Australian passports are issued each year in Australia and abroad.

§ 12. Citizenship and Naturalization

1. *Commonwealth Legislation.*—The *Nationality and Citizenship Act 1948* commenced on Australia Day (26th January), 1949, and repealed all previous Commonwealth legislation on this subject. The most significant effect of the Act was the creation for the first time of the status of “Australian Citizen”. In this respect the Act was complementary to citizenship legislation passed or about to be passed by other countries of the British Commonwealth. All Australian citizens, and the citizens of other countries of the British Commonwealth, are declared to be British subjects. Australian citizenship was automatically acquired as from 26th January, 1949, by persons who were British subjects at that date and who either (a) were born in Australia or New Guinea; or (b) were naturalized in Australia; or (c) had been residing in Australia during the five years immediately preceding 26th January, 1949; or (d) were born outside Australia of fathers to whom (a) or (b) above applied (provided the persons concerned had entered Australia without being placed under any immigration restriction); or (e) were women who had been married to men who became Australian citizens under the above headings (provided that the women concerned had entered Australia without being placed under immigration restriction). For the purposes of the Act, “Australia” includes Norfolk Island and the Territory of Papua, and by an amendment of the Act in 1950 it was further provided that Nauru shall be treated in the same manner as New Guinea.

Citizenship may be acquired in the following ways:—(a) by birth in Australia; (b) by birth outside Australia, of a father who is an Australian citizen, provided that the birth is registered at an Australian Consulate; (c) by registration—Certificates of Registration as Australian citizens may be granted by the Minister to British subjects or Irish citizens who make application and satisfy the Minister that they can comply with specified requirements as to residence in Australia, good character and intention to reside permanently in Australia; (d) by naturalization—Certificates of Naturalization as Australian citizens may be granted by the Minister to aliens who make application and can comply with requirements somewhat similar to those previously required under the *Nationality Act 1920-1946*. Requirements for naturalization are—(i) as a rule five years residence in Australia is required, but residence in other British countries or service under a British government may be accepted (special concessions in the matter of residence qualifications in respect of persons who have voluntarily enlisted in the armed forces were made by an amending Act of 1952); (ii) the applicants must have an adequate knowledge of the responsibilities and privileges of citizenship; (iii) Certificates do not take effect until the applicant takes the Oath of Allegiance. The oath is now taken, and citizenship is conferred, at public ceremonies held in the locality of the applicant's place of residence, and presided over by the mayor or equivalent head of the local government authority.

The Declaration of Intention to apply for naturalization, which was introduced by the original Act of 1948, is no longer compulsory, although it can still be made if an intending applicant so desires. This change was made by the amending Acts of 1955 and 1959 under the provisions of which aliens may lodge applications on completing 4½ years residence, but may not be granted naturalization until five years residence has been completed.

Under the Act, the independence of married women in nationality matters is recognized, and British nationality is restored to those women who had lost it through marriage to aliens. Marriage does not effect a woman's nationality. Alien women who marry Australian citizens may, however, be naturalized under somewhat easier conditions than those which apply to other aliens.

2. **Naturalization Certificates Granted.**—The following tables show the number of certificates granted during 1963-64 and the number of persons affected by these certificates. The certificate covers the person being naturalized and his or her children under the *Nationality and Citizenship Act 1948-1960*.

**NATURALIZATION CERTIFICATES GRANTED AND PERSONS AFFECTED:

The numbers of persons affected by certificates granted in 1963-64 in respect of residents of the various States and Territories were as follows:—New South Wales, 10,703; Victoria, 14,367; Queensland, 1,825; South Australia, 4,066; Western Australia, 3,105; Tasmania, 423; Northern Territory, 151; Australian Capital Territory, 395; New Guinea, 318; Total, 35,353.

§ 13. Population of External Territories

Ordinances of the individual external territories under the control of Australia provide for a census of the population to be taken on the day prescribed for the taking of a census in the Commonwealth of Australia.

The following table shows the population of the Territories of Christmas Island, Cocos (Keeling) Islands, Norfolk Island, Papua, the Trust Territory of New Guinea and the Trust Territory of Nauru at the census of 30th June, 1961, and as estimated at 30th June, 1964.

POPULATION: EXTERNAL TERRITORIES

Territory	Census, 30th June, 1961			Estimate, 30th June, 1964
	Males	Females	Persons	Persons
Christmas Island ..	1,963	1,136	3,099	3,382
Cocos (Keeling) Islands ..	333	273	606	663
Norfolk Island ..	421	423	844	896
Papua ..	(a) 5,490	(a) 4,304	(a) 9,794	(b) 561,740
Trust Territory of New Guinea	(a) 9,158	(a) 6,378	(a) 15,536	(b) 1,539,076
Trust Territory of Nauru ..	3,019	1,594	4,613	4,914

(a) Non-indigenous population only. The indigenous population was estimated to be—Papua, 513,648; Trust Territory of New Guinea, 1,433,383. (b) Total population. The non-indigenous population was estimated to be—Papua, 12,888; Trust Territory of New Guinea, 16,920.

Further particulars concerning the indigenous populations of the territories are given in Chapter V. The Territories of Australia.

§ 14. The Aboriginal Population of Australia

In Year Book No. 17, pages 951-61, a brief account was given of the Australian Aboriginal population, its origin, its numbers as estimated from time to time and the steps taken for its protection. On pages 914-16 of Year Book No. 22, particulars were shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appeared on pages 687-96 of Year Book No. 23.

The Aborigines are scattered over the whole of the mainland, but are mostly in the Northern Territory, Queensland, and Western Australia. Particulars of the number in each State and Territory at the census of 30th June, 1961, are shown in the following table. Half-caste Aborigines are included in the numbers of the population and are of course enumerated at the census.

ABORIGINAL POPULATION, 30th JUNE, 1961

State or Territory	Full-blood					Half-caste (enumerated at the census)			Total full-blood and half-caste
	Number enumerated at census, 30th June, 1961			Estimated number out of contact at census	Total number as recorded or estimated at 30th June, 1961	Males	Females	Persons	
	Males	Females	Persons						
New South Wales ..	791	697	1,488	..	1,488	6,703	6,525	13,228	14,716
Victoria ..	141	112	253	..	253	758	785	1,543	1,796
Queensland ..	4,686	4,000	8,686	..	8,686	5,460	5,550	11,010	19,696
South Australia ..	1,181	966	2,147	..	2,147	1,426	1,311	2,737	4,884
Western Australia ..	4,243	3,878	8,121	2,000	10,121	4,108	4,047	8,155	18,276
Tasmania	24	14	38	38
Northern Territory ..	7,857	7,585	15,442	1,944	17,386	1,156	1,162	2,318	19,704
Aust. Cap. Territory	78	65	143	143
Australia ..	18,899	17,238	36,137	3,944	40,081	19,713	19,459	39,172	79,253

Torres Strait Islanders, both full-blood and half-caste, are not included as Aborigines, but are included in the populations shown on pp. 260-81. At the 1961 census there were 4,972 full-blood and 245 half-caste Torres Strait Islanders of whom 4,970 and 237 respectively were recorded in Queensland.

For further information as to the estimated numbers of full-blood Aborigines, and the difficulty of arriving at precise figures, see Year Book No. 47, page 329.

§ 15. International Statistics of Population

1. Introduction.—In the following tables, the population, density, rate of growth, natural increase and masculinity are shown in respect of all countries which had an estimated population of at least one million persons in 1962, plus Papua. The source of these figures is the 1963 *Demographic Yearbook* which is prepared and published by the Statistical Office of the United Nations. The tables include figures varying in reliability and accuracy, there being considerable variation in the quality of demographic statistics as between countries, but this information has been shown to provide some form of guide as to the magnitude and trend of population movements in oversea countries.

Where the information available to the Statistical Office of the United Nations relates to only part of the population of a country, the population characteristic (e.g., rate of growth), or vital statistics rate (e. g., marriages), has been omitted from the tables, and this is indicated by a footnote.

For fuller particulars of the differences in the quality of the statistics and their reliability and for other qualifications, reference should be made to the detailed explanations contained in the *Demographic Yearbook* of the Statistical Office of the United Nations (see particularly Technical Notes on Statistical Tables and footnotes to the tables).

2. **Population, Rate of Growth and Density: World, Continents and Regions.**—The following table shows for the World, Continents, and Regions, estimated population from 1930 to 1950 at ten year intervals, and for 1958 and 1962. The annual rate of increase (per cent.), together with the average annual increase, during the period 1958–62, is also shown. It should be noted that the population figures have been adjusted for underenumeration and errors in estimation. In preparing these figures, the Population Branch of the United Nations revises, from time to time, the estimates for previous years as new data become available, for example, from a census. The figures are estimates only, and as such are subject to a substantial margin of error.

POPULATION, DENSITY AND RATE OF INCREASE FOR THE WORLD AND CONTINENTS—SELECTED YEARS

(Source: United Nations *Demographic Yearbook*, 1963)

Continent and region	Population					Annual rate of increase 1958–62 (per cent.)	Average annual increase 1958–62 (millions)	Density (persons per square mile)

CHAPTER X

VITAL STATISTICS

NOTE.—The tables in this chapter are confined to the principal characteristics of vital statistics for Australia, and relate, in the main, to the year 1963, except for the totals of marriages, births, deaths and infant deaths, for which it has been possible to include figures for 1964. Comparisons have been restricted, in general, to the individual years 1960 to 1964 and the five-year periods 1926–30 to 1956–60, while age data have been shown in five-year groups. Comparisons over longer periods, together with more detailed figures such as single age particulars and cross-classifications of various characteristics, will be found in the annual bulletin, *Demography*. For 1963 and following years a separate bulletin *Causes of Death* is being published. This will contain the detailed tables based on the International Statistical Classification of Diseases, Injuries and Causes of Death which were formerly published in *Demography*. Current information is published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics* and the *Australian Demographic Review* (a mimeographed series issued at intervals throughout the year on population and vital statistics).

Figures of births and deaths for Australia are exclusive throughout of full-blood Aborigines.

Vital statistics for the principal countries of the world are set out in § 7. International Vital Statistics.

§ 1. Provisions for Registration and Compilation of Statistics

In Australia vital statistics are compiled from information supplied for the registration of births, deaths and marriages. Each State and Territory has an independent system of registration. Provisions for the civil registration of births, deaths and marriages have been in force in Tasmania from 1839, in Western Australia from 1841, in South Australia from 1842, in Victoria from 1853, and in New South Wales and Queensland (then part of New South Wales) from 1856. Registration in the Territories is administered by the Commonwealth Government, registration having been taken over in respect of the Northern Territory from South Australia in 1911 and in respect of the Australian Capital Territory from New South Wales in 1930. The authority responsible for the registration of births, deaths and marriages occurring within his particular State or Territory is the Registrar-General (the Government Statist in Victoria) or the Principal Registrar.

Information concerning a birth is required to be supplied within 28 days in the Australian Capital Territory and the Northern Territory, 42 days in South Australia, and 60 days in other States. For the registration of a death the period allowed is 8 days in Tasmania, 10 days in South Australia, 14 days in Western Australia, Australian Capital Territory and Northern Territory, 21 days in Victoria, and 30 days in New South Wales and Queensland.

The *Marriage Act* 1961 came into operation on 1st September, 1963, placing the marriage laws of all States, the mainland Territories and Norfolk Island on a uniform basis. Provision is made for the celebration of marriage by ministers of religion registered with the Registrar of Ministers of Religion appointed in each State and Territory by the Attorney-General, and by certain civil officers. In all cases, the authorized celebrant is required to register particulars of the parties married with the appropriate registering authority in each State or Territory. The celebrant is requested to register a marriage as soon as practicable and in any case not later than fourteen days after the marriage.

The registration of stillbirths is compulsory in all the States and Territories except Tasmania. Western Australia in 1908 was the first State to introduce compulsory registration, followed by the Australian Capital Territory in 1930, New South Wales in 1935, South Australia in 1937, the Northern Territory in 1949, Victoria in 1953, and Queensland in 1959.

Stillbirths are entered in both the birth and death registers in New South Wales and Western Australia, in the birth register in the Australian Capital Territory and the Northern Territory, and in separate stillbirth registers in Victoria, South Australia and Tasmania. Stillbirths are not entered in a register in Queensland but the papers are kept for a period of at least ten years. Though registration is not compulsory in Tasmania it is believed that for various reasons nearly all stillbirths are notified voluntarily. In this chapter stillbirths have been excluded from all tables of births and deaths and are shown only in those specially relating to stillbirths.

The data for the compilation of vital statistics are obtained from registry records and dispatched, through the Statistical Office in each State and Territory, to the Commonwealth Statistician. The compilation and publication of vital statistics for Australia is one of the functions of the Commonwealth Statistician. The Deputy Commonwealth Statisticians compile and publish statistics relating to their respective States.

§ 2. Marriages

1. **Number of Marriages.**—The numbers of marriages registered in each State and Territory in five-year periods from 1926–30 to 1956–60, and for each of the years 1960 to 1964, are shown in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 575. A graph showing the number of marriages in each year from 1870 to 1964 appears on page 309 of this issue.

1963 ..	7.65	7.22	7.32	7.24	7.44	7.08	9.07	7.21	7.41
1964 ..	7.92	7.72	7.41	7.52	7.62	7.81	7.42	7.05	7.72

(a) Number of marriages per 1,000 of mean population.

The crude marriage rates for Australia and the more populous countries of the world are shown for the latest available year in § 7. International Vital Statistics, pp. 344-6.

3. **Marriage Rates based on Marriageable Population.**—As the marriage rates in some international tabulations are based on the unmarried population aged 15 years and over the corresponding rates have been calculated for Australia for the nine census periods to 1960-62. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows.

PERSONS MARRYING PER 1,000 OF UNMARRIED POPULATION: AUSTRALIA

Period	Rate(a)	Period	Rate(a)
1880-82	48.63	1932-34	42.88
1890-92	44.04	1946-48	71.24
1900-02	42.14	1953-55	65.32
1910-12	50.12	1960-62	62.27
1920-22	55.97		

(a) Average annual number of persons who married per 1,000 unmarried persons, including widowed and divorced, aged 15 years and over.

4. **Age and Conjugal Condition at Marriage.**—(i) *General.* Particulars of age at marriage in age groups, and previous conjugal condition, of bridegrooms and brides in 1963 are given hereunder. There were 9,712 males under 21 years of age married during 1963, while the corresponding number of females was 32,844. At the other extreme there were 1,047 bridegrooms and 468 brides in the age group 65 years and over.

AGE AND CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES:
AUSTRALIA, 1963

(iv) *Average Ages of Bridegrooms and Brides.* The average age at marriage of brides and bridegrooms has declined during recent years. The average ages, in years, of brides for each of the five years to 1963 were:—1959, 25.01; 1960, 24.84; 1961, 24.73; 1962, 24.68; and 1963, 24.42. The average ages, in years, of bridegrooms were:—1959, 28.39; 1960, 28.15; 1961, 28.07; 1962, 28.03; and 1963, 27.76. The difference in the average age at marriage between brides and bridegrooms is generally just over three years, the difference in 1963 being 3.34 years.

5. Previous Conjugal Condition.—The following table shows the relative conjugal condition of bridegrooms and brides in 1963.

CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES: AUSTRALIA, 1963

Conjugal condition of bridegrooms	Total bridegrooms	Conjugal condition of brides		
		Spinsters	Widows	Divorced
Bachelors	73,257	69,391	1,123	2,743
Widowers	3,050	1,020	1,361	669
Divorced	4,609	2,422	634	1,553
Total Brides	80,916	72,833	3,118	4,965

6. Countries of Birth of Persons Marrying.—The following table shows the relative countries of birth of bridegrooms and brides married in 1963.

RELATIVE COUNTRIES OF BIRTH OF BRIDEGROOMS AND BRIDES: AUSTRALIA, 1963

Country of birth of bridegroom	Country of birth of bride											Total bridegrooms
	Australia	New Zealand	United Kingdom and Ireland	Germany	Greece	Italy	Netherlands	Poland	Yugoslavia	Other European	Other and unspecified	
Australia	55,718	188	2,804	353	46	99	381	41	30	379	444	60,483

Total Brides	64,247	350	4,475	1,119	2,860	2,819	960	344	634	1,765	1,343	80,916

7. Occupation of Bridegrooms.—The distribution of the 80,916 bridegrooms for 1963 amongst classes of occupations was as follows:—craftsmen, 27,480; administrative and clerical workers, 10,229; labourers, 9,634; rural and mining workers, 8,018; professional and technical workers, 7,595; workers in transport and communication, 5,924; service, sport, and other workers, 5,502; sales workers, 5,240; persons not in the work force, 1,294.

8. Celebration of Marriages.—Under the provisions of the *Marriage Act* 1961 marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar of Ministers of Religion in each State or Territory, or by certain civil officers, in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1963 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been combined under the heading "Other Christian". The figures for 1963 are shown in the following table.

MARRIAGES IN EACH DENOMINATION, 1963

Denomination	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Australia

§ 3. Divorce

The number of dissolutions of marriage, nullities of marriage and judicial separations was 7,446 in 1963 and 7,799 in 1964. Further information may be found in Chapter XVII. Public Justice.

BIRTHS, DEATHS, AND MARRIAGES : AUSTRALIA, 1870 to 1964

RATES OF BIRTHS, DEATHS, AND NATURAL INCREASE

AUSTRALIA, 1870 TO 1964

INFANT DEATHS: AUSTRALIA, 1910 to 1964

INFANT MORTALITY RATES: AUSTRALIA, 1910 to 1964

(INFANT DEATHS PER 1,000 LIVE BIRTHS)

§ 4. Fertility and Reproduction

1. **Introduction.**—Natural increase has been a significant element of increase in the population of Australia for many years. The level of natural increase depends on the excess of births over deaths, and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. **Number of Live Births and Confinements.**—(i) *Year 1963.* There are various methods of measuring the fertility of the population by relating the number of births to the numbers of the population. In each, the basic data are, of course, the numbers of live births.

The number of live births registered in Australia during 1963 is shown in the following table. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only.

LIVE BIRTHS AND CONFINEMENTS, 1963

CONFINEMENTS RESULTING IN BIRTHS SHOWN ABOVE

Nuptial ..	78,391	61,846	32,934	20,090	15,907	7,987	752	1,936	219,843
Ex-nuptial ..	4,773	3,037	2,632	1,053	1,220	459	102	38	13,314
<i>Total</i> ..	<i>83,164</i>	<i>64,883</i>	<i>35,566</i>	<i>21,143</i>	<i>17,127</i>	<i>8,446</i>	<i>854</i>	<i>1,974</i>	<i>233,157</i>

NOTE.—Owing to the registration procedure adopted in some States, it is possible that in some cases where one child only of a multiple pregnancy was live-born, the confinement has been treated as a single birth. However, the numbers of multiple births are not significantly affected. See also para. 12, p. 319.

(ii) *Live Births, Years 1926 to 1964.* The average annual number of live births in each State and Territory for each five-year period from 1926 to 1960 and the total number of live births for each year from 1960 to 1964 are given in the following table. Corresponding figures for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 583.

A graph showing the number of births in each year from 1870 to 1964 will be found on page 309.

3. **Crude Birth Rates.**—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth rate. The crude birth rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period. Other methods of measuring fertility are shown on pages 315-17.

Crude birth rates for each five-year period from 1926 to 1960 and for each year from 1960 to 1964 for each State and Territory are set out below.

CRUDE BIRTH RATES(a)

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	21.76	19.65	21.90	19.41	21.54	22.29	15.60	14.96	20.98
1931-35 ..	17.28	15.60	18.48	14.89	18.36	19.95	15.99	15.77	16.94

1951-55 ..	21.78	22.42	24.11	23.25	25.37	25.58	29.37	32.22	22.86
1956-60 ..	21.55	22.52	23.80	22.27	24.20	25.45	31.49	30.10	22.59
ANNUAL RATES									
1960 ..	21.38	22.41	23.62	22.19	23.41	25.52	30.95	30.12	22.42
1961 ..	22.07	22.51	24.17	23.10	23.16	25.40	33.46	29.49	22.85
1962 ..	21.46	22.04	23.19	21.59	22.59	24.75	34.26	27.69	22.14
1963 ..	20.75	21.49	23.00	21.18	22.36	23.42	29.96	27.20	21.59
1964 ..	19.54	20.77	22.06	20.22	21.11	22.46	29.02	24.22	20.58

(a) Number of births per 1,000 of mean population.

NOTE.—The birth rates in the table above are based on *live births registered in the respective States and Territories*. Some confinements, however, take place in States other than the State in which the mother usually resides, particularly in areas near State borders.

The variations thus caused in the birth rates for the States and Territories by referring the birth registrations to the mother's usual residence are shown by the following corrected rates for 1964—New South Wales, 19.59; Victoria, 20.76; Queensland, 21.96; South Australia, 20.12; Western Australia, 21.14; Tasmania, 22.51; Northern Territory, 30.20; and Australian Capital Territory, 24.18.

See Year Book No. 47 (p. 339) for the effect of the variations in the availability of hospital facilities on the birth rate in the Australian Capital Territory and in the neighbouring town of Queanbeyan in New South Wales.

A graph showing the birth rate for each year from 1870 to 1964 will be found on page 310.

The crude birth rates of Australia and the more populous countries of the world for the latest available year are shown in § 7. International Vital Statistics on pages 344-6.

4. **Fertility Rates.**—The principal demographic factors affecting the level of crude birth rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a higher proportion of married women of child-bearing age will have a much higher crude birth rate than one with a low proportion, although the fertilities of the two populations may be identical.

In order to compare fertilities births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility rate.

The following table sets out for certain periods, commencing with 1880-82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15-44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

CRUDE BIRTH RATES AND FERTILITY RATES: AUSTRALIA

Period	Average annual rates			Index nos. (Base: 1880-82 = 100)		
	Crude birth rate(a)	Fertility rates		Crude birth rate(a)	Fertility rates	
		Births per 1,000 women aged 15-44 years	Nuptial births per 1,000 married women aged 15-44 years		Births per 1,000 women aged 15-44 years	Nuptial births per 1,000 married women aged 15-44 years
1880-82.. ..	35.3	170	321	100	100	100
1890-92.. ..	34.5	159	332	98	94	103
1900-02.. ..	27.2	117	235	77	69	73
1910-12.. ..	27.2	117	236	77	69	74
1920-22.. ..	25.0	107	197	71	63	61
1932-34.. ..	16.7	71	131	47	42	41
1946-48.. ..	23.6	104	160	67	61	50
1953-55.. ..	22.7	109	149	64	64	46
1960-62.. ..	22.5	112	154	64	66	48

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth rate. Thus, while the nuptial birth rate for married women increased by only 22 per cent. over the period 1932-34 to 1946-48, the crude birth rate rose by 41 per cent. owing principally to the greatly increased number of marriages during that period.

5. **Age-specific Fertility Rates for Females.**—So long as customary ages at marriage do not change drastically the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably, and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific fertility rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Age-specific fertility rates are more commonly expressed in age groups than in single ages. In the following table such rates, calculated in terms of female births for the purpose of obtaining the gross and net reproduction rates described in para. 6, are shown in five-year age groups for Australia for the period 1926 to 1963.

AGE-SPECIFIC FERTILITY RATES(a): AUSTRALIA

Age group (years)	1926	1931	1936	1941	1946	1951	1956	1961	1963
15-19..	14.02	13.08	12.18	11.90	12.63	18.59	20.84	22.87	22.22
20-24..	60.23	53.08	50.33	59.42	73.52	85.84	101.46	110.01	100.74
25-29..	76.82	62.47	62.02	70.78	89.51	90.24	98.11	107.73	102.27
30-34..	61.90	51.25	46.33	49.72	65.03	59.16	59.65	63.62	60.11
35-39..	43.55	33.23	28.89	28.69	37.43	32.29	31.32	30.53	29.03
40-44..	17.63	13.61	10.19	9.52	11.87	9.97	9.48	9.36	9.07
45-49..	1.90	1.45	1.11	0.80	1.03	0.80	0.76	0.70	0.53

(a) Number of female births per 1,000 women in each age group.

6. Gross and Net Reproduction Rates for Females.—A single measure of reproduction, known as the gross reproduction rate, is obtained by adding together the specific fertility rates for each age in the child-bearing group. This measure indicates the number of female children who would be born on an average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility rates by the number of females in the corresponding age group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality, and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase; if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of marriage fertility in paragraph 8, page 317.

GROSS AND NET REPRODUCTION RATES: AUSTRALIA

Year	Gross reproduction rate	Net reproduction rate	Year	Gross reproduction rate	Net reproduction rate
1881(a) ..	2.65	(b) 1.88	1947 ..	1.493	(g) 1.416
1891(a) ..	2.30	(b) 1.73	1954 ..	1.558	(h) 1.497
1901(a) ..	1.74	(c) 1.39	1959 ..	1.678	(h) 1.614
1911 ..	1.705	(d) 1.421	1960 ..	1.677	(h) 1.613
1921 ..	1.511	(e) 1.313	1961 ..	1.724	(h) 1.658
1931 ..	1.141	(f) 1.039	1962 ..	1.659	(h) 1.596
1941 ..	1.154	(f) 1.053	1963 ..	1.620	(h) 1.558

(a) Approximate only. (b) 1881-1890 mortality experience used. (c) 1891-1900 mortality experience used. (d) 1901-1910 mortality experience used. (e) 1920-1922 mortality experience used. (f) 1932-1934 mortality experience used. (g) 1946-1948 mortality experience used. (h) 1953-1955 mortality experience used.

NOTE.—It is not strictly correct to assume, as in the calculations of the rates above, that a particular age-specific fertility rate can be applied to a hypothetical group of women reaching that age, without taking account of previous fertility and marriage experience. Reproduction rates are therefore unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

7. Gross and Net Reproduction Rates, Various Countries.—In the following table a comparison is given of the gross and net reproduction rates recorded for various countries in the period 1954 to 1963. These represent the latest available international comparisons.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES

Country	Period	Reproduction rate		Country	Period	Reproduction rate	
		Gross	Net			Gross	Net
Thailand ..	1954	2.26	1.70	Yugoslavia ..	1960	1.36	1.12
New Zealand(a) ..	1962	1.97	1.91	England and Wales	1961	1.35	1.30
Canada ..	1962	1.84	1.77	Finland ..	1961	1.32	1.30
United States of America(b) ..	1961	1.70	1.65	Belgium ..	1961	1.29	1.24
Australia(c) ..	1963	1.62	1.56	Denmark ..	1960	1.24	n.a.
Ireland, Republic of	1955	1.59	1.45	Czechoslovakia ..	1961	1.16	1.12
Netherlands ..	1962	1.55	1.50	Germany—			
Scotland ..	1963	1.47	1.42	Federal Rep. ..	1960	1.16	1.11
Portugal ..	1958	1.47	1.26	Democratic Rep.	1955	1.13	n.a.
Norway ..	1961	1.39	1.34	Switzerland ..	1959	1.15	1.09
Austria ..	1962	1.38	1.28	Sweden ..	1961	1.07	1.05
France ..	1961	1.37	1.32	Japan ..	1961	0.95	0.90
				Hungary ..	1962	0.87	0.81

(a) Excludes Maoris.

(b) White population only.

(c) Excludes full-blood Aborigines.

In comparing the reproduction rates of the countries shown above allowance should be made for any differences in years, as the rates for any one country from year to year are affected by variations in the incidence of marriage, as well as the stationary or life table population used.

8. **Fertility of Marriages.**—More satisfactory estimates of the fertility of marriages may be made by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES: AUSTRALIA

Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage
1949 ..	2.45	1954 ..	2.66	1959 ..	2.93
1950 ..	2.56	1955 ..	2.71	1960 ..	2.96
1951 ..	2.55	1956 ..	2.76	1961 ..	3.05
1952 ..	2.63	1957 ..	2.87	1962 ..	2.98
1953 ..	2.66	1958 ..	2.88	1963 ..	2.92

NOTE.—See NOTE to table on p. 316.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. The figures for 1949 and subsequent years present a somewhat inflated index, as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and consequently are not included in Australian marriage records. Partial investigation suggests that this factor probably overstated the index by very little in 1949, but that the overstatement at present is about 8 per cent.

9. **Masculinity of Live Births.**—The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, totals for smaller States) considerable variation is shown. The averages for the ten years 1951–60 were as follows:—New South Wales, 105.38; Victoria, 105.50; Queensland, 105.80; South Australia, 104.89; Western Australia, 105.25; Tasmania, 104.96; Northern Territory, 107.16; Australian Capital Territory, 108.77; Australia, 105.43. The following table shows the figures for Australia for each ten-year period from 1901 to 1960 and for each of the years 1962 to 1964.

MASCULINITY^(a) OF LIVE BIRTHS REGISTERED: AUSTRALIA

Particulars	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60	1962	1963	1964
Total births ..	105.22	105.27	105.55	105.12	105.38	105.43	106.21	105.75	106.28
Ex-nuptial births	104.08	105.25	105.16	105.36	105.34	103.99	106.23	106.76	106.00

(a) Number of males born for every 100 female births.

10. Ex-nuptial Live Births.—(i) *General*. The variations in the proportions of ex-nuptial live births as between the individual States and Territories for 1964 are shown below.

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, 1964

Particulars	N.S.W.	Vic.	Q'land	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number ..	5,427	3,402	2,898	1,239	1,311	502	103	43	14,925
Proportion of total births %	6.74	5.23	8.29	5.94	7.86	6.08	11.31	2.20	6.51

The number and proportion of ex-nuptial births at intervals from 1901 to 1964 are as follows.

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, AUSTRALIA

Particulars	Annual average						1960	1961	1962	1963	1964
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60					
Number ..	6,498	6,836	6,238	5,133	6,780	9,013	10,987	12,269	12,813	13,454	14,925
Proportion of total births %	6.05	5.22	4.66	4.40	4.13	4.25	4.77	5.11	5.40	5.71	6.51

(ii) *Rate of Ex-nuptiality*. A further measure of ex-nuptiality is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population aged from 15 to 44 years. On this basis, the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 44 is as follows:—1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; 1920-22, 10.50; 1932-34, 6.91; 1946-48, 11.45; 1953-55, 14.45; and 1960-62, 18.49. Ex-nuptial births to married women, which are not recorded separately, are included in these figures and it is not possible to determine to what extent they influence the trend shown.

(iii) *Comparison of Rates*. The following table shows the relative ratios of ex-nuptial and nuptial births to the total population for periods from 1901.

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES (a): AUSTRALIA

Birth rate	Annual average						1962	1963	1964
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60			
Ex-nuptial ..	1.60	1.39	1.04	0.76	0.90	0.97	1.19	1.23	1.34
Nuptial ..	24.91	25.18	21.40	16.47	20.99	21.75	20.95	20.36	19.24
Total ..	26.51	26.57	22.44	17.23	21.89	22.72	22.14	21.59	20.58

(a) Number of births per 1,000 of mean population.

11. **Legitimations.**—Under the provisions of the Commonwealth *Marriage Act* 1961, which came into operation on 1st September, 1963, a child whose parents were not married to each other at the time of its birth becomes legitimized on the subsequent marriage of its parents. The legitimation takes place whether or not there was a legal impediment to the marriage of the parents at the time of the child's birth and whether or not the child was still living at the time of the marriage, or in the case of a child born before 1st September, 1963, at that date. Prior to the introduction of this Act, legitimations took place under Acts passed in the several States to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who came within the scope of their purposes, born before or after the passing thereof, was deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. The number of children legitimized in Australia during 1963 was 2,436.

12. **Multiple Births.**—Because the current Australian birth statistics are based only on those confinements which resulted in a live-born child, the number of confinements for multiple births for Australia is understated—firstly, because in cases where all children of a multiple birth are still-born the confinement is excluded, and secondly, because some cases of multiple births in which only one child was live-born are registered as single births.

Multiple births recorded on this basis during 1963 comprised 2,584 cases of twins and 21 cases of triplets, the resultant numbers of live-born and still-born children being respectively 5,077 and 91 for twins, 60 and 3 for triplets. This represents an average of 11.08 recorded cases of twins and 0.09 recorded cases of triplets per 1,000 confinements or, alternatively, mothers of twins represented 1 in every 90 mothers and mothers of triplets 1 in every 11,103. Total cases of multiple births represented 11.17 per 1,000 confinements or 1 in every 90 mothers.

The proportion of mothers of multiple births to total mothers does not vary greatly from year to year.

13. **Ages of Parents.**—The relative ages of the parents of children whose births were registered in 1963 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births, the relative ages of parents are shown in *Demography*, Bulletin No. 81. In the following table the relative ages of parents are shown in five-year groups.

CONFINEMENTS: RELATIVE AGES OF PARENTS, AUSTRALIA, 1963

Age of father (years) and type of birth	Total	Age of mother (years)								
		Under 15	15-19	20-24	25-29	30-34	35-39	40-44	45 and over	Not stated

Other European ..	1,807	29	266	273	74	60	81	92	81	3,213	157	6,133
Other and unspecified ..	1,615	24	218	47	148	52	97	18	17	93	1,860	4,189
Total Mothers ..	176,382	855	11,979	2,332	4,794	9,594	3,317	867	1,588	4,501	3,634	219,843

15. **Occupation of Fathers.**—In the 219,843 cases where nuptial confinements resulted in one or more live births, the classes of occupations of the fathers were distributed as follows:—craftsmen, 69,751; rural and mining workers, 28,919; administrative and clerical workers, 28,806; labourers, 23,462; workers in transport and communication, 19,885; professional and technical workers, 19,546; sales workers, 14,403; service, sport and other workers, 14,380; persons not in the work force, 691.

16. **Age, Duration of Marriage and Issue of Mothers.**—(i) *General.* The total number of nuptial confinements resulting in live births in 1963 was 219,843, comprising 217,378 single births, 2,446 cases of twins and 19 cases of triplets. The following tables relating to previous issue exclude the issue of former marriages and still-born children. On the other hand, they include in some States children by the same father who were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that in 1963 the duration of marriage of mothers of nuptial children ranged from less than one year to over 25 years and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1963 was 2.60, compared with 2.61 in 1962, 2.60 in 1961, 2.59 in 1960, and 2.58 in 1959.

**NUPTIAL CONFINEMENTS: DURATION OF MARRIAGE AND ISSUE OF
MOTHERS, AUSTRALIA, 1963**

(v) *Multiple Births—Previous Issue of Mothers.* Figures regarding the previous issue of married mothers of twins in 1963 show that 634 mothers had no previous issue either living or deceased, 606 had one child previously, 529 had two previous issue, 295 three, 170 four, 98 five, 52 six, 20 seven, 21 eight, 12 nine, 4 ten, 2 eleven, 2 twelve, and 1 fifteen.

Of the 19 cases of nuptial triplets registered during 1963, 3 mothers had no previous issue, 4 had one, 4 had two, 2 had three, 2 had four, 1 had five, 1 had six, 1 had seven, and 1 had nine previous issue.

17. *Nuptial First Births.*—(i) *Duration of Marriage.* The following table shows the interval between marriage and first birth for periods since 1911. In cases of multiple births, the first live-born child only is enumerated.

NUPTIAL FIRST BIRTHS: DURATION OF MARRIAGE, AUSTRALIA

Duration of marriage	Annual average					1962	1963
	1911-20	1921-30	1931-40	1941-50	1951-60

1963	69,130	150,713	219,843	31.45

18. *Stillbirths.*—Interstate comparisons of the figures and rates in the following tables are affected by the differences in the definitions of stillbirths adopted by the various States, and only the trends in the rates for the States should be compared.

For various reasons, the registration of stillbirths is not as complete as for live births and deaths. Particulars for the Territories and smaller States are more affected on this account than are those for the larger States.

The number of stillbirths recorded in each State and Territory since 1936 is shown in the following table.

STILLBIRTHS

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
ANNUAL AVERAGES									
1936-40 ..	1,409	854	(a)	(b) 274	234	144	(a)	5	(a)

1962 ..	12.70	11.63	14.36	12.85	11.76	11.34	9.65	10.88	12.52
1963 ..	13.65	11.92	13.07	12.11	10.19	7.33	33.75	6.97	12.48

(a) Numbers of stillbirths per 1,000 of all births (live and still). (b) Not available.
 (c) Three years 1938-40. (d) Four years 1942-45. (e) Excludes Queensland for 1941.
 (f) Excludes Northern Territory.

NOTE.—Because of the smallness of the numbers of stillbirths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. the number per thousand live births and stillbirths) are subject to considerable fluctuation.

§ 5. Mortality

1. Number of Deaths.—(i) Year 1964. The following table shows the number of deaths, male and female, registered in each State and Territory during the year. Stillbirths, although registered as both births and deaths in some States, are excluded from the death statistics published herein.

DEATHS, 1964

Sex	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Males ..	21,899	14,992	8,480	5,008	3,738	1,797	117	215	56,246
Females ..	17,588	12,556	6,043	3,898	2,691	1,377	47	148	44,348
Persons ..	39,487	27,548	14,523	8,906	6,429	3,174	164	363	100,594

(ii) Years 1926 to 1964. A summary of the number of deaths in each State and Territory from 1926 to 1964 is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 597.

DEATHS

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

1956-60 ..	34,002	24,254	12,008	7,732	5,523	2,668	117	184	86,488
ANNUAL TOTALS									
1960 ..	35,030	24,547	12,370	7,804	5,697	2,670	134	212	88,464
1961 ..	35,048	24,500	12,756	7,815	5,729	2,789	128	196	88,961
1962 ..	36,861	25,847	13,182	8,232	5,810	2,870	144	217	93,163
1963 ..	37,226	26,920	13,275	8,201	5,976	2,818	161	317	94,894
1964 ..	39,487	27,548	14,523	8,906	6,429	3,174	164	363	100,594

(a) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September, 1939 to June, 1947.

A graph showing the number of deaths in each year from 1870 to 1964 will be found on page 309.

2. **Crude Death Rates.**—The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death rate. This rate for a given period measures the number per thousand of population by which the population is depleted through deaths during that period. Crude death rates for each State and Territory from 1926 to 1964 are shown in the following table.

CRUDE DEATH RATES(a)

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	9.26	9.56	9.06	8.83	8.91	9.44	15.83	5.36	9.26
1931-35 ..	8.68	9.72	8.62	8.72	8.83	9.63	13.46	3.81	9.00
1936-40(b) ..	9.45	10.36	9.08	9.33	9.22	9.91	11.69	4.54	9.63

1946-50(b) ..	9.70	10.37	9.13	9.76	9.23	9.30	6.27	5.31	9.74
1951-55 ..	9.49	9.55	8.71	9.25	8.49	8.48	6.86	4.58	9.25
1956-60 ..	9.20	8.91	8.36	8.62	7.90	7.97	5.32	4.31	8.78
ANNUAL RATES									
1960 ..	9.14	8.59	8.30	8.26	7.88	7.70	5.34	4.03	8.61
1961 ..	8.95	8.37	8.42	8.06	7.77	7.89	4.88	3.33	8.47
1962 ..	9.26	8.64	8.56	8.32	7.69	7.99	5.34	3.30	8.70
1963 ..	9.19	8.81	8.50	8.13	7.73	7.74	5.62	4.32	8.69
1964—									
Males ..	10.58	9.54	10.54	9.62	9.32	9.67	6.39	5.12	10.02
Females ..	8.58	8.06	7.74	7.62	6.92	7.58	3.60	3.82	8.03
Persons ..	9.58	8.80	9.16	8.63	8.14	8.64	5.22	4.50	9.03

(a) Number of deaths per 1,000 of mean population. (b) Excludes deaths of defence personnel etc., from September, 1939 to June, 1947.

NOTE.—Crude death rates (i.e. the number of deaths per thousand of mean population) are affected by the particular age and sex composition of the population. In the Australian Capital Territory and the Northern Territory the population at risk in the higher ages is lower proportionately than in other States, largely as a result of the rapid increases of the population in the lower ages.

A graph showing the crude death rate for each year from 1870 to 1964 will be found on page 310.

3. **Standardized Death Rates.**—(i) *General.* The death rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death rate of a community will be low if it contains a large proportion of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death rate if the death rates for each sex and in each age group had been as recorded, but the age and sex distribution had been the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their censuses nearest to the year 1900.

An examination of the age distribution of deaths and the resultant age-specific death rates is made in paragraph 7, pages 332-4.

(ii) *Comparison of Crude and Standardized Death Rates.* The relative incidence of mortality as between individual States and as between the years 1921, 1933, 1947, 1954 and 1961 is illustrated in the following statement of crude and "standardized" death rates. These years have been chosen for comparison because the census data give essential information as to sexes and ages of the State populations. Crude death rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH RATES

Particulars	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
Crude death rate(a)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947	9.53	10.44	9.15	9.61	9.39	9.17	9.69
1954	9.46	9.20	8.63	9.01	8.38	8.67	9.10
1961	8.95	8.37	8.42	8.06	7.77	7.89	8.47
Standardized death rate(b)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947	7.44	7.31	7.47	6.77	7.28	7.21	7.34
1954	7.24	6.63	6.80	6.52	6.71	7.02	6.90
1961	6.56	6.12	6.26	5.90	6.02	6.19	6.27

(a) Total deaths per 1,000 of mean population.
in para. 3 (i) p. 325.

(b) See explanation of standardized death rates

The comparisons above relate to individual years in which a census of population was taken and should not be used as the basis for general conclusions as to changes in incidence of mortality for other than those years.

4. **True Death Rates.**—The main objections to standardized death rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. However, a correct measurement of the mortality of the population can be obtained from life tables. A life table represents the number of survivors at each age from a group of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in a stationary population one person in 50 or 20 per thousand will die each year. The true death rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survival from each year of age to the next. The table below sets out complete expectation of life at birth and true death rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH RATES: AUSTRALIA

Period	Complete expectation of life at birth (years)		True death rate	
	Males	Females	Males(a)	Females(b)
1881-1890	47.20	50.84	21.19	19.67
1891-1900	51.06	54.76	19.58	18.26
1901-1910	55.20	58.84	18.12	17.00
1920-1922	59.15	63.31	16.91	15.80
1932-1934	63.48	67.14	15.75	14.89
1946-1948	66.07	70.63	15.14	14.16
1953-1955	67.14	72.75	14.89	13.75

(a) Number of deaths per 1,000 males in stationary population.

(b) Number of deaths per 1,000 females in stationary population.

The crude death rates and the true death rates of Australia and the more populous countries of the world for the latest available year are shown in the table in § 7. International Vital Statistics, pages 344-6.

5. Australian Life Tables.—(i) *Life Tables prior to 1954.* It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881-1890, 1891-1900 and 1901-1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, time, and geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the ten years 1901-1910 were prepared and published.

At the Census of 1921, Life Tables were prepared by the Commonwealth Statistician from the recorded census population and the deaths in the three years 1920 to 1922. In 1933 and 1947, Life Tables based on the census population and the deaths in the years 1932 to 1934 and 1946 to 1948 respectively were compiled by the Commonwealth Actuary.

(ii) *Life Tables of Census of 1954.* On the occasion of the 1954 Census, the seventh Life Tables in the series were compiled by the Commonwealth Actuary. These were based on the population recorded at the Census, adjusted to allow for variation the net movement into Australia over the years 1953 to 1955, and deaths during these years. Full particulars of the data used, the method of construction and the tabulations of these Life Tables will be found in the report of the Commonwealth Actuary, which was published by the Commonwealth Statistician in 1958. This report also appears in Volume VIII. of the detailed tables of the 1954 Census.

The main features of the tables are set out in the following summary table. Comparisons with earlier Australian tables and with the latest experience in the United Kingdom and New Zealand are provided in Year Book No. 48, pages 338-40.

LIFE TABLES, 1953-55

Age (x)	Males			Females		
	Rate of mortality (q_x)	Number of survivors (l_x)	Complete expectation of life (${}^e e_x$)	Rate of mortality (q_x)	Number of survivors (l_x)	Complete expectation of life (${}^e e_x$)
002521	100,000	67.14	.01989	100,000	72.75
1000056	96,488	59.53	.00035	97,228	64.78
2000186	95,460	50.10	.00064	96,774	55.06
3000170	93,801	40.90	.00096	96,055	45.43
4000297	91,861	31.65	.00217	94,715	36.00
5000819	87,553	22.92	.00530	91,573	27.03
6002221	76,256	15.47	.01203	84,665	18.78
7005315	54,054	9.59	.03250	69,613	11.62
8011958	23,658	5.47	.09314	39,633	6.30

q_x = probability of dying within one year at specified ages. l_x = number surviving at specified ages out of 100,000 births. ${}^e e_x$ = complete expectation of life at specified ages.

The following table shows a comparison of the complete expectation of life at selected ages for males and females as calculated from the life tables of 1920-22, 1932-34, 1946-48 and 1953-55.

COMPLETE EXPECTATION OF LIFE ($^{\circ}e_x$) AT SELECTED AGES: AUSTRALIA

Age (x)	Males				Females			
	1920-22	1932-34	1946-48	1953-55	1920-22	1932-34	1946-48	1953-55

1961 ..	20.84	17.80	20.01	20.00	19.67	16.81	23.92	15.57	19.54
1962 ..	21.36	18.50	21.13	19.15	22.27	20.69	40.04	17.59	20.41
1963 ..	19.90	18.92	20.09	18.67	20.42	17.94	31.43	19.05	19.55
1964 ..	20.29	16.89	19.24	19.03	19.66	20.12	32.93	20.97	19.06

(a) Number of deaths of children aged under one year per 1,000 live births registered.

Compared with other countries, Australia occupies a favourable position in respect of infant mortality. In 1963, only a few countries recorded a lower rate than Australia. Rates for Australia and the more populous countries of the world for the latest available year are shown in the tables in § 7. International Vital Statistics, pages 344-6.

(b) *Under Four Weeks.* The following table shows infant mortality rates under four weeks of age in each State and Territory during the period 1926 to 1963.

INFANT MORTALITY RATES(a): UNDER FOUR WEEKS

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	29.63	29.75	27.66	26.84	25.10	33.12	14.37	28.86	28.96
1931-35 ..	27.62	27.78	27.91	22.99	25.11	30.09	35.26	23.45	27.27
1936-40 ..	27.63	25.94	26.15	21.62	22.62	29.56	28.80	16.33	26.19
1941-45 ..	24.34	24.27	24.34	20.88	20.62	27.13	35.27	12.48	23.85
1946-50 ..	20.53	17.55	19.95	18.38	19.53	19.34	21.45	15.80	19.34
1951-55 ..	17.34	15.18	17.09	14.95	17.27	16.34	19.63	11.28	16.45
1956-60 ..	16.04	14.50	15.15	13.67	15.01	13.29	24.19	9.64	15.07
ANNUAL RATES									
1959 ..	16.37	15.22	14.61	14.03	13.79	14.84	27.63	8.81	15.31
1960 ..	15.25	15.84	13.70	13.26	15.89	11.18	27.03	12.00	14.64
1961 ..	14.86	13.46	14.80	12.99	12.76	11.91	14.81	10.96	14.01
1962 ..	15.46	14.17	15.02	13.44	14.48	14.06	19.48	11.54	14.71
1963 ..	14.10	14.88	14.80	12.92	14.87	12.08	20.95	13.54	14.32

(a) Number of deaths of children aged under four weeks per 1,000 live births registered.

NOTE.—Because of the smallness of the numbers of these deaths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. number of such deaths per thousand live births) are subject to considerable fluctuation.

(c) *Four Weeks and under One Year.* Infant mortality rates for children aged four weeks and under one year are shown in the following table for the period 1926 to 1963.

INFANT MORTALITY RATES(a): FOUR WEEKS AND UNDER ONE YEAR

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	25.11	22.59	19.75	20.11	24.17	20.25	51.72	42.45	23.03
1931-35 ..	14.30	14.98	11.55	12.13	15.70	14.38	45.34	11.03	14.00
1936-40 ..	13.55	11.69	10.60	11.46	17.08	11.67	16.00	5.45	12.62
1941-45 ..	11.61	10.23	9.97	12.07	12.68	12.18	26.46	6.24	11.12
1946-50 ..	8.38	6.27	7.54	8.12	8.62	7.19	15.92	.09	7.64
1951-55 ..	7.77	5.52	6.49	7.60	7.14	7.33	16.65	4.12	6.89
1956-60 ..	6.19	5.17	5.85	6.84	6.41	7.33	11.81	4.04	5.98
ANNUAL RATES									
1959 ..	6.28	5.99	5.64	6.68	6.37	8.58	11.31	2.94	6.23
1960 ..	5.91	4.76	5.17	5.68	5.73	7.91	6.43	5.69	5.52
1961 ..	5.98	4.34	5.21	7.01	6.91	4.90	9.11	4.61	5.53
1962 ..	5.90	4.33	6.11	5.71	7.79	6.63	20.56	6.05	5.70
1963 ..	5.80	4.04	5.29	5.75	5.55	5.86	10.48	5.51	5.23

(a) Number of deaths of children aged four weeks and under one year per 1,000 live births registered.

NOTE.—Because of the smallness of the numbers of these deaths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. number of such deaths per thousand live births) are subject to considerable fluctuation.

(ii) *Australia. (a) Under One Year.* The fact that out of 601,014 male infants born from 1959 to 1963, 13,561 (22.56 per 1,000) died during the first year of life, while of 569,044 female infants only 10,107 (17.76 per 1,000) died during the first year, accords with the universal experience that during the first few years of life the higher death rate of male infants tends to counteract the excess of male births. Stillbirths, for which masculinity is also higher, are not included in any of the tables relating to deaths.

As shown by the following table, the disparity is greater during the first four weeks of life, termed the neonatal period, than during the remainder of the first year of life, or the post-neonatal period.

INFANT DEATHS AND MORTALITY RATES: AUSTRALIA

Period	Number of deaths						Rates(a)					
	Neonatal— under four weeks		Post- neonatal— four weeks and under one year		Total under one year		Neonatal— under four weeks		Post- neonatal— four weeks and under one year		Total under one year

(a) Number of deaths per 1,000 male or female live births registered.

(b) Not available.

(c) Includes under one day.

Graphs showing infant deaths and infant mortality rates for each year from 1910 to 1964 will be found on pages 311 and 312 respectively.

(iii) *Causes of death—Children under One Year.* (a) *Numbers.* Causes of death of children under one year of age should be considered in relation to age at death, because the emphasis on various causes changes rapidly as age at death varies.

A summary for 1963 of deaths of children under one year of age, classified according to principal causes of death and age at death, is given in the following table.

CAUSES OF DEATH: CHILDREN UNDER ONE YEAR OF AGE, AUSTRALIA, 1963

International Statistical Classification number	Cause of death	Age at death										Total under one year	
		Days		Total under one week	Weeks			Months					
		Under 1	1-6		1	2	3	1-2 (a)	3-5	6-8	9-11		
	Causes mainly of pre-natal and natal origin—												
750-759	Congenital malformations ..	202	196	398	90	40	31	144	105	53	24	885	
760, 761	Birth injury ..	343	238	581	24	6	611

	All Causes	3,008 (65.3 %)	100.0	367 (8.0 %)	100.0	1,232 (26.7 %)	100.0	4,607 (100.0 %)	100.0

(a) 490-493, 500-502, 763.

7. *Age Distribution.*—(i) *Number of Deaths.* Age at death is recorded for statistical purposes in days for the first week of life, in weeks for the first four weeks, in months for the first year and in completed years of life thereafter. These ages are usually combined in groups for publication, the most common being weeks for the first four weeks, months or groups of months for the first year, single years of age for the first five years, and thereafter the five-year groups 5-9 years, 10-14 years, etc. A summary in this form for the year 1963 is given for Australia in the following table.

AGE AT DEATH: AUSTRALIA, 1963

Age at death	Males	Fe- males	Per- sons	Age at death			
				Males	Fe- males	Per- sons	
Under 1 week	1,734	1,274	3,008	5-9 years	276	190	466
1 week and under 2 weeks ..	126	85	211	10-14 "	265	133	398
2 weeks and under 3 weeks ..	56	39	95	15-19 "	562	219	781

				Age not stated ..	7	1	8
<i>Total under 5 years ..</i>	<i>3,103</i>	<i>2,379</i>	<i>5,482</i>	Total, All Ages ..	53,212	41,682	94,894

There are different mortality rates at various stages of life, and the actual number of deaths in any period is related to the numbers living at the respective stages. Changes in the number of deaths from one period to another are associated with changes in the rate of mortality in the various age groups and by the changed proportions of persons living in the different groups.

The combined effect of various influences, i.e., the steady decline in the rate of mortality, the long-term decline in the birth-rate, and the effects of past and present migration on the age distribution of the population, is shown in the following table, which shows the proportion of deaths in various age groups in ten-year periods from 1901 to 1960 and for the year 1963.

PROPORTION OF DEATHS IN EACH AGE GROUP: AUSTRALIA

(Per cent.)

Period	Age at death (years)								Total
	Under 1	1-4	5-19	20-39	40-59	60-64	65 and over	Unspeci- fied	
1901-10 ..	20.51	6.45	6.37	14.99	17.99	5.31	28.26	0.12	100.00
1911-20 ..	16.66	6.09	5.49	14.44	20.32	6.19	30.68	0.13	100.00
1921-30 ..	13.10	4.51	4.85	12.12	20.55	8.26	36.53	0.08	100.00
1931-40 ..	7.40	2.56	3.83	9.36	20.54	8.36	47.92	0.03	100.00
1941-50 ..	6.79	1.71	2.26	6.01	19.04	9.33	54.84	0.02	100.00
1951-60 ..	5.59	1.33	1.80	4.90	17.27	9.18	59.90	0.03	100.00
1963—									
Males ..	4.95	0.88	2.07	5.00	20.20	10.30	56.59	0.01	100.00
Females ..	4.73	0.98	1.30	3.28	13.71	7.11	68.89	0.00	100.00
Persons ..	4.85	0.92	1.73	4.25	17.35	8.90	61.99	0.01	100.00

A table showing these proportions for males and females separately for the period 1901 to 1950 was published in Year Book No. 39, page 614.

(ii) *Age-specific Death Rates.* In previous issues of the Year Book, average annual age-specific death rates were given for each State and Australia for the periods 1932-34, 1946-48 and 1953-55 (see Year Books, No. 37, pp. 778-9, No. 39, pp. 615-6 and No. 44, pp. 640-1). These rates were based on the age distribution of the population at the relevant censuses.

Intercensal estimates of the age distribution of the population are available for Australia and for the larger States. The following table shows age-specific death rates for Australia for the year 1963, for males, females and persons.

AGE-SPECIFIC DEATH RATES(a): AUSTRALIA, 1963

Age group (years)	Males	Females	Persons	Age group (years)	Males	Females	Persons
Under 1(b) ..	21.8	17.2	19.5	45-49 ..	6.4	3.7	5.0
1-4 ..	1.0	0.9	1.0	50-54 ..	10.1	5.6	7.9
5-9 ..	0.5	0.4	0.4	55-59 ..	16.6	8.5	12.7
10-14 ..	0.5	0.3	0.4	60-64 ..	27.0	13.8	20.2
15-19 ..	1.2	0.5	0.8	65-69 ..	43.4	21.4	31.1
20-24 ..	1.6	0.6	1.1	70-74 ..	63.3	37.2	48.5
25-29 ..	1.5	0.7	1.1	75-79 ..	96.8	62.3	76.6
30-34 ..	1.7	1.0	1.3	80-84 ..	144.4	107.7	121.7
35-39 ..	2.3	1.5	1.9	85 and over	241.1	201.9	215.3
40-44 ..	3.5	2.4	3.0				

(a) Average number of deaths per 1,000 of mid-year population in each age group estimated in respect of 30th June, 1963. (b) Infant deaths per 1,000 live births registered.

8. *Causes of Death.*—The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899, and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death, and further international revisions in 1909 (Second), 1920 (Third), 1929 (Fourth), 1938 (Fifth), 1948 (Sixth), and 1955 (Seventh), were successively adapted for use in Australian statistics.

The Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death was used in Australia for deaths registered in 1950 to 1957. The Seventh Revision has been used for deaths registered in 1958 and subsequent years. The Sixth Revision, for the first time in connexion with the International Classification, laid down rules for a uniform method of selecting the main cause to be tabulated if more than one cause is stated on the death certificate. These rules were maintained in the Seventh Revision, which was concerned mainly with certain essential changes and amendment of errors and inconsistencies in the previous classification. Prior to 1950, the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform to successive revisions of the International List.

The adoption of the new method introduced with the Sixth Revision and maintained in the Seventh marked a fundamental change in Australian cause of death statistics, emphasis now being placed on the underlying cause of death as indicated by the certifying practitioner. This change in principle affects the comparability of the statistics for 1950 and subsequent years with those for earlier years. A complete detailed classification of causes of death for Australia for 1950 according to both the Fifth and Sixth Revisions was shown in *Demography*, Bulletin No. 68, 1950.

In order to facilitate the concise presentation of cause of death statistics, the present International Classification provides two special lists of causes for tabulation—the Intermediate List of 150 causes and the Abbreviated List of 50 causes. The latter has been used as the base of the cause of death tabulations for 1963 which follow. Some categories have been sub-divided to show additional particulars of interest in Australian statistics. Tables A and B show deaths of males and females, respectively, in age groups, and Table C shows the total numbers of males and females who died, the death rates per million of mean population, and the percentage of total deaths.

(a) Less than 0.5. (b) 030-039, 041, 042, 044, 049, 052-054, 059-074, 081-083, 086-096, 120-138. (c) 140-18, 160, 161, 164, 165, 190-203, 205.

9. Deaths from Principal Causes.—(i) *General*. In the preceding tables, particulars have been given for each of the causes of death comprising the Abbreviated Classification according to the Seventh Revision of the International List. Certain important causes are treated in detail hereunder. The Abbreviated Classification numbers used in tables A to C (pp. 335-8) are indicated in parentheses for each cause or group of causes.

(ii) *All Forms of Tuberculosis (B1, B2)*. (a) *General*. The total number of deaths classified to all forms of tuberculosis in 1963 was 440, consisting of 346 males and 94 females. In comparing any of the figures for 1950 and subsequent years with those for 1949 and earlier years, consideration should be given to the effect of the change in basis from the Fifth to the Sixth Revision of the International List. This was discussed in Year Book No. 39, page 626.

(b) *Age at Death*. The following table shows the age groups of males and females who were classified as dying from tuberculosis in 1963, together with figures for 1931, 1941, 1951, and 1961.

