<sup>(</sup>a) In addition, the following numbers of parking offences were settled by payment of fines to the Police Department without court appearances: 1954—23,177; 1955—61,179; 1956—163,921. Cases of parking offences tried in previous years are included in the totals shown. (b) Twelve months ended 30th June of year shown. (c) A person convicted on several counts at the one hearing appears only once, but if a person be convicted at different hearings during the year, whether for the same or for a different type of offence, the results of all hearings are recorded separately.

- 4. Convictions for Serious Crime at Magistrates' Courts.—(i) General. The figures given in the preceding tables refer to all convictions, and include offences of a technical nature, drunkenness, and minor breaches of good order, which, if they can be said to come under the heading of crime at all, at least do so in a very different sense from the more serious offences. The following table has therefore been prepared to show convictions at Magistrates' Courts for what may be regarded as the more serious offences, i.e. offences against the person, offences against property, forgery and offences against the currency.
- (ii) Number and Rates. The following table shows the number of convictions for serious crime at Magistrates' Courts for the years 1952 to 1956:—

#### CONVICTIONS FOR SERIOUS(a) CRIME AT MAGISTRATES' COURTS.

State or Territory.	1952.	1953.	1954.	1955.	1956.
New South Wales	17,858	17,612	17,085	19,803	21,399

<sup>(</sup>a) Twelve months ended 30th June of year shown.

The term "drunkenness" includes drunkenness and disorderliness, and habitual drunkenness.

<sup>(</sup>ii) Convictions per 10,000 of Population. In the twenties, the convictions for drunkenness averaged approximately 100 per 10,000 of population, but the rate fell away considerably during 1930 and 1931, being only 57.1 in the latter year. The average then rose steadily, the annual average for the period 1936 to 1939 being 82.7 and that for the years 1940 to 1945, 90.8. In 1946, the convictions per 10,000 rose very steeply to 132.1 increasing further to 174.5 by 1951, since when they have declined again to 138.9 in 1956.

The rates of convictions for drunkenness since 1952 are shown in the following table:—

#### CONVICTIONS FOR DRUNKENNESS.

(PER 10,000 OF POPULATION.)

State or Territory.	1952.	1953.	1954.	1955.	1956.

1955-56				0.31	1.18	24.74
1956–57				0.28	1.25	22.09

- (iv) Remedial Treatment of Drunkenness. Legislation has been passed in each State providing for the committal of inebriates to special government institutions. The laws in the various States are as follows:—New South Wales, Inebriates Act 1912 amended in 1949; Victoria, Inebriates Act 1928; Queensland, Inebriate Institutions Act 1896; South Australia, Inebriates Act 1908–1934, Convicted Inebriates Act 1913–1934; Western Australia, Inebriates Act 1912–1919; Tasmania, Inebriates Act 1885, Inebriate Hospitals Acts 1892 and 1941. In New South Wales, the care and treatment of inebriates other than those convicted of an offence are under the control of the Inspector-General of Mental Hospitals. The Inebriates Home in Queensland is under the control of the Department of Health and Home Affairs. Its function is curative. In Western Australia, the treatment of inebriates is under the control of the Inspector-General of Mental Health Services. In Tasmania, a charitable institution has been established by the Gaols Department, but treatment is purely custodial. A certain amount of remedial treatment is undertaken by the Director of Mental Health.
- 7. First Offenders.—In all States, statutes dealing with first offenders have been in force for many years. Existing legislation is as follows:—New South Wales, Crimes Act 1900–1955, First Offenders (Women) Act 1919 amended in 1929; Victoria, Crimes Act 1957; Queensland, Criminal Code Acts 1899 to 1945; South Australia, Offenders Probation Act of 1913–1953; Western Australia, Criminal Code Act 1913–1956; Tasmania, Probation of Offenders Act 1934. In New South Wales, Queensland, South Australia and Western Australia the court may allow a first offender convicted of a minor offence to go free on recognizances being entered into for his good behaviour for a certain period. In Victoria, the court may suspend sentence and place the offender under the supervision of a probation officer for not more than five years. In Western Australia, the court may also dismiss the

<sup>(</sup>iii) Consumption of Intoxicants. The following table shows the consumption of spirits, wine and beer per head of population in Australia during the years 1952-53 to 1956-57:—

indictment or complaint without proceeding to conviction. In Tasmania, the court may discharge an offender on his recognizance, with or without sureties, to be of good behaviour and to appear for sentence when called upon at any time during the following three years. The offender may be placed under the supervision of a probation officer.

8. Children's Courts.—(i) New South Wales. Children's Courts, established in 1905, exercise jurisdiction under the Child Welfare Act 1939-55. Where practicable, they are not held in ordinary court rooms, and persons not directly interested are excluded from any hearing in order that children may be protected against the adverse influences which they would encounter in ordinary courts.

The magistrates exercise all the powers of a Court of Petty Sessions in respect of offences committed by or against children under 18 years of age. They also exercise jurisdiction in respect of neglected and uncontrollable children. Their functions are reformative, not punitive; they may commit children to institutions, to the care of persons other than the parents, or to the care of the Minister for Education.

- (ii) Victoria. The jurisdiction of Children's Courts is limited to children under the age of 17 years. A stipendiary special magistrate, with jurisdiction throughout the State has the assistance of two stipendiary probation officers who investigate problem cases which come before the court. A clinic has been established to deal with cases referred to it by the court.
- (iii) Queensland. The Children's Court in the metropolitan area is presided over by a magistrate, and the services of the Psychiatric clinic are available to him if he considers they are needed. Proceedings are held in camera. A non-commissioned police officer is present to offer any observations he considers necessary and to assist the magistrate. In country areas the court is presided over by the local stipendiary magistrate or, in his absence, by two justices. If found guilty a child may be either admonished, released on probation or committed to the care of the State Children's Department or an institution. A conviction will not necessarily be recorded against him. His parent or guardian may be ordered to pay damages to the wronged party, and in default is liable to the same consequences as a defendant in an ordinary Court of Petty Sessions.
- (iv) South Australia. A Juvenile Court to hear cases of offences by children under the age of 17 years is constituted by a special magistrate or two justices. It has power to determine all charges other than homicide. A child can be committed by a court only to a reformatory. For indictable offences, the penalty is committal to a reformatory or a fine of up to £50.
- (v) Western Australia. Children's Courts are established to deal with offenders under the age of 18 years and to hear cases of certain offences against children. Special magistrates are appointed for Children's Courts, and the Governor may appoint other persons to be members of a particular Children's Court. One member may sit and adjudicate with the special magistrate, but in the magistrate's absence at least two members must be present.

A Children's Court is deemed to be a court of summary jurisdiction and may exercise exclusive jurisdiction in respect of all offences except wilful murder, murder, manslaughter or treason alleged to have been committed by children.

Adults charged with certain specified sexual offences against children may be dealt with summarily, but have the right to elect to be tried by a jury.

- (vi) Tasmania. Children's Courts are established to deal with offenders under the age of 17 years. Special magistrates are appointed by the Governor for Children's Courts. One or two special magistrates, or one or two justices constitute a court.
- A Children's Court is deemed to be a court of summary jurisdiction, and may exercise exclusive jurisdiction in respect of all offences alleged to have been committed by children.
- (vii) Australian Capital Territory. The Court of Petty Sessions constitutes the Children's Court when it is hearing proceedings involving persons under the age of 18 years. Its proceedings are similar to those of an ordinary Court of Petty Sessions except that persons not directly interested are excluded from the Court. The Court has power to hear and

determine summarily a charge for an indictable offence. It may release an offender on probation, commit him to the care of a specified person, make him a government ward or commit him to an institution for up to three years.

#### B. HIGHER (JUDGES') COURTS.

1. Persons Convicted at Higher Courts.—The following tables show for each State and Territory and for Australia as a whole the number of persons convicted at higher courts classified according to the nature of the offence, during 1955 and 1956:—

- (a) Twelve months ended 30th June of year shown. (b) A person convicted on several counts at the one hearing appears only once, but if a person be convicted at different hearings during the year, whether for the same or for a different type of offence, the results of all hearings are recorded separately. (c) Convictions.
- 3. Habitual Offenders.—In most States, judges have power to declare as habitual criminals persons who have a certain number of previous convictions. A summary of the methods adopted in each State was given on pp. 497–8 of Official Year Book No. 40.
- 4. Capital Punishment.—There were nine executions in Australia during the period 1947 to 1956. Three took place in Victoria (in 1951), three in South Australia (one in 1950, one in 1953 and one in 1956), one in Western Australia (in 1952), and two in Northern Territory (in 1952). In each case the offence was murder.

Under the Criminal Code Amendment Act 1922, capital punishment was abolished in Queensland, and in New South Wales the Crimes Act was recently amended abolishing capital punishment for all offences except treason and piracy.

In the early days of the history of Australia, the penalty of death was attached to a large number of offences, many of which would now be dealt with in a Magistrate's Court. With the growth of settlement, and the general improvement in social and moral conditions, the list was considerably curtailed, and the existing tendency is to restrict death sentences to persons convicted of murder. Although rape is a capital offence in some States, the penalty of death has not been imposed in recent years on persons convicted of it.

The average annual number of executions in Australia from 1861 to 1880 was 9; from 1881 to 1900, 6; from 1901 to 1910, 4; from 1911 to 1920, 2; from 1921 to 1930, 2; from 1931 to 1940, 1; and from 1941 to 1950, 0.5.

#### § 3. Civil Courts.

#### A. LOWER COURTS.

The total numbers of plaints entered and the amounts awarded to plaintiffs during 1955 and 1956 are shown in the following table. The figures are compiled from returns from the Small Debts Courts in New South Wales, Courts of Petty Sessions in Victoria, Magistrates' Courts in Queensland, Local Courts in South Australia and Western Australia, Courts of Requests in Tasmania, Courts of Summary Jurisdiction in the Northern Territory and the Court of Petty Sessions in the Australian Capital Territory.

#### B. HIGHER COURTS.

1. General.—The following table shows the transactions on the civil side (excluding divorce and bankruptcy) in the higher courts during 1955 and 1956. The particulars given below include the number and amount of judgments entered by default or confession, or agreement, and differ from those in issues of the Official Year Book prior to No. 29, which related in most States only to cases tried during the year.

#### CIVIL CASES AT HIGHER COURTS.

2. Divorce.—(i) General. The marriage relationship may be terminated by process of law in any one of three ways: by dissolution of the marriage, by annulment of the marriage, or by the grant of a judicial separation. The term "divorce" is used sometimes to designate all three processes, and sometimes to designate only the first. In this publication it is used in the wider sense.

Every decree for dissolution of marriage is first a decree nisi. During a period which varies from State to State, any person may show cause why the decree should not be made absolute, either because of collusion or because material facts were not before the court. In some States, the Attorney-General also may intervene. If no matter in opposition is pending, the decree nisi may be made absolute at the expiration of the time set. A decree absolute for dissolution of marriage dissolves the marriage tie at the time when it is made, the parties to that marriage cease to have the status of husband and wife, and are free to remarry after the expiration of the time set down for appeal against the court's decision.

Proceedings for nullity of marriage may be instituted in respect of a marriage which is void or voidable. A marriage which is void has no existence at all and so, strictly speaking, it is not necessary to obtain a decree of nullity of marriage, but as the issue may depend on difficult questions of fact, such as insanity, it is advisable to seek a court judgment, which is binding and decides the question of the validity of the marriage. Proceedings for annulling a voidable marriage must be taken before the marriage is terminated by dissolution or death. Once the final decree has been pronounced, a voidable marriage is void ab initio, but until then the parties to it have the status of married people and transactions

<sup>(</sup>b) Not available. (c) Excludes Northern

concluded on the basis of the existence of that status cannot be undone or re-opened. Since the parties to a marriage which is void or which has been voided do not have the status of married people, they are free to remarry.

A decree of judicial separation leaves unimpaired the status of marriage, but suspends the rights and duties of the parties to the marriage with respect to cohabitation, and is a defence against a suit for the restitution of conjugal rights. A husband is not responsible for the acts of his wife, save that he is liable for necessaries supplied to her if he has failed to pay alimony ordered by a court. Persons who have been judicially separated are not free to remarry.

(ii) Number of Petitions filed. The following table shows the number of petitions for dissolution of marriage, nullity of marriage and judicial separation filed in each State during 1956.:—

<sup>(</sup>a) For dissolutions and nullities of marriage the figures represent decrees nisi granted.

(vii) Ages of Husband and Wife at time of Dissolution of Marriage. The following table shows the number of husbands and wives in each age group who were parties to marriages dissolved in 1956. Age is taken at the time the decree absolute is made.

Forty-two per cent. of wives were in the 25-34 years age group and 40 per cent. of husbands in the 30-39 years age group. These proportions have varied little during recent years and are considerably higher than the proportions of married persons of those age groups in the whole population (27 per cent. and 26 per cent. respectively at the Census of 30th June, 1947; 28 per cent. and 25 per cent. respectively at the Census of 30th June, 1954).

(viii) Duration and Issue of Marriages Dissolved. The following table shows the number of dissolutions of marriage granted in 1956, classified according to the legal duration of the marriage (i.e., the period from the date of marriage to the date when the decree nisi was made absolute) and issue. The majority of marriages dissolved are of less than fifteen years' duration; about 40 per cent. of them are of less than ten years' duration. About one-third of all marriages dissolved in 1956 were childless. These proportions have varied very little in recent years. The proportion of all childless marriages in the population was 16.7 per cent. at the Census of 30th June, 1947, and 18.5 per cent. at the Census of 30th June, 1954.

(ix) Number of Divorced Persons at each Census 1901 to 1954. The following table shows the number and proportions of divorced persons in Australia at each census from 1901 to 1954. A classification of these persons by age appeared in earlier issues of the Official Year Book (see No. 39, p. 269). Prior to 1911, no record was made of divorced persons in South Australia, so comparisons cannot be made to extend beyond that date.

(a) Excludes South Australia.

3. Bankruptcies.—Particulars relating to bankruptcy in each State to the end of 1927 have been incorporated under this heading in issues of the Official Year Book prior to No. 23. On 1st August, 1928, the Commonwealth Bankruptcy Act, which is now the Bankruptcy Act 1924–1955, came into operation.

Under the Bankruptcy Act 1924–1955, the Commonwealth is divided into bankruptcy districts which coincide generally with State boundaries. A Federal Court of Bankruptcy has been established with jurisdiction throughout Australia but it exercises this jurisdiction mainly in the bankruptcy districts of New South Wales, which includes the Australian Capital Territory, and Victoria. Certain State courts have been invested with federal jurisdiction in bankruptcy and, outside New South Wales and Victoria, usually exercise that jurisdiction in the appropriate bankruptcy district.

Any person unable to pay his debts may voluntarily apply for the sequestration of his estate, or his creditors may apply for a compulsory sequestration, if he has committed an act of bankruptcy. The act of bankruptcy usually relied on is non-compliance by a debtor with a bankruptcy notice which requires the debtor to whom it is addressed to pay within a specified time to a creditor who has obtained a final judgment or order to pay the amount of the debt or satisfy the Court that he has a counter-claim, set-off, or cross demand which equals or exceeds the judgment debt. If a bankruptcy notice is not complied with, a creditor may thereupon present a petition against a debtor provided that—

- (1) the debt or debts amount to £50:
- (2) the act of bankruptcy relied on has occurred within the six months preceding the presentation of the petition; and
- (3) the statutory requirements relating to domicile or residence are applicable to the debtor.

Upon the issue of a sequestration order, the property of the bankrupt vests in the official receiver named in the order, and his property is divisible among his creditors in accordance with the provisions of the Act. No creditor to whom the bankrupt is indebted in respect of any debt provable in bankruptcy has any remedy against the property or person of the bankrupt except by leave of the court.

Instead of having a sequestration order made against his estate, under Part XI of the Bankruptcy Act 1924-1955, a debtor may compound with his creditors or assign his estate for their benefit. Under Part XII of the Act a debtor may enter into a scheme of arrangement. The object of Parts XI and XII of the Act is to allow a debtor and his creditors to enter into an agreement concerning the debts due to the creditors without having a sequestration order made against the debtor.

The Court has power to decide questions of law affecting a bankrupt estate. Questions of fact may be tried before a jury.

The Bankruptcy Act 1924-1955 provides for an Inspector-General in Bankruptcy, who performs such duties as are prescribed. The Act also provides for a Registrar and an Official Receiver to be appointed for each bankruptcy district.

A Registrar in Bankruptcy is controlled by the Court and has such duties as the Attorney-General of the Commonwealth directs, or as are prescribed, and exercises such functions of an administrative nature as are authorized by the Court. He may examine a bankrupt

or a person indebted to a bankrupt or having in his possession any of the estate or effects of a bankrupt. Stipendiary magistrates are appointed Deputy Registrars in country districts.

All sequestrated estates are vested in an Official Receiver, who is a permanent officer of the Commonwealth Public Service. His duties are to investigate the conduct, property and transactions of the debtor, and the cause of bankruptcy of a debtor and to realise and administer the estate of the debtor. He acts under the general authority of the Attorney-General and is controlled by the Court.

Persons registered by the Court as qualified to act as trustees may be appointed by resolution of the creditors to be trustees of estates. In cases where a registered trustee under a deed of arrangement, composition, or assignment (Parts XI and XII of the Bankruptcy Act) is removed from or vacates his office, the official receiver may be appointed by the Court to complete the administration of the estate, or the Court may direct the official receiver to convene a meeting of the creditors in the estate to enable them to appoint a registered trustee to complete the administration of the estate.

The following tables show the number of bankruptcies of the various types in each State, together with the assets and liabilities of the debtors, during the eleven months ended 30th June, 1956, and the twelve months ended 30th June, 1957:—

For purposes of comparison the following two tables show Australian figures in respect of each of the various types of bankruptcy, and State figures in respect of all types of bankruptcy for the past five years.

Until 1954-55, the bankruptcy year ended on the 31st July. Thereafter it has ended on the 30th June. Figures for 1955-56 therefore cover only eleven months.

#### BANKRUPTCIES, AUSTRALIA.

(a) Includes the Australian Capital Territory.

(b) Eleven months.

4. High Court of Australia.—Under the provisions of Section 71 of the Commonwealth Constitution, the judicial power of the Commonwealth is vested in a Supreme Court called the High Court of Australia, and in such other courts as the Parliament creates or invests with Federal jurisdiction. The High Court of Australia possesses both original and appellate jurisdiction. The powers of the Court are defined in the Commonwealth Constitution, and in the Judiciary Act 1903–1955. The Court consists of a Chief Justice and six other judges. Sittings of the Court are held in the capitals of the various States as occasion requires. The High Court functions as a Court of Appeal for Australia. The following statement shows the transactions of the High Court for 1956 and 1957:—

TRANSACTIONS OF THE HIGH COURT OF AUSTRALIA.

Original Jurisdiction.	1956.	1957.	Appellate Jurisdiction.	1956.	1957.
	İ			ļ

	1	:		!	1

During 1956 and 1957, respectively, the High Court dealt also with the following: Appeals from Assessments under the Taxation Assessment Act, 31, 51; Special cases stated for the opinion of the Full Court, 10, 5; Applications for Prohibitions, etc., 42, 44. The fees collected amounted to £3,457 in 1956 and £3,544 in 1957.

5. Commonwealth Industrial Court.—Information regarding the Commonwealth Industrial Court, which was established under the Conciliation and Arbitration Act 1904–1956, will be found in Chapter VI.—Labour, Wages and Prices.

#### § 4. Police, Prisons and Prisoners.

1. Police.—The primary duties of the police are to prevent crime, to detect and detain offenders, to protect life and property, to enforce the law, and to maintain peace and good order. In addition they perform many duties in the service of the State, e.g. they act as clerks of petty sessions in small centres, as crown land bailiffs, foresters, mining wardens and inspectors under the fisheries and various other acts. In metropolitan and large country areas they also regulate the street traffic. With the exception of a small body of Commonwealth police in the Northern Territory and the Australian Capital Territory, the police forces of Australia are under the control of the State governments, but their members perform certain functions for the Commonwealth government, such as acting as aliens registration officers and policing various acts and regulations.

Women police perform special duties at places where young women and girls are subject to moral danger, control traffic at school crossings, and lecture school children on road safety. They also assist male police as required in the performance of normal police duties.

The strength of the police force in each State and Territory for the years 1952 to 1956 is shown in the following table. The figures include traffic police, probationers, cadets, special constables and women police, but exclude parking police, blacktrackers (natives employed in outlying districts in tracking lost persons and persons wanted by the police), female searchers, wardresses and interpreters. Figures refer to the 30th June, except where otherwise indicated.

#### STRENGTH OF POLICE FORCES.

<sup>(</sup>a) 31st December. (b) Includes Hayes Farm previously shown as a separate gaol. (c) Includes 40 single-unit huts not previously included.

There is no gaol in the Australian Capital Territory, but there is a lock-up consisting of five cells attached to the police station at Canberra, and a similar lock-up at Jervis Bay, where offenders are held while awaiting trial or serving short sentences not exceeding one week imposed by a Magistrate's Court.

3. Convicted Prisoners.—The number of convicted prisoners in each of the years 1952 to 1956 and the proportion per 10,000 of the population are shown in the following table. The figures exclude aborigines and debtors.

#### CONVICTED PRISONERS.

#### § 5. Cost of Administration of Law and Order.

1. Expenditure by the States.—The tables below show the net expenditure (i.e. gross expenditure less receipts from fees, fines, recoup for services rendered, etc.) from Consolidated Revenue during 1955-56 and 1956-57 in connexion with the administration of justice, police and prisons in each State.

In South Australia the receipts for legal fees and registrations exceed the expenditure under "Justice". Because of differing legislative and administrative arrangements in the various States the activities covered by the figures shown are not exactly the same in each State. Other small differences result from differing accounting practices. However, the figures shown for individual States are comparable from year to year.

#### CHAPTER XIV.

## PUBLIC HEALTH.

#### A. STATE GOVERNMENT ACTIVITIES

(including activities of the Commonwealth Government in the Northern Territory and the Australian Capital Territory).

# § 1. Public Health Legislation and Administration.

1. New South Wales.—The Department of Public Health comes under the jurisdiction of the Minister for Health, with an Under-Secretary as Permanent Head of the Department for administrative purposes.

There is also a Director-General of Public Health and Chief Medical Adviser to the Government, who is ex officio President of the Board of Health and Chairman of the Nurses' Registration Board.

The Inspector-General of Mental Hospitals is responsible for the administration of that part of the Lunacy Act relating to the care and treatment of mental patients.

The Department's activities embrace all matters relating to public health and the greater part of the general medical work of the Government. These include:—
(a) Supervision of the work of local authorities (municipal and shire councils) in relation to public health matters connected with the following Acts—Public Health Act, Noxious Trades Act and Pure Food Act; (b) Scientific divisions (Government Analyst, Microbiological Laboratory, and Division of Industrial Hygiene); (c) Tuberculosis and Social Hygiene Divisions; (d) Medical Officers of Health at Sydney, Broken Hill, Newcastle, Wollongong, Bathurst and Lismore; (e) State hospitals and homes and State sanatoria; (f) Mental hospitals; (g) Public hospitals (Hospitals Commission); (h) Maternal and baby welfare (Baby health centres); (i) School medical and dental services; and (j) Publicity, nutrition and library services.

- 2. Victoria.—The Department of Health comprises four branches, the General Health Branch, the Maternal and Child Hygiene Branch, the Tuberculosis Branch and the Mental Hygiene Branch. The work of these branches is described below.
- (a) The General Health Branch. This branch collaborates with local government health authorities to fight against infectious diseases. Since 1st October, 1954, the State Government, through the Hospitals and Charities Commission, has been responsible for the whole cost of treating cases of infectious disease.

Special clinics for prophylaxis and treatment of venereal disease are attached to several public hospitals in the State and treatment may be obtained at all public hospitals.

The Poliomyelitis Division, which has been operating since 1949, provides a consultant diagnostic service and maintains an after-care treatment service for the whole of the State. Three doctors and a number of visiting physiotherapists and nurses treat a great number of patients, mainly in their own homes.

The Industrial Hygiene Division, staffed by doctors and scientists with a number of specially trained inspectors, supervises the working conditions of persons employed in industry.

- (b) The Maternal and Child Hygiene Branch. This branch is concerned with pre-natal hygiene, the development of pre-school services, and the school medical and dental services.
- (c) The Tuberculosis Branch. The Tuberculosis Branch under the control of a Director of Tuberculosis combats the spread of tuberculosis. Using improved diagnostic facilities and better methods of treatment, it has been possible to reduce greatly the incidence of this disease. No longer is there a waiting list for entry into a sanatorium; in fact, the former State sanatorium at Greenvale is now used as an institution for the aged.
- (d) The Mental Hygiene Branch. At the end of 1951, an Authority consisting of three members was established under the Mental Hygiene Authority Act 1950 to take charge of the Mental Hygiene Branch. Although the Authority is head of the branch, detailed administration can be carried out by its officers leaving the Authority free to deal with major

problems relating to the improvement of treatment and accommodation for the mentally ill. The efforts of the Authority at the present time are principally concerned with improving existing hospitals and providing additional accommodation made necessary by the increase in population in the State and with developing preventive out-patient psychiatric services designed to reduce the need for in-patient beds.

The Cancer Institute, set up in 1949 under the provisions of the Cancer Institute Act 1948, is now operating a very active out-patients treatment centre as well as a small inpatient unit. Facilities provided at the Institute for radiation therapy are being extended by installing a 4 m.e.v. linear accelerator. It will be the first of this type of machine to operate in Australia.

- 3. Queensland.—(i) General. The Health Acts 1937 to 1955 are administered by the Director-General of Health and Medical Services subject to the Minister for Health and Home Affairs. A central staff controls the following divisions:—
- (a) Division of Public Health Supervision. This Division is controlled by the Deputy Director-General of Health and Medical Services and comprises separate sections of environmental sanitation, food and drug control, enthetic (venereal) diseases, hookworm control and Hansen's disease (leprosy) control. Two institutions (one at Peel Island in Moreton Bay for white patients and one at Fantome Island near Townsville for aboriginal patients) are maintained for the treatment of Hansen's disease. Modern therapy with sulphone drugs has caused a decline in numbers of patients at these institutions. Free treatment of venereal diseases is offered at the Department's male and female clinics in Brisbane, and at any public hospital. Free immunization against diphtheria, whooping cough and tetanus is offered by most of the local authorities. About 94 per cent. of school children in the Greater Brisbane area and 90 per cent. in the rest of the State have been immunized against diphtheria.
- (b) Division of Tuberculosis. A central chest clinic in Brisbane offers Mantoux tests, X-ray examinations, and inoculations of Mantoux negative reactors free of charge and this service is extensively used. A mobile X-ray unit visits country districts. Children in the final grade of primary schools are now being Mantoux-tested and given B.C.G. vaccine.
- (c) Division of Industrial Medicine. This Division exercises supervision over the health of workers in both primary and secondary industries, including control of leptospirosis (Weil's disease), scrub typhus and other fevers of occupational origin in the sugar-cane growing districts north of Ingham.
- (d) Division of Maternal and Child Welfare. This Division offers supervision and advice on the rearing and health of infants and pre-school children at 232 baby health centres throughout the State. Outlying centres are visited by air or by special rail car. Homes for in-patient treatment of infants with feeding problems have been established at Brisbane, Toowoomba, Ipswich and Rockhampton.
- (e) Division of School Health Service. This Division comprises the Chief Medical Officer, School Health Services, and a staff of doctors, dentists and visiting school nurses. Every child has a medical examination at least once in three years.
- (f) Division of Mental Hygiene. The Director is responsible for the care and treatment of mentally sick patients in the State's four mental hospitals at Brisbane, Toowoomba, Ipswich and Charters Towers.
- (g) Division of Laboratory Services. Two laboratories—the Laboratory of Microbiology and Pathology and the Government Chemical Laboratory—are maintained to ensure the purity of a wide range of foodstuffs and materials. The former also offers a service in clinical pathology to country hospitals and private doctors.
- (ii) Hospitals. All public hospitals operate under the district system, which provides for the constitution of hospitals regions and hospitals districts and a hospitals board for each district. The State is divided into 11 hospitals regions with a base hospital for each region which comprises a number of hospitals districts. The purpose of the regional scheme is to co-ordinate the public hospitals in the region with the base hospital. The administration of the hospital services, including public dental services, in each hospitals district is vested in the hospitals board, which comprises not less than four members nor more than eight members appointed by the Governor-in-Council and one member elected by the component local authorities. There are 54 hospitals boards controlling 140 public hospitals.

Private hospitals in Queensland are controlled under the provisions of the "Health Acts 1937 to 1955" and the "Private Hospital Regulations 1937". There are 59 private hospitals licensed in the State, containing 1,617 beds and six cots, of which 20, containing 684 beds and three cots, are in Brisbane.

4. South Australia,—The Department of Public Health embraces the activities of the Central Board of Health, the Food Drugs Advisory Committee, the School Medical and Dental Services, Poliomyelitis Services, Deafness Guidance Clinic and the public health aspect of the control of tuberculosis, including the State X-ray Health Survey, under the control of the Director of Tuberculosis.

The Central Board of Health consists of five members, three of whom (including the chairman) are appointed by the Governor while one is elected by metropolitan local boards and one by all other local boards. The Central Board of Health administers the Health, Food and Drugs, Dangerous Drugs, Noxious Trades, Bakehouses Registrations and Early Notification of Birth Acts. The Board is also concerned to some degree with Acts relating to local government, abattoirs and cremation. Other legislation administered by the Department of Public Health relates to venereal diseases and vaccination.

The Health Act 1935-1956 constitutes every municipal council and every district council a local board of health for its municipality or district. There are 143 local boards under the general control and supervision of the Central Board. Under the Food and Drugs Act, each local board is constituted the local authority for its respective district, except in the metropolitan area, for which the Metropolitan County Board is the local authority.

5. Western Australia.—Health services are provided under the Health Act 1911-1957. The central authority is the Department of Public Health, controlled by a Commissioner, who must be a qualified doctor. The State is divided into 147 local government areas which are constituted as municipalities or road boards. Each type of authority has health administration powers.

By law, a local board of health may be set up in lieu of a road board, but this method of control is no longer used. In any emergency, the Commissioner may exercise all the powers of a local health authority in any part of the State.

Features of recent legislation are as follows:—(a) Act No. 70 of 1948 gives power to control sufferers from tuberculosis and established a Tuberculosis Control Branch; (b) Act No. 11 of 1952 gives wide powers to regulate the sale and use of pesticides; (c) Act No. 34 of 1954 provides for the licensing of manufacturers of therapeutic substances; (d) Act No. 45 of 1954 requires every doctor who at ends a child which dies within 28 days of birth to notify the Commissioner; and (e) Act No. 21 of 1957 gives power to require the notification of any prescribed condition of health in addition to infectious diseases.

6. Tasmania.—The Department of Health Services is under the jurisdiction of the Minister for Health, and the administration of the various divisions is controlled by the permanent head of the department, the Director-General of Health Services, who is also directly responsible for the Division of Hospital and Medical Services. Associated with the Director-General are the Directors of Orthopaedics, Pathology and Anaesthetics, and the Government Analyst.

The Division of Hospital and Medical Services is responsible for the establishment and administration of public hospitals, the provision of specialist services under the supervision of the Directors of Orthopaedics, Pathology and Anaesthetics, the licensing and inspection of private hospitals, the provision of district nursing hospitals and services in country districts, the administration of the district and tourist nursing services, the conduct of homes for the aged and the government medical service, which comprises 18 practices in country districts where there are no private doctors.

The Division of Public Health administers laws relating to environmental sanitation, food and drugs, places of public entertainment, cremation, and notifications of infectious diseases. The Division also controls the school medical and dental services, maternal and child health centres, and the mothercraft home.

The Tuberculosis section conducts comprehensive X-ray surveys and maintains diagnostic clinics and chest hospitals.

The Division of Mental Health is responsible for the building of mental hospitals, the consultative diagnosis and treatment of psychiatric cases, the treatment and care of the mentally ill, the treatment and care of inebriates, the treatment and custody of sexual offenders, the treatment of psychopathic cases, and the care and treatment of retarded children.

7. Northern Territory.—The Commonwealth Department of Health provides hospital, health and medical services in the Northern Territory.

Four general hospitals have been established. The Darwin Hospital has accommodation for 199 in-patients, Alice Springs Hospital, 117, Katherine Hospital, 30, and Tennant Creek Hospital, 34. East Arm Settlement was opened in August, 1955, for the treatment of Hansen's disease. A full range of ancillary services is available at the Darwin hospital which serves as a base hospital for the Territory. Dental clinics have been set up at Darwin and Alice Springs.

Medical and dental services to outback areas are provided by road and air. Aircraft used in the Territory are one Drover and one De Havilland Dove stationed at Darwin, and one Drover at Alice Springs. They are staffed and serviced by Trans-Australia Airlines and are extensively used in ambulance and survey medical work. At Alice Springs, doctors of the Northern Territory provide the medical services to the Flying Doctor Service (South Australian) base.

A section of the Department of Health undertakes continuous investigation into native health.

School doctors and dentists move throughout the area diagnosing and treating. Public health services are provided and health inspectors periodically visit all settlements.

Darwin, as a first port of entry for oversea aircraft and shipping, has a quarantine station.

8. Australian Capital Territory.—The Public Health Ordinance 1928–1930 placed under the control of the Minister for Health all matters relating to public health and hygiene in the Australian Capital Territory. The Minister has appointed a Medical Officer of Health and a number of Health Inspectors to administer and police this ordinance. The Canberra Community Hospital is administered subject to the Minister for Health by a board consisting of five elected members and three members appointed by the Minister. The hospital has accommodation for 253 in-patients, an out-patients department, and a 16 bed tuberculosis chalet. A district nursing service administered by the Commonwealth Department of Health was established in 1950 to provide a home-nursing service for the sick and aged. The service is available at the request of a registered doctor.

# § 2. Supervision and Care of Infant Life.

1. General.—The number of infant deaths and the rate of infant mortality for the five years 1952 to 1956 are given in the following table. Further information regarding infant mortality (including information for each State as a whole and for the Territories) will be found in Chapter XVII.—Vital Statistics.

<sup>(</sup>a) Fxcludes Territories. (b) Number of deaths of children under one year of age per 1,000 live births registered.

Because the health of mothers and infants depends largely on pre-natal attention as well as after-care, government and private organizations provide instruction and treatment for mothers before and after confinement. The health and well-being of mother and child are looked after by the institution of baby health centres, baby clinics, crèches, visits by midwives and special attention to the milk supply.

In all States, Acts have been passed with the object of supervising and ameliorating the conditions of infant life and reducing the rate of mortality. Departments control the boarding-out to suitable persons of the wards of the State, and wherever possible the child is boarded out to its mother or to a near female relative. Stringent conditions regulate the adoption, nursing and maintenance of children placed in foster-homes by private persons, while special attention is devoted to the welfare of ex-nuptial children. (See also in this connexion Chapter XV.-Welfare Services.)

Under the provisions of Part V. of the Social Services Act 1947-1957, a sum of £15 is payable to the mother in respect of each confinement at which a living or viable child is born if the mother has no other children under 16 years of age. Where there are one or two other children under 16 the amount payable is £16, and where there are three or more other children under 16 the amount payable is £17 10s. Where more than one child is born at a birth the amount of the allowance is increased by £5 in respect of each additional child born at that birth. More detailed information concerning maternity allowances is given in Chapter XV.—Welfare Services.

- 2. Nursing Activities.—(i) General. In several of the States, the Government maintains institutions which provide treatment for mothers and children, and, in addition. subsidies are granted to various associations engaged in welfare work.
- (ii) Details by States. In earlier issues of the Official Year Book (see No. 22, pp. 515-6) information concerning the activities of institutions in each State is given.
- (iii) Summary. The following table gives particulars of the activities of Baby Health Centres and Bush Nursing Associations :-BABY HEALTH CENTRES AND BUSH NURSING ASSOCIATIONS.

Centres ..

In the last twenty-five years, the number of attendances at the Baby Health Centres has more than trebled. The numbers of attendances, at five-year intervals, since 1930 were as follows:—1930, 919,893; 1935, 1,355,306; 1940, 2,035,299; 1945, 2,927.764; 1950. 3,049,375; and 1955, 3,099,233. During the year 1957, the number of attendances was 3,293,672.

# § 3. Medical Inspection of School Children.

- 1. General.—Medical inspection of school children is carried out in all States, in the Northern Territory and in the Australian Capital Territory. Medical staffs have been organized, and in some States travelling clinics have been established to deal with dental and ocular defects.
- 2. New South Wales.—(i) School Medical Service. Doctors of the School Medical Service examine children attending all schools administered by the Department of Education and the majority of other schools in the State. They make annual visits to schools in the metropolitan, Newcastle and Wollongong areas, and in Armidale, Tamworth, Bathurst, Orange and Wagga, and examine children in kindergarten or 1st grade in primary schools and 1st and 4th years in secondary schools. Children in other classes are examined or reviewed, as necessary. The vision and hearing of pupils in 4th grade are re-tested. In country areas, doctors aim to visit schools every three years, and examine all children attending. Owing to insufficient staff, the country portion of the programme cannot be completed each year.

If treatment is necessary, the parent is informed in writing and, if possible, is called in for interview. In the metropolitan, Newcastle and Wollongong areas, school nurses follow up these cases with the object of persuading parents to seek medical advice.

As well as examining school children, the medical officer examines the sanitary arrangements at each school. Bush nurses act as school nurses in schools at or near the bush nursing centres and carry out a limited inspection for defects or unhygienic conditions.

Doctors of this service examined 161,581 children in 1955 and 162,945 in 1956. Notifiable defects were found in 22 per cent. of the children examined.

Various surveys of school children are undertaken from time to time, e.g. hearing surveys, hookworm surveys, height-weight surveys, nutrition surveys, and investigations to determine the incidence of enlargement of the thyroid gland, defective vision, postural defects.

Five child guidance clinics, all in the metropolitan area, operate under the administration of the school medical service. One clinic functions at the Yasmar Boys' Sheker and deals exclusively with cases before the Children's Courts. Each clinic is staffed by a psychiatrist, a psychologist and social workers.

- (ii) School Dental Service. The aim of the School Dental Service is to provide dental treatment for children on school premises, to train them in the care of their teeth, and to teach them the principles of dental health.
- Of 32,993 children examined in both city and country schools in 1957, 30,077 were included in a Dental Health Survey. Of these, six per cent. were found to have naturally sound mouths, and 77 per cent. were in need of treatment.

In 1957, the clinics treated 15,920 children in 45,399 visits; 25,352 teeth were extracted, 36,827 permanent fillings and 46,704 other treatments, including prophylaxis, were provided. As the number of clinics is not sufficient to provide more than a limited service, it is necessary to restrict treatment to the ages 6–8 years in the metropolitan area, and 6–9 years in large country centres. In small outlying rural schools, children of all ages are included.

3. Victoria.—The School Medical and Dental Services are gradually being extended throughout the State. The objective of the medical services is to ensure that each child is examined to ascertain any physical defects at least once in every three years of school life. Parents are informed of any defects and told how treatment may best be obtained. In 1956, approximately 115,000 children were examined, 65 per cent. of them being in the metropolitan area. Nurses perform valuable follow-up work in interviewing parents to ensure that as far as possible treatment recommended is carried out. There are at present 31 doctors and 38 nurses employed in this service.

The school dental service affords dental treatment to children attending primary schools and resident in institutions in certain parts of the State. Children from metropolitan schools in industrial suburbs are transported to the school dental centres by contract bus service. Country schools are visited by mobile dental units. Nine dental vans and six semi-trailer (two-surgery) units are operating in the mobile service. The dental service has a staff of 40 dentists and 45 dental attendants. During 1956, 37,000 children attending 387 schools were examined and all necessary dental treatment carried out. This treatment included approximately 35,000 extractions and 62,000 fillings.

4. Queensland.—During 1955-56, doctors and nurses examined 67,807 school children, referring children with defects to their own doctors. In western Queensland, local doctors

act as part-time ophthalmic officers. In North Queensland, two school sisters assist in the control of hookworm. Advice is given on school sanitation, infectious diseases in schools and health education.

During 1955-56, school dentists gave treatment to 10,039 school children whose parents could not afford private treatment. The treatment was carried out at four rail dental clinics and at schools with portable equipment. In addition, school children are treated at hospital dental clinics in the larger towns.

5. South Australia.—Children in State schools are examined while in Grades 1, 4 and 7 in the primary schools, and in their second and fourth years in secondary schools. Efforts are made to visit country schools every three or four years and all the children are examined. Students who wish to become teachers are examined on appointment as preliminary probationary studen s while still attending secondary schools, again immediately prior to entering the Teachers' College and finally when they leave the college to take up teaching. Courses of lectures in hygiene and in first aid are given to all college students and, in addition, domestic arts students are lectured on home nursing.

During 1956, 53,330 children were examined by doctors in 150 country and 82 metropolitan schools. Of these, 3,935 required notices for defective vision, 1,299 for defective hearing, and 1,618 for their tonsils and adenoids.

A deafness guidance clinic was established in 1956. Of the 330 children it examined, 301 were referred to doctors or hospitals for treatment.

Educational work was assisted by talks to mothers' clubs and interviews with parents by doctors and dentists, and by home visits and interviews by nurses.

The Psychology Branch examines difficult children of many types, including those with such problems as backwardness, truancy and delinquency, and assists the parents of the children interviewed in handling these problems. In addition to supervising opportunity and special classes for children who are hard-of-hearing or backward in school work it advises on questions of placement and types of education for ordinary children. Its guidance officers organize vocational guidance work in schools, interview pupils and visit schools. They also lecture to students of the Teachers' College as well as to other interested organizations such as mothers' clubs. Expenditure of the Psychology Branch was £21,985 during 1957 and £18,830 during 1956.

6. Western Australia.—The Department of Public Health has four full-time doctors for schools, who during 1956 examined 37,773 children (metropolitan 30,666, country 7,107) of whom 18,935 were boys and 18,838 girls. The 184 schools visited comprised—Metropolitan: 73 government, 32 convent and 17 kindergarten; Country: 50 government, 10 convent and 2 kindergarten. The aim is to examine every school child once every two years.

During 1956, the 12 full-time dentists employed visited 16 metropolitan schools, 140 country schools, 12 orphanages and 14 native missions. The number of children examined was 12,257 of whom 7,468 were treated with their parents' consent. The cost of this service for 1955-56 was £47,419.

7. Tasmania.—During 1956, two full-time and four part-time doctors examined school children in State and private schools, and 13 full-time and 2 part-time sisters visited homes and schools. Of the 23,613 children examined by doctors, 8,762 were found to have defects, 5,735 requiring dental treatment.

There are 17 school dental clinics. Surgeries are located at Hobart (2), Launceston (2), Burnie and Devonport, mobile clinics being operated in other districts. A full-time dentist is in charge of each surgery or clinic. During the year, there were 19,290 new visits to the school dentists and 29,290 repeat visits.

The cost of the school medical and school dental services for the year ended 30th June, 1956, was £71,143.

8. Northern Territory.—(i) School Medical Service. The Schools Medical Officer makes routine physical examinations of all children attending both pre-school centres and the schools which come under the supervision of the Assistant Supervisor of Education in the Northern Territory. The only children not examined by him are those at the Native Welfare Settlement School, i.e. full-blooded aborigines, who are examined during native health surveys.

Children attending pre-school centres are examined once a year if possible, and all new entrants are examined. It is aimed to provide a medical examination for all children attending primary and secondary school at least three times during their school life—on entry, about two years later, and before they leave school.

An immunization clinic is held one afternoon a week at the Darwin Hospital by the Schools Medical Officer. He also conducts a pediatric clinic at the hospital one afternoon

a week, and is responsible for procedures in connexion with the Salk anti-poliomyelitis immunization campaign which was introduced in 1956.

During the long summer holidays, the services of the Schools Medical Officer are used on relieving work at the Darwin hospital and on general supervision at the infant welfare clinic in Darwin.

- (ii) School Dental Service. A special service for school and pre-school children is available in Darwin. Each dentist is required to work in the infant school clinic for four months a year. At present only pre-school and infant school children are treated every year. Children from primary, secondary and denominational schools are treated at longer intervals, but emergency treatment is available for them at the main Darwin clinic. Full records of all children are kept.
- 9. Australian Capital Territory.—The Commonwealth Department of Health is responsible for the medical inspection of school children in the Australian Capital Territory.

During 1951, with the appointment of an Infant Welfare and Schools Medical Officer, a plan was introduced for triennial examinations of children in primary and secondary schools, attention also being paid to those children with defects, many of whom were marked for review. At pre-school centres and nursery schools, all children were to be examined on entrance and reviewed in their second year of attendance.

It was apparent at the commencement of 1955 that, owing to a great increase in the child population of the Australian Capital Territory, some modification of the School Medical Officer's programme would be necessary if all schools and play centres were to receive their share of attention. Accordingly, in 1955 and 1956, initial examinations were carried out on school children who were members of 1st class (mostly six year olds) instead of five year olds in kindergarten. Examination of this age group was found to be less time-consuming and results were found to be more reliable than those of the earlier age groups. Children in 3rd class (mostly eight year olds) and in third year at high school received full examination whilst those in 6th class (mostly eleven year olds) received tests for sight and hearing only. Pre-school children were examined once only before entering primary school.

In 1956, 1,305 school children and 436 pre-school children were fully examined. The School Medical Officer also interviewed 124 infants and toddlers and acted as an adviser to the Canberra Mothercraft Society.

#### § 4. Inspection of Food and Drugs for Sale.

Public health legislation in force in all States provides for the inspection of foods and drugs with the object of ensuring that all goods sold shall be wholesome, clean and free from contamination or adulteration, and that all receptacles, places and vehicles used for their manufacture, storage or carriage shall be clean. For further particulars in this connexion, see § 1. Public Health Legislation and Administration, page 513.

#### § 5. Supervision of Dairies, Milk Supply, Etc.

Earlier issues of the Official Year Book (see No. 22, p. 498), refer to the legislation in orce in the various States to ensure the purity of dairy produce.

#### § 6. Disposal of the Dead by Cremation.

The first crematorium in Australia was opened in South Australia in 1903. At 31st December, 1957, there were fifteen crematoria in Australia, situated as follows:—

## CREMATORIA, 31st DECEMBER, 1957.

A	Lustralia				• •		15
Tasmania	••	••	• •	••	• •	••	
Western Aus	stralia	• •		• •	• •	• •	1
South Austr	alia	• •					. 2
Queensland						• •	2
Victoria							2
New South	Wales						6

There is no crematorium in the Northern Territory or the Australian Capital Territory.

The following table shows the number of cremations in each State for each of the years 1953 to 1957:—

#### CREMATIONS.

(a) Year ended 30th June of year shown.

#### B. COMMONWEALTH GOVERNMENT ACTIVITIES.

#### § 1. General.

At the time of federation, the only health function given to the Commonwealth Government under the Constitution was the power to make laws with respect to quarantine. All other health powers remained with the State Governments. Under this power, the systems of State quarantine formerly in operation were abolished with the passing of the Quarantine Act 1908 and a branch of the Department of Trade and Customs, under the control of a Director of Quarantine, was created on the 1st July, 1909.

The Commonwealth Department of Health was formed in 1921 by the extension and development of the quarantine service, the Director of Quarantine becoming the Director-General of Health. It had certain other functions in the field of public health. An amendment to the Constitution in 1946 gave the Commonwealth power to make laws with respect to pharmaceutical, hospital and sickness benefits, and medical and dental services. In addition, the Commonwealth Government has used its powers under Section 96 of the Constitution to make grants to the States for health purposes.

# § 2. National Health Benefits.

1. Pharmaceutical Benefits.—Since September, 1950, under the provisions of the Pharmaceutical Benefits Act 1947–1952 and the National Health Act 1953–1957, certain life-saving and disease-preventing drugs have been provided free of charge to the general community. These drugs are supplied free if they have been prescribed by a doctor registered in Australia.

The number of drugs listed as available as general pharmaceutical benefits has steadily increased. At 30th June, 1957, 230 separate preparations were supplied. Before a drug is listed as being available, it must be approved by the Pharmaceutical Benefits Advisory Committee, a body appointed by the Minister for Health.

All drugs listed in the British Pharmacopoeia, and other drugs as specified, are supplied free to persons who benefit under the pensioner medical service (see § 2. 5, page 524).

Total expenditure on pharmaceutical benefits in the year 1956-57 was £11,716,825.

2. Hospital Benefits.—The payment of hospital benefits to the States is authorized under Part V. of the National Health Act 1953-1957. This Act continues the agreements entered into with the various States under the Hospital Benefits Act 1951. Under these agreements, the Commonwealth pays the States certain sums of money which vary according to the number of occupied beds in public hospitals and the status of patients.

Payment of 12s. per day is made for a patient who is a pensioner or a dependant of a pensioner. The rate of 8s. per day is paid for all other qualified patients. A payment of 8s. per day is made also for patients in approved private hospitals. This payment is made to the proprietor of the private hospital. A condition of the benefit is that an equivalent amount has been allowed against the patient's account.

Commonwealth additional benefit is paid in the case of patients who are members of a registered hospital benefit organization. The additional benefit is payable at the rate of 4s. per day if a person contributes for a fund benefit of at least 6s. per day, but less than 16s. per day, and at the rate of 12s. per day if a person contributes for a fund benefit of at least 16s. per day. Payment of the additional benefit is made through the benefit organization and the patient normally receives it with the amount of fund benefit payable by the organization.

Australian residents who are temporarily living overseas and their dependants who receive hospital treatment are eligible to receive the benefit of 8s. a day and the additional benefit to which they are entitled.

Expenditure on hospital benefits in 1956-57 was £9,813,283. This does not include expenditure on mental hospitals (see para. 3, below).

The following table shows the number of registered organizations, the membership thereof, and payments of Commonwealth benefits and hospital fund benefits on account of occupied beds in public and approved private hospitals. As many persons contribute on behalf of both themselves and their dependants, the total number of persons covered by hospital benefits schemes is considerably higher than the number of members. Reliable figures for coverage are not available.

#### HOSPITAL BENEFITS: SUMMARY 1954-55 to 1956-57.

1. Ordinary Benefits (a). Payable to Hospitals in respect of all occupied beds.

				(~-,				
Year Ender 30th June.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Territories and Overseas.	Aus- tralia.
1955 1956 1957	 3,160,551 3,112,037 3,065,921	1,835,000 1,896,789 1,920,075	1,308,000	665,000		246,020 255,668 264,227	58,757	7,807,508 7,914,230 7,973,163

(a) Ordinary benefits are payable in respect of :—(i) Beds occupied by pensioners in public hospitals (12s. a day); (ii) Beds occupied in certain South Australian hospitals (12s. a day); and (iii) Other occupied beds in public hospitals and approved private hospitals (8s. a day).

# 2. Additional Benefits (a). Payable through Benefit Organizations.

YEAR ENDED 30TH JUNE, 1957.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aus- tralia.(b)
Registered Organizations No. Members . No. Commonwealth Benefit £ Fund Benefit . £	28 1,026,103 980,613 4,258,485	53 648,380 438,652 876,671	3 217,937 86,868 581,237	15 198,690 100,398 473,455	13 193,527 177,875 489,378	10 88,825 55,714 332,829	1,840,120

- (a) An additional benefit of 4s. a day is payable to registered hospital benefit organizations for persons who contribute for a fund benefit of at least 6s. a day or 12s. a day for those who contribute for a fund benefit of at least 16s. a day. (b) No hospital benefit organization is registered in the Northern Territory or the Australian Capital Territory. Persons who live in one of these territories, or who are overseas, receive their fund benefit from an organization, and their Commonwealth benefit through an organization, which is registered in one of the States.
- 3. Mental Hospitals. In 1946, when Commonwealth hospital benefits were introduced for patients in public hospitals, no provision was made for patients in mental hospitals. To help meet the cost of maintaining patients in mental hospitals, the Commonwealth parliament passed the Mental Institutions Benefits Act 1948. This Act ratified agreements with the States whereunder it was provided that:—
  - (a) the Commonwealth would pay the States a benefit equal to the amount being collected by the States from the relatives of patients in mental hospitals by way of charges for maintenance; and
- (b) the States would cease making charges for the maintenance of mental patients. These agreements operated for five years, and terminated in the latter half of 1954. The amount contributed by the Commonwealth during the operation of the agreements was approximately one shilling a day for each patient. When the agreements terminated, Dr. Alan Stoller, of the Victorian Mental Health Authority, was commissioned to undertake a survey on mental health facilities and needs in Australia. His report was released in May, 1955. The report stated that serious overcrowding existed in the majority of mental hospitals in Australia. The provision of more beds was the most urgent need, but other accommodation and rehabilitation facilities were also required. The immediate shortage of accommodation could be made good only by the provision of 10,000 beds at a cost of £3,000 each. This meant the immediate expenditure of £30 million.

On receipt of the report, the Commonwealth Government proposed a new arrangement with the State Governments. It offered to find £10 million on the basis that the State Governments would find £2 for every £1 contributed by the Commonwealth Government. In effect, therefore, the Commonwealth Government offered to find one-third of the £30 million required.

The following table sets out the amounts which have been paid to the State Governments

by the Commonwealth Government.

EXPENDITURE ON MENTAL INSTITUTIONS BY THE COMMONWEALTH GOVERNMENT.

Year.	 N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1949–50	 97,035	108,239		32,751	8,528	9,033	255,586
1950-51	 198,165	146,728		34,368	17,225	9,178	405,664
1951-52	 203,505	149,384	102,697	35,300	17,527	9,367	517,780
1952-53	 208,888	151,227	98,820	36,075	17,723 :	9,819	522,552
1953-54	 209,772	156,752	62,413	37,370	18,280	10,246	494,833
1954-55	 106,525	53,820	36,460	15,871	9,453	3,457	225,586
1955-56	 208,763	445,747	66,588	12,245	9,984	29,822	773,149
1956-57	 383,555	527.213	88,068	128,467	51,855	68,974	1,248,132

Amounts shown in the foregoing table in respect of the years up to and including 1954-55 represent payments made under the Mental Institutions Benefits Act 1948. Amounts shown in respect of 1955-56 and 1956-57 represent payments made during the year shown under the States Grants (Mental Institutions) Act 1955. The total amounts payable to each State government under the last-mentioned Act are as follows:—

Australia		 	 	10,000,000
Tasmania	• •	 ٠.	 	355,000
Western Australia		 	 	720,000
South Australia		 ٠.	 	895,000
Queensland		 ٠.	 	1,460,000
Victoria		 ٠.	 	2,740,000
New South Wales		 	 	3,830,000
				£

There is no mental hospital in the Northern Territory or the Australian Capital Territory.

4. Medical Benefits.—A medical benefits scheme has operated since July, 1953, being authorized firstly by the National Health (Medical Benefits) Regulations and then by the National Health Act 1953.

The basic principle of the scheme is Commonwealth support of voluntary insurance against the costs of medical attention. The benefits payable by the Commonwealth are paid either on a fee-for-service basis in respect of the items set out in the first and second schedules to the National Health Act, or in the form of a subsidy, not exceeding half of the payments made to doctors by registered organizations under contract arrangements.

In order to qualify for the Commonwealth benefit, a person is required to be insured with a registered medical benefits organization. The organization pays the benefits to the contributor usually at the time it pays its own benefits. Reimbursement of the Commonwealth benefit is subsequently made to the organization by the Commonwealth.

An organization wishing to be registered by the Commonwealth for the purposes of the medical benefits scheme is required to provide to its contributors, subject to its rules, all benefits specified in the first schedule, at rates not less than those provided by the Commonwealth. The organization must be non-profit-making.

In 1956-57, Commonwealth expenditure on medical benefits was £6,146,029.

The following table shows the number of registered medical benefit organizations, their membership, the number of medical services rendered to members and their dependants, and payments of Commonwealth benefits and medical fund benefits to members of registered organizations. As many persons contribute on behalf of both themselves and

their dependants, the total number of persons covered by medical benefit schemes is considerably higher than the number of contributors. Reliable figures for coverage are not available.

MEDICAL	BENEFITS:	SUMMARY,	YEAR EI	NDED 30	th JUNE,	, <b>1957.</b>
Dostionless	New	Vic O'l	and S A	32/	Aust To	Austr

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.

- (a) No medical benefit organization is registered in the Northern Territory or the Australian Capital Territory. Persons who live in one of those territories, or who are overseas, receive their fund benefit from an organization, and their Commonwealth benefit through an organization, which is registered in one of the States.
- 5. Pensioner Medical Service.—The Pensioner Medical Service, which commenced on 21st February, 1951, was introduced under the authority of the National Health (Medical Services to Pensioners) Regulations made under the provisions of the National Health Service Act 1948–1949. The service has been continued under the provisions of the National Health Act 1953–1957.

The service covers pensioners, and dependants of pensioners, who either were receiving an age, invalid, widow's or service pension before the 1st November, 1955, or would not have been debarred by reason of their income from receiving a pension at the maximum rate under the Social Services Consolidation Act 1947-1953 or the Repatriation Act 1920-1953. Broadly, this means pensioners whose income from sources other than their pension is not more than £104 a year (£2 a week). However, pensioners who were benefiting under the scheme before the additional means test was imposed continue to benefit. Beneficiaries of the scheme are provided with a free general practitioner service, but not with specialist services. A small fee may be charged by doctors who attend patients outside normal surgery or visiting hours. Doctors in the scheme are paid on a fee-for-service basis by the Commonwealth Government.

At 30th June, 1957, 4,990 doctors were enrolled in the scheme to attend to approximately 683,850 pensioners and their dependants.

During the year ended 30th June, 1957, doctors in the scheme performed 5,381,108 services—visits and surgery consultations—for persons enrolled in the scheme. For these services they were paid £5,962,403. The average number of services rendered by doctors to each person was 7.9.

6. Anti-Tuberculosis Campaign.—The main provisions of the Tuberculosis Act 1948 are as follows:—(a) Section 5 authorizes the Commonwealth to enter into an arrangement with the States for a national campaign against tuberculosis; (b) Section 6 empowers the Commonwealth to take over or provide specified facilities for the diagnosis, treatment and control of tuberculosis; (c) Section 8 provides for the setting up of an advisory council to advise the Commonwealth Minister for Health on matters relating to the national campaign; and (d) Section 9 authorizes the Commonwealth to pay allowances to sufferers from tuberculosis and their dependants.

Under an arrangement with the Commonwealth Government, each State is required to conduct a campaign against tuberculosis. The Commonwealth Government reimburses the State for all approved capital expenditure in relation to tuberculosis, and for net maintenance expenditure to the extent that it exceeds net maintenance expenditure for the year 1947-48. Thus, the States are required to carry out the physical or field work of the national campaign and the Commonwealth acts in an advisory, co-ordinating and financial capacity. For this reason, the Commonwealth has not found it necessary to make much use of its powers under Section 6.

An advisory council, known as the National Tuberculosis Advisory Council, has been set up and has held seven meetings. There are eleven members under the chairmanship of the Commonwealth Director-General of Health. The members are the Commonwealth Director of Tuberculosis, the six State Directors of Tuberculosis, the Consultant (Chest Diseases) of the Department of Repatriation, two specialist private practitioners, and the Chief Administrative Officer of the Commonwealth Department of Health.

To help reduce the spread of infection, the Commonwealth Government pays living allowances to persons suffering from tuberculosis, so that they might give up work and undergo treatment. These allowances have been in operation since 13th July, 1950. Since 24th October, 1957, the rates payable have been:

Married sufferer with a dependent wife £10 7s. 6d. a week.
Each dependent child under the age of 10s. a week (additional to child endowsixteen years

ment)

Sufferer without dependants ...

.. £6 10s. a week (reducible to £4 7s. 6d. a week if a person is maintained free of charge in an institution).

There is a means test on income but not on property. The allowance is reduced by the amount by which a person's income from sources other than his allowance exceeds, in the case of a married person, £7 a week, and in the case of a person without a dependent wife, £3 10s. a week.

The following table gives particulars of the number of new cases of tuberculosis notified in Australia for the year 1956-57.

TUBERCULOSIS: NEW CASES NOTIFIED, YEAR ENDED 30TH JUNE, 1957.

7. Anti-Poliomyelitis Campaign.—The success of the 1954 United States field trials of the poliomyelitis vaccine developed by Dr. Jonas Salk and his associates at the University of Pittsburg was announced in April, 1955. The Commonwealth Government immediately decided to produce the anti-polio vaccine in Australia.

With the advantage of the experience of the campaigns in the United States and Canada, Australia has adopted a vaccine which has already been proved to be safe and effective in building up immunity against poliomyelitis.

The vaccine was being produced in Australia by the end of 1955 under the most rigid safety conditions. Plans were made for comprehensive testing procedures to be carried out at many stages both during the production process and with the finished product. These tests ensured the maintenance of safety standards no less rigid that those laid down in other countries where vaccination campaigns were in progress. The Research Laboratory at the Fairfield Hospital, Melbourne, agreed to act as an independent testing authority under an arrangement with the Commonwealth Government, and the pathology department of the University of Melbourne also agreed to conduct tests. No vaccine was released for use unless the searching requirements of the Commonwealth Serum Laboratories, the Fairfield Hospital, and the University of Melbourne were met.

The vaccine was supplied to the States free of charge and the States accepted responsibility for the cost of their particular vaccination programmes. No child can be vaccinated without the consent of his parents or guardian.

Distribution of the Salk poliomyelitis vaccine to the States began in July, 1956. The States are responsible for the organization and running of their own campaigns and for the distribution of the vaccine in accordance with priority groups established by the National Health and Medical Research Council. The first priority group consists of children in the 0-14 age group, expectant mothers, and persons subjected to special risk. These persons have been found to be the most vulnerable.

Vaccination against poliomyelitis takes the form of three injections of the vaccine. The second injection is given approximately four weeks after the first, and the third injection is given not less than 32 weeks after the first.

Where the incidence of the disease in certain areas approaches epidemic proportions, special efforts have been made to vaccinate all persons giving their consent in the area as soon as possible.

There has been excellent response by the public to the poliomyelitis campaign, notwithstanding the widespread doubts which arose from mishaps overseas.

8. Free Milk for School Children Scheme.—In 1950, the States Grants (Milk for School Children) Act was passed. The object of this Act was to improve the diet of school children by the addition of a small quantity of milk each day. All children under the age of thirteen years attending public or private primary schools, including nursery schools, kindergartens, crèches and aboriginal missions, are eligible to receive this issue. Wherever practicable, the milk is given to the children in one-third of a pint bottles. The cost of the milk plus half the capital or incidental costs, including administrative expenses of the scheme, is reimbursed by the Commonwealth to the States. All States now participate in the scheme. At 30th June, 1957, approximately 1,100,000 children were receiving free milk.

Expenditure by the Commonwealth Government under the scheme since its inception has been as follows:—

COMMONWEALTH EXPENDITURE ON NUTRITION OF SCHOOL CHILDREN, (£.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Australia.
1950–51 1951–52 1952–53 1953–54 1954–55 1955–56	35,683 440,316 701,448 881,600 980,589 1,042,173 1,094,469	140,000 433,766 429,000 498,000 540,000 600,901	55,000 204,600 323,340 308,000 386,999	74,642 175,400 156,000 156,000 184,000 200,000	67,480 92,996 107,138 127,015 137,211 158,659	90,390 60,000 219,580 145,695 185,000 156,275	158 233 552 921 1,016 1,323	92 3,989 5,261 6,891 10,760 14,048 16,146	35,775 816,975 1,524,104 2,005,361 2,242,320 2,411,448 2,614,772

The figures in the foregoing table differ slightly from those in the table shown in Chapter XV., Welfare Services (p. 546), since they include capital and administrative costs. Figures in the latter table represent only expenditure which is a charge on the National Welfare Fund (i.e., the cost of the milk).

#### § 3. Commonwealth Laboratories and Research Institutions.

1. National Health and Medical Research Council.—In 1926, the Commonwealth Government established a Federal Health Council, in accordance with a recommendation of the Royal Commission on Health (1925), "for the purpose of securing closer co-operation between the Commonwealth and State Health Authorities". This council held sessions

each year except in 1932. In 1936, the Commonwealth Government decided to create a body with wider functions and representation, and the National Health and Medical Research Council was established with the following functions:—

- To advise Commonwealth and State Governments on all matters of public health legislation and administration, on matters concerning the health of the public and on medical research.
- To advise the Commonwealth Government on the expenditure of money specifically appropriated to be spent on the advice of this Council.
- To advise the Commonwealth Government on the expenditure of money upon medical research and on projects of medical research generally.
- To advise Commonwealth and State Governments upon the merits of reputed cures or methods of treatment which are from time to time brought forward for recognition.

The council consists of the Commonwealth Director-General of Health (as chairman), two officers of his department, the official head of the Health Department in each State, together with representatives of the Federal Council of the British Medical Association, the Royal Australasian College of Surgeons, the Royal Australasian College of Physicians, the Australian Regional Council of the Royal College of Obstetricians and Gynaecologists, the Australian Dental Association, the Australian Council of the College of General Practitioners, the College of Pathologists of Australia and (jointly) the five Australian universities having medical schools. A prominent layman and laywoman, appointed by the Commonwealth Government, also serve on the council.

The first session of the National Health and Medical Research Council was held at Hobart in February, 1937. The forty-third session was held at Melbourne in May, 1957.

Under the Medical Research Endowment Act 1937, the Commonwealth Government has made an annual appropriation of funds to assist:—(a) departments of the Commonwealth or of a State engaged in medical research; (b) universities for the purpose of medical research; (c) institutions and persons engaged in medical research; and (d) in the training of persons in medical research.

Approved research institutions under this system now number 51. During 1955, grants for projects numbered 50 in the following fields:—bacteriology, biochemistry, biophysics, clinical research, dentistry, epidemiology, haematology, medical chemistry, neurology, neuro-physiology, obstetrics, pathology, physiology and pharmacology, tuberculosis and virus diseases. In certain instances, equipment and apparatus have been made available by the council; this has greatly facilitated some specialized lines of research. The wide scope of work being carried out is greatly assisted by the formation of committees which meet regularly and advise the council on such subjects as industrial hygiene, public health, epidemiology, maternal and child welfare, radio-active isotopes, antibiotic distribution, tropical physiology and hygiene, tuberculosis, staphylococcus infections, dentistry and the latest developments in X-ray technology and application.

The research work being done under these grants is of a high standard, many of the individual investigators enjoying international reputations. Beyond this practical achievement, the original objectives of the council are being attained in encouraging young graduates to take up research work and in securing a continuity and permanence of medical research in Australia.

Four scholarships are available each year to allow overseas study for one year; in addition, assistance is often given to scholarship-holders to cover part of their travel expenses.

An insurance benefit scheme for these medical workers on the lines of the Federated Superannuation System for Universities is now in operation.

2. Commonwealth Serum Laboratories.—The Laboratories were established in 1916 under the administration of the Department of Trade and Customs and since 1921 have operated under the Department of Health. Buildings occupy a site of 23 acres at Royal Park, Melbourne, and a farm of 325 acres is situated at Broadmeadows nine miles from Melbourne.

Their basic function is to ensure the supply of essential biological products to the Commonwealth in line with its national health needs. This includes—

- (a) Production and supply of biological products not otherwise freely available
  in Australia because of the absence of local manufacturers or because of
  difficulties associated in importing biological products and marketing them
  in satisfactory condition. (Many biological products deteriorate quickly.)
   (b) Research and development directed towards the improvement of essential
- (b) Research and development directed towards the improvement of essential biological products or for their introduction.

Since their foundation, the Laboratories have greatly extended in size and scope. They now produce some 4,000 different biological products for use in the diagnosis, prevention and treatment of human and animal diseases. Professional, technical and other staff totals approximately 900.

Products comprise a full range of human bacterial and virus vaccines, veterinary bacterial and virus vaccines, serum products such as blood fractions, a wide variety of antibacterial and antitoxic sera, antivenenes, penicillin, endocrines, including insulin, A.C.T.H., pituitary and thyroid extracts, allergy test materials and desensitizing preparations, culture media and diagnostic agents for clinical and laboratory work.

Continuous research is conducted into the relevant aspects of bacteriology and immunology, and related fields. As the growth of medical and scientific knowledge in Australia and overseas reveals new methods of diagnosis, prevention and treatment of diseases, this information is applied to the preparation of new biological products at the Laboratories, the most recent being the production of poliomyelitis (Salk) vaccine.

Facilities are maintained for investigation in relation to public health matters which it is inconvenient or impracticable to handle at the Commonwealth Health Laboratories or the School of Public Health and Tropical Medicine.

The Laboratories serve as a national centre for the maintenance in Australia of International Standards of the Permanent Commission on Biological Standards (World Health Organization). They act as a regional reference centre for W.H.O. in collating reports of the prevalence of certain infectious diseases and provide facilities for the identification of diseases.

Veterinary biological products produced at the Laboratories have given the lead to other producers in Australia, resulting in the diminution of incidence of a number of serious infectious stock diseases.

3. The Commonwealth Health Laboratories. Health Laboratories, of which there are fourteen, are situated in the following towns: Albury, Bendigo, Cairns, Canberra, Darwin, Hobart, Kalgoorlie, Launceston, Lismore, Port Pirie, Rockhampton, Tamworth, Toowoomba and Townsville. They were established as an essential part of the quarantine system but were also to undertake research into local health problems and to provide doctors of each district with up-to-date facilities for laboratory investigation and diagnosis. It was realized that co-operation between the general practitioner with his clinical observations and knowledge of the environment of disease on the one hand, and the staff of a well-equipped laboratory on the other, is essential to the investigation and control of disease.

From this standpoint, the Laboratories have already proved their value in the determination of leptospirosis and endemic typhus in North Queensland, in the investigation of special local problems in Darwin, of undulant fever throughout Australia, of silicosis and tuberculosis at Kalgoorlie and of plumbism at Port Pirie. In these investigations, close co-operation has existed with State and local health and hospital services; especially is this so in Queensland where collaboration has yielded exceptionally valuable results in differentiating the groups of fevers previously unclassified in that State. In this investigational work, as well as in more routine activities, the Laboratories have at their disposal the full resources and technical and specialist facilities available at the Commonwealth Serum Laboratories and the School of Public Health and Tropical Medicine, Sydney.

4. Commonwealth Acoustic Laboratories. During the years 1942-46 the Acoustic Research Laboratory at Sydney, which was sponsored by the National Health and Medical Research Council, investigated problems of noise and difficulties of intercommunication in aircraft and tanks. In subsequent years it directed its attention to the problem of deafness in children, particularly the group whose affliction was caused by the mother's contracting rubella in the early months of pregnancy. In January, 1947, the Department of Health took over the laboratory. Subsequently it established branch laboratories in all other State capital cities.

The Acoustic Laboratories Act 1948 allowed the Laboratories to:—(1) provide hearingaids for the Repatriation Commission and the Department of Social Services; (2) assist the Education Departments of the States in measuring deafness, by providing and maintaining portable audiometric equipment; (3) make independent tests on behalf of various State and other authorities; (4) investigate problems associated with noise in industry; (5) make hearing tests of Civil Aviation aircrew as required by international agreement; (6) give advice to the armed services on noise problems; and (7) provide hearing aids to schoolchildren and members of the defence forces as required. The Laboratory in Sydney is responsible for the training of personnel for the whole Acoustic Service, the production of equipment, the calibration of hearing-aids and audiometers and the technical administration of the branch laboratories.

5. Commonwealth X-ray and Radium Laboratory. The persistent increase in cancer mortality has led to the development in Australia of a national organization directed towards the control of this disease. The Commonwealth Department of Health has actively participated in this movement. Annual cancer conferences, convened by the Department from 1928 up to the beginning of the 1939-45 War, provided an opportunity each year for those engaged in the campaign against the disease to meet for the discussion of problems and the determination of lines of action for further development.

Cancer conferences were not held during the war and have not been revived, primarily because facilities for the discussion of the various aspects of the treatment of cancer have been provided by the regular congresses of the British Medical Association and of the different specialist colleges and associations. The Department has, however, continued to maintain liaison in the general programme against cancer and in March, 1955, convened a conference in Canberra of representatives of the Commonwealth and States to discuss the co-ordination of anti-cancer activities. This conference recommended that an annual conference of State-sponsored anti-cancer organizations should be convened by the Commonwealth Government and that consideration should be given to the formation of a nationwide Anti-cancer Organization comprising representatives of the statutory Anti-cancer Organizations.

A total of 10 grams of radium, purchased in 1928 by the Commonwealth Government for use in treatment and research, has been distributed on loan to treatment centres throughout Australia. Under the terms of this loan, treatment at well-equipped clinics is available to all persons requiring it, irrespective of their ability to pay. This work is co-ordinated by the Department. From time to time, portions of the original radium holding have been remounted by the Department in forms more suitable for recently developed techniques.