TUBERCULOSIS (ALL FORMS): DEATHS IN AGE GROUPS, AUSTRALIA

Age group (years)	Males					Females				
	1931	1941	1951	1961	1963	1931	1941	1951	1961	1963
0-14	90	63	23	5	3	81	54	35	1	2
15-29	294	162	46	2	3	487	275	68	..	1
30-44	585	428	135	25	20	422	319	142	20	13
45-64	674	793	570	128	138	252	251	126	41	33
65 and over ..	193	279	306	175	182	89	110	86	50	45
Not stated	1
Total ..	1,836	1,725	1,080	335	346	1,331	1,009	458	112	94

(c) *Death Rates*. The reduction in mortality from tuberculosis is shown by the decline in the crude death rate from tubercular diseases, which fell from 49 per 100,000 of mean population in 1931 to 18 in 1951, and to 4 in 1963. The reductions in the younger age groups are much greater, as can be seen from the table above. In making these comparisons, consideration of the effect of the change in basis from the Fifth to the Sixth Revision of the International List (*see* ii (a) above) is particularly important.

Of the more populous countries, those with lowest death rates from tuberculosis per 100,000 of population are: Netherlands, 2.5; Israel (Jewish population), 3.3; Denmark, 3.8; Australia, 4.0; Canada, 4.2; United States of America, 5.1; and New Zealand, 5.2.

Rates for selected countries in each continent are:

Africa—South Africa (white population), 7.1; United Arab Republic, 21.6.

North America—Dominican Republic, 15.5; Mexico, 27.3; Guatemala, 31.4.

South America—Argentina, 19.9; Peru, 56.4. Brazil, 82.3;

Asia—Japan, 29.2; India, 82.7; Philippines, 87.1.

Europe—England and Wales, 6.6; Scotland, 8.4; Italy, 16.3; France, 19.2; Poland, 39.9.

(iii) *Malignant Neoplasms, including Neoplasms of Lymphatic and Haematopoietic Tissues (B18)*. (a) *General*. Deaths classified under this heading according to the Sixth and Seventh Revisions of the International List (used in Australia for deaths registered since 1950) are not directly comparable in total with those on the Fifth Revision basis (*see* Year Book No. 39, p. 628). This should be kept in mind in considering the comparisons shown in the following pages.

(b) *Seat of Disease*. Tables showing the seat of disease in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1963 are included in *Causes of Death*, Bulletin No. 1. A summary regarding seat of disease for 1963 is given on page 340.

DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES: AUSTRALIA, 1963.

Seat of disease	Males	Females	Persons
Malignant neoplasms—			
Buccal cavity and pharynx	202	80	282
Digestive organs and peritoneum—			
Oesophagus	195	85	280
Stomach	992	677	1,669
Small intestine	24	16	40

Hodgkin's disease	83	64	147
Other forms of lymphoma (reticulosis)	41	23	64
Multiple myeloma (plasmocytoma)	72	57	129
Leukaemia and aleukaemia	321	251	572
Mycosis fungoides	2	2	4
<i>Total, Neoplasms of Lymphatic and Haematopoietic Tissues</i>	712	553	1,265
Grand Total	7,968	6,808	14,776

(c) *Age at Death.* The ages of males and females who died from malignant neoplasms in 1963 are given below, together with figures for 1931, 1941, 1951, and 1961. The increase in the number of deaths from malignant neoplasms in the years since 1931 is due principally to the increase in the number of people in the higher age groups, at which ages the risks of cancer are much greater. While the total population increased by about 67 per cent. between 1931 and 1963, the number of people aged 55 years and over increased by about 109 per cent. The increase in the number of deaths in the lower age groups from 1951 is due partly to the inclusion of neoplasms of lymphatic and haematopoietic tissues, and it is probable also that part of the increased number of deaths from cancer recorded in recent years has been due to improved diagnosis and certification on the part of the medical profession.

MALIGNANT NEOPLASMS(a): NUMBER OF DEATHS IN AGE GROUPS, AUSTRALIA

Age group (years)	Males					Females				
	1931	1941	1951 (a)	1961 (a)	1963 (a)	1931	1941	1951 (a)	1961 (a)	1963 (a)

Total	3,484	4,255	5,515	7,380	7,968	3,105	4,223	5,104	6,309	6,808

(a) Includes neoplasms of lymphatic and haematopoietic tissues.

(d) *Death Rates.* The death rates from malignant neoplasms have continued to rise over recent years. The rates are crude death rates representing the number of deaths from malignant neoplasms per 100,000 of mean population and do not take account of changes in the age constitution of the population, and to a substantial extent they reflect the increasing age of the population rather than the true change in mortality from malignant neoplasms (see previous paragraph). In 1931, the rate for Australia was 101 (males, 105; females, 97); in 1941 it was 119 (males, 119; females, 120); and in 1951 it had risen to 126 (males, 130; females, 122). Figures for 1961 gave a rate of 130 (males, 139; females, 121), and for 1963 a rate of 135 (males, 148; females 126).

Death rates from malignant neoplasms per 100,000 of mean population for Australia and for various other countries are as follows:—Brazil, 94; Poland, 97; Japan, 103; Israel Jewish population, 110; South Africa (white population), 111; Canada, 132; Australia, 135; United States of America, 149; Italy, 150; Netherlands, 172; France, 200; England and Wales, 218; Scotland, 221. The rates are for the latest available year in each case.

(iv) *Diseases of the Heart (B25 to B28).* The number of deaths classified to diseases of the heart in 1963 was 35,098 (20,611 males and 14,487 females). This class is the largest among causes of death, the rate having increased from 112 per 100,000 of mean population in 1911–15 to 321 in 1963. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past twenty years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners.

The death rates for heart diseases for various years from 1931 were as follows:—1931, 159 (males, 178; females, 142); 1941, 269 (males, 306; females, 231); 1951, 314 (males, 367; females, 259); 1961, 304 (males, 356; females, 250); and 1963, 321 (males, 374; females, 268). Deaths from heart diseases in 1963 represented 37 per cent. of the total deaths.

(v) *Puerperal Causes (B40).* It was shown in Year Book No. 39, page 634, that the changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The Seventh Revision, introduced in 1958, did not affect comparability. The death rate from these causes has fallen rapidly during recent years and in 1963 the rate was 0.3 per 1,000 live births, compared with a rate of 6 per 1,000 in 1936. The 64 deaths in 1963 correspond to a death rate of 1.18 per 100,000 females. The death rate may be expressed in other terms by stating that for every 3,683 babies born alive in 1963 one woman died from puerperal causes.

The death rate per 1,000 live births from puerperal causes in various countries for the latest available year is as follows:—Denmark and Sweden, 0.2; Australia, Netherlands, Norway and New Zealand, 0.3; United States of America, United Kingdom, Canada and France, 0.4; Finland and Switzerland, 0.5; and Italy, Japan and Venezuela, 1.1.

Tables showing ages at marriage and at death, duration of marriage, and issue for 1963 are given in *Demography*, Bulletin No. 81.

(vi) *Causes of Infant Mortality.* See paragraph devoted to causes of infant deaths on pages 331–2.

(vii) *Accidents, Poisonings and Violence (BE47 to BE50).* (a) *General.* Deaths in this class are classified according to external cause and not according to nature of injury. The classification provides sub-groups for accidents, including adverse reactions to prophylactic inoculations, therapeutic misadventures and late effects of accidental injury; suicide; homicide and injuries purposely inflicted by other persons; and injury resulting from operations of war, including delayed effects.

The following table, showing the death rates in the main sub-groups per 100,000 of mean population, indicates that the death rate from violence is between two and three times as great for males as for females. It can be seen also that in 1963 the proportion of deaths caused by violence was 7.62 per cent., compared with 6.76 per cent. in 1931–35.

The low level of the rates and proportions for the years 1941–45 is due largely to the exclusion of deaths of defence personnel from accidents, suicide and homicide, though the rates have been based on total mean population (including defence personnel). A further contributing factor is the decrease during this period in the number of automobile accidents. From July, 1947, deaths of defence personnel from accidents, etc., have again been included.

ACCIDENTS, POISONINGS AND VIOLENCE: DEATH RATES(a), AUSTRALIA

Period	Death rate from—												All violence, proportion per 10,000 deaths

(a) Number of deaths per 100,000 of mean population.

(b) Includes "open verdict".

(c) Includes late effects of injuries due to operations of war.

(b) *Accidents (BE47, BE48)*. In 1963, the total number of deaths from accidental causes was 5,353 (3,787 males and 1,566 females). Over half of the accidental deaths were the result of transport accidents. Of these, the numbers attributable to the major causes, and the percentages of the total accidental deaths in each case, were as follows:—Motor vehicle traffic accidents, 2,611 (48.78 per cent.); motor vehicle non-traffic accidents, 59 (1.10 per cent.); other road vehicle accidents, 48 (0.90 per cent.); railway accidents, 96 (1.79 per cent.); water transport accidents, 88 (1.65 per cent.); aircraft accidents, 27 (0.50 per cent.); a total of 2,929 (54.72 per cent.). Other important causes were accidental falls, 864 (16.14 per cent.); accidental drowning, 384 (7.17 per cent.); and accidents caused by fire and explosion of combustible material, 199 (3.72 per cent.).

(c) *Suicide (BE49). Modes Adopted*. Deaths from suicide in 1963 numbered 1,718 (males, 1,143; females, 575). Poisoning, other than by gases, was used in 724 cases (42.14 per cent. of total deaths by suicide). Other important modes adopted, together with the numbers and relevant percentages, were as follows:—firearms and explosives, 336 (19.56 per cent.); poisoning by gases, 323 (18.80 per cent.); hanging or strangulation, 157 (9.14 per cent.); submersion (drowning), 81 (4.71 per cent.); other and unspecified modes, 97 (5.65 per cent.).

Of the 1,143 males who committed suicide, 312 (27.30 per cent.) used firearms or explosives. For females the most common mode was poisoning (other than by gases). This was used in 340 cases (59.13 per cent.).

Age at Death. The following table shows the age of persons who committed suicide in 1963.

AGE OF PERSONS WHO COMMITTED SUICIDE: AUSTRALIA, 1963

50-54	120	85	205				
55-59	95	56	151				
				Total Deaths ..	1,143	575	1,718

(d) *Homicide and Operations of War (BE50)*. Of the 160 deaths recorded in 1963, there were 148 deaths from homicide and injury purposely inflicted by other persons (not in war), of which assault by firearms and explosives caused 61, assault by cutting and piercing instruments 23, and assault by other means 64. Deaths from injury resulting from the operations of war numbered 12, but all were deaths from late effects of such injuries.

10. **Age at Death and Average Issue of Deceased Married Males and Females.**—*Demography*, Bulletin No. 81, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married (including widowed or divorced) persons who died in Australia in 1963. Deaths of married males in 1963 numbered 41,397, and those of married females, 33,659. The tables which follow deal, however, with only 40,811 males and 33,423 females, the information regarding issue in the remaining 822 cases being incomplete. The total number of children in the families of the 40,811 males was 118,562 and of the 33,423 females, 105,179. The average number of children is shown for various age groups in the following table.

(a) In cases where the deceased was married more than once this represents age at first marriage.

§ 6. Vital Statistics of External Territories

The following table shows, for the year 1963, the number of marriages, births and deaths registered in the external territories under the control of Australia. More detailed information will be found in a series of tables in *Demography*, Bulletin No. 81.

EXTERNAL TERRITORIES: VITAL STATISTICS, 1963

Territory	Marriages	Births	Deaths
Christmas Island(a) ..	4	91	9
Cocos (Keeling) Islands(a) ..	2	19	3
Norfolk Island(a) ..	4	8	13
Papua(b) ..	99	311	32
Trust Territory of New Guinea(b) ..	119	518	62
Trust Territory of Nauru(b) ..	5	10	2

(a) Total population.

(b) Non-indigenous population only.

§ 7. International Vital Statistics

Vital Statistics Rates—Selected Countries.—In the following table, vital statistics rates for selected countries are shown. Crude marriage, birth, and death rates represent the number of "events" reported for the year stated per 1,000 of the population. Infant mortality rates

are the number of deaths which occurred under one year of age per 1,000 live births. The true death rates (reciprocals of the expectation of life at birth) have been computed from the life tables for the respective countries as published in the United Nations *Demographic Yearbook*, 1963 (see explanation of true death rates, para. 4, p. 326).

In many instances the rates shown in the following table are estimates and the results of sample surveys only. Reference should be made to the detailed comments contained in the United Nations *Demographic Yearbook*, 1963 (see particularly Technical Notes on Statistical Tables and footnotes to the tables). The countries are arranged in the same order as in the table on page 301-2 of the Population chapter.

(a) Crude marriage, birth and death rates, i.e. number of marriages, births and deaths per 1,000 of population. Infant mortality—number of deaths of children under one year of age per 1,000 live births. (b) Number of deaths per 1,000 males and 1,000 females respectively in stationary population (see explanation on p. 326). (c) 1961. (d) Not available, or available information relates to a segment of population only. (e) 1957. (f) 1962. (g) 1963. (h) 1958. (i) Derived from census results by United Nations Statistical Office using reverse survival methods. (j) African population. (k) Estimates specially prepared and published by U.N. Economic Commission for Latin America. (l) 1950-55. (m) Jewish population.

CHAPTER XI

HOUSING AND BUILDING

NOTE.—In § 1 of this chapter details are given of the characteristics of dwellings as obtained from censuses, § 2 provides a summary of building activities, § 3 outlines government activities in the field of housing, and § 4 relates to financial arrangements associated with the erection or purchase of homes.

For further information on dwellings as obtained from censuses reference should be made to the results published in the detailed tables of the 1961 census and earlier censuses and in the mimeographed statements of the 1961 census (*see* Chapter XXX. Miscellaneous).

More detailed information on building activity may be found in the annual bulletin *Secondary Industries, Part I. Factory Operations and Building* and in the *Quarterly Bulletin of Building Statistics*, and current information is obtainable also in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and in the mimeographed statements *Building Statistics: Number of New Houses and Flats* (quarterly), and *Building Approvals* (monthly). Details for particular States are available from publications issued regularly by the Deputy Commonwealth Statisticians.

Commonwealth Government activities relate in the main to the provision of moneys to State Governments under Commonwealth-State Housing Agreements, to the assistance of ex-service personnel in the erection and purchase of homes, and to the provision of homes in the Territories. Further details of activities of the Commonwealth and State Housing Authorities are shown in the reports issued by these authorities.

§ 1. Census Dwellings

1. General.—At each census of the population, in addition to the questions relating to personal particulars, there have been a number of questions relating to dwellings. A "dwelling" is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building, and includes, *in addition to houses and flats*, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution.

All statistics in this section are exclusive of particulars of dwellings occupied solely by full-blood Aborigines.

2. Number of Dwellings.—(i) *Censuses, 1911 to 1961.* The following table shows the number of occupied and unoccupied dwellings in Australia at each census from 1911 to 1961. Occupied dwellings are classified into "private" and "other than private" dwellings (*see* para. 3, p. 349, for definitions of "private" and "other than private" dwellings).

DWELLINGS: AUSTRALIA, CENSUSES

Census	Occupied			Unoccupied (a)
	Private	Other than private	Total	
1911	894,389	29,070	923,459	33,473
1921	1,107,010	46,275	1,153,285	51,163
1933	1,509,671	37,705	1,547,376	68,772
1947	1,873,623	34,272	1,907,895	47,041
1954	2,343,421	36,932	2,380,353	112,594
1961	2,781,945	35,325	2,817,270	194,114

(a) *See* text on p. 357 for explanation of the term "unoccupied".

(ii) *Census, 1961.* The following table shows the number of occupied and unoccupied dwellings in the urban and rural areas of Australia at the census of 30th June, 1961. (For definitions of "urban" and "rural" see Chapter IX. Population, para. 3, p. 263). The boundaries of the metropolitan urban and other divisions of States differ from census to census, and consequently accurate comparison cannot be made between figures for corresponding divisions.

DWELLINGS: AUSTRALIA, CENSUS, 30th JUNE, 1961

Division	Occupied				Unoccupied(a)	
	Private	Other than private	Total		Number	Proportion of total
			Number	Proportion of total		
				Per cent.		Per cent.

(a) See text on p. 357 for explanation of the term "unoccupied".

(iii) *Censuses, 1954 and 1961.* The total numbers of occupied and unoccupied dwellings in each State and Territory at the censuses of 1954 and 1961 were as follows.

DWELLINGS: STATES AND TERRITORIES

State or Territory	Census, 30th June, 1954		Census, 30th June, 1961	
	Occupied	Unoccupied (a)	Occupied	Unoccupied (a)
New South Wales	912,877	42,831	1,061,609	72,432
Victoria	660,690	27,491	790,529	47,389
Queensland	339,328	21,473	398,233	33,969
South Australia	215,301	8,524	261,908	17,061
Western Australia	162,823	6,614	194,317	13,705
Tasmania	78,789	5,288	91,258	8,582
Northern Territory	3,427	47	5,479	179
Australian Capital Territory	7,118	326	13,937	797
Australia	2,380,353	112,594	2,817,270	194,114

(a) See text on p. 357 for explanation of the term "unoccupied".

3. *Class of Dwelling.*—The following table shows the numbers of the various classes of occupied dwellings in the metropolitan urban, other urban, and rural areas of Australia at the censuses of 1954 and 1961.

Private dwellings are classified into the following four categories:—

Private House—includes houses, sheds, huts, garages, etc., used for dwelling purposes, and shared private houses for which only one householder's schedule was received;

Share of Private House—portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received;

Flat—part of a house or other building which can be completely closed off and which has its own cooking and bathing facilities;

Other Private Dwelling—includes private dwellings such as rooms, apartments, etc., which are parts of buildings but are not self-contained units.

Other than Private dwellings include hotels; motels; boarding houses, lodging houses and hostels; educational, religious and charitable institutions; hospitals; defence and penal establishments; police and fire stations; clubs; staff barracks and quarters, etc.

OCCUPIED DWELLINGS, BY CLASS: AUSTRALIA

(a) See text on p. 263 regarding comparability as between censuses. (b) Includes shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) Prior to 1961 single self-contained dwellings attached to, or situated above, offices, shops, etc., were classified as private houses irrespective of the description stated in the householder's schedule. In 1961 such dwellings, if described as self-contained flats, were classified as flats. (e) Included with private dwellings. (f) Certain institutions previously classified as "Educational" were in 1961 classified as "Religious".

NOTE.—Minus sign (—) denotes decrease.

4. **Population According to Class of Dwelling, etc.**—The following table shows the number of the various classes of occupied dwellings at the censuses of 1954 and 1961, together with the number of inmates therein.

OCCUPIED DWELLINGS, ETC., AND INMATES: AUSTRALIA

Particulars	Census, 30th June, 1954			Census, 30th June, 1961		
	Number of dwellings	Inmates		Number of dwellings	Inmates

Total Population	8,986,530	100.00	..	10,508,186	100.00

(a) Includes shared private houses for which only one householder's schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) See footnote (d) to table on p. 349. (d) See footnote (e) to table on p. 349. (e) Shipping, railway and air travellers.

5. **Occupied Private Dwellings.**—(j) *Material of Outer Walls.* In the following table, occupied private dwellings are classified according to the material of the outer walls.

Wood has been the most extensively used material in the construction of the outer walls, followed by brick and fibro-cement, and for Australia at 30th June, 1961, the respective proportions for which material of outer walls was specified, were 41.5 per cent., 34.3 per cent., and 16.3 per cent. Fibro-cement dwellings have increased from 1933, when the proportion was 1.6 per cent. (23,696 dwellings), to 6.3 per cent. in 1947 (117,631 dwellings), to 12.7 per cent. in 1954 (296,553 dwellings), and to 16.3 per cent. in 1961 (452,270 dwellings). The proportions of both brick and wooden dwellings have shown small decreases since 1954. The numbers of dwellings of all other materials except fibro-cement and concrete have decreased. Brick dwellings in 1961 represented 50.3 per cent. of all occupied private dwellings in the metropolitan urban division, while in the other urban and rural divisions wooden dwellings predominated, the percentages of such dwellings being 54.8 per cent. and 55.3 per cent. respectively.

OCUPIED PRIVATE DWELLINGS, BY MATERIAL OF OUTER WALLS:

(a) See text on p. 263 regarding comparability as between censuses.

NOTE.—Minus sign (-) denotes decrease.

(ii) *Number of Rooms.* For census purposes the kitchen and any permanently enclosed sleep-out were included in the number of rooms in the dwelling, but the bathroom, pantry, laundry and storehouse were excluded.

Excluding houses with rooms unspecified, private houses of four, five and six rooms represented 80.2 per cent. of the total number of private houses in Australia at 30th June, 1961, compared with 78.3 per cent. in 1954; 90.2 per cent. of the total increase in the number of private houses since 1954 consisted of houses containing these numbers of rooms.

The following table gives particulars of occupied private dwellings by number of rooms. For a dissection of these figures into metropolitan urban, other urban, and rural areas see page 359 of Year Book No. 50.

OCUPIED PRIVATE DWELLINGS, BY NUMBER OF ROOMS: AUSTRALIA

(a) Includes kitchen and permanently enclosed sleep-out but does not include bathroom, pantry, laundry or storehouse.

(b) Includes houses, sheds, butts, etc., and shared private houses for which only one householder's schedule was received.

(c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received.

(d) See footnote (d) to table on p. 349.

(iii) *Number of Inmates.* A classification of occupied private dwellings according to the number of inmates is shown in the following table. Particulars for metropolitan urban, other urban, and rural areas were included in earlier issues of the Year Book (*see* p. 361 of No. 50) but are not repeated in this issue.

For Australia as a whole, at the 1961 census, private houses with two inmates were most numerous, followed by those with four and three inmates in that order.

An increase of 21 per cent (93,420 houses) in the number of private houses occupied by two inmates brought this group from second position in 1954, to first position in 1961. Houses with two inmates in 1961 constituted 22 per cent. of the total number of occupied private houses in Australia, while private houses with four and three inmates constituted 21 per cent. and 19 per cent., respectively.

The greatest proportional increase since 1954 in the number of occupied private dwellings occurred in those with one inmate, the growth of 33.9 per cent. being due mainly to an increase of 34.5 per cent. in the number of private houses with one inmate and an increase of 108.3 per cent. in the number of flats with one inmate. The number of flats with two, three and four inmates showed increases of 66.7 per cent., 46.7 per cent. and 61.8 per cent. respectively since 1954. However, the comparison of figures for flats between 1954 and 1961 is affected by the classification as flats in 1961 of dwellings previously classified as private houses (*see* footnote (d) to table on p. 349).

At 30th June, 1961, dwellings with less than 6 inmates represented 86.4 per cent. of total occupied private dwellings compared with 87.2 per cent. in 1954.

Average number of inmates per private dwelling ..	3.69	2.71	2.58	2.11	3.55	3.69	2.82	2.54	1.94	3.55

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) *See* footnote (d) to table on p. 349.

(iv) *Nature of Occupancy.* At the 1961 census 52.0 per cent. of occupied private houses in Australia for which particulars were supplied were occupied by owners, 25.1 per cent. by purchasers by instalments, 20.7 per cent. by tenants, and 2.2 per cent. by others. The corresponding percentages in 1954 were—owners, 52.5 per cent.; purchasers by instalments, 16.8 per cent.; tenants, 28.1 per cent.; and others, 2.6 per cent. Owner-occupied houses in Australia increased by 17.3 per cent. between 1954 and 1961, and those being purchased by instalments by 76.8 per cent., the increase in these two groups combined being nearly 32 per cent., while tenant-occupied houses decreased by 12.4 per cent.

In the metropolitan areas 80.6 per cent. of all occupied private houses were either owner-occupied or being purchased by instalments, as compared with 74.6 per cent. in the other urban areas and 70.2 per cent. in the rural areas.

Tenants occupied by far the greater proportion of flats and other private dwellings.

Particulars of the nature of occupancy of occupied private dwellings are shown for Australia in the following table. For similar particulars for metropolitan urban, other urban and rural areas, *see* Year Book No. 50, page 363.

**OCCUPIED PRIVATE DWELLINGS, BY NATURE OF OCCUPANCY:
AUSTRALIA**

Nature of occupancy	Census, 30th June, 1954					Census, 30th June, 1961

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received.

(b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received.

(c) See footnote (d) to table on p. 349.

(d) At the 1954 Census, figures were compiled from the answers furnished in response to the instruction on the householder's schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'". At the 1961 Census, householders were instructed on the schedule to write "Tenant (G)" if they paid rent to the Governmental Housing Authority in their State or Territory.

(v) *Weekly Rent—Tenanted Private Dwellings.* The following table shows tenanted private dwellings in Australia classified according to weekly rent (unfurnished). For similar particulars for metropolitan urban, other urban, and rural areas *see* Year Book No. 50, page 365.

Information tabulated concerning rents was restricted to the actual rent paid per week by tenants for unfurnished private dwellings. Particulars of rents shown in the following tables are therefore on an *unfurnished* basis. Dwellings shown as rent "Not stated" include those whose rents were shown on householders' schedules on a *furnished* basis, and those whose rents were not applicable (e.g., for shop and dwelling combined). In this section information on "tenanted private dwellings" *excludes particulars of dwellings occupied by "Tenants (Governmental Housing)" in each State*, i.e. those householders who at the 1954 Census furnished answers in response to the instruction on the census householder's schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'" and those householders who at the 1961 Census furnished answers in response to the instruction on the census householder's schedule "Tenant paying rent to the Governmental Housing Authority in their State to write 'Tenant (G)'" . *For the Australian Capital Territory and the Northern Territory particulars of all tenanted private dwellings are included.*

Average weekly rent (unfurnished) per private dwelling ..	s. d. 32 2	s. d. 34 2	s. d. 50 6	s. d. 36 2	s. d. 35 0	s. d. 57 8	s. d. 66 3	s. d. 94 8	s. d. 62 6	s. d. 66 6

(a) These figures exclude dwellings occupied by "Tenants (Governmental housing)" except those in the Northern Territory and the Australian Capital Territory. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) See footnote (d) to table on p. 349. (e) Includes tenanted dwellings which were rent-free, those rented on a furnished basis, and those for which the rents were not applicable (e.g., for shop and dwelling combined).

At the 1954 census nearly 55 per cent. of the tenanted private houses in Australia for which unfurnished rents were stated had weekly rentals of between 20s. and 40s.; at the 1961 census, only 28 per cent. were within these limits. In 1954, 18 per cent. had rentals below 20s. and 27 per cent. above 40s. In 1961, 8 per cent. had rentals below 20s. and 64 per cent. above 40s. At the 1961 census 31 per cent. of the flats in Australia had rentals of between

40s. and 70s., 10 per cent. were below this range, and 59 per cent. above it. At the 1954 census the corresponding proportions were:—51 per cent., 34 per cent. and 15 per cent. In 1961, 14 per cent. of tenanted private houses and 40 per cent. of tenanted flats were in the rental range 100s. and over. Dwellings whose rents were not stated were excluded in obtaining these proportions.

The average rentals shown in this table for all tenanted private dwellings in Australia at the 1961 census were 90 per cent. higher than in 1954 (79 per cent. higher for houses and 88 per cent. higher for flats). Metropolitan rentals in 1961 were higher by 106 per cent., 98 per cent. and 93 per cent., respectively, than in 1954.

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) After 30th June, 1954, but year not stated.

NOTE.—The information above was derived from replies of occupants of dwellings at 30th June, 1961. For a number of reasons, the figures shown on the first line of the table do not agree with the number of dwellings by class recorded at the Census of 30th June, 1954, e.g., demolitions, conversion from one class of dwelling to another and errors of memory regarding date of building. Also, the figures are not precisely comparable with 1954 data because of changes in classification of dwellings adopted at the 1961 Census, as indicated in footnotes (d) and (e) to table on p. 349.

Of those occupied private dwellings in Australia where date of building was stated, 21.8 per cent. were built after 30th June, 1954. In the metropolitan urban division, 22.4 per cent. were built after 30th June, 1954, while in the other urban and rural divisions, the proportions were 22.7 per cent. and 18.6 per cent. respectively.

(vii) *Facilities, etc.* At the 1961 census a question was asked regarding the facilities gas, electricity and television. Of those persons who answered the question on gas and electricity 51.4 per cent. had electricity but not gas, and 45.2 per cent. had both electricity and gas, making a combined total of 96.6 per cent. with electricity. Occupied private dwellings with gas but not electricity constituted 0.2 per cent. In the metropolitan urban division 99.7 per cent. of occupied private dwellings had electricity, while in the other urban and rural divisions the proportions with electricity were 98.7 per cent. and 82.5 per cent. respectively. The proportion of private dwellings with both electricity and gas was 65.6 per cent. in metropolitan urban, 25.3 per cent. in other urban and 4.4 per cent. in rural.

Of the occupied private dwellings in Australia stated as having a television set 81.2 per cent. were in the metropolitan urban division. In this division 64.6 per cent. of occupied private dwellings were stated as having a television set.

Similar information was not compiled for the 1954 census, but a summary of information obtained at the 1947 census was published on page 571 of Year Book No. 38.

**OCCUPIED PRIVATE DWELLINGS, BY FACILITIES: AUSTRALIA,
CENSUS, 30th JUNE, 1961**

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one household's schedule was received. (b) So stated in census schedules.

6. Unoccupied Dwellings.—The following table classifies unoccupied dwellings according to the reasons given by census collectors as to why the dwellings were unoccupied at the census date. Unoccupied dwellings include vacant dwellings available for sale or renting; dwellings such as "week-ender", "holiday home", "second home", "seasonal workers' quarters", which were not occupied on the night of the census; dwellings normally occupied, but whose usual occupants were temporarily absent on the night of the census; newly completed dwellings whose owners or tenants had not entered into occupation on the night of the census; dwellings described as "to be demolished", "condemned", "deceased estate", "exhibition home", etc.; and buildings constructed as dwellings, but used for non-dwelling purposes on the night of the census. The total number of unoccupied dwellings shown for any area must not, therefore, be read as representing the number of vacant houses and flats available for sale or renting.

**UNOCCUPIED DWELLINGS, BY REASON FOR BEING UNOCCUPIED:
AUSTRALIA, CENSUS, 30th JUNE, 1961**

Reason for being unoccupied	Urban		Rural	Total, Australia

§ 2. Building

1. **General.**—(i) *Statistics of Building Approved.* Statistics of building approvals have been compiled from (a) permits issued by local government authorities in the areas subject to building control by these authorities, and (b) contracts let or work commenced and day labour projects authorized by governmental authorities. *They relate only to approvals for buildings as distinct from the construction of roads, railways, bridges, earthworks, water storage, etc.* Values shown represent the estimated cost when completed (excluding cost of land) of new buildings and alterations and additions to existing buildings. Additions of £5,000 and over are included with new buildings in all States except New South Wales, where they are included in “alterations and additions”.

These statistics are available from the year 1953–54.

(ii) *Statistics of Building Commenced, Completed and Under Construction.* These relate to building by private contractors, government authorities and owner-builders.

The following outlines the scope of the statistics: (a) *only the erection of new buildings as distinct from the construction of roads, railways, bridges, earthworks, water storage, etc., is covered;* (b) major new additions to existing buildings are included as new buildings (for New South Wales, major alterations also are included as new building); (c) minor additions, alterations, renovations and repairs are excluded because of the difficulty of obtaining details of this work; (d) temporary dwellings, sheds, huts, etc., are excluded; (e) figures for houses exclude flats and dwellings attached to other new buildings (the value of dwellings attached to other new buildings is included with the value of buildings to which they are attached); figures for flats include “home units”; (f) imported prefabricated houses are included; (g) details obtained from government authorities and building contractors refer to all areas whereas details for owner-builders cover only areas subject to building control by local government authorities.

The following definitions of terms used in this section are necessary for interpretation of the data presented.

Private or Government ownership. A building is classified as “private” or “government” according to ownership at date of commencement. Thus “government” includes buildings erected for Commonwealth and State Governments, semi-governmental and local government authorities, either by contractor or by day-labour, whether these buildings are for their own use or for rental or sale after completion. Houses erected for *particular persons* under government sponsored home building schemes or with government financial assistance are classified as “private”.

Owner-built. An “owner-built” house is one actually erected or being erected by the owner or under the owner’s direction without the services of a contractor who is responsible for the whole job.

Contract-built. Includes the operations of all building contractors and government instrumentalities which undertake the erection of new buildings.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, classifications made by informants may not be entirely uniform.

Completed. A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classifications made may not be entirely uniform.

Under construction. A building is regarded as being under construction if it has been commenced but not completed, whether or not work on the building is actively proceeding.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

Type of building. Classification is according to the function a building is intended to serve. A building which is ancillary to other buildings or forms part of a group of related buildings is classified according to the function of the group as a whole.

Employment. Figures relate to persons working on the jobs of contractors who undertake the erection of new buildings and of government instrumentalities which erect new buildings on their own account. They include persons actually working on alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and instrumentalities.

Contractors are asked to give details of all persons working on their jobs on a specified day, including working principals, men working as or for sub-contractors and men temporarily laid off on account of weather. Because of the intermittent employment of various types of sub-contractors on any particular job, it is sometimes difficult for contractors and authorities to provide precise particulars of the number of sub-contractors and the number of employees of sub-contractors working on their jobs on the specified day. This factor may cause some estimation by persons completing returns and some degree of understatement in figures shown in tables. On the other hand, because of frequent movement between jobs of some types of tradesmen (such as electricians) who may work on several jobs on the one day, a small element of duplication may occur.

The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance.

2. **New Houses.**—(i) *Approved, Commenced, Completed and Under Construction, 1963–64.* The next table provides a summary of the number of new houses approved, commenced, completed and under construction in each State and Territory.

A graph showing the number of new houses commenced, completed and under construction for the period 1953–54 to 1963–64, will be found on page 377.

NEW HOUSES: NUMBER, 1963–64

1963-64 ..	12,991	12,912	2,916	5,639	2,923	1,633	359	922	40,295

(a) Includes flats for 1959-60 and 1960-61.

3. *New Flats.*—The figures in the foregoing tables, except those for the Northern Territory for periods prior to 1961-62, do not include particulars of new flats. It should be noted: (a) that the figures hereunder are additional to the numbers of houses shown in other tables, (b) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, (c) that new flats only are included, i.e., conversions of old buildings into flats are omitted, and (d) "home units" are included as flats.

A graph showing the number of new flats commenced, completed and under construction for the period 1953-54 to 1963-64 will be found on page 378.

(i) *Approved, Commenced, Completed and Under Construction, 1963-64.* The summary below shows the number of new flats approved, commenced, completed and under construction for the year 1963-64.

NEW FLATS: NUMBER, 1963-64

(Individual living units)

(a) Prior to 29th June, 1962, excludes the number of persons working on certain private buildings, other than houses, which were erected without the services of a contractor responsible for the whole job.

§ 3. Government Activities in the Housing Field

1. **Housing Agreements between Commonwealth and State Governments.**—Under the Commonwealth-State Housing Agreements the Commonwealth Government makes substantial loans to the States for the provision of housing.

(i) *The 1945 Agreement.* In November, 1945, the Commonwealth Government entered into an Agreement with the Governments of the States whereby the Commonwealth Government would provide finance for, and the State Governments would undertake the building of, housing projects. Tasmania withdrew from the Agreement in August, 1950, and South Australia did not begin to operate under it until July, 1953.

Between 1945–46 and 1955–56, under this Agreement, the Commonwealth Government advanced £88,849,000 to New South Wales; £85,781,000 to Victoria; £24,344,000 to Queensland; £11,700,000 to South Australia; £27,050,000 to Western Australia; and £2,835,000 to Tasmania. When Tasmania withdrew from the Agreement, it repaid all advances made to it.

For information on the conditions of sale, etc., under the 1945 Agreement see Year Book No. 48, page 367. In 1961 the 1945 Agreement was amended to allow sales of dwellings on terms decided by the States, but tenants eligible under the *War Service Homes Act 1918–1962* are entitled to purchase dwellings built under the 1945 Agreement on the terms provided in the Act.

(ii) *The 1956 Agreement.* In 1956 the Commonwealth and the States entered into a new agreement, under which added emphasis was placed on the construction of homes for private ownership. The Commonwealth Government provided finance to the States over a period of five years ending 30th June, 1961, for the erection of housing projects. For the first two years of the agreement 20 per cent. of the money allocated to each State (and 30 per cent. for the next three years) was advanced to building societies and other approved institutions for lending to private house builders. The remaining allocation to each State was used by the States for the erection of houses for either rental or sale. The States determined the type of houses to be erected, their location and the selection of tenants, and also fixed the terms of selling.

The Commonwealth was entitled to specify that a portion of the moneys be set aside for the erection of houses for serving members of the defence forces nominated by the Commonwealth. The Commonwealth provided supplementary advances to the States equal to the amounts set aside by them for this purpose.

For other features of the 1956 Commonwealth and State Housing Agreement see Year Book No. 48, page 368.

(iii) *The 1961 Agreement.* The period during which Commonwealth advances to the States could be made under the 1956 Agreement terminated on 30th June, 1961. A new Agreement was entered into which extended for a further five years the period during which advances could be made and also amended the 1956 Agreement in certain respects.

The main effects of the amendments were to:

- (a) allow the Commonwealth and/or a State to contribute funds for the erection of dwellings for rental to servicemen in excess of the previous maximum of five per cent. of the allocation to the State housing authorities plus matching funds from the Commonwealth;
- (b) provide for a rate of interest on the Commonwealth advances equal to the long-term Commonwealth bond rate at the time the advances were made, less one per cent. per annum.

The interest rates under the Agreement have been: from 1st July, 1961 to 6th February, 1962, 4½ per cent. per annum; 7th February, 1962 to 22nd July, 1963, 4 per cent. per annum; 23rd July, 1963 to 13th May, 1964, 3½ per cent. per annum; 14th May, 1964 to 12th August, 1964, 3¾ per cent. per annum; and since 13th August, 1964, 4 per cent. per annum.

(iv) *Operations in 1963-64.* The following table shows operations under the various Housing Agreements during 1963-64.

COMMONWEALTH AND STATE HOUSING AGREEMENTS, 1963-64

(a) The total number of houses and flats completed under State Housing Programmes plus, since 30th June, 1956, the numbers completed and purchased under the Home Builders' Account. (b) Tasmania withdrew from the 1945 Agreement in August, 1950, and repaid all advances made to it.
(c) The figure for the number of dwellings completed from Housing Agreement moneys under the State Housing programme of Queensland is an estimate only, supplied by the Queensland Housing Commission (see footnote (b) to table on p. 369). (d) Includes some dwellings erected before 1945-46 to which the 1945 Agreement applied.

(vii) *Houses sold, 1954-55 to 1963-64.* The table below shows the number of houses sold under the Commonwealth and State Housing Agreements in each year since 1954-55. For earlier years see Year Book No. 50, page 383.

Total since 1948-49	22,912	18,044	(a)4,377	1,839	5,283	2,588	a 55,043

(a) Estimates supplied by the Queensland Housing Commission (see footnote (b) to table on p. 369).

2. **War Service Homes.**—(i) *General.* The provision of War Service Homes is a function of the War Service Homes Division of the Department of Housing, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes. The War Service Homes Division was formerly a Division of the Department of National Development but was transferred to the Department of Housing in December, 1963.

The *War Service Homes Act* 1918-1962 is a measure for the provision of homes for Australian ex-servicemen who served during the 1914-1918 War or the 1939-1945 War and to persons with service in Korea or Malaya. Provision is made also for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person as joint tenants, but the War Service Homes Division does not provide homes for occupation purely on a tenancy basis.

(ii) *Operations, 1963-64.* The following table gives details of the operations of the War Service Homes Division in the year 1963-64 and also since the inception of the scheme on 6th March, 1919. The figures shown include operations in the Territories of Papua, New Guinea and Norfolk Island.

1963-64	3,747	2,787	1,140	695	939	222	3	93	9,626

(a) Includes Norfolk Island.

(b) Includes Territories of Papua and New Guinea.

In addition to the homes provided under the War Service Homes Act and shown in the table above, 2,162 homes, which had been provided originally under the Housing Agreements with the States, have been taken over in accordance with those Agreements, 86 being taken over during 1963-64.

3. **State Housing Authorities.**—The following paragraphs describe briefly the organization of the various State Housing Authorities and their activities in the fields of home construction and provision of homes on a rental basis (see § 4 for their financial advances to persons wishing to purchase or build a home). For summarized figures of total government construction of houses and flats, see pages 361 and 363.

(i) *New South Wales—The Housing Commission of New South Wales.* (a) *General.* The Housing Commission of New South Wales was constituted in 1942, with a full-time salaried chairman and four other members remunerated by fees. The principal function of the Commission is the provision of low-cost housing for rental or sale to persons in the lower or moderate income groups. The Commission is also empowered to make surveys of housing conditions, recommend local government building ordinances, provide assistance to private home builders, and undertake the manufacture, purchase, and supply of building materials.

Most of the permanent dwellings provided by the Commission have been erected under the Commonwealth-State Housing Agreements. In 1963, 4,173 houses and flats valued at £9,422,149 were completed for the Housing Commission by private builders on contract to the Commission.

(b) *Capital, Income and Expenditure.* Advances from the Commonwealth have provided most of the Housing Commission's capital funds. Of the £195,114,717 total capital funds available to the Commission from its inception to 30th June, 1964, £171,287,655 (or 87.7 per cent.) came from Commonwealth advances, £4,932,024 (2.5 per cent.) from Consolidated Revenue, £6,202,677 (3.2 per cent.) from General Loans Account and £5,291,050 (2.6 per cent.) from other State funds, and £7,401,311 (4.0 per cent.) from the Commission's own funds.

During the year 1963–64, the Housing Commission's income and expenditure (other than capital transactions) was—total income, £11,753,483 (consisting of rent £8,055,853, interest £2,648,222, other £1,049,408); and total expenditure £10,235,871.

(c) *Rental Housing (other than Housing Agreements).* Upon request by other State Departments the Housing Commission will erect houses for employees of those Departments, e.g., Education, Agriculture, Water Conservation, etc. These Departments provide the necessary land and funds needed to finance the erection of the houses. Rentals charged are fixed by the Departments in accordance with the salaries of the officers occupying the houses. In addition, the Commission erects (with State funds) dwellings for employees of industries connected with decentralization and development. The number of rental houses erected (other than under the Housing Agreements) is 1,178.

Specially designed units are erected by the Housing Commission to provide dwellings for elderly persons at rentals within their means. The rents of these units are £1 per week for elderly single persons and £1 10s. per week for elderly couples, and 1,394 units had been completed at 30th June, 1964.

(d) *Sales Schemes.* Applicants for Commission housing may, when their priority has been reached, elect either to purchase or to rent the dwelling allocated to them. Should they decide to purchase, terms of sale provide for a minimum deposit of £50 with repayments spread over a maximum period of forty-five years, with interest currently at the rate of 4½ per cent. There is no limit on the amount of outstanding indebtedness. Further, those tenants who originally elect to rent may subsequently purchase the dwellings occupied by them on similar terms.

Applicants who have established eligibility for Housing Commission accommodation may apply to have a standard type of dwelling erected on their own block of land. At 30th June, 1964, 316 dwellings had been completed under this scheme.

During the years 1954 and 1955, the Housing Commission completed 100 houses for sale which were sold through the Rural Bank on the basis of 10 per cent. deposit with repayment of the balance over a maximum period of 40 years. This scheme was limited to 100 houses.

(ii) *Victoria—Housing Commission, Victoria.* (a) *General.* A preliminary investigation into housing conditions in Victoria was begun in July, 1936, when a board for the purpose was appointed by the Government. As a result of their report, the *Housing Act 1937* was passed by Parliament which provided for the appointment of a Housing Commission of four members to be the central housing authority of the State. The Housing Commission of Victoria was appointed on 1st March, 1938.

The objects of the Commission as now laid down are the improvement of existing housing conditions; the provision of suitable rental housing for persons displaced by slum reclamation or living under unsatisfactory conditions, and for other eligible persons; the sale of houses to eligible persons and making of advances to such persons to enable them to own their homes; the development of land for housing and related purposes; and the responsibility of maintaining housing standards. Until the 1945 Commonwealth-State Housing Agreement was entered into, with its retrospective application to all estates or projects completed after 3rd December, 1943, the construction of dwellings by the Commission was financed by loan funds provided by the State and by three specific debenture issues raised by the Commission. Since the signing of the 1945 Commonwealth-State Housing Agreement the construction of dwellings has been financed by the Commonwealth Government.

(b) *Dwellings Provided.* At 30th June, 1964, the Housing Commission had completed 1,328 dwelling units under the State Housing Scheme, and 49,988 dwelling units under Commonwealth-State Agreements. An additional 2,478 units were either under construction or let to contract at this date.

(c) *Dwellings for Elderly Persons.* Specially designed dwelling units are erected by the Commission to provide dwellings for elderly persons at rentals within their means. To 30th June, 1964, 2,231 units had been completed.

(d) *Housing of Aborigines.* Under the *Aborigines Act* 1958, as amended by the *Aborigines (Houses) Act* 1959, the Aborigines Welfare Board is empowered to buy houses, or land on which to erect houses for occupation as dwellings by Aborigines. To 30th June, 1964, 46 units had been completed.

(e) *Rental Housing (other than Housing Agreements).* State Government Authorities, such as the Public Works Department, State Electricity Commission, Victorian Railways, State Rivers and Water Supply Commission, etc., provide, from time to time, the necessary land and finance for the erection of dwellings for employees of those departments. Rentals charged are fixed by the Government Authorities in accordance with the salaries of officers occupying the dwellings. The dwellings erected by these State Government Authorities do not come under the control of the Victorian Housing Commission.

(f) *Rural Housing.* Prior to the end of the Second World War the Commonwealth Government and various State Governments made arrangements for the settlement of discharged soldiers on the land as part of a general scheme of rehabilitation of ex-members of the Services. In 1945 the Victorian Government completed an Agreement with the Commonwealth Government, and legislation was passed constituting the Soldier Settlement Commission. On 17th March, 1962, the Rural Finance and Settlement Commission came into being, constituted by an Act passed in December, 1961. Activities under the *Soldiers Settlement Act* 1958 and the *Land Settlement Act* 1959, previously administered by the Soldiers Settlement Commission, are now carried out by the Settlement Branch of the new Commission. At 30th June, 1964, a total of 3,113 houses had been erected and 55 were still under construction.

(iii) *Queensland—The Queensland Housing Commission.* (a) *General.* The Queensland Housing Commission was established in 1945 to assist in meeting the housing shortage. It took over the operations of the State Advances Corporation which was established in 1916 to make advances to home builders under "The State Advances Act of 1916" (State Housing in Queensland originally began in 1910 under the Workers' Dwelling Board). In addition, the Commission was empowered to build houses itself, either for sale or for rental.

(b) *House Units Completed.* During 1963-64 the Commission completed 1,876 house units, bringing the total completions under all schemes since the revival of housing construction in 1944-45 to 29,800. Of this number, 17,716 houses, or 59.4 per cent., were for home ownership, and 12,084, or 40.6 per cent., were for rental.

(c) *Finance.* The Housing Commission finances its operations through two Treasury Trust Funds—the Queensland Housing Commission Fund and the Commonwealth-State Housing Fund. In addition, a Home Builders' Deposit Trust Fund is available to assist eligible persons to accumulate money to acquire land and erect a Commission dwelling

thereon, or to purchase a dwelling under contract of sale conditions. Total disbursements by the Commission for the year 1963-64 amounted to £13,214,366, representing £4,038,710 from the Queensland Housing Commission Fund and £9,175,656 from the Commonwealth-State Housing Fund, while the Home Builders' Deposit Fund had a balance of £4,933 at 30th June, 1964.

(d) *Rental Schemes.* In the field of rental housing the Commission administers and acts as the constructing authority for the Commonwealth-State Housing Agreements of 1945, 1956, and 1961. These agreements have made possible large-scale home building programmes during the post-war years, the houses so built being mainly for rental, although subsequently they may be sold.

Until 28th March, 1961, when " *The Workers' Homes Acts, 1919 to 1957* " were repealed, the Commission administered the Workers' Homes scheme, which was described in Year Book No. 48, page 371.

(e) *Sales Schemes.* Operating under the provisions of " *The State Housing Acts, 1945 to 1962* " the Commission, through its scheme of workers' dwellings, makes advances for the construction of dwellings to eligible persons who own a suitable building site. To be eligible to qualify for any of its home-ownership schemes, a person must not own, nor must his wife or her husband own, a house in Queensland or elsewhere. The number of workers' dwellings completed during 1963-64 amounted to 373, making a total of 28,991 completions since the inception of the scheme. The Commission also has power to make advances, secured by mortgage, to firms for housing of employees.

Home ownership is further assisted through the Commission's power to sell houses under contract of sale conditions. It may sell houses already erected to eligible applicants, or it will erect a dwelling to the intending purchaser's own design, on Commission land, for subsequent sale to him. Tenants of rental houses may also purchase, under contract of sale conditions, the houses they are occupying. Contract of sale agreements were made to purchase 861 of the Commission's houses during 1963-64.

The Commission is also authorized, under " *The State Housing Acts Amendment Act of 1961* ", to sell freehold land, or lease vacant Crown land which has been set apart for the purposes of the State Housing Acts, to an eligible person for the erection of a dwelling, subject to the condition that within 18 months from the date of contract he will execute a building agreement for the erection of a dwelling thereon for his occupation.

(iv) *South Australia—The South Australian Housing Trust.* (a) *General.* The South Australian Housing Trust was constituted in 1937 under the South Australian Housing Trust Act, 1936-1937, for the purpose of providing comfortable homes for workers in regular employment on the lower ranges of income and for tenants in serious financial straits. The Housing Trust builds houses for both rental and sale and, in addition, administers an emergency dwelling scheme for the South Australian Government. From July, 1946, to 30th June, 1964, 49,792 houses were erected by the Trust in both city and country areas.

(b) *Rental Houses.* Rents charged for Trust accommodation are generally based on the overall cost of construction, and vary not only according to the size of the dwelling but also according to date of erection. As at 1st January, 1965, the rents of five-roomed houses (i.e., three bedrooms) ranged from £1 17s. 6d. a week for houses of an older type to £3 12s. 6d. a week for houses then being completed in the Metropolitan Area. Factors taken into consideration when allotting rental houses include date of application, housing need and suitability of tenant. Persons with high incomes are asked to consider purchasing their own homes. Two and three storey groups of flats with weekly rentals ranging from £3 7s. 6d. to £6 12s. 6d. per flat have been built in the Metropolitan Area and at Elizabeth. At 1st January, 1965, 1,101 of these flats had been completed in the Metropolitan Area and 220 at Elizabeth. In 1953 the Trust began building cottage or pensioner flats for elderly people. At 30th June, 1964, it had built 697 cottage flats for its own scheme and an additional 318 for, and at the expense of, charitable organizations.

In 1958 the State Government instituted the rental-grant scheme for the purpose of providing houses in the country towns for people who cannot afford to pay an economic rent, and to 30th June, 1964, 181 houses had been built.

(c) *Sales Scheme.* Houses built under this scheme, which was inaugurated in 1946, are of solid or timber-frame construction. More than 23,700 have been completed in both metropolitan and country areas since the scheme began. The Trust may receive cash payment for the house and land. More usually, the purchaser pays a deposit (which varies according to the type of house and locality—at present £170 for a timber-frame house and £200 for a five-roomed brick house—and the purchaser's ability to pay) and raises the balance by way of mortgage. In 1956 the Trust began the erection of houses, which may be of solid or timber-frame construction or a mixture of both, for individuals on their own land. Houses are built by contract under the Trust's supervision. Prices for building and supervision of the standard houses covered by the scheme in late 1964 ranged from £3,800 for a two-bedroom brick house to £6,000 for a five-roomed house. During 1962-63 the Trust commenced construction of rental-purchase houses. The aim of this scheme is to provide less expensive houses for the lower-middle income group, and it is expected that such houses will, as far as possible, replace the demand for the double-unit type rental houses. By 1st January, 1965, approximately 1,000 rental-purchase houses had been built.

Upon request by State Government Departments the Trust will erect houses for purchase by those Departments for the accommodation of their employees. During 1963-64 98 houses were built for Education, Police, Highways, Aboriginal Affairs, and Woods and Forests Departments, etc. Rents for the houses are determined by the Public Service Board.

(d) *Rural Housing.* In order to assist primary producers the Trust will erect houses on the applicant's own land for his own use or that of his employees, either using local materials or transporting prefabricated houses to the site. At 30th June, 1964, prices for three bedroom asbestos cement sheeted timber houses erected on a level site within 100 miles of Adelaide ranged from £3,300 upwards.

(v) *Western Australia—State Housing Commission of Western Australia.* (a) *General.* The State Housing Commission was established in January, 1947, under the *State Housing Act, 1946* to replace the Workers' Homes Board which had been created in 1912 to "erect and dispose of workers' dwellings and to make advances to people of limited means to provide homes for themselves". The *State Housing Act, 1946-1961* has as its objects "the improvement of existing housing conditions" and "the provision of adequate and suitable housing accommodation for persons of limited means and certain other persons not adequately housed". The legislation is comprehensive in scope, providing for the erection of homes for workers, the making of advances to workers for the purchase of homes, the erection of homes for letting on a weekly rental basis, the acquisition and development of land, the clearing of slums, the erection of hostels and the planning of community facilities. The Commission, consisting of seven members, builds houses for letting or sale and lends money for home building. The houses are built by private contract on land provided by the applicant or the Commission. In addition to its operations under the *State Housing Act*, the administration in Western Australia of the *Commonwealth and State Housing Agreements* and the *War Service Homes Act* is included in the functions of the Commission.

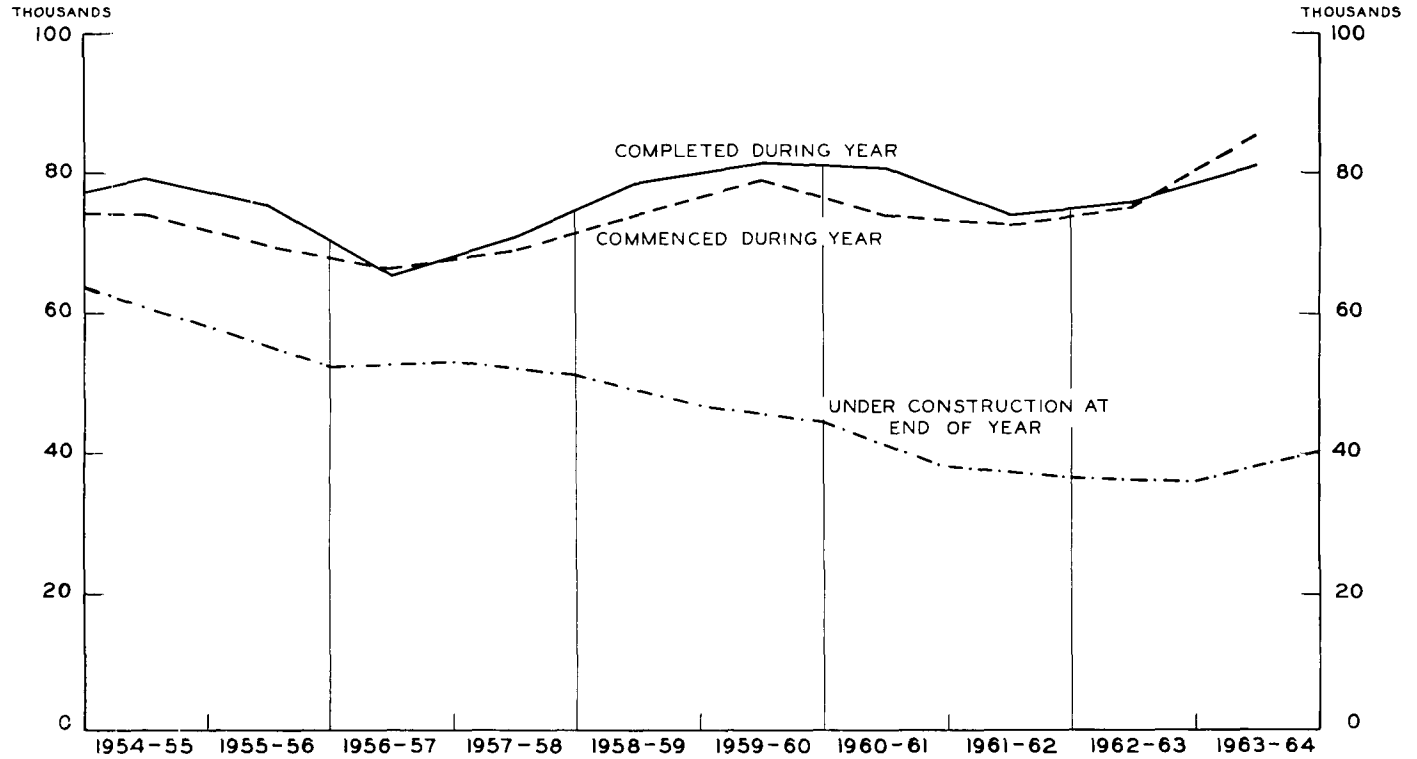

(b) *Operations.* The number of houses completed under the *State Housing Act* up to 30th June, 1964, was:—freehold—2,992; leasehold—3,086; assistance by second mortgage—1,269.

Various forms of assistance have been granted by the Commission to encourage home ownership, including schemes for arranging purchase by means of loans secured by mortgage, advances made under contract of sale, advances for securing homes under leasehold conditions, second mortgage loans and loans for the completion of partly built dwellings. Under the leasehold scheme a purchaser can convert, from perpetual Crown lease or a lease for a term of years, to freehold conditions upon having a 10 per cent. equity in the improvements and by agreeing to purchase the land at the valuation determined at the date of commencement of the lease.

The Commission also conducts certain other housing schemes and has completed, or is currently engaged in, other specific projects. Among the more important of these were the building of 653 homes at Medina and Calista between 1952-53 and 1955-56 in terms of the agreement contained in the *Oil Refinery Industry (Anglo-Iranian Oil Company Limited)*

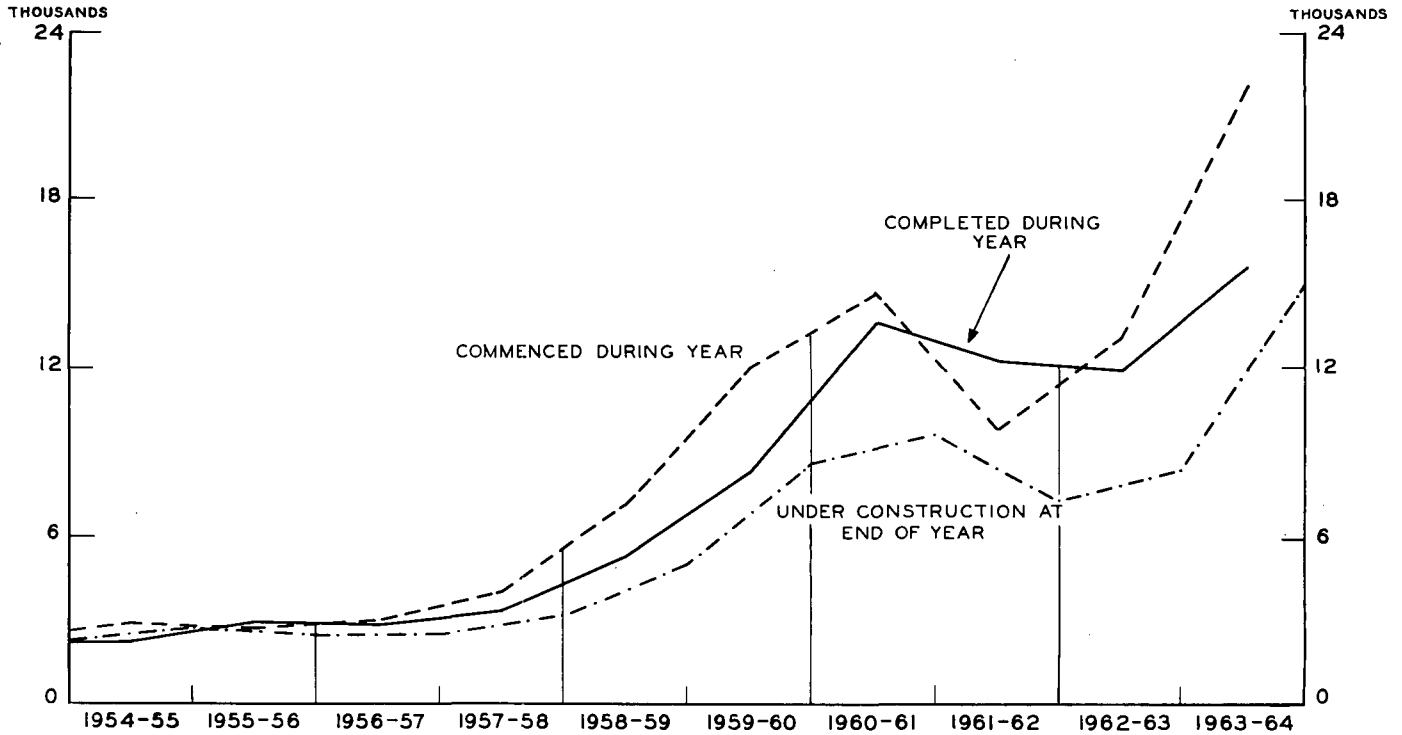

NEW HOUSES: AUSTRALIA

1954-55 TO 1963-64

Act, 1952; the Government Employees' Housing Scheme, which commenced in 1958-59 and, up to 30th June, 1964, had provided 107 houses in country areas for certain government employees; the construction of 100 houses to be built under the provisions of the *Laporte Industrial Factory Agreement Act, 1961*; the construction of 40 homes at Esperance to aid the development of the fertilizer industry; the building of up to 30 homes a year until 1969-70 as part of the Broken Hill Proprietary Company's Agreement with the State to establish an integrated steel industry; and the management, free of charge, of the McNess Housing Trust, a private endowment, the income from which, together with State Government allocation and Lotteries Commission donations, is used to provide homes for aged and infirm persons not able to acquire a home from their own resources. In recent years two three-storey blocks of flats have been completed and accommodate 117 elderly lady pensioners. The Commission also undertakes the construction of houses for other State Government Departments and semi-governmental authorities. To assist further religious and charitable organizations eligible under the Commonwealth Aged Persons Homes Act, full architectural services of the Commission, which include plans, specifications, arranging of contracts and the carrying out of supervision during construction, have been provided free of cost. Up to the 30th June, 1964, 327 units have been completed.

The Commission administers the Building Society legislation in Western Australia. Amendments to the Act in 1959 brought it into line with modern practices. The Commission also administers the *Housing Loan Guarantee Act, 1957-1962*, under which the Government guarantees lenders of funds to Building Societies and other approved financial organizations making advances to families interested in owning their own home on low deposits and at an interest rate not exceeding 6½ per cent. per annum reducible.

(vi) *Tasmania—The Housing Department.* (a) *General.* The Housing Department was established in July, 1953, as a separate identity, and is responsible for administering that portion of the *Homes Act 1935* which relates to the acquisition and development of land for housing purposes and the erection of homes for rental and ultimate sale, and the *Homes (Old Age Pensioners') Act 1940*. Housing Department construction utilizes both day labour and private contractors to build houses on land developed by the Department. On-site construction is supported by the Department's factory which incorporates joinery works, timber mill, plumbing and electrical workshops, material stores, and garage. Most of the dwellings constructed by the Department are three-bedroom timber dwellings. Roofing is usually corrugated iron, but some coloured asbestos cement sheeting is used. Flats for elderly persons and multi-unit flats have also been constructed.

(b) *Construction of Dwellings.* During 1963-64 555 dwellings were completed. Construction since 1944 is summarized in the following table.

Type of dwelling	One-bedroom	Two-bedroom	Three-bedroom	Total
Single unit—Timber	510	6,511	7,021
Other material	929	929
Elderly persons' flatettes	50	118	..	168
Maisonettes	12	10	22
Multi-unit flats	125	157	14	296
Total Dwelling Units	175	797	7,464	8,436

(c) *Dwellings for Rental.* Flats, maisonettes and elderly persons' homes are for rental only. With regard to single unit dwellings, allottees are encouraged to acquire properties on purchase contract where this procedure is deemed to be for their benefit, and a majority take advantage of this opportunity. Some of these dwellings, however, are occupied on a rental basis. The rental of a newly erected three-bedroom timber house in the Hobart metropolitan area approximated £5 11s. in the June quarter of 1964. In certain necessitous cases rental rebates are allowed and the Department is reimbursed by the State Treasury. Rebates on rentals of elderly persons' flatettes are graduated according to the incomes of the occupiers. Under the current rental rebate formula, a married couple whose only income is the age pension pays £1 18s., while a single person solely dependent on the pension pays £1 a week.

(d) *Dwellings for Sale.* Allotments are made on a no-deposit purchase contract basis with repayments over a maximum term of 53 years, but allottees are encouraged to pay a deposit if they are in a position to do so. Purchase contracts are sometimes surrendered to

the Department. Net of surrenders, 5,206 purchase contracts had been entered into by June, 1964. The sale price, excluding land, of a new three-bedroom house in the Hobart metropolitan area was approximately £3,335 in the June quarter of 1964. Prices in the north and north-western areas were slightly lower.

The weekly repayment instalment on a purchase contract is less than the weekly rent of a similar dwelling, as the latter includes a charge for maintenance whereas a person on purchase contract is responsible for maintenance of the property.

4. Housing Schemes in Commonwealth Territories.—(i) *Northern Territory.* In 1946 control of all government-owned residences in the Territory (excluding those belonging to the Defence Services or Commonwealth Railways, or attached to post offices) was vested in the Administration. The Administration provides houses for rental to officers and employees of the Commonwealth. The Northern Territory Housing Commission provides rental housing for persons of limited means who are not adequately housed and who are not officers of either the Commonwealth or the Northern Territory Public Service. The Commission was established in 1959 and operates under authority of the *Housing Ordinance 1959-1963*; to 30th June, 1964, a total of 424 houses and flats had been completed and a further 193 houses and 73 flats were under construction.

(ii) *Australian Capital Territory.* The Commonwealth Government provides houses and flats for rental to persons employed in the Australian Capital Territory. At 30th June, 1964, the Department of the Interior controlled 7,342 houses and 1,801 flats for rental purposes.

Government rental houses may be purchased by tenants. From 1st July, 1950, to 30th June, 1964, 3,766 houses had been sold to tenants.

(iii) *Papua and New Guinea.* In 1960 the Administration, through the Commissioner for Housing, commenced a scheme for providing low-cost houses for rental and eventual sale where possible to indigenes, mixed race peoples and Asians. To 30th June, 1964, 218 houses had been completed.

5. Summary of Rental Activities of Government Authorities.—(i) *Revenue from Rentals.* The following table shows the revenue from rentals for dwellings under control of Government Housing Authorities each year from 1959-60 to 1963-64.

GOVERNMENT HOUSING AUTHORITIES: REVENUE FROM RENTALS

(£'000)

Year	N.S.W.	Vic.	Q'land (a)	S.A. (b)	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Excludes tenanted temporary dwellings.

(b) Excludes temporary and emergency dwellings.

At 30th June, 1963, these numbered 2,549.

(c) Number of occupied dwellings at 30th June.

§ 4. Advances to Home Purchasers

Many prospective home purchasers wish to borrow for the purpose of constructing or purchasing their own homes. Usually the loan is covered by way of mortgage of the home to be constructed or bought. Such loans are provided from a number of private sources and from agencies owned or guaranteed by the State or Commonwealth Governments. The information in this section concerns the direct loans made to home purchasers by the more important institutional lenders. Loans to institutions which in turn lend moneys to home purchasers and loans to contract builders, etc., are excluded as far as possible. The loans may be for the construction of new dwellings, the purchase of existing dwellings, for additions, renovations, etc., as first or subsequent mortgages, overdrafts and so on.

While figures of all loans to home purchasers are not available, the institutions mentioned below account for a significant proportion of total loans. Details of the terms and conditions of lending are given, together with available information on the number and value of loans made.

1. *State Authorities and Agencies.*—(i) *New South Wales.* (a) *Rural Bank of New South Wales—Sale of Homes Agency.* A Sale of Homes Agency was established in 1954 within the Rural Bank's Government Agency Department to arrange for the sale on terms of houses erected by the Housing Commission of New South Wales.

The Agency's operations began with the sale to selected purchasers of 100 houses made available by the Commission during 1954–55 and 1955–56. The sales were made on the basis of 10 per cent. deposit and repayment of the balance over a maximum period of 40 years, with interest at 4½ per cent. per annum. Total advances under that scheme amounted to £323,324; at 30th June, 1964, the advances outstanding amounted to £224,568 in respect of 87 houses.

Since 1956, the Sale of Homes Agency has acted as the agent of the Housing Commission in arranging the sale on terms of houses erected under the 1956 Commonwealth-State Housing Agreement. These houses are sold, in general at the Bank's valuation, to persons who have satisfied the Commission as to their housing needs and have registered as prospective purchasers. The terms of sale provide for a minimum deposit of £50 and repayment of the balance over a maximum period of 45 years, with interest rates, since the inception of the scheme, ranging from 4½ to 5½ per cent. per annum. The cash deposits and periodical instalments payable by purchasers are collected by the Agency as agent for the Commission. Particulars of the advances made by the Agency in connexion with the sale of houses erected under the 1956 Agreement are given in the following table.

RURAL BANK OF NEW SOUTH WALES—SALE OF HOMES AGENCY: ADVANCES FOR HOMES SOLD UNDER THE 1956 COMMONWEALTH—STATE HOUSING AGREEMENT

Year	Advances during year		Advances outstanding at end of year(a)	
	Number of houses	Amount	Number of houses	Amount
		£'000		£'000
1956–57	1,604	5,079	1,604	4,976
1957–58	3,012	9,983	4,612	14,715
1958–59	2,013	6,326	6,623	20,808
1959–60	2,227	7,200	8,831	27,692
1960–61	1,565	5,218	10,364	32,487
1961–62	1,826	6,537	12,129	38,508
1962–63	1,825	6,752	13,830	44,487
1963–64	957	3,681	14,568	47,089

(a) Comprises principal outstanding and loan charges due but not paid.

(b) *Rural Bank of New South Wales—Other Loans.* The Rural Bank of New South Wales provides assistance to individuals for the erection or purchase of homes and for other approved purposes associated with homes. Advances are based on the bank's official valuation of the dwelling. The rate of interest on long-term loans for housing purposes was increased from 5 per cent. to 5½ per cent. from 1st October, 1956, and to 5¾ per cent. from 15th December, 1960. The rate of interest was reduced to 5¼ per cent. per annum from 11th April, 1963.

The following table shows particulars of Rural Bank advances for homes during the last ten years.

RURAL BANK OF NEW SOUTH WALES: ADVANCES FOR HOMES

Year	Advances during year(a)		Advances outstanding at end of year(b)	
	Number of dwellings	Amount	Number of dwellings	Amount
		£'000		£'000
1954-55	2,133	3,488	19,615	16,750
1955-56	1,399	2,757	18,778	17,419
1956-57	1,372	2,851	18,098	18,171
1957-58	1,576	3,490	17,644	19,595
1958-59	1,176	2,722	16,915	20,212
1959-60	1,610	4,026	16,611	21,967
1960-61	2,032	5,400	17,096	25,282
1961-62	1,668	5,658	17,357	28,211
1962-63	2,014	6,542	18,017	31,381
1963-64	2,434	7,574	18,972	34,395

(a) The number of advances during a year represents the number of dwellings in respect of which an advance was first made in the year, but the amount of advances includes subsequent advances made in respect of the dwellings. (b) The number of advances outstanding at the end of a year represents the number of dwellings on which a debt was still outstanding. The amounts shown comprise principal outstanding and loan charges due but not paid.

(ii) *Victoria. (a) Housing Commission, Victoria.* Very few houses were sold by the Commission until 1954. The amendments to the Commonwealth-State Housing Agreement in 1955-56 have had the effect of substantially increasing the number of houses sold. Whereas between 1949 and 1954 only about 100 houses were sold, a total of 18,469 houses were sold on terms to 30th June, 1964, the total value of terms sales exceeding £67 million.

Houses are sold on a minimum deposit of £100, with a maximum repayment term of 45 years, and interest at 4½ per cent.

An inducement to tenants of the Commission to purchase their homes was the introduction of a Death Benefit Scheme, to provide for the property under purchase to pass to the estate of the purchaser free of debt in the event of his death prior to completion of purchase. If application is made for admittance to the Death Benefit Scheme, the maximum period for repayment is reduced to 30 years, the rate of interest is fixed at 5¼ per cent. and the contract must terminate before the purchaser's 70th birthday.

(b) *Home Finance Trust.* In 1956 a Home Finance Trust was established with the object of receiving money from institutions and others in order to make loans for the erection or purchase of houses. Applicants for loans must declare that they intend to use the houses as homes for themselves, their families and dependants. Except in special circumstances, no loan will be granted if the borrower or spouse already owns a house in Victoria at the date of the proposed mortgage.

Loans granted are on the basis of a first mortgage over the house. Loans are not to exceed 95 per cent. of the value of the security (house and land) and are not made if the value of the security exceeds £5,000. The house must not have been erected more than two years before the date of the mortgage. Repayment of loans may be made over a maximum period of 30 years, with interest charges determined by the Trust. At 30th June, 1964, 2,719 loans totalling £8,000,073 had been approved.

In 1963 the Trust was empowered to make housing loans on the security of second mortgages subject to conditions similar to those applying with respect to the first mortgage loans, excepting that the maximum term for repayment of a loan is ten years and no restriction is placed on the percentage of loan to valuation.

At 30th June, 1964, 709 second mortgage loans had been approved, the amount involved being £305,555.

The Trust was also empowered to make a loan to the trustees of a fund established to provide a home for a doctor or a dentist at a place located more than thirty miles from the City of Melbourne. There is no valuation limit or age limit of the dwelling in cases of this nature.

(See para. 3, Savings Banks, pp. 386-7, for activities of the Crédit Foncier Department of the State Savings Bank of Victoria.)

(iii) *Queensland.* (a) *The Queensland Housing Commission.* The present maximum advance allowable under the Acts is £3,500 for a timber, brick veneer, brick, or concrete building. Since 1st August, 1963, two rates of interest have applied, namely $5\frac{1}{2}$ per cent. per annum on advances existing at that time, and $4\frac{1}{2}$ per cent. on new advances. Repayment may be made at the option of the borrower over either a 30-year or a 45-year period. A borrower or purchaser who elects to repay over a 30-year period, who is under 40 years of age, and who has passed a prescribed medical examination, is entitled to free life insurance cover to an amount sufficient to liquidate his indebtedness to the Commission in the event of his death before his loan has been fully repaid, provided that the maximum benefit payable under such insurance cover does not exceed £2,250.

(b) *Workers' Dwellings.* From 4th October, 1962, the maximum advance under this scheme was increased to £3,500 for all types of workers' dwellings. Total advances made for dwellings since operations commenced in 1910 to 30th June, 1964, amounted to £28,669,844.

(iv) *South Australia.* (a) *The South Australian Housing Trust Sales Scheme.* A minimum deposit of £50 is required for houses under the Rental-Purchase Scheme for a maximum loan of £4,200, repayable at an interest rate of $4\frac{1}{2}$ per cent. per annum over a period not exceeding 40 years.

Prospective purchasers of Housing Trust houses (other than rental-purchase houses) can arrange or have arrangements made for a first mortgage to be granted by a lending institution of their choice. In cases where the deposit and the first mortgage so raised are insufficient, the Trust may advance the balance of the house price by way of a second mortgage, the repayment term of which is a maximum of 30 years, interest being at the rate of 6 per cent. per annum.

During 1963-64 the Trust commenced 811 second mortgages valued at £384,200. At 30th June, 1964, second mortgages totalled 7,073, and the balance outstanding at that date was £3,819,000.

(b) *State Bank of South Australia.* The State Bank, together with the Housing Trust, is the principal agent of the State Government for the distribution through the Home Builders' Fund of moneys received under the Commonwealth-State Housing Agreement.

During 1963-64 the Bank opened 1,680 new accounts worth £5,184,253 in the Home Builder's Fund. The balance of loans outstanding at 30th June, 1964, in this Fund totalled £17,741,822.

In addition, £274,584 was made available during 1963-64 by the State Government under the Advances for Homes Act, 1928-1958 which is administered by the Bank. Under this Act, 97 new accounts were opened during 1963-64, leaving a balance outstanding at 30th June, 1964, of £14,406,460.

The present maximum housing loan under either of these schemes is £3,500, repayable over a period not exceeding 50 years at a rate of interest of $5\frac{1}{2}$ to $5\frac{3}{4}$ per cent. per annum calculated on monthly balances. Persons who have received benefit under either of these schemes are ineligible for another mortgage.

(v) *Western Australia. State Housing Commission of Western Australia.* Under the State Housing Act and the Commonwealth/State Housing Agreement, the maximum loan is £3,000 by way of mortgage, while under contract of sale the maximum is £2,900 on the building plus the value of the land in the Metropolitan Area, and greater amounts in rural areas, depending on the circumstances. For houses built north of the 26th parallel the Minister may approve of a larger advance.

To proceed under the mortgage conditions, a deposit of not less than 10 per cent. is required, but under contract of sale the deposit may be as low as £100, and less when circumstances warrant. The interest rate on all advances is $5\frac{1}{2}$ per cent. per annum and the repayment period is 45 years. The income eligibility figure varies according to the movement of the basic wage, and as at the last basic wage adjustment on 26th October, 1964, an applicant in the Metropolitan Area cannot have an income exceeding £1,261 a year, plus £25 for each dependent child under 16 years of age. For the country the corresponding amount is £1,518 per annum plus £25 for each dependent child under 16 years, and north of the 26th parallel the Minister may allow families with an income of up to £2,000 to be given financial assistance.

A second-mortgage scheme exists under the State Housing Act which provides that assistance be limited to those applicants who are building or purchasing new homes, the cost of which, excluding land, does not exceed £3,500. The Commission limits the second mortgage to a maximum of £1,000.

(See para. 3, Savings Banks, p. 387, for activities of the Savings Bank Division of the Rural and Industries Bank of Western Australia.)

(vi) *Tasmania. (a) The Housing Department.* Amounts outstanding in respect of loans made by the Housing Department by way of purchase contracts were as follows for the years 1959-60 to 1963-64.

TASMANIAN HOUSING DEPARTMENT: PURCHASE CONTRACTS

Particulars	1959-60	1960-61	1961-62	1962-63	1963-64
Number of loans outstanding	3,471	3,835	4,156	4,427	4,834
Amount outstanding £'000	10,112	11,317	12,601	13,612	15,110

The interest rate on contracts signed after February, 1962, was 4 per cent., immediately prior to which the rate was $4\frac{1}{2}$ per cent. To be eligible for a house on purchase contract terms, an applicant must be married or about to be married, or have dependants for whom it is necessary to provide a home. Number of dependants, income and existing accommodation are considered in determining applicants' priority.

(b) *Agricultural Bank of Tasmania.* The Agricultural Bank, as an approved institution under the Commonwealth-State Housing Agreement, receives part of those funds allocated for advances to home builders. Prior to the commencement of the agreement, the Bank borrowed from the State Loan Fund and from private institutions. To be eligible for a loan, an applicant must be married or about to be married and be over the age of 21, and when, as is usual, the advance is required to build a house, the applicant must own a block of land. The maximum amount of an advance to an applicant is £3,300 for brick or concrete block type houses in certain areas, or £3,000 for a timber dwelling, provided that the total advance does not exceed 90 per cent. of the Bank's valuation of land and dwelling. Advances to borrowers are repayable by equated instalments over 31 years. Advances made as from 1st February, 1962, were at an interest rate of $5\frac{1}{2}$ per cent., immediately prior to which the rate was $5\frac{1}{4}$ per cent. The following table shows details for recent years.

TASMANIAN AGRICULTURAL BANK: ADVANCES FOR HOUSING(a)

Particulars	1960-61	1961-62	1962-63	1963-64
Advances approved—				
Number	115	239	157	302
Value £'000	362	730	486	1,045
Advances outstanding(b) £'000	4,195	4,512	4,996	5,622

(a) Excludes advances to Building Societies.

(b) At 30th June.

Since November, 1945, a total of 2,659 loans amounting to £7,403,000 have been approved, of which 2,378 have been for erection of dwellings and 281 for the purchase of existing homes.

2. Commonwealth Authorities and Agencies.—(i) *Department of Housing.* In December, 1963, the Department of Housing was created and to it was transferred the functions and staff of the War Service Homes Division and the Housing and Building Industry Branch of the Department of National Development. Further details relating to the Department of Housing may be found on page 83 of Year Book No. 50.

(ii) *War Service Homes.* The maximum amount of loan or advance which may be granted under the *War Service Homes Act 1918-1962* is £3,500. The period of repayment may be up to 45 years. In the case of a widow or widowed mother of an Australian ex-serviceman, the period may be extended to a maximum of 50 years.

The following table gives details of advances by the War Service Homes Division in each State and Territory of Australia, and the Territories of Papua, New Guinea and Norfolk Island, for the years 1954-55 to 1963-64. (See tables on pp. 371-2 for the number of homes provided.)

(a) Includes Norfolk Island. (b) Includes Territory of Papua and New Guinea.
 (c) Included in South Australia. (d) Included in New South Wales.

(iii) *Northern Territory. (a) Loans Scheme.* This Scheme was commenced in 1953 and is administered by the Commissioner for Housing under the *Housing Loans Ordinance 1949-1959*. Advances may be made for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. Loans are provided on a deposit of 5 per cent. of the first £2,000 and 10 per cent. of the balance of the Commissioner's valuation up to a maximum of £3,500. The rate of interest charged is 6 per cent. per annum reducible to 5 per cent. per annum if instalment payments are made by the due date. The maximum period of repayment is 45 years.

Up to 30th June, 1964, 994 loans totalling £2,715,545 had been approved. These were for:—erection, 683; purchase, 240; enlargement or completion, 22; discharge of mortgage 49.

(b) *Sales Scheme.* Tenants of government-owned houses under the control of the Administration may purchase the dwellings they occupy, either for cash or on terms requiring a minimum deposit of 5 per cent. of the first £2,000 and 10 per cent. of the balance of the purchase price with repayments over a maximum period of 45 years including interest at 4½ per cent. per annum.

(c) *Housing Commission Sales Scheme.* Since the amendment of the *Housing Ordinance 1959-1963* in November, 1963, the Housing Commission is permitted to sell its houses to tenants in occupation. The terms require a minimum cash deposit of £100 and repayment of the remainder of the loan over a period not exceeding 45 years; there is no prescribed limit to the amount of the loan and the rate of interest is to be fixed by the Commission from time to time.

(iv) *Australian Capital Territory.* Loans may be granted by the Commissioner for Housing to enable persons to purchase or build a new house in the Australian Capital Territory. Where the Commissioner's valuation does not exceed £2,000, the maximum loan may not exceed 95 per cent. of the valuation. If the Commissioner's valuation exceeds £2,000, the maximum loan is 95 per cent. of the first £2,000 and 90 per cent. of the balance (but in no case can the amount lent exceed £3,500). Repayment may be made over a maximum period of 45 years. The current rate of interest is 4½ per cent. per annum. From 1st July, 1950, to 30th June, 1964, 2,515 loans were granted. At 30th June, 1964, 2,211 houses were under mortgage to the Commissioner.

Government rental houses may be purchased by tenants. The basis of the sale is a minimum deposit of 5 per cent. of the purchase price fixed by the Department of the Interior with no limit to the amount which may be held on mortgage from the Department. Repayment of the amount covered by mortgage may be made over a maximum period of 45 years. The interest rate is 4½ per cent. per annum. From 1st July, 1950 to 30th June, 1964, 3,766 houses had been sold to tenants.

(v) *Papua and New Guinea.* Under authority of the *Housing Loans Ordinance 1953-1963* the Commissioner for Housing may make advances to any member of the community for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. The maximum loan is £3,500. The maximum period of repayment is 35 years for brick, stone or concrete and 25 years for all other materials. Minimum cash deposit is 5 per cent. of the first £2,000 plus 10 per cent. of the remainder of the Commissioner's valuation. The effective rate of interest is 4½ per cent. per annum. Up to 30th June, 1964, 255 loans totalling £621,340 had been approved.

3. *Savings Banks.*—All savings banks lend funds for housing to both individuals and to building societies. Separate figures of loans to individuals are not available for all savings banks. The amounts outstanding on housing loans of all savings banks (including loans to building societies) were £339 million, £397 million and £499 million at the end of June, 1962, 1963 and 1964, respectively.

Some details in respect of three savings banks are shown below.

(i) *State Savings Bank of Victoria—Crédit Foncier Department.* The State Savings Bank of Victoria grants long-term loans to depositors to enable them to build, purchase or improve homes and to purchase or improve farms. Most, but not all, of the loans are made by the Crédit Foncier Department of the Bank.

In order to encourage new building, home loans are granted only on houses up to one year old. The maximum proportion of the valuation to be granted as loan is 80 per cent. and the maximum loan is £3,500. Interest is 4½ per cent. and the term of the loan is 10 years, subject to renewal.

During 1963-64 the Cr dit Foncier Department advanced £16,152,732 to 6,947 borrowers and at the end of that year £84,735,822 was owing by 42,690 borrowers.

(ii) *Savings Bank of South Australia.* The Bank grants mortgage loans for the building or purchase of houses for personal occupation. The maximum loans available on houses of solid construction are £3,750 for new homes and £4,500 for previously occupied homes. Normally advances are made up to 85 per cent. of the Bank's valuation but, if the loan is granted under the Homes Act, 1941-1962, 95 per cent. of such valuation may be advanced (maximum loan—£3,000). The maximum loan period is 30 years at a rate of interest of 5½ per cent. per annum; this rate is subject to review after 5 years.

During 1963-64 the Bank advanced £7,380,000 by way of housing loans, the number of new loans totalling 2,433. At 30th June, 1964, there were 20,556 loans current with a balance outstanding of £40,512,000.

(iii) *The Rural and Industries Bank of Western Australia (Savings Bank Division).* The Rural and Industries Bank of Western Australia is authorized by the *Rural and Industries Bank Act, 1944-1958* to make loans from moneys in deposit with its Savings Bank Division to a person or body for the purchase or erection of a dwelling. It is the policy of the Bank to provide funds for housing primarily for occupancy by the borrower. There is no fixed limit on the amount of a loan. The average loan in the case of a brick or timber house is between £3,000 and £3,500. The rate of interest varies with the current bank rate and is usually ½ per cent. lower. The rate at 30th June, 1964, was 5½ per cent. The average term of housing loans is 22 years.

4. **Trading Banks.**—Apart from loans by certain State banks as Government agencies (see paras. 1 and 3, pp. 381-4 and 386-7), advances for housing to individuals are also provided by the trading banks.

Amounts outstanding in respect of advances to individuals for housing purposes made by the major trading banks were £95 million, £101 million and £105 million at the second Wednesday of July, 1962, 1963 and 1964, respectively.

5. **Life Insurance Companies.**—The life insurance companies are another source of funds for housing. Details of new loans made during 1963 and 1964 (particulars for earlier years are not available) are given in the following table.

LIFE INSURANCE COMPANIES: HOUSING LOANS PAID OVER DURING 1963 AND 1964

State or Territory	Amount (£'000)	
	1963	1964
New South Wales	10,286	10,541
Victoria	6,576	8,088
Queensland(a)	1,715	2,240
South Australia(b)	1,684	1,872
Western Australia	1,131	1,482
Tasmania	709	773
Australian Capital Territory	170	297
Total	22,271	25,293

(a) Includes loans made in Papua and New Guinea. (b) Includes loans made in Northern Territory.

Amounts outstanding at the end of June, 1963 and 1964, in respect of housing loans made by insurance companies were £158 million and £162 million respectively.

6. **Registered Building Societies.**—Including the Victorian Co-operative Housing Societies, there are 2,838 registered building societies in Australia, of which 115 are permanent societies and the remainder terminating societies. The permanent societies are in the main investment societies which make loans for housing purposes, usually on *crédit foncier* terms, and obtain their funds from share capital deposits and borrowings from banks and other lending institutions. The terminating societies are co-operative societies which make loans to members from funds obtained from lending institutions (usually government guaranteed), members' subscriptions, and, since 1956, from moneys provided under the Commonwealth-State Housing Agreements.

Details of new loans granted and net advances outstanding for each of the years ended June, 1959 to 1963, are given in the following table, which now includes particulars of Victorian Co-operative Housing Societies.

REGISTERED BUILDING SOCIETIES

Year	N.S.W.	Victoria		Q'land	S. Aust.	W. Aust.	Tas.	Total
		Co-operative housing societies (a)	Other building societies (b)

(a) Year ended 30th April. (b) Year ended 31st December. (c) Not available.
(d) Excludes Victorian co-operative housing societies. (e) Net of borrowing members' funds.

7. **Other Lenders.**—Little information is available on advances made by other lenders such as superannuation and other trust funds, private finance and investment companies, etc. In South Australia, advances on first mortgage made by the South Australian Superannuation Fund are granted under the Homes Act, 1941-1962, by which the State Government guarantees up to 25 per cent. of the value of the mortgage, thus raising the limit of the advance. Loans so made are limited to 95 per cent. of the Superannuation Board's valuation to a maximum of £3,000, or 85 per cent. of the Board's valuation to a maximum of £3,500. The rate of interest is 5½ per cent. per annum, calculated on quarterly balances, reducing to 5¼ per cent. when payments are made within a prescribed period of 21 days from the end of the quarter. The term of the mortgage may run for 30 years on a stone or brick home or 20 years on a timber-framed construction. Trustee mortgages may be granted as an alternative to the foregoing. A maximum of 70 per cent. of the Board's valuation may be granted for a trustee mortgage, other conditions being those applicable to mortgages granted under the Homes Act.

At 30th June, 1964, there were 5,005 loans current, the principal outstanding totalling £8,784,084. During 1963-64 the value of advances made was £1,468,468.

CHAPTER XII

EMPLOYMENT AND UNEMPLOYMENT

NOTE.—Further detail on subjects dealt with in this chapter is contained in other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in Chapter XXX. Miscellaneous of this Year Book. Detailed information on employment and unemployment and the Work Force Survey is contained in the monthly mimeographed bulletin *Employment and Unemployment*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary estimates of civilian employment are issued in a monthly statement *Wage and Salary Earners in Civilian Employment*.

THE WORK FORCE

§ 1. General

The work force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the work force, classified according to characteristics such as age, sex, conjugal condition, industry, occupational status and occupation, are obtained only at a general census of population. Quarterly estimates of the civilian work force are derived from the results of surveys of a sample of households selected by area sampling methods. Estimates are at present available only for the six State capital cities combined. A summary of the information about the work force that was obtained at the population census of June, 1961, and earlier censuses is given in § 2. Estimates derived from the quarterly work force surveys appear in § 3.

§ 2. Population Censuses*

1. **Occupational Status.**—(i) *General.* Occupational status of persons classified as in the work force at population census dates covers two broad groups: those at work and those not at work. The first group comprises employers, self-employed persons, employees (on wage or salary) and unpaid helpers. The category "not at work" includes those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the census by reason of sickness, accident, etc., or because they were on strike, changing jobs, or temporarily laid off, etc. It also includes persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the census. The numbers shown as "not at work" in the following two tables, therefore, do not represent the number of unemployed available for work and unable to obtain it.

(ii) *Australia, 30th June, 1954 and 1961.* The following table shows the occupational status of the population at the census of 30th June, 1961, as compared with that at the 1954 census.

At the 1961 census, 79.3 per cent. of persons in the work force were wage and salary earners classified as "at work"; 9.8 per cent. were self-employed; 6.3 per cent. were employers; and 4.1 per cent. were "not at work". Persons in the work force constituted 40.2 per cent. of the population, compared with 41.2 per cent. in 1954.

* Particulars of full-blood Aborigines are not included in the tables in this section.

OCCUPATIONAL STATUS OF THE POPULATION: AUSTRALIA

Occupational status	Census, 30th June, 1954			Census, 30th June, 1961			Increase 1954-61
	Males	Females	Persons	Males	Females	Persons	
In work force—

Grand Total	3,917,013	2,930,113	1,518,828	969,340	736,629	350,340	27,095	58,828	10,508,186

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation in sub-para. (i) p. 389.

(iv) *Persons Not at Work, classified by Cause.* The total number of persons "not at work" has been recorded only at the dates of the various censuses. Since the 1947 census, this category has included all persons (usually engaged in industry, business, trade, profession or service) who were out of a job and not at work at the time of the census, for whatever reason, including any not normally associated with unemployment. The following table shows the numbers recorded as "not at work" at the censuses of 30th June, 1947, 1954 and 1961, classified according to cause. As explained in sub-para. (i), p. 389, the totals shown as "not at work" do not represent the number of unemployed available for work and unable to obtain it.

PERSONS NOT AT WORK^(a), BY CAUSE: AUSTRALIA

Census	Unable to secure employment	Temporarily laid off	Illness	Accident	Industrial dispute	Other (b)	Total
MALES							
1947 ..	17,314	12,458	14,639	2,985	475	18,743	66,614
1954 ..	9,912	4,423	11,879	2,804	344	11,652	41,014
1961 ..	85,455	12,153	13,931	6,262	547	10,278	128,626
FEMALES							
1947 ..	2,254	2,449	4,396	280	24	7,512	16,915
1954 ..	3,685	1,386	4,310	318	17	4,284	14,000
1961 ..	28,056	4,012	5,925	787	202	4,998	43,980
PERSONS							
1947 ..	19,568	14,907	19,035	3,265	499	26,255	83,529
1954 ..	13,597	5,809	16,189	3,122	361	15,936	55,014
1961 ..	113,511	16,165	19,856	7,049	749	15,276	172,606

(a) Persons in the work force who were "not at work" (see explanation p. 389) at the time of the census.

(b) The majority of these persons were resting between jobs or changing jobs.

2. Industry.—(i) *General.* For census purposes, industry may be defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified industrially as belonging to that particular branch, irrespective of their personal occupations within the industry. Thus a single firm may employ persons performing completely different occupations in order to make a particular product, or to render a particular service, but the industrial classification of each of these persons is determined by the nature of the product made or of the service rendered by the firm that employs him.

(ii) *Australia, 30th June, 1954 and 1961.* The following table shows the number of persons in the work force in each industry group and sub-group at the censuses of 1954 and 1961. The figures include those at work and those not at work.

At the 1961 census, 60 per cent. of males and 20 per cent. of females were in the work force. Of the males in the work force, those engaged in manufacturing constituted the largest group (28.0 per cent. of the total); followed by those in commerce, 14.3 per cent.; primary production, 13.3 per cent.; building and construction, 11.5 per cent.; and transport and storage, 7.9 per cent. The more important industry groups in which females were engaged were manufacturing, 23.9 per cent.; commerce, 22.2 per cent.; community and business services, 21.5 per cent.; and amusement, hotels, personal service, etc., 12.8 per cent.

INDUSTRY OF THE POPULATION: AUSTRALIA

Industry group and sub-group	Census, 30th June, 1954			Census, 30th June, 1961			Increase or decrease (-) 1954-61

Industry inadequately described or not stated	216	388	10,654	192	11,450	16,779	28,229
Total Females in the Work Force	42,712	62,704	901,902	7,871	1,015,189	43,980	1,059,169

(a) On wage or salary.

(b) Not on wage or salary.

(c) See explanation on p. 389.

4. Occupational Status, Age and Conjugal Condition.—Pages 407–10 of Year Book No. 50 contain tables showing males and females at the census of 30th June, 1961, classified according to occupational status in conjunction with age and conjugal condition. This information is not repeated in this issue, but may be found in Labour Report No. 50, 1962 and 1963, pages 150–3.

5. **Married Women in the Work Force.**—At the 1961 census, 444,680 married women (including 39,148 women who were married but permanently separated, legally or otherwise) were recorded as being in the work force. This represented 42 per cent. of the total number of females in the work force. At the 1954 census the corresponding percentage was 34.3.

Between 1954 and 1961, there was an increase of 154,748 or 53.4 per cent. in the number of married women in the work force, compared with an increase of 213,767 or 25.3 per cent. in total females in the work force. The largest increase (both numerical and proportional) in any age group was for married women aged 35–39 years, where the increase in the seven years 1954–1961 was almost 82 per cent. A comparison for all age groups is given below.

MARRIED WOMEN IN THE WORK FORCE ACCORDING TO AGE: AUSTRALIA

Age last birthday (years)	Married women in the work force ^(a)		Increase, 1954–61	
	Census, 30th June, 1954 ^(b)	Census, 30th June, 1961 ^(c)	Number	Per cent.
15–19	3,549	5,570	2,021	56.95
20–24	35,452	51,003	15,551	43.86
25–29	43,899	49,536	5,637	12.84
30–34	43,320	59,025	15,705	36.25
35–39	41,046	74,660	33,614	81.89
40–44	42,265	67,695	25,430	60.17
45–49	33,492	59,745	26,253	78.39
50–54	23,346	41,142	17,796	76.23
55–59	13,539	22,415	8,876	65.56
60–64	6,609	9,342	2,733	41.35
65 and over	3,415	4,547	1,132	33.15
Total	289,932	444,680	154,748	53.37

(a) Includes women married but permanently separated, legally or otherwise. (b) The figures shown for 1954 include an allowance for the number of women whose conjugal condition was not stated. (c) A conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

6. **Occupation.**—(i) *General.* The working population may be classified according to distinct concepts—(i) the *occupation*, which is personal to the individual, and (ii) the *industry* in which the individual carries on his occupation. Thus the *occupation* of a person is the kind of work that he or she personally performs, while *industry* is defined as any single branch of productive activity, trade or service. Particulars of the work force classified according to industry are given in paragraphs 2 and 3 of this section; this paragraph contains particulars of the principal occupation groups (major and minor) of the work force at the census of 30th June, 1961. Details of individual categories of occupations are published in the mimeographed 1961 *Census Bulletin* No. 32 and in the respective parts of the Census Volumes.

(ii) *Australia, 30th June, 1961.* The following table shows, for Australia, the numbers of males, females and persons in the work force in each of the principal occupation groups at the 1961 census. Data of this type were last obtained at the 1947 census, but a comparison of the figures derived therefrom with those shown below is not possible because of differences in classification.

Only those persons regarded as being in the work force are classified according to occupation.

Corresponding details for persons in each State and Territory are given in *Year Book* No. 50, pages 415–16 and in *Labour Report* No. 50, 1962 and 1963, pages 158–9.

OCCUPATIONS OF THE POPULATION: AUSTRALIA, CENSUS, 30th JUNE, 1961

Occupation group	Males	Females	Persons
Professional, technical and related workers—			
Architects, engineers and surveyors	29,776	170	29,946
Chemists, physicists, geologists and other physical scientists	8,014	637	8,651
Biologists, veterinarians, agronomists and related scientists	3,955	342	4,297
Medical practitioners and dentists	13,920	1,497	15,417

Members of armed services, enlisted personnel	1.3	0.2	1.0
Occupation inadequately described or not stated	1.0	2.0	1.3
Total in Work Force	100.0	100.0	100.0

§ 3. The Work Force Survey

1. **General.**—Estimates of the civilian work force are obtained in February, May, August and November of each year for the six State capital cities from surveys based on a sample of dwellings selected by area sampling methods. These surveys are now being extended to non-metropolitan urban and rural areas; the results from these surveys will enable quarterly estimates of the Australian work force to be published.

The survey information, which is obtained at sample dwellings by personal interview, enables the total civilian population fourteen years of age and over to be classified according to work force and demographic characteristics. The work force classification used conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954. Under this classification, the category to which an individual is assigned depends on his actual activity or status (i.e. whether working, looking for work, etc.) during a specified week covered by the survey.

The principal categories in the following tables are the employed and the unemployed, which together constitute the total work force, and the remainder, comprising persons who are not in the work force. Details of these categories are as follows.

- (a) *Employed persons* comprise all those who, during the specified week, worked for pay, profit, or payment in kind, in a job or business, or on a farm, and those who had a job, business, or farm, but were temporarily absent for the whole of the specified week for reasons other than lack of work. Persons who worked as unpaid helpers in a family business, or on a farm, are included in the employed if they worked fifteen hours or more during the specified week. The category includes employees, employers and workers on own account.
- (b) *Unemployed persons* comprise all those who, during the specified week, did no work at all, did not have a job or business, and were actively looking for work. The category also includes persons absent from work for the whole of the specified week without pay because of lack of demand for their services (i.e. those laid off without pay for the whole of the specified week).
- (c) *The work force* consists of all persons who, during the specified week, were employed or unemployed in terms of the classifications given in (a) and (b) above.
- (d) *Persons not in the work force* are those who, during the specified week, were not classified as employed or unemployed in terms of the classifications given in (a) and (b) above.

Figures in the tables which follow are estimates based on a sample and are therefore subject to sampling variability, that is, variations that may occur by chance because only a sample of the population is enumerated in the surveys. For this reason, figures are rounded but not adjusted to add to totals, because such adjustments would, in some cases, exceed the sampling variability of the estimates and tend to destroy their value as indicators of movement.

2. **Occupational Status, and Work Force Participation and Unemployment Rates.**—The following table shows, for November in each of the years 1960 to 1964, the distribution, by major work force category, of the civilian population fourteen years of age and over in the six State capital cities. The table also shows changes in the work force participation rate and unemployment rate over the period. As indicated in the general notes in paragraph 1 above, the classification of the population by work force category conforms to the standard recommended by the International Conference of Labour Statisticians. This International Standard has not as yet been adopted for the population census, and consequently the figures in this table are not strictly comparable with those in the tables in the preceding section of this chapter.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: OCCUPATIONAL STATUS AND WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, SIX AUSTRALIAN STATE CAPITAL CITIES

November—	Occupational status				Total civilian population 14 years of age and over ('000)	Work force participation rate (b) (per cent.)	Unemployment rate (c) (per cent.)
	Civilians in the work force			Civilians not in the work force ('000)

(a) Includes employees, employers, self-employed persons, and unpaid helpers who worked 15 hours or more per week in a family business.

* Estimates of less than 5,000 are not published in the table because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can, in some cases, be derived from the tables by deduction, undue significance should not be attached to them.

4. **Work Force Participation and Unemployment Rates.**—The table below shows work force participation rates and unemployment rates by conjugal condition for the civilian population 14 years of age and over in the six State capital cities at November in each of the years 1960 to 1964.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, BY CONJUGAL CONDITION, SIX AUSTRALIAN STATE CAPITAL CITIES

1964	58.3	56.2	57.5	0.7	1.5	1.0

(a) The civilian work force as a percentage of the civilian population 14 years of age and over. (b) The number unemployed as a percentage of the civilian work force. (c) Includes never married, widowed and divorced.

5. **Unemployment in Industry Groups.**—(i) *Rates.* The following table shows the unemployment rate in each industry group for the six State capital cities at November in each of the years 1960 to 1964. The total work force for a particular industry group comprises persons currently employed in the industry group and those unemployed persons whose last employment was in the group. The unemployment rates given in the table are the numbers unemployed in the industry groups expressed as percentages of the total work force in those groups. Because unemployed persons with no previous employment experience are excluded from the calculations used for this table, the unemployment rate shown for "All industries combined" differs from the unemployment rate for the civilian work force as a whole. This latter rate, which is given in the tables in paragraphs 2 and 4 above, takes into account all unemployed persons, including those seeking work for the first time.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: UNEMPLOYMENT RATES(a), BY INDUSTRY GROUP, SIX AUSTRALIAN STATE CAPITAL CITIES

(Per cent.)

Industry group in which last employed	November—				
	1960	1961	1962	1963	1964

Total	100.0	100.0	100.0	100.0	100.0

7. Persons Working Less than 35 Hours a week.—In the work force surveys, persons who report themselves as having worked less than 35 hours a week are further questioned to ascertain their reasons for not working longer hours. In the following table, employed civilians in the six State capital cities, 14 years of age and over, who worked less than 35 hours a week are classified according to the reasons why they did not work longer hours.

EMPLOYED CIVILIANS 14 YEARS OF AGE AND OVER WHO WORKED LESS THAN 35 HOURS PER WEEK, BY REASON: SIX AUSTRALIAN STATE CAPITAL CITIES

November—	Reason for working less than 35 hours a week								
	Persons who usually work 35 hours or more a week			Persons who usually work less than 35 hours a week			All persons who worked less than 35 hours in the survey period		
	Lack of work(a)	Other reasons (b)	Total	Lack of work(c)	Other reasons (d)	Total	Lack of work (a)(c)	Other reasons (b)(d)	Total
NUMBER ('000)

1964 ..	10.7	226.5	237.2	7.3	230.5	237.8	18.0	457.0	475.0

PROPORTION OF THE CIVILIAN WORK FORCE OF THE SIX CAPITALS (Per cent.)

1960 ..	0.5	6.7	7.2	0.5	7.5	8.0	1.0	14.2	15.2
1961 ..	1.0	8.6	9.6	0.8	7.3	8.1	1.8	15.9	17.7
1962 ..	0.6	8.9	9.5	0.5	7.7	8.2	1.1	16.6	17.7
1963 ..	0.5	8.8	9.3	0.3	8.2	8.5	0.8	17.0	17.8
1964 ..	0.4	8.5	8.9	0.3	8.6	8.9	0.7	17.1	17.8

(a) Excludes persons laid off for whole week without pay, who are included in the unemployed. The figures comprise persons working short time, those who lost their jobs or commenced in new jobs during the specified week, and those absent from work because of plant breakdowns or bad weather. (b) Own illness or injury, leave or holiday, and industrial disputes. (c) Persons who would prefer to work 35 hours or more a week if suitable work were available. (d) Persons who prefer to work less than 35 hours a week.

WAGE AND SALARY EARNERS IN EMPLOYMENT

1. General.—The monthly estimates of the number of wage and salary earners in civilian employment (excluding employees in rural industry and private domestic service) are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population censuses of June, 1954, and June, 1961. Figures for periods between, and subsequent to, the two benchmark points of time are estimates obtained from three main sources, namely (a) current pay-roll tax returns, (b) current returns from government bodies, and (c) some other direct current records of employment (e.g. for hospitals). Data from these sources have been supplemented by estimates of the changes in the number of wage and salary earners not covered by the foregoing collections.

Figures for current months are subject to revision. As they become available, particulars of employment obtained from other collections, such as the annual factory census and the censuses and sample surveys of retail establishments, are used to check, and, where desirable, to revise estimates in relevant sections. The work force survey (*see p. 399*) will supply an additional check for future estimates.

The benchmark figures are derived from particulars recorded for individuals on population census schedules. The estimated monthly figures are derived mainly from reports supplied by employers relating to enterprises or establishments. These two sources differ in some cases in scope and in reporting of industry; however, the benchmark industry dissections have been adjusted, as nearly as may be, to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June, 1961.

Pay-roll tax returns are lodged at present by all employers paying more than £200 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals, and other similar organizations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1962*). At June, 1954, this Act required employers paying wages of more than £80 a week to lodge returns. The exemption limit was raised to £120 a week from 1st September, 1954, and to the present level of £200 a week as from 1st September, 1957.

Employees in rural industry and in private domestic service are not included in the estimates, because of the inadequacy of current data.

The figures herein relate to "wage and salary earners" on pay-rolls or "in employment" in the latter part of each month as distinct from numbers of employees actually working on a specific date. They include some persons working part-time.

The prime purpose of this series is to measure, as nearly as may be with available data, *current monthly trends* in employment in the defined field. The estimates may be less reliable for longer-term measurement. However, as a broad measure of long-term trends, figures for periods prior to June, 1954 (since June, 1947), estimated on a basis approximately comparable with that for later periods, are to be found on page 172 of *Labour Report No. 50*, 1962 and 1963.

In the tables in this section any discrepancies between totals and sums of components are due to rounding.

2. **Total Civilian Employees and Defence Forces.**—The following table shows, for Australia, the estimated numbers of private and government civilian employees (excluding employees in rural industry and private domestic service) and the numbers in the defence forces at June of each of the years 1954 and 1960 to 1964 and at December, 1964.

COMMONWEALTH EMPLOYMENT SERVICE

1. **General.**—Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act* 1945–1959 (sections 47 and 48). In brief, the main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications; and to assist employers seeking labour to obtain employees best suited to the demands of the employers' particular class of work.

The organization and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948 of the International Labour Organisation, which was ratified by Australia in December, 1949. In addition, C.E.S. practices follow substantially the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions within the Employment and Industrial Services Division of the Department of Labour and National Service on a decentralized basis. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State, with 146 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 341 agents in the smaller country centres. The District Employment Offices and Branch Offices are distributed as follows: New South Wales, 54; Victoria, 37; Queensland, 24; South Australia, 12; Western Australia, 13; Tasmania, 4; Northern Territory, 1; Australian Capital Territory, 1.

The C.E.S. provides specialized facilities for young people, persons with physical and mental handicaps, ex-members of the defence forces, migrants, rural workers and persons with professional and technical qualifications. Vocational guidance is provided free of charge by a staff of qualified psychologists. It is available to any person, but is provided particularly for young people and the physically handicapped. In New South Wales, the State Department of Labour and Industry provides this service, mainly to young people leaving school.

The C.E.S. has responsibilities in the administration of the unemployment benefits provided under the *Social Services Act* 1947–1963. All applicants for benefits must register at a District Employment Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them.

The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance to obtain employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of December, 1964, about 230,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951, it has been responsible for recruiting Australian experts for

oversea service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance. The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out, and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

2. Persons Registered for Employment.—The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include also persons in receipt of unemployment benefit (*see* Chapter XVI. Welfare Services).

WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT
 PRINCIPAL INDUSTRY GROUPS: AUSTRALIA

1955 TO 1964

CHAPTER XIII

LABOUR, WAGES AND PRICES

NOTE.—For particulars of the Farm Production Price Index, see Chapter XXX. Miscellaneous.

For current information on the subjects dealt with in this Chapter, see the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, also the mimeographed statements *Wage Rates and Earnings*, *Consumer Price Index*, *Wholesale Price (Basic Materials and Foodstuffs) Index*, *Wholesale Prices—Price Index of Electrical Installation Materials*, and *Export Price Index*. For further information on these subjects, except the Export Price Index, see the *Labour Report* issued by this Bureau.

In addition, the following recent special publications were issued in mimeographed form:—*Minimum Wage Rates, January, 1960, to June, 1963* (S.B.31).

RETAIL PRICES AND PRICE INDEXES

§ 1. General

Retail prices of food and groceries and average rentals of houses for years extending back to 1901 were collected by the Commonwealth Statistician, and in some cases have been recorded by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923 and comparable information was ascertained for the month of November in each year from 1914 to 1922. The range of items for which retail prices data are obtained was considerably expanded in 1948 and in later years.

Average retail prices of certain food and grocery items in current periods are published in the annual *Labour Report*.

An explanation of the nature and purposes of retail price indexes is given in the various editions of the annual *Labour Report*, together with further particulars of indexes then current. In § 2 below, previous retail price indexes for Australia are briefly outlined. The current retail price index, entitled the Consumer Price Index, was published for the first time in August, 1960. It was compiled retrospectively to 1948–49. A description of the Consumer Price Index is given in § 3 on pages 412–14.

§ 2. Previous Retail Price Indexes

1. General.—Five series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1960. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were as follows.

- (i) *The "A" Series Index* (covering food, groceries and house rents) was first compiled in 1912 with the year 1911 as base = 1,000. It was discontinued in June, 1938.
- (ii) *The "B" Series Index* (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until December quarter, 1953. It was the food and rent constituent of the "C" Series Index and was designed to replace the "A" Series Index for general statistical purposes.
- (iii) *The "C" Series Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921. It was last issued on its original basis for December quarter, 1960. For certain transitional purposes a "C" Series Index was issued for some quarters after that. This was calculated by varying the index numbers of December quarter, 1960, in proportion to movements shown by the Consumer Price Index.

- (iv) *The "D" Series Index*, derived by combining the "A" and "C" Series Indexes, was used by the Commonwealth Court of Conciliation and Arbitration from May, 1933, to May, 1934, and then discontinued.
- (v) *The Interim Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking, certain services and some miscellaneous items) was first compiled in 1954 with the year 1952-53 as base = 100. As its title indicated, it was constructed as a transitional index. Its compilation was discontinued following its replacement by the Consumer Price Index in June quarter, 1960.

2. **The "Court" Index.**—In 1937, the Commonwealth Court of Conciliation and Arbitration introduced a "Court" Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court, the "Court" Index ceased to be issued by the Industrial Registrar as at December quarter, 1953. These "Court" Index numbers were an arithmetical conversion of the "C" Series Retail Price Index.

§ 3. Consumer Price Index

1. **General.**—This retail price index was first compiled in 1960, retrospectively to September quarter, 1948. A full description of the index is given in *Labour Report* No. 50, 1962 and 1963.

2. **Origin.**—The list of component items and the weighting pattern of the "C" Series Retail Price Index, first adopted in 1921, were slightly revised by Conference of Statisticians in 1936, but otherwise continued almost unchanged until the index was discontinued in 1960. The reasons for this, and the circumstances which led to the present Consumer Price Index, appear from ensuing paragraphs.

From the outbreak of war in 1939 to late in 1948, periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and in the pattern of expenditure. This rendered changes desirable but made it impracticable either to produce a new index, or to revise the old one, on any basis that would render the index more representative than it already was of the changing pattern of household expenditure in those years.

When commodity rationing had virtually ceased in the latter part of 1948, action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. This was done to facilitate review of the component items and weighting system of the "C" Series Retail Price Index, in the light of the new pattern of wage-earner expenditure and consumption that appeared to be emerging. But there supervened, in the next few years, conditions which caused wide price dispersion coupled with a very rapid rise in prices and a new sequence of changes in consumption and in the pattern of wage-earner expenditure. Under these conditions it was not possible to devise any new weighting pattern likely to be more continuously representative of conditions then current than was the existing "C" Series Retail Price Index on the 1936 revision.

A Conference of Statisticians considered the matter in June, 1953, and resolved (in part) as follows:—

- "(a) that, in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the "C" Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes;
- (b) that an *Interim Retail Price Index* be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern of consumer usage and expenditure."

The "C" Series Index continued to be compiled on its pre-war basis without significant change in procedures. The Interim Retail Price Index was introduced in 1954 and continued until March quarter, 1960.

The Interim Index was a transitional index designed to measure retail price variations on the "C" Series model in terms of post-war consumption weights, as emerging in the early 1950's. It embraced a wider range of commodities and services than did the "C" Series Retail Price Index, but it did not take into account successive major changes in the

pattern of expenditure and modes of living that began to occur early in 1950 and through to 1960. These changes could not, in fact, be detected and measured promptly, and incorporated into an index, concurrently with their happening. Nor was it envisaged as desirable to adopt fundamentally new procedures in price index construction until it was fully evident that far-reaching procedural changes were necessary to meet the situation that had developed between about 1950 and 1960.

In this period, home owning largely replaced house renting, the use of the motor car greatly increased and partly replaced use of public transport, and various items of electrical household equipment and television came into widespread use. The impact of these (and other) changes in usage upon the pattern of household expenditure was heightened by disparate movements in prices. Together, they rendered nugatory the attempt to meet the situation by devising a single Interim Retail Price Index. As studies progressed and new data became available, it was clear that no single list of items and no single set of fixed weights would be adequately representative as a basis for measuring retail price changes at all times throughout the post-war period. In consequence, the situation was met by compiling the Consumer Price Index constructed as a chain of linked indexes with significant changes in composition and weighting effected at short intervals during the period 1950-1960.

3. Purpose, Scope and Composition.—The Consumer Price Index is a quarterly measure of variations in retail prices for goods and services representing a high proportion of the expenditure of wage-earner households. The weighting pattern relates to estimated aggregates of wage-earner household expenditures and not to estimated expenditures of an "average" or individual household of specified size, type, or mode of living. In this way, it is possible to give appropriate representation to owner-occupied houses as well as rented houses and to include motor cars, television sets, and other major expenditures which relate to some households and not to others.

Consumer (retail) price indexes are sometimes loosely called "cost of living indexes" and are thought to measure changes in the "cost of living". Neither the Consumer Price Index, nor any other retail price index, measures those changes in the cost of living that result directly from changes in the mode or level of living. Changes of that kind are matters for consideration apart from price indexes, but the change in prices of goods and services is a very important part of the change in the cost of living and this part is measured by consumer (retail) price indexes.

The Consumer Price Index covers a wide range of commodities and services arranged in the following five major groups:—

- Food;
- Clothing and Drapery;
- Housing;
- Household Supplies and Equipment;
- Miscellaneous.

These groups do not include every item of household spending. It is both impracticable and unnecessary for them to do so. Prices are collected regularly for specified quantities and qualities of a large and representative selection of commodities and services. Movements in the prices of these items, when combined in suitable proportions, provide a representative measure of price change as affecting a high proportion of the expenditure of wage-earner households.