Realizing the importance of accuracy in determining the quality of radiation used in the treatment of cancer and in measuring the dosage of this radiation delivered to the tumour, and the need for the investigation of physical problems in connexion with the utilization of X-rays and radium in the treatment of disease, the Commonwealth Department of Health, in 1935, extended the work of the Commonwealth Radium Laboratory, established in 1929, to include the investigation of the physical problems of radiation therapy generally. This laboratory, known as the Commonwealth X-ray and Radium Laboratory, is maintained, controlled, and staffed by the Commonwealth Department of Health. It is situated, by agreement with the University of Melbourne, within the University grounds. On 4th March, 1957, it also established offices at Surry Place, Melbourne. It is specially designed for work with X-ray and radium, and is amply provided with all necessary equipment for research work, including a 500,000 volt high-tension generator. The free-air chamber which acts as the Australian standard X-ray dosemeter is maintained in the Laboratory.

The Laboratory co-operates closely with the local physical services which have been developed in the other capital cities of Australia to provide local facilities for the production of radon, for the calibration of X-ray therapy equipment, and for the measurement of radiation exposure of X-ray and radium workers. It also undertakes investigations into physical problems arising in the use of X-rays and radium in treatment. In recent years, the Laboratory has widened its functions to include investigations of the physical aspects of the diagnostic use of X-rays with particular emphasis on miniature radiography.

During the year 1956-57, a total of 88,393 millicuries of radon was prepared and issued from the Laboratory in the form of implants, needles and tubes for use in Victoria, Tasmania, South Australia and Western Australia. A further 27,209 millicuries were issued by the associated centres in Sydney and Brisbane. The corresponding figures for 1955-56 were 91,353 and 28,777 millicuries respectively. The issue of radon from a few centres to serve hospitals all over the continent is an Australian development and enables very efficient use to be made of the radium available.

Supplies of artificial radio-isotopes have been made available through the development of atomic energy programmes overseas. The radio-isotopes can be used medically either as an alternative to natural radio-active materials such as radium and radon, or they may be administered orally or intravenously to patients, in which case the selective up-take by a particular organ or tissue may be used to determine its condition. In addition, radio-isotopes have great potential in industry, in production control, the investigation of the efficiency of processes and as research tools.

The importation of artificial radio-isotopes is restricted under Customs (Prohibited Imports) Regulations, approval for importation being given through the Laboratory by the Director-General of Health after it has been established that the isotope will be used safely and usefully. Isotopes used in Australia are obtained from Great Britain, Canada and the United States of America, and are imported through the Laboratory.

During 1956-57, 41 different radio-isotopes were imported for all purposes. This

represented 431 separate deliveries from oversea sources of supply.

Regular bulk supplies of radio-isotopes for medical purposes are obtained and these are distributed by the Laboratory as individual doses for use on patients throughout Australia according to a policy developed by the Committee on Radio-isotopes of the National Health and Medical Research Council. These radio-isotopes are issued free of charge.

Nine different radio-isotopes were imported in the year 1956-57 for medical purposes, radio-iodine, radio-phosphorus and radio-gold being in greatest demand. However, during 1956-57 an increasing use was made of radio-chromium and radio-iron as labelled compounds in haematological investigations and of radio-cobalt labelled vitamin B12 and radio-iodinated human serum albumin. Since only relatively small activities of these radio-isotopes are used per patient investigated, the total number of activities issued during the year is small. The increased use of these radio-isotopes is illustrated by the use of radio-chromium which was issued for 96 patients in 1955-56 and for 990 patients in 1956-57.

In all approximately 6,000 individual doses of radio-isotopes were issued by the Laboratory during 1956-57 for use on patients.

The use of radio-isotopes in research and industry is also steadily increasing.

Investigations of the degree of protection necessary in particular applications of X-rays and radio-active materials continue to be an important activity of the Laboratory. It prepares specifications of the protection facilities necessary in departments and laboratories employing ionizine radiation in medicine, research and industry and carries out measurements of radiation levels in existing departments and laboratories. An extensive film badge service to measure the radiation dose received by those exposed to ionizing radiation is maintained. In 1956-57, 12,548 film badges were processed and assessed. The corresponding figure for 1955-56 was 9,977 films.

The Laboratory has an extensive library of special radiological literature and issues regular library bulletins. Through its advisory service the Laboratory is available for consultation to all users of ionizing radiation. Technical communications on topics related to its functions are issued from time to time to medical men engaged in the clinical investigation and treatment of cancer and to research workers and those in industry interested in applications of radiation.

6. The School of Public Health and Tropical Medicinc.—In March, 1930, the Commonwealth Government, under an agreement with the University of Sydney, established a School of Public Health and Tropical Medicine at the University of Sydney for the purpose of training medical graduates and students in the subjects of public health and tropical medicine. The organization of the Australian Institute of Tropical Medicine at Townsville was merged in the new school, and the staff, equipment and material were transferred to Sydney.

The work of the school comprises both teaching and investigation. Courses are held for the university post-graduate diploma of public health and the diploma of tropical medicine and hygiene. Lectures are given in public health and preventive medicine as prescribed for the fifth year of the medical curriculum. Other classes include students in architectural, social, and school hygiene, lay officers and nurses in the tropical services, and missionaries. Training is also provided for certain personnel of the armed services, for sister tutors and for laboratory workers from various services and institutions.

Investigation covers a wide field of public health and medical subjects, both in the laboratory and in the field. Field work has been carried out in Australia and in Papua, New Guinea, Norfolk Island and Nauru in co-operation with the local administrations and the South Pacific Commission. Sections of Child Health, Occupational Health and Medical statistics have been recently added.

7. Commonwealth Bureau of Dental Standards.—This laboratory is concerned with research, standards and testing related to dental and allied materials and processes. It became part of the Department of Health in January, 1947, but for the preceding eight years it was sponsored by the National Health and Medical Research Council. During that time the former Dental Materials Research Laboratory established itself as a recognised authority in its special field and proved to be of particular value to the defence services, government departments, the dental profession and manufacturers of dental products. By maintaining the quality of dental materials and improving techniques for their use, the Bureau continues to assist the dentist in his service to the community—a service that calls for restorations and appliances of a high degree of precision and permanence under very exacting conditions.

The functions of the Bureau are: (1) original research into dental equipment, materials, techniques and processes; (2) regular reporting of the results of these investigations in recognized Australian scientific journals; (3) the development through the Standards Association of Australia, in consultation with a committee representing the Commonwealth Department of Health, the Australian Dental Association and manufacturers and distributors, of specifications for dental materials and equipment; and (4) the provision of a consultative service and testing facilities for manufacturers and distributors of dental materials with a view to assisting them in the improvement of existing products and the development of new materials.

8. The Australian Institute of Anatomy. The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a museum in which such specimens could be preserved for future generations. Sir Colin MacKenzie, the first Director of the Institute of Anatomy, presented his entire private collection of Australian fauna to the Commonwealth Government. This gift was housed in the Australian Institute of Anatomy. The Institute became part of the Commonwealth Department of Health in 1931.

The original collection has been greatly augmented. A list of gifts to the Australian nation may be found in Official Year Book No. 39, p. 1277. In addition to these donations of material, there have been several endowments for orations and lectures, particulars of which are shown in previous issues of the Official Year Book.

The Institute consists of a museum section and a laboratory section. In the museum section, which is open to the public, is displayed a portion of the original collection of anatomical specimens assembled by Sir Colin MacKenzie, together with ethnological collections which have been added since the foundation of the Institute. The material has been arranged to present simple lessons in human hygiene, to display the anatomical features and peculiarities of Australian fauna, and to display aspects of the character of Australian aboriginals and natives of Papua and New Guinea.

A number of Health Department sections are now situated in the Institute. These include the Museum and Medical Artistry Section, the Nutrition Section, the Commonwealth Health Laboratory for the Australian Capital Territory and the Veterinary Laboratory.

The scientific research work of the Institute is now concentrated on problems of nutrition. It takes the form of field surveys of the dietary status of the Australian population and laboratory investigations into the biochemistry of nutrition and metabolism. For further information concerning the Institute see Official Year Book No. 32, pp. 919-21.

#### § 4. Control of Infectious and Contagious Diseases.

- General.—The provisions of the various Acts with regard to the compulsory notification of infectious diseases and the precautions to be taken against the spread thereof may be conveniently dealt with under the heading of quarantine and notifiable diseases, including venereal diseases.
- 2. Quarantine.—The Quarantine Act is administered by the Commonwealth Department of Health, and has three sections of disease control, as follows:—(i) Human quarantine, which controls the movements of persons arriving from overseas until it is apparent that they are free of quarantinable disease; (ii) Animal quarantine, which controls the importation of animals and animal products from overseas and the security of other animals present on vessels in Australian ports; and (iii) Plant quarantine, which regulates the conditions of importation of all plants and plant products with the object of excluding plant diseases, insect pests and weeds.

In respect of interstate movements of animals and plants, the Act becomes operative only if the Governor-General considers that Commonwealth action is necessary for the protection of any State or States; in general, the administration of interstate movements of animals and plants is left in the hands of the States.

(i) Human Quarantine. All passengers and crews arriving in Australia from overseas, whether by air or sea, are subjected to a medical inspection by quarantine officers for the purpose of preventing the introduction of disease into Australia. At the major ports, full-time quarantine officers carry out the work but in the minor ports local doctors act as part-time quarantine officers. In each State, quarantine activities are controlled by a medical officer of the Commonwealth Department of Health with the title of Commonwealth Director of Health.

The main concern of the examining officers is to detect cases of the quarantinable diseases smallpox, cholera, yellow fever, plague and typhus fever. These diseases are not endemic infAustralia and it is a matter of extreme moment to prevent their entry. Quarantine stations at the major ports and at Darwin, Thursday Island and Townsville are kept ready for occupation at all times. In addition, persons arriving in Australia and suffering from infectious diseases such as chicken pox, mumps, scarlet fever and measles are directed to appropriate care and placed in isolation where necessary.

The increasing use of air travel has created particular quarantine problems. Before the use of air transport, persons suffering from an infectious or quarantinable disease would show symptoms on arrival and before disembarkation. Passengers travelling by air however can arrive well within the incubation period, and they are, therefore, required to be vaccinated against smallpox before departure. Those from an area infected with cholera or yellow fever are required to be inoculated in addition against the particular disease prevalent in that area. They are also required to report any sickness which they might suffer within the fourteen days after arrival. All passengers, whether they arrive by sea or air, are required to give their intended place of residence so that they may be traced if a case of disease occurs among the passengers on the aircraft or ship by which they travelled to Australia.

The number of cases of infectious (non-quarantinable) diseases which were discovered among the passengers and crew of oversea vessels and aircraft calling at Australian ports during the year ended 30th June, 1957, and during the preceding four years, are shown in the following tables.

HUMAN QUARANTINE: CASES OF INFECTIOUS (NON-QUARANTINABLE)
DISEASES ON OVERSEA VESSELS AND AIRCRAFT CALLING AT
AUSTRALIAN PORTS, YEAR ENDED 30th JUNE, 1957.

(ii) Animal Quarantine. Animal quarantine, authorized by the provisions of the Quarantine Act 1908-1950, aims at preventing the introduction or spread of animal diseases. It covers the importation of all animals, raw animal products and biological cultures associated with animal diseases and goods associated with animals.

Domesticated animals, i.e., horses, cattle, pigs, sheep, goats, dogs, cats and poultry, are admitted from a limited number of countries depending on diseases present in the country of origin. All must be accompanied by health certificates which include prescribed

tests. On arrival in Australia, they are subject to quarantine detention.

Zoological specimens are imported into registered zoos where they remain in permanent quarantine. Circuses are also registered if exotic species of animals are kept. In a somewhat similar manner, animals for scientific purposes are imported to approved laboratories. All these premises are kept under constant surveillance. Raw animal products such as hair, special types of wool, skins and hides, are specially treated under quarantine control, whilst such items as raw meat, sausage casings and eggs, which cannot be sterilized, are admitted from very few countries. Other items such as harness-fittings, fodder, and ship's refuse, are treated to destroy any possible infection.

The Division of Veterinary Hygiene was created in 1926 to deal with the administration of animal quarantine; formerly the full responsibility for this administration fell on the Director of Quarantine; the organization of the Division provides an excellent example of Commonwealth and State co-operation. The central administration is situated within the Health Department at Canberra, with a Director, an Assistant Director and Veterinary Officers. The Principal Veterinary Officer of the Department of Agriculture in each State is appointed Chief Quarantine Officer (Animals) of the State, and members of his staff Quarantine Officers (Animals). These State officers carry out the quarantine policy formulated by the central administration. Quarantine accommodation is provided in permanent animal quarantine stations at each capital city.

The Division participates in world-wide international notification of the more serious contagious diseases of animals and maintains a census of such diseases throughout the world. Information regarding animal diseases and parasites in Australia is also collected and disseminated by means of service publications. Consultation on technical matters is maintained with various scientific institutions, notably the Commonwealth Scientific and Industrial Research Organization. In matters of policy and the quarantine control of imports, there is a close liaison with the Department of Customs and Excise.

The Division collaborates with the "General" and "Plant" divisions of the quarantine service. Many diseases of animals are communicable to man and for this reason "Animal" and "General" quarantine administration are in some respects inseparable. Similarly the interests of "Animal" and "Plant" divisions overlap, many items such as insects, fodder and straw being the subject of combined control.

In each alternate year, the Director of the Division convenes the Biennial Conference of Principal Commonwealth and State Veterinarians which meets under the aegis of the Australian Agricultural Council to discuss problems of animal health and disease control and animal quarantine.

In the Australian Capital Territory veterinary officers of the division exercise control over animal disease, dairy and piggery hygiene, manage the Canberra abattoir and give advice to stockowners.

(iii) Plant Quarantine. Since 1st July, 1909, the importation into Australia of all plants or parts of plants, cuttings, seeds and fruits, whether living or dead, has been subject to an increasingly stringent quarantine with the object of preventing the introduction of insect pests, plant diseases and weeds not yet established in this country. Under the Quarantine Act 1908–1950, quarantine inspectors are required to examine all plant material at the first port of entry and to release only material free from diseases and pests. Everyone entering Australia is required to declare if he or she has any plant material in luggage or personal effects. Heavy penalties are laid down for those found evading the regulations. All plant material entering as cargo must also be declared.

When the Commonwealth became responsible for all plant quarantine, the State Governments agreed to co-operate by providing and maintaining inspection facilities and personnel, for which they are reimbursed by the Commonwealth. In 1921, the administration of the regulations came under the newly-formed Department of Health, and in 1927 the Division of Plant Quarantine was created, under a Director who is responsible for policy and legislation and for co-ordinating the work of the State officers, who carry out the detailed administration in their capacity as Commonwealth officers.

Any plant material found carrying diseases or pests, or suspected of doing so, may be ordered into quarantine for remedial treatment, or if the treatment be impracticable may be destroyed. The cost of treatment is met by the importer. Regulations governing the different types of plants are based on the following broad principles:—(a) The importation

of plants likely to be infected with plant diseases, noxious fungi or poison plants is prohibited; (b) Agricultural seed must conform to standards of purity, insect pest and disease freedom; (c) Many commodities such as hops, cotton, peanuts in shell, nursery stock, potatoes, certain crop seeds, vines and specified plants may be imported only by approved importers under special conditions; (d) Certain plant products such as bulbs and timber (in logs or sawn) from specified areas may be imported only if accompanied by certificates showing that prescribed treatment has been given in the country of origin.

3. Notifiable Diseases.—(i) General. (a) Methods of Prevention and Control. Provision exists in the Health Acts of all the States for the observance of precautions against the spread of, and the compulsory notification of, infectious disease. When any such disease occurs, the local authority must be notified at once, and in some States notification must be made also to the Health Department.

As a rule, the local authorities are required to report from time to time to the Central Board of Health in each State on the health, cleanliness and general sanitary state of their several districts, and on the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of premises, and for the disinfection or destruction of bedding, clothing or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as smallpox and leprosy.

(b) Diseases Notifiable and Cases Notified in each State and Territory. The following table, which has been compiled by the Commonwealth Department of Health, shows for each State and Territory the diseases notifiable in 1956 and the number of cases notified.

Diseases not notifiable in a State or Territory are indicated by an asterisk.

DISEASES NOTIFIABLE IN EACH STATE AND TERRITORY OF AUSTRALIA AND NUMBER OF CASES REPORTED DURING THE YEAR ENDED 31st DECEMBER, 1956.

<sup>\*</sup> Not notifiable.

Note.-No cases of cholera, plague, smallpox, epidemic typhus or yellow fever were notified.

(ii) Venereal Diseases. The prevention and control of venereal diseases are undertaken by the States. Each State has a Venereal Diseases Act, or provisions in the Health Act govern the control of these diseases. Under these Acts, treatment has been made compulsory in every State. Consequent steps have been taken to ensure free treatment by medical practitioners or in subsidized hospitals and clinics. Registered pharmaceutical chemists are allowed to dispense only prescriptions signed by medical practitioners. Clinics have been established and, in some cases, beds in public hospitals have been set aside for patients suffering from these diseases.

Penalties may be imposed on a patient who fails to continue under treatment. Clauses are inserted in the Acts which aim at preventing the marriage of any infected person and the employment of an infected person in the manufacture or distribution of foodstuffs.

# § 5. Commonwealth Grants to Organizations Associated with Public Health.

- 1. General.—In addition to providing the services mentioned in sections 1-4 above, the Commonwealth Government gives financial assistance to certain organizations associated with public health which it desires to encourage. Examples of organizations included in this category are the Lady Gowrie Child Centres, the National Fitness Organizations, the Royal Flying Doctor Service of Australia, and the Red Cross Blood Transfusion Service.
- · 2. Lady Gowrie Child Centres.—Sessions of the National Health and Medical Research Council and the reports of the Commonwealth Advisory Council on Nutrition have called attention to the need for greater effort throughout Australia directed towards the care of the growing child, especially during the pre-school period. Movements for the welfare of the school child and the care of the infant are already developed by State authorities as recorded in sections 2 and 3 of division A of this chapter (see pp. 516-520). The Commonwealth Government felt that more could be done for the child of pre-school age, and it was decided to give a lead by assisting in the provision of facilities for demonstrating what could be done and the practical methods which could be applied. It therefore established in each capital city a pre-school demonstration centre, known as the Lady Gowrie Child Centre, and, in order to achieve the best results in association with those who have had experience in this field, it secured the co-operation of the federal organization of Kindergarten Unions which operated under the title of "The Australian Association for Pre-school Child Development". A suitable site was secured in each capital city and the necessary school structure was built. This organization has since been extended to include all pre-school organizations and its title has been changed to "The Australian Pre-school Association".

The Australian Pre-school Association administers the Lady Gowrie Child Centres for the Commonwealth Department of Health. An annual grant of £33,500 is received of which £29,850 is divided equally among six centres; £2,000 is allocated for the payment of salary and travelling for the Federal Pre-school Officer of the Association and £150 is a contribution to office expenses of the A.P.A. The Commonwealth Department of Health retains £1,500 for the maintenance of buildings.

The specialized function of the centres is that of demonstration and research and the programmes are carried out under the supervision of the Federal Officer. Each centre is concerned with a study of the factors promoting and retarding physical and mental health in young children, and in demonstrating an educational health programme based on the developing needs of children aged 3 to 6 years. Detailed case history records are kept for each child and these are discussed at weekly staff meetings of teachers, the sister, and the social worker, and form the basis for the guidance of child and parents. These records are available for approved research students.

The centres are used for observation by university students of Medicine, Psychology, Education, Social Studies, Architecture, Physical Education, Teacher Training Colleges, Nursing Colleges and Domestic Science. A number of research projects have been carried out into problems relating to the pre-school child.

In Sydney and Brisbane, the centres are used as a laboratory for a Social Paediatrics course for advanced medical students.

A research project at the Perth Centre is now in progress on "The Development of Concepts of Social Relations in Pre-school Children", under the direction of the University

of Western Australia. All centres are gathering material on possible stress in children—when (1) mothers are working outside the home, (2) mothers are in hospital, or (3) families are migrants.

In June, 1956, the Commonwealth Government made a grant of £3,000 to cover a two-year research study at the Sydney centre, under the supervision of the Institute of Child Health. Each centre has a committee of management responsible for the disbursement of funds.

3. National Fitness.—In 1938, arising from a recommendation of the National Health and Medical Research Council, the Commonwealth Government appointed a Commonwealth Council for National Fitness, under the Commonwealth Minister for Health, to effect collaboration of Commonwealth, State and Local Government authorities in the movement. Following the recommendations of the first Commonwealth Council meeting in 1939, the Commonwealth Government agreed to make available an annual sum of £20,000 for five years and grants were allocated to each State for purposes of organization and to each of the six Australian universities to establish lectureships in physical education. In June, 1942, this grant was increased to £72,500 to include grants to State Education Departments and for the work in the Australian Capital Territory.

Autonomous National Fitness Councils operating in each State are engaged in voluntary leader training, camping and hostelling, co-ordinating and promoting the work of amateur sports organizations, and providing advisory services to these organizations.

In some States, school camps are held as part of the regular school programmes. In Western Australia, a combined white and aboriginal children's camp has become a regular annual feature. Education departments spend their grant on physical education in schools and teachers' colleges. In New South Wales, the Education Department is providing high schools with pre-fabricated gymnasiums, and in Queensland 24 swimming pools have now been provided at schools.

A number of universities provide either a diploma course in physical education or a major course in physical education as part of a degree course.

An annual grant is made to sports and youth organizations in the Australian Capital Territory for the purchase of equipment, the development of coaching schemes, and the extension of club and camp facilities. In 1956, approval was given for the allocation, on a £1 for £1 basis, of £10,000 to the Y.M.C.A. from the accumulated balances of the A.C.T. National Fitness Fund for the erection of a central indoor recreation centre which will be for the use of all youth and sports organizations in the Australian Capital Territory.

4. Royal Flying Doctor Service of Australia.—The purpose of the Royal Flying Doctor Service of Australia is to provide medical and dental services to white and aboriginal persons in isolated areas. Most remote homesteads are equipped with two-way radio sets which they use for receiving ordinary radio programmes, participating in the School of the Air, and for contacting each other. In cases of minor illness or injury, they also use these sets to seek medical advice. If the illness or injury is serious, a doctor holding an aeroplane pilot's licence flies to the homestead and, if necessary, flies the patient to the nearest hospital. Standard medicine chests are supplied by the service. Each chest contains a first-aid book and instructions on the use of the various drugs and medical supplies in it. Further instructions are given by doctors over the air.

From time to time, special purpose work is undertaken in connexion with flood relief, searching for lost parties and co-ordinating cattle movements.

The service is not conducted with a view to profit. In some sections, small charges are made for particular services or a fixed annual charge is levied on graziers. Other sections rely on voluntary contributions from those who use their services. Donations and government contributions help to provide much of the overhead and capital expenditure incurred each year.

The Commonwealth has made an annual grant to this organization for operational expenses since 1936. Prior to that, from 1928 to 1931, the Commonwealth subsidized the Australian Inland Mission Aerial Medical Service. The Commonwealth annual grant to the Royal Flying Doctor Service of Australia towards maintenance was increased from £20,000 to £25,000 per annum, for three years from 30th June, 1957. The Commonwealth grant towards capital expenditure remained at £15,000 per annum. This capital expenditure grant is made on a £1 for £1 basis, in respect of approved projects.

The Royal Flying Doctor Service of Australia is conducted by a federal council comprising representatives of six sections, namely Queensland, New South Wales, Victoria, South Australia, Western Australia and the Eastern Goldfields of Western Australia. The Queensland, New South Wales and South Australian sections are centred in their own States but in Western Australia there are three centres, that in the far north being under the control of the Victorian section, and that in the south-east under the control of the Eastern Goldfields section. The third one, which has bases at Port Hedland and Meekatharra, is sponsored by the Western Australian section.

5. Red Cross Blood Transfusion Service.—The Australian Red Cross Society conducts a blood transfusion service in all States.

Before 1952-53, the cost of the Red Cross Blood Transfusion Service was borne by the Red Cross Society with assistance from the State Governments. In 1952, the Commonwealth agreed to make an amount of £50,000 available to the Red Cross Society through the State Governments. The States were to continue to assist the society at the same level as previously and make arrangements with the society to share any deficit still remaining.

The Commonwealth recognized that the proper maintenance of a blood transfusion service was of the utmost importance to the welfare of the community and that the service was one eminently suited for operation by the Australian Red Cross Society. Hence, in March, 1954, the Commonwealth offered each State Government a grant equal to 30 per cent. of the certifiable operating expenses incurred by the Society in the conduct of the blood transfusion service in that State. The grant was to be made subject to the conditions that the government of the State concerned agreed to meet 60 per cent. of the cost of operating the service in that State, leaving the society to meet the remaining 10 per cent. of the cost. All States accepted this proposal. The following table sets out the payments made by the Commonwealth government to the State governments in 1956-57:—

# RED CROSS BLOOD TRANSFUSION SERVICE: PAYMENTS TO STATES FOR 1956-57.

#### C. INSTITUTIONS.

# § 1. General.

In Australia, institutions related to public health may be classified to three groups:
(a) State, (b) public and (c) private. To the first group belong those institutions wholly provided for by the State, such as the principal mental hospitals in the various States and the Government and leased hospitals in Western Australia. To the second group belong public institutions of two kinds, namely:—(i) those partially subsidized by the State or by State endowments for maintenance, but receiving also private aid, and (ii) those wholly dependent upon private aid. To the first of these two kinds belong such institutions as the principal metropolitan hospitals; in the second are included institutions established and endowed by individuals for the benefit of the needy generally. All institutions of a private character are included in the third group. A more or less accurate statistical account is possible in classes (a) and (b), but in respect of (c) general tabulation is impossible. Owing to differences in the dates of collection and tabulation, it is impossible to bring statistics of some charitable institutions to a common year.

# § 2. Public Hospitals (other than Mental Hospitals).

1. General.—All the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres, there are special hospitals for infectious diseases, tubercular patients, women, children, and patients suffering from chronic diseases.

The particulars given herein refer to public hospitals at the latest available date and include all institutions affording hospital relief, whether general or special, with the exception of mental hospitals, repatriation hospitals and private hospitals conducted commercially.

2. Number, Staff and Accommodation.—Details regarding the number of hospitals, staff and accommodation for the year 1955-56 are given in the following table:—

PUBLIC HOSPITALS: NUMBER, STAFF AND ACCOMMODATION, 1955-56.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Number of Hospitals	264	126	140	65	95	26	4	1	721
Medical Staff— Honorary Salaried	3,446 748	1,284 631	610	137	309 107	92 99	13	34 4	5,754 2,349
Persons	4,194	1,915	761	575	416	191	13	38	8,103
Nursing Staff Accommodation— Number of beds	11,035	7,671	4,563	2,062	2,376	1,153	97	113	29,070
and cots	20,200	11,819	10,705	3,617	4,291	2,300	368	250	53,550

The figures for accommodation shown in the table above include particulars, where available, of a considerable number of beds and cots for certain classes of cases in outdoor or verandah sleeping places.

3. In-Patients Treated.—The following table furnishes particulars of in-patients treated. The figures shown refer to cases, that is to say, a person who is admitted to hospital twice during a year is counted twice. Newborn are excluded unless they remain in hospital after their mothers' discharge.

In addition to those admitted to the hospitals, there are large numbers of out-patients. During 1955-56, there were 1,077,618 out-patients treated in New South Wales, 514,423 in Victoria, 583,061 in Queensland, 109,196 in South Australia, 121,000 (estimated) in Western Australia, 111,008 in Tasmania, 63,530 in the Northern Territory and 7,661 in the Australian Capital Territory, making an estimated total for Australia of 2,587,000. The figures quoted refer to cases, as distinct from persons and attendances.

4. Revenue and Expenditure.—Details of the revenue and expenditure for the year 1955-56 are shown in the next table. The revenue includes the Commonwealth Hospital Benefits Scheme.

<sup>(</sup>b) Up to and including 1954-55, excludes loan receipts and expenditure

# § 3. Leper Hospitals.

Isolation hospitals for the care and treatment of persons suffering from Hansen's disease (leprosy) have been established in New South Wales (Little Bay), Queensland (Peel Island, near Brisbane, and Fantome Island, North Queensland), Western Australia (Derby), and the Northern Territory (East Arm Settlement, near Darwin). In addition, special wards for the isolation of leprosy patients have been provided at Fairfield (Victoria) and Wooroloo (Western Australia). At the end of 1957 there were 6 cases in residence at Little Bay, 19 at Peel Island, 24 at Fantome Island, 175 at Derby, 186 at East Arm Settlement, 5 at Fairfield and 1 at Wooroloo. Of the 416 cases, 351 were full-blood aborigines, 34 half-caste aborigines, 3 Asians and 28 Europeans.

### § 4. Mental Hospitals.

- 1. General.—The methods of compiling statistics of mental patients are fairly uniform throughout the States, but there is an element of uncertainty about possible differences in diagnosis in the early stages of the disease. Licensed houses are included in all particulars excepting revenue and expenditure for New South Wales. The figures exclude those of reception houses and observation wards in gaols. There are no mental hospitals in the Northern Territory or the Australian Capital Territory.
- 2. Hospitals, Staff and Accommodation.—Particulars regarding the number of hospitals, the medical and nursing staff, and accommodation are given in the following table for the year 1956. Figures for Victoria and Western Australia relate to 31st December, 1956. Figures for the other States relate to 30th June, 1956.

MENTAL HOSPITALS: NUMBER, STAFF, ACCOMMODATION, 1956.

<sup>(</sup>a) Year 1956. (b) Includes persons treated at the Epileptic Home. transferred to other institutions,

Persons who are well advanced towards recovery are allowed to leave the hospitals and live with their relatives or friends, but they are under supervision and their names are kept in the records. They are included in the figures shown in the above table.

4. Revenue and Expenditure, 1955-56.—Mental hospitals are maintained by the State Governments. They derive a small proportion of their revenue from other sources (chiefly patients' fees, pharmaceutical benefits and sale of farm produce), but in 1955-56 this source provided less than 4 per cent. of all their revenue. For a statement on the funds provided by the Commonwealth Government for the treatment of mental diseases, see Part B of this Chapter, § 2, para. 3, Mental Hospitals, p. 522.

In New South Wales, the expenditure includes the cost of Broken Hill patients treated in South Australian mental hospitals:—

resident .	£220/5/11	£393/0/7	£420/7/3	£467/14/5	£534/6/9

6. Number of Mental Patients.—The total number returned as under treatment at the end of each year shows a slight increase during the period but the proportion to total population shows a slight decline. A more rational attitude towards the treatment of mental cases has resulted in a greater willingness in recent years to submit afflicted persons to treatment at an early stage, and an increase in the number of recorded cases, therefore, does not necessarily imply an increase in mental diseases. The difference between States in the number of patients in mental hospitals per 1,000 of population may also to some extent be the result of differences in classification. Figures for Victoria and Western Australia relate to 31st December of the year shown; figures for the other States relate to 30th June of the year shown.

#### CHAPTER XV.

#### WELFARE SERVICES.

#### A. COMMONWEALTH SOCIAL SERVICES.

#### § 1. Introduction.

Under the provisions of section 51 of the Constitution, the Commonwealth Government is empowered to legislate on :—

" (xxiii) Invalid and old-age pensions:

(xxiiia) The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances: ".

The latter paragraph was inserted in the constitution after being accepted by the electors at a referendum on the 28th September, 1946. The enabling Act was assented to on the 19th December, 1946.

Before 1947, each social service benefit was paid under a separate Act. On the 1st July, 1947, with the passage of the Social Services Consolidation Act 1947, all Acts providing social service benefits were amalgamated. This Act eliminated certain anomalies and obsolete provisions and changed the title "old-age pension" to "age pension". The word "Consolidation" was dropped from the short title of the Act in 1954. The Act is at present styled the Social Services Act 1947–1957.

The social service benefits provided by the Commonwealth Government, and the date on which each came into operation, are:—

Age pension	1st July, 1909
Child endowment (for other than first child	d) 1st July, 1941
Child endowment (for first child)	20th June, 1950
Commonwealth Rehabilitation Service	10th December, 1948
Funeral benefit	1st July, 1943
Invalid pension	15th December, 1910
Maternity allowance	10th October, 1912
Sickness benefit	1st July, 1945
Special benefit	1st July, 1945
Unemployment benefit	1st July, 1945
Widow's pension	30th June, 1942

Information concerning these benefits appears in later sections of this chapter (pp. 547-558). Particulars of benefits provided under the National Health Service appear in Chapter XIV.—Public Health, pp. 521-527.

#### § 2. Commonwealth Expenditure on Social and Health Services.

1. National Welfare Fund.—The National Welfare Fund was established by the National Welfare Fund Act 1943 to finance a scheme of national welfare. In introducing this measure to Parliament, the Prime Minister said that part of the scheme was to be introduced immediately, and part was to be deferred until after the end of the war. A certain balance, which would therefore accrue to the fund, would be invested in Commonwealth securities, and would thus provide finance for the war effort.

The fund operated from 1st July, 1943. At its commencement, it was used to finance funeral benefits and maternity allowances. Other social and health benefits were made a charge on the fund from time to time. At present, expenditure on all benefits except repatriation and a few minor social and health benefits is met from the fund. The fund is used only to finance the benefits themselves; it is not used to finance the cost of administering the benefits, nor on capital works associated with the benefits.

For particulars of the income of the fund, see Chapter XXI., Public Finance, Part A, § 2, III., para. 6. The following table sets out expenditure from the fund during 1956-57.

<sup>(</sup>a) Includes special benefits to migrants in reception and training centres. (b) Paid to the State Governments as a contribution towards the maintenance of institutions for the treatment of tuberculosis. (c) This item covers the cost of district laboratory services, the free supply of prophylactic materials and biological products (e.g., insulin, poliomyelitis and diphtheria prophylactic), the supply and maintenance of hearing aids for children, subsidies to voluntary organizations conducting home-nursing services, and certain costs associated with the blood transfusion services of the Australian Red Cross Society. (d) Includes an amount of £650,642 for the production of poliomyelitis vaccine.

Expenditure from the fund during each of the years 1952-53 to 1956-57 is shown in the following table. A graph showing expenditure from the fund from 1940-41 to 1956-57 is to be found on page 559.

<sup>(</sup>a) See footnote to table on p. 551.

<sup>2.</sup> Capital Expenditure. Particulars of Commonwealth expenditure on capital works are given in Chapter XIV., Public Health, Division B, Section 2, para. 3 Mental Health

and para. 6, Anti-tuberculosis Campaign. Grants are made to private organizations for the construction of homes for elderly people (see Division B of this Chapter, § 1, para, 4, p. 561).

3. Administrative Expenditure. Information concerning the cost of administering each benefit separately is not compiled. Particulars of the cost of administering the Department of Health and the Department of Social Services may be found in Chapter XXI., Public Finance, Division A, Section 2, III., para. 5.

## § 3. Age and Invalid Pensions.

Age pensions are payable to men, 65 years of age and over, and women, 60 years of age and over, who have resided in Australia continuously for at least 20 years, which need not be immediately prior to the date of claim for a pension. Absence in a Territory of the Commonwealth, any periods of absence during which a person's home remained in Australia, and absences in certain other circumstances including, in the case of a claimant who has had at least 18 years' residence, occasional absences aggregating up to 2 years plus 6 months for every year of residence in excess of 18 years, are counted as residence.

Invalid pensions are payable to persons, 16 years of age and over, who have resided in Australia for a continuous period of five years (including any occasional absences not exceeding, in total, six months), and who are permanently incapacitated for work or permanently blind. The degree of permanent incapacity has to be not less than 85 per cent. and the claimant must have become permanently incapacitated or permanently blind while in Australia or during a temporary absence from Australia, but this condition is waived if he has resided in Australia for not less than 20 years (continuous or otherwise), whether any such period was before or after the occurrence of the permanent incapacity or blindness.

Pensions may be granted to aboriginal natives of Australia who have been granted exemption from State control laws, or who, in any State where exemption is not provided for, are considered, by reason of their character, intelligence and social development, to be suitable persons to receive pensions.

A pension is not payable to:—an alien (except a woman who, before marriage, was a British subject); a person who has deprived himself of property or income, or who has brought about his incapacity, in order to qualify for a pension; a person in receipt of income of £409 10s. per annum (£819 per annum for a married couple); a person who owns property, apart from his permanent home and other exempt property, to the net value of more than £1,750 (£3,500 for married persons); or a person who has deserted his spouse or children for the six months preceding the date of the claim (age pension only).