4. Structure—a Chain of Linked Indexes.—Substantial changes occurred in consumer usage and patterns of expenditure following the 1939-45 War. In order to keep the weighting pattern representative of current expenditures, it became necessary to construct indexes with additional items and changes in the weighting pattern at intervals, rather than on the basis of a list of items and set of weights that remained unchanged throughout the whole period covered. Five series for short periods (namely, from the September quarter of 1948 to the June quarter of 1952, from the June quarter of 1952 to the June quarter of 1956, from the June quarter of 1956 to the March quarter of 1960, from the March quarter of 1960 to the December quarter of 1963, and from the December quarter of 1963 onwards) have therefore been constructed and linked to form a continuous retail price index series known as the Consumer Price Index. During each period between links, the items and weighing remained unchanged. At times of linking, the weighting pattern was altered and new items that had become significant in household expenditure were introduced.

Under this method, in effect, average percentage price movements are assessed on one pattern up to the time of the link and on another pattern thereafter. The process of linking

ensures that the series reflects only price variations and not differences in cost of the old and new lists of items. The introduction of new items and weights by linking does not, of itself, raise or lower the level of the index.

§ 4. Tabular Statements of Retail Price Index Numbers

Consumer Price Index.—(i) *General.* The index has been compiled for each quarter from September quarter, 1948, and for each year from 1948-49. "All Groups" index numbers and "Group" index numbers for each of the five major groups are compiled and published regularly for the six State capital cities separately and combined and for Canberra. The reference base for each of these indexes is: year 1952-53 = 100 0. Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding off the figures to the nearest whole number.

Index numbers for each quarter are first issued in mimeographed statistical bulletins available from the Commonwealth Statistician about three weeks after the end of the quarter. These bulletins contain comment on the index and on significant price movements in that quarter. Tables showing index numbers for preceding quarters and years are presented.

(ii) *Consumer Price Index Numbers.* The following table shows Consumer Price Index Numbers (Total All Groups), for the six State capital cities separately and combined and for Canberra, for periods from the year 1948-49.

CONSUMER PRICE INDEX: ALL GROUPS INDEX NUMBERS

SIX STATE CAPITAL CITIES AND CANBERRA.

(Base of each Index: Year 1952-53 = 100.0)

NOTE.—The separate city indexes measure price movements within each city individually. They do not compare price levels as between cities.

The following table shows Consumer Price Index Group Index Numbers for each State capital city and for Canberra for recent years and quarters.

CONSUMER PRICE INDEX: GROUP INDEX NUMBERS

(Base of each Index: Year 1952-53 = 100.0)

NOTE.—The index numbers hereunder are designed to measure movements in retail prices of specified groups of items for specified cities individually. They measure variations from time to time and not differences in price level as between cities nor comparative costs of groups of items.

(a) Weighted average. (b) The initial publication of index numbers and descriptive material for Canberra was made in Statistical Bulletin S.B. 29 of 4th September, 1964.

§ 5. Retail Price Index Numbers, 1901 to 1964

The index numbers shown below are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the "A" Series Retail Price Index; from 1914 to 1946-47, the "C" Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and "C" Series Index excluding Rent; and from 1948-49 to 1964, the Consumer Price Index.

RETAIL PRICE INDEX NUMBERS, 1901 TO 1964

SIX STATE CAPITAL CITIES COMBINED

(Base: Year 1911 = 100)

Year	Index number	Year	Index number
1901	88	1933	133

1932	138	1964	483

(a) November.

§ 6. International Comparisons

The following table shows index numbers of consumer (retail) prices for various countries. Except where otherwise noted, the year 1958 is taken as base (= 100). The index numbers show fluctuations in prices in each country, and do not measure relative price levels as between countries.

INDEX NUMBERS OF CONSUMER (RETAIL) PRICES IN VARIOUS COUNTRIES

(a) Consumer Price Index converted to base 1958 = 100 by Commonwealth Statistician. (b) Beginning 1963, new index—base: 1962 = 100. Before 1963, index for Paris. (c) Base: Average of March–December, 1958 = 100. (d) Index for Europeans only.

NOTE.—Symbol - on each side of an index number (e.g. -95-) indicates that two series have been linked at that period. Symbol — between two index numbers indicates that it is not possible to link two series (because of change in scope, etc.) and therefore the index numbers are not comparable with each other even though they are shown on the same base period.

WHOLESALE PRICES AND PRICE INDEXES

§ 1. General

Three indexes of wholesale prices have been compiled by the Commonwealth Bureau of Census and Statistics. These are:—

- (i) The Melbourne Wholesale Price Index;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index;
- (iii) Wholesale Prices—Price Index of Electrical Installation Materials.

A brief note on the Melbourne Wholesale Price Index, which is now obsolete, is given in § 3 on page 420. After reviewing the list of items and weighting of the Melbourne Wholesale Price Index, the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index, the Wholesale Price (Basic Materials and Foodstuffs) Index, is compiled monthly and extends back to 1928. The index Wholesale Prices—Price Index of Electrical Installation Materials was first published in Statistical Bulletin 71 of 11th November, 1964.

§ 2. Wholesale Price (Basic Materials and Foodstuffs) Index

1. **Price Quotations.**—The prices used in the index have, in the main, been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and in respect of imported materials as nearly as may be at the point where they first make effective impact on the local price structure. Thus the prices of imported goods are not taken at the time of import, but rather on an ex-bond (or into factory) basis.

Broadly, where home-consumption prices exist for local products, they have been used in this index. During the year 1950–51, wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 420.

2. **Commodities and Grouping.**—For purposes of this index, “basic” materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The list of items is divided into seven main groups, each of which is sub-divided into goods which are mainly imported, and goods which are mainly home-produced. The percentage of the total aggregate in 1963–64 contributed by each group was as follows:—Metals and coal, 16.92; oils, fats and waxes, 7.84; textiles, 3.64; chemicals, 3.36; rubber and hides, 1.29; building materials, 11.65; foodstuffs and tobacco, 55.30. Goods principally imported comprised 23.46 per cent. of the total aggregate in 1963–64, and goods principally home-produced, 76.54.

A full list of the commodities and the quantity-multipliers (weights) is published in *Labour Report* No. 50, 1962 and 1963, page 40.

3. **Method of Construction.**—The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928–29 to 1934–35 inclusive. Changes in usage, changes of category as between “imported” and “home-produced” for some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

4. **Index Numbers.**—Index numbers for each group of commodities, and for all groups combined, for the index of wholesale prices of basic materials and food stuffs are given in the following table. Current index numbers, on the base: Average of three years ended June, 1939 = 100 are published monthly in the mimeographed statistical bulletin *Wholesale Price (Basic Materials and Foodstuffs) Index* and in the *Monthly Review of Business Statistics*. A table showing index numbers computed to the base 1928 = 100 is published in the *Labour Report*.

WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX NUMBERS

(Base of each Index: Average of 3 years ended June, 1939 = 100)

(a) Excludes potatoes and onions from 1936-37. (b) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure changes in the prices of all imports.

§ 3. Melbourne Wholesale Price Index

An index of Melbourne wholesale prices was first compiled in 1912. It related chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the list of items nor the weighting was varied, except for some changes in the building materials group in 1949. The series has some historical significance as a measure of changes in the prices, since the year 1861, of its component items combined in the proportions in which they were in common use about the year 1910. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pages 43-45. Index numbers up to the year 1961, the last period for which the index was compiled, were published in *Year Book* No. 48, 1962.

EXPORT PRICES AND PRICE INDEXES

§ 1. Previous Export Price Indexes

1. **1901 to 1917.**—An annual index of export prices has been published by the Bureau since its inception. The first index was compiled annually for the years 1901 to 1916-17. The method of computation was to select all articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The "total value" so obtained was divided into the total recorded value of these exports for the year concerned and the result (multiplied by 1,000) was the export price index number for that year.

2. **1918 to 1930.**—The method was changed in 1918. Weights for all principal exports were calculated, based on the average quantities of exports for the nineteen and a half years from 1st January, 1897, to 30th June, 1916. To these weights were applied the "average unit export values" of each export in successive years, and a weighted aggregative index of "price" variations was derived. This index was published for the years 1897 to 1929-30. Particulars of this index were last published in Year Book No. 24, page 147.

3. **1928 to 1962.**—(i) *General.* After the 1914-18 War, the relative importance of different exports changed considerably, and the pattern of exports varied considerably from year to year. For these reasons, two new series of monthly export price indexes—one using fixed weights and the other using changing weights—were published in 1937, compiled back to 1928. The data on which both series were based differed from those used in the previous series of annual index numbers. The most important change was the use of actual (or calculated) export prices in place of the "unit values" declared at the Customs. Brief notes on these two indexes are given below. A full description of both indexes was last published in Year Book No. 48, 1962, pages 500-4.

(ii) *The Fixed Weights Index.* This was a weighted aggregative index of price variations. It was compiled back to 1928, with that year taken as base. In later years it was published on the base: Average of three years ended June, 1939 = 100. The original weights (used for the period 1928 to 1936) were the average annual exports (production in the case of gold) during the five years 1928-29 to 1932-33. From July, 1936, the weights were revised and were based on average annual exports (production in the case of gold) during the three years 1933-34 to 1935-36. This index was published from 1937 until July, 1962, after which it was replaced by the current Export Price Index described in § 2 below.

(iii) *The Changing Weights Index.* This index was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. In computing these index numbers, the "quantity multipliers" were the quantities actually exported (sold, in some cases) in the months (or periods) to which the index numbers relate. This index was discontinued in 1962.

§ 2. The Current Export Price Index

1. **General.**—The current Export Price Index was first published in October, 1962, but index numbers were compiled back to July, 1959. The reference base of this index is: Year 1959-60 = 100. This index is a fixed-weights index, and its purpose (as was that of the previous fixed-weights index) is to provide comparisons monthly, over a limited number of years, of the level of export prices of the selected items, making no allowance for variations in quantities exported. The index numbers are thus measures of price change only. The price series used in the index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative grades, types, etc. For some commodities, price movements in the predominant market, or markets, are used, while for other commodities average realizations in all export markets are used. As nearly as possible, prices used are on the basis f.o.b. at the main Australian ports of export. The index is compiled by the method known as "weighted average of price relatives".

2. **Composition and Weighting.**—There are 29 items in the current index compared with 20 items in the previous index. These 29 items have constituted approximately 83 per cent. of the total value of Australian exports in recent years. (The 20 items in the previous index, which in pre-war years constituted about 85 per cent. of total exports, and for most of the post-war period averaged about 80 per cent. of total exports, constituted about 73 per cent. of total exports during the last years for which the index was compiled.) The weights for the current index are based on average annual values of exports during the five

years 1956-57 to 1960-61, whereas the weights for the previous index were based on average annual exports during the three years 1933-34 to 1935-36. A comparison of the old and new indexes, showing percentage contributions of the various items to the total index in the year 1959-60, is set out in the table below.

COMPARISON OF PREVIOUS AND CURRENT EXPORT PRICE INDEXES
PERCENTAGE CONTRIBUTION OF ITEMS TO ALL GROUPS INDEXES IN 1959-60

Item	Percentage contribution to All Groups Index	
	Previous Index	Current Index
Wool	51.24	50.73
Beef	4.68	6.71
Lamb	2.22	0.76
Mutton	0.36	0.59
Pork	0.32	(a)

Sugar	2.89	3.99
Cattle hides	0.55	0.72
Calf skins	0.09	(c)
Tallow	0.51	0.54
Coal	(a)	0.63
Iron and steel	(a)	3.48
Copper	0.27	1.57
Tin	0.27	(a)
Zinc	2.50	1.23
Lead	4.07	2.97
Silver	0.61	0.66
Gold	3.28	1.99
Total	100.00	100.00

(a) Not included. (b) Included in weight for sultanas. (c) Included in weight for cattle hides.

The following table sets out a list of the items, and groups of items, in the new index, together with the percentage contribution of each item and group to the All Groups index in the reference base year 1959-60. The weights used for some of the items are adjusted to cover some related commodities which are not priced directly. The most important instances of this are wool, which includes wool exported on sheepskins, and copper, zinc, lead and silver, which include the estimated metallic content of ores and concentrates exported. In the previous index, the weight for gold was derived from production instead of export figures. For the period 1956-57 to 1960-61, production and exports of gold were similar, and therefore in the new index the weight for gold (as for the other items) is based on average annual exports during the period.

EXPORT PRICE INDEX

LIST OF ITEMS AND PERCENTAGE CONTRIBUTION OF ITEMS AND GROUPS TO
ALL GROUPS INDEX IN 1959-60

Group and item	Percentage contribution to All Groups Index
<i>Wool</i>	50.73

(a) Nominal.

4. Link between Current and Previous Indexes.—In order to show approximate movements in export prices over a long period, the "All Groups" indexes of the previous and current series have been linked together at the year 1959-60, the earliest year for which the new index has been compiled. The table below shows this linked series and a long-term price index for wool, which is the most important single component in the movement of the "All Groups" index.

EXPORT PRICE INDEX NUMBERS—LINKED SERIES

CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR

An account of the measures taken by the Commonwealth Government to control prices from September, 1939, until 29th May, 1948 (the date of the Prices Referendum), was given in Year Book No. 37, pages 458-64. Subsequent measures for price control by the States consequent upon the rejection of the proposal in the Prices Referendum of 29th May, 1948, that permanent power to control rents and prices be conferred on the Commonwealth Government, are described in issues up to No. 49. Particulars of the amounts expended by the Commonwealth Government for the purpose of stabilizing prices are given in Year Book No. 38, page 414, and in later issues.

WAGES, EARNINGS AND HOURS

§ 1. Arbitration and Wages Boards Acts and Associated Legislation

1. **General.**—Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and other conditions of employment were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Year Book prior to No. 38. A summary of the Commonwealth legislation and brief particulars of Commonwealth and State industrial tribunals are given in the following paragraphs.

2. **Commonwealth.**—Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to “conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State”. The Parliament has made such a law, namely the *Conciliation and Arbitration Act 1904–1964*.

This Act defines an “industrial dispute” as “(a) A dispute (including a threatened, impending or probable dispute) as to industrial matters which extends beyond the limits of any State; and (b) a situation which is likely to give rise to a dispute as to industrial matters which so extends; and includes—(c) such a dispute in relation to employment in an industry carried on by, or under the control of, a State or an authority of a State; (d) a dispute in relation to employment in an industry carried on by, or under the control of, the Commonwealth or an authority of the Commonwealth, whether or not the dispute extends beyond the limits of any one State; and (e) a claim which an organization is entitled to submit to the Commission under section eleven A of the *Public Service Arbitration Act 1920–1960* or an application or matter which the Public Service Arbitrator has refrained from hearing, or from further hearing, or from determining under section fourteen A of that Act, whether or not there exists in relation to the claim, application or matter a dispute as to industrial matters which extends beyond the limits of any one State.”

The Conciliation and Arbitration Act was extensively amended by an Act (No. 44 of 1956) assented to on 30th June, 1956. This amendment altered the structure of the arbitration machinery by separating the judicial functions from the conciliation and arbitration functions. The Commonwealth Industrial Court was established to deal with judicial matters under the Act, and the Commonwealth Conciliation and Arbitration Commission to handle the functions of conciliation and arbitration. A summary of the provisions of the *Conciliation and Arbitration Act 1904–1964* is given in the following paragraphs.

The Commonwealth Industrial Court is at present composed of a Chief Judge and four other Judges. The jurisdiction of the Court shall be exercised by not less than two Judges, except in the following circumstances. A single Judge may exercise the jurisdiction of the Court with respect to the dismissal or injury of an employee on account of industrial action, interpretation of awards, questions concerning eligibility of membership of an organization, disputes between an organization and its members and a prescribed matter of practice or procedure. A single Judge may refer a question of law for the opinion of the Court constituted by not less than two Judges. The Court is a Superior Court of Record with the same power to punish contempts of its power and authority as is possessed by the High Court. In general, decisions of the Industrial Court are final; however, an appeal lies to the High Court, but only when the latter grants leave to appeal. The Act provides for the registration of associations of employees and employers, and for inquiries to be held concerning disputed elections in organizations; and certain powers in connexion therewith are, by the Act, given to the Industrial Court. Provision is also made for the Commission to exercise the powers of the Court with regard to an application for cancellation of registration of an organization. Any such change of jurisdiction must be notified by proclamation. This provision could be used if the powers of the Court in this regard were declared, in whole or in part, to be invalid.

Special provision is made concerning the right of audience before the Commonwealth Industrial Court. Briefly, except in proceedings which, in general, involve questions of law or offences against the Act, parties are able to elect whether to appear personally or to be represented by lawyers or officials. Even in proceedings involving questions of law, except appeals from decisions by other Courts to the Industrial Court, on matters arising under this Act or the *Public Service Arbitration Act 1920–1960*, the parties may, if they wish and the Court grants leave, be represented by officials.

The Commonwealth Conciliation and Arbitration Commission at the end of 1964 was composed of a President, five Deputy Presidents, a Senior Commissioner, ten Commissioners and three Conciliators. The Commission is empowered to prevent or settle industrial disputes by conciliation or arbitration, and to make suggestions and to do such things as appear right and proper for (a) effecting a reconciliation between parties to industrial disputes; (b) preventing and settling industrial disputes by amicable agreement; and (c) preventing and settling, by conciliation or arbitration, industrial disputes not prevented or settled by amicable agreement. The Commission may exercise its powers of its own motion or on the application of a party.

The President may assign a Commissioner to deal with industrial disputes relating to particular industries, or members of the Commission to deal with a particular industrial dispute. However, subject to the approval of the President, it is the duty of the Senior Commissioner to organize and allocate the work of the Commissioners and Conciliators.

When an industrial dispute occurs or is likely to occur, a Commissioner shall take steps for the prompt prevention or settlement of that dispute by conciliation or, if in his opinion conciliation is unlikely to succeed or has failed, by arbitration. A Commissioner may arrange with the Senior Commissioner for a Conciliator to assist the parties to reach an amicable agreement and shall do so if the parties so request. If an agreement is reached, a memorandum of its terms shall be made in writing, and may be certified by the Commission. A certified memorandum shall have the same effect as an award.

Only the Commission in Presidential Session, that is, the Commission constituted by at least three presidential members nominated by the President, has the power to make awards, or to certify agreements, concerning standard hours, basic wages and long-service leave.

Upon application by a party to an industrial dispute, a Commissioner shall consult with the President as to whether in the public interest any matter in dispute should be dealt with by a Commission constituted by not less than three members nominated by the President, at least one of whom shall be a presidential member and one, where practicable, the Commissioner concerned. The President may direct the Commission to hear the matter in dispute; however, after consideration, the Commission may refer the matter in dispute back for determination to the Commissioner originally dealing with the dispute.

An appeal against the decision of a Commissioner shall be heard by not less than three members nominated by the President, of whom at least two shall be presidential members of the Commission. However, an appeal will not be heard unless the Commission considers it is necessary as a matter of public interest. The President, after taking account of the views of the parties to a dispute, may appoint a member of the Commission to take evidence on behalf of a presidential bench of the Commission, so that it may have this evidence before it when it commences its hearing.

Full benches of the Commission not constituted by the same persons may sit in joint session at the direction of the President when he considers it desirable and has the opinion that a question is common to the matters before those benches. A joint session may be held whether the benches concerned are constituted pursuant to the Conciliation and Arbitration Act or the Public Service Arbitration Act, and whether they are constituted to hear references or appeals. However, it is left to each appropriate full bench to determine any of the matters before it.

Provision is also made in the Act for a presidential member of the Commission to handle industrial matters in connexion with the maritime industries, the Snowy Mountains Area and the stevedoring industry, except in those matters for which the Act requires that the Commission shall be constituted by more than one member.

The Commonwealth Conciliation and Arbitration Commission also deals with disputes and industrial matters, interstate or intra-state, associated with undertakings or projects of the Commonwealth Government which have been declared by the Minister to be Commonwealth projects for the purposes of this Act. In effect, this places employees of Commonwealth projects, so declared, under the jurisdiction of the Commission. The Minister has the power to exempt certain persons or classes of persons working on these projects from the jurisdiction of the Commission.

The Commission may make an award in relation to an industrial dispute concerning employees of a Commonwealth project or when the Public Service Arbitrator refrains from

dealing with claims made by a Public Service employee organization or consents to the claims being presented to the Commission, though such an award may be inconsistent with a law of the Commonwealth relating to salaries, wages, rates of pay or terms or conditions of service of employees in the Public Service as defined by section three of the *Public Service Arbitration Act* 1920-1960, not being the *Commonwealth Employees' Compensation Act* 1930-1964, the *Commonwealth Employees' Furlough Act* 1943-1959, the *Superannuation Act* 1922-1963 or any other prescribed Act.

The Act provides that where a State law, or an order, award, decision or determination of a State industrial authority is inconsistent with or deals with a matter dealt with in an award of the Commission, the latter shall prevail, and the former, to the extent of the inconsistency or in relation to the matter dealt with, shall be invalid.

For further particulars regarding Commonwealth arbitration legislation, see the annual *Labour Report*.

For information concerning the Australian Stevedoring Industry Authority and the Coal Industry Tribunal see the Transport and Communication chapter and the Mineral Industry chapter respectively of this Year Book, and for further information on the Commonwealth Public Service Arbitrator see the *Labour Report*.

3. States.—In each State, Industrial Tribunals have been established to regulate and arbitrate in industrial matters. Brief particulars are given in the following paragraphs.

(i) *New South Wales*. The controlling authority is the Industrial Commission of New South Wales, consisting of a President and seven other Judges. Subsidiary tribunals are the Conciliation Commissioners, the Apprenticeship Commissioner, Conciliation Committees and Apprenticeship Councils constituted for particular industries. Each Conciliation Committee consists of a Conciliation Commissioner as Chairman and equal numbers of representatives of employers and employees. The Apprenticeship Commissioner and the members of the Conciliation Committee for an industry constitute the Apprenticeship Council for the industry. These subsidiary tribunals may make awards binding on industries, but an appeal to the Industrial Commission may be made against any award. Special Commissioners with conciliatory powers and limited arbitration powers may be appointed. Compulsory control commenced in 1901, after the earlier Acts of 1892 and 1899 providing for voluntary submission of matters in dispute had proved abortive.

(ii) *Victoria*. The authorities are separate Wages Boards for the occupations and industries covered, each consisting of a chairman and equal numbers of representatives of employers and employees, and a Court of Industrial Appeals, the latter presided over by a Judge of the County Court. The system was instituted in the State in 1896, and represented the first example in Australia of legal regulation of wage rates.

(iii) *Queensland*. Legal control was first instituted in 1907 with the passing of the Wages Board Act. "The Industrial Conciliation and Arbitration Act of 1961" established the Industrial Conciliation and Arbitration Commission and preserved and continued in existence the Industrial Court. The Industrial Court is constituted by the President (a Judge of the Supreme Court of Queensland) sitting alone, and the Full Industrial Court by the President and two Commissioners. The Conciliation and Arbitration Commission is constituted by a Commissioner sitting alone; and the Full Bench of the Commission by at least three Commissioners. Not more than five Commissioners shall be appointed. A Commissioner shall not be capable of being a member of the Executive Council or of the Legislative Assembly, and shall not take part in the management of any business.

(iv) *South Australia*. The principal tribunal is the Industrial Court of South Australia, composed of the President (a person eligible for appointment as a Judge of the Supreme Court) who may be joined by two assessors employed in the industry concerned; Deputy Presidents may also be appointed. There are also Industrial Boards for the various industries, consisting of a chairman and equal numbers of representatives of employers and employees. Another tribunal provided for under the Industrial Code is the Board of Industry, composed of a President, who shall be the President or a Deputy President of the Industrial Court, and four Commissioners. Broadly speaking, the functions of these three tribunals are:—(i) the Industrial Court delivers awards concerning workers who do not

come under the jurisdiction of the Industrial Boards, appoints Boards of Reference and hears appeals from decisions of Industrial Boards and Boards of Reference; (ii) the determinations of the Industrial Boards apply to most industries in the metropolitan area; however, for employees of the Public Service, Railways, and councils of a municipality or district, determinations of Industrial Boards apply to the whole of the State; (iii) the Board of Industry declares, for the whole of the State, the "living wage".

(v) *Western Australia.* Legal control dates back to 1900. The present system of control comprises a four-man Western Australian Industrial Commission and an Industrial Appeal Court consisting of three Supreme Court judges who are nominated by the Chief Justice of Western Australia. A Commissioner may, in relation to any dispute or other matter, refer such matters to the Commission in Court Session. Similarly, appeals from decisions of a single Commissioner are heard by the other three Commissioners acting as the Commission in Court Session, but such hearings are restricted to the evidence and matters raised in the proceedings before the single Commissioner. The Commission in Court Session fixes and adjusts the basic wage. Appeals from the Commission to the Industrial Appeal Court are limited to matters which are erroneous in law or in excess of jurisdiction. The Court has the power to impose penalties for disobedience of orders made by the Commission.

The Western Australian Coal Industry Tribunal, established under the *Mining Act, 1904-1963*, has power to determine any industrial matter in the coal mining industry. It consists of a chairman and four other members (two representatives each of employers and employees). Boards of reference may be appointed by the Tribunal and decisions of the Tribunal may be reviewed by the Court of Arbitration on the application of a party subject to the decision.

(vi) *Tasmania.* The authority consists of Wages Boards for separate industries, comprising a Chairman (who is common to all Wages Boards), appointed by the Governor, and equal numbers of representatives of employers and employees, appointed by the Minister administering the Act. The system was instituted in 1910.

§ 2. Rates of Wage and Hours of Work

1. *General.*—This section contains indexes (with base: year 1954 = 100) of minimum weekly and hourly rates of wage and standard hours of work for adult males and adult females for Australia and each State. In the indexes there are 15 industry groups for adult males and 8 industry groups for adult females. For relevant periods, these indexes replace cognate indexes (base: year 1911 = 1,000 for males and April, 1914 = 1,000 for females) published in Year Books before No. 46, 1960. The current indexes are based on the occupation structure existing in 1954. Weights for each industry and each occupation were derived from two sample surveys made in that year. The first was the Survey of Awards in April, 1954, which showed the number of employees covered by individual awards, determinations and agreements. This provided employee weights for each industry as well as a basis for the Survey of Award Occupations made in November, 1954. This second survey showed the number of employees in each occupation within selected awards, etc., thereby providing occupation weights.

The industrial classification used in the current indexes, shown in the table on page 431, does not differ basically from the previous classification, the alterations being largely in the arrangement of classes. The former Pastoral, Agricultural, etc., group and the Domestic part of the group Amusement, Hotels, Personal Service, etc. are excluded from the current indexes because of coverage difficulties.

The minimum wage rates and standard hours of work used in the current indexes are for representative occupations within each industry. They have been derived entirely from representative awards, determinations and agreements in force at the end of each month or quarter, commencing with March, 1939, for adult males and March, 1951, for adult females. From January, 1957, particulars for adult males have been available as at the end of each month. The index for adult males includes rates and hours for 3,424 award designations. However, as some of these designations are operative within more than one industry,

or in more than one State, the total number of individual award occupations is 2,322. For adult females, the corresponding numbers are 1,103 and 518. Using the industry and occupation weights derived from the surveys described above, these rates and hours were combined to give weighted averages for each industry group for each State and Australia. Weighted averages of the components of the total minimum weekly wage rate, i.e. basic wage, margin and loading, were calculated separately for employees covered by Commonwealth awards, etc., and for those covered by State awards, etc. (see pp. 431-3).

Because the indexes are designed to measure movements in prescribed minimum rates of "wages" as distinct from "salaries", those awards, etc., which relate solely or mainly to salary earners are excluded.

A more detailed description of the current indexes of minimum rates of wage and standard hours of work is given in the *Labour Report*, which also contains an extensive tabular presentation of the minimum rates of wage for adult males and females in the principal occupations in the capital city of each State. Further particulars of weekly wage rates and index numbers will be found in the statistical bulletins S.B. 123—*Minimum Weekly Wage Rates, 1939 to 1959*, and S.B. 31—*Minimum Wage Rates, January, 1960 to June, 1963*. Current figures are published in the monthly bulletin *Wage Rates and Earnings*.

2. **Weekly Wage Rates.**—(i) *Adult Males—States.* The following table shows, for each State and Australia, the weighted average minimum weekly rates of wage payable to adult male workers for a full week's work, and index numbers at the dates specified.

(a) As prescribed in awards, determinations and agreements. (b) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends. (c) Includes the value of keep, where supplied. (d) Excludes rural.

(iii) *Adult Males—Components of Total Wage Rate.* A dissection of weighted average minimum weekly wage rates for adult males into the three components of the total minimum wage, i.e. basic wage, margin and loading, is given in the following two tables, separate particulars being shown for employees covered by awards, etc., within Commonwealth and

State jurisdictions. For the purposes of the index, the Commonwealth jurisdiction embraces awards of, or agreements registered with, the Commonwealth Conciliation and Arbitration Commission, and determinations of the Commonwealth Public Service Arbitrator. State jurisdictions embrace awards or determinations of, or agreements registered with, State industrial tribunals, together with certain unregistered agreements, where these are dominant in the particular industries to which they refer.

The basic wage rates shown herein are weighted averages of the rates prescribed in awards, etc., for the occupations included in the index for each State. For industries other than mining, metropolitan basic wage rates have generally been used. However, there are a number of occupations for which basic wage rates other than the metropolitan rate are prescribed. Also, in some States at various times, State Government employees under Commonwealth awards have been paid State basic wage rates, and the basic wage rates of some employees have been subject to automatic quarterly adjustments while those of other employees within the same jurisdiction have remained unchanged. In all such cases, the basic wage rate actually paid is used in tables below. For these and other reasons, the weighted average basic wage rates differ, in the majority of cases, from the metropolitan basic wage rates shown in other sections of this chapter.

Margins are minimum amounts, in addition to the basic wage, awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness and other like factors.

Loadings are minimum amounts, in addition to the basic wage and margin (if any), awarded for various kinds of disabilities associated with the performance of work, or to meet particular circumstances. They include payments such as industry loadings and other general loadings prescribed in awards, etc., for the occupations included in the index.

For a more detailed description of this dissection of weekly wage rates into components and for tables for each State and Australia, according to jurisdiction, extending back to 1939, see the statistical bulletins S.B. 123—*Minimum Weekly Wage Rates, 1939 to 1959*, and S.B. 31—*Minimum Wage Rates, January, 1960 to June, 1963*.

(a) States. The following table shows the components of the total minimum weekly wage rate for each State and Australia, as at 31st December, 1964, according to jurisdiction.

3. **Standard Hours of Work.**—(i) *General.* In the fixation of weekly wage rates, most industrial tribunals prescribe the number of hours constituting a full week's work for the wage rates specified. The hours of work so prescribed form the basis of the compilation of the weighted averages and index numbers on pages 436-37. The main features of the reduction of hours to 44 and later to 40 per week are summarized on p. 435. In considering such changes, it must be remembered that even within individual States, the authority to alter conditions of work is divided between Commonwealth and State industrial tribunals and the various legislatures, and that the State legislation usually does not apply to employees covered by awards of the Commonwealth Conciliation and Arbitration Commission. However, it may do so in respect of matters not treated in Commonwealth awards.

(ii) *The 44-hour Week.* No permanent reduction to a 44-hour week was effected until 1925, although temporary reductions had been achieved earlier. In 1920, the New South Wales legislature granted a 44-hour week to most industries, but in the following year this provision was withdrawn. Also in 1920, the President of the Commonwealth Court of Conciliation and Arbitration (Higgins J.), after inquiry, granted a 44-hour week to the Timber Workers' Union, and in the following year extended the same privilege to the Amalgamated Society of Engineers. In 1921, however, a reconstituted Commonwealth Court of Conciliation and Arbitration unanimously rejected applications by five trade unions for the shorter standard week and re-introduced the 48-hour week in the case of the above-mentioned two unions then working 44 hours. During 1924 the Queensland Parliament passed legislation to operate from 1st July, 1925, granting the 44-hour standard week to employees whose conditions of work were regulated by awards and agreements of the Queensland State industrial authority. Similar legislative action in New South Wales led to the re-introduction of the 44-hour week in that State as from 4th January, 1926.

In 1927, after an exhaustive inquiry, the Commonwealth Court of Conciliation and Arbitration granted a 44-hour week to the Amalgamated Engineering Union and intimated that this reduction in standard hours of work would be extended to industries operating under conditions similar to those in the engineering industry. Applications for the shorter hours by other unions were, however, treated individually, the nature of the industry, the problem of production, the financial status and the amount of foreign competition being fully investigated. The economic depression delayed the extension of the standard 44-hour week until the subsequent improvement in economic conditions made possible its general extension to employees under Commonwealth awards.

In States other than New South Wales and Queensland, no legislation was passed to reduce the standard hours of work, so that, for employees not covered by Commonwealth awards, the change had to be effected by decisions of the appropriate industrial tribunals. In these cases, the date on which the reduction to 44 hours was implemented depended on the decision of the tribunals in particular industries, employees in some industries receiving the benefit of the reduced hours years ahead of those in others. In these States, the change to the shorter week extended over the years from 1926 to 1941.

(iii) *The 40-hour Week.* (a) *Standard Hours Inquiry, 1947.* Soon after the end of the 1939-45 War, applications were made to the Commonwealth Court of Conciliation and Arbitration for the introduction of a 40-hour week, and the hearing by the Court commenced in October, 1945. Before the Court gave its decision, the New South Wales Parliament passed legislation granting a 40-hour week, operative from 1st July, 1947, to industries and trades regulated by State awards and agreements, and in Queensland similar legislation was introduced in Parliament providing for the 40-hour week to operate from 1st January, 1948.

The Commonwealth Court of Conciliation and Arbitration, in its judgment on 8th September, 1947, granted the reduction to the 40-hour week from the beginning of the first pay-period commencing in January, 1948. The Queensland Act was passed, and was proclaimed on 10th October, 1947. On 27th October, 1947, the South Australian Industrial Court, after hearing applications by unions, approved the incorporation of the 40-hour standard week in awards of that State. The Court of Arbitration of Western Australia, on 6th November, 1947, approved that, on application, provision for a 40-hour week could be incorporated in awards of the Court, commencing from 1st January, 1948.

In Victoria and Tasmania, the Wages Boards met and also incorporated the shorter working week in their determinations, so that from the beginning of 1948 practically all employees in Australia whose conditions of labour were regulated by industrial authorities had the advantages of a standard working week of 40 hours or, in certain cases, less.

(b) *Basic Wage and Standard Hours Inquiry, 1952-53.* In the 1952-53 Basic Wage and Standard Hours Inquiry the employers sought an increase in the standard hours of work per week, claiming that one of the chief causes of the high costs and inflation had been the loss of production due to the introduction of the 40-hour week. This claim was rejected by the Court, as it considered that the employers had not proved that the existing economic situation called for a reduction of general standards in the matter of the ordinary working week. (*See also* § 5, para. 2 (iii) p. 452.)

(c) *Basic Wage and Standard Hours Inquiry, 1961.* In this case the employers sought an increase in the number of ordinary working hours from 40 to 42 per week, with a concomitant increase in weekly wages by an amount equal to two hours' pay at ordinary rates. This was to be a temporary measure to have effect for four years, after which time hours would revert to 40 and the increased wage would remain. The employers submitted that such a measure was called for by the balance of payments crisis, that it would lead to increased productivity at stable prices, and that work in excess of forty hours would be more evenly distributed with consequent financial relief for men not getting overtime work. The Commonwealth Conciliation and Arbitration Commission, which heard the application, was not persuaded that the anticipated consequences would follow, and the claim was rejected. (See also pp. 455-6.)

4. **Hourly Wage Rates.**—(i) *General.* The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. However, the number of hours constituting a full week's work differs in some instances between various occupations in each State, and between the same occupations in the several States. For some purposes, a better comparison may be obtained by reducing the results in the preceding paragraphs to a common basis, namely, the rate of wage per hour. The particulars of weighted average minimum hourly rates of wage given in the following tables relate to all industry groups except Rural, and Shipping and Stevedoring. The Rural industry is not included in the index and Shipping and Stevedoring has been excluded because, for some of the occupations in this group, definite particulars for the computation of average working hours and hourly rates of wage are not available.

(ii) *Adult Males—States.* The following table shows the weighted average minimum hourly rates of wage payable to adult male workers, and index numbers of hourly rates in each State.

(a) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends.

5. **Weighted Average Standard Weekly Hours of Work.**—The 40-hour week has operated in Australia generally from 1st January, 1948, and in New South Wales from 1st July, 1947 (see para. 3 (iii), p. 435). However, as stated in para. 4 (i) on page 436, the number of hours constituting a full week's work (excluding overtime) differs between occupations and/or between States. The weighted average standard hours of work (excluding overtime) prescribed in awards, determinations and agreements for a full working week, in respect of adult male workers in all industry groups except Rural, and Shipping and Stevedoring, at 31st December, 1964, were:—New South Wales, 39.95; Victoria, 39.97; Queensland, 39.98; South Australia, 39.96; Western Australia, 39.89; Tasmania, 39.97; Australia, 39.96. Corresponding figures for adult female workers at 31st December, 1964, were:—New South Wales, 39.53; Victoria, 39.81; Queensland, 39.70; South Australia, 39.77; Western Australia, 39.78; Tasmania, 39.56; Australia, 39.67.

§ 3. Average Weekly Earnings

1. **General.**—The figures in this section are derived from particulars of employment and of wages and salaries recorded on pay-roll tax returns, from other direct collections and from estimates of the unrecorded balance. Pay of members of the defence forces is not included.

Particulars of wages and salaries paid are not available for males and females separately from these sources; average weekly earnings have therefore been calculated in terms of male units. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. As it was not possible to estimate the ratio of male to female earnings in the several States the same ratio has been used in each State. Because the actual ratio may vary between States precise comparisons between average earnings in different States cannot be made on the basis of the figures shown in paragraph 2.

Quarterly figures corresponding to those shown on p. 438 are published in the monthly bulletin *Wage Rates and Earnings* and in the *Monthly Review of Business Statistics*.

2. Average Weekly Earnings.—Particulars of average weekly earnings per employed male unit are shown in the following table for each of the years 1954–55 to 1963–64.

AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT(a)
(£)

Year	N.S.W. (b)	Vic.	Qld	S.A. (c)	W.A.	Tas.	Aust.
1954–55	17.69	17.65	15.59	16.89	16.15	16.60	17.17
1955–56	18.97	18.91	16.48	17.93	16.94	17.79	18.34
1956–57	19.95	19.81	17.42	18.34	17.51	18.85	19.21
1957–58	20.48	20.34	17.86	18.84	18.11	19.14	19.73
1958–59	21.14	20.98	18.62	19.29	18.31	19.62	20.34
1959–60	22.83	22.74	19.71	20.91	19.61	20.96	21.93
1960–61	24.06	23.58	20.79	21.68	20.77	21.66	22.98
1961–62	24.55	24.26	21.61	22.37	21.51	22.64	23.62
1962–63	25.08	25.05	22.18	22.89	22.12	22.95	24.22
1963–64	26.29	26.23	23.34	24.05	23.59	24.28	25.43

(a) Includes, in addition to wages at award rates, earnings of salaried employees, overtime earnings, over-award and bonus payments, payments made in advance or retrospectively during the periods specified, etc. See explanatory notes in paragraph 1. p. 439. (b) Includes Australian Capital Territory. (c) Includes Northern Territory.

3. Index Numbers.—The following table shows, for “All industries” and for “Manufacturing”, the movement in average weekly earnings from 1953–54 to the March quarter, 1965. The “All industries” index is based on pay-roll tax returns and other data. The index for manufacturing industries for the years 1953–54 to 1963–64 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory censuses (see Chapter VI. Manufacturing Industry, § 8, para. 2 (iii), p. 166); figures for quarters subsequent to June quarter, 1964, are preliminary estimates based on pay-roll tax returns.

The index numbers for “All industries” and “Manufacturing” show the movement in average earnings for each group over a period of time. However, they do not give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1953–54 = 100, and both series have been seasonally adjusted.

INDEXES OF AVERAGE WEEKLY EARNINGS(a): AUSTRALIA

SEASONALLY ADJUSTED

(Base of each Series: 1953–54 = 100)

Year	All industries(b)	Manufacturing	Quarter	All industries(b)	Manufacturing

1962–63.. ..	148.3	147.7	December	164.2	
1963–64.. ..	155.7	154.8			

(a) See footnote (a) to table above. (b) Average earnings per employed male unit. See explanation in paragraph 1, p. 437.

§ 4. Surveys of Wage Rates, Earnings and Hours

1. **General.**—Towards the end of 1960, a statistical survey of the wage structure of Australia was undertaken by this Bureau. The object of the survey was to obtain information as to marginal rates of wage and actual weekly earnings of adult male employees (excluding part-time and casual employees) for the last pay-period in September, 1960. A survey as at the last pay-period in October, 1961, provided similar information as to actual weekly earnings. A survey of weekly earnings and hours, carried out in respect of the last pay-period in October, 1962, provided information about the hours of work and average earnings of male and female employees in private industry.

The surveys were based on returns from stratified random samples of private employers subject to pay-roll tax. They did not include government or semi-government employment. Because of insufficient data, employees in rural industry and private domestic service were excluded, as also were employees of religious, benevolent and other similar bodies exempt from pay-roll tax. In addition, the 1960 survey excluded the shipping and stevedoring industry, the motion picture industry, certain businesses such as those of accountants and consultant engineers, and trade associations, etc.

A brief summary of the results of the 1960 and 1961 surveys is given in paras. 2 and 3 following. Only the proportions of the total employees in the various groups are shown in this issue, but more detailed particulars, including the number of employees in each group, may be found in Year Book No. 48, 1962, pages 410–18. The preliminary results of the 1962 survey were published in Year Book No. 49, 1963, pages 482–5.

2. **Survey of Wage Rates and Earnings, September, 1960.**—(i) *General.* The sample for this survey was designed to provide accurate particulars only for Australia as a whole; hence no State details are shown in the tables below. The survey covered more than 1,100,000 adult male employees.

Definitions relevant to the survey are as follows.

- (a) *Adult Male Employees* refer to employees on the pay-roll of the last pay-day in September, 1960, and include those who, although under 21 years of age, were paid at the adult rate prescribed in the appropriate award. Part-time and casual employees and those absent in the defence forces were excluded.
- (b) The term *awards* as used herein denotes awards or determinations of, or agreements registered with, Commonwealth or State industrial tribunals. Employees whose rates of pay and working conditions were not regulated by awards, and employees covered by formal, though unregistered, agreements between employee organizations and employers, are shown as “not covered by awards”.
- (c) *Margins* are minimum amounts, in addition to the basic wage, awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness or other like factors. For the purposes of this survey the following were not included in margins:—special allowances prescribed in awards, such as shift, dirt, and height money, leading hand allowances, etc.; and other payments such as commission, payments above the minimum rate for contract and piece work, etc. (see sub-paras. (e) and (g) p. 440 and also § 6. Wage Margins). In the case of contract work, etc., the margin was determined by the minimum amount prescribed in the award for the class of work performed. Where the marginal rate of wage for an occupation was not specified in an award, the margin was assumed to be the difference between the total minimum prescribed rate of wage for the occupation and the appropriate Commonwealth or State basic wage. For employees not covered by awards, and whose margins were not specified in unregistered agreements, the margin was assumed to be the difference between the appropriate basic wage in the State jurisdiction and the agreed rate of pay for a standard working week (or the weekly equivalent of the agreed rate).

- (d) *Total Weekly Earnings* include ordinary time earnings at award rates (and, for employees not covered by awards, payments at agreed rates for a standard working week), overtime earnings and all other payments. Annual or other periodical bonuses were included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week was included.
- (e) *Ordinary Time Earnings at Award Rates* represent the total weekly payment to adult male employees (excluding part-time and casual employees) for hours of work paid for up to the standard or award hours, calculated at award rates of pay. They include payments for sick leave, proportion of annual leave, special allowances prescribed in awards, etc. (see sub-para. (c) p. 439). For employees not covered by awards, they include payments at agreed rates for a standard working week.
- (f) *Overtime Earnings* represent the total weekly payment to adult male employees (excluding part-time and casual employees) for time worked in excess of award or agreed hours.
- (g) *Other Earnings* include all payments other than those in sub-paras. (e) and (f) above, such as commission, payments above the minimum rate for contract work, incentive scheme, piece-work, and profit-sharing scheme payments, proportion of annual or other periodical bonuses, points system payments, attendance or good time-keeping bonuses, etc. (see sub-para. (c) p. 439).

(ii) *Marginal Rates of Wage. (a) Industry Groups.* In the following table, adult male employees in each of the main industry groups are classified according to weekly margin above the basic wage.

ADULT MALE EMPLOYEES (EXCLUDING PART-TIME AND CASUAL EMPLOYEES) CLASSIFIED ACCORDING TO MARGINAL RATES OF WAGE: INDUSTRY GROUPS, AUSTRALIA, SEPTEMBER, 1960 (a)

PROPORTION OF TOTAL (PER CENT.)

(a) See p. 439, for particulars of the coverage of the survey.

(b) For definitions, see pp. 439-40.

(c) Inquiry indicated that many of the adult males in this group were absent for part of the week.

3. *Survey of Weekly Earnings, October, 1961.*—(i) *General.* For this survey the sample was designed so that particulars of the distribution of earnings in each State could be obtained as well as those for Australia (see p. 443), but it was not possible, without a considerable increase in the number of returns, to obtain particulars for each industry group in each State. State details were therefore restricted to the two major groups, manufacturing and non-manufacturing; those for Australia were obtained for eight separate industry groups. Because of limitations of space, it has not been possible to include all figures in the tables herein. For further details, reference should be made to Statistical Bulletin No. 22—*Survey of Weekly Earnings, October, 1961.*

The businesses selected in the sample were allocated by States and by industry and size groups in such a way that the precision of the sample estimates for total manufacturing and total non-manufacturing, expressed as percentages of the estimates themselves, would be approximately the same in each State.

Definitions relevant to the survey are as follows.

Adult Male Employees refer to employees on the pay-roll of the last pay-period in October, 1961, and includes those who, although under 21 years of age, were paid at the adult rate prescribed for their particular occupation. Part-time and casual employees and those absent in the defence forces were excluded. Executive, clerical and sales staff were included, as were employees working short time who would normally have been full-time employees.

Total Weekly Earnings (i.e. gross earnings before taxation and other deductions) include ordinary time earnings, overtime earnings and all other payments, such as holiday and sick pay, commission, payments above the minimum rate for contract work, incentive scheme, piece-work and profit-sharing scheme payments, points system payments, attendance bonuses, etc. Annual or other periodical bonuses have been included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week has been included.

(ii) *States.* (a) *All Industries.* The following table shows the proportions of adult male employees in each earnings group in each State.

ADULT MALE EMPLOYEES (EXCLUDING PART-TIME AND CASUAL EMPLOYEES) CLASSIFIED ACCORDING TO TOTAL WEEKLY EARNINGS, OCTOBER, 1961(a)

PROPORTIONS OF TOTAL (PER CENT.)

(a) See p. 442 for particulars of the coverage of the survey. (b) For definitions, see p. 442.

(c) Inquiry indicated that the majority of the adult males in this group did not work a full week because of absenteeism, changing jobs, etc. Others were working short time.

(iii) *Australia, Industry Groups.* The proportions of adult male employees in the main industry groups covered by the survey are shown in the following table according to total weekly earnings.

ADULT MALE EMPLOYEES (EXCLUDING PART-TIME AND CASUAL EMPLOYEES) CLASSIFIED ACCORDING TO TOTAL WEEKLY EARNINGS: INDUSTRY GROUPS, AUSTRALIA, OCTOBER, 1961(a)

(a) See p. 442 for particulars of the coverage of the survey. (b) For definitions, see p. 442. (c) Inquiry indicated that the majority of the adult males in this group did not work a full week because of absenteeism, changing jobs, etc. Others were working short time.

4. *Surveys of Weekly Earnings and Hours, October, 1962 and October, 1963.*—(i) *General.* Sample surveys in respect of most private employers subject to pay-roll tax (i.e. those paying more than £200 a week in wages and salaries) have been conducted as at the last pay-periods in October, 1962, and October, 1963. These surveys supply detailed data for use in the compilation of the Australian National Accounts and other statistical series as well as for general publication.

Results of the 1963 survey, with some qualified comparisons with the 1962 survey, are shown in the following tables. The figures for the 1962 survey amend those published in preliminary form in Statistical Bulletin No. 213 (20th March, 1963). The 1962 survey was the first of this type and was experimental in form.

Figures for average weekly earnings, average weekly hours paid for, and average hourly earnings as at the selected pay-periods are presented for males and females (adult and junior) separately by industry groupings (for 1963) and by States. They reflect the effects of differences (and of changes between the points of time) in amounts paid for the various occupations; in amounts paid for the same occupations; in occupational structures within industries; in industry structure; in degrees of business activity (incidence of overtime, etc.); and in incidence of incentive schemes, piece-work and profit-sharing scheme payments, etc.

(ii) *Coverage.* The results of the surveys in October, 1962, and October, 1963, were based on returns from two separate stratified random samples of private employers subject to pay-roll tax. Employees in rural industry and in private domestic service were excluded because most employers in these two industries are not subject to pay-roll tax. Also excluded from the surveys were employees of government and semi-government authorities as well as those of religious, benevolent and other similar organizations exempt from pay-roll tax. The earnings and hours of waterside workers employed on a casual basis have been excluded because they are subject to wide fluctuations for short periods such as those covered by these surveys.

For the October, 1962, survey returns were received from approximately 3,700 employers and the sample returns represented 1,302,800 male and 518,500 female wage and salary earners. There were also approximately 3,700 employers surveyed in October, 1963, and the sample represented a total of 1,338,500 male and 538,900 female employees.

The figures contained in the tables in this section are for "Employees (other than part-time) Whose Hours of Work Were Known" as defined below. Because of the heterogeneity of the data combined with high sampling variability, figures relating to other employees (part-time workers, executives, etc., and those whose hours of work were not known) are not available for publication.

(iii) *Comparability of Results.* These sample surveys are, of course, subject to sampling variability, i.e., variations which might occur by chance because only samples of employers were surveyed. In addition to affecting the results of each sample such aspects also affect comparison between each year's results.

In the table on page 448 a comparison of the results of the surveys in October, 1962, and October, 1963, is therefore shown for broad categories only. Comparison of the more detailed results for 1963 contained in this section and the preliminary results for 1962 in Statistical Bulletin No. 213 (20th March, 1963) should not be attempted. This is because figures for October, 1962 contained in S.B. 213 have been revised; the comparison other than for broad categories would be subject to sampling variability too high for most practical purposes; and there was a change in industry classification between the two surveys. From October, 1963, these surveys have been related to the industry classification adopted for the population census of June, 1961.

(iv) *Definitions.* The following definitions refer to terms used in the surveys and in the tables in this section.

- (a) *Employees* refer to male and female employees on the pay-roll for the last pay-period in October.
- (b) *Employees Whose Hours of Work Were Known* exclude (i) all managerial, executive, professional and higher supervisory staff, whether or not their hours of work were known, and (ii) any other employees whose hours of work were not known. They comprise all other employees who received pay for the last pay-period in October and whose hours of work were known (including foremen, transport supervisors, floor-walkers, other minor supervisory employees, clerical and office staff, etc.).
- (c) *Part-time Employees* refer to employees who ordinarily worked less than 30 hours a week. Employees on short-time who normally worked 30 hours or more a week were classified as "other than part-time".
- (d) *Adults* include employees who, although under 21 years of age, were paid at the adult rate for their occupation.
- (e) *Juniors* are those employees under 21 years of age who were not paid at the adult rate for their occupation.

(f) *Earnings* (i.e. gross earnings, before taxation and other deductions) include ordinary time and overtime earnings, payments for sick leave and holidays, commission, and all other payments such as incentive scheme, piecework and profit-sharing scheme payments, etc., and bonus payments of any kind. Annual or other periodical bonuses have been included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week has been included.

(g) *Weekly Hours Paid for* include ordinary time and overtime hours, paid stand-by or reporting time, paid sick leave and paid holidays. For employees paid other than weekly, hours have been converted to the equivalent for one week.

(v) *Average Earnings and Hours.* (a) *Average Weekly Earnings, Average Weekly Hours Paid for and Average Hourly Earnings—Australia.* In the following table, the average weekly earnings, average weekly hours paid for and average hourly earnings at the last pay-period in October, 1963, are shown for males and females (adult and junior), other than part time, by industry groupings.

(a) Private employees only. Excludes managerial, executive, professional and higher supervisory staff, whether or not their hours of work were known, and all other employees whose hours of work were not known. (b) Last pay-period in October, 1962, and October, 1963. For definitions and particulars of the coverage of the surveys, etc., see pp. 445-6. (c) Excludes Northern Territory and Australian Capital Territory.

§ 5. Basic Wages in Australia

1. **General.**—The concept of a “basic” or “living” wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the “minimum” or “basic” wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted “that the wage should be fixed at the highest amount which the economy can sustain and that the ‘dominant factor’ is the capacity of the community to carry the resultant wage levels”.*

Under the *Commonwealth Conciliation and Arbitration Act 1904–1964* (see p. 426) the Commonwealth Conciliation and Arbitration Commission (previously the Commonwealth Court of Conciliation and Arbitration) may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award “altering the basic wage (that is to say, that wage or that part of the wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which he [she] is employed) or the principles upon which it is computed”.

In the past, the Commonwealth Court of Conciliation and Arbitration held general basic wage inquiries from time to time, and its findings applied to industrial awards within its jurisdiction. Prior to the decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, discontinuing the automatic adjustment of basic wages in Commonwealth awards in accordance with variations occurring in retail price index numbers, the relevant basic wage of the Commonwealth Court of Conciliation and Arbitration was adopted to a considerable extent by State industrial tribunals. In New South Wales and South Australia, the State industrial authorities adopted the relevant Commonwealth basic wage. In Victoria and Tasmania, where Wages Boards systems operate, no provision was included in the Industrial Acts for the declaration of a basic wage, although, in the past, Wages Boards generally adopted basic wages based on those of the Commonwealth Court. In Queensland and Western Australia, the determination of a basic wage was a function of the respective State Industrial or Arbitration Courts, and (subject to State law) they took into account the rates determined by the Commonwealth Court. Following the decision of the Commonwealth Court of Conciliation and Arbitration to discontinue automatic quarterly adjustments to the basic wage, the various State industrial authorities have determined State basic wages in accordance with the provisions of the respective State industrial legislation. Details of the action taken in each State and subsequent variations in State basic wages are set out in para. 5, pages 460–6.

In addition to the basic wage, “secondary” wage payments, including margins for skill and various kinds of loadings peculiar to the occupation or industry, are determined by these authorities. The basic wage, and the “secondary” wage, where prescribed, make up the “minimum” wage for a particular occupation. The term “minimum wage” as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry. (See also § 2, para. 2 (iii) *Adult Males—Components of Total Wage Rate*, pp. 431–3).

2. **The Commonwealth Basic Wage.**—(i) *Early Judgments.* The principle of a living or basic wage was propounded as far back as 1890, but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by an order in terms of section 2 (d) of the *Excise Tariff 1906* in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was “fair and reasonable”. Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of a “fair and reasonable” minimum wage for unskilled labourers as that standard appropriate to “the normal needs of the average employee, regarded as a human being living in a civilized community”.† The rate declared was 7s. a day or £2 2s. a week for Melbourne, the amount considered reasonable for “a family of about five”.

* *Commonwealth Arbitration Reports*, Vol. 77, p. 494.
Vol. 2, p. 3.

† *Commonwealth Arbitration Reports*,

The "Harvester" standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses ("A" Series) for the 30 more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. The basic wage rates for towns were thereafter varied in accordance with the respective retail price index numbers. Court practice was to equate the retail price index number 875 for Melbourne for the year 1907 to the "Harvester" rate of 42s. a week (or the base of the index (1,000) to 48s. a week). At intervals thereafter as awards came before it for review, the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index. In some country towns, certain "loadings" were added by the Court to wage rates so derived to offset the effect of lower housing standards, and consequently of house rents, on the index numbers for these towns.

Over the period of its operation, the adequacy or otherwise of the "Harvester" standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War, strong criticism developed that this system did not adequately maintain the "Harvester" equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's Reports were presented in 1920 and 1921. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court, because they were considerably in advance of existing rates, and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in *Labour Report* No. 41, page 102.

The system of making automatic quarterly adjustments to the basic wage in direct ratio to variations in the retail price index ("A" Series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. Previously, adjustments had been made sporadically in relation to retail price indexes for the previous calendar year or the year ended with the preceding quarter. The new method would have resulted in a basic wage lower than that to which employees would have been entitled had the previous practice been continued, and in 1922* the Court added to the basic wage a general loading of 3s. (known as the "Powers 3s."), "a sum . . . which did, to the extent of 3s. per week, relieve the employees from the detrimental effect so far as they were concerned of the change which the Court was then making in its method of fixing the basic wage".† This loading continued until 1934. The practice adopted by the Commonwealth Court in 1921 of making automatic quarterly adjustments continued until the Court's judgment of 12th September, 1953 (*see* p. 452).

For a description of the several series of retail price indexes referred to in these paragraphs, *see* pages 411-12 of this chapter.

(ii) *Basic Wage Inquiries*, 1930 to 1950. No change was made in the method of fixation and adjustment of the basic wage until the onset of the depression in 1930, when applications were made to the Court for a reduction of wages. From 1st February, 1931, the Court reduced all wages under its jurisdiction by 10 per cent. Subsequent applications in 1932 and 1933 for cancellation of this reduction were refused. In May, 1933, the Court transferred the basis of the quarterly adjustment of the basic wage from the "A" Series to the "D" Series Retail Price Index. Further particulars may be found in the *Labour Report*, Nos. 22 and 23.

The "Harvester" standard, adjusted by variations in retail price index numbers, continued to be the theoretical basis of the wage of the Commonwealth Court until the judgment of 17th April, 1934, when automatic adjustment was transferred to the "C" Series Retail Price Index, the base of the index being taken as equal to 81s. a week. The new rate for the six capital cities, £3 5s., was in effect the same as that previously paid under the "A" Series, without the "Powers 3s." and without the 10 per cent. reduction, which then ceased to operate. (*See Labour Report* No. 25, 1934.)

* *Commonwealth Arbitration Reports*, Vol. 16, p. 32.

† *Ibid*, p. 841.

The following were the main features of the judgment of the 1937 Inquiry. (a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as "loadings" additional to the rates payable under the 1934 judgment (referred to as the "needs" portion of the basic wage). These loadings, commonly referred to as "Prosperity" loadings, ranged, for capital cities, from 4s. to 6s., that for the six capitals being 5s. (b) The minimum adjustment of the basic wage was fixed at 1s. a week instead of 2s. (c) The basis of the adjustment of the "needs" portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the "C" Series to a special "Court" Series based upon the "C" Series. (d) Female and junior rates were left for adjustment by individual judges when dealing with specific awards. (See *Labour Report* No. 28, pages 77-87.)

In 1940, the combined unions applied to have the value of 1,000 (the base of the "C" Series Index upon which the "Court" Series was based) raised from 81s. to 100s. a week, and the "Prosperity" loadings incorporated in the new rate. In its judgment of 7th February, 1941, the Court unanimously refused to grant any increase, owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. (See below.) In the course of the judgment, the Chief Judge suggested that the basic wage might be graded according to family responsibilities by means of a comprehensive system of child endowment, and that if a scheme of this nature were established, future fixations of the basic wage would be greatly simplified. (The Commonwealth *Child Endowment Act* 1941 came into operation on 1st July, 1941. For details see Chapter XVI. Welfare Services.)

In 1946, an application was made for restoration of the adjourned 1940 hearing (see above). During the protracted hearing of the Standard Hours Inquiry (see p. 435), it became apparent that reconsideration of the amount of the basic wage was, in the public interest, a matter of increasing urgency, and the unions therefore applied for an "interim" basic wage declaration. Judgment was delivered on 13th December, 1946, whereby an increase of 7s. a week was granted in the "needs" portion of the basic wage, the rate for the six capital cities as a whole being increased from 93s. to 100s. a week. For automatic quarterly adjustments, a new "Court" Index (Second Series) (Base 1923-27 = 87.0) was adopted. All "loadings" on the basic wage were retained. Further particulars of this judgment may be obtained from *Labour Report* No. 38, page 79.

The Basic Wage Inquiry, 1949-50, completed the case begun in 1940 and continued in 1946 (see above). The general hearing of the unions' claims was commenced on 17th May, 1949, and separate judgments were delivered on 12th October, 1950.* A majority of the Court (Foster and Dunphy JJ.) was of the opinion that the basic wage for adult males should be increased by £1 a week, and that for adult females should be 75 per cent. of the adult male rate. Kelly C.J. considered that no increase in either the male or the female wage was justified. On 24th October and 17th and 23rd November, 1950, the Court made further declarations concerning the "Prosperity" and other loadings. The "Prosperity" loading of 1937 (see above), which was being paid at rates between 3s. and 6s. a week according to localities, was standardized at a uniform rate of 5s. a week for all localities and was declared to be an adjustable part of the basic wage, the "War" loadings were declared to be not part of the basic wage, and any other loading declared to be part of the basic wage ceased to be paid as a separate entity.

The new rates operated from the beginning of the first pay-period in December, 1950, being in all cases the rate based on the Court Index (2nd Series) for the September quarter, 1950, plus a flat-rate addition of £1, together with the standardized "Prosperity" loading of 5s. The new basic wage rate for the six capital cities (weighted average) was £8 2s., comprising £6 17s. Court (2nd Series) plus 5s. uniform "Prosperity" loading plus the £1 addition. The declaration provided that the whole of this basic wage would be subject to automatic quarterly adjustments as from the beginning of the first pay-period commencing in February, 1951, on the basis of the index numbers for the December quarter, 1950. For this purpose, the new rate of £8 2s. was equated to the "C" Series retail price index number 1,572 for the six capital cities (weighted average) for the September quarter, 1950. From this equation was derived a new "Court" Index (Third Series) with 103.0 equated to 1,000 in the "C" Series Index. Further particulars of the judgment may be found in *Labour Report* No. 39, page 81.

* *Commonwealth Arbitration Reports*, Vol. 68, p. 698.

For more detailed descriptions of the foregoing inquiries, reference should be made to earlier issues of the Year Book and the *Labour Report*.

(iii) *Basic Wage and Standard Hours Inquiry, 1952-53*. On 5th August, 1952, the Commonwealth Court of Conciliation and Arbitration began hearing claims by employers' organizations that (a) the basic wage for adult males be reduced; (b) the basic wage for adult females be reduced; (c) the standard hours of work be increased; (d) the system of adjusting the basic wages in accordance with variations occurring in retail price index numbers be abandoned; and by employees' organizations, that the basic wage for adult males be increased.

The decision of the Court, announced on 12th September, 1953*, was as follows:—the employers' applications for reduction of the basic wages for adult males and females and for an increase of the standard hours of work were refused; the employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages were granted; and the unions' applications for increases of basic wages were refused.

The Court in the course of its judgment said that nothing had been put before it during the inquiry in support of a departure from its well-established principle that the basic wage should be the highest that the capacity of the community as a whole could sustain. If the Court is at any time asked to fix a basic wage on a true needs basis, the question of whether such a method is correct in principle and all questions as to the size of the family unit remain open.

For further particulars of the judgment, see *Labour Report* No. 46, page 64.

(iv) *Basic Wage Inquiry, 1956*. On 14th February, 1956, the Commonwealth Court of Conciliation and Arbitration commenced hearing an application by trade unions for an increase in the basic wage to the amount it would have reached if automatic quarterly adjustments deleted in September, 1953, had remained in force, plus a further £1; for the re-introduction of automatic quarterly adjustments; and for the abolition of what was known as the 3s. country differential. This application was regarded as a general application for variation of the basic wage in all Commonwealth awards.

All the claims made by the unions were opposed by the respondent employers. The Commonwealth Government intervened in the public interest and opposed the re-introduction of automatic adjustments. The States of New South Wales, Queensland, Western Australia and Tasmania supported the unions' claims for the re-establishment of the system of automatic adjustments and the raising of the basic wage to the levels indicated by the current "C" Series Index numbers, but the State of South Australia opposed these claims. The State of Victoria neither supported nor opposed the unions' claims.

The judgment was delivered on 26th May, 1956. The Court rejected each claim made by the unions, but decided to increase the adult male basic wage by 10s. a week, payable from the beginning of the first pay-period in June. As a result of this decision, the basic wage for adult females was increased by 7s. 6d. a week with proportionate increases for juniors of both sexes and for apprentices.

For further details, see *Labour Report* No. 46, page 67.

(v) *Basic Wage Inquiry, 1956-57*. On 13th November, 1956, the Commonwealth Conciliation and Arbitration Commission in Presidential Session commenced to hear claims by the combined unions for an increase of the basic wage to the amount it would have reached if automatic quarterly adjustments had remained in force and for the restoration of automatic quarterly adjustments.† This application was treated by the Commission as a general application for alteration of the basic wage in all Commonwealth awards.

The unions' claims were opposed by the respondent employers. Victoria and South Australia were the only States to appear before the Commission and the Commonwealth Government intervened in the public interest. Victoria neither supported nor opposed the application by the unions. South Australia opposed the unions' claims and suggested that,

* *Commonwealth Arbitration Reports*, Vol. 77, p. 477.

† 87 C.A.R., p. 439.

if an increase in the basic wage were granted, the Commission should decide on the increase to be added to the six capitals basic wage, and then apportion that increase among the six capital cities on a basis accurately reflecting the differences in their cost of living. The Commonwealth opposed the restoration of the automatic adjustment system, whatever index was used for this purpose.

Judgment was delivered on 29th April, 1957.* The Commission, having considered all aspects of the state of the economy, decided that the basic wages in Federal awards should be increased and that the increase in the six capital cities basic wage should be 10s. a week for adult males, to come into effect from the first pay-period to commence on or after 15th May, 1957. The Commission also decided that this increase would be uniform for all basic wage rates. The basic wage for adult females was increased by 7s. 6d. with proportionate increases for juniors of both sexes and for apprentices. The claim for restoration of automatic quarterly adjustments was refused. The Commission advised that it approved an annual review of the basic wage and would be available for this purpose in February, 1958. However, although favouring an annual review of the basic wage, the Commission considered that "it would not be proper for it nor would it wish to curtail the existing right of disputants to make an application at whatever time they think it necessary to do so."†

A more detailed summary of the judgment may be found in *Labour Report* No. 46, pages 68-71.

(vi) *Basic Wage Inquiry*, 1958. On 18th February, 1958, the Conciliation and Arbitration Commission in Presidential Session commenced hearing an application by respondent unions for variation of the Metal Trades Award, by increasing the amounts of basic wage prescribed therein to the figure each would have reached had the quarterly adjustment system based on the "C" Series retail price index numbers been retained, plus an addition of 10s., and by making provision for future adjustment of each of the new amounts at quarterly intervals by the application thereto of the same index numbers.‡

The claims for the restoration of quarterly adjustments and for basic wage increases were opposed by private employers and by the State of South Australia, which also contended that, as the cost of living was much lower in Adelaide than in Melbourne and Sydney, greater disparities in basic wage rates than then existed should be determined if, against its submission, any general increase in the basic wage were decided upon. Tasmania, the only other State represented, made no submissions. The Commonwealth Government intervened in the public interest and leave to intervene was granted to the Professional Officers' Association of the Commonwealth Public Service, three other organizations of medical and scientific workers employed in the Commonwealth Public Service and the Australian Council of Salaried and Professional Associations.

The decisions of the Commission, delivered with its judgment on 12th May, 1958,§ were as follows—the claim for restoration of automatic quarterly adjustments and the claim of the South Australian Government for special treatment were refused; and the basic wages of adult male employees covered by Federal awards were increased by a uniform amount of 5s. a week, to operate from the beginning of the first pay-period commencing on or after 21st May, 1958. The Commission indicated that the issues involved in inter-city differential wage rates were complex and could not be decided after a brief hearing.

The basic wage for adult females was increased to 75 per cent. of the new basic wage for adult males with proportionate increases for juniors and apprentices of both sexes.

For a more detailed summary of the judgment see *Labour Report* No. 49, pages 91-93.

(vii) *Basic Wage Inquiry*, 1959. On 24th February, 1959, the Conciliation and Arbitration Commission, constituted in Presidential Session by Kirby C.J., Foster and Gallagher J.J., commenced hearing an application by respondent unions for variation of the Metal Trades Award by increasing the amounts of basic wage prescribed therein for respective cities, towns and localities to the figure each would have reached had the quarterly adjustment system based on the "C" Series retail price index numbers been retained, plus an addition of 10s. to each basic wage and by making provision for future adjustment of each of the new amounts at quarterly intervals by the application thereto of the same index numbers.

* *Commonwealth Arbitration Reports*, Vol. 87. p. 439.
§ *Ibid.*, p. 285.

† *Ibid.*, p. 459.

‡ 89 *C.A.R.*, p. 287.

A large number of applications for similar variation of other awards were ordered to be treated as involved in the inquiry and as such to be decided upon the evidence, material and submissions made from the beginning of the hearing.

The application of the unions was opposed by private employers generally, and by the State of South Australia and two of its instrumentalities. Tasmania was the only other State represented and it appeared in support of the application of the unions in regard to the increase of the basic wage to the amount it would have reached had the adjustment system been retained and the restoration of that system. The Commonwealth Government intervened and submitted that the application for restoration of the automatic adjustment system should be refused. The Commonwealth again supplied, for the benefit of the Commission and the parties, economic and statistical information and material and, in addition, without making a particular submission as to whether there should be an increase, or its amount, made a general submission on the state of the national economy. The Australian Council of Salaried and Professional Associations was granted leave to intervene, and submissions were also presented on behalf of fixed income earners and pensioners generally.

The Graziers' Association of New South Wales and other organizations of employers in the pastoral industry asked the Commission to reduce the basic wage in the Pastoral Award, 1956, by £1 5s., being the aggregate amount of the increases granted by the Court in 1956 and the Commission in 1957 and 1958. The Commission decided to join these applications in the main hearing as a matter of procedure only and without deciding affirmatively that the Commission as constituted for that hearing had power to grant them in whole or in part. On 5th May, 1959, at the conclusion of submissions in support of these applications and without calling upon the Australian Workers Union in reply, the Commission stated that it would reject the applications for reduction of the basic wage in the Pastoral Award and again indicated that the question of jurisdiction as to whether the Commission had the power to decide a different basic wage remained "undecided and open".

On 5th June, 1959, the three Judges delivered separate judgments.* On the question of whether the system of automatic quarterly adjustments should be restored the members of the Commission were divided in opinion and therefore the question was decided in accordance with the decision of the majority, (Kirby *C.J.* and Gallagher *J.*) that the system not be restored. Foster *J.* dissented.

The members of the Commission were unanimous in the opinion that there should be an increase in the basic wage, but as to the amount of the increase they were divided in opinion. The President, Kirby *C.J.*, was of opinion that the increase should be 15s. a week, payable as from the beginning of the first pay-period commencing on or after 11th June, 1959. Foster *J.* was of opinion that the increase should be 20s. a week, payable as to 10s. as from the first pay-period in July, 1959, and as to the balance by increases of 2s. 6d. for four quarters commencing 1st January, 1960. Gallagher *J.* was of opinion that the increase should be 10s. a week, payable as from the date chosen by the President. Foster *J.*, while holding his opinion, decided to concur in the decision proposed by the President in order that the Commission might reach an effective decision.

A summary of the separate reasons for judgment was published in Year Book No. 46, pages 437-9.

(viii) *Basic Wage Inquiry*, 1960. On 16th February, 1960, the Conciliation and Arbitration Commission, constituted in Presidential Session by Kirby *C.J.* (President), Ashburner and Moore *J.J.* (Deputy Presidents), commenced hearing an application by respondent unions for the restoration to the Metal Trades Award of quarterly adjustments to the basic wage and for an increase in the amount of the basic wage. On the six capital cities rate, the amount of the increase sought was 22s. a week. This amount was composed of two parts—firstly, an addition of 5s. a week to restore to the basic wage the same real value as it had in 1953, and, secondly, a further amount of 17s. representing the unions' estimate of the minimum increase in productivity which had occurred in the period since the automatic adjustment system was abolished.

* *Commonwealth Arbitration Reports*, Vol. 91, p. 683.

The Commonwealth Government intervened in the public interest and again presented a detailed analysis of the economic situation of Australia, together with comments on fiscal and budgetary policy. It also announced its opposition to the unions' application both for restoration of automatic quarterly adjustments and for an increase in the basic wage. The State of South Australia presented material to the Commission to show the effect which wage increases would have on its finances, and opposed the unions' application. Victoria, Queensland and Western Australia presented information to show how their finances would be affected by wage increases, but neither supported nor opposed the claims of the applicants. Tasmania indicated that it supported the application for restoration of quarterly adjustments, but made no submissions.

In its judgment, delivered on 12th April, 1960, the Commission refused the unions' application.* A summary of the judgment may be found in Year Book, No. 47, pages 443-6.

(ix) *Differential Basic Wage Inquiries*, 1960. On 9th August, 1960, the Commonwealth Conciliation and Arbitration Commission commenced hearing claims by:—(a) the Federated Engine Drivers and Firemen's Association of Australia to vary the Engine Drivers and Firemen's (General) Award by eliminating country differentials from basic wages prescribed therein; (b) employers' associations in South Australia to vary the Metal Trades Award by providing that future basic wage increases for Adelaide should be 25 per cent. less than basic wage increases for Sydney until the Adelaide basic wage was 90 per cent. of the Sydney basic wage, and that the basic wage applicable in areas other than Adelaide, Whyalla and Iron Knob should be £13 8s. and should remain unchanged until the Adelaide rate reached £14.

Judgment was delivered on 14th December, 1960.† The Commission granted the application to eliminate specified country differentials from the Engine Drivers' and Firemen's (General) Award, the new basic wages to be payable from the beginning of the first pay-period commencing on or after 1st January, 1961. Other awards were adjusted similarly on application to the Commission. The employers' applications in respect of basic wages in South Australia were both rejected.

(x) *Basic Wage and Standard Hours Inquiry*, 1961. On 14th February, 1961, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby C.J. (President), Ashburner and Moore J.J. (Deputy Presidents), commenced hearing applications by employers and unions for variation of the Metal Trades Award. In the first application the employers sought to increase the number of ordinary working hours per week from 40 to 42, with a concomitant increase in weekly wages by an amount equivalent to two hours pay at ordinary rates, and to effect certain other consequential variations. In the second the unions applied for an increase in the basic wage on a six capital cities basis by the amount of 49s. (which was amended during the hearing to 52s.) and for the re-introduction of automatic quarterly adjustments based on the "C" Series Retail Price Index. The amount claimed represented 27s. (30s.) for cost of living increases since 1953 and 22s. to reflect increases in productivity since that time. The applications were heard together.

All States except New South Wales were represented at the hearing. South Australia made no submissions and called no evidence. Tasmania indicated its support for the unions' application for the restoration of automatic adjustments, plus an adjustment of the basic wage to the level indicated by the movement in the "C" Series Index, but presented no material. Victoria, Queensland and Western Australia neither supported nor opposed the application of the unions, but all presented some statistical information. Although the Commonwealth Government followed its usual practice of supplying, for the benefit of the Commission and the parties, certain economic and statistical material, it expressed no attitude other than its opposition to the re-introduction of quarterly adjustments.

In its judgment, delivered on 4th July, 1961,‡ the Commission made the following decisions.

1. The employers' claim for an increase in the standard hours of work from forty to forty-two with a concomitant increase in the weekly wage equivalent to two hours' pay at ordinary rates is refused.
2. The unions' claim for restoration of automatic quarterly adjustments is refused.
3. The basic wages of adult male employees covered by federal awards will be increased by a uniform amount of 12s. per week.

* *Commonwealth Arbitration Reports*, Vol. 94, p. 314. † 96 C.A.R., p. 573. ‡ 97 C.A.R., p. 377.

4. The new rates will come into effect from the beginning of the first pay-period commencing on or after 7th July instant subject to special cases.
5. For the specific reasons set out in the judgment we consider that in February next the only issue in regard to the basic wage should be why the money wages fixed as a result of our decision should not be adjusted in accordance with any change in the Consumer Price Index and for the purpose of deciding that issue the Order giving effect to the decisions hereby announced will also provide for the adjournment of the application of the unions for increase of the basic wages under the Metal Trades Award to Tuesday, 20th February, 1962, in Melbourne, when such submissions thereon as are desired to be made will be heard.
6. The decision regarding increases in basic wages is applicable to all the applications which have been ordered by the Commission to be joined for hearing and decision with the original application and those joined applications are stood over to a date after 20th February, 1962, to be fixed by the Commission.**

A summary of the Commission's judgment will be found in Year Book No. 50, pages 475-9.

(xi) *Basic Wage Inquiry*, 1962. In accordance with decision No. 5 in the 1961 Inquiry (see above), the adjourned hearing was held on 20th February, 1962, before Kirby C.J., and Ashburner and Moore JJ.

The unions submitted that, although the 1961 judgment represented a recognition of union claims as to the need to maintain the real value of the basic wage, it had not met in full the demands of the trade union movement. The unions intended to return to the Commission at the appropriate time to argue at length for the implementation of their policy as to the basic wage standard and the question of quarterly adjustment.

In the employers' submission, reference was made to the Commission's 1961 judgment as indicating a firm intention to confine argument in the current hearing to the quantum of any basic wage change and to exclude any re-examination of the Commission's departure from previously accepted principles. As the Consumer Price Index had shown practically no change between the March and December quarters of 1961, there could be no change in the basic wage. However, the employers' view was that in any hearing involving movement in the basic wage the parties must be free to discuss economic capacity to sustain the basic wage at any given level and the principles upon which it is computed.

The Commonwealth Government stated that at the proper time the Commonwealth would appear before the Commission to present argument as to the use of price indexes in basic wage fixation and other important issues raised by the 1961 judgment. However the matter might come before the Commission as a matter of procedure, when circumstances called for the debate of any substantive issue the Commonwealth would be in a position to make further submissions.

The Commission decided that there would be no alteration in the amounts of the existing basic wages until further order; and further adjourned the application before it until 19th February, 1963. At the adjourned hearing the issues would be: (a) the issue set out in paragraph 5 of the decisions of 4th July, 1961 (see above); (b) any issue which a party desired to raise and of which it had given notice to the Industrial Registrar, the other parties and to the Attorney-General by 31st January, 1963. The applications referred to in paragraph 6 of the decision of 4th July, 1961, were stood over to a date after 19th February, 1963, to be fixed by the Commission with liberty to any of the parties to those applications to apply in the meantime.

(xii) *Basic Wage Inquiry*, 1963. This was an adjourned inquiry which arose out of an order made by the Commission on 20th February, 1962 (see above). The hearing was held on 5th February, 1963 before Kirby C.J., Ashburner and Moore JJ.

During the proceedings the unions discussed the various methods by which changes in the rates of basic wage could be calculated by using changes in the index numbers of the Consumer Price Index and asked for a direction by the Commission as to which method should be used.

* *Commonwealth Arbitration Reports*, Vol. 97, p. 378.

In conformity with the decision in the 1962 Basic Wage Inquiry (*see* p. 456) the employers gave notice to the Commission that issues and procedures referred to in the 1961 Basic Wage Judgment that related to the fixation of wages or conditions of employment by reference to the capacity of the national economy would, of necessity, be argued at the present hearings.

The employers submitted that the following matters were essential considerations in the hearing and determining of any application seeking to alter wages and conditions of employment on a national basis.

- (a) The role of the Commission in relation to government economic or fiscal policies, inflation, etc.
- (b) The justification for adjustment of wages by reference to a price index either automatically or *prima facie*, including the relationship between movements in a price index and variations in capacity of the national economy.
- (c) The relationship between the capacity of the economy to absorb increases in wages or labour costs and the movements or likely movements in national productivity.

The unions submitted that the matters raised by the employers could be discussed only before a Presidential Bench of the Commission and that the employers could not seek the right to argue the 1961 basic wage decisions before a bench of the Commission constituted otherwise.

In the judgment given on 5th February, 1963, the Commission said:—

“ 1. There will be no alteration in the amounts of the existing basic wage until further order of the Commission.

2. The application before the Commission is further adjourned until 18th February, 1964.

3. At such adjourned hearing the issues will be:

- (a) The issue set out in paragraph (5) of the decision of 4th July, 1961 (*see* page 456), and
- (b) Any issue which a party desires to raise and of which it has given notice to the Industrial Registrar, the other parties, and the Attorney-General, by the 31st January, 1964.”

With regard to the matter of the use of statistics, which had been raised by counsel for the unions, the Commission felt that it was not the appropriate time to deal with the matter, but it would be further considered when it was appropriate.

The Commission referred to the matter raised by the employers concerning the considerations to be taken into account by the Commission when hearing applications to alter wages and conditions of employment, and ruled that it was not the appropriate time to deal with the submissions made.

If submissions were made before benches of the Commission differently constituted from the present one, then those benches were the ones to deal with their relevance, admissibility or otherwise.

The applications referred to in para. 6 of the decision of 4th July, 1961, were further stood over to a date after 18th February, 1964, to be fixed by the Commission with liberty to any of the parties to these applications to apply in the meantime.

(xiii) *Basic Wage Inquiry, 1964.* The Commonwealth Conciliation and Arbitration Commission announced on 9th June, 1964, its decision on trade union claims for an increase in basic wages for adult males covered by federal awards. The Commission was unanimous that an increase be granted, but was divided equally in opinion on the amount of the increase, the President (Kirby C.J.) and Moore J. being of the opinion that it should be 20s. and Gallagher and Nimmo JJ. that it should be 10s. The Commission being equally divided

in opinion, the matter was decided according to the opinion of the President, as provided in the Conciliation and Arbitration Act. The increase of 20s. a week would apply to adult male employees covered by federal awards and would operate from the beginning of the first pay-period commencing on or after 19th June, 1964. The Commission refused the unions' application for restoration of automatic quarterly adjustments of the basic wage. The 1s. per week disparity in the basic wage for station hands under the Pastoral Award was abolished. A summary of the reasons for these decisions will be included in the next issue of the Year Book.

(xiv) *Employers' Total Wage Case, 1964.* On 9th June, 1964, the Commonwealth Conciliation and Arbitration Commission announced its decision rejecting the application of employers for deletion from the Commission's awards, generally, of the basic wage provisions and for the insertion in those awards of a wage expressed as a total wage. A summary of the reasons for this decision will be included in the next issue of the Year Book.

(xv) *Rates Operative, Principal Towns.* The basic wage rates of the Commonwealth Conciliation and Arbitration Commission for adult males and females, operative as from the beginning of the first pay period commencing on or after 19th June, 1964, are as shown in the following table.

COMMONWEALTH BASIC WAGE: WEEKLY RATES^(a), 1964

City or town	Rate of wage		City or town	Rate of wage	
	Adult males	Adult females		Adult males	Adult females
	£ s. d.	£ s. d.		£ s. d.	£ s. d.

(a) Rates prescribed by the Commonwealth Conciliation and Arbitration Commission (before 30th June, 1956, the Commonwealth Court of Conciliation and Arbitration). Rates include prosperity loadings, where applicable.

(b) Rates operative from the beginning of the first pay-period commencing in the month shown or commencing on or after the date shown. (c) From December, 1950 the basic wage rates for adult females have been 75 per cent. of the rates for adult males. (d) Automatic adjustment discontinued (see p. 452).

A table showing Commonwealth basic wage rates from 1923 to 1964 was published in the Appendix to *Labour Report* No. 50.

3. **Australian Territories.**—In the Northern Territory, there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the "Darwin" rate, and the other in respect of areas south of that parallel and extending down to the 26th parallel (the "Port Augusta" rate).

The basic wage rates payable as from the beginning of the first pay-period commencing on or after 19th June, 1964 were:—"Darwin" rate, adult males £16 7s., adult females £12 5s.; "Port Augusta" rate, adult males £15 14s., adult females £11 15s. 6d.

In addition to these rates, special loadings were prescribed in Northern Territory awards following the fixation of the basic wage rates operative from November, 1951.

In the Australian Capital Territory, the rates payable as from the beginning of the first pay-period commencing on or after 19th June, 1964, were £15 10s. for adult males and £11 12s. 6d. for adult females.

Further details of basic wage rates in the Northern Territory and the Australian Capital Territory may be found in *Labour Report* No. 50, pages 107-11 and in Section IX of the Appendix (p. 300).

4. **Basic Wage Rates for Females.**—Reference should be made to *Labour Report* No. 50 (page 106) for an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949-50 Basic Wage Inquiry, the Commonwealth Court of Conciliation and Arbitration, by a majority decision, fixed the basic weekly wage for adult females at 75 per cent. of the corresponding male rate from the beginning of the first pay-period commencing in December, 1950. This percentage has continued to be prescribed in subsequent inquiries.

5. *State Basic Wages.*—(i) *New South Wales.* The first determination under the New South Wales Industrial Arbitration Act of a standard “living” wage for adult male employees was made on 16th February, 1914, when the Court of Industrial Arbitration fixed the living wage at £2 8s. a week for adult males in the metropolitan area. A Board of Trade, established in 1918, with power to determine the “living” wage for adult male and female employees in the State, made numerous declarations from 1918 to 1925, but ceased to function after the Industrial Arbitration (Amendment) Act, 1926 transferred its powers, as from 15th April, 1926, to the Industrial Commission of New South Wales.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. However, with the adoption in 1937 of the Commonwealth basic wage, the identification of a specified family unit with the basic wage disappeared.

A State scheme of supplementing wages by child endowment became operative in New South Wales from July, 1927, and continued until superseded by the Commonwealth Government scheme in July, 1941. A brief account of the main features of the New South Wales system was given in Year Book No. 37, pages 485–6. For particulars of the Commonwealth scheme, see Chapter XVI. of this Year Book.

Shortly after the Commonwealth Court of Conciliation and Arbitration announced its decision in the 1937 Basic Wage Inquiry, the Government of New South Wales amended the Industrial Arbitration Act to make the State basic wage agree with the Commonwealth rate ruling in New South Wales, and to adopt, as far as practicable, the general principles of operation laid down by the Commonwealth Court. Further amendments to the Industrial Arbitration Act were made in 1950 to give effect to the new rates declared by the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry (see page 451).

Differential basic wage rates for country areas (except Broken Hill) and for employees under Crown awards were eliminated by an amendment of the Industrial Arbitration Act in 1951. Separate rates for Broken Hill were discontinued in 1961 (see below).

Following the decision of the Commonwealth Court of Conciliation and Arbitration in September, 1953, to discontinue the system of automatic adjustment of the basic wage in accordance with changes in the “Court” Series retail price index numbers, the New South Wales Industrial Commission deleted the automatic adjustment clause from awards, etc., within its jurisdiction. As a result, the basic wages applicable for the State and operative from the beginning of the first pay-period commencing in August, 1953, remained unchanged until November, 1955.

In October, 1955, the Industrial Arbitration Act, 1940–1955 was amended to provide for the automatic adjustment of the existing basic wage each quarter, in accordance with the movements in the Commonwealth Statistician’s “C” Series retail price index numbers. The first adjustment, based on the index number for the September quarter, 1955, represented the amount which would have been added to the basic wage if quarterly adjustments had not been suspended, and was made payable from the beginning of the first pay-period in November, 1955.

The Industrial Arbitration (Basic Wage) Amendment Act, 1961 (No. 29 of 1961) amended the Industrial Arbitration (Amendment) Act, 1961, by adopting the Consumer Price Index numbers in place of the “C” Series retail price index numbers for purposes of the automatic quarterly adjustment of the basic wage. The November, 1961, variation was the first based on the Consumer Price Index. Consumer Price Index numbers relate only to capital cities and the weighted average for the six capital cities, and as a result the Sydney basic wage rate became the rate for the whole of New South Wales, separate rates no longer being prescribed for Broken Hill and “5 Towns” after November, 1961.

The Industrial Arbitration (Female Rates) Amendment Act, 1958, which became operative on 1st January, 1959, defined the existing basic wage for adult females as being 75 per cent. of the adult male rate and made provision for equal pay for males and females in certain circumstances. Where the Industrial Commission or a Conciliation Committee is satisfied that male and female employees are performing work of the same or a like nature and of equal value, they shall prescribe the same marginal or secondary rates of wage. The basic wage for these adult females was prescribed as 80 per cent. of the appropriate basic wage for adult males as from 1st January, 1959. Thereafter, the basic wage was to be increased annually by 5 per cent., so that on 1st January, 1963, it became the same as that for adult males.

In October, 1964, the Industrial Arbitration (Amendment) Act, 1964 (No. 37 of 1964) fixed the State basic wages for adult males and adult females at the levels of the then current Commonwealth basic wages for Sydney, i.e., £15 15s. and £11 16s. per week respectively, to operate from the beginning of the first pay-period which commenced on or after 19th June, 1964. Any provisions in State awards and industrial agreements for adjustments in the basic wages, in accordance with fluctuations in the Consumer Price Index, were to be deleted. The Act provided that the Commonwealth basic wages for Sydney, as declared by the Commonwealth Conciliation and Arbitration Commission under the provisions of the Metal Trades Award, would in future apply to State awards and industrial agreements.

A table showing, for the period from 16th February, 1914, to 19th June, 1964, the basic wage rates for adult males and females payable in Sydney was published in the Appendix to *Labour Report* No. 50, 1962 and 1963.

(ii) *Victoria*. There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted from representatives of employers and employees, with an independent chairman, for each industry group or calling, determine the minimum rate of wage to be paid in that industry or calling. In general, these Boards have adopted a basic wage in determining the rate of wage to be paid.

By an amendment to the Factories and Shops Act in 1934, Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards. A further amendment to this Act in 1937 made it compulsory for Wages Boards to adopt such provisions of Commonwealth Awards. The 1937 Act, as amended, also gave Wages Boards power to adjust wage rates, "with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate". The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September, 1953, a number of Wages Boards met in November, 1953, and deleted references to these adjustments. However, an amendment to the Factories and Shops Act in November, 1953, required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers.

In October, 1956, an amendment to the Labour and Industry Act (which had superseded the Factories and Shops Acts in 1954) deleted the automatic adjustment provision and directed Wages Boards in determining wage rates to take into consideration relevant awards of, or agreements certified by, the Commonwealth Conciliation and Arbitration Commission. As a result of this legislation, the last automatic quarterly adjustment of the basic wage made was based on the variation in retail price index numbers for the June quarter, 1956, and was payable as from the beginning of the first pay-period in August, 1956. Following the judgment of the Commonwealth Conciliation and Arbitration Commission in the 1961 Basic Wage Inquiry, Wages Boards met in July and August, 1961, and varied their determinations by incorporating the new Commonwealth rates. As the 1964 Basic Wage Inquiry resulted in an increase of 20s. being made to the Commonwealth basic wage for adult males, the rates for Melbourne are £15 7s. a week for adult males and £11 10s. for adult females.

A table showing, for the period November, 1953 to June, 1964, the basic wage rates for adult males and females adopted by most Wages Boards was published in the Appendix to *Labour Report* No. 50, 1962 and 1963.

(iii) *Queensland*. "The Industrial Conciliation and Arbitration Act of 1929" established an Industrial Court, and provided that the Court could make declarations as to the basic wage and standard hours. This Act, as subsequently amended, was repealed by "The Industrial Conciliation and Arbitration Act of 1961", which established, in addition to the Industrial Court, an Industrial Conciliation and Arbitration Commission. The full bench of the Commission, consisting of not less than three Commissioners, may make declarations as to, *inter alia*, the basic wage for males and/or females and the standard hours of work. The first formal declaration of a basic wage (£4 5s. for adult males) by the Queensland Court of Industrial Arbitration operated from 1st March, 1921. Prior to this declaration, the rate of £3 17s. a week for adult males had been generally recognized by the Court in its awards as the "basic" or "living" wage. The Queensland Industrial Conciliation and Arbitration Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

From 21st April, 1942, the Queensland Industrial Court adopted the practice of making quarterly declarations of the basic wage on the basis of variations in the "C" Series retail price index numbers for Brisbane.

The Court granted increases of 7s. and 5s. in the basic wages for adult males and adult females respectively, payable from 23rd December, 1946, following the "interim" basic wage judgment of the Commonwealth Court of Conciliation and Arbitration announced earlier in December, 1946.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to increase the male and female basic wages from December, 1950, the Queensland Industrial Court, after an inquiry, granted an increase of 15s. a week to both adult males and adult females, operative from 7th December, 1950. The new male rate was identical with the Commonwealth basic wage for the Brisbane metropolitan area and the basic wage payable to adult females became approximately 66 per cent. of the male rate.

In January, 1953, because the Court was not satisfied that the fall in the "C" Series index for Brisbane for the December quarter, 1952, was a true representation of the economic position for Queensland as a whole, it declined to make any alteration to the existing basic wage. However, quarterly adjustments were made for the next four quarters.

Following a Basic Wage Inquiry, the Court announced, on 11th June, 1954, that there would be no change in the basic wage rates declared for February, 1954. For the following four quarters, the Court also decided not to vary the existing basic wage rates. However, after considering the "C" Series index number for the quarter ended 30th June, 1955, and its relation to the index number for the March quarter, 1955, the Court announced that, as these figures showed a continued upward trend, the basic wage for adult males should be increased from 1st August, 1955. In this judgment, the Court emphasized that it held itself free whether or not to adjust the basic wage upwards or downwards in accordance with movements in the "C" Series retail price index numbers. The Court examined the movement in these index numbers for each subsequent quarter and announced variations in the basic wage.

On 22nd and 23rd April, 1958, the Court heard an application by combined unions for an immediate increase of £1 in the basic wage, on the ground that a state of emergency existed with regard to the cost of living. On 30th May, 1958, the Court dismissed the application.

In December, 1960, the Court determined that as from 1st May, 1961, the basic wage for adult females should be 75 per cent. of that for adult males.

In its basic wage declaration of 25th January, 1961, the Court referred to the opinion given by the Commonwealth Statistician that the "C" Series Retail Price Index had become an unreliable measure of retail price changes in recent quarters and to the fact that, for current statistical purposes, variations in retail prices were measured by the Consumer Price Index. Taking into consideration all relevant factors, including the approximate increase in price levels as disclosed by the Consumer Price Index, the Court decided to increase the basic wage for adult males by 4s. a week.

"*The Industrial Conciliation and Arbitration Act of 1961*", which came into operation as from 2nd May, 1961, provided that the full bench of the Commission, consisting of not less than three Commissioners, may make declarations as to the basic wage and standard hours of work. The Act also provided that all persons interested must be given an opportunity to be heard before any general declaration as to the basic wage can be made.

Following an inquiry, the Commission, in a decision issued on 24th May, 1961, increased the adult male basic wage by 4s. a week, which was approximately the amount of the increase indicated by the Consumer Price Index for March quarter, 1961.

In September, 1961 the Commission heard an application by employer organizations for a declaration of a general ruling that "in future the basic wage for males and/or females shall not be reviewed merely by reason of any change in the Consumer Price Index at intervals of less than twelve months". The application was opposed by the trade unions generally. In a judgment delivered on 14th November, 1961, the Commission refused the employers' application.

An inquiry held in November and December, 1962, dealt with an application by unions for increases of £1 4s. in the adult male basic wage and 18s. in the adult female basic wage. The application was opposed by employer organizations generally, by the State of Queensland and by the Queensland Commissioner for Railways. Judgment was given on 20th December, 1962, the application being refused.

A further application was made by trade unions for a declaration of a basic wage, and an inquiry was held in April, 1963. Employers generally opposed the application, and the State of Queensland, while adopting a neutral attitude, submitted information for the assistance of the Commission. In a judgment delivered on 26th April, 1963, the Commission increased the basic wage by 2s. a week for adult males and by 1s. 6d. a week for adult females from 6th May, 1963.

On 23rd June, 1964, the Commission began hearing four applications by unions to alter the basic wage. The Queensland Government and the employers agreed that there should be an upward movement in the adult male basic wage but limited to 4s., which would take into consideration movement in prices as shown by the Consumer Price Index for March quarter, 1964. This increase would bring the State basic wage for Brisbane to the same amount as the Commonwealth basic wage for Brisbane, namely £14 10s. The Commission on 7th July* unanimously increased the basic wage by 14s. to £15 a week for adult males. The increase took effect on and from 13th July, 1964.

In a declaration on 23rd September, 1964,† the Commission after an inquiry refused to increase the basic wage, despite movement in the Consumer Price Index for the June quarter, 1964, which would have justified an increase of 2s., on grounds that such an increase would constitute a very ineffective addition to the wages of employees.

On 30th November, 1964, the Commission began hearing applications filed by unions and employer associations. The unions claimed increases of 6s. and 4s. 6d. a week for adult males and adult females respectively on the basis of movements in the Consumer Price Index for the June and September quarters, 1964. The employer associations sought that the Commission re-affirm its decision of 7th July, 1964 (see above) and that it declare as a matter of policy that it would not review the basic wage until the Commonwealth Conciliation and Arbitration Commission decided to alter the existing Commonwealth basic wage. The Commission, in its decision of 3rd December,‡ granted the increases claimed by the unions. Commenting on the employer associations' claims, the Commission stated that, although the Commonwealth basic wage determined the State basic wage in all States except Queensland and Western Australia, the Commission had never fixed the State basic wage only in relation to the basic wage in other States or the Commonwealth basic wage and could therefore see no reason why a decision should be made at this time to withhold a hearing for review pending the review of the Commonwealth basic wage.

The rates payable in the Southern Division (Eastern District) from 29th March, 1965, were £15 9s. for adult males and £11 12s. for adult females.

In addition to the basic wage for the Southern Division (Eastern District), which includes Brisbane, adult males in other areas receive district allowances. As from 2nd February, 1959, the allowances have been:—Southern Division (Western District) 10s. 6d., Mackay Division 9s., Northern Division (Eastern District) 10s. 6d., Northern Division (Western District) £1 12s. 6d. The allowances for adult females are not less than 75 per cent. of those for adult males.

In the Appendix to *Labour Report* No. 50, a table was published showing adult male and adult female basic wage rates payable in the Southern Division (Eastern District) from 1st March, 1921, to 13th July, 1964.

(iv) *South Australia.* The Industrial Code, 1920–1963 provides that the Board of Industry shall after public inquiry declare the "living wages" to be paid to adult male and adult female employees. The Board has power also to fix different rates to be paid in defined areas.

The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage was to be declared was a man with a wife and three children. However, the concept of a family unit disappeared with the adoption of basic wage rates declared by the Commonwealth Conciliation and Arbitration Commission (see p. 464).

The first declaration by the Board of Industry became operative from 4th August, 1921, when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. a week.

† Q.G.I.G., No. 57, p. 376.

‡ Q.G.I.G. No. 29.

Following the "interim" increase in the "needs" basic wage of the Commonwealth Court of Conciliation and Arbitration, announced on 13th December, 1946, the South Australian Government made a provision in the Economic Stability Act, 1946 for the declaration by the Governor of a living wage based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination on 5th September, 1946, and under the Industrial Code was unable to make a further determination for six months.

The Industrial Code Amendment Act, 1949, made provision for the quarterly adjustment of the living wage in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect, this made the State living wage and the Commonwealth basic wage equal from the beginning of the first pay-period commencing in February, 1950. The prescribed adjustment to the female living wage was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the living wage, but any new living wage was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry, the South Australian Industrial Code was amended to provide for declarations of the living wage by proclamation to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30th November, 1950, the South Australian living wage in the metropolitan area was made identical with the December, 1950, rates fixed by the Commonwealth Court of Conciliation and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 55 per cent. of the male basic wage, was increased to 75 per cent. of the corresponding male rate.

When the Commonwealth Court of Conciliation and Arbitration discontinued quarterly adjustments to Commonwealth basic wages in September, 1953, the South Australian living wage also ceased to be varied quarterly, and since that time it has remained the same as the Commonwealth basic wage for Adelaide. Following the Commonwealth basic wage inquiries in 1956 and subsequent years, increases were made to the South Australian living wages by proclamation. The rates operative from 22nd June, 1964, were £15 3s. for adult males and £11 7s. for adult females.

A table showing adult male and adult female basic wage rates for the whole State (with the exception of Whyalla and nearby area) from 1921 to June, 1964, will be found in Section XI of the Appendix to *Labour Report* No. 50.

(v) *Western Australia.* Prior to the amendment made in 1963, the *Industrial Arbitration Act, 1912-1961* provided that the Court of Arbitration could determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determination shall be made within twelve months of the previous inquiry.

The term "basic wage" was defined in the Act as "a wage which the Court considers to be just and reasonable for the average worker to whom it applies". In determining what is just and reasonable, the Court had to take into account not only the "needs of an average worker", but also the "economic capacity of industry" and any other matters it deems relevant.

The Act provided that the Court of Arbitration could make adjustments to the basic wage each quarter, if the statement supplied by the State Government Statistician showing retail price index numbers and monetary equivalents in terms of the State basic wages indicated that there had been a variation of 1s. or more a week compared with the previous quarter. These adjustments generally applied from the dates of declaration by the Court.

The first declaration of the basic wage by the Court of Arbitration, after the authority to fix one was vested in the Court in 1925, operated from 1st July, 1926. The family unit was not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. Since that date, the principal inquiries have been those of 1938, 1947, 1950 and 1951.

Following the judgment of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry, the Western Australian Court of Arbitration decided that the basic wage should be increased by £1 a week for adult males and by 15s. a week for adult females. As the result of a subsequent inquiry, the basic wage for adult females was increased from 1st December, 1951, to 65 per cent. of the corresponding male rate. This was subject to the condition that the increase in the basic wage should be offset by the reduction in, or deletion of, existing margins as specified by the appropriate award or determination.

Following the decision of the Commonwealth Court of Conciliation and Arbitration, in September, 1953, to discontinue quarterly adjustments to Commonwealth basic wages, the Western Australian Court of Arbitration exercised its discretionary power and declined to make any adjustments to the basic wage from November, 1953, to the June quarter, 1955.

However, from 9th August, 1955, the Court decided to increase the adult male basic wage by 5s. 11d. a week for Perth and to make corresponding increases for other areas. No further change was announced in the basic wage until January, 1956, and for each subsequent quarter to September quarter, 1961, the Court varied the State basic wages after considering the official statement supplied by the State Government Statistician, except in February, 1959, and February, 1960, when no change was made. Basic wage rates remained unchanged from 30th October, 1961, to 22nd April, 1963.

In a decision issued on 30th January, 1960, the Court, acting in recognition of an agreement between representatives of unions and employers, increased the basic wage for adult females from 65 per cent. to 75 per cent. of the adult male rate. The increased rates were payable from the beginning of the first pay-period commencing on or after this date. As in December, 1951, female margins were to be reduced or deleted to offset the increase in the female basic wage.

Amendments to the Industrial Arbitration Act passed in 1963 became effective on 1st February, 1964. The Act provided that the fixation and adjustment of the basic wage would now be dealt with by the Commission in Court Session (three Commissioners) instead of the former Court of Arbitration.

In April, 1964, the Commission, in exercising the same discretionary powers held by the former Court of Arbitration, unanimously increased the basic wage for adult males by 2s. 8d. a week for the metropolitan area and the rest of the South-West land division and 2s. 7d. a week for the Goldfields area and all other parts of the State.

The Commission on 22nd July, 1964, began a General Inquiry following union submissions for an increase of £2 12s. in the basic wage for adult males. On 22nd September, the Commission announced its decision that the basic wage for the whole of the State would be £15 8s. for adult males with appropriate rates for females, juniors and apprentices. This decision abolished the differential rates applying to different areas of the State which had operated since 1931. Subsequently the Commission reduced the industry allowance in the goldmining industry awards from 30s. to 22s. 6d. a week.

The basic wage for the whole of the State was further increased by 3s. 2d. a week, for adult males and 2s. 5d. a week for adult females in October, 1964, following the Commission's examination of the movement in the Consumer Price Index for the September quarter, 1964.

The rates payable in the metropolitan area as from 26th October, 1964, were £15 11s. 2d. for adult males and £11 13s. 5d. for adult females.

A table showing the West Australian State basic wage for the Perth Metropolitan Area, from 1926 to 22nd September, 1964, will be found in Section XI of the Appendix to *Labour Report* No. 50.

(vi) *Tasmania*. A State basic wage is not declared in Tasmania. Under the *Wages Board Act* 1920 as amended (to 1964), Wages Boards are constituted for a number of industries from representatives of employers and employees with an independent chairman (who is common to all Wages Boards), with power to determine the minimum rates of wage payable in each industry. Until February, 1956, these Boards generally adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rates of wage to be paid.

Wages Boards have power to adjust their wage rates in accordance with variations in the cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September, 1953, the Chairman of the Wages Boards stated he was of the opinion that automatic adjustment clauses should be deleted from all Wages Boards determinations. Before Wages Boards met to consider this matter, the wage rates for all determinations were automatically adjusted upwards from the beginning of the first pay-period commencing in November. By early December, 1953, all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November.

Automatic quarterly adjustments in accordance with movements in retail price index numbers were re-introduced by Wages Boards in February, 1956, and restored the basic wage to the level it would have reached if quarterly adjustments had not been discontinued in 1953. A further basic wage increase was payable from the first pay-period in May, 1956.

Upon application by the Employers' Federation of Tasmania, a compulsory conference of employer and employee representatives was held on 22nd and 25th June, 1956, to consider the adoption of Commonwealth basic wages and the deletion of automatic quarterly adjustment provisions. At the conclusion of the conference, the Chairman of the Wages Boards stated he was of the opinion that the adjustments should be suspended for a period in an endeavour to achieve some measure of stability. However, he pointed out that any Wages Board was competent to adopt, by agreement between the representatives of employers and employees or majority decision, the Commonwealth Court's basic wage or any other method of fixing the basic wage.

The majority of Wages Boards suspended automatic quarterly adjustments after the August, 1956, adjustment, and wage rates remained unchanged until July, 1959, when the Commonwealth rates were adopted. Following the decision of the Commonwealth Conciliation and Arbitration Commission in July, 1961, to increase the basic wage, Wages Boards met during July, and incorporated the new Commonwealth rates in their determinations. These rates operated until June, 1964, when, following the increase of 20s. in the Commonwealth basic wage for adult males, the rates became £15 14s. and £11 15s. 6d., respectively. During January, 1961, Wages Boards adopted the basic wage for Hobart as the uniform rate applicable throughout the State.

During 1962, a number of Wages Boards met and varied determinations by making provision for the automatic adjustment of the basic wage to conform to any change in the basic wage determined from time to time in awards of the Commonwealth Conciliation and Arbitration Commission.

A table was published in the Appendix to *Labour Report* No. 50, 1962 and 1963, showing basic wage rates for adult males and females generally adopted in Hobart for the period February, 1956, to June, 1964.

(vii) *State Basic Wage Rates.* The "basic" wage rates of State industrial tribunals operative from September, 1964, are summarized in the following table. State basic wage rates for adult males and adult females for a long period of years are shown in the Appendix to *Labour Report* No. 50, 1962 and 1963. Current figures are published in the monthly bulletin *Wage Rates and Earnings*.

Since June, 1964, the New South Wales basic wage has been the same as the Commonwealth basic wage for Sydney. Prior to this, the State basic wage was automatically adjusted each quarter in accordance with variations in the Consumer Price Index. State basic wages are not declared in Victoria and Tasmania, but Wages Boards, which determine minimum rates to be paid in various industry groups or callings, now generally adopt Commonwealth rates. In Queensland, the industrial authority may declare a basic wage only after an inquiry. In South Australia, the rates have been the same as Commonwealth rates since 1950. The Industrial Authority in Western Australia determines the basic wage each quarter after considering retail price index numbers. In all States, since May, 1961, the basic wage for adult females has been 75 per cent. of the adult male rate.

(a) Differential rates abolished as from 22nd September, 1964.

§ 6. Wage Margins

1. **General.**—Wage margins have been defined as “ minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance ”.*

Marginal rates of wage are determined by Commonwealth and State industrial tribunals. In the Commonwealth jurisdiction, prior to 1954, the Commonwealth Court of Conciliation and Arbitration had not made any general determination in respect of wage margins, but general principles of marginal rate fixation had been enunciated by the Court in the Engineers Case of 1924, the Merchant Service Guild Case of 1942 and the Printing Trades Case of 1947. Major determinations affecting margins were made in 1954, 1959 and 1963. The decisions of the Commonwealth Court and later the Commonwealth Conciliation and Arbitration Commission have generally been followed by State industrial tribunals in the determination of margins in State awards.

A summary of the 1954, 1959 and 1963 Margins Cases is given in the following paragraphs.

2. **Metal Trades Case, 1954.**—Employee organizations parties to the Metal Trades Award, 1952, filed applications during 1953 for increased margins for all workers covered by this award. The applications came on for hearing before J. M. Galvin C.C., who decided that they raised matters of such importance that, in the public interest, they should be dealt with by the Commonwealth Court of Conciliation and Arbitration. On 16th September and 6th October, 1953 the Conciliation Commissioner, pursuant to section 14A of the Conciliation and Arbitration Act, referred these applications to the Court.

The actual claims of the trade unions were that the marginal rate of 52s. a week payable to a fitter in the metal trades should be increased to 80s. a week (86s. for certain electrical trades), with proportionate increases for other award occupations. The margins then current, with a few exceptions, had been in existence since 1947. The employees' claims were in the nature of a test case to determine the attitude of the Court to other applications for increased margins.

Employer organizations respondent to the Metal Trades Award counter-claimed that existing margins for skilled tradesmen should remain unaltered, while those paid to partly skilled or unskilled workers should be reduced.

The Court decided to take the Commissioner's two references together, and the matter came on for hearing before the Full Arbitration Court (Kelly C.J., Kirby, Dunphy and Morgan J.J.) in Melbourne on 13th October, 1953.

In a judgment delivered on 25th February, 1954, the Court held that a prima facie case had been made for a re-assessment of margins but that the economic situation at that time, particularly in regard to the level of costs, did not permit of such a comprehensive review. The Court decided that, to avoid the creation of new disputes, to save expense and to obviate procedural difficulties, it would not reject the claims but adjourn them until 9th November, 1954.

On 25th and 26th August, 1954, summonses were filed by the employees' organizations for orders that proceedings in this case be brought forward, and the hearing was resumed on 5th October, 1954.

In a judgment delivered on 5th November, 1954†, the Court made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of the margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin, the existing margin was to remain unaltered. In effect, this decision increased the margins of a fitter from 52s. a week to 75s. a week, increased similarly margins of other skilled occupations, and made no increase in margins of what may generally be described as the unskilled or only slightly skilled occupations under the Metal Trades Award. The new rates operated from the beginning of the first pay-period commencing on or after 13th December, 1954.

At the end of its judgment, the Court stated that, while its decision in this case related immediately to one particular industry, it was expected to afford general guidance to all authorities operating under the Conciliation and Arbitration Act, or under other legislation

* *Commonwealth Arbitration Reports*, Vol. 80, p. 24.

† *Ibid.*, p. 3.

which provided for tribunals having power to make references, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals " which may regard decisions of this Court as of persuasive authority ". Further details were published in *Labour Report* No. 46, 1958, pages 101-8.

3. *Margins Cases, 1959.*—On 25th August, 1959, the Commonwealth Conciliation and Arbitration Commission began considering a number of applications for changes in margins referred to it from the appropriate Commissioner. Applications had been made by various employee organizations for increased margins in Parts I. and II. of the Metal Trades Award, Part II. of the Aircraft Industry Award, the Bank Officials' Award and the Gold and Metalliferous Mining Award. An application by employers sought to reduce marginal rates in the Metal Trades Award. The Commission decided to hear all these matters together, permitting the applicant unions in respect of Part II. of the Metal Trades and Aircraft Industry Awards and the Bank Officials' Award to ask first for an interim increase. A summary of the principal decisions of the Commission is given in the following paragraphs. Further details, including extracts from the judgment, were published in Year Book No. 47, pages 455-9.

Metal Trades Award, Part I. The employee organizations claimed an increase in the margin for the fitter, as set out in the Metal Trades Award, 1952 (i.e. the award as it existed prior to the Metal Trades Case, 1954—see para. 2, p. 467), from 52s. to 134s. a week and an increase of 157 per cent. in the margins for other classifications. The employers counter-claimed for a reduction in margins of 15s. a week.

The Commonwealth Government intervened, and not only submitted statistical material and an analysis of the economic situation, but also assisted the Commission with an exposition of various factors proper to be taken into account in the fixation of margins. In particular, the Commonwealth emphasized the desirability of flexibility in the workings of the arbitration system.

In its judgment, delivered on 27th November, 1959,* the Commission rejected the employers' application to reduce margins, and made an order re-assessing the marginal structure in the Metal Trades Award by increasing the existing margins by 28 per cent., the amount of the increase being taken to the nearest 6d. The new margins applied from the beginning of the first full pay-period commencing in December, 1959. The effect of this decision was to increase the margin of the fitter from 75s. to 96s. a week and that for the process worker from 22s. to 28s.

The Commission stated that, not having before it the question of work values, and having decided not to alter the 1954 relativities, the increases had been expressed as a percentage of current margins, but this was not to be taken as an endorsement of that method of fixing margins.

The Commission went on to say:—" This decision is based on the material placed before us and our general industrial knowledge which, in view of our functions under the Act, we think it proper to use. Both that material and that knowledge relate to the Metal Trades industry and to the economy generally. Our decision, however, relates only to the Metal Trades Award. We realize that on occasions in the past, margins fixed in the Metal Trades Award, and in particular the margin of the fitter, have been used as standards for other awards. The use of the increases which we have granted as a guide in other disputes will be a matter for the parties as far as conciliation is concerned and, if arbitration is necessary, for this Commission however constituted."†

Gold and Metalliferous Mining Award. Judgment was also delivered on 27th November, 1959, in connexion with the application for variation of margins in this award.‡ The margin for the miner was increased from 30s. to 42s. 6d. a week from the beginning of the first full pay-period commencing in December, 1959. Marginal claims for other classifications were referred back to the appropriate Commissioner for consideration. Subsequently, the parties to the award agreed that margins for all other classifications should be increased in the same proportion as the margin for the miner (i.e. 41.7 per cent.). The Commissioner varied the award accordingly.

Metal Trades Award, Part II., and Aircraft Industry Award, Part II. On 11th December, 1959,‡ the Commission delivered a judgment granting a 20 per cent. interim increase in margins to graduate and diplomate engineers and scientists, payable as from the beginning of the first full pay-period commencing in December, 1959.

* *Commonwealth Arbitration Reports*, Vol. 92, p. 798.

† *Ibid.*, p. 799.

‡ 93 C.A.R., p. 63.

Bank Officials' Award. On 11th December, 1959,* a 20 per cent. interim increase in margins was granted to officers in the 10th to 18th year of service inclusive and to accountants and managers, payable retrospectively as from 11th June, 1959. Interim increases were not awarded to more junior officers, nor to females. Subsequently the parties to the Bank Officials' Award met before a single Commissioner, and a consent award was made giving final marginal increases to adult males and adult females and making adjustments to junior rates of pay.

4. *Margins Case, 1963.*—Following the conclusion of the 1963 Basic Wage Case, two benches of the Commonwealth Conciliation and Arbitration Commission commenced, on 5th February, 1963, to hear applications by metal trades unions for increased margins and for three weeks annual leave (see pp. 472-3). The two benches sat jointly for the convenience of the parties involved and were constituted as follows:—margins case—Kirby C.J. (President), Moore and Ashburner J.J. and Commissioner Apsey; three weeks' annual leave case—Kirby C.J. (President), Moore J. (Deputy President) and Commissioner Apsey. In their application, the claimant unions were supported by the Australian Workers Union, the High Council of Commonwealth Public Service Organizations, the Australian Council of Salaried and Professional Associations and certain affiliated organizations. The claim was opposed by the respondent employers, who were supported in their opposition by the banks, respondents to the Bank Officials Award, and by members of the Australian Wool Growers and Graziers Council.

The unions' claim on margins was that the Commission restore, on an assessed basic wage, the relativities within the Metal Trades Award established in 1947 by what is known as the second Mooney formula. Taking £15 7s. as the assessed basic wage (calculated as the 1947 basic wage adjusted to price changes since 1947) and applying the percentage 48.6, which the fitter's margin was of the 1947 basic wage, the union arrived at a new marginal rate of £7 9s. for a fitter, an increase of £2 13s. on the current margin. This claim of £7 9s. was 2.86 times the 1947 fitter's margin, and hence the unions sought to have all 1947 margins multiplied by 2.86. This claim was opposed by the employers who asked that any consideration of marginal increases be deferred for an unspecified time.

The Commonwealth Government intervened in the public interest and made submissions as to the approach to be adopted to marginal fixation generally, and to marginal fixation in the metal trades industry, as well as supplying information to the Commission about the economic situation and the Government's assessment of it. The Commonwealth Government neither opposed nor supported the claim. The South Australian Government neither opposed nor supported the claim for marginal increases, but did oppose any change in present relativities. The Queensland Government neither opposed nor supported the application for increases in margins, but submitted certain information regarding possible effects in Queensland. The Commission declined to allow submissions aimed at showing what might happen in State awards if State industrial tribunals followed their past practices with respect to the Commission's decisions.