Since 24th October, 1957, the maximum rate of pension has been £227 10s. per annum. The wife of an invalid pensioner (or an age pensioner who is permanently incapacitated for work or permanently blind) may be granted a wife's allowance of not more than £91 per annum (£1 15s. a week). A child's allowance of £29 18s. per annum (11s. 6d. a week) is also paid to an invalid pensioner who is maintaining a child under 16 years of age. If a pensioner is maintaining more than one child, his pension is increased by £26 a year (10s. a week) for each additional child. At 30th June, 1957, 376,022 age pensioners (80.7% of all age pensioners) and 79,529 invalid pensioners (90.1% of all invalid pensioners) were receiving an annual pension of £208 or more.

A pensioner who is an inmate of a benevolent home is paid so much of his pension as does not exceed £79 6s. per annum (£1 10s. 6d. a week) and the balance, if any, of the pension is paid to the institution for his maintenance.

Age and invalid pensions (other than invalid pensions paid to blind persons) and allowances paid to wives of invalid pensioners (but not the child's allowance of 11s. 6d. a week) are subject to a means test. They are reduced by the amount by which a pensioner's income from sources other than his pension exceeds £182 per annum (£3 10s. a week). For this purpose, certain types of allowances received are not counted as income. These include gifts or allowances received from the pensioner's children, benefits from friendly societies, payments for illness, infirmity or old age from a trade union, State food relief, maternity allowances, child endowment or any other payment received for children maintained by the pensioner, allowances received under the national health service, interest on war gratuities, income received from property owned by a pensioner or his spouse and income such as dividends on shares and interest from bonds or on money in the bank.

The annual rate of pension or allowance is further reduced by £1 for every complete £10 by which the value of property owned by a pensioner or his spouse exceeds £200, and the pension cuts out altogether if the value of the property exceeds £1,750. For this purpose, certain types of property are disregarded. They include the permanent home of the

pensioner, his furniture and personal effects, the surrender value (up to £750) of life insurance policies, the capital value of annuities or contingent interests, the present value of any reversionary interests, inheritances not received and war gratuities.

For the purposes of the administration of the means test, the income and property of a married person is deemed to be half the total income and property of the husband and wife (unless they are legally separated). This provision means that the pension of a married pensioner, whether or not his spouse is a pensioner, will not be reduced because of his income from other sources unless that income exceeds £364 per annum (£7 per week), nor will his pension be reduced on account of the value of his property unless that value exceeds £400.

The following statement shows the rates of pension at 1st July, 1909, and the rates as they have been varied since that date, subject in all cases, to income and property qualifications:—

# MAXIMUM RATES OF PENSION PAYABLE.(a)

Note.—Provision for variations according to retail price index numbers was repealed on 6th April,

During 1956-57, 50,799 age pension claims were granted, 1,882 pensioners were transferred from the invalid pension list, and 36,642 pensions expired through cancellations and deaths. The number of age pensioners at 30th June, 1957, was 465,781, of whom 160,308 (or 34 per cent.) were males, and 305,473 (or 66 per cent.) were females. Pensioners in benevolent homes have been included in these figures; in past years they were excluded.

The recorded ages of the 50,799 persons (19,699 males and 31,100 females) to whom age pensions were granted during the year 1956-57 varied considerably, ranging from 8,305 at age 60 to eight who were over 97; 36,862 were in the 60-69 years age-group. The conjugal condition of these new pensioners was as follows:—Males—single, 2,205; married, 14,207; and widowed, 3,287: Females—single, 3,748; married, 16,401; and widowed, 10,951.

<sup>(</sup>a) Excludes amounts payable for wives and children of invalid pensioners. (b) Additional pension of £6 10s, per annum (2s, 6d. per week) was payable to a pensioner with no income. Pensioners with income of less than 2s. 6d. per week were paid additional pension of 2s. 6d. less the amount of income. (c) Variation according to change in retail price index number. (d) Increase paid on 9th July, 1942, retrospective to 2nd April, 1942. (e) Rate restored to £70 4s. per annum under National Security (Supplementary) Regulations 112A—Statutory Rule 315 of 1943.

During 1956-57, 11,726 invalid pension claims were granted, 7,049 pensions ceased through cancellation or death, and 1,882 invalid pensioners were transferred to the age pension list. The number of invalid pensioners at 30th June, 1957, was 88,236, of whom 50,423 (or 57 per cent.) were males and 37,813 (or 43 per cent.) were females. Pensioners in benevolent homes have been included for the first time in the 30th June, 1957, figures.

The recorded ages of the 11,726 persons (6,883 males and 4,843 females) to whom invalid pensions were granted during 1956-57 varied widely, 968 (8 per cent.) were in the 16-19 years age-group, 2,241 (19 per cent.) were in the 20-44 years age-group; 5,951 (51 per cent.) were in the 45-59 years age-group, 2,043 (17 per cent.) were in the 60-64 years age-group, and 523 (5 per cent.) were over 65 years of age.

The conjugal condition of persons to whom invalid pensions were granted during the year was as follows:—Males—single, 2,273; married, 4,106; and widowed, 504: Females—single, 1,813; married, 2,180; and widowed, 850.

AGE AND INVALID PENSIONS, 30th JUNE, 1957.

The sum disbursed in age and invalid pensions in 1956-57, including the amount paid to homes for the maintenance of pensioners and allowances to wives of invalid pensioners, represented an expenditure of £11 9s. 1d. per head of population as compared with £10 18s. 2d. in 1955-56.

The following table gives details of age and invalid pensions for the years 1952-53 to 1956-57:—

AGE AND INVALID PENSIONS: SUMMARY, AUSTRALIA.

<sup>(</sup>a) Number of males to each 100 females.

<sup>(</sup>a) Number of pensioners per 1,000 persons of pensionable age (males aged 65 years and over and females aged 60 years and over). (b) Includes allowances to wives of invalid pensioners. (c) Excludes age and invalid pensioners in benevolent homes, at 30th June, 1953, 6,309; 1954, 6,463; 1955, 6,132; and 1956, 6,244.

#### § 4. Child Endowment.

A person who is resident in Australia and has the custody, care and control of one or more children under the age of sixteen years, or an approved institution of which children are inmates shall be qualified to receive an endowment in respect of each child.

Endowment may be paid in respect of a child whose father is not a British subject if the child was born in Australia, the mother is a British subject, or the child is likely to remain permanently in Australia. A child born during the mother's temporary absence from Australia is deemed to have been born in Australia. Endowment is payable to aboriginal natives of Australia unless they are nomadic, or unless the child concerned is wholly or mainly dependent on the Commonwealth or a State, and also in respect of children of members of the naval, military or air forces of the United Kingdom who are serving with the Australian forces from the time of arrival of the children in Australia. There are provisions to meet cases of families divided by reason of divorce, separation, unemployment or death of a parent. There is no means test.

From 1st July, 1941, the rate of endowment was 5s. a week for each child in excess of one in a family, and for each child under sixteen years in an approved institution. The rate was increased to 7s. 6d. a week on 25th June, 1945, and to 10s. a week on 9th November, 1948. Since 20th June, 1950, the rates of endowment have been 5s. a week for the first child in a family, 10s. a week for each other child in a family, and 10s. a week for each child in an institution.

The number of families with one or more endowed children at 30th June, 1957, was 1,378,169, an increase of 38,362 or 2.9 per cent. during the year. The following table shows particulars of the numbers of persons in each State and Territory who were receiving child endowment at the 30th June, 1957:—

<sup>(</sup>a) A number of endowments are paid every twelve weeks. During two years out of every three there are four such payments, but every third year there are five. Since the size of the amount so paid (£24,200,000 in 1956-57) causes considerable fluctuations in the figures for expenditure on child endowment from year to year, figures for annual liability reflect trends in expenditure on child endowment more accurately than do figures for expenditure.

The following table shows, as at 30th June, 1957, the number of claims in force and the number of endowed children classified according to the number of endowed children in the family:—

CHILD ENDOWMENT: NUMBER OF ENDOWED CHILDREN IN FAMILIES, 30th JUNE, 1957.

#### § 5. Commonwealth Rehabilitation Service.

The Commonwealth Rehabilitation Service has been set up to help persons who are too disabled to work or who have had to give up their employment because of sickness or injury. It aims at restoring disabled persons so they can earn a living and lead useful lives. They are given suitable treatment and training, the cases selected being those in which the person's disability is remediable and there are reasonable prospects of his engaging in a suitable vocation within three years after the commencement of treatment or training.

The benefits are available to invalid pensioners, persons receiving unemployment or sickness benefits, persons receiving tuberculosis allowances and persons over 14 but under 16 years of age who, without treatment and training, would be likely to qualify for an invalid pension on reaching the age of 16 years. Other persons may participate in the scheme upon reimbursement of the cost of treatment and training. During the treatment stage of rehabilitation the payment of pension or benefit is continued. If, however, vocational training is provided the pension or benefit is suspended and the trainee is paid instead a rehabilitation allowance equivalent to the amount of invalid pension for which he is qualified, or which would be payable if he were qualified to receive an invalid pension, together with the amount of any wife's and child's allowances, plus a training allowance of £1 10s. per week.

Living-away-from-home allowances are paid where necessary. Fares and living expenses (including those of an attendant where required) incurred in connexion with treatment, training or attendance for an interview or for medical examination may also be paid. A person receiving treatment or training may be provided, free of charge, with necessary artificial replacements, surgical aids and appliances. He may also be provided with books, equipment and tools of trade, costing not more than £40. If these are retained by him, he is required to pay the cost, but payments may be made by small instalments after he has commenced employment.

If the treatment or vocational training does not result in the trainee being able to engage in employment, his right to the continuance of his pension or benefit is not prejudiced.

The numbers of persons receiving benefits who were examined, accepted, trained and placed in employment during the year 1956-57 are shown in the following table:—

#### COMMONWEALTH REHABILITATION SERVICE: AUSTRALIA, 1956-57.

			Commission	Placed in Employment.

on payment of the cost	153	116		1	82		
Total	19,134	1,505	313	356	666		

#### § 6. Funeral Benefits.

A funeral benefit of up to £10 is payable to the person who has paid, or is liable to pay, the cost of the funeral of an age or invalid pensioner or of a claimant who, but for his death, would have been granted an age or invalid pension, or of a person who at the time of his death was receiving, or was a claimant for, a tuberculosis allowance, if he would otherwise have been qualified to receive an age or invalid pension. Where the cost of the funeral has been partly met by payment from a contributory funeral benefit fund of an organization other than a friendly society, funeral benefit is payable to the extent of the amount (not above £10) by which the cost of the funeral exceeded the amount paid from the fund. A funeral benefit is not payable to a person administering a contributory funeral benefit fund.

The following table shows the number of funeral benefits which were paid in each State and Territory for the years 1952-53 to 1956-57.

<b>5</b>			Benefits Granted.

#### FUNERAL BENEFITS GRANTED, AUSTRALIA.

In 1956-57 the average amount paid per grant was £9 18s. 5d.

# § 7. Maternity Allowances.

Maternity allowances are paid to provide financial assistance towards the expenses associated with the birth of children and are additional to the benefits provided under the Commonwealth hospital benefits scheme. They are not subject to a means test.

The allowance is £15 if the mother has no other children, £16 if she has one or two other children and £17 10s. if she has three or more other children under the age of sixteen years. The amount is increased by £5 in respect of each additional child born at a birth. An advance payment of £10 on account of a maternity allowance may be made four weeks before the expected date of birth. The balance is payable immediately after the birth. Payment may be made in respect of the birth of a still-born child, or a child which lives for less than twelve hours, if the period of intra-uterine life of the child was at least 5½ months.

A maternity allowance is payable to a woman who, at the date of giving birth to a child, is residing in Australia, is temporarily abroad or who is on board a ship proceeding from a port in Australia or an Australian Territory to another port in Australia, or another Australian Territory, or on board a ship proceeding to Australia, provided she receives no maternity benefit in respect of the birth from the country whence she came. An alien mother may receive the allowance if she was a British subject prior to her marriage, or if she or her husband resided in Australia for at least twelve months immediately prior to the birth of the child, but this last condition may be waived if the mother is likely to remain in Australia. The allowances may be paid to aboriginal natives of Australia who have been granted exemption from State control laws or who, in any State where exemption is not provided for, are considered suitable persons to receive the allowance by reason of their character, standard of intelligence and social development.

The following table gives details of the amount paid in each State for the years 1952-53 to 1956-57:—

#### § 8. Unemployment, Sickness and Special Benefits.

Unemployment and Sickness benefits are paid to men over 16 and under 65 years of age, and women over 16 and under 60 years of age who, through unemployment, sickness or accident, suffer temporary loss of regular earnings. They must have been living in Australia during the preceding twelve months or be likely to remain permanently in Australia. A person in receipt of an age, invalid or widow's pension, or a service pension (as distinct from a war pension) under the Repatriation Act, or a tuberculosis allowance is ineligible to receive a benefit.

To qualify for an unemployment benefit, a person must establish that he is unemployed and that his unemployment is not due to his being a direct participant in a strike, that he is capable and willing to undertake suitable work, and that he has taken reasonable steps to obtain such work. Registration with the local Commonwealth District Employment Officer is necessary.

To qualify for a sickness benefit, a person must establish that he is temporarily incapacitated for work by reason of sickness or accident and that he has thereby suffered a loss of salary, wages or other income.

A married woman is not eligible to receive a sickness benefit if it is reasonably possible for her husband to maintain her. Where her husband is able to maintain her only partially, a benefit may be paid at such rate as is considered reasonable in the circumstances. In exceptional cases, a married woman may qualify for an unemployment benefit in her own right.

A benefit may be paid to those aboriginal natives of Australia who are considered suitable by reason of character, standard of intelligence and social development.

The maximum weekly rates of benefit payable and permissible income since the 17th October, 1957, have been as follows:—

Age and Marital Status of	Maximum Weekly Benefit Payable.	Permissible Weekly Income.			
Person over 21 years of age			<u> </u>	£ s. d.	£ s. d.
Married person under 21 years of age Unmarried person 18-20 years of age	• •	• •	7	276	1 0 0
Unmarried person 17 years of age	••	• •	::	1 15 0	1 0 0
Unmarried person 16 years of age	••	••		1 15 0	100

An additional benefit of £2 7s. 6d. per week may be paid for a dependent spouse and 10s. for one dependent child under 16 years of age. If no allowance is paid for a dependent spouse, a similar benefit may be paid for a claimant's housekeeper, provided there are one or more children under 16 years of age in the home and the woman is substantially dependent on the claimant but is not employed by him.

The weekly rate of benefit is reduced by the amount by which a beneficiary's income from sources other than his pension exceeds the amount shown in the final column of the relevant line in the above table. For unemployment benefit purposes, the incomes of the claimant and his spouse are taken into account, unless they are permanently separated. For sickness benefit purposes, the income of the claimant only is taken into account, while up to £2 per week is disregarded of any payment received from an approved friendly society or other similar approved body in respect of the incapacity for which sickness benefit is payable. "Income" does not include child endowment, or other payments in respect of children, the Commonwealth hospital benefits and pharmaceutical benefits, or a tuberculosis allowance or an amount paid in reimbursement of medical, dental or similar expenses paid. There is no means test on property.

Where a person qualified for sickness benefit receives or is entitled to receive (in respect of the same period and the same incapacity for which sickness benefit is payable) any payment by way of compensation (including workers' compensation), damages, or otherwise under any law (except payments for which he has contributed), the amount of the compensation, etc., is not taken into account as income but is deducted from the rate of sickness benefit otherwise payable.

There is a waiting period of seven days in respect of which unemployment or sickness benefit is not payable. Unemployment and sickness beneficiaries are eligible to participate in the Commonwealth Rehabilitation Service under the same conditions as invalid pensioners. Payment of an unemployment or sickness benefit may be refused if the claimant or beneficiary, on being required, fails to undergo a medical examination or to receive treatment or undertake training or to do any suitable work.

A special benefit may be granted to a person not qualified for unemployment or sickness benefit who is not in receipt of an age, invalid or widow's pension or a service pension, if by reason of age, physical or mental disability or domestic circumstances, or for any other reason, he is unable to earn a sufficient livelihood for himself and his dependants.

The following table shows the number admitted to benefit during 1956-57, the number of persons on benefit at 30th June, 1957, and the amount paid for each benefit during 1956-57.

# § 9. Widows' Pensions.

Widows' pensions are payable to the following classes of women. The rates shown have been in operation since 15th October, 1957.

- Class "A"—A widow who has the custody, care and control of one or more children under the age of 16 years—£240 10s. per annum (£4 12s. 6d. a week) plus £26 per annum (10s. a week) for each child after the first in her custody, care and control.
- Class "B"—A widow who has no children under 16 years of age in her custody, care and control, and who is not less than 50 years of age or who, after having attained the age of 45 years, ceased to receive a Class "A" widow's pension by reason of the fact that she no longer had the custody, care and control of a child—£195 per annum (£3 15s. a week).
- Class "C"—A widow who is under 50 years of age and has no children under the age of 16 years in her custody, care and control, but is in necessitous circumstances at the time of or within 26 weeks after the death of her husband—£3 15s, a week for not more than 26 weeks. If at the time of her husband's death the widow is with child, this period will be extended until the birth of the child. She will then become eligible for a class "A" widow's pension.
- Class "D"—A woman whose husband has been serving a term of imprisonment for at least six months, if she has the custody, care and control of one or more children under the age of 16 years or is not less than 50 years of age—£195 per annum (£3 15s. a week).

The term "widow" includes; (i) a woman who was wholly or mainly maintained by a man as his wife on a permanent and bona fide domestic basis for not less than the three years before his death; (ii) a woman who has been deserted by her husband without just cause for not less than six months; (iii) a divorcee who has not remarried; and (iv) a woman whose husband is an inmate of a mental hospital.

The residential qualification is five years' continuous residence in Australia immediately prior to the date of lodgment of the claim, but this period may be reduced to one year under certain circumstances.

A widow's pension is not payable to an alien, unless she was a British subject before her marriage, a woman who is in receipt of an age or invalid pension, a tuberculosis allowance, or a war widow's pension, a woman who has deprived herself of property or income in order to qualify for a pension, a deserted wife or a divorcee who has not taken reasonable action to obtain maintenance from her husband or former husband, a woman who is not of good character, or a woman who is not deserving of a pension. Widows' pensions may be granted to aboriginal native women of Australia under the same conditions as age pensions.

Widows' pensions are subject to a means test. They are reduced by the amount by which a pensioner's income from sources other than her pension exceeds £182 per annum (£3 10s. a week). In determining the amount of income, the income of a Class "A" widow is reduced by £26 per annum (10s. a week) less the amount of any payment other than child endowment received by her in respect of her child.

The pension of a woman in Class "B" or "D" is further reduced by £1 per annum for every complete £12 by which the value of her property exceeds £200.

No pension is payable to a woman who owns property valued at more than £1,750. The types of income and property disregarded in the case of widows' pensions are the same as in the case of age and invalid pensions except that any amount in excess of 15s. a week received by a deserted wife, or a divorcee from her husband or former husband, for the maintenance of a child is taken into account in the claimant's income.

The pension payable to a Class "A" widow may be continued after her child reaches 16 years and until the age of 18 years is reached if the child continues with full-time education at a school or university, is still dependent on the widow and is not in employment.

The number of widows' pensions by class, current at 30th June, 1957, was as follows:—Class "A", 20,648; Class "B", 24,269; Class "C", 223; Class "D", 276; total, 45,416.

The amount paid in pensions during 1956-57 was £8,862,402. The following table shows details of widows' pensions paid in each State and Territory in the year 1956-57:—

# § 10. Reciprocal Agreements with Other Countries.

1. New Zealand.—An agreement between the governments of Australia and New Zealand for reciprocity in social services came into operation on 1st July, 1949.

The reciprocal arrangements cover age and invalid pensions, widows' pensions, child endowment and unemployment and sickness benefits, and apply to both permanent and temporary changes of residence.

Residence in one country counts as residence in the other country in relation to entitlement to benefits in which a residential qualification applies.

Persons from one country taking up permanent residence in the other country become eligible for any of the specified benefits of the new country under the same conditions (with one or two exceptions) as apply to citizens of that country.

Persons in receipt of any of the specified benefits in one country may continue to receive those benefits while temporarily absent in the other country. These payments are made on an agency basis by the appropriate authority of the country in which the person is temporarily resident.

2. United Kingdom.—A reciprocal agreement on social services between the United Kingdom and Australia came into operation on 7th January, 1954.

Under this agreement, former residents of the United Kingdom who were in the National Insurance Scheme when they left the United Kingdom are deemed, for the purposes of qualifying for age, invalid and widows' pensions, child endowment and unemployment and sickness benefits, to comply with the Australian residential requirements. Subject to the means test, persons who would be entitled to receive United Kingdom pensions on account of age, invalidity or widowhood if they were living in the United Kingdom have their United Kingdom pensions supplemented by the Commonwealth Government.

Australians going to the United Kingdom for permanent residence are treated in the United Kingdom as if they had been insured under the National Insurance Scheme while in Australia, so that they can qualify for various National Insurance benefits.

Families who go from one country to the other qualify for child endowment, or family allowances, as soon as they arrive in their new country.

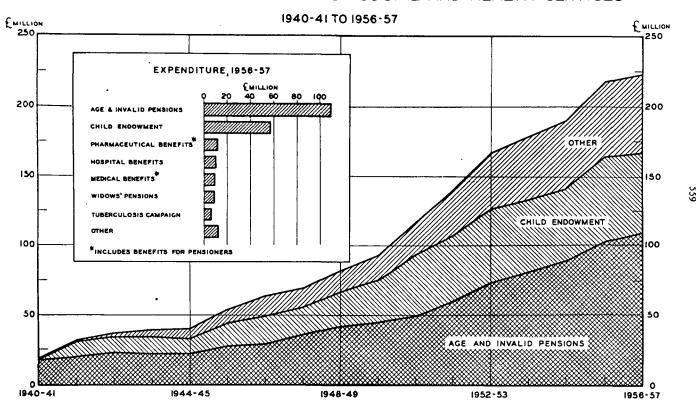

There is also provision for the safeguard of social service rights for persons going from one country to the other for temporary residence.

#### B. OTHER SERVICES.

# § 1. Benevolent Homes.

1. General.—Numerous establishments exist for the housing and protection of persons no longer able to provide for themselves. These homes are supported by government and municipal aid, public subscriptions, bequests, etc. In many cases relatives of poor and afflicted persons contribute to their maintenance.

# COMMONWEALTH EXPENDITURE ON SOCIAL AND HEALTH SERVICES

An entirely satisfactory statistical tabulation of all forms of charitable aid provided by benevolent institutions is difficult because these services differ considerably.

- 2. Principal Institutions.—Particulars respecting the accommodation and the number of inmates of the principal institutions were published in earlier issues of the Official Year Book (see No. 22, p. 485).
- 3. Revenue and Expenditure.—Details regarding revenue and expenditure for the year 1955-56 are given in the following table.

BENEVOLENT HOMES:	REVENUE AND	<b>EXPENDITURE, 19</b>	55-56.

	I					l	i

- (a) These figures relate to the three State hospitals and homes only. (b) Includes Commonwealth hospital benefits and age and invalid pension receipts. (c) Includes such items as purchase of land, cost of new buildings and additions to buildings.
- 4. The Aged Persons Homes Act.—The Aged Persons Homes Act 1954 operated from 16th December, 1954. The purpose of the Act is to encourage the provision of homes at which aged persons may reside in conditions approaching normal domestic life as nearly as possible.
  - To be eligible for assistance under this Act an organization must be-
    - (a) carried on otherwise than for purposes of profit or gain to the individual members; and
    - (b) a religious organization, an organization the principal objects or purposes of which are charitable or benevolent, an organization of former members of the defence forces established in every State or a State branch of such an organization, or an organization approved by the Governor-General for the purpose of this Act.

An organization conducted or controlled by, or by persons appointed by, the Government of the Commonwealth or of a State or a local governing body established under the law of a State, is not eligible for assistance under this Act.

The Director-General of Social Services may make a grant of money to an organization as assistance towards meeting the cost of the construction or purchase of a home to be used permanently for the accommodation of aged persons. When the Act was introduced, the grant was made on a £1 for £1 basis with money raised by the organization, not counting money which the organization received from a governmental body or borrowed. Since 22nd October, 1957, the grant has been £2 for every £1 raised by the organization. Before a grant is made, the Director-General must be satisfied that the sum of the money expended, and the money presently available for expenditure, by the organization towards the capital cost of the home, together with the amount of the grant, will be not less than the capital cost of the home. Expenditure by the Commonwealth Government was £436,236 in 1954-55, £397,994 in 1955-56 and £751,136 in 1956-57.

## § 2. Orphanages, Industrial Schools, etc.

- 1. General.—The methods of caring for orphans and neglected children differ extensively, some are placed in orphanages and industrial schools, while others are boarded out with their mothers or female relatives or with approved foster-mothers. The children in orphanages and similar institutions may receive, in addition to primary education, some craft training. In all cases employment is found for the children on their discharge from the institution, and they remain for some time under the supervision of the proper authorities. The conditions under which orphans, neglected children and children boarded out live are subject to frequent departmental inspections.
- 2. Principal Institutions.—Particulars concerning the principal institutions in each State were published in earlier issues of the Official Year Book (see No. 22, p. 486).
- 3. Children under Government Authority.—The following table summarizes the transactions of State Departments during 1955-56 in connexion with children under their control or supervision. In addition to neglected children, the figures include uncontrollable and convicted children who are wards of a government authority, as well as poor children whose parents obtain assistance from the government without giving up the legal right of custody.

CHILDREN UNDER GOVERNMENT AUTHORITY: SUMMARY, 1955-56.

Receipts from parents' con- tributions, etc.	78,897	32,752				_	206,684
	· · ·						
Net Cost to State	1,123,650	737,088	422,837	231,151	118,326	33,989	2,667,041

<sup>(</sup>a) Year ended 31st December, 1956. (b) Includes inmates of hospitals. with female relatives. (d) Includes 526 after-care ex-institution inmates.

The total expenditure on children's relief in the foregoing table shows considerable variation amongst the States owing to the different methods of treating assistance to mothers with dependent children. In South Australia, Western Australia and Tasmania, large amounts have been excluded from the total expenditure on this account owing to the difficulty of obtaining separate amounts for allowances made in respect of the dependent children only.

#### § 3. Protection of Aboriginals.

For the protection of the aboriginal Australian race, there are institutions, under the supervision of Aborigines Boards, where these people are housed and encouraged to work, the children receiving elementary education. The work is usually carried on at mission stations, but many of the natives are nomadic, and receive food and clothing when they call, while others only rarely come near the stations. The aboriginal race is extinct in Tasmania. The expenditure from Consolidated Revenue in 1955–56 was as follows (figures in brackets are for the year 1956–57):—New South Wales, £181,585 (£174,967); Victoria, £16,219 (£13,039); Queensland, £657,917 (£632,107); South Australia, £214,809 (£177,535); Western Australia, £447,993 (£417,864); Northern Territory, £508,743 (£421,412); Australian Capital Territory, £4,684 (£3,427); Australia, £2,031,950 (£1,840,351).

#### § 4. Lifesaving.

There are three lifesaving societies in Australia—The Royal Life Saving Society, the Australian Life Saving Society and the Surf Life Saving Association. The object of these societies is the saving of life from drowning and other forms of asphyxiation. Among other things, they aim to encourage an ability to swim and a knowledge of lifesaving techniques on the part of pupils in schools and colleges. Numerous certificates of proficiency in various grades are issued annually throughout Australia.

#### § 5. Royal Humane Society.

The Royal Humane Society of Australasia with head office at 188 Collins Street Melbourne has as its main object the granting of awards to all who with bravery, skill and perseverance promptly risk their own lives in saving or attempting to save those of their fellow creatures. The classes of awards are (a) Gold Medal; (b) Silver Medal; (c) Bronze Medal; and (d) Certificate of Merit. The Clarke Medal is awarded for the outstanding case of the year, and the Rupert Wilks Trophy is awarded for the most outstanding bravery by a child under 13 years of age. About 50 awards are made annually.

#### § 6. The Order of St. John.

The Priory in Australia of the Most Venerable Order of the Hospital of St. John of Jerusalem is the governing body of the various activities of the Order which comprises the St. John Ambulance Association, the St. John Ambulance Brigade and the Hospitallers' Clubs in all States and Commonwealth Territories.

Members of the St. John Ambulance Association teach first aid to the injured, home nursing, hygiene and child welfare.

Members of the St. John Ambulance Brigade provide first aid at public functions.

The Hospitallers' Clubs in each State undertake the collection of funds for the St. John Ophthalmic Hospital in Jerusalem, and other duties which tend to bring together all persons interested in the work of the order.

The Order of St. John has established ambulance transport services in some States, acts as an ancillary to such services in other States, and provides technical reserves for the medical services of the Crown.

The Lifesaving Medal is awarded by the Order as warranted.

# § 7. Other Charitable Institutions.

Owing to the variety of name and function of other charitable institutions it has been found impracticable to give detailed results. The aid given in kind—food, clothing, tools of trade, etc.—is considerable, whilst the shelter and treatment afforded range from a bed for a night for casual callers in establishments ministering minor charity to indoor treatment over long periods in those that exist for the relief of the aged and the infirm. The institutions not so particularized include homes for the deaf, dumb and blind, infant homes, homes for the destitute and aged poor, industrial colonies, night shelters, crèches, rescue homes for females, free kindergartens, auxiliary medical charities, free dispensaries, benevolent societies and nursing systems, ambulance and health societies, boys' brigades, humane and animals' protection societies, prisoners' aid associations, shipwreck relief societies, bush fire, flood and mining accident relief funds.

#### CHAPTER XVI.

#### POPULATION.

Note.—The figures shown throughout this chapter for the Census of 30th June, 1954, are the final results, and population estimates shown for the intercensal period 1947 to 1954 are revised figures which have been adjusted in accordance with these results.

In general, the remaining statistics in this chapter cover the year 1957. More detailed figures will be found in the annual bulletin, *Demography*.

# § 1. Population Statistics.

Population statistics relating to Australia or to the component States and Territories as at specific dates are of two types—

- (i) Those ascertained by census enumeration. These results attain a very high degree of accuracy and may generally be accepted without reservation.
- (ii) Estimates derived by the application of vital and migration statistics to census data. In general, three estimates are made for any specific date:
  - (a) Original estimates for dates subsequent to a census made before another census is taken.
  - (b) Two-stage revision of the original estimates for each newly completed intercensal period to adjust for the difference between the new census result and the comparable estimate. This is to bring intercensal estimates into line with the two census populations. The first revision is reconciled with preliminary census results and the second revision with final census results.

Final revised figures become the permanent population estimates. For purposes requiring a mean population for any twelve-month period such mean is calculated as described in § 4. As populations at specific dates are used in these calculations, consequential revisions are made in mean populations when the estimates for specific dates are revised as described above.

In accordance with this policy, all Australian population statistics shown in this issue of the Official Year Book for dates up to 30th June, 1954, and all mean populations for calendar years up to 1953 and financial years up to 1953-54 are final. Population statistics for dates or years subsequent to these are subject to revision when another census is taken.

Since the establishment of the Commonwealth Bureau of Census and Statistics, the populations of the States and Territories have been estimated in a comparable manner and attention has been given to the improvement of the basic demographic data from which the estimates are compiled. The principal source of error in early estimates lay in the migration records, both oversea and interstate, and efforts were directed towards their improvement. The 1911 Census disclosed an error in the precensal estimates equivalent to proportions of 14.5 per cent. and 10.0 per cent., respectively, of recorded male and female oversea departures from Australia. These proportions were used as adjusting factors to recorded oversea departures during the intercensal period 1911-21. These adjusting factors were reduced after the 1921 Census to 1 per cent. for males and 4.5 per cent. for females and were discontinued altogether after the 1933 Census. From the results of the 1954 Census it appears that the accuracy of the records of oversea migration is such that in future little adjustment to recorded figures will be necessary for Australia as a whole.

It is improbable that the same degree of accuracy as has been attained in the record of oversea migration can be reached in the case of interstate movements. Records are made of interstate passengers by sea, rail and air, but it is impracticable, with occasional important exceptions, to record the movements by road.

#### § 2. The Census.

1. Census-taking.—Although "musters" of the population were carried out at least annually from 1788 to 1825, the first regular census in Australia was not taken until 1828, when a count of the population of the Colony of New South Wales was made. Subsequent censuses were taken sporadically in the various colonies until 1881, when a census was taken on the same date throughout Australia.

In 1891 and 1901, census-taking was still in the hands of the Government Statisticians of the States, but, in 1911, under the provisions of the Commonwealth Census and Statistics Act, which provides for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first census of the Commonwealth of Australia. The second was taken in 1921, the third in 1933, the fourth in 1947 and the fifth in 1954.

2. Population recorded at Censuses.—State and Territorial populations recorded at the Australia-wide censuses taken over the period 1881 to 1954 are shown in the following table. The figures relate to the political boundaries of the several States (or Colonies) and Territories as they existed at the date of each census, except that the Northern Territory has been shown separately from South Australia for three censuses prior to its transfer from that State. The years of formation of the separate Colonies and transfer of the Territories are shown in Chapter 1, § 4 and § 5. The total populations recorded at the censuses taken in the Colonies from 1828 to 1876 were shown in Official Year Book No. 40, p. 326.

POPULATION: AUSTRALIAN CENSUSES, 1881 TO 1954.

(a) Part of New South Wales prior to 1911.

The final results of the 1954 Census of the Australian External Territories will be found in § 13 of this chapter.

3. Increase since 1881 Census.—The increases in the populations of the several States and Territories and of Australia as a whole during the last seven intercensal periods are shown in the following table, which distinguishes the numerical increases, the proportional increases (which do not allow for the differences in the length of the intercensal periods) and the average annual rates of increase.

#### POPULATION: INTERCENSAL INCREASES.

# § 3. Growth and Distribution of Population.

1. Growth of Population.—The table which follows shows the growth in the population of each sex in the various States and Territories as measured by the estimated population at 31st December in 1880 and thereafter at decennial intervals to 1950. Each year from 1952 to 1957 is included in order to show recent growth in greater detail.

#### ESTIMATED POPULATION: 1880 TO 1957.

(a) Northern Territory figures included with South Australia prior to 1900. (b) Part of New South Wales prior to 1911. (c) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment. (d) Revised estimates based on the June, 1957 Population Count of Canberra are as follows:—1954, males 16,458, females 14,848, persons 31,306; 1955, males 17,615, females 16,345, persons 33,960; 1956, males 19,553, females 17,275, persons 36,828.

Estimates of population for intercensal years are obtained in the manner outlined in § 1. The estimated population at 31st December each year from 1788 to 1946 on the same basis as in the table above was shown in *Demography*, Bulletin No. 67, 1949 and for the period 1881 to 1956 in *Demography*, Bulletin No. 74. A graph illustrating the growth of the population of Australia and of each State and Territory appears on p. 593.

- 2. Present Numbers.—The population of Australia at 31st December, 1957, was estimated at 9,747,471 persons, of whom 4,932,705, or 50.60 per cent., were males and 4,814,766, or 49.40 per cent., were females. The increase during 1957 was 214,137, equal to 2.25 per cent., males having increased by 101,984 or 2.11 per cent., and females by 112,153 or 2.38 per cent. This increase was the result of an excess of births over deaths of 135,405, and a net gain by migration of 78,732 persons.
- 3. Proportion of Area and Population, Density and Masculinity.—The previous table shows the number of persons in each of the States and Territories at 31st December, 1957. In the following table the proportions of the total area and of the total population represented by each State and Territory are given, together with the density and the masculinity of the population.

DENSITY AND MASCULINITY OF POPULATION, 1957.

<sup>(</sup>a) Number of persons per square mile.

<sup>(</sup>b) Number of males per 100 females.

Additional information regarding density and masculinity of population appears in later sections of this chapter.

4. Urban and Rural Distribution.—Particulars of the distribution of the population amongst metropolitan urban, other urban and rural areas in each State and Territory is available only from a census. Particulars of the distribution at the 1947 Census were shown in Official Year Book No. 39, pp. 521-524.

At the census of 30th June, 1954, the number of persons and the proportion of the total population of Australia in each division were:—metropolitan urban 4,845,230, 53.92 per cent.; other urban 2,230,039, 24.81 per cent.; rural 1,887,892, 21.01 per cent. Migratory population (23,369) accounted for the remaining 0.26 per cent.

Of the States, Victoria had the largest proportion of population residing in the metropolitan area (62.15 per cent.) but was closely followed in this respect by South Australia (60.66 per cent.). Percentages for the other States were:—New South Wales, 54.42; Queensland, 38.10; Western Australia, 54.50; and Tasmania, 30.84.

A feature of the metropolitan population is its higher femininity as compared with the population of extra-metropolitan areas. In 1933, 52.5 per cent. of the metropolitan population was composed of females; in 1947, the proportion had fallen slightly to 51.9 per cent., being highest in Tasmania at 52.3 per cent.; at the Census of 30th June, 1954, the proportion had fallen to 51.0 per cent., there being little difference in the proportions as between the several States. The proportion of females in extra-metropolitan areas was between 46 per cent. and 48 per cent. at each of these three censuses.

Metropolitan Urban Divisions include the capital cities of the States and (included in 1954 for the first time) Canberra, the capital city of Australia, the boundaries of the capital cities being determined for census purposes by the Statisticians of the States in collaboration with the Commonwealth Statistician, and normally include the city proper and all contiguous urban areas. In order to conform to the growth of the metropolitan urban population, the boundaries are reviewed at each census and adjustments made, wherever necessary, to embrace contiguous urban areas that have developed since the previous census. Amendments were made prior to the Census of 1954 to the boundaries of the Metropolitan Urban Divisions in New South Wales, Victoria and Tasmania.

Other Urban Divisions comprise the capital city of the Northern Territory, all separately incorporated cities and towns, and all other towns with a population of 1,000 persons or more (750 in Tasmania), outside the Metropolitan Urban Divisions. The inclusion in the Other Urban Divisions in 1954 of the larger towns not separately incorporated was a significant departure from the classification adopted at previous censuses, when these towns (in all States except Tasmania) were included in the Rural Divisions, and the Other Urban Divisions (or Provincial Urban Divisions) were restricted to provincial separately incorporated cities and towns only.

Rural Divisions comprise the remaining portions of each State and Territory, and are affected by the intercensal changes in the areas of the Metropolitan Urban and Other Urban Divisions. As already mentioned, the Rural Divisions in 1954 exclude the towns of 1,000 persons or more (750 in Tasmania) which were not separately incorporated.

The term "Migratory" refers to persons not elsewhere enumerated who at midnight between 30th June and 1st July, 1954 were travelling on ships in Australian waters or on long-distance trains or aircraft.

As particulars of the population in urban and rural divisions for the 1947 Census are not directly available on the basis of the 1954 composition of these divisions, adjustments have been made to the 1947 figures in order to provide approximate comparisons with 1954 for the purposes of the following table. Adjustments to 1947 Metropolitan figures have been made in New South Wales, Victoria, Tasmania and the Australian Capital Territory, while in all States and in the Northern Territory adjustments have been made to allow for the transfer of towns of 1,000 persons or more from Rural to Other Urban.

<sup>(</sup>a) See letterpress preceding this table for definitions of urban, rural, etc., and for reference to the adjustments to 1947 Census figures in order to provide approximate comparisons on the 1954 Census basis.

Note.—Minus sign (-) denotes decrease.

<sup>5.</sup> Capital Cities: Australia and Other Countries.—In Australia there is an abnormal concentration of population in the capital cities, which are the only cities of outstanding importance in the various States. A comparison with the capitals of various other countries is given in the following table.

POPULATION OF CAPITAL CITIES: AUSTRALIA AND OTHER COUNTRIES. ('000.)

State or Country.	Metropolis.	Year.	Metro- politan Popu- lation.	Country.	Metropolis.	Year.	Metro- politan Popu- lation.

7. Urban Areas Outside Metropolitan Areas.—The proportion of the total population of each State which was located in incorporated urban provincial areas at the 1933 and 1947 Censuses was shown in Official Year Book No. 39, pp. 522-3. In Official Year Book No. 40, p. 334, a table was given showing aggregate population at the 1947 Census of all cities and towns outside the metropolitan area of each State with 2,000 or more and 3,000 or more inhabitants, irrespective of whether such centres were incorporated separately or not. In addition, the proportion of the aggregate population of these cities and towns to the total population of the State was shown. The following table shows similar particulars for the 1954 Census.

# AGGREGATE POPULATION OF CITIES AND TOWNS OF SPECIFIED SIZE: CENSUS, 30th JUNE, 1954.

<sup>(</sup>a) Excludes that part of Liverpool Municipality outside the Metropolitan Area of Sydney.

(b) Excludes that part of Fremantle suburbs outside the Metropolitan Area of Perth.

(c) The only city or town is Canberra, the capital city of Australia, classed as metropolitan.

In the foregoing table, "Urban Areas" comprising two or more Local Government Areas or portions thereof are treated as units. The "Urban Areas" so treated are: in New South Wales, Newcastle; in Victoria, Ballarat, Bendigo, and Geelong; in Western Australia, Kalgoorlic; and in Tasmania, Launceston. The figures in each instance include the populations of the adjoining areas which, together with the city proper, constitute the entire "Urban Area".

The numbers of towns of 2,000 or more inhabitants in New South Wales and Victoria, and of 3,000 or more in New South Wales, show considerable decreases as compared with the figures for the 1947 Census. This is due to the absorption, by the increased metropolitan areas, of towns within these ranges which were formerly outside the metropolitan limits, and, in New South Wales, to similar absorptions by the City of Blue Mountains, Greater Wollongong and Newcastle Urban Area.

8. Principal Cities in the World.—The following table shows the population of the world's largest cities at the latest available date:—

#### § 4. Mean Population.

- 1. General.—Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods.
- 2. Method of Calculation.—From 1901 onwards the mean population for any year has been calculated by the formula:—

Mean Population = 
$$\frac{a + 4b + 2c + 4d + e}{12}$$

where a, b, c, d and e, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31st December of the preceding year and 31st March, 30th June, 30th September and 31st December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population progressing smoothly through the five values a, b, c, d, e.

<sup>(</sup>b) Greater London.

(a) Revised estimates based on the June, 1957 Population Count of Canberra are as follows:—1955, 31,411; 1956, 34,132; 1957, 36,749.

#### § 5. Elements of Increase.

1. Natural Increase.—(i) General. The two factors which contribute to the growth of a population are the "natural increase", i.e., the excess of births over deaths, and the "net migration", i.e., the excess of arrivals over departures. In earlier issues of the Official Year Book, particulars of the natural increase from 1861 were given for each sex and for each State and Territory (see No. 22, p. 899). Figures for more recent years will be found in Demography, Bulletin No. 74.

During the present century, the rate of natural increase grew until it reached its maximum at a rate of 17.44 per thousand of population in 1914, but it steadily declined after that year to 7.07 in 1934. There was little change until 1939, but during the war and in the post-war period the rate rose sharply, reaching the level of 14.37 in 1947. In 1957 the rate was 14.04.

In the following table particulars of the natural increase in each State and Territory are given for each sex for each five-year period from 1926 to 1955 and for each of the years 1953 to 1957.

POPULATION: NATURAL INCREASE (EXCESS OF BIRTHS OVER DEATHS). (Excluding Full-blood Aboriginals.)

<sup>(</sup>a) Excess of births over civilian deaths from September, 1939 to June, 1947. (b) Excess of births over deaths per 1,000 of mean population. (c) Excess of births over civilian deaths per 1,000 of mean population from September, 1939 to June, 1947. (d) Rates based on the revised estimates of mean population for the Australian Capital Territory consequent on the June, 1957 Population Count of Canberra are as follows:—1954, 24.29; 1955, 22.45; 1956, 25.74; 1957, 25.42.

Note.-Minus sign (-) denotes excess of deaths over births.

During the first five years of the present century, the average annual increment to the population of Australia by natural increase was 56,886 persons. The increment rose to 81,695 persons a year in 1921–25, but thereafter fell to 52,650 in the five years 1931–35. During 1941–45, the average annual excess of births over civilian deaths was 74,750, while during 1951–55 the annual excess of births over deaths was a record high average of 119,940. The excess for the year 1957 was 135,405.

A graph showing the rate of natural increase for each year from 1860 to 1957 will be found on p. 630.

(ii) Comparison with other Countries. Australia has a higher rate of natural increase than most European countries, owing to the fact that it has both a higher birth rate and a lower death rate. The following table gives a comparison between the rate of natural increase in Australia and that in some of the principal countries for which such information is available.

NATURAL INCREASE OF POPULATION: VARIOUS COUNTRIES.

ANNUAL INCREASE PER 1,000 OF MEAN POPULATION.

2. Recorded Net Interstate and Oversea Migration.\*—The other factor of increase in the population, namely, the excess of arrivals over departures, known as "net migration," is, from its nature, much more subject to variation than is "natural increase".

Particulars of the increase by net migration are given below for five-year periods from 1926 to 1955 and for each of the years 1953 to 1957.

		l	<u> </u>			<u> </u>						

<sup>(</sup>a) Excess of arrivals over departures. Interstate migration relates to recorded movements by rail, sea and air and to certain special movements by road, together with an allowance for unrecorded movement into the Australian Capital Territory. (b) Excludes troop movements from September, 1939 to June, 1947. (c) Excludes interstate migration from July, 1943 to June, 1947. (d) Revised figures of net migration consequent on the June, 1957 Population Count of Canberra are as follows:—1954, males 501, females 501, females 614, persons 1,135; 1955, males 800, females 119, persons 1,919; 1956, males 1,481, females 477, persons 1,958; 1957, males 773, females 547, persons 1,320.

Note.-Minus sign (-) indicates excess of departures over arrivals.

<sup>\*</sup> The subject of oversea migration is dealt with at some length later in this chapter (see p. 591.)

In the five years ended 1935, there was a net emigration of 10,886 and, in the five years ended 1940, a net immigration of 43,128. During the war period 1941-45 net immigration fell to 7,809 persons. In 1946 there was a net loss by migration of 15,148 persons, due mainly to the departure of refugees and evacuees, and also fiancées, wives and children of British and Allied servicemen but, with increasing transport facilities and the resumption of assisted migration, there was a net gain of 10,611 in 1947, which increased rapidly to 55,115 in 1948, 150,001 in 1949 and 152,505 in 1950. This large net gain was due in great measure to the arrival of successive contingents from Australia's quota of 176,000 former European displaced persons, of whom 156,491 had arrived by the end of 1950. As this flow diminished, it was partly offset by new schemes for assisted migrants, but by 1953 the total net gain from all sources during the year had fallen to 42,897. Since then it has risen, being 93,998 in 1956 and 78,732 in 1957. The net gains in each of the years 1949 to 1952 were the highest recorded for individual years with the exception of 1919, for which year troops returning from the 1914-18 War were included.

3. Total Increase.—The total increase of the population is obtained by combining the natural increase with the increase by net migration. For the period September, 1939 to June, 1947, deaths of defence personnel have been deducted from the total increase so derived. The results of the 1947 and 1954 Censuses disclosed some unrecorded movements of population during the intercensal periods, July, 1933 to June, 1947 and July, 1947 to June, 1954, and particulars of total increase, after taking into account deaths of defence personnel in the earlier period, have been adjusted for these discrepancies. However, no separate adjustment has been applied to individual elements of increase during the periods, although intercensal discrepancies disclosed by previous censuses were adjusted on recorded oversea departures.

The annual increments to the population for the years 1953 to 1957 are shown below, together with the increases for each five years from 1926 to 1955. For the reasons stated in the previous paragraph, figures for the period 1933 to 1954 differ from the totals of figures for natural increase and net migration shown in preceding tables by an amount equal to the net total of deaths of defence personnel and unrecorded movements of population disclosed by the Censuses of 1947 and 1954.

1957	72,153	68,012	22,480	24,291	15,379	8,056	662	(c)3,104	214,137

<sup>(</sup>a) Includes recorded deaths of defence personnel, whether inside or outside Australia, from September, 1939 to June, 1947. (b) Excludes interstate migration from July, 1943 to June, 1947. (c) Revised figures based on the June, 1957 population Count of Canberra are as follows:—1954, males 368, females 1,224, persons 1,592; 1955, males 1,157, females 1,497, persons 2,654; 1956, males 1,938, females 930, persons 2,868; 1957, males 1,267, females 1,019, persons 2,286.

4. Rate of Population Growth.—(i) Australia. The annual percentage rate of population growth is computed by the compound interest formula. The formula is as follows:—  $P_1 = P_0 (1+r)^t$ 

where  $P_0$  and  $P_1$  are the populations at the beginning and end of the period respectively, t is the number of years intervening and r is the annual rate of growth.

The annual rates of growth per cent. of population in Australia during each of the years 1948 to 1957 were as follows:—1948, 2.02; 1949, 3.25; 1950, 3.26; 1951, 2.65; 1952, 2.48; 1953, 1.87; 1954, 2.11; 1955, 2.45; 1956, 2.36; and 1957, 2.25.

The annual rate of population growth during the present century has been 1.68 per cent., but the results from year to year have deviated widely from this figure. In the following table the period 31st December, 1900 to 31st December, 1957 has been arranged into certain defined groups of years according to the occurrence of influences markedly affecting the growth of population:—

POPULATION: PERIODICAL RATES OF GROWTH.

Period.		Interval.	Total	Average Annual Numerical	Annual Rate of Population Growth. (Per cent.)			
Torrou.		(Years.)	('000.)	Increase. ('000.)	Natural Increase. Migration.		Total.	
1901 to 1913		13	1,128	87	1.59	10.53	2.04	
1914 to 1923		10	862	86	1.50	0.15	1.64	
1924 to 1929		-6	-680	113	1.28	0.64	1.88	
1930 to 1939(a)		10	569	57	0.82	0.03	0.85	
1940 to 1946(a)		7	513	73	1.05	0:01	1.01	
1947 to 1957(a)	• •	11	2,229	203	1.45	1.09	2.39	

<sup>(</sup>a) For the period September, 1939 to June, 1947, oversea movements of Australian defence forces have been excluded and deaths of members of these forces, whether occurring in Australia or overseas, have been included.

Up to 1913 the rate of natural increase was rising, and this factor, coupled with the impetus given to immigration from 1911 onwards by increased governmental assistance, was responsible for the comparatively high annual rate of 2.04 per cent. during this period. The 1914-18 War was a dominating influence in the decade 1914-23, and its effects can be

Density. 581

seen in the reduction of the rate from 2.04 to 1.64 per cent. From 1924 to 1929, more settled and prosperous conditions were experienced; encouraged migration was resumed on a large scale and, despite a further decline in the rate of natural increase owing to the persistent fall in the birth rate, the annual rate of growth rose to 1.88 per cent. After 1929 came the economic depression, and immigration ceased—in fact, Australia actually lost people through an excess of departures over arrivals in 1930, 1931, 1932 and 1935. The rate of natural increase also fell, and the annual rate of growth of the population fell to 0.85 per cent. With the outbreak of war in 1939, Australia entered a new phase in her demographic history, the full effects of which will not be seen for some time to come. The immediate effect of the war was to increase the number of marriages and to reverse the downward trend in fertility. The number of births increased each war year from 1940 to 1945, and these increases more than offset the rise in deaths due to war casualties and higher civilian death rates. As might be expected, migration over these years was negligible. The post-war period 1947 to 1957 was marked by a continued high natural increase and a resumption of immigration, the latter resulting in very high net gains in each of the four years 1949 to 1952. The annual rate of growth for the period was 2.39 per cent.

Rates of population growth from 1881 are shown for each State and Territory of Australia in the annual bulletin, *Demography*.

(ii) Various Countries. Estimated rates of growth of the population of Australia in comparison with those for other countries are shown in the following table:—

POPULATION:	RATES (	OF	GROWTH IN	VARIOUS	COUNTRIES.

(a) Excludes armed forces overseas at 31st December, 1941. (b) Not available. (c) Excludes war losses. (d) Territory defined by 1947 peace treaty.

Note.-Minus sign (-) denotes decrease.

#### § 6. Density.

1. General.—From certain aspects population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,974,581 square miles, and an estimated population at 31st December, 1957 of 9,747,471, excluding about 47,000 full-blood aboriginals, has a density of only 3.28 persons to the square mile, and is, therefore, the most sparsely populated of the civilized countries of the world. For the other continents and sub-continents the densities in 1956 were approximately as follows:—Europe (excluding U.S.S.R.), 217; Asia (excluding U.S.S.R.), 145; U.S.S.R., 23; Africa, 20; North and Central America, 26; and South America, 18. The population of Australia has thus about one-sixth of the density of that of South America and of Africa; about one-seventh of that of U.S.S.R.; about one-eighth of that of North and Central America; about one-forty-fifth of that of Asia (excluding U.S.S.R.); and about one-sixty-eighth of that of Europe (excluding U.S.S.R.).

On account of the large area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole the figure has increased from 1.29 per square mile in 1901 to 3.28 in 1957. Victoria's density, however, has grown from 13.77 to 30.73 and that of New South Wales from 4.43 to 11.83 in the same period. When comparing the density of population of the several States, consideration should be given to the average annual rainfall distribution

in each State as an indication of the climatic influence upon probable population numbers. The proportion of the area of Australia receiving less than 10 inches of rainfall is 38 percent.; that of the various States is:—New South Wales, 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; and Tasmania, nil.

2. Main Countries of the World.—Number and density of population of the most important countries of the world in 1956 are shown in the following table. In some instances, more particularly in the cases of Asia and Africa, the numbers must be considered as rough approximations only.

POPULATION OF THE PRINCIPAL COUNTRIES OF THE WORLD: NUMBER AND DENSITY, 1956.

<sup>(</sup>a) Number of persons per square mile. 1954. (d) Includes non-Europeans.

The populations shown in the table above are, in the main, in accordance with figures published in the *Demographic Year Book*, 1957, published by the United Nations, and the countries have been arranged in accordance with the continental groups used therein. The totals for continents include adjustments for overestimation and underenumeration.

<sup>(</sup>b) Includes European Territory.
(e) Excludes full-blood aboriginals.

<sup>(</sup>c) Population

# § 7. General Characteristics.

1. Sex Distribution.—(i) States. The number of males to each hundred females has been adopted as a measure of the "masculinity" of the population. On pp. 163-5 in Official Year Book No. 2 a table was included showing the masculinity of the population of each of the States for each year from 1796 to 1907. In issue No. 5, on p. 123, the figures in this table for the years 1901 to 1907 were modified in accordance with the results of the 1911 Census.

With the exception of some dislocation arising from the two World Wars, there was a continuous diminution of the masculinity of the population until 1945. This resulted from the increasing proportion of the population in the higher age groups, in which females preponderate owing to their greater longevity, and the general long-term fall in the birth rate. At the 1947 Census, the numbers of the sexes were practically equal, but there has since been an increase in masculinity owing to the higher birth rate and to the increase in the number of immigrants, the majority of whom are males.

The following table shows the masculinity of the population at five-year intervals from 1925 to 1950 and for each of the years 1953 to 1957:—

POPULATION: MASCULINITY, 1925 TO 1957.

(NUMBER OF MALES PER 100 FEMALES.)

<sup>(</sup>a) Excludes full-blood aboriginals,

<sup>(</sup>b) Excludes Maoris.

<sup>(</sup>c) White population only.

2. Age Distribution.—The age distribution of the population is obtained only at a census, but estimates, based on the census distribution and on births, recorded ages at death and recorded ages of migrants, are made for intercensal years.

Estimates for 30th June, 1956 and 1957 are shown in the following table. Particulars of the age distribution recorded at the 1947 and 1954 Censuses were published in Official Year Book No. 43, p. 560.

<sup>(</sup>a) Based on the age distribution at the Census of 30th June, 1954 (adjusted only for "not stated" ages) and on subsequent births, recorded ages at death and recorded ages of migrants.

The next table shows the change which has been taking place in the age constitution of the population of Australia since 1871. Up to the 1954 Census, each successive census except that of 1921 had revealed a larger percentage of the population 15 years of age and over than had been recorded at the previous census. However, in 1954, the proportion of this age group dropped sharply to a level (71.5 per cent.) slightly below that of 1933, the proportion of children under 15 years showing a corresponding increase to 28.5 per cent. of the total population. The proportions at 30th June, 1957 were estimated to be 70.5 per cent. and 29.5 per cent. respectively.

## POPULATION: PROPORTIONAL AGE DISTRIBUTION, AUSTRALIA, 1871 TO 1957.

(a) Estimate, 30th June.

3. Conjugal Condition.—Of the total population of Australia at the 1954 Census, 46.8 per cent. had never married; 47.1 per cent. were married (including 1.4 per cent. married but permanently separated); 5.2 per cent. were widowed; and 0.8 per cent. were divorced. Between 1947 and 1954, the number never married increased by 17.7 per cent.; those married (including permanently separated) by 20.6 per cent.; the widowed by 10.2 per cent.; and the divorced by 31.8 per cent.

From the demographic point of view, the most important change in the conjugal condition of the population of Australia between 1947 and 1954 was the increase of 35.0 per cent. in never married persons under 15 years of age, which offset by many times the continued decrease in never married persons aged 15 years and over. The latter decrease was, however, confined to females, as the number of unmarried males aged 15 years and over increased by 3.6 per cent. between 1947 and 1954. The proportion of married persons continued to increase, and in 1954 comprised 66 per cent. of the population 15 years of age and over who stated their conjugal condition, compared with 62 per cent. in 1947 and 54 per cent. in 1933.

The number of widowed females recorded in Australia in 1954 was 351,102, or more than three times as many as the number of widowed males. This disparity is the result of two influences. The first is the greater longevity of females coupled with the usually younger age at marriage; and the second is that a larger proportion of widowed males cancel their widowhood by remarriage.

POPULATION: CONJUGAL CONDITION, AUSTRALIA, 1947 AND 1954.
(EXCLUDING FULL-BLOOD ABORIGINALS.)

4. Birthplace.—At 30th June, 1954, the Australian-born element of the population of Australia represented 85.7 per cent. as compared with 90.2 per cent. at the 1947 Census. The number of Australian-born increased by 864,893, or 12.7 per cent., between 1947 and 1954, while the oversea-born population increased by 542,279 or 72.9 per cent. The latter resulted mainly from the increase of 503,458 in the number of persons of European birthplace between 1947 and 1954—principally persons born in England (an increase of 96,819); Italy (86,265); Germany (50,855); Poland (50,021); and the Netherlands (49,861).

Although numerically less significant, the number of persons of Asian and African birthplace more than doubled during the intercensal period, but there was little change in the number of persons born elsewhere.

Of persons born outside Australia, 57 per cent. were males and 43 per cent. females.

POPULATION: BIRTHPLACES, AUSTRALIA, 1947 AND 1954.

5. Period of Residence in Australia.—This table classifies the immigrant population of Australia according to period of residence in Australia, and reflects the greatly increased rate of immigration since 1947. It shows that in 1954, of persons born outside Australia who stated their period of residence, 40.9 per cent. had resided in Australia for a period of less than 5 years, 53.9 per cent. for less than 8 years, and 56.2 per cent. for less than 15 years, compared with 5.7, 7.7 and 14.8 per cent. respectively at the previous Census in 1947.

6. Nationality.—At 30th June, 1954, 8,582,251 persons, or 95.5 per cent. of the Australian population, were of British nationality (consisting of 85.7 per cent. born in Australia and 9.8 per cent. born outside), compared with 99.5 per cent. in 1947 (90.2 per cent. Australian-born and 9.3 per cent. born outside Australia). Of the oversea-born population in 1954, 68.6 per cent. were British subjects, compared with 94.8 per cent. in 1947. The most numerous foreign nationals in Australia at 30th June, 1954, were:—Italian, 90,018 persons; Dutch, 53,458; Polish, 49,746; German, 31,448; Yugoslav, 18,124; Greek, 17,843; Ukrainian, 17,239; and Latvian, 17,225.

<sup>(</sup>a) "Irish" nationality is included with "British" nationality for the purpose of this table.

7. Religion.—At the 1921 Census, 92,258 persons in Australia, or 1.7 per cent., gave no reply to this question, but at the Censuses of 1933, 1947 and 1954, when the public was informed that there was no legal obligation to answer this question, 848,948 persons (12.8 per cent.), 824,824 (10.9 per cent.) and 855,819 (9.5 per cent.), respectively, gave no reply. Of males 10.3 per cent., and of females 8.7 per cent., did not state their religion in 1954.

Of those who stated their religion, the greatest numerical increase during the intercensal period between 1947 and 1954 was recorded by Roman Catholic and Catholic combined. This group was followed closely by Church of England, and then Presbyterian, Methodist and Lutheran in that order. Amongst the denominations with the largest numbers of adherents, the greatest proportional increases were recorded by Roman Catholic and Catholic combined, 29.9 per cent.; Presbyterian, 17.0 per cent.; Church of England, 15.3 per cent.; and Methodist, 12.2 per cent. The largest proportional increase was that of the Lutheran denomination, 73.7 per cent.

At the 1954 Census, as at earlier censuses, 99 per cent. of those who stated their religion professed the Christian faith. Between 1947 and 1954 the number who stated they were of non-Christian religion increased by 50 per cent., while those specifically stating they had no religion decreased by 10 per cent.

(a) So described in individual Census Schedules. (b) Not available.

Note.—Minus sign (-) denotes decrease.

8. Industry.—In the following table, the male and female populations of Australia are classified according to the industry in which they were usually engaged at the 1954 Census. Persons usually engaged in industry are regarded as being "in the work force," while the remainder of the population, which at the 1954 Census comprised 5,284,508 persons, is classified as not being in the work force. The term "in the work force" includes persons of all ages who are employers, self-employed or working on their own account, wage and salary earners and unpaid helpers engaged in industry. It also includes persons "not at work," i.e., those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the Census by reason of sickness, accident, etc., or because they were on strike, changing jobs or temporarily laid off, etc.; also persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the Census.

Persons who do not earn their living by doing work for monetary reward, such as children, housewives, full-time students, retired persons, pensioners and permanent inmates of institutions, are regarded as not being in the work force.

About 63 in every 100 of the male population and 19 in every 100 of the female population were in the work force, or in other words there were, in 1954, 3.4 males to every female in the work force.

Of the total males in the work force, those engaged in Manufacturing represented the largest proportion, namely 28.0 per cent., followed in order by those in Primary Production, 16.1 per cent.; Commerce, 13.6 per cent.; Building and Construction, 11.3 per cent.; Public Authority (n.e.i.) and Professional Activities, 9.1 per cent.; and Transport and Storage, 8.4 per cent.

As with males, females in the work force were engaged mainly in Manufacturing, 26.9 per cent., followed in order by those in Commerce, 22.5 per cent.; Public Authority (n.e.i.) and Professional Activities, 22.1 per cent.; and Amusement, Hotels, Cafés, Personal Service, etc., 14.8 per cent.

9. Occupational Status.—The term "occupational status" relates to the capacity in which persons are engaged in the various branches of industry.

While the numbers of employers and of persons self-employed at the 1954 Census showed increases of approximately 13 per cent. and 6 per cent., respectively, as compared with 1947, the number of employees increased by slightly more than 20 per cent., and in 1954 constituted nearly 80 per cent. of the total work force, as compared with 77 per cent. in 1947. Employers and self-employed combined constituted 17.8 per cent. of the work force in 1954 as compared with 19.0 per cent. in 1947.

POPULATION: OCCUPATIONAL STATUS, AUSTRALIA, 1947 AND 1954. (EXCLUDING FULL-BLOOD ABORIGINALS.)

<sup>(</sup>a) Includes persons who were (1) unable to secure employment; (2) temporarily laid off from their jobs; or (3) not actively seeking work at the time of the Census on account of sickness or accident, industrial dispute, resting between jobs or for any other reason.

Note.—Minus sign (-) denotes decrease.

10. Other General Characteristics.—Questions asked at the 1933 Census regarding orphanhood, and the ability to read and write a foreign language (of persons who could not read and write English), were not asked on the schedules of the 1947 and 1954 Censuses and the question on dependent children asked at the 1947 Census was not asked in 1954. The latest data published in respect of the first two questions appear on pp. 482 and 487 of Official Year Book No. 36, and in respect of dependent children on p. 326 of Official Year Book No. 41.

Particulars relating to race as recorded at the 1954 Census were not available when this section was prepared, but summarized results will be found in the Appendix.

#### § 8. Oversea Migration.

1. Oversea Migration during the Present Century.—Earlier issues of the Official Year Book contain in summary form tables showing the increase of population by net migration from 1861 to the latest date, while information for individual years is published in the annual bulletin, *Demography*. The following table shows, for Australia, arrivals and departures and net migration since 1901. A graph showing arrivals and departures from 1921 to 1957 appears on p. 594.

۰	OMEDCEA	MIGRATION:	ATICTDATIA

(a) Excludes movements of defence personnel from September, 1939 to June, 1947.
 Note.—Minus sign (-) indicates excess of departures over arrivals.

As the encouragement of immigration by governmental assistance has been a feature of Australian immigration policy, a clear indication of the significance of migration movements is obtained when "assisted" and "unassisted" movements are distinguished. This was shown broadly, for the period 1901-1952, in Official Year Book No. 40, p. 361, and has been continued in the following table for the period 1926 to 1957.

"ASSISTED" AND "UNASSISTED" MIGRATION: AUSTRALIA.

					Arrivals.		Excess of	
	Period.		Nominated and Selected ("Assisted").	Other ("Un- assisted").	Total.	Departures.	assisted " Arrivals over All Departures.

1956				54,957	192,491	247,448	153,450	39,041
1957				62,361	170,967	233,328	154,596	16,371

(a) Exc'udes movements of defence personnel from September, 1939 to June, 1947. Note.—Minus sign (—) indicates excess of departures over "unassisted" arrivals.

It is not possible in the statistics of departures to distinguish the return movement of persons who came to Australia as "assisted" migrants from that of "unassisted" migrants. Consequently, the separate net migration of "assisted" and "non-assisted" persons cannot be ascertained. Nevertheless, the basis on which the above table has been compiled is sufficient to throw into relief the major trends in Australian migration statistics in the period reviewed.

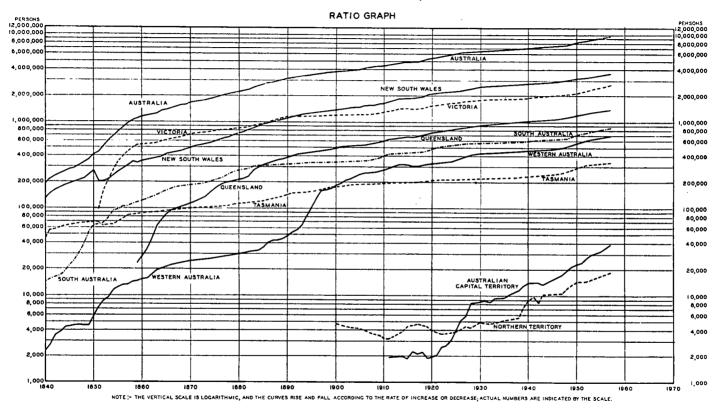

Although separate net migration figures are not available, it is generally agreed that Australia has gained considerably more population through its encouraged migration programme than it has from non-assisted migration.

A detailed review of assisted migration into Australia in recent years is given in § 9.

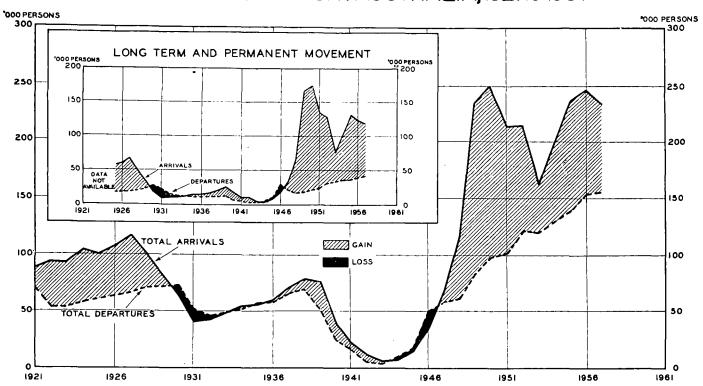

2. Classification of Arrivals and Departures.—(i) General. Since 1st July, 1924, oversea travellers have been classified according to declared intention in regard to residence made at the time of arrival or departure. Certain of the headings previously used in this classification have now been changed to ensure more accurate definition and to assist in interpretation of the figures. The figures themselves, however, are exactly comparable with those published in previous issues.

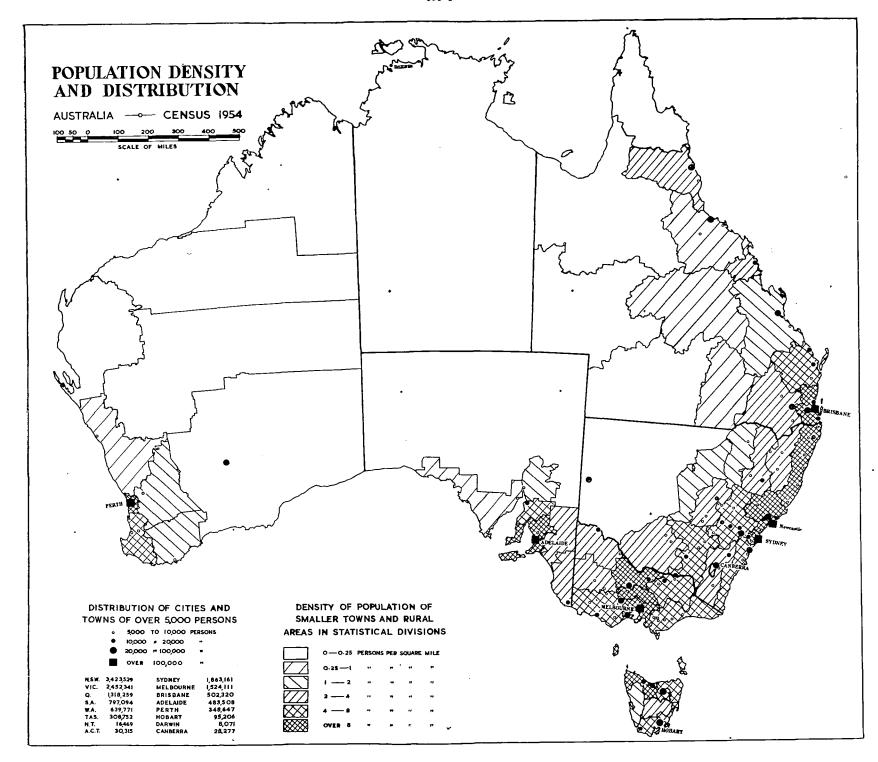

"Long Term and Permanent Movement" (formerly described as "Permanent Movement") relates to persons arriving who state that they intend to reside in Australia for a period of one year or more; and to persons departing who state that they intend to reside abroad for a period of one year or more.

### POPULATION OF AUSTRALIA, 1840 to 1957

						:	
				•			

"Short Term Movement" (formerly described as "Temporary Movement") relates to persons arriving who state that they intend to reside in Australia for a period of less than one year; and to persons departing who state that they intend to reside abroad for a period of less than one year.

These definitions are in accordance with international usage and do not purport to represent permanent migration as such. For various reasons the intentions of travellers are subject to subsequent modification and the classification headings used must therefore be accepted as indicating intention only. The numbers so classified since 1st January, 1926, are as follows:—

ARRIVALS AND DEPARTURES CLASSIFIED ACCORDING TO INTENDED RESIDENCE: AUSTRALIA.

<sup>(</sup>a) For definitions of long term and permanent and short term movement see letterpress above.
(b) Includes 46 arrivals whose intended period of residence was not stated.
(c) Includes 78 departures whose intended length of stay abroad was not stated.
(d) Includes 5 departures whose intended length of stay abroad was not stated.
(e) Includes evacuees arriving in Australia during the war years as follows:—1936-40, 4,543; 1941-45, 12,586.

(ii) Long Term and Permanent Movement. The 1939-45 War caused a large drop, from 1940, in the number of arrivals but after the war the number rose progressively, reaching 174,540 in 1950, the highest on record. As in the case of arrivals, although not to the same extent, the number of departures rose rapidly in the period of immediate post-war readjustment of population, but the high figure of 29,806 in 1946 was surpassed in each of the years 1952 to 1957, for which the figures were higher than any recorded since this method of classification was introduced.

Up to and including 1929, there was a considerable net gain from long term and permanent movement but during 1930 and 1931 there was a heavy net loss. The loss wasvery much reduced in 1932, 1933 and 1934, whilst during the five years up to and including; 1939 there was a net gain of more than 28,000. Except for the arrival of evacuees, little movement took place during the war period, but in 1946 a net loss of 11,589 persons occurred, owing in large measure to the departure for the United States of America of Australian wives and children of American servicemen, and, when conditions permitted after the war, the departure of Australians to Papua and New Guinea and of large numbers of war evacuees who were returned to their home countries. Subsequently, the largest net gain recorded was 153,685 in 1950. A net gain of 77,622 was recorded in 1957.