The unions' case in outline comprised—firstly, a critical analysis of major decisions of the Court and of the Commission extending back to the Harvester decision of 1907; secondly, a demonstration from those decisions of the basic criteria used in the fixation of margins, in particular the market value of the work of the various classifications at the time of fixation and the inter-related consideration of economic capacity; thirdly, evidence to demonstrate what is the current market value; and, finally, material concerning economic capacity to pay the rates being claimed.

Referring to past decisions and the problem of marginal fixation, the Commission stated that "the assessment of particular margins at particular times must be an act of judgment by the person or persons making the assessment in the light of current knowledge and practice both of which are themselves susceptible of change We hold the view that whatever may have been the practice in the past there is no reason why any margin should, after a period of time, necessarily be restored to any earlier relativity which it may have had with any earlier basic wage Margins are awarded for skill and other factors which are not included in the assessment of the basic wage. The value from time to time of skill and other factors relevant only to margins may change independently of changes in the basic wage. We are not prepared to assume that because in 1947 the fitter's margin represented 48.6 per cent. of the basic wage that it should now represent the same percentage of the current basic wage." The Commission emphasised the need to have before it all information essential for a complete assessment of margins, some of which must relate to the work actually being done, and pointed out that margins in the Metal Trades Award cannot be properly assessed either absolutely or relatively until the Commission in one form or another has before it an application which will enable it to deal with all aspects of marginal fixation.

* *Commonwealth Arbitration Reports*, Vol. 93, p. 63.

In the absence of any evidence or material on work value, the Commission said it accepted the margins then current in the metal trades award as a starting point. Since last fixing margins in 1959, the Consumer Price Index had risen 6.05 per cent. and the Commission stated that it was prepared to assume that this showed a movement in purchasing power of money with sufficient accuracy to enable this to be taken into account in fixing margins, and believing that a compensating increase in within capacity it considered it would be inequitable not to award it. But as this would only restore margins to the real value of the 1959 margins, it was necessary to consider whether there was any ground for an increase in real margins. To do this, and in the absence of any material related to the work itself, the Commission said it could only consider the question of economic capacity in the metal trades and in industry generally.

The Commission repeated what had been said in the 1961 Basic Wage Case, namely, that productivity figures could be used only to demonstrate a trend and that productivity can only be approximately measured. The unions put forward the view that both past and future increases in productivity should be noted, while the employers said that the proper approach was to ignore the past except to the extent to which it indicated the future, and to adjust wages in a ratio slightly less than any expected future increase in productivity. The employers argued that if overall the level of wages increases at a faster rate than the increase in national productivity then there will be an increase in prices or a shift in income to the wages sector. The Commission made the following observations on this proposition— firstly, that productivity can only be imperfectly calculated and that such productivity figures as are now available can only be properly used to demonstrate a trend; secondly, that the case for marginal increase relates to the metal trades industry only; thirdly, that, if current margins are inadequate, it should be a matter of equity to award margins which are adequate even if such increase raises wages by a percentage greater than the estimated immediate future increase in national productivity; and, finally, that it was an oversimplification to relate the movement in prices to general economic considerations only. The Commission then considered figures from 1949–50 of the movement in national productivity based on gross national product per person employed at 1952–53 prices, and pointed out that, since the 1959 assessment of margins to 1961–62, national productivity measured in this way had increased by 5.1 per cent.

On economic capacity the Commission came to the conclusion that after a period of slowing down, the economy had recovered some of its impetus and that this recovery was likely to continue in the immediate future at a somewhat higher rate than that of the past year. After considering material related to the metal trades industry, namely, over-award payments, average hours of overtime and average weekly hours for adult males, and keeping in mind that employers did not suggest that the economic capacity of the metal trades industry was less than industry generally or that increases in productivity in that industry had been or would be less than increases in national productivity, the Commission was prepared to assume in the unions' favour that by and large the economic capacity of the metal trades industry was certainly not less than, and probably more than, that of industry generally.

Summing up, the Commission said: "In our judgment of national economic capacity, including productivity, the likely future trends in that capacity and the relationship between the capacity of the Metal Trades industry and national capacity we consider that we should as a matter of equity increase the real value of margins under this award. Having regard to this decision and the decreased purchasing power of money since the last assessment we consider that it would be fair to increase margins under this award by ten per cent. We have reached this conclusion in the knowledge that today employees under this award have been awarded an extra week's annual leave. We emphasise again that no information about work values has been placed before us which would enable us to make a more accurate and from our point of view a more satisfactory assessment."

The Commission then considered in detail the capacity of the economy as shown by the following economic indicators:—rural industry, balance of payments, competitive position of secondary industries, investment, employment, company income, money and banking and retail trade, and general. Under company income, the Commission dealt with a submission of the employers that because wages had gone up as a result of the 1961 Basic Wage decision in a period of comparatively low activity in the economy and because the price level had not risen as a result of that decision, there had been a movement in income from the company sector to the wage sector. Any further increase in wages, the employers submitted, would be likely to cause a further drift in company income, followed by a further dampening down of investment and a consequent deleterious effect on activity in the economy and a worsening of the economic position of wage earners. The Commission referred to figures

of gross national product, company income and wages and salaries which indicated that movements in company income were not directly related to movements in wages and salaries, but stated that the fact that company incomes had been lower in the past two years indicated the necessity for caution in awarding marginal increases.

The Commission concluded its consideration of the indicators with these words ". . . . our own investigation of the economy (is) that both from a long term point of view and also from a short term point of view the prospects for the economy may be reasonably regarded with optimism. On a consideration of the whole of the indicators, we conclude that national capacity has increased and that it is likely to continue to increase in the foreseeable future. In these circumstances we are confident that the economy is able to sustain the increase of ten per cent. in margins in this award which we consider is otherwise justified."

At the request of the parties the Commission took the unusual course of making a pronouncement early in the proceedings as to the extent to which the decision in the metal trades case should be used in other industries. The Commission re-affirmed what was said in the 1959 metal trades judgment that the decision would relate to the Metal Trades Award only, although they realized that the margin of the fitter had been used as a standard for other awards. In the present case the Commission stated it was not intended that the decision should be applied automatically outside the metal trades.

The order of the Commission was that the margins for adult males in the Metal Trades Award be increased by ten per cent., the increase to be calculated to the nearest shilling and to operate from the beginning of the first pay-period to commence on and after 22nd April, 1963.

§ 7. Annual Leave

1. **General.**—The judgment delivered by the Commonwealth Court of Conciliation and Arbitration, in the Commercial Printing Case of 1936, granting one week's annual leave with full pay to employees in the industry, has usually been regarded as the first statement in the Commonwealth jurisdiction of the principles involved in deciding whether or not annual leave should be awarded. Over a period of time annual leave was introduced industry by industry when and if the Judge responsible for the industry considered it proper.

In 1945, the question of annual leave was before the Court* and the Court in its judgment set out what it considered to be the principles to be applied in all applications for an extension of the annual leave period to fourteen days. Alteration of particular awards was left to the discretion of the single judge who heard the application.

Further inquiries into annual leave have been conducted and a summary of the most recent inquiries is given on pages 472-3.

Annual leave for employees under the jurisdiction of State awards, etc. is subject to separate determination and a brief summary is given in paragraphs 6 to 11, pages 473-7.

At present the majority of employees in Australia receive three weeks' annual leave at least.

2. **Commonwealth.**—Since 1960, three inquiries have been held following union claims to increase paid annual leave from two to three weeks in Commonwealth Awards. A report on these cases is given below.

3. **Three Weeks' Annual Leave Inquiry, 1960.**—Unions respondent to the Metal Trades Award applied to the Commonwealth Conciliation and Arbitration Commission on 18th July, 1960, to vary the Award to provide three weeks' paid annual leave instead of two weeks.

The application was opposed by employers, the State of Victoria and the Electricity Trust of South Australia. The State of Tasmania supported the application. The Commonwealth Government and the State of Queensland neither supported nor opposed the application, although the Commonwealth tendered statistical and economic information for the benefit of the Commission and the parties.

* *Commonwealth Arbitration Reports*, Vol. 55, p. 595.

In its judgment of the 14th December, 1960, the Commission summarized the submissions made by the unions and the employers, and stated that the two economic factors considered most important were the export-import position and the state of employment. The Commission stated that it had decided to reject the application, but emphasized that its decision was not intended to apply to a situation where, for special reasons related to a particular industry, it may consider an amount of annual leave greater than two weeks to be justified.

Part of the conclusion of the Commission stated.—“ We accordingly dismiss this application because of the present economic situation. In doing so we would again repeat what we have said earlier in this judgment that we do not consider that employees under Federal awards have yet achieved all the leisure which they should achieve. We have done no more than decide that the present is not an appropriate time in which to award an extra week's paid leave.”*

For further particulars *see* Year Book No. 49, pages 511–513.

4. Three Weeks' Annual Leave Inquiry, 1962.—On 10th April, 1962, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby *C.J.* (President), Moore *J.* (Deputy President) and D. G. Apsey (Commissioner) commenced hearing an application by unions respondent to the Metal Trades Award for variation of the award to provide three weeks' paid annual leave instead of two weeks.

Although the application was made in respect of the Metal Trades Award only, the unions made it clear that they wished the claim to be regarded as a test case which, if granted, would involve the inclusion in federal awards generally of the basic standard of three weeks' annual leave. The application was opposed by employers, the Victorian Government and the Electricity Trust of South Australia. New South Wales and Tasmanian Governments supported the application. The Commonwealth Government and the Queensland Government neither supported nor opposed the application, although the Commonwealth intervened in the public interest and made submissions on the state of the economy, as well as providing economic and statistical information for the benefit of the Commission and the parties.

The hearing was concluded on 2nd May, 1962, and on 30th May the Commission made the following announcement.

“ We have given careful consideration to the submissions which have been made to us in this case. The applicant unions have asked that we consider the claim a general one, the result to be applied to Federal awards generally. This must result in greater caution on our part in deciding whether or not the application should succeed. Our present intention is that an increase to three weeks' annual leave generally in secondary industry, subject to special cases, should be granted as soon as we are satisfied that the economy is in a position to cope with the effects of such an increase. However, there are two aspects of the economic arguments about which we are troubled and about which we consider it too early to make any firm decision. These are, firstly, whether our internal economy has sufficiently recovered from the recession of late 1961 and, if so, what is the likely rate of its recovery in the future and, secondly, the effect on Australia of success or failure of the application of the United Kingdom to enter the European Common Market. There have been developments in relation to the latter question since the hearing which both emphasise its importance and the lack of accurate information as to what is going to happen and the short and long term effect on Australia's economy.

So that we may be able better to assess these matters we have decided to adjourn these proceedings until a date in February or March next which will be announced later when the parties and interveners will be able to make such further submissions on these two matters as they may desire.”

Further details were published in Year Book No. 50, page 496.

5. Three Weeks Annual Leave Inquiry, 1963.—On 5th February, 1963, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby *C.J.* (President), Moore *J.* (Deputy President) and Commissioner Apsey, commenced hearing the application, which had been adjourned from May, 1962, to vary the Metal Trades Award to provide three weeks' paid annual leave, instead of two (*see* para. 4 above).

* *Commonwealth Arbitration Reports*, Vol. 96, p. 217.

The hearing was continued during March and April, 1963, jointly with the Metal Trades Margins case hearing (see pp. 469-71), and in its judgment on 18th April, 1963, the Commission referred to the announcement it had made on 30th May, 1962, as to the Commission's intention to grant a period of three weeks' annual leave, when it was satisfied that the economy was in a position to cope with the effects of such an increase. "In our view the Australian economy has recovered sufficiently from the recession of 1961 and its likely rate of recovery in the future is such as to enable us to grant three weeks' annual leave. The second aspect of the economic arguments about which we were troubled has for the purposes of this decision been changed in a manner in which the problem has become no longer relevant. Therefore we see no reason why we should not implement our express intention of May last year to increase annual leave to three weeks generally in secondary industry, subject to special cases."

The Commission then announced that the Metal Trades Award would be varied to produce the following result. "A period of 21 consecutive days' leave shall be allowed to employees who have completed twelve months continuous service by or after 30th November, 1963."

Provision for proportionate leave for periods of employment of one month and over was made in respect of employment after 1st June, 1963.

It was stated that the application of the new standard of annual leave for secondary industry in other Federal awards would be a matter for individual Commissioners upon proper application being made for variation.

In a decision given on 22nd October, 1963, the Commission, comprising Wright J. (Acting President), Moore J. (Deputy President) and Commissioner Winter, unanimously rejected an application by the Metal Trades Employers Association and other employers' organizations firstly for permission, at the employers' discretion, to require employees to take their annual leave in two periods of seven and fourteen days respectively, and secondly that the time after accrual, within which leave must be taken, should be extended to nine months when leave is taken in one period and twelve months when leave is taken in more than one period.

6. New South Wales.—Employees in New South Wales in private industry, other than those covered by Federal awards, were granted three weeks' annual leave by an amendment to the Annual Holidays Act, passed in 1958. In February, 1964, the State Government indicated that it would grant its employees four weeks' annual leave effective from 1st January, 1964. From 29th September, 1964, annual holiday pay, for employees covered by provisions of the Annual Holidays Act, would be calculated on the basis of the employee's current weekly earnings instead of current award rates.

7. Victoria.—Following the decision of the Commonwealth Conciliation and Arbitration Commission in May, 1963, individual Wages Boards commenced to alter provisions of their determinations to grant employees an extra week's leave. By September, 1963, the majority of Boards had included three weeks' annual leave in their determinations.

In December, 1963, the Industrial Appeals Court upheld an appeal by employees against the determination of the Photographic Goods Board which stated that an employer may direct the workers or group of workers to take their annual leave in two periods of two consecutive weeks and one week, respectively. The President of the Court pointed out that the Commonwealth Conciliation and Arbitration Commission contemplated that employers might need to plan properly and far enough in advance to enable the appropriate adjustments to the new standard of leave to be made. The Court considered that it had been demonstrated during the year that the employer would be able to make these adjustments without the kind of hardship which the Commonwealth Commission contemplated would warrant exemption from the obligation to give three consecutive weeks' leave.

8. Queensland.—In June, 1963*, the Full Bench of the Industrial Conciliation and Arbitration Commission granted an extra week's annual leave to employees with twelve months' continuous service on or after 30th November, 1963. This move implemented a previous decision of the Commission in which it was decided, as a matter of policy, to grant increased leave to persons already enjoying two weeks' leave.

* Queensland Government Industrial Gazette, Vol. 53, p. 473.

The decision applied to day workers and non-continuous shift workers receiving two weeks' leave; continuous shift workers receiving three weeks' leave; and day workers and shift workers receiving additional leave in lieu of extra payment for working on statutory holidays. The order became effective as from 1st June, 1963.

The terms of the decision of the Commonwealth Conciliation and Arbitration Commission, as handed down in April, 1963 (*see* page 473) were to apply to awards of the Industrial Conciliation and Arbitration Commission of Queensland with the exception that, in the State awards, pro-rata payment for leave not taken at the termination of employment was to be expressed at hours per month. The Commission added that those industries or employers who felt that the condition of an industry warranted exemption or exclusion from such additional leave, should make an application showing justification for the exemption or exclusion as the onus rested upon that industry or employer to do so.

The decision did not apply to employees in primary industry—apart from the sugar industry—or those in western areas. Extra leave for these employees was subject to separate applications.

9. South Australia.—The Full Bench of the South Australian Industrial Court in May, 1963, announced an increased standard of annual leave in the State, adopting the standard fixed by the Commonwealth Conciliation and Arbitration Commission (*see* page 473).

The Court pointed out that it had embraced three weeks as the general standard for annual leave for the time being. There would not be any automatic extension as the court would decide the application for each industry as it arose to ensure that comparable industrial justice would be applied to the various groups of employees in the State. The Court felt that the Commonwealth Commission's forecast regarding the future of the economy was not based entirely upon established facts but partly on a predicted economic trend for the near future. If that trend is not maintained the Court would, if application were made, be prepared in a proper case to review the new standard of annual leave.

The Court, as a general indication as to its attitude, expressed the view that annual leave should be taken at a time fixed either by agreement or, if this is not possible, at a time fixed by the employer. The leave should be allowed in two parts and one part must be of at least two weeks' duration. These, however, were factors which could vary from award to award and their determination would depend on the needs of the particular industry.

10. Western Australia.—Following a general inquiry concerning Annual Leave and Public Holidays, the Court of Arbitration in June, 1963*, adopted three weeks as the new standard for the normal period of annual leave in State awards, with four weeks for seven-day shift workers. The date of operation was the same as that decided by the Commonwealth Conciliation and Arbitration Commission (*see* page 473).

Existing awards and agreements which already provided annual leave in excess of the Court's standard were to be examined separately to ascertain whether special circumstances existed to justify leave greater than the normal standard.

The President of the Court in the reasons for his decision said that he was not convinced that the economic capacity of the State, and its economic capacity for the future, was less than that of the country as a whole.

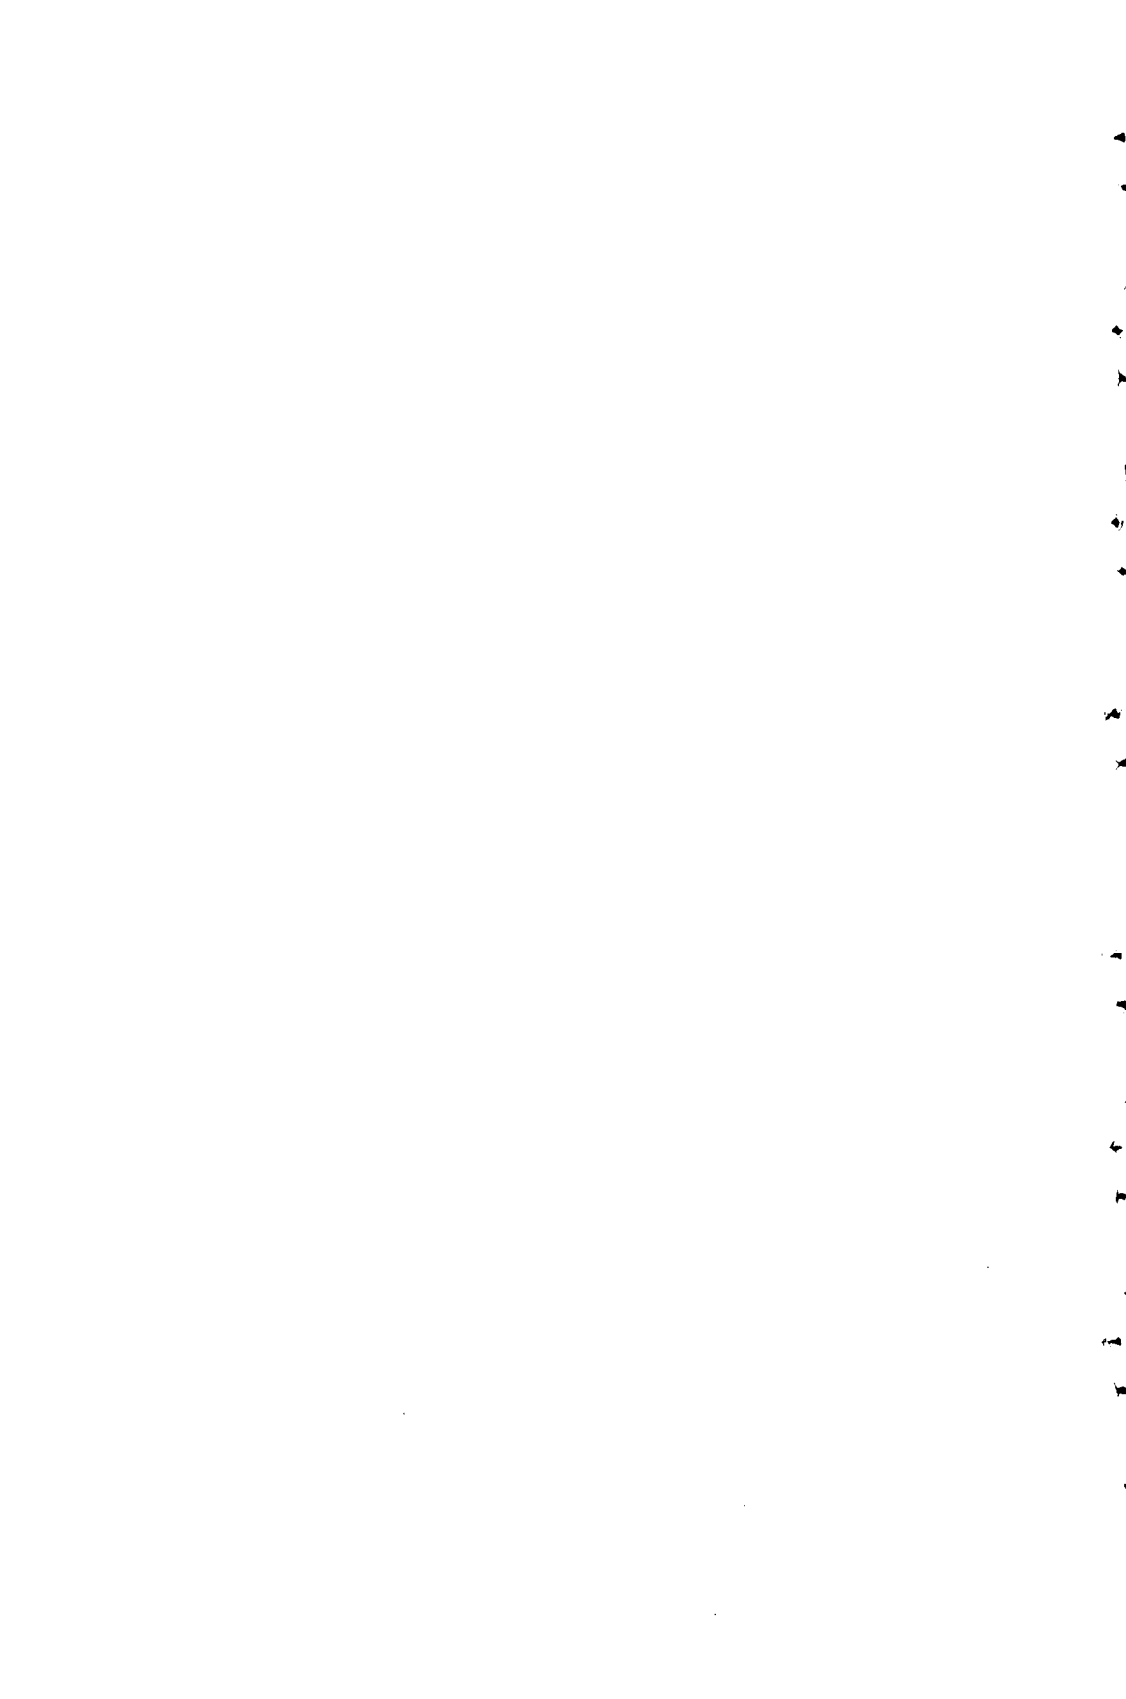

In the inquiry the Government sought a reduction in the number of public holidays and a review of other conditions where these were more favourable than the Court's standard. Private employers opposed any increase in annual leave but, alternatively, submitted that, if there was to be an increase, then the new standard should be two weeks and four days per annum or the number of public holidays in each year should be reduced by one. Both these submissions were rejected and the standard number of public holidays was retained at ten with the provision that where an award provided for more than ten public holidays a year, that award, unless the union consented to a reduction to ten, would be excluded from the above order amending the annual leave provisions until it was established that special circumstances justified the continuance of the greater number of holidays.

* *Western Australian Industrial Gazette*, Vol. 43 p. 392.

INDUSTRIAL DISPUTES, AUSTRALIA, 1952 TO 1964

WORKING DAYS LOST - INDUSTRY GROUPS

In November, 1963*, the Court refused an application by employers for the right to split the annual leave into two parts since it decided to follow the decision of most other State tribunals and allow the additional leave in conformity with conditions similar to those prescribed by the Commonwealth Conciliation and Arbitration Commission. The right to split the leave would only be allowed by the Court in exceptional circumstances, unless all the parties concerned agreed to the inclusion of such a provision.

11. *Tasmania*.—Following an amendment to the Wages Board Act in 1961, Wages Boards were permitted to grant employees up to three weeks' paid recreational leave. In June, 1962, the determination of the Ironmongers' Wages Board provided that the entitlement to annual leave, on and from 1st January, 1963, where the year of employment ended after 31st December, 1962, would be fourteen consecutive days, together with a period during working hours equal to 3½ hours for each completed month of employment after 31st December, 1962. Employees whose year of employment commenced after 31st December, 1963, would be eligible for three weeks' annual leave.

By the end of 1962 the determination of 72 Wages Boards had been amended to include these entitlements for extra leave. The remaining three Boards incorporated the entitlements in early 1963.

Generally, most Wages Boards adopted provisions to enable leave to be taken in one consecutive period within six months from the end of the preceding year of employment or, if the employer and employee agree, in two separate periods, the lesser of which shall be of not less than seven consecutive days.

§ 8. Long Service Leave

1. *General*.—Paid long service leave, i.e., leave granted to workers who remain with the one employer over an extended period of time, has been included in the provisions of industrial legislation in the several States and a brief summary is given in the following paragraphs. The position in regard to Commonwealth award employees is also summarized. In all cases the transfer of ownership of a business does not constitute a break in continuity of service with the same employer.

2. *Commonwealth*.—(i) *General*. Until May, 1964, the Commonwealth Conciliation and Arbitration Commission had not included provision for long service leave in its awards, and had refrained from determining disputes relating to this subject except in the case of the Northern Territory and the Australian Capital Territory (*see* p. 478). Consequently till then, the provisions of the various State Acts relating to long service leave applied to workers covered by awards of the Commonwealth. The applicability of long service leave provisions under State law to workers under Commonwealth awards had been tested before the High Court and the Privy Council, and such provisions had been held to be valid.

The Commission's position was set out in its decision, issued on 16th September, 1959, regarding disputes on the inclusion, in the Graphic Arts (Interim) Award, 1957, of provisions for long service leave. It stated that it should refrain, until further order, from determining the disputes so far as they concerned long service leave and that if, in future, the Commission decided that long service leave on a national basis was desirable, it was open to proceed to the making of an award on the matter.

Following the hearing of claims for long service leave provisions by employers in the graphic arts and metal trades industries in August, 1963, the Full Bench of the Commonwealth Conciliation and Arbitration Commission, on 11th May, 1964, announced its decision that long service leave entitlement would be calculated on the basis of thirteen weeks for twenty years of unbroken employment, in respect of employment before 11th May, 1964 (or, in New South Wales, 1st April, 1963), and at the rate of thirteen weeks for fifteen years in respect of service after 11th May, 1964 (or, in New South Wales, 1st April, 1963). After further periods of ten years, employees would be entitled to an additional pro-rata period of leave calculated on the same basis. Those employees who completed an unbroken contract of employment of ten years but less than fifteen years, and whose employment was terminated by death or by the employer for any cause other than serious and wilful misconduct, or by the employee on account of illness, incapacity or domestic or other pressing necessity, would be entitled to pro-rata payment. The rate of payment while on leave would be current award rates which would be subject to basic wage changes and marginal adjustments which occurred during the leave period.

Following applications by employers in the metal trades and printing industries, the Full Bench of the Commission in a judgment delivered on 23rd December, 1964, extended the provisions of the awards to cover non-unionist employees. The decision rejected the unions' argument that the Commission had no jurisdiction to make long service leave awards

* *Western Australian Industrial Gazette*, Vol. 43, p. 1459.

binding in respect of non-unionists. The Commission, in a separate decision, varied the provisions of the awards so that an employer would not be required to grant an employee long service leave until the entitlement equalled thirteen weeks for the first period of entitlement and eight and two-thirds weeks in respect of any subsequent period of entitlement. These variations would be effective on and from 1st December, 1964.

(ii) *Australian Territories*. Long service leave codes for employees covered by Northern Territory and Australian Capital Territory awards were originally prescribed on 4th December, 1961, by the Commonwealth Conciliation and Arbitration Commission in Presidential Session. The Commission decided that employees should be granted three months' long service leave after twenty years' service with one employer, even if part of this service was outside the Territory. In addition, the Australian Capital Territory code prescribed that employees presently employed might "go back for a period of 25 years in regard to the calculation of their present or future entitlement of long service leave". In December, 1964, the Commission amended the majority of awards covering employees in the Northern Territory and the Australian Capital Territory by granting long service leave on the basis of thirteen weeks after fifteen years service.

(iii) *Stevedoring Industry*. The *Stevedoring Industry Act 1962* which came into force on 19th November, 1962, amended the *Stevedoring Industry Act 1956-1961* by extending the eligibility and qualifying periods of the long service leave provisions of the Act. No changes were made to the entitlement for long service leave which remained at thirteen weeks after twenty years' qualifying service and six and a half weeks for each subsequent ten years' qualifying service.

3. *New South Wales*.—Long service leave was first introduced for the majority of workers by the Industrial Arbitration Act, 1951, which provided such leave for workers under State awards. This Act was replaced by the Long Service Leave Act, 1955, which extended the benefits to any worker within the State. An amendment to the Act in April, 1963, provided for three months' long service leave for fifteen years' continuous service with the same employer and proportionate amounts on this basis after a minimum of five years' service. The Long Service Leave (Metalliferous Mining Industry) Act, 1963, conferred on certain workers in the metalliferous mining industry the right to three months long service leave after ten years' service. This act operated from 1st January, 1964.

4. *Victoria*.—The *Factories and Shops (Long Service Leave) Act 1953* first provided for long service leave for workers in Victoria, the provisions of this Act being subsequently incorporated in the Labour and Industry Act. Leave provided for was thirteen weeks for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes were to be taken into consideration in dealing with exemptions from the Act.

An amendment to the Labour and Industry Act in December, 1964, granted employees, from 1st January, 1965, thirteen weeks leave after fifteen years continuous service. Workers who terminated their employment after ten years but less than the qualifying fifteen years would be able to obtain a pro-rata entitlement subject to the existing special conditions of the Act. Following amendment to the Public Service Act, public servants became entitled to four and a half months leave after fifteen years' service instead of six months after twenty years.

5. *Queensland*.—In 1952 The Industrial Conciliation and Arbitration Acts were amended to include long service leave provisions for employees within the jurisdiction of the Industrial Court, and the Acts were amended again in 1955 to extend these provisions to any employee in respect of whose employment there was not in force an award or industrial agreement under the Act and to seasonal workers in sugar mills and meat works. Leave provided for was thirteen weeks for twenty years' continuous service with the same employer.

An amendment to The Industrial Conciliation and Arbitration Acts was passed and assented to in December, 1964, granting employees long service leave of thirteen weeks after fifteen years' continuous service. The amendment retained pro-rata leave entitlement after ten years' service and operated on and from 11th May, 1964.

6. *South Australia*.—The Long Service Leave Act, passed in 1957, exempts a large number of industrial agreements, with wide industrial coverage from specifying long service leave for employees. For those covered by the Act, leave provided for is seven days in the eighth and in each subsequent year of continuous service. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions under the Act.

On 24th December, 1964, long service leave of thirteen weeks after fifteen years' continuous service in respect of employment on and from 11th May, 1964, was granted to shop assistants by agreement between employers and employees.

7. **Western Australia.**—The Long Service Leave Act was passed in 1958, but it did not apply to employees whose conditions of work were regulated under the Western Australian Industrial Arbitration Act. The Court of Arbitration of Western Australia, in an order dated 1st April, 1958, incorporated, in most of the awards and agreements within its jurisdiction, provisions similar to those in the Long Service Leave Act. Leave provided for was thirteen weeks for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions from the Act.

In September, 1964, the Industrial Commission began to amend the long service leave provisions of its awards and industrial agreements to provide for thirteen weeks' leave after fifteen years service on or from 1st October, 1964. Pro-rata entitlement would accrue after ten years' service. The *Long Service Leave Amendment Act (No. 2), 1964*, introduced in October, 1964, was in the same terms as the amendments made by the Commission to the various awards and agreements (*see above*).

8. **Tasmania.**—The Long Service Leave Act, which was passed in 1956, provided for thirteen weeks' leave for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes could be taken into consideration in dealing with exemptions from the Act. An amendment to the Long Service Leave Act, assented to on 17th December, 1964, reduced the qualifying period to fifteen years. The amendment operated on and from 11th May, 1964.

INDUSTRIAL DISPUTES

1. **General.**—Detailed information regarding industrial disputes involving stoppage of work is given in the *Labour Report*. A table showing statistics of industrial disputes for each year from 1913 is contained in the Appendix to *Labour Report* No. 50, 1962 and 1963.

Particulars of all disputes in progress during the year are included in the annual figures, whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of "the number of disputes" and "workers involved" in disputes which commenced in any year, and were still in progress during the following year, are included in the figures for both years.

2. **Industry Groups.**—The following table gives, for Australia as a whole, particulars of industrial disputes which were in progress during 1964, classified according to industry groups.

INDUSTRIAL DISPUTES(a): INDUSTRY GROUPS, AUSTRALIA, 1964

Industry group	Number	Workers involved			Working days lost	Estimated loss in wages (£'000)
		Directly	Indirectly (b)	Total		
Agriculture, grazing, etc.	223	35,314	..	35,314	34,261	167.1
Coal mining	7	5,443	3,641	9,084	31,066	201.6
Other mining and quarrying	373	149,431	6,048	155,479	376,564	1,795.9
Engineering, metals, vehicles, etc. ..	4	2,227	..	2,227	7,977	31.9
Textiles, clothing and footwear	94	23,387	6,069	29,456	92,950	378.4
Food, drink and tobacco	1	258	..	258	60	0.2
Sawmilling, furniture, etc.	9	1,064	19	1,083	2,088	9.2
Paper, printing, etc.	96	29,689	286	29,975	49,271	228.4
Building and construction	140	41,152	241	41,393	68,882	326.6
Railway and tramway services	20	55,630	12	55,642	63,195	250.9
Road and air transport	24	22,065	495	22,560	54,073	256.0
Shipping
Stevedoring	317	149,483	..	149,483	113,556	564.7
Amusement, hotels, personal service, etc. .	8	545	..	545	843	4.0
Other industries(c)	18	13,129	..	13,129	16,572	65.5
Total	1,334	528,817	16,811	545,628	911,358	4,280.4

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (c) Includes Communication; Finance and Property; Wholesale and Retail Trade; Public Authority (n.e.i.); and Community and Business Services.

A graph showing, for the years 1952 to 1964, the working days lost as a result of industrial disputes in the main industry groups is shown on page 475.

3. States and Territories.—The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved and the losses in working days and wages caused by disputes which were current during each of the years 1960 to 1964.

INDUSTRIAL DISPUTES(a): STATES AND TERRITORIES

State or Territory	Year	Number	Workers involved			Working days lost	Estimated loss in wages (£'000)
			Directly	Indirectly (b)	Total		
New South Wales ..	1960	736	289,266	7,646	296,912	416,762	1,731.9
	1961	529	131,661	5,295	136,956	318,629	1,316.0
	1962	752	195,344	13,623	208,967	303,400	1,285.9
	1963	817	214,643	4,333	218,976	307,440	1,314.7

	1963	1,250	398,567	14,141	412,708	581,568	2,495.7
	1964	1,334	528,817	16,811	545,628	911,358	4,280.4

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

4. Duration.—(i) *General*. The duration of each industrial dispute involving a loss of work, i.e. the time between the cessation and resumption of work, has been calculated in working days, exclusive of Saturdays, Sundays and holidays, except where the establishment involved carries on a continuous process (e.g. metal smelting and cement manufacture).

(ii) *Industry Groups, 1964*. The following table shows, for the year 1964, industrial disputes in coal mining, stevedoring and other industries classified according to duration.

DURATION OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1964

Duration (working days)	Number	Workers involved(b)		Working days lost		Estimated loss in wages (£'000)
		Number	Proportion of total (per cent.)	Number	Proportion of total (per cent.)	
COAL MINING						
1 day and less	166	23,590	66.8	11,598	33.9	57.4
2 days and more than 1 day ..	29	8,367	23.7	11,615	33.9	57.4
3 days and more than 2 days ..	13	1,743	4.9	4,601	13.4	21.7
Over 3 days and less than 5 days ..	13	1,426	4.1	5,041	14.7	23.9
5 days and less than 10 days ..	2	188	0.5	1,406	4.1	6.7

10 days and less than 20 days ..	26	7,005	1.3	92,796	10.2	474.8
20 days and less than 40 days ..	7	8,663	1.6	191,790	21.0	953.8
40 days and over	2	107	(c)	5,271	0.6	24.6
<i>Grand Total</i>	<i>1,334</i>	<i>545,628</i>	<i>100.0</i>	<i>911,358</i>	<i>100.0</i>	<i>4,280.4</i>

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See footnote (b) to table on page 480. (c) Less than 0.05 per cent.

5. Causes.—(i) *General*. Stoppages are analysed in three separate groups, "Coal Mining", "Stevedoring", and "Other Industries". Causes have been grouped under four main headings:—(1) Wages, Hours and Leave; (2) Physical Working Conditions and Managerial Policy; (3) Trade Unionism; (4) Other Causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, including disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff and disputes arising from the computation of wages, leave, etc., in individual cases. The third group includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g. political matters, and cases (occurring mainly in the coal mining industry) where the cause of the stoppage is not officially made known to the management.

(ii) *Industry Groups.* The following table shows particulars of industrial disputes for 1964, classified according to cause, in three industry groups.

CAUSES OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1964

Cause of dispute	Coal mining	Stevedoring	Other industries	All industries
NUMBER OF DISPUTES				
Wages, hours and leave	7	28	285	320
Physical working conditions and managerial policy	114	258	386	758
Trade unionism	28	16	92	136
Other	74	15	31	120
Total	223	317	794	1,334
WORKERS INVOLVED(b)				
Wages, hours and leave	907	19,907	215,032	235,846
Physical working conditions and managerial policy	14,133	91,159	86,062	191,354
Trade unionism	4,670	5,210	21,790	31,670
Other	15,604	33,207	37,947	86,758
Total	35,314	149,483	360,831	545,628
WORKING DAYS LOST				
Wages, hours and leave	1,133	8,628	547,187	556,948
Physical working conditions and managerial policy	17,643	69,677	169,742	257,062
Trade unionism	5,701	2,631	25,060	33,392
Other	9,784	32,620	21,552	63,956
Total	34,261	113,556	763,541	911,358

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table on p. 480.

(iii) *Summary, 1960 to 1964.* The following table gives particulars of industrial disputes according to cause for the years 1960 to 1964.

CAUSES OF INDUSTRIAL DISPUTES(a): AUSTRALIA

Cause of dispute	1960	1961	1962	1963	1964
NUMBER OF DISPUTES					
Wages, hours and leave	213	123	290	279	320
Physical working conditions and managerial policy	648	525	707	748	758
Trade unionism	127	66	92	115	136
Other	157	101	94	108	120
Total	1,145	815	1,183	1,250	1,334
WORKERS INVOLVED(b)					
Wages, hours and leave	228,695	114,125	133,312	171,551	235,846
Physical working conditions and managerial policy	154,401	102,125	179,321	142,998	191,354
Trade unionism	43,321	13,797	15,243	22,251	31,670
Other	176,862	70,310	25,977	75,908	86,758
Total	603,279	300,357	353,853	412,708	545,628
WORKING DAYS LOST					
Wages, hours and leave	254,926	248,864	194,427	274,901	556,948

Trade unionism	64,617	34,021	22,418	23,268	33,392
Other	127,809	62,472	17,819	49,897	63,956
Total	725,107	606,811	508,755	581,568	911,358

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table on p. 480.

6. Methods of Settlement.—The following table shows particulars of industrial disputes for 1964, classified according to method of settlement, in three industry groups.

INDUSTRIAL DISPUTES(a): METHODS OF SETTLEMENT, AUSTRALIA, 1964

Method of settlement	Coal mining	Stevedoring	Other industries	All industries
NUMBER OF DISPUTES				
By private negotiation	34	8	207	249
By mediation not based on legislation
State legislation—				
Under State Conciliation, etc., legislation	2	113	115
By reference to State Government officials
Commonwealth and Commonwealth-State legislation—				
Industrial Tribunals under—				
Conciliation and Arbitration Act	3	107	110
Coal Industry Acts	14	14
Stevedoring Industry Act	11	..	11
Other Acts
By reference to Commonwealth Government officials	1	156	..	157
By filling places of workers on strike or locked out
By closing down establishment permanently
By resumption without negotiation	174	137	366	677
By other methods
Total	223	317	(c) 793	(c) 1,333

WORKERS INVOLVED(b)				
By private negotiation	2,860	728	45,220	48,808
By mediation not based on legislation
State legislation—				
Under State Conciliation, etc., legislation	43	36,898	36,941
By reference to State Government officials
Commonwealth and Commonwealth-State legislation—				
Industrial Tribunals under—				
Conciliation and Arbitration Act	190	15,510	15,700
Coal Industry Acts	1,214	1,214
Stevedoring Industry Act	1,511	..	1,511
Other Acts
By reference to Commonwealth Government officials	23	18,576	..	18,599
By filling places of workers on strike or locked out
By closing down establishment permanently
By resumption without negotiation	31,217	128,435	261,429	421,081
By other methods
Total	35,314	149,483	(c) 359,057	(c) 543,854

WORKING DAYS LOST				
By private negotiation	4,787	272	288,591	293,650
By mediation not based on legislation
State legislation—				
Under State Conciliation, etc., legislation	57	104,733	104,790
By reference to State Government officials
Commonwealth and Commonwealth-State legislation—				
Industrial Tribunals under—				
Conciliation and Arbitration Act	583	58,590	59,173
Coal Industry Acts	4,061	4,061
Stevedoring Industry Act	1,329	..	1,329
Other Acts
By reference to Commonwealth Government officials	42	15,294	..	15,336
By filling places of workers on strike or locked out
By closing down establishment permanently
By resumption without negotiation	25,371	96,021	291,651	413,043
By other methods
Total	34,261	113,556	(c) 743,565	(c) 891,382

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table on p. 480. (c) Differences between these figures and corresponding figures in tables on pages 479-82 are due to disputes which were incomplete at the end of the year.

WORKERS' COMPENSATION LEGISLATION

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 31st December, 1963, will be found in *Labour Report* No. 50, pages 195-203.

LABOUR ORGANIZATIONS

§ 1. Labour Organizations in Australia

1. **General.**—The figures shown in this section are prepared from a special collection of membership of labour organizations at 31st December each year. The affairs of single unions are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information. More detailed statistics appear in the annual *Labour Report*.

2. **Trade Unions.**—(i) *General.* The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations:—(a) the local independent; (b) the State; (c) the interstate; and (d) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions, the State organizations are bound together under a system of unification with centralized control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one of two specified purposes. Statistics relating to interstate or federated trade unions are contained in tables on page 486.

(ii) *Number and Membership.* Returns showing membership by States and Territories at 31st December each year are obtained for all trade unions and employee organizations. The following table shows the position at the end of each of the years 1962 to 1964.

TRADE UNIONS: NUMBER AND MEMBERSHIP

State or Territory	Number of separate unions			Number of members ('000)			Percentage increase in membership(a)		
	1962	1963	1964	1962	1963	1964	1962	1963	1964
New South Wales ..	222	227	223	765.5	782.7	795.1	2.9	2.2	1.6
Victoria ..	155	154	157	498.0	514.9	525.8	2.3	3.4	2.1
Queensland ..	135	137	141	334.0	339.4	350.6	1.3	1.6	3.3
South Australia ..	133	134	137	160.4	161.1	166.9	5.9	0.4	3.6
Western Australia..	152	154	154	121.0	129.0	135.1	5.3	6.5	4.7
Tasmania ..	103	103	111	57.3	57.4	59.9	0.7	0.4	4.2
Northern Territory(b)	23	30	30	3.3	3.3	3.4	(b)	(b)	(b)
Australian Capital Territory(b)	38	54	59	11.0	15.7	18.0	(b)	(b)	(b)
Australia ..	(c)347	(c)347	(c)340	1,950.5	2,003.5	2,054.8	2.9	2.7	2.6

(a) On preceding year. (b) In some cases, union members in the Territories associated with State organizations are reported under the heading of that State. The annual figures reflect, in part, progressive improvements to more accurate reporting, and the comparability of totals for the Territories is affected by this aspect. (c) Without interstate duplication. See below.

In the preceding table, under the heading "Number of separate unions", a union reporting members in a State or Territory is counted as one union within that State or Territory. The figures do not add to the Australian total (shown in the last line) because a union represented in more than one State or Territory is included in the figure for each State or Territory in which it is represented, but is counted only once in the Australian total.

A table showing the number and membership of trade unions in Australia for the years 1912 to 1963 will be found in the Appendix to *Labour Report* No. 50.

(iii) *Classification in Industry Groups.* The following table shows the number of unions and members thereof in Australia at the end of each of the years 1962 to 1964.

TRADE UNIONS: INDUSTRY GROUPS, AUSTRALIA

Industry Group	1962		1963		1964	
	No. of unions (a)	No. of members	No. of unions (a)	No. of members	No. of unions (a)	No. of members
		'000		'000		'000
Agriculture, grazing, etc.	3	60.7	3	60.8	3	63.3
Mining and quarrying	12	35.4	12	35.0	12	35.2
Manufacturing—

(a) Without interstate duplication. See para. (ii) p.484.
municipal, etc. (c) Includes community and business services.

(b) Includes communication.

(iv) *Number of Members and Proportion of Wage and Salary Earners.* The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As estimates of wage and salary earners in employment do not include employees engaged in rural industry or in private domestic service, the percentages have been calculated on figures obtained by adding, to the end of year estimates, the number of employees in rural industry and in private domestic service recorded at the nearest available population census. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

TRADE UNIONS: NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA

Year	Number of members (^{'000})			Proportion of total wage and salary earners ^(a) (Per cent.)		
	Males	Females	Persons	Males	Females	Persons
1954	1,448.2	339.3	1,787.5	66	45	61
1961	1,521.9	372.7	1,894.6	63	41	57
1962	1,561.9	388.6	1,950.5	64	41	57
1963	1,588.5	415.0	2,003.5	62	42	57
1964	1,624.0	430.8	2,054.8	62	41	56

(a) See text above.

(v) *Interstate or Federated Trade Unions.* The following table gives particulars of the number and membership of interstate or federated trade unions in 1964.

INTERSTATE OR FEDERATED TRADE UNIONS(a): AUSTRALIA, 1964

Particulars	Unions operating in—					Total
	2 States	3 States	4 States	5 States	6 States	
Number of unions ..	9	4	22	37	71	143
„ „ members ('000)	17.9	25.3	170.9	455.4	1,180.9	1,850.3

(a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory or the Australian Capital Territory or both.

3. Organizations Registered under the (Commonwealth) Conciliation and Arbitration Act.—Under Part VIII. of the *Conciliation and Arbitration Act* 1904–1961, any association of employers in an industry who have, or any employer who has, employed, on an average taken per month, not less than 100 employees during the six months preceding application for registration, and any association of not less than 100 employees in any industry, may be registered. However, the Public Service Arbitration Act provides that an association of less than 100 employees may be registered as an organization under the Conciliation and Arbitration Act, if its members comprise at least three-fifths of all persons engaged in that industry in the Public Service. Such organizations are included in the figures shown below. Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1964 the number of employers' organizations registered under the provisions of the Act was 66. The number of unions registered at the end of 1964 was 156, with membership of 1,710,000, representing 83 per cent. of the total membership of all trade unions in Australia. Lists of organizations of employees and of employers registered under this Act are contained in the *Industrial Information Bulletin*, Vol. 20, No. 1, January, 1965, published by the Department of Labour and National Service.

4. Central Labour Organizations.—(i) *Trades and Labour Councils*. Delegate organizations, usually known as Trades Hall Councils or Labour Councils and consisting of representatives of a number of trade unions have been established in the capital cities and in a number of other centres in each State. In the centres where these councils exist most unions or local branches operating in the district are affiliated. The district councils obtain their finance by means of a *per capita* tax on members of affiliated unions. In States other than Western Australia the district councils are generally independent bodies, although provision usually exists in the rules of the central council in the capital city for the organization of district councils, or for their representation on the central council. In Western Australia, until 1962, there was a unified system or organization with a central council and district councils within the framework of the Australian Labour Party. In 1962 this organization was abolished and a separate Trades and Labour Council with provincial councils was to be established outside the political organization. At the end of 1963 only the central council (the Trades and Labour Council of Western Australia) was operating. A number of provincial councils were established during 1964.

The following table shows, for each State and Territory, the number of trades and labour councils and the number of affiliated unions, or branches of unions, at the end of 1964. The figures for the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

CENTRAL LABOUR ORGANIZATIONS: NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED, 1964

Particulars	N.S.W.	Vic.	Q'land	S.A.	W.A. (a)	Tas.	N.T.	A.C.T.	Total
Number of councils ..	12	9	13	5	3	5	..	1	48
Number of unions and branch unions affiliated	342	291	187	151	126	130	..	29	1,256

(a) See explanation in text above.

As well as trades and labour councils there are councils organized on trade lines and composed of delegates from separate unions whose members' interests are closely connected by reason of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the metal trades, or with the building trades, are examples of such organizations.

(ii) *Australian Council of Trade Unions.* A central labour organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in Melbourne in May, 1927. The A.C.T.U. consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the A.C.T.U. and it has the right to appoint one representative to act on the executive of the Council. In addition to the representatives of the State Branches of the A.C.T.U., six delegates are elected by and from Congress, one from each of the following industry groups:—Building, Food and distributive services, Manufacturing, Metal, Services, and Transport. To this executive are added the four officers, namely, President, two Vice-Presidents, and Secretary, who are elected by and from the Australian Congress of Trade Unions.

The ordinary meetings of Congress are held in alternate years. The 1963 Biennial Congress was held in September, 1963, and attended by 517 delegates from affiliated organizations, State branches of the A.C.T.U., and provincial councils. Special meetings of Congress are held whenever deemed advisable by decision of the executive, as approved by the majority of its branches, or by resolution of unions representing one-third of the total membership of the A.C.T.U.

The objectives of the A.C.T.U. are the socialization of industry, i.e., production, distribution and exchange, and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all. The methods to be adopted are:—the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the establishment of one union in each industry; the consolidation of the Australian Labour Movement with the object of unified control, administration, and action; the centralized control of industrial disputes; educational propaganda among unions; and political action to secure satisfactory working-class legislation.

The A.C.T.U. was the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference.

All the major unions are affiliated with the A.C.T.U., with the exception of the largest, the Australian Workers' Union, which is itself virtually a central organization of branches catering in the main for employees in rural and construction industries.

§ 2. International Labour Organisation

The International Labour Organisation (I.L.O.) was established on 11th April, 1919, as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939–45 War the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal, Canada. In 1946 the Organization became the first of the specialized agencies of the United Nations. Under the terms of agreement the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organization, social security and other aspects of social policy. The Organization has three basic parts. These are the International Labour Conference, its highest authority, which as a rule meets annually; the Governing Body, its executive council,

which usually meets three times each year; and the International Labour Office, which provides the secretariat of the Organisation. The Conference is composed of delegations from the Member States of the Organisation. At the end of 1964, there were 111 Member States, each of which is entitled to be represented by four delegates—two government, one representing employers and one representing workers, together with their advisers. Each delegate speaks and votes independently, so that all points of view in each country are fully expressed. The Governing Body consists of the representatives of twenty-four governments and twelve employers' and twelve workers' representatives. Of the twenty-four government representatives, ten are from the ten countries of major industrial importance and fourteen are elected by the remaining governments. These latter fourteen government representatives and the twelve employers' and twelve workers' titular delegates and the deputy members of the three groups are elected by their groups at the Conference every three years. Particulars are given in *Labour Report* No. 50 of the proceedings of International Labour Conferences up to the 47th Session, held in Geneva in June, 1963. For details of I.L.O. conventions ratified by Australia, see *Labour Report* No. 50, pages 215-17.

CHAPTER XIV

OVERSEA TRADE

NOTE.—Because of the limitations of space, the statistics in this chapter are, in the main, restricted to summarized form. For details of imports and exports reference should be made to the annual bulletins on *Oversea Trade* (preliminary and final), *Australian Exports*, and *Imports Cleared for Home Consumption*. Current information on oversea trade is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, the *Monthly Bulletin of Oversea Trade Statistics*, and a preliminary monthly statement on *Australian Oversea Trade—Merchandise*. The *Australian Balance of Payments* (mimeographed statement) contains detailed information on this subject, and there are also the following additional mimeographed statements:—*Exports of Wool* (monthly), *Oversea Trade with Major Groups of Countries* (quarterly), *Trade of Australia with the United Kingdom* (half-yearly) and *Trade of Australia with Eastern Countries* (annually).

§ 1. Legislation affecting Oversea Trade

1. **Constitutional Powers.**—By the Commonwealth of Australia Constitution Act, section 51 (i), the power to make laws with respect to trade and commerce with other countries was conferred on the Commonwealth Parliament. Under section 86 of the Constitution, the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1st January, 1901. Other references to trade and commerce are contained in sections 87 to 95 of the Constitution (*see pp. 18-19*).

2. **Commonwealth Legislation.**—The Commonwealth legislation affecting oversea trade includes: the Customs Act; the Customs Tariff and various Preference Tariffs; the Customs Tariff (Dumping and Subsidies) Act; Trading with the Enemy Act. The Customs Act is the administrative Act under which the Department of Customs and Excise operates, while the Customs Tariffs provide the statutory authority for imposing the actual rates of duty operative from time to time.

3. **The Customs Tariff.**—(i) *General.* The first Commonwealth Customs Tariff was introduced by Resolution on 8th October, 1901, from which date uniform duties came into effect throughout Australia. The tariff has since been extensively amended.

The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to certain imports from certain countries of the Commonwealth of Nations. Duties are also imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

Australia has three classes of tariff—the British Preferential Tariff, the Intermediate Tariff and the General Tariff.

(ii) *British Preference.* British Preferential Tariff rates of duty apply to goods the produce or manufacture of the United Kingdom, provided that such goods comply with the laws and statutory regulations in force at the time affecting the grant of preference,

and that the goods have been shipped in the United Kingdom to Australia and have not been transhipped, or, if transhipped, it is proved to the satisfaction of the Collector of Customs that the intended destination of the goods, when originally shipped from the United Kingdom, was Australia. For the purpose of the preferential tariff, the following goods are deemed by section 151A of the *Customs Act* 1901-1963 to be the produce or manufacture of the United Kingdom, provided the final process of their production or manufacture was performed in that country.

- (a) Goods which are wholly produced or wholly manufactured in the United Kingdom from materials in one or more of the following classes:—
 - (i) materials wholly produced or wholly manufactured in the United Kingdom or in Australia;
 - (ii) imported unmanufactured raw materials; or
 - (iii) imported manufactured raw materials as determined by the Minister.
- (b) Goods of the factory or works cost of which not less than 75 per cent. is represented—
 - (i) by labour or material of the United Kingdom; or
 - (ii) by labour or material of the United Kingdom and labour or material of Australia.
- (c) Goods of a class or kind not commercially produced or manufactured in Australia and of the factory or works cost of which not less than 25 per cent. (or 50 per cent. if the Minister so determines) is represented—
 - (i) by labour or material of the United Kingdom; or
 - (ii) by labour or material of the United Kingdom and labour or material of Australia.

The British Preferential Tariff also applies to the Republic of Ireland and, with the exception of a relatively small number of commodities which carry special rates of duty, to Canada, New Zealand (except Cook Islands) and the Territory of Papua and New Guinea, and the abovementioned preference conditions apply *mutatis mutandis* to each of those countries, except that in respect of New Zealand the percentage content of goods under clause (b) of the said conditions is 50 per cent. of New Zealand and Australian labour and materials or 75 per cent. of New Zealand and United Kingdom or of New Zealand, Australian and United Kingdom labour and materials. In relation to certain goods, the British Preferential Tariff also applies to specified countries of the Commonwealth of Nations and most of the British non-self-governing colonies, protectorates and trust territories.

(iii) *Intermediate Tariff.* The Intermediate Tariff has been a feature of the Australian Tariff for a considerable number of years, although its effective application dates only from 1st January, 1937, consequent upon the conclusion of trade agreements with Belgium, Czechoslovakia and France in 1936. The countries to which the Intermediate Tariff applies include those countries with which Australia has concluded trade agreements (including tariff negotiations pursuant to the General Agreement on Tariffs and Trade) and countries which accord Australia reciprocal most-favoured-nation tariff treatment by reason of agreements between those countries and the United Kingdom. The Intermediate Tariff has also been extended to some countries to which Australia has no formal obligation to accord most-favoured-nation treatment. The countries and the particular tariff items to which the Intermediate Tariff applies are specified by Ministerial order.

(iv) *General Tariff.* The General Tariff applies to goods other than those to which the British Preferential Tariff or Intermediate Tariff or special rates under trade agreements apply.

4. *Primage Duties.*—In addition to the duties imposed by the Customs Tariff, *ad valorem* primage duties at rates of 4 per cent., 5 per cent. or 10 per cent. are charged on some goods according to the type of goods and origin thereof. Other goods are exempt from primage duty. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji, Cocos Islands, Christmas Island and the Territory of Papua and New Guinea are exempt from primage duty.

5. **Tariff Board.**—The *Tariff Board Act 1921–1962* provides for the appointment of a Tariff Board consisting of eight members. Of these, two must, and three may, be members of the Commonwealth Public Service at the time of their appointment (or first appointments in the case of re-appointments). Members of the Board are appointed for terms of not less than one year and not more than five years. The purpose of the Tariff Board is to advise the Government on matters relating to the protection and encouragement of Australian industry.

The Minister of State for Trade and Industry is required to refer to the Board for inquiry and report the following matters:—the necessity for new, increased, or reduced duties; the necessity for granting bounties and the effect of existing bounties; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods by charging unnecessarily high prices for his goods or acting in restraint of trade. In addition, the Minister may refer the following matters to the Tariff Board for inquiry and report:—the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws on the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and other matters affecting the encouragement of primary and secondary industries in relation to the Tariff. The Minister of State for Customs and Excise may refer to the Tariff Board for inquiry and report the following matters:—the classification of goods in the Customs Tariff or Excise Tariff and matters in connexion with the interpretation of these Tariffs; the question of the value for duty of goods; whether goods not prescribed in departmental by-laws should be so prescribed; and any matters in respect of which action may be taken under the *Customs Tariff (Dumping and Subsidies) Act 1961*.

Where a matter of the necessity for new or increased duties on any goods has been referred to the Board for inquiry and report, the Board may, in its report, recommend the restriction of the importation of those goods for such period as is specified in the report.

Inquiries conducted by the Board relating to a revision of the Tariff, a proposal for a bounty, a question under the Customs Tariff (Dumping and Subsidies) Act, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods, are held in public, and evidence in such inquiries is taken in public on oath, unless the Board accepts evidence as confidential or in the form of a written statement by a witness on oath. The Board is required to make available to the public the contents of any such written statement except any matter which it accepts as confidential.

6. **Special Advisory Authority.**—The Minister for Trade and Industry may also request a Special Advisory Authority to inquire into cases where urgent action appears necessary to protect an Australian industry against import competition pending receipt and consideration of a full report by the Tariff Board. The Special Advisory Authority's report must be submitted to the Minister within thirty days of the making of the request. Temporary protection recommended by a Special Advisory Authority may be imposed, but may only operate for a period of up to three months after the date of receipt of the final report by the Tariff Board on the goods concerned.

7. **Anti-dumping Legislation.**—The *Customs Tariff (Dumping and Subsidies) Act 1961* provides protection for Australian industry against various forms of unfair trading. Under this Act dumping duty may be imposed on goods that are sold to Australia at an export price which is less than the normal value of the goods, where this causes or threatens material injury to an Australian industry.

“Normal value” under the Act means:—

- (a) fair market value in the country of export;
- (b) price in the country of export to a third country;
- (c) fair market value in a third country; or
- (d) cost of production, plus f.o.b. charges, plus selling costs and profit.

Countervailing duty may be levied on goods in respect of which any subsidy, bounty, reduction, or remission of freight or other financial assistance has been, or is being, paid or granted directly or indirectly upon the production, manufacture, carriage or export of those goods. The amount of the countervailing duty in respect of any goods is a sum equal to the amount of the subsidy, bounty, reduction or remission of freight or other financial assistance.

Special duties may be collected also if dumped or subsidized goods are imported to the detriment of the trade of a third country in the Australian market.

Dumping and countervailing duties may be imposed to protect an Australian industry only after inquiry and report by the Tariff Board.

8. Trade Descriptions.—The *Commerce (Trade Descriptions) Act 1905–1950* gives power to require the application of a proper trade description on certain prescribed goods imported into or exported from Australia. Goods which must bear a prescribed trade description upon importation into Australia are specified in the *Commerce (Imports) Regulations*. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.

9. Import Controls.—*Customs (Import Licensing) Regulations*. A comprehensive system of import licensing was introduced in Australia at the beginning of the second World War under the authority of the *Customs (Import Licensing) Regulations*.

With the end of the War it was possible to relax the restrictions progressively. However, because of a serious deterioration in Australia's external financial position, import licensing controls were reimposed on 8th March, 1952, on imports from all sources except for goods originating in Papua, New Guinea and Norfolk Island.

The object of import licensing was to limit the value of imports to an annual rate determined by the Government in order that payments for imports would not involve an excessive drawing on Australia's overseas exchange reserves. Imports were divided into a number of categories to which different licensing treatment was accorded (largely by the establishment of quotas for individual importers within each category). In general, the nature of goods and their relative importance to the Australian economy were taken into account in determining the licensing rate for particular goods.

Between March, 1952, and February, 1960, import restrictions were relaxed and intensified broadly in line with changes in Australia's balance of payments position.

The import controls were administered without discrimination as to country of origin, with the exception of those relating to imports from Japan and the dollar area. The special restrictions against Japanese imports were removed in July, 1957, and from October, 1955, Australia progressively removed discrimination against imports from the dollar area.

In accordance with the principle of relaxing and removing controls in the light of developments in Australia's balance of payments position, large-scale licensing changes involving the almost complete abolition of controls were made as from 23rd February, 1960. As a result of these changes, some 90 per cent. of total imports were exempted from control. The remaining import licensing controls were removed on 18th October, 1962, with the exception of some goods retained under control for reasons associated with the protection of the Australian industries concerned. The goods falling within this latter category at 31st December, 1964, are broadly described as:—aluminium and aluminium alloy, ingot and preliminary shapes, and waste and scrap; and used, secondhand or disposal earthmoving and construction equipment.

The administration of the import controls is the responsibility of the Department of Trade and Industry, although the issue of import licences is a function of the Department of Customs and Excise at the various ports of the Commonwealth.

10. Export Controls.—(i) *Commodity Control*. Section 112 of the *Customs Act* provides that the Governor-General may, by regulation, prohibit the exportation of goods from Australia, and that this power may be exercised by—(a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with. Goods subject to this export control are listed in the *Customs (Prohibited Exports) Regulations*.

(ii) *Exchange Control—Banking Act 1959*. As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the *Banking (Foreign Exchange) Regulations*, to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Reserve Bank of

Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations and under Part IV. of the *Banking Act 1959* to control the movement out of Australia of capital in the form of securities, currency and gold.

Export licences are issued subject to terms and conditions specified in the Banking (Foreign Exchange) Regulations, and may be subject to such further terms and conditions as are determined, or may be free from terms and conditions. On the receipt in Australia by the Reserve Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Reserve Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions involving exports, movements of personal effects are also controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds £A.125, or where jewellery and other articles of high intrinsic worth either exceed £A.1,000 in value or have not been the personal property of the passenger for at least twelve months.

11. **Trade Agreements.**—(i) *The United Kingdom.* The original United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on 20th August, 1932. Under this agreement, Australia secured preferences in the United Kingdom market for a wide range of Australian export commodities, and in return assumed obligations in respect of tariff levels and the grant of preference to United Kingdom goods.

A new Trade Agreement, designed to replace the original agreement and correct the unbalance in benefits which had emerged in the 25 years of its operation, came into effect on 9th November, 1956. Briefly, this agreement preserves security for Australian exports in the United Kingdom market, but lowers the obligatory margins of preference which Australia extends to the United Kingdom (see also pp. 495–6).

(ii) *Canada.* The existing agreement between Australia and Canada came into force on 30th June, 1960, replacing an agreement signed on 3rd August, 1931. The agreement provides for Australian goods to receive British Preferential Tariff rates, or better, upon entry into Canada, and for Canada to maintain margins of preference in favour of Australia on a range of commodities. The agreement specifies that Canadian goods, with some exceptions, shall receive the benefit of the British Preferential Tariff upon importation into Australia and that Australia shall maintain margins of preference in favour of Canada on a range of commodities. The agreement continues subject to six months notice.

(iii) *New Zealand.* The existing trade agreement between Australia and New Zealand came into force on 1st December, 1933. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are listed in the schedules to the agreement.

(iv) *Southern Rhodesia, Zambia and Malawi.* A trade agreement was negotiated with the Federation of Rhodesia and Nyasaland in June, 1955. Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco. The Federation accorded preferential tariff treatment on a wide range of Australian export products. Following the dissolution of the Federation in December, 1963, the agreement has been applied on a provisional basis to each of the three constituent countries—Southern Rhodesia, Zambia and Malawi.

(v) *Malaysia.* A trade agreement was signed with the former Federation of Malaya on 26th August, 1958. By common consent, the agreement continues in force, applying only to that part of Malaysia which formerly comprised the Federation of Malaya. (For administrative purposes this area is now known as the States of Malaya.) The trade agreement provides for concessional rates of duty on a limited number of items on both sides, and includes anti-dumping clauses to protect Malayan rubber and tin and Australian wheat and flour. The Agreement continues in force indefinitely, subject to six months notice of termination by either party. A review of the operation of the agreement is due every two years.

(vi) *Japan.* An Agreement on Commerce between the Commonwealth of Australia and Japan was signed on 6th July, 1957, and formally ratified on 4th December, 1957. It was provided that the Agreement would remain in force until 5th July, 1960, and thereafter

unless prior notice of termination should be given by either government. The agreement provides that each country shall extend most-favoured-nation treatment to the other in respect of customs duties and similar charges and import and export licensing. Japan is not entitled to claim the benefit of preferences accorded by Australia to Commonwealth countries and dependent territories. Japan also gave certain specific commitments on some important Australian export commodities.

Following a review of the agreement, a Protocol of Amendment was signed on 5th August, 1963, and formally ratified on 27th May, 1964. Under the Protocol, Australia agreed to withdraw action against Japan under Article XXXV of the General Agreement on Tariffs and Trade, and thus a full G.A.T.T. relationship was established between the two countries.

The specific undertakings agreed in 1957 have now lapsed and the following commitments entered into.

Japan has—

- (a) undertaken not to accord less favourable import treatment (apart from tariff) for raw wool than for raw cotton,
- (b) stated that it has no present intention of imposing a duty on wool,
- (c) undertaken to continue imports of Australian soft wheat at a stabilized level, and to purchase Australian hard wheat when necessary requirements are met,^a
- (d) stated that it will endeavour to expand opportunities for imports into Japan of Australian sugar, canned meat, leather, motor vehicles, butter and cheese.

Australia has—

- (a) undertaken to consult Japan on temporary protection cases affecting Japanese products (in such consultations Japan will consider whether the need for temporary protection can be obviated by measures taken in Japan),
- (b) stated that equal opportunities of fair and equal competition are accorded to Japanese products in Australian Government purchases overseas.

The new agreement will be effective for three years from the date of ratification and thereafter subject to three months' notice of termination by either Government. There is provision for consultations to take place at least annually.

(vii) *Federal Republic of Germany.* An agreement signed in October, 1959, provided for annual import quotas for Australian wheat, coarse grains, frozen mutton and lamb, canned meat, fruits preserved in sugar, canned tropical fruit and wine. The agreement also provided for Australia to be included in all global tenders for whole and skim milk powder, butter, cheese, frozen beef, apples, pears, canned fruits, jam and casein.

The agreement operated until December, 1962. Since that time, for each succeeding year, the Federal Republic has agreed to accord similar treatment, except for those products which have become subject to the common agricultural policy of the European Economic Community.

(viii) *Indonesia.* This agreement came into operation on 1st July, 1959. It records the desirability of expanding trade between Australia and Indonesia. It also gives special recognition to the importance of the flour trade from Australia to Indonesia. Australia recognizes the importance to Indonesia of its traditional export items to Australia. The agreement is subject to review and renewal annually.

(ix) *Other Countries.* Australia has entered into bilateral agreements with South Africa, Brazil, Czechoslovakia, Greece and Switzerland. Summaries of the texts of these agreements were given in earlier issues of the Official Year Book. In 1951, Australia entered into a trade agreement with Israel under which each country undertook to accord most-favoured-nation treatment to imports from the other. A similar agreement with Iceland was concluded in 1952.

(x) *The General Agreement on Tariffs and Trade (G.A.T.T.).* The General Agreement on Tariffs and Trade, of which Australia is an original member, is an international trade agreement which has been in operation since 1st January, 1948. Some of the provisions of the Agreement were revised in 1954 and 1955.

* "Soft" wheat is fair average quality wheat; "hard" wheat is premium grade wheat similar to that grown in North America.

The objectives of the G.A.T.T. include the expansion of world trade and the raising of living standards throughout the world. Its members work towards these objectives by the reduction of tariffs and other barriers to trade, and by reduction of discrimination between countries through negotiations on a reciprocal and mutually advantageous basis. The essential features of the G.A.T.T. are the schedules of tariff concessions which its members have agreed to apply consequent to tariff negotiations with each other, the application of most-favoured-nation treatment among its members, the avoidance of trade discrimination, and a code of agreed commercial policy rules for fair international trading.

Five series of tariff negotiations have been completed under the provisions of the General Agreement. As a result of these negotiations, Australia has obtained tariff concessions on a number of products of which it is an actual or potential exporter to the individual countries concerned. These concessions were a result both of direct negotiation by Australia and of negotiations by other countries—in the latter case, benefits occur through the operation under the Agreement of the most-favoured-nation principle.

In 1958 a Committee was set up to examine problems of expansion of trade in agricultural products and obstacles to the expansion of trade of under-developed countries, and in 1962 groups were set up to study the problems of trade in cereals and meat. Little progress has been made, however, in resolving the problems of expanding trade in agricultural products.

In May, 1963, a Ministerial meeting of Contracting Parties was convened principally to make arrangements for a new round of trade negotiations commencing in 1964—the "Kennedy Round". The chief characteristics of the present proposals for Kennedy Round negotiations is that they contemplate a linear or "across the board" cut in tariffs of a suggested depth of 50 per cent. (whereas previous rounds were confined to negotiation of tariff cuts on an item-by-item basis) and are expected to embrace non-tariff barriers. The negotiations are intended to cover agricultural as well as other products.

There are at present (January, 1965) 64 Contracting Parties to the Agreement, comprising most of the world's larger trading nations, and further countries are seeking accession or have some provisional association with the G.A.T.T. The Contracting Parties periodically hold plenary sessions to deal with the questions arising out of the administration of the Agreement. The 21st Session was held in February/March, 1964 and the 22nd Session was held in March, 1965. A permanent Council has been set up to deal with urgent business arising between sessions and gives preliminary consideration to work arising at the sessions.

§ 2. Imperial Preference in the United Kingdom

1. **Preferential Tariff of the United Kingdom.**—A brief summary of the preferential tariff of the United Kingdom in the years prior to 1931 was published in Year Book No. 43, page 328. Further details were published in Year Book No. 48, page 474.

Since 30th October, 1947, Canada and the United Kingdom have, by an exchange of letters, recognized the rights of their respective Governments to reduce or eliminate the preferences they accord one another without prior consultation or consent.

In 1947 the United Kingdom and Australia adhered to the General Agreement on Tariffs and Trade, which prohibits increases in tariff preferences by either country. This rule, as is the case with the other provisions of the General Agreement, may be waived by a two-thirds majority of the signatories to the agreement.

2. **The Australia-United Kingdom Trade Agreement.**—The provisions and history of the original Australia-United Kingdom Agreement (Ottawa Agreement) were published in Year Book No. 43, page 329.

The major provisions of the current agreement (operative since 9th November, 1956) which affect Australia's position in the United Kingdom market are as follows.

- (a) Continued free entry for those Australian goods in which Australia has an active trade interest, and which were accorded free entry immediately prior to the new agreement.

- (b) A guaranteed minimum margin of preference in the United Kingdom Tariff on all items so treated in the previous agreement plus an extension of this guarantee to several items on which the margin of preference, although in force, was not bound to Australia. This latter group comprised currants, egg powder and egg pulp, jam, rice, tomato juice, pineapple juice and coconut oil. A selection of the items on which Australia receives a bound margin of preference and the extent of that preference is as follows (all values in sterling):—cheese (15 per cent. *ad val.*); canned peaches, pears and apricots (12 per cent. *ad val.*); raisins (8s. 6d. a cwt.); eggs in shells (1s. to 1s. 9d. a great hundred (10 dozen)); milk powder (6s. a cwt.); sweetened condensed milk (5s. a cwt.); apples (4s. 6d. a cwt. in season); honey (5s. a cwt.); flour (10 per cent. *ad val.*); light wine (2s. a gallon); heavy wine (10s. a gallon at present duty rate).
- (c) All rights under the Ottawa Agreement in respect of meat are maintained.
- (d) Australia receives an assured wheat market of at least 750,000 tons f.a.q. wheat or flour equivalent annually. Any Australian high-protein wheat sold to the United Kingdom is not counted against this obligation.
- (e) There is provision for full consultation between the two Governments on such matters as agricultural production and marketing, transport and communication, the disposal of surpluses and restrictive business practices.
- (f) The agreement shall be the subject of re-negotiation between the two Governments during the fifth year of its operation. (By agreement between the two Governments this re-negotiation has been postponed.)

§ 3. Trade Commissioner Service

The stimulation of interest abroad in Australia's exports is an important government activity in which the Australian Trade Commissioner Service plays a prominent part. The origin of official Australian trade representation abroad dates back to 1921, when the first Trade Commissioner was appointed to Shanghai. In the following year, a second Commissioner was appointed to Singapore. These appointments, however, were terminated shortly afterwards.

In 1929, a Trade Commissioner post was opened at Toronto. Wellington was opened five years later. The *Trade Commissioners Act 1933* provided for the establishment of an Australian Government Trade Commissioner Service. In 1935, official trade representation was established at Batavia (now Djakarta), Shanghai and Tokyo. Cairo, New York and Calcutta posts were opened between 1937 and 1939 and the Singapore post was established in 1941.

After the War, the service increased steadily to take care of Australia's expanding export interests and the growing diversity of our export commodities. By December, 1964, there were 41 Trade Commissioner posts in 30 countries. In 1964 new posts were opened in The Hague, the Netherlands; Vienna, Austria; Hamburg, West Germany; and Brussels, Belgium.

In 1957 Australia's official commercial representation overseas was extended by the introduction of a system of government Trade Correspondents. These men, who as a rule already reside in particular centres overseas, are engaged on a part-time basis to carry out market research, arrange introductions between buyer and seller, and generally promote Australia's trade interests in the same way as Trade Commissioners. Each Trade Correspondent operates under the general direction of the nearest Trade Commissioner.

The first two Australian Trade Correspondents were appointed in 1957 at Montevideo, Uruguay, and Nairobi, Kenya (since replaced by a Trade Commissioner). In 1958, four more were appointed at Suva, Honolulu (discontinued in 1963), Mauritius and Mexico City. Appointments have since been made at Taiwan, Malta, Istanbul and Madrid.

Trade Commissioners and, to a lesser extent, Trade Correspondents, are responsible for commercial intelligence in their territories. Particular facilities provided for Australian exporters and export organizations include—

- (a) surveys of market prospects;
- (b) advice on selling and advertising methods;
- (c) arranging introductions with buyers and agents;
- (d) providing reports on the standing of oversea firms;
- (e) advice and assistance to business visitors;
- (f) helping to organize and carry through trade missions, trade displays, newspaper supplements and other promotion and publicity media;
- (g) providing information on import duties, import licensing, economic conditions, quarantine and sanitary requirements, and other factors affecting the entry and sale of goods;
- (h) helping to attract desirable investment.

In some countries, Trade Commissioners also participate in inter-governmental negotiations in the economic and commercial fields. In certain countries where there is no diplomatic or consular mission he is called upon to act as the Australian representative.

Trade Commissioners usually enter the Service from either private enterprise or the public service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts the Trade Commissioner is supported by an Assistant Trade Commissioner, who normally qualifies at a later stage for appointment as a Trade Commissioner.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade and Industry (as distinct from the diplomatic and consular services administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The oversea trade representation is shown in Chapter XXIX. International Relations.

§ 4. Australian Trade Missions

During the last ten years the Australian Government has sent a number of Trade Missions abroad as part of the campaign to increase exports.

Experience in this field has indicated the need to vary the technique to suit particular products or markets.

At present the following two trade mission techniques are in use.

- (a) *Survey Mission.* This is organized to obtain precise knowledge about trade potential for specific products in an oversea market. This method is adopted for new or developing areas where commercial intelligence is not readily available or where a complex industry is involved and requires technical knowledge. Seven such missions have been organized to date.
- (b) *Specialized Selling Mission.* The approach is to organize a specific industry or group of industries to participate in a planned selling campaign in oversea markets with known sales potential. The group visits the market, exhibits and publicizes its products and negotiates sales. Two specialized selling missions have been organized in recent years.

Survey and selling missions have developed from the general trade missions of the past which comprised members with a wide variety of interests and objectives. In addition to the missions mentioned above, Australia has sent overseas since 1954, 15 general trade missions and four trade ships.

Further details on Trade Missions are included in Year Book No. 49, page 544.

§ 5. Export Payments Insurance Corporation

The *Export Payments Insurance Corporation Act 1956* established the Corporation with the objective of protecting Australian exporters against risks of loss arising from non-payment of their overseas accounts.

The Corporation is charged to be self-supporting and operates on principles similar to those of any other form of insurance. There is no overlap with normal insurance facilities, since the Corporation does not cover risks which can normally be insured with commercial insurers.

The main risks of loss against which the Corporation insures are the "commercial" risks of the insolvency or protracted default of the buyer, and "political" risks. The cover for "commercial" risks is a maximum of 85 per cent., and the cover on "political" risks a maximum of 90 per cent. for the amount of loss in the pre-shipment period and a maximum of 95 per cent. in the post-shipment period.

The initial capital of the Corporation was £500,000 and the maximum contingent liability limit for contracts of insurance issued to exporters, £25,000,000. In April, 1959, these limits were increased to £1,000,000 and £50,000,000 respectively, to meet the then existing demands of the Australian exporter for this facility. In November, 1964, it was found necessary to increase the maximum contingent liability figure again to £75,000,000; the capital remained unchanged.

Further information on the Corporation is contained in Year Book No. 49, page 544. For particulars of its operations, see Chapter XXI. Private Finance.

§ 6. Method of Recording Imports and Exports

1. **Source of Statistics.**—Overseas trade statistics are compiled from documents obtained under the *Customs Act 1901–1963* and supplied to the Commonwealth Bureau of Census and Statistics by the Department of Customs and Excise. Certain items are excluded for which customs entries are not required. See sub-para. (viii) Balance of Payments, page 500.

2. **Customs Area.**—The area to which all overseas trade statistics issued by this Bureau apply is the whole area of the Commonwealth of Australia. Non-contiguous territories are treated as outside countries, and trade transactions between Australia and these non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular country is separately recorded and tabulated.

3. **The Trade System.**—There are two generally accepted systems of recording overseas trade statistics, namely (a) special trade and (b) general trade. Statistics of both are published by the Bureau, although greater emphasis is placed on general trade. The Statistical Office of the United Nations defines the two systems as follows.

“*System of Trade.* Two systems of recording trade are in common use, differing mainly in the way warehoused and re-exported goods are recorded.

(a) *Special Trade.* Special imports are the combined total of imports directly for domestic consumption (including transformation and repair) and withdrawals from bonded warehouses or free zones for domestic consumption. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported without transformation.)

(b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. General exports are the combined total of national exports and re-exports. *Re-exports*, in the general trade system, consist of the outward movement of nationalized goods plus goods which, after importation, move outward from bonded warehouse or free zone without having been transformed.

Direct transit trade, i.e., goods merely being transhipped or moving through the country for purposes of transport only, is excluded from the statistics of both special and general trade."

The tables which follow refer to general trade, except for those appearing in § 17, para. 2, which refer to imports cleared for home consumption.

4. **Statistical Classification of Imports and Exports.**—Statistics of overseas imports and exports from which the summary tables in this issue of the Official Year Book have been extracted were compiled according to the revised classification which came into operation on 1st July, 1945. This classification is designed to allow for the inclusion of items which become significant with varying trade conditions, and in 1963–64 provided for over 3,700 import items and over 1,300 export items.

5. **The Trade Year.**—From 1st July, 1914, the statistics relating to overseas trade have been shown according to the financial year (July to June). Prior to that date, the figures related to the calendar year. A table is included in § 18 showing the total value of imports and exports in the calendar years 1960 to 1964 inclusive.

6. **Valuation.**—(i) *Imports.* The recorded value of goods imported from countries beyond Australia as shown in the following tables represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*.

Section 154 (1) of the *Customs Act* 1901–1963 provides that "when any duty is imposed according to value, the value for duty shall be the sum of the following:—

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export."

"Current domestic value" is defined as "the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country". *The recorded values of Australia's imports, as shown throughout this and other chapters of this issue of the Official Year Book, are therefore "transaction value (f.o.b.)" or "domestic value (f.o.b.)", whichever is the higher. These values are f.o.b. port of shipment Australian currency.*

(ii) *Exports.* Since 1st July, 1937, the following revised definitions of f.o.b. values have been adopted for exports generally.

- (a) Goods sold to overseas buyers before export—the Australian f.o.b. port of shipment equivalent of the price at which the goods were sold (e.g., as regards wool, the actual price paid by the overseas buyer plus the cost of all services incurred by him in placing the wool on board ship).
- (b) Goods shipped on consignment—the Australian f.o.b. port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. port of shipment equivalent of the current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. port of shipment equivalent of the price ultimately received).

Exporters are required to show all values in terms of Australian currency and to include the cost of containers.

An account of the bases of valuation in operation prior to 1st July, 1937, was given on page 469 of Year Book No. 39.

7. **Inclusions and Exclusions.**—(i) *Stores.* Prior to 1906 goods shipped in Australian ports on oversea vessels as ships' stores were included as exports. From 1906 ships', and subsequently aircraft, stores have been specially recorded as such, and omitted from the tabulation of exports. A table showing the value of these stores shipped each year since 1959-60 is shown on page 523.

(ii) *Outside Packages.* Outside packages (containers, crates, etc.) have always been included as a separate item in the tabulation of imports, but, except for those received from the United Kingdom, a classification according to country of origin has been available only since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.

(iii) *Trade on Government Account.* Imports and exports on Government account are treated as normal transactions and are an integral part of oversea trade transactions.

(iv) *Currency.* Notes and coins are included in the oversea trade statistics at their commodity value only.

(v) *Gold Content of Ores and Concentrates.* The value of ores and concentrates imported and exported includes the value of the gold content. The latter is not recorded separately for purposes of inclusion in imports and exports of gold.

(vi) *Migrants' Effects.* Migrants' effects are included in imports and exports.

(vii) *Direct Transit Trade.* Particulars of direct transit trade through Australia are not recorded.

(viii) *Balance of Payments.* Statistics relating to oversea trade do not measure Australia's total balance of payments during the period shown. Particulars of other transactions entering into the balance of payments, for example, freight charges and oversea travel, payment of dividends, profits and interest, and government expenditure overseas, are provided in the statistical bulletin *Balance of Payments: Quarterly Summary* issued by the Commonwealth Statistician (see also § 20, p. 529). For items such as naval ships, merchant vessels trading overseas, aircraft for use on oversea routes, uranium and certain materials for inter-governmental defence projects, no customs entries are recorded, but these items are taken into account in estimates of the balance of payments.

8. **Countries.**—(i) *Imports.* From 1st January, 1905, in addition to the record of the countries whence goods arrived directly in Australia a record of the countries of their origin was kept, as it was considered that classification of imports according to country of origin was of greater interest and value than classification according to country of shipment. Up to and including the year 1920-21 imports continued to be classified both according to country of shipment and according to country of origin, but the former tabulation was discontinued as from the year 1921-22. "Country of origin" referred to in import tables should be taken to mean the country of production.

(ii) *Exports.* In the export sections of tables in this chapter, "country" refers to the country to which the goods were consigned so far as this can be determined at the time of export.

9. **Quantities.**—Where quantities are shown, they are generally, but not invariably, expressed in terms of the normal trade unit. Where "cental" is used, the unit is equivalent to 100 lb. avoirdupois. Quantities are not tabulated in respect of items for which there is no appropriate unit of quantity (e.g. an item which covers a number of commodities and cannot be recorded under a uniform unit of quantity).

10. *Pre-federation Records.*—In the years preceding Federation each State recorded its trade independently, and in so doing did not distinguish the other Australian States from foreign countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Year Book prior to No. 41. On the introduction of the *Customs Act* 1901, the methods of recording values were made uniform throughout the States.

§ 7. Total Oversea Trade

1. *Including Gold.*—The following table shows the total trade (including gold) of Australia with overseas countries from 1901 to 1963–64. The period 1901 to 1955–56 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for the individual years were published in earlier issues, but figures for imports in issues prior to No. 37 were expressed in British currency.

VALUE OF OVERSEA TRADE: AUSTRALIA

(INCLUDING GOLD)

(£A. f.o.b.)

Period	Imports	Exports	Total	Excess of exports (+) or imports (-)	Value per head of population		
					Imports	Exports	Total
Annual Average—	£'000	£'000	£'000	£'000	£	£	£
1901 to 1905 ..	35,689	51,237	86,926	+ 15,548	9.1	13.1	22.2
1906 to 1910 ..	46,825	a 69,336	116,161	+ 22,511	11.0	16.3	27.3
1911 to 1915–16 ..	66,737	74,504	141,241	+ 7,767	13.8	15.4	29.2
1916–17 to 1920–21	91,577	115,066	206,643	+ 23,489	17.4	21.9	39.3
1921–22 to 1925–26	124,404	134,545	258,949	+ 10,141	21.1	22.9	44.0
1926–27 to 1930–31	119,337	131,382	250,719	+ 12,045	18.6	20.5	39.1
1931–32 to 1935–36	73,798	120,958	194,756	+ 47,160	11.1	18.1	29.2
1936–37 to 1940–41	123,553	157,610	281,163	+ 34,057	17.8	22.7	40.5
1941–42 to 1945–46	211,514	163,955	375,469	– 47,559	29.1	22.4	51.5
1946–47 to 1950–51	449,273	571,430	1,020,703	+ 122,157	57.2	72.7	129.9
1951–52 to 1955–56	782,794	786,128	1,568,922	+ 3,334	87.8	88.2	176.0
Year—							
1954–55 ..	843,742	774,164	1,617,906	– 69,578	92.8	85.2	178.0
1955–56 ..	821,088	781,864	1,602,952	– 39,224	88.1	83.9	172.0
1956–57 ..	718,991	992,906	1,711,897	+ 273,915	75.4	104.2	179.6
1957–58 ..	791,940	817,946	1,609,886	+ 26,006	81.3	83.9	165.2
1958–59 ..	796,599	811,463	1,608,062	+ 14,864	80.0	81.5	161.5
1959–60 ..	927,091	937,682	1,864,773	+ 10,591	91.1	92.2	183.3
1960–61 ..	1,087,577	968,843	2,056,420	– 118,734	104.6	93.2	197.8
1961–62 ..	884,746	1,077,284	1,962,030	+ 192,538	83.4	101.6	185.0
1962–63 ..	1,081,335	1,075,906	2,157,241	– 5,429	100.0	99.5	199.5
1963–64 ..	1,186,329	1,391,230	2,577,559	+ 204,901	107.6	126.2	233.8

(a) Prior to 1906, ships' stores were included in exports. For the value of such goods shipped on overseas vessels and aircraft during each of the years 1959–60 to 1963–64, see table in § 13 on p. 523.

A graph showing the overseas trade of Australia from 1945–46 to 1963–64 appears on page 509.

2. Excluding Gold.—The following table shows particulars of merchandise trade (including silver and bronze as merchandise), from which all gold movements have been excluded.

VALUE OF OVERSEA TRADE: AUSTRALIA
(EXCLUDING GOLD)
(£A. f.o.b.)

Year	Imports	Exports	Total	Value per head of population		
				Imports	Exports	Total
				£	£	£
1959-60 ..	£'000 924,568	£'000 927,471	£'000 1,852,039	91.0	91.2	182.2
1960-61 ..	1,085,374	928,884	2,014,258	104.5	89.4	193.9
1961-62 ..	882,598	1,068,307	1,950,905	83.2	100.7	183.9

2. According to Major Groups of Countries.—(i) *Countries included in Major Groups.* The following table shows the major groups of countries referred to in the tables on pages 504-5 and 533-4.

COUNTRIES INCLUDED IN MAJOR GROUPS

Sterling area	Non-sterling countries	
United Kingdom	North America—	Eastern Europe, China
British East Africa, British Pacific Islands, British West Africa, West Indies, Hong Kong and other British colonies and dependencies (excluding New Hebrides)	Canada	(Mainland), etc.—
	United States of America and dependencies	<i>continued</i>
	European Economic Community(a)—	Poland
	Belgium-Luxembourg	Romania
	France	Union of Soviet Socialist Republics
	Germany, Federal Republic of	China (Mainland)
	Greece	Korea (North)
	Italy	Vietnam (North)
Australia and Territories (including Papua and New Guinea)	Netherlands (excluding dependencies)	Principal other countries—
Ceylon	European Free Trade Association (other than the United Kingdom)(a)—	Argentina
Ghana	Austria	Brazil
India	Denmark	China, Republic of (Formosa)
Malaysia, Federation of (Malaya, Sabah, Sarawak and Singapore)	Finland	Indonesia
New Zealand and dependencies	Norway	Iran
Pakistan	Portugal	Iraq
Rhodesia and Malawi	Sweden	Japan
Other Commonwealth countries	Switzerland	Korea, Republic of
Arabian States of Bahrain, Kuwait, Qatar, and Trucial States	Eastern Europe, China (Mainland), etc.—	Mexico
Burma	Albania	Netherlands dependencies
Iceland	Bulgaria	Peru
Ireland	Czechoslovakia	Philippines
Jordan	Germany (East)	Spain
Libya	Hungary	Saudi Arabia
South Africa		Thailand
		Turkey
		United Arab Republic
		Venezuela
		Yugoslavia

(a) Includes dependent territories, associated communities, etc., unless otherwise stated.

(ii) *Trade with Major Groups.* The following table shows the trade of Australia with the major groups of countries shown above during the years 1962-63 and 1963-64. Particulars of Australia's balance of payments with countries in these groups are shown on pages 533-4.

Total Exports (Australian Produce)	201,544	197,398	251,984

(a) 2,000 lb.

(b) Excludes railway sleepers.

4. Imports from the United Kingdom and Competing Countries.—Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8th August, 1907, the Commonwealth Customs Tariffs have provided preferential rates of customs duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on pages 495–6 in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. Imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom cannot supply. These items, in addition to others not available from that country, have therefore been omitted from the following table.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, the Federal Republic of Germany, Japan, and the United States of America. These countries have been selected as the principal competitors in normal times with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1961–62 to 1963–64 are shown in the following table.

VALUE OF IMPORTS FROM THE UNITED KINGDOM AND ITS MAIN COMPETITORS: AUSTRALIA

(\$A.'000 f.o.b.)

Nature of imports	Year	United Kingdom	France	Federal Republic of Germany	Japan	United States of America	All countries
Foodstuffs of animal origin	1961-62	1,932	11	315	2,504	1,037	11,271

(a) 2,000 lb.

A graph showing exports in principal commodity groups in each of the years 1953-54 to 1963-64 will be found on page 512.

4. Imports of Merchandise and Bullion and Specie.—The table hereunder shows the value of imports into Australia during each of the years 1959-60 to 1963-64, grouped under the headings—Merchandise, and Bullion and specie. The imports of merchandise are shown under the sub-headings of "free" and "dutiable" goods.

**VALUE OF IMPORTS OF MERCHANDISE, AND BULLION AND SPECIE:
AUSTRALIA
(£A.'000 f.o.b.)**

Year	Merchandise			Bullion and specie	Total imports
	Free goods	Dutiable goods	Total		
1959-60 ..	525,736	398,792	924,528	2,563	927,091
1960-61 ..	594,543	490,788	1,085,331	2,246	1,087,577
1961-62 ..	496,798	385,748	882,546	2,200	884,746
1962-63 ..	601,766	477,011	1,078,777	2,558	1,081,335
1963-64 ..	662,069	521,868	1,183,937	2,392	1,186,329

5. Exports of Merchandise, and Bullion and Specie.—The next table shows the value of exports from Australia during each of the years 1959-60 to 1963-64, grouped under the headings—Merchandise, and Bullion and specie. The exports of Australian produce and re-exports are shown separately.

**VALUE OF EXPORTS OF MERCHANDISE, AND BULLION AND SPECIE:
AUSTRALIA
(£A.'000 f.o.b.)**

Year	Merchandise			Bullion and specie			Total exports
	Australian produce	Re-exports	Total	Australian produce	Re-exports	Total	
1959-60 ..	907,971	17,988	925,959	11,716	7	11,723	937,682
1960-61 ..	901,809	26,232	928,041	40,797	5	40,802	968,843
1961-62 ..	1,041,339	26,546	1,067,885	9,385	14	9,399	1,077,284
1962-63 ..	1,046,054	22,972	1,069,026	6,855	25	6,880	1,075,906
1963-64 ..	1,353,398	27,759	1,381,157	10,059	14	10,073	1,391,230

6. Ratios of Net Customs Revenue to Values of Merchandise Imported.—The following table shows the ratios of net customs revenue collected, including and excluding net primage, to values of merchandise imported during the years 1959-60 to 1963-64. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period. For particulars of customs revenue collections see Chapter XXII. Public Finance.

**RATIOS OF NET CUSTOMS REVENUE COLLECTED TO VALUES OF
MERCHANDISE IMPORTED: AUSTRALIA
(Per cent.)**

Ratio of—	1959-60	1960-61	1961-62	1962-63	1963-64
Net customs revenue collected (excluding net primage) to value of all merchandise imported	8.9	9.2	9.4	9.5	9.6
Net customs revenue collected plus net primage to value of all merchandise imported	9.1	9.4	9.6	9.7	9.8
Net customs revenue collected (excluding net primage) to value of dutiable goods only	19.9	19.5	21.5	20.8	21.8

§ 13. Ships' and Aircraft Stores

The value of ships' and aircraft stores, which are excluded from the export figures, is shown in the following table for each of the years 1959-60 to 1963-64, with separate figures for oils.

**VALUE OF STORES LOADED ON OVERSEA SHIPS AND AIRCRAFT:
AUSTRALIA
(£A. '000 f.o.b.)**

Item	1959-60	1960-61	1961-62	1962-63	1963-64
Oils	7,817	8,937	7,819	6,869	9,131
All stores (including oils) ..	12,413	14,205	13,324	12,937	14,935

In addition to oils, the principal items supplied to oversea ships and aircraft in 1963-64 were:—meats, £1,313,054; fruit and vegetables, £383,174; eggs, £188,596; butter, £131,121; sea food, £189,197; flour, £49,937; rice, £33,961; milk and cream, £31,519; ale, beer, wine, spirits, etc., £594,463; tobacco and cigarettes, £280,974.

§ 14. Movement of Bullion and Specie

1. Imports and Exports.—The following table shows the values of gold and silver bullion and specie, and of bronze specie, imported into, and exported from, Australia during each of the years 1961-62 to 1963-64.

**VALUE OF OVERSEA TRADE OF AUSTRALIA IN BULLION AND SPECIE
(£A. f.o.b.)**

Simply transformed ..	18,091	18,622	18,536	2.0	1.7	1.6
Elaborately transformed ..	153,569	176,584	180,695	17.4	16.4	15.3
Total Imports—						
Crude ..	149,249	167,540	186,957	16.9	15.5	15.8
Simply transformed ..	125,932	156,608	162,247	14.3	14.5	13.7
Elaborately transformed ..	607,365	754,629	834,733	68.8	70.0	70.5
Grand Total ..	882,546	1,078,777	1,183,937	100.0	100.0	100.0

(a) Owing to insufficient information, it is not possible to treat unassembled tractors and other machinery in a similar manner to motor vehicles, and all such machinery and replacement parts therefore are treated as capital equipment whether imported in an assembled or unassembled condition. (b) Excludes a percentage for piece-goods to be sold at retail, and paper to be used solely for wrapping, which are recorded in Finished consumer goods, All other, and Auxiliary aids to production, respectively. (c) See footnote (a). (d) Includes a percentage for piece-goods to be sold at retail; see footnote (b). (e) Excludes crude petroleum, which is included in Producers' materials, Manufacturing—Other. (f) Includes a percentage for paper to be used solely for wrapping; see footnote (b). (g) The class Fuels and lubricants consists of goods "simply transformed" and the classes Capital equipment and Munitions and war stores entirely of goods "more elaborately transformed". The class Auxiliary aids to production is about equally divided between goods "simply" and "more elaborately transformed".

§ 16. Exports According to Industries

1. **Classification.**—The following table provides an analysis of the total recorded value of Australian exports for the years 1961-62 to 1963-64. This analysis is designed to show fluctuations in the value of exports of Australian produce dissected according to the main industry of their origin, although any such classification is necessarily arbitrary in some respects.

VALUES OF EXPORTS OF AUSTRALIAN PRODUCE: INDUSTRIAL GROUPS

Industrial group	Value (£A.'000 f.o.b.)			Proportion of value of exports of Australian produce (excluding gold) (Per cent.)		
	1961-62	1962-63	1963-64	1961-62	1962-63	1963-64
Agriculture, horticulture and viticulture—						
Unprocessed	184,576	143,780	220,086	17.8	13.7	16.2
Processed	83,579	91,879	141,426	8.0	8.8	10.5
Total	268,155	235,659	361,512	25.8	22.5	26.7
Pastoral—						
Unprocessed	439,971	476,853	588,711	42.2	45.6	43.4
Processed	65,520	64,926	72,405	6.3	6.2	5.3
Total	505,491	541,779	661,116	48.5	51.8	48.7
Dairy and farmyard—						
Unprocessed	2,605	2,471	2,477	0.2	0.2	0.2
Processed	41,688	43,535	47,974	4.0	4.2	3.5
Total	44,293	46,006	50,451	4.2	4.4	3.7
Mines and quarries (other than gold)—						
Unprocessed	36,882	31,935	41,056	3.6	3.1	3.0
Processed	39,460	41,039	54,813	3.8	3.9	4.1
Total (a)	76,342	72,974	95,869	7.4	7.0	7.1
Fisheries—						
Unprocessed	6,858	6,629	7,329	0.6	0.6	0.6
Processed	761	359	518	0.1	0.1	0.0
Total	7,619	6,988	7,847	0.7	0.7	0.6
Forestry—						
Unprocessed	607	427	514	0.1	0.1	0.0
Processed	3,296	2,863	2,742	0.3	0.2	0.2
Total	3,903	3,290	3,256	0.4	0.3	0.2
Total, Primary Produce—						
Unprocessed	671,499	662,095	860,173	64.5	63.3	63.4
Processed	234,304	244,601	319,878	22.5	23.4	23.6
Total	905,803	906,696	1,180,051	87.0	86.7	87.0
Manufactures	102,052	102,088	139,806	9.8	9.8	10.3
Refined petroleum oils	21,537	23,391	19,313	2.0	2.2	1.4
Unclassified	12,356	14,282	17,142	1.2	1.3	1.3
Total, Australian Produce (excluding Gold)	1,041,748	1,046,457	1,356,312	100.0	100.0	100.0
Re-exports (excluding Gold)	26,559	22,979	27,773
Gold exports	8,977	6,470	7,145
Total Recorded Value of Exports	1,077,284	1,075,906	1,391,230

2. **Relative Importance of Industrial Groups.**—In the year 1963–64 Australian produce (other than gold) exported amounted to approximately £1,356 million. Of this, £1,180 million or 87 per cent. was mainly produce of primary industries, comprising £860 million of unprocessed produce and £320 million of goods which had been processed in some degree before export. The values of the principal individual items of processed Australian primary produce exported were:—raw sugar, £78,256,000; flour, etc., £21,119,000; canned fruit, £17,118,000; dried fruit, £10,530,000; wool (scoured, tops, etc.), £50,729,000; canned meats, £6,295,000; butter, £27,357,000; milk (condensed, dried, etc.), £9,850,000; pig lead, £15,286,000; lead bullion, £8,789,000; zinc bars, blocks, etc., £8,833,000; copper ingots, £7,407,000; and undressed timber, £2,158,000.

The value of manufactures exported as classified on page 526 was £140 million, approximately 10 per cent. of Australian produce (other than gold) exported in 1963–64. The values of principal individual items here included were:—manufactures of metal, £62,210,000; implements and machinery, £17,504,000; drugs and chemicals, £10,174,000; and paper and stationery, £5,860,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw materials (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and re-exported in the refined form. The values of principal individual items shown as “unclassified” in 1963–64 were:—individual consignments of less than £50 in value, £6,306,000; and military equipment and stores and supplies for Australian projects overseas, £2,415,000.

§ 17. External Trade of Australia and other Countries

1. **Essentials of Comparison.**—Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e. from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium-Luxembourg than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand the same class of trade represents a comparatively small proportion of the total.

2. **“Special Trade” of Various Countries.**—In the following table, the figures, which are expressed in Australian currency, relate as nearly as possible to imports cleared for home consumption in the various countries specified and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed below are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available. Information for countries other than Australia has been extracted from publications of the United Nations.

VALUES OF IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY (a)): VARIOUS COUNTRIES, 1963

Country	Imports cleared c.i.f.	Exports f.o.b.	Total	Trade per head of population

Turkey ..	308.0	164.3	472.3	10.2	5.4	15.6

(a) Includes silver. (b) f.o.b. (c) Covers goods imported less goods re-exported. (d) Covers goods imported as distinct from goods cleared for home consumption. (e) Year ended June, 1963.

§ 18. Oversea Trade in Calendar Years

For the purpose of comparison with countries which record oversea trade in calendar years, the following table has been compiled to show Australian imports and exports for each of the calendar years 1960 to 1964.

VALUE OF OVERSEA TRADE IN CALENDAR YEARS: AUSTRALIA

(£A.'000 f.o.b.)

Year	Merchandise		Bullion and specie		Total	
	Imports	Exports	Imports	Exports	Imports	Exports
1960 ..	1,056,842	874,585	2,389	40,577	1,059,231	915,162
1961 ..	934,333	1,036,950	2,331	17,753	936,664	1,054,703
1962 ..	1,009,594	1,046,550	2,224	5,367	1,011,818	1,051,917
1963 ..	1,106,304	1,243,828	3,328	8,673	1,109,632	1,252,501
1964 p ..	1,327,188	1,356,185	2,355	9,727	1,329,523	1,365,912

§ 19. Excise

Although excise goods have no immediate bearing on oversea trade, the rate of excise duty is in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of customs and excise revenue are shown in Chapter XXII. Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the years 1962-63 and 1963-64.

QUANTITY OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY WAS PAID: AUSTRALIA

Article	1962-63	1963-64	Article	1962-63	1963-64
	'000 gallons	'000 gallons	Cigarettes—machine-made	'000 lb. 44,007	'000 lb. 45,835

Cigars	149	167			

(a) Operative from 30th October, 1963.

§ 20. Balance of Payments

1. *Introduction.*—Estimates of a country's balance of payments are prepared for the purpose of providing a systematic record in money terms of the economic transactions which take place over a period between that country and all other countries. Such records are essential to the examination of influences which external factors have on the domestic economy. The Australian economy is subject to fairly large fluctuations in export income, and it is also affected in important respects by variations in the level of foreign investment and the demand for imports. Consequently, these estimates have always assumed particular importance in this country.

Official estimates of Australia's balance of payments covering the period 1928-29 to 1930-31 were included in the Appendix to Official Year Book No. 24, 1931. Except for the war years (1939 to 1945), estimates have since been published annually. Detailed estimates are currently provided twice yearly in the form of a mimeographed publication *Balance of Payments*. This publication brings the estimates forward to the end of the most recent financial year or half-year and, together with a printed volume *The Australian Balance of Payments, 1928-29 to 1950-51*, provides also a description of the various items included and the sources from which the information is obtained. A summarized statement of the principal current account items and some identified capital movements is prepared and issued on a quarterly basis in the *Balance of Payments—Quarterly Summary*.

The form in which the Australian estimates are presented follows the pattern originally adopted by the International Monetary Fund. In this presentation, a basic distinction is drawn between "current account" transactions and "capital account" transactions. Current account transactions are defined as those which involve changes in the ownership of goods or the rendering of services between residents of Australia and the rest of the world. They include such important items as exports, imports, shipping freights, dividends, profits and interest, travel and government expenditure. The current account also includes transfers in the form of personal gifts and government gifts of technical assistance, for which there is no consideration. Capital account transactions are defined

as those which involve claims to money and titles to investments between residents of one country and those of another country. Details are shown according to whether the items with which transactions are concerned are classified as assets or liabilities. For practical purposes, items are also broadly divisible into investment items (including oversea investment in companies in Australia and government loans), certain financing transactions, and monetary movements (including transactions with the International Monetary Fund and changes in the level of international reserves).

By definition, the balance of payments on current account is always equivalent to the balance on capital account. The net monetary movement is used as a control figure to which the net sum of all other figures must reconcile. However, errors and omissions occur in the estimation of the amounts involved in various items included in both current and capital accounts, and in addition there are timing differences between the statistical recording of trade transactions and certain invisible items, and the relevant foreign exchange transactions. Therefore, in order to preserve the identity between the total shown in the current account and the total shown in the capital account, it is necessary to introduce a "balancing item". The "balancing item" is included in the capital account, but, as mentioned above, it may include discrepancies in the current account, and it does not, as is frequently supposed, include only errors and timing differences related to investment and financing transactions.

Recent changes in the estimates include an adjustment for the estimated excess of the value of imports, as recorded in oversea trade statistics, over the actual selling price to the importer (see Appendix IV. *The Australian Balance of Payments 1957-58 to 1961-62*). Significant amendments to figures previously published for transportation items and changes in concept and presentation were made in the *Balance of Payments 1960-61, 1961-62 and First Half 1962-63*. Information on these changes is provided in "Notes to Tables" and Appendix II. of that publication.

Details of the estimates are assembled from a variety of sources of which the following are the more important:—(i) statistics of exports and imports obtained from Australian trade statistics; (ii) details of the import valuation adjustment obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia; (iii) information on particular invisible current account items and capital movements obtained by regular inquiry from private organizations and government departments; (iv) details of receipts and payments of foreign exchange provided by the banking system; (v) information on dividends remitted, undistributed income and private investment in companies provided by statistics of oversea investment collected by this Bureau; (vi) information on freight on imports and other items concerned with oversea shipping obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia and a survey of shipping operations conducted by this Bureau; and (vii) information on international reserves supplied by the Reserve Bank of Australia.

2. Current Account.—The balance of payments on current account is arranged to show a series of credit items and a corresponding series of debit items. In general, entries on the credit side include all current transactions which result in receipts of foreign exchange (for goods and services, investment income or donations), and on the debit side the similar transactions which result in payments of foreign exchange. The principal exceptions to this rule are the amounts shown for undistributed income. In respect of these amounts no movement of foreign exchange takes place, the amounts concerned being treated as credits or debits in the relevant sections of the current account, and as corresponding outflows or inflows in the relevant sections of the capital account. Exceptions also occur where debts incurred for current account items, principally goods, are subsequently capitalized.

The largest items shown in the current account are exports and imports, and the difference between them represents the balance of visible trade. This is the most important, and usually the most variable, relationship in the balance of payments. A full evaluation of the overall position on current account, however, occurs only after the invisible items have been taken into account. The most important of these are the transportation items. Entries appear on both the debit and credit sides, the principal component on the debit side being freight payable overseas on imports into Australia. The principal component on the credit side is expenditure by oversea carriers, which represents mainly oversea ships' expenditure for stevedoring, port charges, etc., incurred in loading and discharging goods at Australian ports, and stores purchased in Australia. The items next in importance are those concerning income from property. Debit entries under this heading include dividends, profits, interest and royalties, payable overseas, while the credit entries include similar details of amounts receivable by Australian residents. These items include undistributed income for which, as mentioned above, no monetary payments occur. The remaining items are smaller than those mentioned above, and include travel, government transactions, donations (including foreign aid made available by the Australian Government), and, on the credit side, the net value of Australian gold production.

Balance on Capital Account	-0.6	233.0	12.7

On the assets side, the most important item is Australia's holdings of monetary gold and foreign exchange, usually referred to as international reserves. On the liabilities side, the most important items are government loans, I.M.F. transactions and private investment in Australian companies.

Transactions with international monetary and financial agencies appear on both sides of the capital account. On the assets side, items 2 and 3 show increases in subscriptions to these institutions, and on the liabilities side, items 10 and 11 show corresponding increases in liabilities or changes in liabilities previously incurred. Liabilities comprise, on the one hand, bank balances and special non-negotiable, non-interest bearing securities (payable in Australian currency but convertible by arrangement into foreign currency or gold) related to capital subscriptions to the various agencies and, on the other hand, drawings from the International Monetary Fund.

Changes in overseas investment in companies by Australian residents are shown on the assets side of the capital account (items 6 and 7), and changes in investment in Australian companies by overseas residents are shown on the liabilities side (items 13 (part) and 14). Figures shown for marketing authorities (item 5) represent changes in the estimated value of commodity stocks held overseas or in amounts owed by overseas debtors to the principal Australian marketing authorities.

The balancing item includes errors and omissions and timing differences, referred to on page 530.

4. Balance of Payments on Current Account, by Major Groups of Countries.—Estimates are also made of Australia's current account transactions with the following groups of countries (see p. 504 for countries included in the several groups).

CHAPTER XV

TRANSPORT AND COMMUNICATION

NOTE.—The statistics in this chapter relate in the main to the year 1963–64, with comparisons restricted to a few recent years. More detailed figures and particulars for earlier years are included in the annual bulletins, *Transport and Communication*, *Commonwealth Finance*, and *State, Territory and Local Government Authorities' Finance and Government Securities* published by this Bureau.

Current information on subjects dealt with in this chapter appears in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, the *Monthly Bulletin of Registrations of New Motor Vehicles* and two preliminary monthly statements on *Registrations of New Motor Vehicles*.

SHIPPING

§ 1. Control of Shipping

1. *Commonwealth Navigation and Shipping Legislation.*—By section 51 (j) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws in respect of "Trade and commerce with other countries, and among the States". By section 98, this power is further defined as extending to navigation and shipping. Section 51 (vii) empowers the Commonwealth Parliament to legislate in respect of "Lighthouses, lightships, beacons and buoys" and section 51 (ix) in respect of "Quarantine".

A review of the introduction and development of the *Navigation Act 1912–1950* was given in Year Book No. 40, pages 110–2. Amendments to the principal Act were made by the Navigation Acts of 1952, 1953, 1956, 1958 and 1961.

Other shipping Acts under the powers of the Commonwealth are the *Sea-Carriage of Goods Act 1924–1961*, the *Seamen's Compensation Act 1911–1964*, the *Seamen's War Pensions and Allowances Act 1940–1964*, the *Pollution of the Sea by Oil Act 1960*, the *Australian Coastal Shipping Commission Act 1956–1964*, the *Australian Coastal Shipping Agreement Act 1956*, the *Stevedoring Industry Act 1956–1962*, the *Beaches, Fishing Grounds and Sea Routes Protection Act 1932–1961* (except Section 3), the *Submarine Cables and Pipelines Protection Act 1963* and the *Lighthouses Act 1911–1961*.

The control of shipping during, and immediately after, the 1939–45 War and the establishment of the Maritime Industry Commission (abolished in 1952), the Australian Stevedoring Industry Board (replaced in 1956 by the Australian Stevedoring Industry Authority), and the Australian Shipping Board (replaced in 1956 by the Australian Coastal Shipping Commission) are described in Year Books No. 36, pages 121–30, and No. 39, pages 147–8.

2. *Australian Coastal Shipping Commission.*—This Commission was established in 1956 for the purpose of maintaining and operating interstate, overseas and territorial shipping services, and replaced the Australian Shipping Board. It operates the Australian National Line, a Commonwealth owned merchant shipping service, which, at 30th June, 1964, comprised 41 vessels totalling 178,619 gross tons. These vessels included 15 with a gross tonnage of 500 to 3,000, 12 with a gross tonnage of 3,000 to 5,000, 12 with a gross tonnage of 5,000 to 8,000, and the bulk ore carriers *Mount Keira*, 10,229 gross tons, and *Mount Kembla*, 10,112 gross tons.

During 1963–64 the general purpose bulk carrier *Jeparit* of 6,341 gross tons, commissioned in February, 1964, was added to the fleet.

The Commission has recently taken over *Musgrave Range*, and a passenger vehicular vessel, *Empress of Australia*, of 12,037 gross tons for operation between Sydney and Tasmania. The *Empress of Australia* is augmenting the service already being provided between the mainland and Tasmania by the *Princess of Tasmania*, the vehicular container ship *Bass Trader* and the container vessel *South Esk*. The 21,400 ton deadweight bulk carrier *Musgrave Range* was brought into service during 1964.

In the year ended 30th June, 1964, the *Princess of Tasmania* carried 89,415 passengers, 20,800 accompanied vehicles, 7,773 commercial vehicles and 3,432 trade cars.

3. **Australian Shipbuilding Board.**—(i) *Constitution and Functions.* Established in March, 1941, as a wartime measure under the National Security (Shipbuilding) Regulations and constituted in 1948 under the *Supply and Development Act 1939–1948*, the Board now operates under the control of the Minister for Shipping and Transport. In November, 1963, the Commonwealth Public Service Board approved its permanent establishment as a branch of the Department of Shipping and Transport. The membership of the Board consists of a Chairman, a Finance Member and three other members, one of whom represents the Naval Board.

The functions of the Board are set out in detail in Regulation 22 (4) of the Supply and Development Regulations and, briefly, in the exercise of those functions the Board is responsible for—

- (a) Recommending to the Minister for Shipping and Transport the price at which vessels may be purchased and disposed of by him on behalf of the Commonwealth;
- (b) the design, construction, outfitting, repair or conversion of ships;
- (c) research into all matters connected with or incidental to shipbuilding;
- (d) advice to the Minister on developments in the shipbuilding industry;
- (e) rendering assistance to all sections of the industry.

(ii) *Construction Programme.* Up to 31st January, 1965, the Board had arranged the construction of 84 merchant vessels and one naval survey vessel totalling approximately 563,000 deadweight tons, at a cost of about £96,000,000, and also thirteen small craft on which the Commonwealth Shipbuilding subsidy did not apply.

At 31st January, 1965, the Board had current orders for the construction of twenty-two vessels totalling 210,300 deadweight tons. These vessels comprised three 47,500 ton deadweight bulk ore carriers, one 21,400 ton deadweight ore carrier, one 3,600 ton deadweight general cargo vessel, two 19,600 ton oil tankers, one vehicular ferry, one 3,300 ton limestone carrier, one lighthouse supply vessel, five tugs, four landing craft, one tuna fishing vessel and two small launches.

(iii) *Shipyards.* There are five major Australian shipyards building merchant vessels, two in Queensland, two in South Australia and one in New South Wales, and two shipyards principally engaged in naval shipbuilding, one in New South Wales and one in Victoria. There are also numerous smaller yards, situated in every State, building steel and wooden working and pleasure craft.

4. **Australian Stevedoring Industry Authority.**—In March, 1947, legislation established a permanent Stevedoring Industry Commission to continue in peace-time the functions performed during the war by the Commission established under National Security legislation. In June, 1949, legislation was enacted to abolish the Stevedoring Industry Commission, on which employers and employees were represented, and established in its place a Stevedoring Industry Board of three members, which attended to administrative matters formerly under the control of the Commission, such as the operation of labour bureaux at ports, payment of attendance money and provision of amenities. The industrial functions which previously came within the province of the Commission were assigned to a single Judge of the Commonwealth Court of Conciliation and Arbitration. In August, 1956, following a Committee of Inquiry into the stevedoring industry, the Stevedoring Industry Board was replaced by the Australian Stevedoring Industry Authority of three members, including a representative of the management side of industry and a representative of the trade union movement. At the same time, the judicial and non-judicial functions formerly exercised by the Commonwealth Court of Conciliation and Arbitration were divided between the Commonwealth Industrial Court and the Commonwealth Conciliation and Arbitration Commission respectively. Awards of the Conciliation and Arbitration Commission subsequently placed payment of sick pay, public holiday pay and annual leave under the administration of the Authority. Under amending legislation which operated from 6th June, 1961, the Authority became responsible for payment of long service leave to registered waterside workers, and its disciplinary powers were strengthened to reduce the time lost through unauthorized stoppages. The statutory provisions regulating the industry are now contained in the *Stevedoring Industry Act 1956–1962*, the *Stevedoring Industry Act 1963*, and Division 4 of Part III of the *Conciliation and Arbitration Act 1904–1961*.