(iii) Short Term Movement. Short term movement refers to persons intending residence for periods of less than one year and includes Australian residents and visitors from overseas. Since 1st July, 1947, it also includes Australian defence personnel irrespective of intended length of residence. Although considerable in number, the short term movement is of little significance from the point of view of population growth, as it represents principally the movement of people travelling on business or for pleasure.

3. Extent of Journey.—Since 1st January, 1945, the journeys undertaken by passengers have been recorded for Australian oversea migration statistics in two ways: (a) according

to country of embarkation or disembarkation and (b) according to country of last or intended future residence.

Detailed statistics of oversea journeys are published in the annual bulletin, Demography.

4. Racial Origin.—Up to 30th June, 1948, the system of classifying racial origin was a compromise based partly on nationality and partly on racial origin (see para. 5). From 1st July, 1948, this system was superseded by one in which the passenger's statement as to race is restricted to either "European", "Asian", "African" or "Polynesian" only. Statistics based on this system are shown for the years 1955 to 1957 in the following table. Under this system nationality is recorded independently, as indicated in the next paragraph.

RACIAL.	ORIGIN	OF	ARRIVALS	AND	DEPARTURES:	ATISTRATIA

Racial Origin.		Arrivals.		D	epartures		Net Migration.			
Racial Origin.	1955.	1956.	1957.	1955.	1956.	1957.	1955.	1956.	1957.

Nore.—Minus sign (-) indicates excess of departures over arrivals.

5. Nationality.—From 1st July, 1924, to 30th June, 1948, nationality of oversea passengers was recorded as "British" or "Alien" only. Racial origin was also recorded and as the particulars of racial origin stated by passengers closely reflected their nationalities and made it possible to present much more detail of "nationality" than was possible on the total "Alien" basis, published statistics were confined mainly to those compiled on the detailed basis according to a composite classification of "nationality or race".

This method was superseded on 1st July, 1948 by one in which each passenger's race was recorded as indicated in paragraph 4 above, and nationality, as shown on each passenger's passport or other document of identification, was recorded independently of race. The principal nationalities recorded on this basis for the years 1955 to 1957 are as follows:—

NATIONALITY OF ARRIVALS AND DEPARTURES: AUSTRALIA.

- <b>7</b> 4* 4*		rrivals.		r	epartures		Ne	t Migratio	on.

<sup>(</sup>a) Irish nationality is included with British for the purpose of this table. (b) Includes "Stateless" who were formerly Polish. (c) Includes "Stateless" who were formerly Russian. (d) Stateless, with former nationality stated but other than Polish or Russian.

Note.—Minus sign (-) indicates excess of departures over arrivals.

6. Age Distribution and Conjugal Condition.—A summary of the age distribution and conjugal condition of arrivals and departures classified as long term and permanent movement during 1957 is as follows:—

LONG TERM AND PERMANENT MOVEMENT(a): AGE DISTRIBUTION AND CONJUGAL CONDITION OF ARRIVALS AND DEPARTURES, AUSTRALIA, 1957.

Age Group		Arrivals.		Departures.					
(Years).	Males.	Females.	Persons.	Males.	Females.	Persons.

<sup>(</sup>a) For definition of long term and permanent movement see para. 2 (i), p. 592.

7. Occupation.—The following is a summary of the main occupational groups of males classified to long-term and permanent movement (see para. 2 (i) on p. 592) during 1957:—Permanent new arrivals—Rural, fishing and hunting, 3,580; professional and semi-professional, 2,744; administrative, 1,012; commercial and clerical, 4,497; domestic and protective service, 1,473; craftsmen, 12,542; operatives, 7,850; labourers, 3,475; indefinite or not stated, 2,463; not gainfully occupied (mainly children), 19,581; total, 59,217. Permanent departures—Rural, fishing and hunting, 724; professional and semi-professional, 2,280; administrative, 894; commercial and clerical, 2,966; domestic and protective service, 764; craftsmen, 4,683; operatives, 1,855; labourers, 2,736; indefinite or not stated, 428; not gainfully occupied (mainly children), 5,086; total, 22,416.

#### § 9. Assisted Migration into Australia.

- 1. Joint Commonwealth and States Scheme.—Details of the joint scheme of assisted immigration arrived at by agreement between the Commonwealth and State Governments, which operated from 1920 to 1939, may be found in earlier issues of the Official Year Book (see No. 38, p. 576). After the outbreak of hostilities in 1939, it was decided to discontinue the grant of assisted passages for the duration of the war.
- 2. United Kingdom Free and Assisted Passage Agreements, March, 1946.—(i) General. Resumption of migration was the subject of negotiations between the Commonwealth and United Kingdom Governments towards the end of 1945 and two agreements were signed in March, 1946. These agreements, which came into operation on 31st March, 1947, provided for free and assisted passages to be granted to British residents desirous of settling in Australia. The Free Passage Agreement was terminated on 28th February, 1955. From 1st April, 1949, the Assisted Passage Agreement continued in operation under renewal from time to time and has again been renewed as from 1st April, 1957.

(ii) Assisted Passages. Under the existing financial arrangements the United Kingdom Government's contribution towards the Assisted Passage Scheme is agreed upon when the Agreement is extended, and for the five years from 1st April, 1957, is fixed at a maximum amount of £150,000 sterling per annum.

The Assisted Passage Agreement covers five main groups of migrants (and their families), namely, personal nominees, group nominees, Commonwealth nominees, "Bring out a Briton" campaign families and unnominated single men and women and married couples without children. Personal nominees are migrants sponsored by residents of Australia able to provide suitable accommodation for them (any adult resident of Australia may nominate friends or relatives in the United Kingdom who are eligible to be considered for assisted passages under this agreement). Group nominees are recruited on a tradequalification basis to meet applications lodged by employers and State Governments, who guarantee to provide employment and accommodation for those selected; Commonwealth nominees comprise workers selected against known and assessed employment demands in Australia. Migrants in this group live in hostels established by the Commonwealth Government for up to two years while they are seeking to obtain private accommodation. The Commonwealth nominee scheme was introduced in 1950 in order to reinforce the personal and group nomination schemes. "Bring out a Briton" campaign families are selected to fill employment and accommodation vacancies located by special voluntary committees formed by community effort to stimulate the flow of British migrants who are otherwise unable to obtain sponsorship. Unnominated single men and women and married couples without children may also be granted assisted passages, even though they are unable to arrange personal nominations and are not occupationally qualified for approval under other existing assisted passage selection schemes. They must possess on arrival a minimum of £25 sterling in the case of single persons and £50 sterling in the case of married couples without children, and must comply in the United Kingdom with the normal selection criteria for assisted passages. If necessary, hostel accommodation is provided by the Commonwealth.

Although the Commonwealth is not generally prepared to accept single persons or married persons without children if they have reached their forty-sixth birthday before the date of sailing, the parents or close relatives of intending migrants or of persons established in Australia may, if otherwise acceptable under the scheme, be granted passages irrespective of age. Each migrant of 19 years of age and over is required to contribute £10 sterling towards the cost of his or her passage, while juveniles aged 14 years and under 19 years have to pay £5 sterling. Children under 14 years travel free. Apart from these contributions and that made annually by the United Kingdom Government, the cost of the passages is borne by the Commonwealth Government.

(iii) Numbers Arrived. The numbers of British migrants who came to Australia under the Free and Assisted Passage Agreement during the years 1947 to 1957 are given in the following table:—

UNITED KINGDOM FREE AND ASSISTED PASSAGE AGREEMENT: NUMBER OF MIGRANTS.(a)

Period.	N.S.W.	Vic.	Qld.	S. Aust.	W.Aust.	Tas.	A.C.T.	C'wealth Nomi- nees.	Total.
1947–52 1953 1954 1955 1956 1957	41,756 3,890 3,046 4,743 4,231 4,994	48,985 3,962 3,199 6,068 5,516 5,184	21,176 1,835 1,872 2,731 2,471 3,219	12,407 1,072 1,406 1,756 1,814 2,197	16,601 1,969 2,067 2,219 2,231 1,774	6,242 485 425 672 602 749	2,358 110 97 119 189 220	27,367 372 6,605 7,389 7,082 6,665	176,892 13,695 18,717 25,697 24,136 25,002
Total, 1947-57	62,660	72,914	33,304	20,652	26,861	9,175	3,093	55,480	284,139

(a) Includes child migrants as shown in para. 3 (iii) below.

3. Child Migration from the United Kingdom.—(i) General. Since the commencement of the assisted passage schemes in 1947, the immigration of unaccompanied children and youths from the United Kingdom has been encouraged under the auspices of approved voluntary organizations. The organizations at present introducing child migrants include the

Fairbridge Farm Schools, Dr. Barnardo's Homes, the Big Brother Movements of New South Wales and Tasmania, and the Northcote Children's Emigration Fund. All the principal religious denominations are also participating in the scheme. There are 42 approved Homes in Australia for the reception of child migrants, and at present 35 of them are caring for child migrants.

- (ii) Financial Assistance. The United Kingdom Government contributes 12s. 6d. a week for each child and the respective State Governments contribute amounts varying from 7s. a week in New South Wales to £1 3s. 3d. in Western Australia. The Commonwealth Government pays the normal child endowment of 10s. a week. In addition, the Commonwealth Government and the State Government concerned may contribute towards the capital expenditure on accommodation for child migrants.
- (iii) Numbers Arrived. From the beginning of 1947 to the end of 1957, a total of 4,708 British children and youths arrived under the sponsorship of voluntary organizations. New South Wales took 2,650, Western Australia 1,192, Victoria 480 and the other three States 386. These children were brought to Australia under the United Kingdom Free and Assisted Passage Scheme and are included in the figures shown in the table above.
- 4. Assisted Passage Scheme, Eire.—In November, 1948, the Commonwealth Government decided to grant limited financial assistance to natural-born citizens of Eire normally residing in the British Isles, and to natural-born British citizens residing in Eire, who wish to emigrate to Australia and who are duly selected. This scheme applies only to prospective settlers and their dependants who are not eligible for assisted passages under the agreement with the United Kingdom Government (see para. 2 above). The maximum amount granted towards an adult passage is £30 sterling, with varying amounts for children according to age.

It is not essential for an applicant for a passage to be nominated by a friend or relative in Australia before the question of granting financial assistance is considered. Single men or women who are eligible under the scheme are readily accepted. Families, on the other hand, are accepted only if they can produce evidence of having secured accommodation in Australia, or, in the case of nominated migrants, a guarantee of accommodation by their sponsors. Up to the end of 1957, 3,076 migrants had arrived under this scheme.

- 5. Maltese Migration.—On 31st May, 1948, the Commonwealth Government and the Government of Malta entered into an agreement under which both Governments grant financial assistance towards the passage costs of selected Maltese migrants. The Commonwealth contribution is £30 sterling per adult with proportionate amounts for children, and the Government of Malta contributes an amount at least equal to this sum. This agreement has been extended from time to time. On 13th August, 1957 a new agreement, which is acknowledged to have come into effect as from 1st July, 1956, was signed between the two Governments. This agreement is of 2 years' duration.
- At 31st December, 1957, a total of 22,931 Maltese had arrived under this scheme since its inception. Up to the end of 1957, 225 Maltese children had been brought out to approved institutions in Australia. These are included in the number shown above.
- 6. Empire and Allied Ex-Servicemen's Scheme.—On 26th May, 1947, the Commonwealth Government implemented a scheme under which assistance was given to the passage costs of Empire ex-servicemen and their dependants not covered by the Free and Assisted Passage Scheme (see para. 2 above) and of ex-servicemen of the U.S.A. Later, eligibility was extended to ex-servicemen and resistance workers of the Netherlands, Norway, France, Belgium and Denmark. The amount of assistance for an adult was £30 sterling and amounts for children varied according to age. The scheme was discontinued as from 30th June, 1955.

During its currency a total of 21,994 migrants came to Australia under the scheme. The majority of these (16,830) were Dutch.

7. Displaced Persons Scheme.—On 21st July, 1947, the Commonwealth Government entered into an agreement with the International Refugee Organization to settle displaced persons in Australia. Although the International Refugee Organization wound up its

activities in 1951, the Commonwealth agreed to receive those displaced persons already accepted for migration, but whose passages had still to be arranged. A total of 170,700 persons settled in Australia under this scheme.

8. Netherlands Migration.—A migration agreement concluded between the Commonwealth and Netherlands Governments in February, 1951, came into operation on 1st April of that year. On 1st August, 1956, the agreement was extended for a period of 5 years with retroactive effect as from 1st April, 1956. This superseded an earlier arrangement in 1946 between the Commonwealth and the Netherlands Emigration Foundation (see Official Year Book No. 39, p. 567).

The migrant is required to contribute towards his passage costs in accordance with a formula devised by the Netherlands Government. The balance is met by the Commonwealth and Netherlands Governments and the Intergovernmental Committee for European Migration. The Commonwealth Government's contribution is now equivalent to \$110 a head.

The provision of shipping is the responsibility of the Netherlands Government. The Commonwealth arranges for the reception of migrants and their after-care and assists in the securing of employment. Families who have not obtained private accommodation prior to arrival may be temporarily accommodated in an Immigration Centre when the breadwinner is placed in employment and proceeds either to employer-found accommodation or a Commonwealth Hostel. These arrangements continue until the family can secure its own accommodation, or vacancies enable a family to be united in a hostel.

Up to the end of December, 1957, 37,376 Dutch migrants had settled here under the Netherlands-Australia Migration Agreement.

9. Italian Migration.—On 29th March, 1951, the Commonwealth and Italian Governments entered into a migration agreement effective for a period of 5 years, under which certain selected Italian migrants were assisted to Australia. The agreement came into force on 1st August, 1951.

The agreement was temporarily suspended at the end of 1952, but in March, 1954, provision was made for assisted passages to be granted to certain relatives and fiancées of migrants who had previously settled in Australia under the agreement. On 1st December, 1954, the agreement proper was re-opened and it was subsequently extended to 30th June, 1958. At present the Commonwealth contributes the equivalent of \$100 towards the fare of each migrant. The balance of passage costs is contributed by the migrants themselves, the Italian Government and the Intergovernmental Committee for European Migration. Up to 31st December, 1957, arrivals under this agreement totalled 29,104 persons.

As the Italian agreement does not provide for the acceptance of other nationals living in Italy, a special quota is determined annually for the selection of suitable refugees from Italy. Arrivals under this "Non-Italian National Quota" (N.I.N.Q.) totalled 1,176 between 1st July, 1955, and 31st December, 1957.

- 10. Migration from Trieste.—In 1953, arrangements were made for the migration of peiugees from Trieste. These arrangements continued until what was formerly the Free Territory of Trieste became part of the Italian Republic. Since then migrants from Trieste have proceeded under the Italian Agreement. Altogether 4,745 Triestians arrived in Australia as assisted migrants up to 30th June, 1955. The Commonwealth made a contribution to passage costs at the same rate as for other European migrants and the balance was made up by contributions from the Intergovernmental Committee for European Migration and the Italian Government.
- 11. German Migration.—On 29th August, 1952, a migration agreement was signed between the Commonwealth Government and the Government of the Federal Republic of Germany. This was somewhat similar to the agreements concluded with the Netherlands and Italy and was effective for a period of 5 years. On 3rd July, 1957 a new agreement, operative for a period of five years, was signed by the two countries. The Commonwealth's contribution towards passage costs is the equivalent of \$100 a head. The migrant maybe required to pay a small contribution and the balance of passage costs is paid by the Government of the Federal Republic and the Intergovernmental Committee for European Migration. Arrivals of German assisted migrants numbered 37,071 to the end of December, 1957.

- 12. Austrian Migration.—Late in 1952, arrangements were made with the Intergovernmental Committee for European Migration for the migration to Australia of a small number of selected rural and other workers and their families from Austria. Later these arrangements were extended to cover greater numbers and wider categories of migrants. The Commonwealth contributes an amount equivalent to \$100 a head towards the passage costs of Austrian migrants. The Austrian Government, the Intergovernmental Committee for European Migration and the migrants themselves also contribute towards passage costs. Reception arrangements, temporary accommodation, after-care and placement in employment are undertaken by the Commonwealth. Under these arrangements, 13,781 Austrians arrived in Australia up to 31st December, 1957.
- 13. Greek Migration.—An arrangement similar to the Austrian one was made with the Intergovernmental Committee for European Migration late in 1952. The Commonwealth's contribution and the arrangements for reception, accommodation, employment and aftercare are the same as for Austrian migrants. Under this arrangement 21,124 Greek assisted migrants had settled in Australia up to 31st December, 1957.
- 14. Hungarian Migration.—On 5th November, 1956, the Intergovernmental Committee for European Migration and the United Nations High Commissioner for Refugees, in accordance with a request received from the Austrian Government, appealed to Member Governments to give asylum to the greatest possible number of Hungarian refugees who were fleeing in thousands across the border into Austria, following Russian military action in Hungary.

On 8th November, 1956, the Minister for Immigration announced that Australia would provide permanent asylum for up to 3,000 Hungarian refugees during the year 1956-57. The Australian migration representative in Austria was instructed to begin selection of the refugees immediately, and was advised that normal standards should be applied with understanding and flexibility. Early in December, 1956, the Government decided that the number of Hungarian refugees to be received during the year 1956-57 should be increased from 3,000 to 5,000, and this number was later increased to 10,000. Subsequently, the Government decided to admit an additional 5,000 Hungarian refugees in 1957-58 under these special arrangements.

The Commonwealth Government has granted a total of £A.130,000 for the relief of Hungarian refugees and, in addition, at present contributes the equivalent of \$100 a head to the passage costs of the refugees.

To the end of December, 1957, 12,082 Hungarian refugees had arrived in Australia.

- 15. General Assisted Passage Scheme.—To encourage the migration of persons from the United States of America, Switzerland, Denmark, Norway, Sweden and Finland, the Commonwealth, on 10th September, 1954, introduced an assisted passage scheme for nationals of those countries. The Commonwealth makes a contribution of £37 10s. sterling per adult migrant and pro rata amounts for children according to the fare paid. To the end of December, 1957, 4,414 migrants had arrived in Australia under this scheme.
- 16. Summary of Arrivals of Assisted Migrants.—The following table shows, for each of the years 1951 to 1957, the number of assisted migrants who arrived in Australia under the various schemes. The total for the years 1947 to 1957 is also given.

Assisted Migration Scheme.	1951.	1952.	1953.	1954.	1955.	1956.	1957.	Total, 1947-57.

ASSISTED MIGRATION SCHEMES: NUMBER OF MIGRANTS.

From the earliest years of assisted migration to the end of 1957 a total of 1,734,065 assisted migrants arrived in Australia.

#### § 10. The Regulation of Immigration into Australia.

- 1. Powers and Legislation of the Commonwealth.—(i) Constitutional. Under section 51 (xxvii) and (xxviii) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals.
- (ii) Legislation. Immigration into the Commonwealth is regulated by the Immigration Act 1901-1949, which specifies the persons whose immigration is prohibited and provides for their deportation if they enter contrary to the Act. Provision is also made for the deportation of persons who have entered lawfully but who contravene the provisions of the Act after they have entered. Power is given to the Minister for Immigration to admit prohibited immigrants for a specified period under Certificate of Exemption from the provisions of the Act relating to entry or stay in the Commonwealth.

The Aliens Deportation Act 1948 empowers the Minister for Immigration to order the deportation of an alien who after investigation by a Commissioner is reported as not being a fit and proper person to be allowed to remain in Australia.

The Immigration (Guardianship of Children) Act 1946–1952 provides that the Minister for Immigration becomes the legal guardian of every person under the age of 21 years who enters Australia other than in the charge of, or for the purpose of living in the care of, a parent or adult relative. It is primarily administered through the child welfare authorities in each State who, as the Minister's delegates under the Act, supervise the welfare of each "immigrant child".

The Aliens Act 1947-1952 provides that a register of aliens shall be maintained for every State and Territory of the Commonwealth. Unless exempted, aliens 16 years of age and over are required to register with the Department of Immigration, and to notify the Department of any change of address, occupation or employment, and of their marriage. The Act also provides that consent must be obtained before an alien may change his surname.

- 2. Conditions of Immigration into Australia.—(i) Persons of Non-European Race. In pursuance of established policy, the general practice is not to permit Asians or other persons of non-European descent to enter Australia for the purpose of settling permanently. Special provision exists for the temporary admission of non-Europeans who are bona fide merchants, students or tourists. They are permitted to enter and remain in Australia under exemption while they retain their status. Permission may also be given for the entry of non-Europeans as assistants to local traders domiciled in Australia. Such persons are allowed to remain so long as they retain their status.
- (ii) Persons of European Race. Persons of European race desiring to settle permanently in Australia are required to obtain authority for admission from the Department of Immigration. Their admission under the present policy is subject to their compliance with the Commonwealth's requirements in regard to health, character, freedom from security risk and general suitability as settlers.
- (iii) General Information. General information as to conditions of entry into Australia may be obtained from the following officers:—
  - (a) In Australia—The Secretary, Department of Immigration, Canberra, Australian Capital Territory, and Commonwealth Migration Officers in the capital cities of the various States;
  - (b) In Great Britain—the Chief Migration Officer, High Commissioner's Office, Australia House, Strand, London;
  - (c) In other British Commonwealth countries—The High Commissioner for Australia;
  - (d) In Holland, Italy, Germany, Greece, Austria, Denmark and Hong Kong the Chief Migration Officer or Migration Officer in the capital city of each of those countries;
  - (e) In other countries where Australia is represented—the Secretary, Australian Embassy, Legation or Consulate.

For details of Australian representatives in the British Commonwealth and other countries see the section entitled "Australian Representation Abroad: Oversea Representation in Australia" in Chapter XXX.

3. Racial Origin and Nationality of Persons Arriving.—For details of the racial origin and nationality of persons who arrived in Australia during the years 1955 to 1957, see p. 598.

#### § 11. Passports.

Provision is made in the Immigration Act 1901–1949 for the production of a passport by each immigrant over 16 years of age who desires to enter Australia. Under the Passports Act 1920, it was compulsory also for each person over 16 years of age to be in possession of a passport or other document authorizing his departure. This Act has now been superseded by the Passports Act 1938–1948, which repealed the compulsory provisions. The Act also applies to the External Territories of Australia.

Although it is not compulsory for Australians to obtain a passport when leaving Australia, it is desirable in their own interests that they should have one in order to establish their identity and nationality overseas. A passport is necessary for admission into most countries, and the holder of an Australian passport also has no difficulty in landing on return to Australia. The charge for an Australian passport is £1.

As a result of the Nationality and Citizenship Act 1948-1955 (see § 12 below) and the enactment of similar citizenship legislation in other British Commonwealth countries, it is now the general rule that Australian passports are issued only to Australian citizens. Citizens of other British Commonwealth countries secure passports from their own High Commissioners in Australia. Australian citizens abroad may secure passports only from Australian representatives.

Diplomatic and official passports are issued to members of the Australian diplomatic service and other Government officials proceeding abroad on official business.

Applicants for passports are required to produce evidence of their identity and nationality (e.g., birth certificates).

#### § 12. Citizenship and Naturalization.

- 1. Commonwealth Legislation.—The Nationality and Citizenship Act 1948 commenced on Australia Day (26th January), 1949 and repealed all previous Commonwealth legislation on this subject. The most significant effect of the Act was the creation for the first time of the status of "Australian Citizen". In this respect, the Act was complementary to citizenship legislation passed or about to be passed by other countries of the British Commonwealth. All Australian citizens, and the citizens of other countries of the British Commonwealth, are declared to be British subjects. For details of the Act, see Official Year Book No. 42, p. 619.
- 2. Certificates Granted.—(i) Australia. The following tables show the number of certificates granted under the Nationality and Citizenship Act 1948–1955 during the years 1956 and 1957.

<sup>(</sup>ii) States. The certificates granted in 1957 were issued in respect of residents of the various States and Territories as follows:—New South Wales, 9,696; Victoria, 9,583; Queensland, 4,012; South Australia, 5,766; Western Australia, 3,575; Tasmania, 618; Northern Territory, 82; Australian Capital Territory, 256; External Territories, 67; Total, 33,655.

#### § 13. Population of External Territories.

Ordinances of the individual external territories under the control of Australia, namely:—Norfolk Island, Papua, the Trust Territory of New Guinea, and the Trust Territory of Nauru, provide for a Census of the non-indigenous population to be taken by the Commonwealth Statistician on the day prescribed for the taking of a Census in the Commonwealth of Australia. The following table shows the population of each of these Territories at the Census of 30th June, 1954 and the estimated population at 30th June, 1957.

On 23rd November, 1955, the Cocos (Keeling) Islands were placed under the authority of the Commonwealth. An estimate of the population at 30th June, 1957 is included in the table below.

## POPULATION: EXTERNAL TERRITORIES. (Excluding Indigenous Population.)

Territory.		Cens	Estimate, 30th June, 1957.		
		Males.	Females.	Persons.	Persons.
Cocos (Keeling) Islands					632

Trust Territory of Nauru		1,269	376	1,645	2,210
•		J			

Particulars concerning the indigenous populations of the external territories will be found in Chapter V.—The Territories of Australia.

#### § 14. The Aboriginal Population of Australia.

In Official Year Book No. 17, pp. 951-61, a brief account was given of the Australian aboriginal population, its origin, its numbers as estimated from time to time, and the steps taken for its protection. On pp. 914-6 of Official Year Book No. 22, particulars were shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appeared on pp. 687-96 of Official Year Book No. 23.

The aboriginals are scattered over the whole of the mainland but the majority are concentrated in Western Australia, Queensland and the Northern Territory. Details of the number in each State at the June, 1947, Census are shown in the following table. Full-blood aboriginals in employment or living in proximity to settlements were enumerated at the census, while estimates of the total numbers, including those living in the wild state, were furnished by the Protectors of Aboriginals. Half-caste aboriginals are included in the numbers of the population and are of course enumerated at the census. The figures shown for Queensland are exclusive of Torres Strait Islanders.

#### ABORIGINAL POPULATION, 30th JUNE, 1947.

Territory		546 100 3,504 259 2,664 5,615	407 108 2,822 205 2,269 5,370	953 208 6,326 464 4,933	(c) 953 (c) 208 9,100 2,139 20,338	5,498 537 3,684 1,103 2,359 127 660 58	5,109 532 3,527 1,054 2,215 87 587 42	10,607 1,069 7,211 (d)2,157 (d)4,574 214 1,247 100	11,560 1,277 16,311 (d)4,296 d 24,912 214 15,147 100	
Total		12,688	11,181	23,869	46,638	14,026	13,153	27,179	73,817	

<sup>(</sup>a) Enumerated at the Census. (b) Furnished by the Protectors of Aboriginals. (c) Census totals. (d) In addition to these totals, the Protectors of Aboriginals estimated that there were 826 half-caste and mixed bloods in South Australia and 1,322 in Western Australia, presumably living in the nomadic state.

According to the annual Reports of the Protectors of Aboriginals, there has been little change in the numbers of aboriginals in most States since 1947. In Western Australia, however, the estimate for the total number of full-blood and half-caste aboriginals at 30th June, 1952 was 21,051.

#### CHAPTER XVII.

#### VITAL STATISTICS.

Note.—1. Owing to considerations of space, the tables in this chapter contain only summaries of the principal vital statistics for Australia. They relate, in the main, to the year 1956, except for the totals of marriages, births, deaths and infant deaths, for which it has been possible to include figures for 1957. Comparisons have been restricted, in general, to the individual years 1953 to 1957 and the five-year periods 1931–35 to 1951–55, while age data have been shown in groups. Comparisons over longer periods, together with more detailed figures such as single age distributions and cross-classifications of various characteristics, will be found in the annual bulletin, Demography.

2. Figures for Australia throughout are exclusive of full-blood aboriginals.

#### § 1. Provisions for Registration and Compilation of Statistics.

In Australia, vital statistics are compiled from information obtained from the registers of births, deaths and marriages. Each State and Territory has an independent system of registration. Provisions for the civil registration of births, deaths and marriages have been in force in Tasmania from 1839, in Western Australia from 1841, in South Australia from 1842, in Victoria from 1853 and in New South Wales and Queensland (then part of New South Wales) from 1856. Registration in the Territories is administered by the Commonwealth Government, registration in respect of the Northern Territory having been taken over from South Australia in 1911 and in respect of the Australian Capital Territory from New South Wales in 1930. The authority responsible for the registration of births, deaths and marriages occurring within his particular State or Territory is the Registrar-General or the Principal Registrar, or, in the case of Victoria, the Government Statist.

In the Australian Capital Territory and the Northern Territory, information concerning a birth is required to be supplied within 21 days, in South Australia in 42 days, and in all other States 60 days is allowed. In all States, however, provision has been made for the late registration of births. For the registration of a death, the length of time varies more considerably, being 8 days in Tasmania, 10 days in South Australia, 14 days in Western Australia, the Northern Territory and the Australian Capital Territory, 21 days in Victoria and 30 days in New South Wales and Queensland, Provision is made in all States and Territories for the celebration of marriages by ministers of religion registered for that purpose with the Registrar-General or the Principal Registrar of Births, Deaths and Marriages of the State or Territory and also by certain civil officers. In all cases the celebrant, whether minister of religion or civil officer, is required to register particulars of the parties married with the Registrar of the district in which the marriage has taken place. The length of time allowed for registration of marriage also shows considerable variation as between States and Territories. In Victoria, Western Australia, the Northern Territory and the Australian Capital Territory, registration is required immediately following the ceremony, in Tasmania and South Australia within 7 days and in New South Wales and Queensland within 30 days.

For all States except Queensland and Tasmania, the registration of stillbirths is compulsory. Western Australia was the first State to introduce compulsory registration in 1908, followed by the Australian Capital Territory in 1930, New South Wales in 1935, South Australia in 1937 and Victoria in 1953. No statutory provision has been made in Queensland or Tasmania for the registration of stillbirths, but provision is made in these States for voluntary registration and it appears likely that nearly all such births are notified to the Registrar-General. In this chapter, stillbirths have been excluded from all tables of births and deaths and shown only in those specially relating to stillbirths.

While there is every indication that the registration work of the several States and the Territories is very efficiently carried out, it is clear that in those States with a large area and scattered population, failure to register births and deaths may occur in some cases. It is believed, however, that as claims for maternity allowances are checked against birth registers before payment, the proportion of births occurring now which is not registered is very small.

The data required for the compilation of vital statistics are copied from the registers of births, deaths and marriages in the Registrar-General's Office and forwarded, through the Deputy Commonwealth Statistician in each State, and direct from the Principal Registrars in the two Territories, to the Commonwealth Statistician. The compilation and publication of vital statistics for Australia is a function of the Commonwealth Statistician. The Statisticians in the various States compile and publish statistics relating to their respective States.

#### § 2. Marriages.

NOTE.—See NOTE at the beginning of this chapter.

1. Number of Marriages.—The number of marriages registered in Australia during the year ended 31st December, 1957 was 73,696, giving a rate of 7.64 per 1,000 of the mean population for the year. A summary of the number of marriages registered in each State and Territory from 1931 to 1957 is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, p. 575. A graph showing the number of marriages in each year from 1860 to 1957 appears on p. 629 of this issue.

(a) Number of marriages per 1,000 of mean population. (b) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 8.20; 1954, 8.09; 1955, 7.67; 1956, 7.86; 1957, 6.74.

3. Marriage Rates based on Marriageable Population.—As the marriage rates in some international tabulations are based on the unmarried population aged 15 years and over, the corresponding rates have been calculated for Australia for the eight census periods to 1953-55. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows:—

PERSONS MARRYING PER 1,000 OF UNMARRIED POPULATION: AUSTRALIA.

	Period.				Rate.(a) Period.

<sup>(</sup>a) Number of marriages per 1,000 of mean population.
(c) Includes Maoris.
(d) Excludes full-blood aboriginals.

5. Age and Conjugal Condition at Marriage.—(i) General. Particulars of age at marriage in age groups and previous conjugal condition of bridegrooms and brides in 1956 are given hereunder. There were 6,088 males under 21 years of age married during 1956, while the corresponding number of females was 25,310. At the other extreme there were 114 bachelors and 61 spinsters in the age group 65 years and over.

<sup>(</sup>iv) Average Ages of Bridegrooms and Brides. The age at marriage of brides has remained fairly constant during recent years at an average of about 25½ years, although in the period 1937-39 the average rose to almost 26 years. The average ages, in years, of brides for each of the five years to 1956 were:—1952, 25.61; 1953, 25.73; 1954, 25.59; 1955, 25.42; and 1956, 25.34. For the following five-year periods the average ages in years were:—1931-35, 25.50; 1936-40, 25.72; 1941-45, 25.68; 1946-50, 25.61; and 1951-55, 25.61. The average ages, in years, of bridegrooms were 28.79 in 1952, 28.96 in 1953, 28.82 in 1954, 28.68 in 1955, and 28.66 in 1956. It follows, therefore, that brides are, generally speaking, a little more than three years younger than bridegrooms. The difference in age was 3.18 years in 1952, 3.23 in 1953 and 1954, 3.26 in 1955, and 3.32 in 1956.

<sup>6.</sup> Previous Conjugal Condition.—The following table shows the relative conjugal condition of the contracting parties to marriages in 1956.

CONJUGAL	CONDITION	OF	BRIDEGROOMS	AND	BRIDES:	AUSTRALIA.	1956.
----------	-----------	----	-------------	-----	---------	------------	-------

Co	Conjugal Condition of Bridegrooms.		Total	Conjugal Condition of Brides.					
			Bridegrooms.	Spinsters.	Widows.	Divorced.			
Bachelors	• • • • • • • • • • • • • • • • • • • •	•••	 64,308	59,877	1,403	3,028			
Widowers			 3,106	1,162	1,362	582			
Divorced			 4,366	2,449	594	1,323			
Tota	l Brides		 71,780	63,488	3,359	4,933			

- 7. Birthplaces of Persons Marrying.—A table showing the relative birthplaces of bridegrooms and brides married in each year will be found in the annual bulletin, Demography.
- 8. Occupation of Bridegrooms.—The distribution of the 71,780 bridegrooms for 1956 amongst classes of occupations was as follows:—Craftsmen, 19,510; commercial and clerical, 12,570; operatives, 11,518; rural, fishing and hunting, 7,946; labourers, 7,310; domestic and protective service, 4,128; professional and semi-professional, 4,001; administrative, 2,772; not gainfully occupied and not stated, 2,025.
- 9. Celebration of Marriages.-In all the States, marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar-General, or by certain civil officers-in most cases district registrars-but most of the marriages are celebrated by ministers of religion. The registered ministers in 1956 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been combined under the heading "Other Christian". The figures for 1956 are shown in the following table:-

#### § 3. Divorce.

The number of dissolutions of marriage, nullities of marriage and judicial separations in 1956 was 6,492. Further information may be found in Chapter XIII.—Public Justice, and detailed tables relating to divorce statistics for 1956 and summary tables for earlier years in *Demography*, Bulletin No. 74.

#### § 4. Fertility and Reproduction.

NOTE.—See NOTE at the beginning of this chapter.

- 1. Introductory.—Of the two elements of increase in the population, namely, natural increase and net migration, the former has been by far the more important over the past few decades. The level of natural increase depends on the excess of births over deaths and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.
- 2. Number of Live Births and Confinements.—(i) Year 1956. There are various methods of measuring the fertility of the population by relating the number of births to the numbers in the population. In each the basic data are, of course, the numbers of live births.

The number of live births registered in Australia during 1956 is shown in the following table. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only.

#### LIVE BIRTHS AND CONFINEMENTS, 1956.

Note.—Owing to the registration procedure adopted in some States, it is possible that in some cases where one child only of a multiple pregnancy is live-born the confinement has been treated as a single birth. However, the numbers of multiple births are not significantly affected. See also para. 13.

(ii) Live Births, Years 1931 to 1957. The average annual number of live births in each State and Territory for each five-year period from 1931 to 1955 and the total number of live births for each year from 1953 to 1957 are given in the following table. Corresponding figures for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, p. 583.

A graph showing the number of births in each year from 1860 to 1957 will be found on p. 629.

3. Crude Birth Rates.—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth rate. The crude birth rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period. Other methods of measuring fertility are shown on pp. 616-9.

Crude birth rates for each five-year period from 1931 to 1955 and for each year from 1953 to 1957 for each State and Territory are set out below:-

(a) Number of births per 1,000 of mean population. (b) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 32.22; 1954, 28.17; 1955, 26.30; 1956, 30.47; 1957, 29.84.

Note.-The birth rates in the table above are based on live births registered in the respective States NOTE.—The birth rates in the table above are based on live births registered in the respective States and Territories. Prior to 1939, a large proportion of births in respect of which the mother's usual residence was the Australian Capital Territory took place in Queanbeyan, just over the New South Wales border. With improved hospital facilities in the Territory, the position was reversed until late in 1952, when maternity accommodation was provided at the Queanbeyan District Hospital. Since 1952, the movements in either direction have been only small. Particularly for years prior to 1953, the following rates, based on births in respect of which the mother's usual residence was the Australian Capital Territory, are a truer measure of birth rates in the Australian Capital Territory.

An	nual Aver	age.		l	Year.	
1931-1935		٠.,	19.53	1953	 	27.61
1936-1940			19.29	1954	 	(a) 28.67
1941-1945			23.06	1955	 	(a)26.53
1946-1950			27.13	1956	 	(a)30.64
1951-1955	::		a)28.39	1957	 	(a)29.58

(a) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 28.32; 1954, 28.63; 1955, 26.27; 1956, 30.07; 1957, 29.29.

The variations similarly caused in the birth rates for the States and the Northern Territory by referring the birth registrations to the State or Territory in which the mother was usually resident are shown by the following corrected rates for 1957:—New South Wales, 21.92; Victoria, 22.62; Queensland, 24.30; South Australia, 22.28; Western Australia, 24.49; Tasmania, 25.60; and Northern Territory, 34.92.

A graph showing the birth rate for each year from 1860 to 1957 will be found on p. 630.

In the earlier years of the present century the crude birth rate fluctuated somewhat, but from 1912, when 28.60 was recorded, there was an almost continuous decline to the very low figure of 16.39 in 1934. The decline in the depression years was to some extent occasioned by the postponement of marriages, and with subsequent improvement in economic conditions the rate rose. From 1940 the rate increased quite appreciably, owing to a continued improvement in the economic welfare of the community and the war-time boom in marriages. The latter resulted in an abnormal number of first births, but investigation indicates that rates for births other than first were generally slightly higher than might have been expected from pre-war experience. The improvement in the birth rate has been substantially maintained since the end of the war despite some falling off in marriage rates. The post-war peak of 24.07 was recorded in 1947.

4. Crude Birth Rates, Various Countries.—The following table gives crude birth rates for Australia in comparison with rates for various other countries.

CRUDE BIRTH RATES(a): VARIOUS COUNTRIES.

5. Fertility Rates.—The principal demographic factors affecting the level of crude birth rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a higher proportion of married women of child-bearing age will have a much higher crude birth rate than one with a low proportion, although the fertilities of the two populations may be identical.

In order to compare fertilities, births are sometimes related to the number of women of child-bearing age or, alternatively; nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility rate.

The following table sets out for certain periods, commencing with 1880-82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15-44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

<sup>(</sup>a) Number of births per 1,000 of mean population. (b) White population only. (c) 1933-35. (d) Excludes Maoris. (e) Excludes full-blood aboriginals.

#### CRUDE BIRTH RATES AND FERTILITY RATES: AUSTRALIA.

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth rate. Thus, while the nuptial birth rate for married women increased by only 22 per cent. over the period 1932-34 to 1946-48 the crude birth rate rose by 41 per cent., owing principally to the greatly increased number of marriages during that period.

6. Age-specific Fertility Rates for Females.—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific fertility rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Age-specific fertility rates are more commonly expressed in age groups than in single ages. In the following table, such rates, calculated in terms of female births for the purpose of obtaining the gross and net reproduction rates described in para. 7, are shown in five-year age groups for Australia for the period 1921 to 1956.

AGE-SPECIFIC FI	ERTILITY	RATES(a):	AUSTRALIA.
-----------------	----------	-----------	------------

Age Group (Years).	1921.	1926.	1931.	1936.	1941.	1946.	1951.	1954.	1955.	1956.

(a) Number of female births per 1,000 women in each age group.

The table shows that from 1954 the most fertile age group has been 20-24 years, whereas previously fertility had been highest between the ages of 25 and 29 years. The decline in fertility between 1921 and 1936 was general but was more pronounced in the higher age groups. During the period 1936 to 1956, a rise in fertility occurred in all age groups below 40. The most noticeable increase has been in the 20 to 24 age group, in which, as mentioned, fertility is now highest, as the result of a marked trend towards earlier marriage.

7. Gross and Net Reproduction Rates for Females.—A single measure of reproduction known as the gross reproduction rate is obtained by adding together the specific fertility rates for each age in the child-bearing group. This measure indicates the number of female children who would be born on the average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an

imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measureof this nature is obtained by multiplying the specific fertility rates by the number of femalesin the corresponding age group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase; if less than unity, it will ultimately decrease. The following table should be read in the light of the comment. which follows it and of the index of marriage fertility in paragraph 9, p. 619.

GROSS AND NET REPRODUCTION RATES: AUSTRALIA.

Year.		Gross Repro- duction Rate.	Net Repro- duction Rate.	Year.			Gross Repro- duction Rate.	Net Repro- duction Rate.(g)	
1881(a)			2.65	(b) 1.88	1950	•••		1.491	1.415
1891(a)			2.30	(b) 1.73	1951			1.485	1.409
1901(a)			1.74	(c) 1.39	1952		]	1.547	1.468

1931			1.141	(f) 1.039	1955			1.594	1.513
1941			1.154	(f) 1.053	1956			1.608	1.527

(a) Approximate only. (b) 1881–1890 mortality experience used. (c) 1891–1900 mortality experience used. (d) 1901–1910 mortality experience used. (e) 1920–1922 mortality experience used. (f) 1932–1934 mortality experience used. (g) 1946–1948 mortality experience used. Norte—It is not strictly correct to assume, as in the calculations of the rates above, that a particular age-specific fertility rate can be applied to a hypothetical group of women reaching that age, without taking account of previous fertility and marriage experiences. Reproduction rates are therefore unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

Since 1881, there has been a substantial downward trend in both rates, but the grossrate has fallen considerably more than the net, showing that the decline in fertility has been offset to some extent by a decline in mortality. The net reproduction rate was below unity over the period 1932 to 1939. If such low levels were to be experienced indefinitely, ultimate population decline would be certain. The progressive rise in both gross and net reproduction rates from 1939 to 1947 was due largely to higher marriage rates during the war and early post-war years than had been experienced in the immediate pre-war years. Such fluctuations in marriage rates affect both gross and net reproduction rates When fluctuations in marriage rates are transient, reproduction rates substantially. calculated as above are not valid as indicators of relative fertility nor of the extent to which population will replace itself. Owing to various influences, the number of marriages in each year since 1950 has remained at a relatively high level and the net reproduction rates have been steady at about 1.4 and 1.5. The fertility of marriages is shown in paragraph 9 below.

8. Gross and Net Reproduction Rates of Various Countries.—In the following table, a comparison is given of the gross and net reproduction rates recorded for various countries in the period 1950 to 1956. These represent the latest available international comparison.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES.

Country.	Period.	Reproduction Rate.		Country.	Period.	Reproduction Rate.	
		Gross.	Net.			Gross.	Net.
Canada	1954	1.87	(a)	France	1953	1.30	1.22
New Zealand(b)	1954	1.76	1.69	Norway	1953	1.28	1.21
United States of				Switzerland	1953	1.25	1.15
America $(c)$	1953	1.60	1.54	Denmark	1954	1.23	1.12
Australia $(d)$	1956	1.61	1.53	Scotland	1952	1.18	1.12
Ireland, Republic of	1950-52	1.60	1.47	England and Wales	1953	(a)	1.03
Netherlands	1953	1.47	1.40	Belgium	1953	1.13	1.03
Finland	1953	1.44	1.34	Sweden	1952	1.08	1.03
Portugal	1953	1.50	1.27				

<sup>(</sup>a) Not available. full-blood aboriginals.

<sup>(</sup>b) Excludes Maoris.

<sup>(</sup>c) White population only.

In comparing the reproduction rates of the countries shown above, allowance should be made for any differences in years, as the rates for any one country from year to year are affected by variations in the incidence of marriage.

9. Fertility of Marriages.—Estimates of the fertility of marriages which were published in issues of the Official Year Book prior to No. 36 were calculated by relating the births of one five-year period to the marriages in the preceding five years (see Official Year Book No. 35, p. 329). Since the publication of that issue, an improved method has been formulated for measuring current marriage fertility by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTH ITV	OF MARRIAGES:	ALISTRALIA

Year. Nuptial Confinements per Marriage.		Year		Nuptial Confine- ments per Marriage.	Year	Nuptial Confine- ments per Marriage.		
1942		2.12	1947		2.55	1952	•••	2.63
1943		2.21	1948		2.44	1953		2.66
1944		2.28	1949		2.45	1954		2.66
1945		2.36	1950		2.56	1955		2.71
1946		2.55	1951		2.55	1956		2.76

NOTE.—See NOTE to table opposite.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. There was an almost continuous decline for a number of years to 1942, but a pronounced increase has since occurred. In comparing this index with the net reproduction rate, it is evident that the rise in the latter since 1935 has been caused mainly by a rise in the marriage rate, due firstly to postponed depression marriages, and secondly to war-time and post-war marriages which have resulted in very high proportions of women married, particularly in the most fertile age groups. Only since 1944 has there been an increase in the fertility of marriages compared with pre-war levels.

The figures for 1949 and subsequent years present a somewhat inflated index, as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and are consequently not included in Australian marriage records. Partial investigation suggests that this factor probably overstated the index by very little in 1949, but that the overstatement at present is about 8 per cent.

10. Masculinity of Live Births.—The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, State totals), considerable variation is shown. For 1957, the figures ranged from 105.00 in Victoria to 110.78 in the Australian Capital Territory. The averages for the ten years 1941-50 were as follows:—New South Wales, 105.49; Victoria, 105.47; Queensland, 105.49; South Australia, 105.78; Western Australia, 104.27; Tasmania, 104.45; Northern Territory, 100.20; Australian Capital Territory, 104.91; Australia, 105.38. The following table shows the figures for Australia for each ten-year period from 1901 to 1950 and for each of the years 1954 to 1957:—

MASCULINITY(a) OF LIVE BIRTHS REGISTERED: AUSTRALIA.

Particulars.	1901–10.	1911–20.	1921–30.	1931–40.	1941-50.	1954.	1955.	1956.	1957.
Total Births Ex-nuptial Births	105.22	105.27	105.55	105.12	105.38	104.92	105.16	106.87	105.71
	104.08	105.25	105.16	105.36	105.34	101.58	104.72	107.16	102.86

(a) Number of males born for every 100 female births.

11. Ex-nuptial Live Births.—(i) General. The highest proportion of ex-nuptial births in any one year since 1901 was recorded in 1905, when there were 6,545 ex-nuptial births, representing 6.24 per cent. of total births. Since then the proportion has declined steadily. The largest number of ex-nuptial births was recorded in 1957, when 9,362 were registered, but this number represented only 4.25 per cent. of total births. The lowest proportion was 3.78 per cent. in 1940.

The variations in the proportions of ex-nuptial births as between the individual States and Territories for 1956 are shown below.

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, 1956.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number Proportion of	3,305	1,980	1,833	639	796	320	78	19	8,970
Total Births %	4.37	3.39	5.66	3.37	4.71	3.95	14.03	1.76	4.23

The number and proportion of ex-nuptial births at intervals from 1901 to 1956 are as follows:—

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, AUSTRALIA.

Particulars.				.An	nual Ave	rage.				40.75	
			1901- 10.	1911- 20.	1921- 30.	1931- 40.	1941- 50.	1953.	1954.	1955.	1956.
Number Proportion	of	Total	6,498	6,836	6,238	5,133	6,780	8,032	8,027	8,537	8,970
Births		%_	6.05	5.22	4.66	4.40	4.13	3.97	3.97	4.11	4.23

It is of course possible that the number of ex-nuptial births is somewhat understated owing to diffidence in proclaiming the fact of ex-nuptiality.

(ii) Rate of Ex-nuptiality. A further comparison is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population aged from 15 to 44 years. On this basis, the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 44 is as follows:—1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; 1920-22, 10.50; 1932-34, 6.91; 1946-48, 11.45; and 1953-55, 14.45. Ex-nuptial births to married women, which are not recorded separately, are included in these figures and it is not possible to determine to what extent they influence the trend shown.

(iii) Comparison of Rates. The following table, showing the relative proportions of ex-nuptial and nuptial births to the total population, discloses a much greater proportional movement in the ex-nuptial birth rate than in the nuptial rate:—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES(a): AUSTRALIA.

Birth Rate.			Anı	nual Aver	age.	1953.	1954.	1955.	1956.	
		1901–10.	1911–20.	1921–30.	1931–40.	1941–50.		1934.	1933.	1930.
Ex-nuptial Nuptial Total	• • •	1.60 24.91 <b>26.51</b>	1.39 25.18 26.57	1.04 21.40 22.44	0.76 16.47 17.23	0.90 20.99 21.89	0.91 22.03 <b>22.94</b>	.0.89 21.61 22.50	0.93 21.64 22.57	0.95 21.55 22.50

(a) Number of births per 1,000 of mean population.

12. Legitimations.—Acts have been passed in the several States to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who comes within the scope of their purposes, born before or after the passing thereof, is deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1956, the number of children legitimized in Australia was 934.

13. Multiple Births.—Because the current Australian birth statistics are based only on those confinements which resulted in a live-born child, the number of confinements for multiple births for Australia is understated—firstly, because in cases where all children of a multiple birth are still-born the confinement is excluded, and secondly, because some cases of multiple births in which only one child was live-born are registered as single births.

During 1956, multiple births recorded on the above basis comprised 2,442 cases of twins, 20 cases of triplets and 1 case of live-born quadruplets, the resultant numbers of live-born and still-born children being respectively 4,790 and 94 for twins, 57 and 3 for

triplets and 4 live-born for quadruplets. This represents an average of 11.64 recorded cases of twins and 0.10 recorded cases of triplets per 1,000 confinements or, alternatively, mothers of twins represented 1 in every 86 mothers and mothers of triplets 1 in every 10,487. Total cases of multiple births represented 11.74 per 1,000 confinements or 1 in every 85 mothers.

The proportion of mothers of multiple births to total mothers does not vary greatly from year to year.

14. Ages of Parents.—The relative ages of the parents of children registered in 1956 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births the relative ages of parents are shown in *Demography*, Bulletin No. 74. In the present work the exigencies of space allow only the insertion of a table showing, in respect of confinements resulting in one or more live births, the relative ages of parents in groups of five years.

<sup>(</sup>a) Includes 1 case of quadruplets.

- 15. Birthplaces of Parents.—A table showing birthplaces of parents of children whose births were registered during 1956 appears in *Demography*, Bulletin No. 74.
- 16. Occupation of Fathers.—A table showing occupations of the fathers of all nuptial children registered in 1956 appears in *Demography*, Bulletin No. 74.
- 17. Age, Duration of Marriage and Issue of Mothers.—(i) General. The total number of nuptial confinements resulting in live births in 1956 was 200,863, comprising 198,492 single births, 2,351 cases of twins, 19 cases of triplets and 1 case of quadruplets. The tables relating to previous issue exclude the issue of former marriages and still-born children. On the other hand, they include children by the same father who were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.
- (ii) Duration of Marriage and Issue of Mothers. The following table shows that in 1956 the duration of marriage of mothers of nuptial children ranged from less than one year to over 25 years, and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1956 was 2.52, compared with 2.50 in 1955, 2.48 in 1954, 2.45 in 1953, 2.42 in 1952, and 2.40 in 1951.

<sup>(</sup>b) Includes 1 case of triplets.

(iii) Age and Average Issue of Mothers. The following table shows the average number of children born to mothers of different ages. In the younger ages there is, naturally, little difference in the average number of children to each mother from year to year, but for mothers in the higher age groups the number of issue has until recently fallen in comparison with past years. In 1956, average issue was greater in all age groups under 40 years than in the decade 1941-50. The average issue of mothers of all ages recorded for 1956 (namely, 2.52) is 22.5 per cent. below the average of 3.25 for the years 1911-20.

AGE AND AVERAGE ISSUE OF MOTHERS: AUSTRALIA.

(v) Multiple Births.—Previous Issue of Mothers. Figures regarding the previous issue of married mothers of twins in 1956 show that 585 mothers had no previous issue either living or deceased, 672 had one child previously, 485 had two previous issue, 275 three, 155 four, 88 five, 41 six, 24 seven, 10 eight, 8 nine, 3 ten, 2 eleven, 1 twelve, 1 fourteen and 1 twenty.

Of the 19 cases of nuptial triplets and the one case of quadruplets registered during 1956, 5 mothers had no previous issue, 6 had one, 2 had two, 5 had three, 1 had four, and 1 had six.

18. Nuptial First Births.—(i) Duration of Marriage. The following table shows the interval between marriage and first birth for 1911-20, 1921-30, 1931-40, 1941-50, 1954, 1955 and 1956. In cases of multiple births, the first live-born child only is enumerated.

19. Stillbirths.—Registration of stillbirths is not compulsory in all Australian States. It has been compulsory in Western Australia since 14th January, 1908; in the Australian Capital Territory since 1st January, 1930; in New South Wales since 1st April, 1935; in South Australia since 1st May, 1937; and in Victoria from 1st January, 1953. In Queensland and Tasmania, where registration is not enforced, some information is obtained by notification of stillbirths for various purposes. Because registration is not compulsory in all States, detailed statistics of stillbirths for Australia as a whole have not been compiled.

The number of stillbirths in each State and Territory, as recorded since 1936 by the means outlined above, is shown in the following table:—

#### STILLBIRTHS.

<sup>(</sup>a) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September, 1939 to June, 1947.

A graph showing the number of deaths in each year from 1860 to 1957 will be found on p. 629.

2. Crude Death Rates.—The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death rate. This rate for a given period measures the numbers per thousand of population by which the population is depleted through deaths during that period. Crude death rates for each State and Territory from 1931 to 1957 are shown in the following table.

CRUDE DEATH RATES.(a) N.S.W. Period. Vic. Q'land. S. Aust. W. Aust. Tas. N.T. A.C.T. Aust. <sup>(</sup>a) Number of deaths per 1,000 of mean population. (b) Excludes deaths of defence personnel from September, 1939 to June, 1947. (c) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Camberra are as follows:—1951-55, 4.58; 1955, 3.85; 1956, 4.72; 1957, males 5.04, females 3.72, persons 4.42.

A graph showing the crude death rate for each year from 1860 to 1957 will be found on p. 630.

- 3. Standardized Death Rates .-- (i) General. The death rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death rate of a community will be low if it contains a large proportion of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death rate if the death rates for each sex and in each age group had been as recorded, but the age and sex distribution had been the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their censuses nearest to the year 1900. Full details of the "Standard Population" were published in Official Year Book No. 22, p. 962.
- (ii) Death Rates in Age Groups. An examination of the age distribution of deaths and the resultant age-specific death rates is made in paragraph 9, p. 639.
- (iii) Comparison of Crude and Standardized Death Rates. The relative incidence of mortality as between individual States and as between the years 1921, 1933, 1947 and 1954 is illustrated in the following statement of crude and "standardized" death rates. These years have been chosen for comparison because the census data give essential information as to sexes and ages of the State populations. Crude death rates are shown to indicate the degree to which they disguise the true position.

CRUDE	AND	STANDARDIZED	DEATH	RATES.

<sup>(</sup>a) Total deaths per 1,000 of mean population. in para. 3 (i) above.

The comparisons above relate to individual years in which a census of population was taken and should not be used as the basis for general conclusions as to changes in incidence of mortality for other than those years.

4. True Death Rates.—The main objections to standardized death rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. A correct measurement of the mortality of the population can be obtained, however, from life tables. A life table represents the number of survivors at each age from a group of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in the standard population one person in 50 or 20 per thousand will die each year. The true death rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survivorship from each year of age to the next. The table below sets out complete expectation of life at birth and true death rates for the periods covered by Australian life tables.

<sup>(</sup>b) See explanation of standardized death rates

# INFANT MORTALITY RATES: AUSTRALIA, 1910 TO 1957

7. Australian Life Tables.—(i) Life Tables prior to 1947. It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881–1890, 1891–1900 and 1901–1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, of time, and of geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1912. In addition, monetary tables based on the experience for the whole of Australia for the ten years 1901–1910 were prepared and published.

At the Census of 1921, Life Tables were prepared by the Commonwealth Statistician from the population recorded and the deaths in the three years 1920 to 1922. Similarly, in 1933, the Life Tables were based on the census population and the deaths in the years 1932 to 1934.

(ii) Life Tables of Census of 1947. On the occasion of the 1947 Census, Life Tables representing the sixth in the series were compiled by the Commonwealth Actuary. These were based on the population recorded, in conjunction with the deaths during 1946, 1947 and 1948, as it was considered undesirable to take into account deaths occurring prior to 1946 owing to the possible effects on the civilian population of conditions arising from the 1939-45 War. Full particulars of the data used and the methods of construction and tabulation of these Life Tables will be found in the report of the Commonwealth Actuary, which was published by the Commonwealth Statistician in 1950. This report also appeared in Volume III. of Census of the Commonwealth of Australia, 30th June, 1947. Monetary tables for both single and joint lives were also prepared by the Commonwealth Actuary.

Comparative tables showing the number of survivors  $(l_x)$  out of 100,000 births, rates of mortality  $(q_x)$  and probability of surviving ten years  $(l_1p_x)$ , at selected ages, in respect of the Australian Life Tables of 1920-22, 1932-34 and 1946-48, together with a summary of the main characteristics of the tables, were published in Official Year Book No. 39, pp. 602-3. The expectation of life at selected ages taken from these three Life Tables is as follows:—

AUSTRALIAN LIFE TABLES : COMPLETE EXPECTATION OF LIFE  $(\mathring{e}_{\chi})$  AT SELECTED AGES.

	Age			Males.		Females.				
	Age $(x)$ .		1920-22.	1932–34.	1946-48.	1920-22.	1932-34.	1946-48.

<sup>(</sup>a) Number of deaths of children aged four weeks and under one year per 1,000 live births registered.

(b) Not yet available.

(ii) Australia. (a) Under One Year. The universal experience that during the first few years of life the higher death rate of male infants tends to counteract the excess of male births is confirmed by the fact that out of 536,330 male infants born from 1953 to 1957, 13,170 (24.56 per 1,000) died during the first year of life, while of 508,329 female infants only 9,986 (19.65 per 1,000) died during the first year. Stillbirths, for which masculinity is also higher, are not included in any of the tables relating to deaths.

As shown by the following table, the disparity is greater during the first four weeks of life, termed the neonatal period, than during the remainder of the first year of life, or the post-neonatal period.

<sup>(</sup>a) Number of deaths per 1,000 live births registered. under one day.

(b) Not available.

(c) Includes

The foregoing tables indicate the decrease in infant mortality in Australia, the mortality rate of children aged under one year per 1,000 live births for 1957 being 52 per cent. of the average rate for 1931-35. The improvement was due largely to the decrease in deaths from preventable causes, the mortality rate for children aged one week but under one year of age declining by 58 per cent., while that for children aged under one week declined by only 40 per cent.

A graph showing infant mortality rates for each year from 1910 to 1957 will be found on page 631.

(iii) Statistical Divisions. The total numbers of births and of deaths of children under one year of age in each statistical division are shown in the annual bulletin, Demography.

(iv) Various Countries. Compared with other countries Australia occupies a favourable position in respect of infant mortality. In 1956, only New Zealand, Sweden the Netherlands and Norway recorded a lower rate than Australia.

(v) Causes of Death: Children under one Year. Causes of death of children under one year of age should be considered in relation to age at death, because the emphasis on various causes changes rapidly as age at death varies. In 1956, 2,813 (97.7 per cent.) of the deaths occurring during the first week of life were caused by congenital malformations (12.4 per cent.) and certain diseases of early infancy (85.3 per cent.). Of the latter, 68.3 per cent. were associated with immaturity (see table below). At ages one week and under four weeks the proportions were 39.3 per cent. and 46.7 per cent. respectively. Of deaths of children over four weeks and under one year of age, 24.6 per cent. were caused by congenital malformations and only 6.3 per cent. by diseases of early infancy, the emphasis having shifted to respiratory and digestive diseases (40.5 per cent.), accidents and violence (7.2 per cent.), infective and parasitic diseases (6.8 per cent.) and diseases of the nervous system (6.3 per cent.). A summary for 1956 of the deaths of children under one year of age, classified according to principal causes of death and age at death, is given in the following table.

CAUSES OF DEATH: CHILDREN UNDER ONE YEAR OF AGE, AUSTRALIA, 1956.

<sup>(</sup>a) Age four weeks and under two months.

The individual categories representing the causes of death which come within Class XV.—Certain Diseases of Early Infancy are designed to show the effect of immaturity in such causes of infant death. In 1956, 68 per cent. of deaths in this class during the first week of life and 35 per cent. of those in the next three weeks of life were due, directly or indirectly, to immaturity. The relationship between immaturity and each of the individual categories of Class XV. is shown for the year 1956 in the following table.

<sup>(</sup>b) For further detail of this group of causes see next table.

(vi) Deaths of Ex-nuptial Children under one Year of Age. Distinction between nuptial and ex-nuptial children in death statistics for Australia as a whole has been made since 1925. Results show that death rates during infancy have generally been much higher for ex-nuptial children than for nuptial children, but the disparity has become smaller in recent years. The following table shows the number of deaths of children under one year of age and the infant mortality rates for nuptial, ex-nuptial and all children in five-year periods since 1931 and for each year from 1953 to 1956.

DEATHS UNDER ONE YEAR OF AGE: NUPTIAL AND EX-NUPTIAL, AUSTRALIA.

1955		4,365	21.92	207	24.25	111	4,572	22.01	
1956		4,413	21.72	195	21.74	100	4,608	21.72	

(a) Number of deaths under one year of age per 1,000 nuptial live births registered. (b) Number of deaths under one year of age per 1,000 ex-nuptial live births registered. (c) Number of deaths under one year of age per 1,000 total live births registered.

For the five years 1951-55, the ratio of the ex-nuptial to the nuptial rate at various ages of infancy was as follows:—Under one month, 99 per cent.; one month, 144 per cent.; 2 months, 113 per cent.; 3 months, 154 per cent.; 4 months, 119 per cent.; 5 months, 158 per cent.; under one year, 105 per cent.

Detailed information for Australia as to the age at which ex-nuptial children died from each cause of death will be found in the annual bulletin, *Demography*. Because of the small number of ex-nuptial deaths involved in each case, it is difficult to assess the real significance of the differences between the numbers of nuptial and ex-nuptial deaths from each individual cause.

9. Age Distribution.—(i) Number of Deaths. Age at death is recorded for statistical purposes in days for the first week of life, in weeks for the first four weeks, in months for the first two years and in completed years of life thereafter. These ages are usually combined in groups for publication, the most common being weeks for the first four weeks, months or groups of months for the first year, single years of age for the first five years and thereafter the five-year groups 5-9 years, 10-14 years, etc. A summary in this form for Australia is given in the following table for the year 1956.

AGE AT DEATH: AUSTRALIA, 1956.

Age at Death.	Males.	Fe- males.	Per- sons.	Age at Death.		Males.	Fe- males.	Per- sons.

There are different mortality rates at various stages of life and the actual number of deaths in any period depends upon the impact of these rates on the numbers living at the respective stages. Changes in the number of deaths from one period to another are caused by changes in the rate of mortality in the various age groups and by the changed proportions of persons living in the different groups.

In Australia, during the last fifty years, there has been a steady decline in the rate of mortality at all ages, which has tended to reduce the number of deaths. This has been most pronounced at ages under one year. The increased length of life due to this factor, coupled with the long-term decline in the birth rate and the effects of past and present migration, has been a significant cause in changing the age distribution of the population and consequently the age distribution of deaths, thus obscuring the effects of declining mortality rates.

The combined effect of these various influences can be seen from the following table, which shows the proportion of deaths in various age groups in ten-year periods from 1901 to 1950 and for the year 1956.

PROPORTION OF DEATHS IN EACH AGE GROUP: AUSTRALIA.

(Per Cent.)

		Age at Death (Years).											
Period.	Under 1.	1-4.	5–19.	20–39.	40–59.	60–64.	65 and over.	Unspeci- fied.	Total.				
1901-10	20.51	6.45	6.37	14.99	17.99	5.31	28.26	0.12	100.00				
1911–20	16.66	6.09	5.49	14.44	20.32	6.19	30.68	0.13	100.00				
1921-30	13.10	4.51	4.85	12.12	20.55	8.26	36.53	0.08	100.00				
1931–40	7.40	2.56	3.83	9.36	20.54	8.36	47.92	0.03	100.00				
1941–50	6.79	1.71	2.26	6.01	19.04	9.33	54.84	0.02	100.00				
1956	1					1							
Males	5.36	1.22	1.90	5.51	18.95	10.16	56.86	0.04	100.00				
Females	5.34	1.28	1.26	3.56	13.63	7.54	67.38	0.01	100.00				
Persons	5.36	1.24	1.62	4.65	16.61	9.01	61.49	0.02	100.00				

A table showing these proportions for males and females separately for the period 1901 to 1950 was published in Official Year Book No. 39, p. 614.

(ii) Age-specific Death Rates. The following table gives the average annual age-specific death rates for each State and Australia for the years 1953 to 1955 based on the age distribution of the population at the Census of 30th June, 1954. Similar tables for the years 1932-34 and 1946-48 were published in earlier issues of the Official Year Book (see No. 37, p. 778 and No. 39, pp. 615-6).

<sup>(</sup>a) Average annual number of deaths per 1 000 of population in each age group at 30th June, 1954.

10. Causes of Death.—The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899 and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death and further international revisions in 1909 (Second), 1920 (Third), 1929 (Fourth), 1938 (Fifth) and 1948 (Sixth) were successively adapted for use in Australian statistics.

The Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death has been used in Australia since 1950. For the first time in connexion with the International List, international rules for a uniform method of selecting the main cause to be tabulated, if more than one cause is stated on the death certificate, were laid down. Prior to 1950, the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform with successive revisions of the International List.

The adoption of the new method marked a fundamental change in Australian cause of death statistics, with emphasis now placed on the underlying cause of death as indicated by the certifying practitioner. The introduction of this method required the adoption by all States of a form of medical certificate substantially identical with the International Form of Medical Certificate of Cause of Death as laid down in Article 9 of the World Health Organization Regulations No. 1. By 1950, all States had adopted satisfactory forms of certificate and it was possible to apply the new principles uniformly to all State cause of death records.

This change in principle affects the comparability of the statistics for 1950 and subsequent years with those for earlier years. For convenience in assessing the extent of the change and in accordance with a recommendation of the Sixth Decennial Revision Conference, causes of death for Australia for 1950 were also classified according to the detailed classification of the Fifth Revision, 1938, on the joint cause rules current for that revision. A complete detailed classification according to both the Fifth and Sixth Revisions was shown in *Demography*, Bulletin No. 68. Commencing with 1951, the classification is according to the Sixth Revision only.

In order to facilitate the briefer presentation of cause of death statistics, the present International Classification provides two special lists of causes for tabulation—the Intermediate List of 150 causes and the Abbreviated List of 50 causes. The latter has been used for the cause of death tabulations A to C which follow. Tables A and B show deaths of males and females, respectively, for 1956 and Table C shows the numbers of persons who died and the death rates and proportion per 10,000 deaths for the years 1955 and 1956.

### A.-CAUSES OF DEATH: MALES, 1956.

# Abbreviated List of 50 Causes (Based on the Sixth Revision of the International List).

- 11. Deaths from Principal Causes.—(i) General. In the preceding tables particulars have been given for each of the causes of death comprising the Abbreviated Classification according to the Sixth Revision of the International List. Certain important causes are treated in detail hereunder. The Abbreviated Classification numbers used in tables A to C (pp. 642-4) are indicated in parentheses for each cause or group of causes.
- (ii) All Forms of Tuberculosis (B1, B2). (a) General. The total number of deaths classified to all forms of tuberculosis in 1956 was 724, consisting of 540 males and 184 females. In comparing any of the figures for 1950 and subsequent years with those for 1949 and earlier years, consideration should be given to the effect of the change in basis from the Fifth to the Sixth Revision of the International List. This was discussed in Official Year Book No. 39, p. 626.
- (b) Age at Death. The following table shows the age groups of males and females who were classified as dying from tuberculosis in 1956, together with figures for 1921, 1931, 1941 and 1951.

TUBERCULOSIS (ALL FORMS): DEATHS IN AGE GROUPS, AUSTRALIA.

- (c) Death Rates. The reduction in mortality from tuberculosis is shown by the decline in the crude death rate from tubercular diseases, which fell from 68 per 100,000 of mean population in 1921 (males, 78; females, 56) to 18 in 1951 (males, 25; females, 11) and still further to 8 in 1956 (males 11; females, 4). The crude death rate does not reveal the even more striking fall in the number of deaths in the younger age groups, which can be seen from the table above.
- (d) Death Rates, Various Countries. A comparison of the death rates from tuberculosis for Australia with those for various other countries, made on the latest figures available, shows that Australia, with a rate of 8 deaths per 100,000 of mean population, occupies a favourable position as regards this disease. Whereas the rate for Denmark is only 6, rates range as high as 63 for Portugal. For various other countries rates are as follows:—Netherlands, 7; Canada, 9; New Zealand, Union of South Africa and United States of America, 10; United Kingdom, 15; Switzerland, 22; Italy, 23; France, 31; Finland, 42; and Japan, 53.
- (iii) Malignant Neoplasms, including Neoplasms of Lymphatic and Haematopoietic Tissues (B18). (a) General. It was shown in Official Year Book No. 39, p. 628, that deaths classified under this heading according to the Sixth Revision of the International List are not directly comparable in total with those on the Fifth Revision basis and comparability ratios were given to enable comparison to be made on an adjusted basis. This change must be kept in mind in considering the comparisons shown in the following pages.
- (b) Type and Seat of Disease. Tables showing the type and seat of disease in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1956 will be found in Demography, Bulletin No. 74. A summary regarding type and seat of disease for 1956 is given below. It may be pointed out that the significance of the number of deaths shown for the various types of neoplasms enumerated hereunder is doubtful, owing to the fact that, in the absence of a post-mortem, it is impracticable for the certifying doctor in the majority of cases to make an accurate diagnosis as to type in the detail required for the following classification.

DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES: TYPE AND SEAT OF DISEASE, AUSTRALIA, 1956.

(c) Age at Death. The ages of males and females who died from malignant neoplasms in 1956 are given below, together with figures for 1921, 1931, 1941 and 1951. Inferences drawn from the great increase in the number of deaths from malignant neoplasms in 1956 compared with the number in 1921 need qualification, in view of the inclusion of neoplasms of lymphatic and haematopoietic tissues from 1951 and also the fact that the age constitution of the population has changed since 1921. While the total population increased by about 73 per cent. between 1921 and 1956, the number of people over 55 years of age, at which ages the risks of cancer are much greater, increased by about 150 per cent. The rate of mortality, as distinct from the number of deaths, has increased for the lower age groups and for some of the higher age groups since 1921, but in the other age groups the rates have actually declined. It is probable that a proportion of the increased number of deaths from cancer recorded in recent years has been due to improved diagnosis and certification on the part of the medical profession.

<sup>(</sup>a) Includes neoplasms of lymphatic and haematopoietic tissues.

- (d) Death Rates. The death rates from malignant neoplasms have continued to rise over recent years. The rates are crude death rates representing the number of deaths from malignant neoplasms per 100,000 of mean population and do not take account of changes in the age constitution of the population, and to a substantial extent reflect the increasing age of the population rather than the true change in mortality from malignant neoplasms (see previous paragraph). In 1921, the rate for Australia was 87 (males, 88; females, 87); in 1931 it was 101 (males, 105; females, 97); in 1941 it was 119 (males, 119; females, 120) and in 1951 it had risen to 126 (males, 129; females, 122). Figures for 1956 show that a further rise has taken place, the rate being 130 (males, 135; females, 126).
- (e) Death Rates, Various Countries. Death rates from malignant neoplasms per 100,000 of mean population for Australia and for various other countries are as follows:—Portugal, 84; Japan, 87; Italy, 124; Union of South Africa, 127; Canada, 130; Australia, 130; Finland and United States of America, 146; New Zealand, 147; Netherlands, 155; France, 184; Switzerland, 188; and United Kingdom, 204. The rates are for the latest available year in each case.
- (iv) Diseases of the Heart (B25 to B28). The number of deaths classified to diseases of the heart in 1956 was 29.519 (17,467 males and 12,052 females). This class is the largest amongst causes of death, the rate having increased from 112 per 100,000 of mean population in 1911-15 to 313 in 1956. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past twenty years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners.

The death rates for heart diseases for various years from 1921 were as follows:—1921, 93 (males, 102; females, 83); 1931, 159 (males, 178; females, 142); 1941, 269 (males, 306; females, 231); 1951, 314 (males, 367; females, 259); and 1956, 313 (males, 366; females, 259). Deaths from heart diseases in 1956 represented 34 per cent. of the total deaths.

(v) Puerperal Causes (B40). It was shown in Official Year Book No. 39, p. 634, that the changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The death rate from these causes (including criminal abortion) has fallen rapidly during recent years and in 1956 the rate was 0.6 per 1,000 live births, compared with a rate of 6 per 1,000 in 1936. The 119 deaths in 1956 correspond to a death rate of 2.6 per 100,000 females. The death rate may be expressed in other terms by stating that 1 of every 1,763 women giving birth to a live child in 1956 died from puerperal causes; the corresponding ratios for married women were 1 in every 1,843, and for single women 1 in every 888.

The death rate per 1,000 live births from peurperal causes in various countries for the latest available years is as follows:—New Zealand, United States of America and Denmark, 0.5; France, United Kingdom and the Netherlands, 0.6; Canada, 0.8; Finland and Switzerland, 1.1; Union of South Africa, 1.2; Italy, 1.3; and Japan, 1.8.

The total number of children left by the 109 married mothers who died from puerperal causes in 1956 was 320, an average of 2.9 children per mother.

Four of the mothers who died had been married less than one year, 14 between one and two years, and 5 between two and three years. The duration of marriage ranged up to 27 years. Tabulations distinguishing the ages at marriage and at death will be found in *Demography*, Bulletin No. 74, which also includes a table showing in combination the duration of marriage and previous issue.

- (vi) Congenital Malformations and Diseases of Early Infancy (B 41 to B 44). This combined group embraces two complete classes of the International List of Causes of Death which relate more specifically to infant deaths and they have already been presented in detail in the section devoted to causes of infant death (see pp. 637 and 638).
- (vii) Accidents, Poisonings and Violence (BE 47 to BE 50). (a) General. Deaths in this class are classified according to external cause and not according to nature of injury. The classification provides sub-groups for accidents, including adverse reactions to prophylactic inoculations, therapeutic misadventures and late effects of accidental injury; suicide; homicide and injuries purposely inflicted by other persons; and injury resulting from operations of war, including late effects.

The following table, showing the death rates in the main sub-groups per 100,000 of mean population, indicates that the death rate from violence is generally about three times as great for males as for females. It can be seen also that in 1956 the proportion of deaths caused by violence was 7.35 per cent., compared with 6.76 per cent. in 1931-35.

The low level of the rates and proportions for the years 1941-45 is due largely to the exclusion of deaths of defence personnel from accidents, suicide and homicide, though the

rates have been based on total mean population (including defence personnel). A further contributing factor is the decrease during this period in the number of automobile accidents. From July, 1947, deaths of defence personnel from accidents, etc., have again been included.

<sup>(</sup>a) Number of deaths per 100,000 of mean population. (c) Includes late effects of injuries due to operations of war.

- (b) Accidents (BE 47, BE 48). In 1956, the total number of deaths from accidental causes was 5,167 (3,634 males and 1,533 females). Half of the accidental deaths were the result of transport accidents. Of these, the numbers attributable to the major causes, and the percentages of the total accidental deaths in each case, were as follows:—Motor vehicle traffic accidents, 2,117 (40.97 per cent.); motor vehicle non-traffic accidents, 102 (1.98 per cent.); other road vehicle accidents, 113 (2.19 per cent.); railway accidents, 150 (2.90 per cent.); water transport accidents, 89 (1.72 per cent.); aircraft accidents, 28 (0.54 per cent.); a total of 2,599 (50.30 per cent.). Other important causes were accidental falls, 1,065 (20.61 per cent.); accidental drowning, 452 (8.75 per cent.); and accidents caused by fire and explosion of combustible material, 152 (2.94 per cent.).

  (c) Suicide (BE 49). (i) Modes Adopted. Deaths from suicide in 1956 numbered 1,021 (males, 751; females, 270). Firearms and explosives were used in 277 cases (27.13)
- (c) Suicide (BE 49). (1) Modes Adopted. Deaths from suicide in 1956 numbered 1,021 (males, 751; females, 270). Firearms and explosives were used in 277 cases (27.13 per cent. of total deaths by suicide). Other important modes adopted, together with the numbers and relevant percentages, were as follows:—Poisoning other than by gases, 221 (21.64 per cent.); poisoning by gases, 201 (19.69 per cent.); hanging or strangulation, 145 (14.20 per cent.); submersion (drowning), 60 (5.88 per cent.); other modes, 117 (11.46 per cent.).
- Of the 751 males who committed suicide, 258 (34.35 per cent.) used firearms or explosives. For females the most common mode was poisoning (other than by gases). This was used in 95 cases (35.19 per cent.).
- (ii) Age at Death. From the following table, which shows the age of persons who committed suicide in 1956, it will be seen that both young and very old people took their lives during this year.

AGE OF PERSONS WHO COMMITTED SUICIDE: AUSTRALIA, 1956.

55-59		65	22	87	Total Deaths		751	270	1,021

(d) Homicide and Operations of War (BE 50). In 1956, there were 135 deaths from homicide and injury purposely inflicted by other persons (not in war), of which non-accidental poisonings caused 8 deaths, assault by firearms and explosives 31, assault by cutting and piercing instruments 25, assault by other means 59, injury by intervention of police 1 and legal execution 1. Deaths from injury resulting from the operations of war numbered 10, but all were deaths from late effects of such injuries.

<sup>(</sup>b) Includes "open verdict".

12. Age at Death of Deceased Married Males and Females, and Issue.—Demography, Bulletin No. 74, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married (including widowed or divorced) persons who died in Australia in 1956. Deaths of married males in 1956 numbered 36,048, and of married females, 29,698. The tables which follow deal, however, with only 35,562 males and 29,503 females, the information regarding issue in the remaining 681 cases being incomplete. The total number of children in the families of the 35,562 males was 113,422 and of the 29,503 females, 101,298. The average number of children is shown for various age groups in the following table.

### § 6. Vital Statistics of External Territories.

Because of the outbreak of hostilities in the Pacific during the 1939-45 War, civil administration in the external territories was suspended on 11th February, 1942, and registration of births, deaths and marriages was not resumed until 1946. The following table for the year 1956 shows the number of marriages, births and deaths registered in the external territories under the control of Australia, namely:—Norfolk Island; Papua; the Trust Territory of New Guinea; and the Trust Territory of Nauru. More detailed information will be found in a series of tables in *Demography*, Bulletin No. 74.

#### CHAPTER XVIII.

#### HOUSING.

#### § 1. Introduction.

1. General. In issues of the Official Year Book prior to No. 43, certain information relating to the housing of the population was included in various chapters, but for a more convenient presentation of the material this complete chapter, which presents a summary of all available information on the subject, has now been substituted.

In sections 2 and 3, a brief outline is given of government assistance to housing since 1945 and of operations under the War Service Homes Act 1918-1956. Other sections of the chapter are devoted to statistics of new building and to characteristics of dwellings at the Censuses of 1947 and 1954.

2. Number of Dwellings, Censuses 1911 to 1954.—At each census, in addition to the questions relating to the personal particulars of the individual members of households, there have been a number of important questions on the Census Schedule designed to elicit information concerning the dwellings in which the population was housed at the date of the census. For the purpose of the census, a "dwelling" is any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has therefore a very wide reference, and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution.

The following table shows the number of occupied and unoccupied dwellings in Australia at each Census from 1911 to 1954. Occupied dwellings are classified into private and other dwellings. Dwellings other than private include hotels, boarding houses, lodging houses, hostels, hospitals, educational, religious and charitable institutions, defence and penal establishments, etc. The term "unoccupied dwellings" is not synonymous with vacant houses and flats available for occupancy, but refers mainly to "week-end", holiday and other dwellings whose usual occupants were temporarily absent on the night of the Census; newly-completed dwellings awaiting occupancy are also included.

DWELLINGS: AUSTRALIA, CENSUSES 1911 TO 1954. (Excluding Dwellings occupied solely by Full-blood Aboriginals.)

#### § 2. Government Assistance to Housing Since 1945.

- 1. Agreements between the Commonwealth and State Governments.—(i) The 1945 Agreement.—In November, 1945, the Commonwealth Government entered into an agreement with the Governments of the States whereby the Commonwealth Government would provide finance for and the State Governments would undertake the building of housing projects. Tasmania withdrew from the Agreement in August, 1950 and South Australia did not begin to operate under it until July, 1953. The Agreement expired on 30th June, 1956. Features of the 1945 Commonwealth and State Housing Agreement were:—
  - (a) The Commonwealth Government agreed to advance to each participating State the amount expended for the construction of housing projects between 3rd December, 1943, and the date of the Agreement, and the amount required for the State's housing projects during a further period of ten years.
  - (b) Each advance of money was to be repaid with interest thereon in equal annual instalments within a maximum period of 53 years from the date the advance was made, the interest to be at a rate not exceeding that payable in respect of the latest Commonwealth loan at the date of the advance.

- (c) Rents charged were to be economic rents, i.e., the rents were to be sufficient to meet repayments by the State to the Commonwealth of the capital cost of each dwelling with interest and of current outgoings such as the cost of maintenance, administration, rates and taxes and insurance.
- (d) The rental provisions of the Agreement provided for a system of rental rebates, whose basic principle was that a family with an income at the basic wage level did not need to pay more than one-fifth of its income in rent, regardless of the economic rent of the dwelling.
- (e) The Commonwealth Government was to bear three-fifths, and the State concerned two-fifths, of all losses sustained by the States, on an annual basis.

The following table shows the amount of money advanced to each State under the 1945 Agreement:—

1945 COMMONWEALTH AND STATE HOUSING AGREEMENT: ADVANCES TO STATES.

(a) Includes flats.

Initially, houses constructed under the 1945 Commonwealth and State Housing Agreement could be sold to tenants, provided the tenant was able to arrange payment of the full purchase price of the house to the State Authority immediately on sale. Under this arrangement sales to tenants were relatively few. In April, 1955, the Commonwealth and the States entered into a supplementary agreement whereby the State Governments were permitted to sell houses to tenants on terms. These were:—deposit, 5 per cent. of the first £2,000 and 10 per cent. of the balance of the purchase price of the house, the maximum amount of the remaining balance being limited to £2,750 and repayment of the balance to be made over a maximum period of 45 years at an interest rate of 4½ per cent. per annum. Tenants eligible under the War Service Homes Act were entitled to purchase houses built under the Agreement on the terms provided in that Act. The number of houses sold under the Agreement is as follows:—

1945 COMMONWEALTH AND STATE HOUSING AGREEMENT: HOUSES SOLD.

- (a) Tasmania did not operate under the 1945 Agreement.
- (ii) The 1956 Agreement. In 1956, the Commonwealth and the States entered into a new agreement, under which added emphasis was placed on the construction of homes for private ownership. Features of the agreement are:—
  - (a) The Commonwealth Government is to provide finance to the States over a period of five years ending 30th June, 1961, for the erection of housing projects.
  - (b) For the first two years of the agreement, 20 per cent. of the money allocated to each State was advanced to building societies and other approved institutions for lending to private house builders. During the remaining years of the agreement the proportion is to be increased to 30 per cent.
  - (c) The remaining 70 per cent. (first two years 80 per cent.) of the allocation to each State may be used by the States for the erection of houses for either rental or sale. The States determine the type of houses to be erected, their location and the selection of tenants. They also fix the terms of selling.
  - (d) In any one year, the Commonwealth may specify that an amount not exceeding 5 per cent. of the moneys referred to in (c) above be set aside for the erection of houses for serving members of the defence forces nominated by the Commonwealth. The Commonwealth is to provide supplementary advances to the States equal to the amounts set aside by them for this purpose.
  - (e) Each advance of money and interest thereon is to be repaid in equal annual instalments within a maximum period of 53 years from the date the advance is made. Interest on advances made during the years 1956-57 and 1957-58 was the long-term bond rate less one per cent. per annum, i.e., 4 per cent. Interest on advances made during the years 1958-59 to 1960-61 shall be as agreed between the Commonwealth and the States, or, in default of agreement, as determined by the Treasurer of the Commonwealth, but not exceeding the long-term bond rate less three-quarters of one per cent. per annum.

The following table shows progress made under the 1956 Housing Agreement up to 30th June, 1957:—

<sup>(</sup>a) Actual amount available for the Tasmanian State Housing Programme during 1956-57 was £1,775,000. An amount of £175,000 was transferred from the Home Builders' Account to the State Housing Programme in 1956-57, and was repaid to the Home Builders' Account in 1957-58. (b) Includes Service Housing. (c) Fifty per cent. by Commonwealth and 50 per cent. by State. (d) Included in State Housing Programme above. (e) See note (a).

2. Imported Houses.—With the object of supplementing the number of houses being constructed by the building industry within Australia, the Commonwealth Government in 1950 sponsored a plan to import prefabricated houses from overseas. Under the States Grants (Imported Houses) Act 1950, the Commonwealth undertook to pay a subsidy not exceeding £300 per house to assist approved State Housing Authorities to meet the cost of houses brought to Australia from overseas.

Under this plan, 14,016 houses were imported by State Authorities. Of these, 7,613 units were erected under the 1945 Commonwealth and State Housing Agreement on behalf of the State Governments themselves, whilst other houses were erected for governmental authorities concerned with public utilities such as the generation of electricity, railways and water supply.

The Commonwealth Government imported 4,176 houses for the Department of Works and the Snowy Mountains Hydro-Electric Authority. Of the 18,192 houses imported, the United Kingdom supplied slightly more than half, with France, Austria and Sweden the next largest suppliers in that order.

Expenditure by the Commonwealth Government on subsidies to the States importing houses under this plan was as follows: New South Wales, £252,000; Victoria, £1,645,200; Queensland, £703,800; South Australia, £1,173,000; Western Australia, £419,700; Total, £4,193,700. Imports of houses under this scheme ceased in January, 1954.

3. Housing Schemes in Commonwealth Territories.—(i) Northern Territory. In 1946, control of all Government-owned residences in the Territory (excluding those belonging to the Defence Services or Commonwealth Railways or attached to post offices) was vested in

the Administration. The Administration provides houses for rental for its own and other Commonwealth employees. In 1953, a Housing Scheme was inaugurated under which potential house builders may obtain loans of up to £2,750 for the erection of houses, the purchase or extension of existing houses or the discharge of mortgages on houses. Up to 30th September, 1957, 255 loans had been approved. These were for:—new houses, 168; extensions to existing houses and/or discharge of mortgages, 28; purchase of existing houses, 59.

(ii) Australian Capital Territory. The Commonwealth Government, through the Department of Works (construction) and the Department of the Interior (management), provides houses primarily for rental to employees of Government organizations and to persons privately employed in the Australian Capital Territory.

From 1st July, 1945, to 30th June, 1957, 4,407 houses and flats were erected for the Department of the Interior for letting.

Government rental houses may be purchased by tenants and the basis of sale is a minimum deposit of 5 per cent. of the first £2,000 of the purchase price fixed by the Department of the Interior and 10 per cent. of the balance, with a maximum advance by way of mortgage of £2,750. Repayment may be made over a maximum period of 45 years on all types of houses. Interest charged on loans is  $4\frac{1}{2}$  per cent. per annum. More than 1,250 houses have been sold to tenants since 1950.

Loans may be granted by the Commissioner for Housing to enable persons to purchase, erect or enlarge houses in the Territory or to discharge mortgages. Where the Commissioner's valuation of the property concerned does not exceed £2,000 the maximum loan may not exceed 95 per cent. of the valuation. If the Commissioner's valuation exceeds £2,000 the maximum loan is 95 per cent. of the first £2,000 and 90 per cent. of the balance (but in no case can the amount lent exceed £2,750). Repayment may be made over a maximum period of 45 years. The current rate of interest is 5 per cent. per annum. From 1st July, 1949 to 30th June, 1957, 343 loans were granted.

- (iii) Papua and New Guinea. The Housing Loans Ordinance 1953 permits the advance of loans of up to £2,750 to any member of the community for the erection of a house or the purchase or extension of an existing house. The loans are limited to declared township are as and are repayable over a maximum period of 45 years. The effective rate of interest is 5 per cent. per annum. Up to 21st November, 1957, loans totalling £173,250 had been a pproved.
- 4. Other Housing Schemes in the States.—(i) General. In each State, the major Government housing schemes operated by the State Housing Authorities are those provided for under the Housing Agreements between the Commonwealth and State Governments referred to earlier. Other State Government assistance to housing is referred to in the following paragraphs.
  - (ii) New South Wales. The principal schemes operating in New South Wales are:—
    (a) Commission-Financed Advances. Under the Housing Act 1912-55, the Housing Commission is empowered to provide finance to persons to have houses erected on their own land, to purchase existing dwellings, or to effect improvements or repairs to houses. In respect of advances made under the Act prior to 1952, the maximum amount that could be lent was limited to £1,540, repayment of which could be made over a maximum period of 45 years. Interest charged was at the rate of 4½ per cent. per annum. Under this scheme 779 houses were erected. Regulations prescribing the present maximum amount that may be advanced and the limitation on income which may be received by an applicant for a loan have not been

published and at present no advances are being made.

- (b) Rental Housing (other than Housing Agreements.) Upon request by other State Departments, the Housing Commission will erect houses for employees of those Departments, e.g., Education, Agriculture, Water Conservation, etc. These Departments provide the necessary land and funds needed to finance the erection of the houses. Rentals charged are fixed by the Departments in accordance with the salaries of the officers occupying the houses. The number of rental houses erected (other than under the Housing Agreements) is 755.
- (c) Sales Scheme. During 1953-54, the Housing Commission began the erection of 100 houses for sale. Under this scheme, the Commission acted as the construction authority whilst administrative arrangements are carried out by the Rural Bank. Houses are sold on the basis of 10 per cent. deposit with repayment of the balance over a maximum period of 40 years. Construction of all houses has been completed.

(iii) Victoria. In 1956, a Home Finance Trust was established with the object of receiving money from institutions and others in order to make loans for the erection or purchase of houses. Applicants for loans must declare that they intend to use the house as a home for themselves, their family and dependants. Except in special circumstances no loan will be granted if the borrower or wife or husband of the borrower already owns a house in Victoria at the date of the proposed mortgage.

Loans granted will be on the basis of a first mortgage over the house. Loans are not to exceed 95 per cent. of the value of the house and will not be made if the value of the house exceeds £4,500. In the case of purchase the house must not have been erected more than two years before the date of the mortgage. Repayment of loans may be made over a maximum period of 30 years, with interest charges determined by the Trust. At 30th June, 1957, 507 loans totalling £1,340,150 had been made.

(iv) Queensland. In this State there are two housing schemes operating-

- (a) Under the State Housing Acts, 1945 to 1957, the Queensland Housing Commission makes advances to eligible applicants on the security of homes to be erected. A person to be eligible must be the proprietor of a suitable building site, must not already own a dwelling and must undertake to use the completed dwelling as a home for himself and family. The present maximum advances allowable under the Acts are £2,400 for a timber-frame building, £2,500 for a brick veneer and £2,750 for a brick or concrete building. The rate of interest at present chargeable on advances is 51 per cent. per annum. Repayment may be made at the option of the borrower over either a 30-year or a 45-year period. A borrower or purchaser who elects to repay over a 30-year period, who is under 40 years of age, and who has passed a prescribed medical examination, is entitled to free life insurance cover in an amount sufficient to liquidate his indebtedness to the Commission in the event of his death before his loan has been fully repaid, provided that the maximum benefit payable under such insurance cover does not exceed £2,250. The total amount advanced on completed dwellings up to 30th June, 1957, was £16,900,000. The number of dwellings constructed under these Acts up to 30th June, 1957, was 24,906.
- (b) Workers homes are erected by the Queensland Housing Commission under the Workers' Homes Act 1919-1953. These homes are intended for persons who are not the owners of building sites, and applications are confined to persons with a net annual income for taxation purposes of not more than £800. The Housing Commission builds the home to suit the applicant's needs, on Crown Land, or on land purchased for the purpose, which is then converted to perpetual leasehold tenure. An applicant pays a deposit of 5 per cent. of the purchase price of the home and the balance by monthly rent over a term of 30 to 45 years. The rate of interest is 5½ per cent. per annum. The number of houses constructed under this Act up to 30th June, 1957, was 2,344.

(v) South Australia. In South Australia, the Housing Trust builds houses for both rental and sale and, in addition, administers an emergency dwelling scheme for the South Australian Government. From July, 1946 to 30th June, 1957, 28,141 houses were erected by the Trust in both city and country areas.

- (a) Rental Houses. The majority of the Trust's rental houses are of brick or stone construction and are built in pairs in housing groups. The Trust has a large number of flats for rental, tenancy of which is restricted to married couples and others without young children. Specially designed flats for pensioners and other elderly persons of limited means are also built. Rents charged for accommodation are generally based on the overall cost of construction, and are likely to vary not only according to the size of the dwelling but also as to date of erection. As at 1st November, 1957, the rents of 5-roomed houses (i.e., 3 bedrooms) ranged from £1 17s. 6d. a week for houses of an older type to £3 5s. a week for houses then being completed. Factors taken into consideration when allotting rental houses include date of application, housing need and suitability of tenant. Persons with high incomes are asked to consider purchasing their own homes.
- (b) Sales Scheme. Houses built under this scheme, which was inaugurated in 1946, are of solid or timber-frame construction. More than 12,000 houses have been completed in both metropolitan and country areas since the scheme began. When houses are sold the usual practice is for the Trust to recover the total cost of the house and land by the purchaser paying the total amount in cash or (as is usually the case) paying a deposit (which varies according to the type of house—at present £300 for a timber-frame

house and £600 for a 5-roomed brick house—and the purchaser's ability to pay) and raising the balance by way of mortgage. In cases where the deposit and first mortgage are insufficient, the Trust may advance the balance by way of a second mortgage, the repayment term of which is a maximum of 30 years, interest being at the rate of 5½ per cent. per annum. In 1956, the Trust began the erection of houses, which may be of solid or timber-frame construction or a mixture of both, for individuals on their own land. Houses are built by contract under the Trust's supervision. Prices for building and supervision of the standard houses covered by the scheme in late 1957 ranged from £2,950 for a 2-bedroom brick house to £4,700 for a 6-roomed (2-storey) house.

(c) Rural Housing. In order to assist primary producers, the Trust will erect houses on the applicant's own land for his own use or that of his employees, either using local materials or transporting prefabricated houses to the site. At the end of 1957, prices for houses erected on level sites within 100 miles of Adelaide ranged from £1,875 for a 2-bedroom minimum type timber house to £2,560 for a 3-bedroom, asbestos cement sheeted, timber house.

(vi) Western Australia. Under the State Housing Act, 1946–1956 the State Housing Commission has two types of home ownership schemes in operation. These are—
(a) Freehold scheme on a mortgage or contract of sale basis; and (b) leasehold scheme on a perpetual Crown lease.

Under both schemes, the Housing Commission builds the houses on a contract basis—with the freehold scheme on land owned by the applicant or the Commission; with the leasehold scheme on land dedicated by the Crown for the purposes of the State Housing Act. With each scheme, the maximum loan granted is £2,500. Under the mortgage scheme a deposit of not less than 10 per cent. is required, but with the contract of sale or leasehold scheme a deposit of less than 10 per cent. may be accepted at the discretion of the Commission. The rate of interest chargeable in both cases is, at present, 5½ per cent. per annum. The repayment of the balance may be made over a maximum period of 45 years. An applicant's gross income is at present not to exceed £1,078 per annum plus £25 per year for each dependent child.

A second mortgage scheme also exists. This provides a maximum loan of £1,000 under the same conditions as above. The loan on a second mortgage, however, must not exceed the amount advanced under the first mortgage. The applicant has still to provide at least 10 per cent. of the cost of the house, which is not to exceed £3,000.

The number of houses completed in the post-war years under the above Act (to 30th June, 1957) was—leasehold, 1,966, freehold, 804, assistance by second mortgage, 273.

(vii) Tasmania. The Agricultural Bank is authorized under the terms of the Homes Act 1935 to make loans to eligible persons for home building on the security of a first mortgage over the property. A person to be eligible must be married or be about to marry or have dependants for whom it is necessary to provide a home. At present, there are no statutory limitations as to the maximum income which an eligible applicant may receive. However, it is the policy of the Bank not to make loans to persons who are well able to provide houses for themselves. The maximum amount which the Bank can lend at present is £3,300 on homes built in proclaimed brick areas, and £3,000 on timber houses. The rate of interest at present charged is 5½ per cent. per annum. As funds now coming to the Bank for the purposes of the Homes Act are provided under the 1956 Housing Agreement, the period of repayment is limited to 31 years.

5. War Service Homes.—The provision of War Service Homes is a function of the War Service Homes Division of the Department of National Development, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes.

The War Service Homes Act 1918–1956 is a measure for the provision of homes for Australian ex-servicemen who served during the 1914–1918 War or the 1939–1945 War and, subject to the statutory provisions of the Act, to persons with service in Korea or Malaya. Provision is made also for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person, as the case may be, as joint tenants.

The maximum amount of loan or advance which may be granted under the Act is £2,750. The period of repayment may be approved up to 45 years. In the case of a widow or widowed mother of an Australian ex-serviceman the period may be extended to a maximum of 50 years.

The War Service Homes Division does not provide homes for occupation on a purely enancy basis.

From the inception of operations under the War Service Homes Act to 30th June, 1957, (figures in parentheses indicate cases where eligibility has been established as a result of service during the 1939-45 War or in Korea or Malaya), 172,394 (121,272) applications were

approved; 64,962 (41,933) homes were built, or assistance to build them was given; 68,627 (52,935) homes were purchased; and 17,953 (14,377) mortgages were discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1957, was 151,542, including 109,245 to persons who served during the 1939-45 War or in Korea or Malaya. In addition, the Division had approved 14,406 transfers and resales, of which 5,813 were in respect of persons whose eligibility had been established as a result of service during the 1939-45 War or in Korea or Malaya. Applications approved under the Commonwealth-State Housing Agreements of 1955 and 1956 numbered 1,142 (1,076) and homes purchased 945 (894).

During 1956-57, 13,959 (13,268) applications were approved; 4,187 (4,047) homes were built or assistance to build them was given; 5,813 (5,544) homes were purchased; and 1,227 (1,172) mortgages were discharged. The total number of homes provided during the year was 11,227 (10,763). Transfers and resales approved numbered 1,150 (1,019). Applications approved under the Commonwealth-State Housing Agreements of 1955 and

1956 numbered 561 (514) and homes purchased 519 (483).

At 30th June, 1957, 2,926 homes, including 709 group homes, were in course of construction; 1,182 contracts, of which 386 were for group homes, had been let but work had not started; and 557 tenders, including 10 for group homes, had been called but not finally dealt with. The majority of these homes are being provided for persons who served during the 1939-45 War.

The total capital expenditure from inception to 30th June, 1957, was £259,657,447, including £30,170,898 for 1956-57. Receipts from inception to 30th June, 1957, amounted to £107.644,245, including £12,690,264 during 1956-57. Of the total receipts, £54,727,682 had been paid to the National Debt Sinking Fund, including £5,660,230 for 1956-57.

At 30th June, 1957, the total amount of insurances in force, including cover notes, amounted to £321,201,766. During 1956-57, the premium income amounted to £239,305, and expenditure from the War Service Homes Insurance Trust Account to £163.074.

At 30th June, 1957, arrears of instalments outstanding amounted to £357,192, or 0.35 per cent. of the total instalments due.

- 6. Other Forms of Government Assistance.—(i) General. In addition to the assistance given to housing as outlined above, the Commonwealth and State Governments, through advances by Government Banks and the exercise of certain guarantees of the operations of Co-operative Terminating Building Societies by State Governments, further assist in making finance available for the erection and purchase of houses.
- (ii) Government Banks. The terms and conditions governing the making of advances may be altered from time to time; consequently, no attempt has been made to tabulate them. However, the usual loan for a house of solid construction (brick, etc.) is generally between £2,250 and £2,500. The average loan for a timber-frame house is £2,000. Interest rates charged average 5½ per cent. per annum. In some institutions this may be changed, usually after from 5 years to 10 years from the date of the loan. The maximum period of repayment ranges from about 20 years for timber-frame houses to 30 to 40 years for a house of solid construction.
- (iii) Building Societies. There are some 1,500 building societies in Australia, over 95 per cent. of which are of the terminating type. Most of the terminating societies are in New South Wales and Victoria, where the movement derives its strength from State legislation, under which the Government of the State guarantees loans made to the societies. Terminating societies also operate in Queensland, where legislation has recently been introduced to provide a government guarantee for loans made to them, and in Western Australia and Tasmania. A few terminating societies of the Starr-Bowkett type, an earlier and now less popular form of terminating society, operate in all States.

In addition to the terminating societies there are a number of permanent building societies operating in all States under State legislation. State Governments do not guarantee the borrowings of these societies, except in Western Australia, where the Housing Loan Guarantee Act, 1957 provides guarantees in respect of loans made by approved lending institutions, including permanent building societies.

#### § 3. Statistical Summary—New Building.

1. General.—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which exclude the numbers of persons working on owner-built houses. In general, they relate to new building only, and data on alterations, additions, renovations and repairs to buildings are excluded, because of the difficulty in obtaining complete lists of persons who engage in these operations. Figures for houses exclude converted military huts, flats and shop dwellings. Some houses built on farms are excluded but these do not affect the figures materially.

These statistics are available for each quarter from the September quarter, 1945.

More detailed information on building activity may be found in the Quarterly Bulletin of Building Statistics.

The following definitions of terms used in this section are necessary for interpretation of the data presented:—

Owner-built. An "owner-built" house is one actually erected or being erected by the owner or under the owner's direction without the services of a contractor who is responsible for the whole job.

Contract-built. Includes the operations of all building contractors and Government instrumentalities which undertake the erection of new buildings.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, it is probable that the classifications made by informants are not entirely uniform.

Completed. A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classifications made may not be entirely uniform.

Under Construction. A building under construction at the end of a period is so classified regardless of whether construction was actively proceeding on that particular date.

Employment. Figures relate to persons actually working on the jobs of contractors who undertake the erection of new buildings and of Government instrumentalities which erect new buildings on their own account. They include persons actually engaged on alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and instrumentalities. The figures include working principals and their employees, men working as or for sub-contractors, and men temporarily laid off on account of weather.

Contractors are asked to give details of the persons employed on a specified day but, because of frequent movement between jobs and because some persons (such as electricians, etc.) may work on several jobs which are under construction simultaneously, some duplication may occur.

The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance. Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. New Houses.—(i) Commenced, Completed and Under Construction, 1952-53 to 1956-57. The next table provides a summary of the number of new houses commenced, completed and under construction in each State and Territory for the years 1952-53 to 1956-57.

(a) Excludes Northern Territory prior to 1954-55.

3. New Flats.—The figures in the foregoing tables, except those for the Northern Territory, do not include particulars of new flats. The summary below shows the number of new flats commenced, completed and under construction in each State and Territory for the years 1952-53 to 1956-57. It should be noted: (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted.

### § 4. Census Dwellings.

1. Number of Dwellings.—The following table shows the number of occupied and unoccupied dwellings in the urban and rural areas of Australia at the Census of 30th June, 1954. (For definitions of "urban" and "rural" see para. 4, p. 569). As explained therein, the boundaries of the Metropolitan Urban and other divisions of State differ from census to census, and consequently accurate comparison cannot be made between figures for corresponding divisions. Moreover, the inclusion in the Other Urban Division in 1954 of the larger towns not separately incorporated has further reduced comparability. These factors should be borne in mind when referring to tables in this section showing divisions of State.

Occupied dwellings are classified into private and other dwellings (see para. 2, p. 667, for definitions of "private" and "other" dwellings). The term "unoccupied dwellings." is not synonymous with vacant houses and flats available for occupancy, but refers mainly to "week-end", holiday and other dwellings whose usual occupants were temporarily absent on the night of the Census; newly-completed dwellings awaiting occupancy are also included:

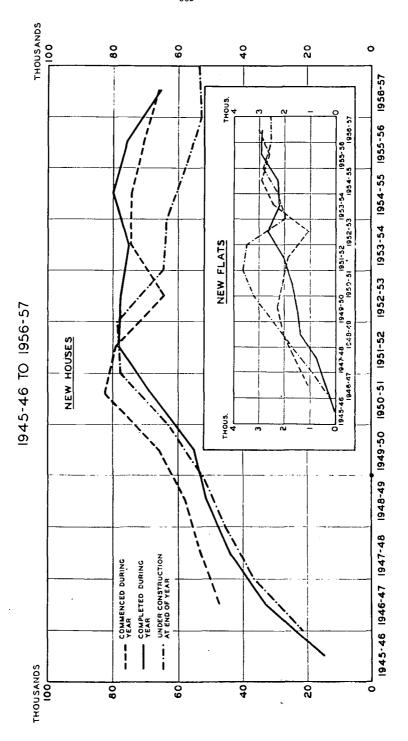

The total number of occupied dwellings in Australia at the Census of 30th June, 1954, showed an increase of 24.8 per cent. over the corresponding figure for the 1947 Census, compared with an increase of 18.6 per cent. in population. Occupied private dwellings increased by 25.1 per cent. and occupied dwellings other than private by 7.8 per cent. At the 1954 Census, 98.4 per cent. of the total occupied dwellings in Australia were private dwellings, compared with 98.2 per cent. in 1947. Proportional increases in total occupied dwellings over 1947 figures in each State and Territory were:—New South Wales 22.3 per cent., Victoria 25.3 per cent., Queensland 24.7 per cent., South Australia 27.7 per cent., Western Australia 30.5 per cent., Tasmania 26.1 per cent., Australian Capital Territory 96.9 per cent., and Northern Territory 27.1 per cent.

Unoccupied dwellings increased by 139 per cent.

The numbers of occupied dwellings in the External Territories at the 1954 Census were as follows:—Norfolk Island, 310; Papua, 1,605; Trust Territory of New Guinea, 3,098; Trust Territory of Nauru, 99.

2. Class of Dwelling.—The following table shows the number of the various classes of occupied dwellings in the Metropolitan Urban, Other Urban and Rural Areas of Australia at the Censuses of 1947 and 1954. Definitions of the several classes of dwellings are as follows:—

Private dwellings comprise private houses (including sheds, huts, garages, etc. used for dwelling purposes), shares of private houses, flats, and rooms, apartments, etc. In previous censuses, dwellings returned on the Schedules as sheds, huts, garages, etc. were included with private houses. For the Census of 1954, particulars of these dwellings were tabulated separately, but have been included with private houses to preserve continuity with past census results. Separate particulars were shown in the 1947 Census publications for private houses which were shared by two or more family units and for which only one Householder's Schedule was received, but in 1954 these dwellings were included with private houses.

Share of private house is a portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was furnished.

Flat is part of a house or other building which can be completely closed off and which includes both cooking and bathing facilities.

Other private dwelling is an apartment, room(s), etc., which is part of a building, but which is not a self-contained unit.

Dwellings other than private include hotels, boarding houses, lodging houses, hostels, hospitals, educational, religious and charitable institutions, defence and penal establishments

It is desirable when considering the question of housing to exclude those forms of accommodation which do not represent the normal housing conditions associated with family life, and the statistics which follow relate mainly to private dwellings only.

6875/57.-21

(c) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received.

Note.—Minus sign (-) denotes decrease.

3. Population According to Class of Dwelling, etc.—The following table shows the number of the various classes of occupied dwellings at the Censuses of 1947 and 1954, together with the number of inmates therein.

Of the total population in 1954, 92.52 per cent. were living in private dwellings—houses, flats, apartments, rooms, etc.—whilst 672,168 persons, or 7.48 per cent. of the population, spent the night in other than private dwellings, or on ships, trains or aircraft or were camping out.

<sup>(</sup>a) Includes shared private houses for which only one