§ 2. System of Record

In the system of recording statistics of oversea shipping, Australia is considered as a unit, and therefore only one entry and one clearance are counted for each voyage, without regard to the number of States visited (*see* also § 4, pp. 539-40). For the purpose of these statistics, the Australian mainland and Tasmania are treated as Australia and all external territories as oversea countries.

On arrival at, or departure from, a port in Australia, whether from or for an oversea country or from or for another port in Australia, the master or agent must "enter" the vessel with the Customs authorities at the port, and supply certain prescribed information in regard to the ship, passengers and cargo. At the end of each month, the information so obtained is forwarded to the Bureau of Census and Statistics. This information relates, in the main, only to vessels engaged in the carriage of passengers and/or cargo between Australian States or between Australia and oversea countries.

The size of a vessel may be expressed in a number of ways. A vessel's gross tonnage, expressed in tons of 100 cubic feet, represents the total volume of the enclosed space, i.e. a ship of 25,000 tons has a total enclosed capacity of 2,500,000 cubic feet. Its net tonnage, expressed in tons of 100 cubic feet, represents the volume of enclosed space that can be used for cargo or passengers. Its displacement is its total weight and is expressed in tons of 2,240 lb. Its deadweight tonnage is the difference between the displacement of the vessel loaded to its summer deadline and the displacement light, i.e. it is the weight the vessel can carry, including the weight of bunkers and stores. Net tonnage is the concept generally used in the tables in this chapter, but since it can give a misleading impression of the size of ships which have a function other than carrying passengers and cargo (e.g. a tug has no net tonnage), some figures are given for deadweight tons and tons gross also.

Most of the cargo is recorded in terms of the ton weight of 2,240 lb. However, some additional cargo, mainly bulky commodities, is shipped and recorded on the basis of 40 cubic feet of space used representing one ton measurement.

Except in § 5. Shipping at Principal Ports (pp. 542-3), intra-State (coastal) movements of vessels, including those of vessels engaged solely in trade within State limits, are excluded from the statistics in the following pages.

§ 3. Oversea Shipping

1. **Total Movement.**—The following table shows the number of entrances and clearances combined of oversea vessels at Australian ports, and the aggregate net tonnage, during each of the years 1959-60 to 1963-64.

OVERSEA SHIPPING: ENTRANCES AND CLEARANCES (COMBINED) OF VESSELS DIRECT, AUSTRALIA

Particulars	1959-60	1960-61	1961-62	1962-63	1963-64
Number of vessels	5,945	6,778	7,210	6,762	7,477
Net tonnage '000 tons	28,874	34,317	37,662	37,584	41,640

Particulars of the total oversea movement of shipping for each year from 1822 to 1920-21 were published in Year Book No. 15, page 507, and those for each year from 1921-22 to 1950-51 in Year Book No. 40, page 97.

2. **Total Oversea Shipping, States.**—The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels direct from and to oversea countries, and the aggregate net tonnage, during the year 1963-64.

**OVERSEA SHIPPING: ENTRANCES AND CLEARANCES OF VESSELS DIRECT,
1963-64**

Particulars		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

3. Shipping Communication with Various Countries.—A vessel arriving in Australia from overseas is recorded as coming from the country where the voyage commenced, irrespective of the number of intermediate ports of call. Similarly, a vessel leaving Australia is recorded as going to the country where the voyage is scheduled to terminate.

The following table shows statistics of the net tonnage entered and cleared, with cargo and in ballast, according to the principal countries where vessels commenced or terminated their voyages to or from Australia during each of the years 1961-62 to 1963-64.

**OVERSEA SHIPPING: COUNTRIES FROM WHICH ENTERED OR FOR WHICH

Liberia	886	1,150	1,400				
Netherlands	917	831	974				

(a) Includes New Caledonia (29 during 1963-64).

The Australian tonnage which entered Australian ports from overseas during the year 1963-64 represented 0.5 per cent. of the total tonnage entered and was confined mainly to the New Zealand and Pacific Islands trade.

§ 4. Interstate Shipping

1. System of Record.—*Interstate Shipping* comprises two elements: (a) vessels engaged solely in interstate trade; and (b) vessels trading between Australia and overseas countries and in the course of their voyages proceeding from one State to another. (However, these vessels, except under special circumstances, do not engage in interstate carrying. Numerous overseas vessels obtain single voyage permits or exemptions under the *Navigation Act 1912-1961*. Such vessels include overseas tankers carrying petroleum products interstate, and, since the withdrawal of interstate passenger liners, other overseas vessels, under permit, carrying passengers and frozen cargo on the interstate run.) No complexity enters into the record of those in category (a), but with regard to the method of recording the movements of the overseas vessels (b), some explanation is necessary. Each State desires that its shipping statistics should show in full its shipping communication with overseas countries, but at the same time it is necessary to avoid any duplication in the statistics of Australia as a whole. In order to meet these dual requirements, a vessel arriving in any State from an overseas country—say the United Kingdom—via another State, is recorded in the second State as from the United Kingdom "Oversea via States", thus distinguishing the movement from a direct overseas entry. Continuing the voyage, the vessel is again recorded for the statistics of the third State as from the United Kingdom "Oversea via States". On an inward voyage, the clearance from the first State to the second State is a clearance interstate, and is included with interstate tonnage in conformity with the preferential practice of the States, and to preserve the continuity of State statistics. Thus, movements of ships which are, from the standpoint of Australia as a whole, purely coastal movements, must for the individual States be recorded as "Oversea via States" or "Interstate" according to the direction of the movement. The significance of the record of these movements will be seen more clearly

from the following tabular presentation of the inward and outward voyages to and from Australia of an oversea vessel which, it is presumed, reaches Fremantle (Western Australia) and then proceeds to the terminal port of the voyage—Sydney (New South Wales)—via South Australia and Victoria. From the terminal port, the vessel will commence the outward voyage and retrace its inward track.

ITINERARY OF AN OVERSEA VESSEL ON THE AUSTRALIAN COAST

Particulars	Recorded as—		
	For the State and for Australia	For the States	
	1.	2.	3.
Inward Voyage—			
Enters Fremantle from United Kingdom	Overseas direct		
Clears Fremantle for Adelaide ..		Interstate direct	
Enters Adelaide from United Kingdom via Fremantle			Overseas via States
Clears Adelaide for Melbourne		Interstate direct	
Enters Melbourne from United Kingdom via Adelaide			Overseas via States
Clears Melbourne for Sydney		Interstate direct	
Enters Sydney from United Kingdom via Melbourne			Overseas via States
Outward Voyage—			
Clears Sydney for United Kingdom via Melbourne			Overseas via States
Enters Melbourne from Sydney		Interstate direct	
Clears Melbourne for United Kingdom via Adelaide			Overseas via States
Enters Adelaide from Melbourne		Interstate direct	
Clears Adelaide for United Kingdom via Fremantle			Overseas via States
Enters Fremantle from Adelaide		Interstate direct	
Clears Fremantle for United Kingdom ..	Overseas direct		

From the method outlined above, the requirements for Australia and for the individual States are ascertained as follows. (a) The aggregate of all ships recorded for each State as "Overseas direct" gives the overseas shipping for Australia as a whole; (b) the aggregate for all ships recorded in any State as "Overseas direct" plus those recorded as "Overseas via States" gives the total overseas shipping for that State; and (c) the aggregate for all ships recorded as "Overseas via States" may also be used, together with those recorded as "Interstate direct" (including those engaged solely in interstate movement) to furnish figures showing the total interstate movement of shipping.

2. Interstate Movement.—(i) *Interstate Direct.* The following table shows the number of entrances and the net tonnage of vessels recorded into each State and the Northern Territory from any other State (including overseas vessels on interstate direct voyages as in column 2 above) during each of the years 1961–62 to 1963–64.

INTERSTATE MOVEMENT OF SHIPPING: ENTRANCES OF VESSELS INTERSTATE DIRECT

State or Territory	Number			Net tons ('000)		
	1961–62	1962–63	1963–64	1961–62	1962–63	1963–64
New South Wales	1,933	1,844	1,974	6,149	5,946	6,656
Victoria	1,749	1,711	1,763	5,147	4,915	5,355
Queensland	748	772	789	1,930	2,195	2,213
South Australia	1,147	1,132	1,228	3,969	4,010	4,397
Western Australia	685	649	667	3,206	2,950	3,176
Tasmania	1,223	1,200	1,131	1,675	1,739	1,719
Northern Territory	69	71	78	139	144	177
Australia	7,554	7,379	7,630	22,215	21,899	23,693

(ii) *Oversea via States.* The figures in the following table show the number of entrances and clearances of vessels to and from oversea countries via other Australian States as in column 3 in the table in para. 1, p. 540, and their aggregate net tonnage.

INTERSTATE MOVEMENT OF SHIPPING: ENTRANCES AND CLEARANCES OF VESSELS OVERSEAS VIA OTHER AUSTRALIAN STATES, 1963-64

Particulars		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Entrances ..	No.	867	1,015	491	665	76	296	..	3,410
	'000 net tons	4,374	5,657	2,207	3,058	405	1,353	..	17,054
Clearances ..	No.	899	894	262	547	45	295	7	2,949
	'000 net tons	4,076	4,424	1,146	2,714	280	1,294	40	13,974

(iii) *Total Interstate Movement.* In order to ascertain the aggregate movement of interstate shipping, including the total interstate movement of oversea vessels, the figures in the two preceding tables must be combined. The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels from and for other States (including the interstate movement of oversea vessels) during the year 1963-64, together with the aggregate net tonnage.

INTERSTATE MOVEMENT OF SHIPPING: TOTAL, 1963-64

Particulars		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Entrances ..	No.	2,841	2,778	1,280	1,893	743	1,427	78	11,040
	'000 net tons	11,030	11,012	4,420	7,455	3,581	3,072	177	40,747

	'000 net tons	11,545	10,305	3,587	8,012	3,652	3,076	223	40,400

The following table shows the total interstate movement of shipping, including oversea vessels travelling overseas via States and interstate direct, for Australia for each of the years 1959-60 to 1963-64.

INTERSTATE MOVEMENT OF SHIPPING: TOTAL, AUSTRALIA

Particulars		1959-60	1960-61	1961-62	1962-63	1963-64
Entrances ..	No.	9,866	10,225	10,551	10,552	11,040
	'000 net tons	32,857	35,791	36,974	37,428	40,747
Clearances ..	No.	9,819	10,276	10,608	10,746	10,985
	'000 net tons	32,622	36,006	36,923	37,862	40,400

3. *Shipping Engaged Solely in Interstate Trade.*—The following table shows, for each State and the Northern Territory, the number of entrances direct from other States of vessels engaged solely in interstate trade (i.e., excluding oversea vessels in continuation of their oversea voyages) during the year 1963-64, together with the net tonnage.

SHIPPING ENGAGED SOLELY IN INTERSTATE TRADE(a): ENTRANCES, 1963-64

Particulars		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Ships entered ..		1,231	1,140	400	915	266	1,050	65	5,067
Net tons ..	'000	3,321	2,012	575	2,662	876	1,287	119	10,852

(a) Excludes vessels travelling interstate via ports in the same States.

4. **Australian Trading Vessels.**—The following table shows particulars of all Australian trading vessels of 200 gross tons or more engaged in the regular oversea, interstate or coastal (intrastate) services at 30th June, 1964.

**AUSTRALIAN TRADING VESSELS OF 200 GROSS TONS OR MORE,
30th JUNE, 1964**

Vessels	No.	Deadweight tons	Gross tons
Interstate vessels—			
Australian-owned, Australian-registered vessels ..	94	552,925	416,929
Oversea-owned, Australian-registered engaged in Australian coastal trade—New Zealand-owned ..	10	27,926	24,008
Other	1	15,330	10,166

(b) Includes Kwinana.

(c) Includes Port Stanvac.

§ 6. Shipping Cargo

1. Oversea and Interstate Cargo.—(i) *Australia*. The table hereunder shows the aggregate tonnage of oversea and interstate cargo discharged and shipped at Australian ports for the years 1959–60 to 1963–64. Most of the cargo is recorded in terms of the ton weight of 2,240 lb., the remainder, mainly bulky commodities, being shipped and recorded on the basis of 40 cubic feet of space occupied representing one ton measurement.

SHIPPING CARGO MOVEMENT: AUSTRALIA

(*000 tons)

Year	Oversea cargo				Interstate cargo			
	Discharged		Shipped		Discharged		Shipped	
	Weight	Meas.	Weight	Meas.	Weight	Meas.	Weight	Meas.

§ 7. Vessels Registered in Australia

1. Australian-registered Trading Vessels.—The following table shows the number and gross tonnage of trading vessels of 200 tons and over registered in Australia at 30th June, 1964, classified according to—(i) year of construction, 1960 to 1964, and 1959 and earlier years, (ii) type of trade in which the vessels were engaged, and (iii) vessels built in Australian or in overseas shipyards. The statistics in this table have been compiled by the Commonwealth Department of Shipping and Transport. The Merchant Shipping Act 1894 (Imperial) under which vessels are registered in Australia, does not make it compulsory to register vessels under 15 tons burden if engaged in river or coastal trade. Larger vessels are also exempt from registration if not engaged in trade. Yachts and small trading vessels, however, may be, and frequently are, registered at the request of the owners.

AUSTRALIAN-REGISTERED TRADING VESSELS, 30TH JUNE, 1964 (a)

Year of construction	Overseas and interstate vessels		Intrastate vessels		Built in Australian yards		Built overseas		Total	
	No.	Gross tons	No.	Gross tons	No.	Gross tons	No.	Gross tons	No.	Gross tons
1959 and earlier	99	383,031	19	20,318	58	244,683	60	158,666	118	403,349

1962	2	16,715	2	16,715	2	16,715
1963	2	12,932	2	12,932	2	12,932
1964	3	15,127	3	15,127	3	15,127
Total, Registered in Australia ..	112	472,403	20	22,314	72	336,051	60	158,666	132	494,717

(a) 200 gross tons and over.

Figures in this table relate to gross tons, and are therefore not comparable with those in the table following, which relate to net tons and to *all* registered vessels irrespective of tonnage and type.

2. Vessels Registered.—The following table shows the number and net tonnage of steam, sailing and other vessels on the register of each State and the Northern Territory at 31st December, 1964.

VESSELS REGISTERED, 31st DECEMBER, 1964

State or Territory	Steam and motor		Sailing				Barges, hulks, dredges, etc., not self-propelled		Total	
			Propelled by sail only		Fitted with auxiliary power

3. World Shipping Tonnage.—At 1st July, 1964, the total steamships and motorships 100 gross tons and upwards throughout the world amounted to 40,859, with a gross tonnage of 152,999,621. Of these totals, steamships numbered 11,446 for 74,988,759 gross tons, and motorships 29,413 for 78,010,862 gross tons. Included therein were 5,130 oil tankers of 100 gross tons and upwards, with a gross tonnage of 50,563,315. Australian steamships and motorships, 292 for 593,700 gross tons, constituted 0.71 per cent. and 0.39 per cent. respectively of the total number and tonnage. This information has been derived from *Lloyd's Register of Shipping*.

§ 8. Miscellaneous

1. Lighthouses.—A list of the principal lighthouses on the coast of Australia, giving details of the location, number, colour, character, period, candle-power and visibility of each light so far as particulars are available, will be found in *Transport and Communication*, Bulletin No. 46.

2. Distances by Sea.—The distances by sea between principal ports of Australia and some important ports in other countries which trade with Australia were published in Year Book No. 48, page 525.

3. Shipping Freight Rates.—The *Quarterly Summary of Australian Statistics* shows a list of the current freight rates for general merchandise in respect of both overseas and interstate shipments.

The following table shows the freight rates from Australia to various countries for certain important commodities at 31st December, 1964.

OVERSEA SHIPPING FREIGHT RATES FROM AUSTRALIA TO VARIOUS COUNTRIES, 31st DECEMBER, 1964
(1 ton measurement = 40 cubic feet)

Interstate rates per ton weight or measurement for general cargo at 31st December, 1964, (expressed in Australian currency) were:—Sydney—Melbourne, 157s. 6d.; Sydney—Brisbane, 160s.; Sydney—Adelaide, 192s. 6d.; Sydney—Fremantle, 262s.; Sydney—Hobart, 155s. 6d.; Sydney—Darwin, 258s. 6d.

4. **Depth of Water at Main Ports.**—A table showing the depth of water available and tides at principal ports of Australia is published in the annual bulletin, *Transport and Communication*. For some major ports, information is given in Chapter XX. Local Government.

5. **Shipping Casualties.**—Courts of Marine Inquiry are constituted by a magistrate assisted by skilled assessors, and, when necessary, are held at the principal port in each State and at Launceston (Tasmania). Such courts have power to deal with the certificates of officers who are found at fault. Particulars of shipping losses and casualties reported on or near the coast during each of the years 1959–60 to 1963–64 are shown in the table below.

SHIPPING CASUALTIES TO OVERSEA AND INTERSTATE STEAM AND MOTOR VESSELS(a): AUSTRALIA

Year	Shipping losses			Other shipping casualties			Total shipping casualties		
	Vessels	Net tons	Lives lost	Vessels	Net tons	Lives lost	Vessels	Net tons	Lives lost

(a) Vessels over 50 net tons.

6. **Ferry (Passenger) Services.**—For particulars of ferry passenger services operating in several States see page 570.

GOVERNMENT RAILWAYS

1. **General.**—The policy of government ownership and control of railways has been adopted generally throughout Australia, and, although a number of private railways exist, most of them are light railways intended primarily to transport goods involved in the commercial operations of their owners. There are three main gauges in use in the several States (5 ft. 3 in., 4 ft. 8½ in. and 3 ft. 6 in.), but in recent years considerable progress has been made towards the standardization of main trunk routes (*see* para. 3 below).

In the tables in this division, details of the four lines owned by the Commonwealth are grouped and shown with the totals for the various State-owned systems. Separate particulars for each Commonwealth line and more detailed statistics for all lines are shown in the annual bulletin, *Transport and Communication*.

2. **Railway Communication in Australia.**—An account of the progress of railway construction in Australia since the opening of the first line in 1854 was given in Year Book No. 6, page 681, and in No. 22, page 259. The main ports on the mainland are connected by lines running approximately parallel to the coast and are the focal points of lines which radiate inland to the agricultural, mining and pastoral areas of the continent to a distance of up to 750 miles. However, Darwin in the Northern Territory is not connected by rail to any other port. A 3 ft. 6 in. gauge railway extends southward from Darwin to Birdum, a distance of 317 miles, and from Port Augusta in South Australia a 4 ft. 8½ in. gauge railway of 221 miles extends northwards to Marree from where a 3 ft. 6 in. gauge of 540 miles continues to Alice Springs.

3. **Standardization of Railway Gauges.**—The first step towards uniform gauge railway communication between the capitals of the mainland States was effected in 1930 with the construction of the 4 ft. 8½ in. gauge line from Grafton to South Brisbane. The finance required for the construction was provided by the Commonwealth Government. For details of the agreement between the Commonwealth and New South Wales and Queensland, *see* Official Year Book No. 31, page 122. This line is operated by the New South Wales Railways, and details of operations in New South Wales are included with those of the New South Wales system. Details of operations on the Queensland portion are included with Queensland railway statistics unless otherwise specified.

In March, 1944, the late Sir Harold Clapp, Director-General of Land Transport, Commonwealth Department of Transport, and formerly Chairman of Commissioners, Victorian Railways, was requested by the Commonwealth Government to submit a report and recommendation regarding the standardization of Australia's railway gauges on the basis of a 4 ft. 8½ in. gauge. A summary of his report and recommendations, made in March, 1945, together with an outline of the agreement between the Commonwealth Government and the States of New South Wales, Victoria and South Australia regarding the standardization of railway gauges in their respective States, was published in Year Book No. 37, pages 146-9. The agreement, which was signed in 1946, was ratified by the Governments of the Commonwealth, Victoria and South Australia, but not by the New South Wales Government. After some time had elapsed and New South Wales had not ratified the agreement, the Commonwealth Government decided to enter into a separate agreement with South Australia, and the necessary legislation was enacted in 1949 by each Government concerned. The Commonwealth-South Australia Agreement provides for the same standardization work to be carried out in South Australia as would have been carried out had New South Wales ratified the original Commonwealth-Three States Agreement, and that the Commonwealth shall provide all funds required under the Agreement, with 30 per cent. of such moneys being repaid with interest by South Australia over 50 years, while the Commonwealth shall meet the full cost of works on Commonwealth railways in South Australia.

At the request of the South Australian Government, an amendment to the Agreement was approved to enable, as an interim measure, the narrow gauge (3 ft. 6 in.) lines in the South-Eastern Division of the State railways system to be converted to the broad gauge (5 ft. 3 in.). This work was completed in 1959 at a cost of £5 million. Construction and conversion work on the Central Australia Railway between Stirling North and Maree, 217 miles, has been completed by Commonwealth Railways at a cost of £12.2 million. In 1958, the Commonwealth Government made available £50,000 to South Australia for surveying the standard gauge line to be constructed between Broken Hill and Port Pirie, and in April, 1963, it announced its intention to provide funds for the standardization of the line. Work on this project has commenced and is planned to be completed by December, 1967.

In 1961, the Commonwealth undertook to provide £1.3 million, outside the Standardization Agreement, for the purchase of diesel-electric locomotives and ore wagons for use on the existing narrow gauge line on this route, the State to bear the cost of their subsequent conversion for operation on standard gauge track.

As a further step towards standardization, a committee consisting of members of the Federal Parliament was formed in March, 1956, to ascertain whether a scheme confined to the main trunk routes would be desirable. This committee recommended in October, 1956, that standard gauge (4 ft. 8½ in.) lines be provided from Wodonga to Melbourne, from Broken Hill to Adelaide via Port Pirie and from Kalgoorlie to Fremantle via Perth.

In 1962, the opening of a new uniform gauge line between Albury and Melbourne completed the standard gauge link between South Brisbane and Melbourne, and for the first time through services were operated between Sydney and Melbourne. Legislation for this link was enacted by the Commonwealth, Victorian and New South Wales Governments in three separate Acts assented to towards the end of 1958. The agreement on this project between the Commonwealth and the two State Governments provided for the Commonwealth to meet 70 per cent. of the cost of unification and the two States to share equally the remaining 30 per cent. The Commonwealth was required to advance the whole of the necessary funds initially, the States' proportion, plus interest, being repayable over 50 years. The final cost of this project, met initially by the Commonwealth, amounted to £15,972,846. The cost of operation of, and the revenue derived from, the line are based proportionately, on a Sydney-Melbourne mileage basis. Details of operations are included in statistics of the various States.

In 1961, the Commonwealth and Western Australian Governments enacted legislation to enter into an Agreement to undertake certain standard gauge railway works, including the provision of rolling stock, in Western Australia, at an estimated cost of £41.2 million. The proposal is linked with the establishment of an integrated iron and steel industry at Kwinana in that State, and the new railway facilities will be used to transport iron ore from the Koolyanobbing deposits some 33 miles beyond Southern Cross. These railway facilities will also link Kalgoorlie with East Perth and Fremantle by a standard gauge line. It has been agreed that the project has standardization and developmental components in approximately equal parts, and, initially, the Commonwealth will in effect provide finance for all of the standardization portion of the works and 70 per cent. of the developmental portion. The State will repay with interest 30 per cent. of the standardization costs over 50 years and all the advance for developmental works over 20 years. Work on the project commenced in 1962 and is planned to be completed by December, 1968.

4. Mileage Open for Traffic, all Lines.—The following table shows the route-mileage of Commonwealth and State lines open in each State and Territory at various periods since the inauguration of railways in Australia in 1854.

GOVERNMENT RAILWAYS: ROUTE-MILEAGE OPEN

(a) Portion of Victorian system. (b) Excludes 202 miles of 5 ft. 3 in. gauge line which roughly parallels the uniform gauge (4 ft. 8½ in.) line between Albury and Melbourne. (c) Queensland section of Grafton-South Brisbane Uniform Gauge Line. (d) Portion of Commonwealth system. (e) Includes 432 miles of Commonwealth system.

6. Summary of Operations.—In the following table a summary is shown of the operations of government railways open in Australia during 1963-64. Figures for earnings exclude State government grants and certain other earnings payable to railways, while figures for working expenses exclude certain other expenses charged to railways (see para. 10, p. 559).

GOVERNMENT RAILWAYS: SUMMARY OF OPERATIONS, 1963-64

Particulars	Commonwealth railways	State railways	Total

" wages and salaries paid per employee £	1,329	1,205	1,208

7. Gross Earnings.—(i) General. Gross earnings are composed of earnings from (a) coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) carriage of goods and livestock; and (c) rents and miscellaneous items. State Government grants are excluded. Details of these grants made during 1963-64 are shown in para. 10, page 559.

(ii) *Coaching, Goods and Miscellaneous Earnings.* (a) *Summary.* In the following table, gross earnings are shown for the years 1959-60 to 1963-64, together with earnings per average route-mile worked and per revenue train-mile.

GOVERNMENT RAILWAYS: GROSS EARNINGS(a)

Australia ..	48,311	172,837	11,095	20.80	74.42	4.78

(a) Excludes government grants; see para. 10, p. 559.

8. Working Expenses.—(i) *General.* In comparing the working expenses of the several States and Territories, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the different systems of the State and Commonwealth railways, but also on different portions of the same system.

Working expenses, wherever presented in the Railways section of this chapter, include reserves for depreciation in South Australia, Western Australia and Tasmania but exclude interest, sinking fund, exchange and certain other payments (*see* para. 10, p. 559).

(ii) *Working Expenses.* The following table shows the total working expenses, the ratio of working expenses to gross earnings, and working expenses per average route-mile worked, and per revenue train-mile for the years 1959–60 to 1963–64.

GOVERNMENT RAILWAYS: WORKING EXPENSES(a)

Year	N.S.W.	Vic.	Q'land	S. Aust. (b)	W. Aust. (b)	Tas. (b)	C'wealth (c)	Aust.

(a) *See* para. 10, p. 559. (b) Includes depreciation. (c) Includes depreciation as from 1st July, 1962. Before this depreciation was not charged to working expenses. (d) Includes contributions to Railways Renewals Fund on account of previous years, £1,050,000; provision for accrued leave, £400,000; and estimated liability from employees transferring to the Railways Retirement Fund, £3,250,000 (estimated liability in 1964–65, £1,500,000). (e) *See* footnote (d).

(iii) *Distribution.* The following table shows the total working expenses for the year 1963-64 classified according to the four main expenditure headings.

GOVERNMENT RAILWAYS: DISTRIBUTION OF WORKING EXPENSES, 1963-64
(£'000)

Railway system	Maintenance of way and works	Motive power(a)	Traffic	Other charges	Total working expenses(b)
New South Wales	15,457	29,860	20,408	(c) 22,983	88,708
Victoria	8,817	13,194	12,528	11,217	45,756
Queensland	9,918	17,470	9,497	2,259	39,144
South Australia	(d) 3,388	(d) 6,045	(d) 4,069	1,953	15,455
Western Australia	(d) 3,913	(d) 7,882	4,079	2,027	17,901
Tasmania(d)	865	1,272	893	417	3,447
Commonwealth	2,288	1,956	1,112	(d) 1,802	7,158
Australia	44,646	77,679	52,586	42,658	217,569

(a) Includes maintenance of rolling stock. (b) See para. 10, p. 559. (c) Includes contributions to Railways Renewals Fund on account of previous years, £1,050,000; provision for accrued leave, £400,000; and an estimated liability from employees transferring to the Railways Retirement Fund, £3,250,000 (estimated liability in 1964-65, £1,500,000). (d) Includes provision of reserves for depreciation.

9. *Net Earnings.*—The following table shows, for the years 1959-60 to 1963-64, net earnings, i.e., the excess of gross earnings over working expenses and the amount of such net earnings per average route-mile worked and per revenue train-mile.

(c) See footnote (c)

NOTE.—Minus sign (-) denotes loss.

10. Net Earnings, Grants to Railways, Interest, Sinking Fund, Surplus or Deficit, 1963-64.—The following table shows, for each railway system for the year 1963-64, (i) net earnings as in para. 9 above, (ii) State grants and other items credited to railways accounts, (iii) loan interest, exchange, sinking fund, etc., payments charged against the accounts, and (iv) the net surplus or deficit after these items have been taken into account. Particulars of items (ii) to (iv) are not included in the preceding tables in this section.

The figures shown in this table accord with those published in the Annual Reports of the Railways Commissioners of the several systems. Because of the differences in governmental practice concerning costs other than operative charged against railways accounts, compensation for non-paying and developmental lines, etc., and the inclusion in some railways finances of the operations of ancillary transport services, direct comparison cannot be made between the results shown in the table.

GOVERNMENT RAILWAYS: SURPLUS OR DEFICIT AT 30th JUNE, 1964

(£)

1963-64 ..	4,263	2,860	1,617	2,060	1,411	2,291	1,100	2,440

(a) Traffic originating on the 3 ft. 6 in. gauge system and continuing on the Uniform Gauge Railway, or vice versa, has been counted once only. (b) Based on ticket sales, making allowances for periodical tickets. Except in Tasmania, tickets sold at concession rates are counted as full journeys. (c) Concession tickets are counted according to the proportion of the adult fare charged.

(ii) *Passenger Traffic.* With the exception of the Commonwealth railway systems, which operate only country services, all systems provide both suburban and country passenger services. Traffic classed as "suburban" moves between stations within a classified suburban area around each capital city, while traffic classed as "country" originates or terminates at stations outside this suburban area. Particulars of suburban and country passenger traffic are shown separately in the two tables following.

(a) *Suburban Passenger Traffic.* The following table shows a summary of suburban passenger operations for the years 1959-60 to 1963-64. Most of the suburban services in New South Wales and Victoria are operated within electrified areas.

GOVERNMENT RAILWAYS: SUBURBAN PASSENGER SUMMARY

Year	Suburban passenger-journeys (a)	Suburban revenue passenger-train-miles	Suburban passenger-miles	Average number of passengers per train-mile	Average mileage per passenger-journey (Miles)	Suburban passenger earnings			
						Gross (£'000)	Per passenger journey (Pence)	Per passenger-mile (Pence)	Per passenger train-mile (Pence)

1963-64	338	898	107,005	119	316.20	958	679.15	2.15	256

(a) Based on ticket sales, making allowances for periodical tickets. Except in Tasmania, tickets sold at concession rates are counted as full journeys. (b) Includes a proportion of mixed train-miles. (c) Passenger-miles divided by passenger train-miles inclusive of a proportion of mixed train-miles. (d) Passenger earnings divided by passenger train-miles inclusive of a proportion of mixed train-miles. (e) Traffic originating on the 3 ft. 6 in. gauge system and continuing on the Uniform Gauge Railway, or vice versa, has been counted once only. (f) Concession tickets are counted according to the proportion of the adult fare charged. (g) Railways controlled by Commonwealth Government.

NOTE.—Train-miles refer to revenue mileages only. Figures include a proportion of mixed train-miles for all systems except Western Australia and, after 1961-62, Victoria, where they do not apply.

(iii) *Freight Traffic.* (a) *Commodities Carried and Earnings.* The following table shows the quantities of various commodities carried on the various systems and the earnings derived during 1963-64.

GOVERNMENT RAILWAYS: COMMODITIES CARRIED AND EARNINGS, 1963-64

Railway system	Coal, coke and briquettes	Other minerals (a)	Agricultural produce (b)	Wool	Live-stock	All other commodities	Total
QUANTITY CARRIED (⁰⁰⁰ Tons)							
New South Wales ..	9,827	2,289	4,068	239	553	8,838	25,814
Victoria ..	2,289	112	3,648	132	312	5,639	12,132

(a) Includes construction staff. (b) Included with operating staff. (c) Excludes Queensland portion of Uniform Gauge Railway. (d) Includes construction staff, Victoria.

TRAMWAY, TROLLEY-BUS AND OMNIBUS SERVICES

1. Systems in Operation.—(i) *Tramway and Trolley-bus.* Since 1st April, 1947, all systems have been operated by government or municipal authorities. During the year 1963-64, tramway systems were in operation in the following cities—Melbourne, Bendigo, and Ballarat, Victoria; Brisbane, Queensland; and Adelaide, South Australia. Trolley-bus services operated in Brisbane, Queensland; Adelaide, South Australia, to 13th July, 1963; Perth, Western Australia; and Hobart and Launceston, Tasmania. All systems were electric.

In many parts of Australia, private lines used for special purposes in connexion with the timber, mining, sugar, or other industries are often called tramways, but they are more properly railways, and the traffic on them has nothing in common with that of the street tramways for the conveyance of passengers, which are dealt with in the present section.

(ii) *Motor Omnibus.* Services are operated by government or municipal authorities and private operators. Statistics are collected for government and municipal omnibus services located in all State capital cities; Canberra, Australian Capital Territory; Newcastle, New South Wales; Maryborough and Rockhampton, Queensland; Fremantle and the Eastern Goldfields area, Western Australia; Launceston and Burnie, Tasmania; Darwin, Northern

Territory; and for country road services operated by the Western Australian Government Railways. In Sydney, the Government tramway system has been replaced by omnibus services, and in Perth, the Metropolitan (Perth) Passenger Transport Trust has replaced privately owned services in the metropolitan area. In Hobart, the Government trolley-bus and omnibus services have replaced the Government tramway service.

Particulars of motor omnibus services under the control of private operators are recorded for the States of New South Wales, Victoria, Queensland, South Australia and Western Australia. In New South Wales, particulars of private services are compiled for the Sydney Metropolitan and Newcastle transport districts and the city of Greater Wollongong. In Victoria, particulars relate to the omnibus services operating within eight miles of the limits of the city of Melbourne only, and in South Australia to services licensed by the Municipal Tramways Trust and the Transport Control Board. In Queensland, they relate to all cities with a population of 10,000 persons or more. In Western Australia, particulars of all private services throughout the State are included.

2. Government and Municipal Services.—(i) *Summary of Operations, States.* Because of the development in recent years of the various forms of public road transport under the control of single authorities, and the gradual replacement of tramway services by motor omnibus services, it is no longer possible to obtain separate statistics for all phases of the activities of each form of transport, particularly financial operations. In this section, therefore, statistics of public tramway, trolley-bus and motor omnibus services are combined in single tables with separate details shown for each form of transport where possible.

The tramway gauge is 4 feet 8½ inches throughout.

The following table gives a summary for 1963-64 of the operations of tramway, trolley-bus and omnibus systems controlled by government and municipal authorities.

(a) Includes particulars of New South Wales trolley-buses up to cessation of operation in August, 1959, and tramway services up to February, 1961. (b) Includes a small number of passenger-ferry miles for Western Australia. (c) Includes particulars for Tasmanian trams (to October, 1960) and trolley-buses. (d) Excludes government grants. (e) Includes provision of reserves for depreciation, etc., where possible. (f) Excludes accidents to employees.

NOTE.—Minus sign (-) denotes deficit.

3. Private Services.—*Summary of Operations.* The following table shows the operations of motor omnibus services under the control of private operators in New South Wales, Victoria, Queensland, South Australia and Western Australia during each of the years 1959-60 to 1963-64. Particulars are not available for Tasmania.

MOTOR OMNIBUS SERVICES: PRIVATE

(a) Metropolitan, Newcastle and Wollongong transport districts only. (b) Nine months ended March, 1961: subsequent figures relate to the years ended 31st March. (c) Particulars relate to the omnibus services operating within eight miles of the limits of the city of Melbourne. (d) Partly estimated. (e) Vehicles only. (f) Drivers only. (g) All cities with a population of 10,000 persons or more. (h) Services licensed by the Municipal Tramways Trust and the Transport Control Board. (i) Excludes Transport Control Board licensed omnibuses. (j) Includes services operated in metropolitan and rural areas. (k) Decrease due to Metropolitan (Perth) Passenger Transport Trust's acquisition of services previously privately owned.

FERRY (PASSENGER) SERVICES

1. **General.**—Ferry passenger services are operated in the following States—New South Wales, at Sydney and Newcastle; Western Australia on the Swan River at Perth; Tasmania, on the Mersey River at Devonport. Control is exercised by both governmental authorities and private operators. In Victoria and Queensland the services operated are not extensive. There are no ferry passenger services in South Australia.

2. **Summary of Operations.**—The operations of ferry passenger services in New South Wales, Western Australia and Tasmania during the years 1959–60 to 1963–64 are summarized in the following table. Particulars of vehicular ferries are not included.

FERRY (PASSENGER) SERVICES

Year	Number of vessels	Passenger accommodation	Passenger-journeys (‘000)	Gross revenue (£)	Persons employed

(a) Devonport only.

MOTOR VEHICLES

The arrangements for the registration of motor vehicles and the licensing of drivers and riders are not uniform throughout Australia, since they are the function of a separate authority, or authorities, in each State and Territory. Particulars of registration, licences, fees payable, etc., in each State and Territory at 30th June, 1960, were given in Year Book, No. 47, pp. 553–6, and at 30th June, 1963 in *Transport and Communication*, Bulletin No. 54, 1962–63.

§ 1. Motor Vehicles on Register

1. *Census of Motor Vehicles, 1962.*—A census of motor vehicles on register at 31st December, 1962, was conducted by the Commonwealth Statistician in co-operation with the Deputy Commonwealth Statisticians and the motor vehicle registration authorities. The census covered items shown on the motor vehicle registration certificate such as make of vehicle, year of model, type of vehicle, horsepower, motive power, location (i.e. address on registration certificate), ownership (private, government, etc.), and for specific types of vehicles such items as unladen weight, carrying capacity, passenger capacity, and in some States gross vehicle weight.

Preliminary results of the census were published in mimeographed preliminary statements and further details were published in printed bulletins for each State and Territory and for Australia and in issue No. 54, 1962–63 of the annual bulletin *Transport and Communication*. Year Book No. 50, 1964, contains on pages 591–594 summarized particulars of the census.

Previous enumerations of this nature were the census of motor vehicles, 31st December, 1955, and the survey of motor vehicles, 1947–48. The results were published in a series of bulletins and, in summarized form, in issues of the annual bulletin *Transport and Communication* No. 48, 1956–57 (1955 census) and No. 40, 1948–49 (1947–48 survey). Year Book No. 44, 1958, contains on page 415 a summary, for each State and Territory and for Australia, of the vehicles of each type recorded at the census of 31st December, 1955.

The following table contains a summary for each State and Territory of the number of motor vehicles of each type on the register at 31st December, 1962. The total number of each type recorded for Australia at the previous motor vehicle census (31st December, 1955) is included for purposes of comparison.

CENSUS OF MOTOR VEHICLES, 31st DECEMBER, 1962: TYPES OF VEHICLE

(a) Includes panel vans, Queensland.

(b) Excludes panel vans, Queensland, which are included with utilities.

2. *Motor Vehicles on Register, etc.*—The following table shows particulars of the number of motor vehicles on register and the number per 1,000 of population at 31st December, 1963. All Commonwealth Government-owned vehicles are included except those belonging to the Defence Services.

MOTOR VEHICLES(a) ON REGISTER, 31st DECEMBER, 1963

State or Territory	Motor cars and station wagons	Utilities, panel vans, trucks(b), omnibuses	Motor cycles	Total(c)	Per 1,000 of population
New South Wales	896,459	283,948	18,160	1,198,567	293
Victoria	734,919	213,123	14,518	962,560	312
Queensland	321,840	150,815	13,719	486,374	309
South Australia	257,172	83,292	15,477	355,941	349
Western Australia	181,424	77,738	10,960	270,122	344
Tasmania	81,642	28,125	1,856	111,623	299
Northern Territory	6,647	5,341	353	12,341	428
Australian Capital Territory ..	21,927	4,203	293	26,423	341
Australia	2,502,030	846,585	75,336	3,423,951	311

(a) On a basis comparable with the Census of Motor Vehicles, 1962. All figures are subject to revision. (b) Includes other truck-type vehicles. (c) Excludes tractors, trailers, plant and equipment, etc.

The table following shows a summary for Australia of the number of motor vehicles on register and the number per 1,000 of population at 31st December each year, 1959 to 1963. All Commonwealth Government-owned vehicles are included except those belonging to the Defence Services.

MOTOR VEHICLES ON REGISTER: AUSTRALIA

Year	Motor cars and station wagons	Utilities, panel vans, trucks(a), omnibuses	Motor cycles	Total(b)	Per 1,000 of population
1959(c)	1,851,934	766,298	106,822	2,725,054	268
1960(c)	2,028,419	801,163	99,452	2,929,034	282
1961(c)	2,128,301	806,032	90,063	3,024,396	285
1962(d)	2,303,730	829,806	82,576	3,216,112	298
1963(e)	2,502,030	846,585	75,336	3,423,951	311

(a) Includes other truck-type vehicles. (b) Excludes tractors, trailers, plant and equipment, etc. (c) Estimates for inter-censal years on a basis comparable with the Censuses of 1955 and 1962. (d) Census figures. (e) Subject to revision.

The table following shows the number of motor vehicles on register per 1,000 of population in each State and Territory at 31st December, for each of the years 1959 to 1963. All Commonwealth Government-owned vehicles are included except those belonging to the Defence Services.

MOTOR VEHICLES(a) ON REGISTER PER 1,000 OF POPULATION

Year	N.S.W.	Vic.	Q'land	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1959(b) ..	251	276	269	297	286	259	325	299	268
1960(b) ..	262	288	281	333	301	268	352	310	282
1961(b) ..	267	290	282	332	311	275	386	309	285
1962(c) ..	281	300	292	338	331	284	406	319	298
1963(d) ..	293	312	309	349	344	299	428	341	311

(a) Excludes tractors, trailers, plant and equipment, etc. (b) Estimates for inter-censal years on a basis comparable with the Censuses of 1955 and 1962. (c) Census figures. (d) Subject to revision.

3. **World Motor Vehicle Statistics, 1964.**—At 1st January, 1964, there were 158,395,700 motor cars, trucks and omnibuses registered in various countries of the world. This was an increase of 8.3 per cent. on the figure for the previous year, 146,190,200. Of the 1964 registrations, 83,500,000 or 52.7 per cent. of the world total were in the United States of America, while Australian registrations amounted to 2.1 per cent. This information is derived largely from the *Automobile International*, May, 1964.

§ 2. Licenses, Registration Fees, etc.

The following table shows particulars of the number of drivers' and riders' licences in force at 30th June, and gross revenue derived from vehicle registrations, motor tax, licences, etc., in each State and Territory for the year ended 30th June, 1964.

NUMBER OF DRIVERS' AND RIDERS' LICENCES IN FORCE AND GROSS REVENUE, 30th JUNE, 1964

State or Territory	Number of drivers' and riders' licences in force at 30th June	Gross revenue (£'000) derived from—			
		Vehicle registrations and motor tax	Drivers' and riders', etc., licences	Other sources	Total
New South Wales	1,526,810	17,379	3,256	6,690	27,325
Victoria	1,162,448	12,305	1,464	4,480	18,249
Queensland	n.a.	6,925	366	3,736	11,027
South Australia	419,742	(a) 5,388	(b)	94	5,482
Western Australia	321,920	3,449	391	414	4,254
Tasmania	133,071	1,569	123	173	1,865
Northern Territory	15,647	83	13	1	97
Australian Capital Territory ..	44,983	n.a.	n.a.	n.a.	241
Australia	c3,624,621	(d) 47,098	(e) 5,613	(f) 15,588	68,540

(a) Includes drivers', etc., licence fees. (b) Included in registration fees. (c) Excludes Queensland. (d) Excludes Australian Capital Territory but includes drivers', etc., licence fees for South Australia. (e) Excludes South Australia and Australian Capital Territory. (f) Excludes Australian Capital Territory.

The following table shows corresponding particulars for the years 1959–60 to 1963–64.

NUMBER OF DRIVERS' AND RIDERS' LICENCES IN FORCE AND GROSS REVENUE: AUSTRALIA

Year	Number of drivers' and riders' licences in force at 30th June(a)	Gross revenue (£'000) derived from—			
		Vehicle registrations and motor tax	Drivers' and riders', etc., licences	Other sources	Total
1959–60.. ..	2,984,852	34,044	3,275	10,203	47,522
1960–61.. ..	3,197,510	(c) 35,227	(c) 3,799	(c) 10,871	50,061
1961–62.. ..	3,325,774	(d) 37,324	(e) 3,504	(c) 11,767	52,778
1962–63.. ..	3,426,499	(d) 40,917	(e) 4,499	(c) 13,232	58,852
1963–64.. ..	3,624,621	(d) 47,098	(e) 5,613	(c) 15,588	68,540

(a) Excludes Queensland. (b) Includes Australian Capital Territory. (c) Excludes Australian Capital Territory. (d) Excludes Australian Capital Territory, but includes drivers', etc., licence fees for South Australia. (e) Excludes South Australia and Australian Capital Territory.

§ 3. Registrations of New Motor Vehicles

The following table shows the number of new motor vehicles registered in each State and Territory during the year ended 31st December, 1964.

REGISTRATIONS OF NEW MOTOR VEHICLES, 1964

State or Territory	Motor cars and station wagons	Utilities, panel vans, trucks(a) and omnibuses	Motor cycles	Total
New South Wales	122,196	26,101	2,499	150,796
Victoria	91,439	17,670	864	109,973
Queensland	47,284	13,748	1,448	62,480
South Australia	34,288	7,103	1,006	42,397
Western Australia	23,127	7,091	562	30,780
Tasmania	10,123	2,426	45	12,594
Northern Territory	1,042	689	23	1,754
Australian Capital Territory	3,564	664	35	4,263
Australia	333,063	75,492	6,482	415,037

(a) Includes other truck-type vehicles and ambulances.

Particulars of the registrations of new motor vehicles during each of the years ended 31st December, 1960 to 1964, are shown in the following table.

REGISTRATIONS OF NEW MOTOR VEHICLES: AUSTRALIA

Year	Motor cars and station wagons	Utilities, panel vans, trucks(a) and omnibuses	Motor cycles	Total
1960	244,818	65,541	9,153	319,512
1961	188,132	49,608	6,103	243,843
1962	266,789	56,457	5,414	328,660
1963	307,380	66,783	5,272	379,435
1964	333,063	75,492	6,482	415,037

(a) Includes other truck-type vehicles and ambulances.

ROADS AND BRIDGES

Information on the length of roads in Australia, the class of roads and their composition, together with particulars of the financial operations of the roads authorities in the several States, is included in Chapter XX. Local Government, of this Year Book.

ROAD TRAFFIC ACCIDENTS

§ 1. Accidents Reported

1. States and Territories, 1963.—The following table gives a summary of road traffic accidents involving casualties in each State and Territory for the year ended December, 1963.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES(a): NUMBER OF ACCIDENTS, PERSONS KILLED AND PERSONS INJURED, 1963

State or Territory	Accidents involving casualties	Persons killed			Persons injured		
		Number	Per 100,000 of mean population	Per 10,000 motor vehicles registered	Number	Per 100,000 of mean population	Per 10,000 motor vehicles registered
New South Wales ..	18,101	900	22	8	24,652	609	212
Victoria ..	12,590	780	26	8	17,577	575	188
Queensland ..	6,724	398	25	8	9,445	604	201
South Australia(b) ..	6,299	223	22	6	8,271	820	238
Western Australia ..	4,057	198	26	8	5,399	698	206
Tasmania ..	1,051	75	21	7	1,595	438	147
Northern Territory ..	218	16	56	14	313	1,092	272
Aust. Cap. Terr. ..	425	8	11	3	628	856	259
Total ..	49,465	2,598	24	8	67,880	622	204

(a) Accidents (reported to the police) which occurred in public thoroughfares and which resulted in the death of any person within a period of 30 days after the accident, or injury to an extent requiring surgical or medical treatment. (b) Includes all accidents resulting in bodily injury to any person whether or not requiring medical or surgical treatment.

2. States and Territories, 1959 to 1963.—The following table shows the number of road traffic accidents involving casualties and persons killed or injured in road traffic accidents in each State and the Australian Capital Territory during each of the years ended December, 1959 to 1963 and for the Northern Territory for the year ended December, 1963.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES(a): NUMBER OF ACCIDENTS, PERSONS KILLED AND PERSONS INJURED

Year	N.S.W.	Vic.	Q'land	S. Aust. (b)	W. Aust.	Tas.	N.T.	A.C.T.	Total	
									Number	Per 10,000 motor vehicles registered

ACCIDENTS INVOLVING CASUALTIES

1963 ..	900	780	398	223	198	75	16	8	2,598	8

PERSONS INJURED

1959 ..	20,910	17,009	7,748	5,553	4,624	1,016	n.a.	386	57,246	216
1960 ..	22,655	16,669	8,175	7,704	4,862	1,079	n.a.	490	61,634	219
1961 ..	21,839	16,115	7,467	7,297	4,779	1,173	n.a.	451	59,121	199
1962 ..	21,468	16,781	8,703	8,321	5,077	1,158	n.a.	498	62,006	199
1963 ..	24,652	17,577	9,445	8,271	5,399	1,595	313	628	67,880	204

(a) Accidents (reported to the police) which occurred in public thoroughfares and which resulted in the death of any person within a period of 30 days after the accident, or injury to an extent requiring surgical or medical treatment. (b) Includes all accidents resulting in bodily injury to any person whether or not requiring medical or surgical attention.

3. Types of Road User Killed or Injured.—The following table shows the number of persons killed and the number injured in each State and Territory, classified according to types of road user for the year ended December, 1963. Responsibility for cause of accident is not indicated by this classification.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES(a): TYPES OF ROAD USER KILLED OR INJURED, 1963

Type of road user	N.S.W.	Vic.	Qld	S.A. (b)	W.A.	Tas.	N.T.	A.C.T.	Total
PERSONS KILLED									
Drivers of motor vehicles ..	282	255	139	69	72	25	8	5	855
Motor cyclists ..	18	18	20	14	19	1	1	..	91
Pedal cyclists ..	24	47	32	12	8	2	125
Passengers (all types)(c) ..	266	203	111	64	49	22	5	1	721
Pedestrians ..	310	251	96	64	50	25	2	2	800
Other classes(d)	6	6
Total ..	900	780	398	223	198	75	16	8	2,598

PERSONS INJURED									
Drivers of motor vehicles ..	8,835	6,221	3,428	2,980	1,852	582	135	239	24,272
Motor cyclists ..	877	486	700	805	503	49	22	17	3,459
Pedal cyclists ..	956	1,098	565	755	438	52	6	48	3,918
Passengers (all types)(c) ..	9,948	7,125	3,798	2,962	1,955	685	136	268	26,877
Pedestrians ..	4,000	2,555	943	765	640	226	14	56	9,199
Other classes(d) ..	36	92	11	4	11	2	155
Total ..	24,652	17,577	9,445	8,271	5,399	1,595	313	628	67,880

(a) Accidents (reported to the police) which occurred in public thoroughfares and which resulted in the death of any person within a period of 30 days after the accident, or injury to an extent requiring surgical or medical treatment. (b) Includes all accidents resulting in bodily injury to any person whether or not requiring medical or surgical treatment. (c) Includes pillion riders. (d) Includes tram drivers, riders of horses and drivers of animal-drawn vehicles.

4. Age Groups of Persons Killed or Injured.—The following table shows the age groups of persons killed or injured in traffic accidents in each State and Territory for the year ended December, 1963.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES(a): AGES OF PERSONS KILLED OR INJURED, 1963

(a) Accidents (reported to the police) which occurred in public thoroughfares and which resulted in the death of any person within a period of 30 days after the accident, or injury to an extent requiring surgical or medical treatment. (b) Includes all accidents resulting in bodily injury to any person whether or not requiring medical or surgical treatment. (c) Includes parked vehicles.

§ 2. Road Safety Organization

Australian Road Safety Council.—(i) *Origin, Objectives and Organization.* The Australian Road Safety Council was formed in 1947 by the Australian Transport Advisory Council, which comprises Commonwealth and State transport ministers and Commonwealth ministers with associated interests, to co-ordinate road safety activities in Australia. It was re-constituted in February, 1961, by the Australian Transport Advisory Council, in order to provide a smaller, more effective, organization.

The Council comprises 16 members, representing the Commonwealth and State Governments and the major categories of organized road users. It meets approximately twice each year and has established a number of temporary sub-committees to investigate and report upon particular aspects of its activities.

The Department of Shipping and Transport provides the central executive for the Council. Each section represented on the Australian Road Safety Council—Commonwealth, State and community/commercial—exercises full control over its own activities.

A sum of £150,000 is provided annually by the Commonwealth for the promotion of road safety practices; £50,000 is distributed to the State Governments for public education in road safety, and the remaining £100,000 is used for the national public education campaign. The £50,000 grant to the States is allocated in the following proportions:—New South Wales, £12,500; Victoria, £10,000; Queensland, £9,250; South Australia, £6,250; Western Australia, £8,250; Tasmania, £3,750.

(ii) *Mode of Operation.* The media used by the Australian Road Safety Council in its national campaigns include metropolitan daily press and metropolitan radio and television, platform and pulpit, plus a wide variety of posters, pamphlets, booklets, publications and films. The official publication of the Council is the *Australian Road Safety Council Report* which is published monthly. Close liaison is maintained with State and Commonwealth educationists in the preparation and distribution of road safety instructional material for schools.

The Council, through its Central Executive in the Department of Shipping and Transport, works in close collaboration with two companion Committees, established by the Australian Transport Advisory Council. These are the Australian Road Traffic Code Committee, which prepares model regulations with the object of attaining national uniformity of traffic laws; and the Australian Motor Vehicle Standards Committee, which devises national standards for the construction, equipment, and operational efficiency of all road vehicles.

At the present time a special committee of educationists, called together by the Australian Road Safety Council, is investigating ways and means of broadening and strengthening the impact of road safety education throughout the school system. Another committee is looking into the question of more comprehensive and purposeful road accident statistics.

The Council is, jointly with the Australian Motor Vehicle Standards Committee, investigating the desirability of compulsory vehicle inspections. The Council works in co-operation with the National Health and Medical Research Council and also the Australian Traffic Code Committee in examining existing arrangements on the policy and procedures best suited to Australian conditions for the promotion of driver improvement through health standards, licensing and enforcement.

The Council recently brought together representatives of commerce and industry and seat-belt manufacturers to promote a national seat-belt campaign. The move resulted from both Australian and overseas studies which indicated that the risk of death or serious injury to drivers and passengers could be reduced by up to 80 per cent. by the use of seat belts.

CIVIL AVIATION

1. **The Department of Civil Aviation.**—Control of civil aviation in Australia is exercised by the Department of Civil Aviation which was established in 1939 to take over from the Civil Aviation Board the regulation of civil aviation in Australia.

The Department—

provides, operates and maintains the Australian air traffic control and air navigation network, and aeronautical information service, and provides, in conjunction with the Commonwealth Meteorological Bureau, a national weather information service for aircraft;

designs, operates and maintains aerodromes and related facilities and licences their use;

approves fares, freight rates and timetables;

determines the rules of the air and general conditions of flight over Australian territory;

- licences air services—operating in liaison with State Government transport authorities;
- has the power to suspend or cancel pilot licences and airworthiness certificates, enforces safety regulations and institutes prosecutions for infringements;
- investigates aircraft accidents and incidents;
- licences flying schools and training organizations and supervises their activities;
- determines airworthiness requirements for civil aircraft and issues certificates of airworthiness and of type approval;
- licences pilots, flight engineers, radio operators, maintenance engineers, and technicians;
- negotiates and administers international air transport agreements with oversea countries and regulates international flights and air services;
- imposes, varies and collects charges levied on aircraft operators for the use of aerodromes and air route facilities;
- conducts continuous economic and statistical studies of airlines and other civil aviation activities;
- negotiates and administers Government-airline agreements on air services, mail carriage, and other matters;
- represents the Australian Government on several international Civil Aviation Organizations (I.C.A.O., S.P.A.T.C.) and also at international conventions and meetings dealing with civil aviation problems.

The Department's jurisdiction covers not only Australia but also Papua, New Guinea (including New Britain) and areas of the Indian and Pacific Oceans. The head office of the Department is in Melbourne with regional offices in each State and Territory including Papua and New Guinea.

Year Books Nos. 16, 19 and 38 trace the establishment of civil aviation control in Australia and the appropriate Acts of Parliament and Regulations under which this control is exercised.

2. International Activity.—(i) *International Organizations.* A full report of the formation of the International Civil Aviation Organization, the Commonwealth Air Transport Council and the South Pacific Air Transport Council appeared in Year Book No. 37, and particulars of subsequent activity in the international field were included in No. 38. The International Civil Aviation Organization had a membership of 104 nations in December, 1964. Australia has continued its representation on the Council, a position which it held since I.C.A.O. was established in 1947. Further details will be found in Year Book No. 40 and earlier issues.

(ii) *International Agreements.* Australia has signed air services agreements with nineteen countries, of which seventeen were in force at December, 1964. The countries concerned were Canada, United States of America, Pakistan, India, Ceylon, Netherlands, United Arab Republic, Lebanon, South Africa, Japan, Germany, Ireland, Britain, Thailand, New Zealand, Italy and Malaysia. Agreements with Turkey and Iran await ratification by these countries. Provisional arrangements have also been concluded with seven other countries. Under both types of arrangements, traffic rights are granted to Australia's international airline Qantas in return for reciprocal traffic rights for the designated international airlines of the countries concerned to operate air services into Australia. Australia also has concluded provisional arrangements with five other countries providing for the over-flight of their territory by Qantas scheduled services but not covering traffic rights.

(iii) *International Air Services.* Ten international airlines, including Qantas, were operating services between Australia and oversea countries in February, 1965. By January, 1965, Qantas was operating a fleet of 13 Boeing 707-138B V-Jet aircraft and 4 Lockheed Electras over a world-wide network of 81,413 unduplicated route miles. Qantas also has on order six of the larger Boeing 707-338C jet aircraft for delivery during 1965-66.

3. **Australian National Airlines Commission.**—The *Commonwealth Australian National Airlines Act 1945* constituted the Australian National Airlines Commission for the purpose of establishing, maintaining and operating airline services for the transport of passengers and goods between Australian States and/or Territories and within Australian Territories. The Commission may, with the approval of the Minister, undertake services between Australia and places outside Australia, and, in certain circumstances, may engage in intra-State operations.

The operating organization set up to give effect to the Act is Trans-Australia Airlines.

4. **Regular Air Services within Australia.**—Eleven airlines operate domestic services throughout Australia and the Territory of Papua and New Guinea over a network of 80,455 unduplicated route miles. Australia's domestic airlines can be classified into three groups as follows.
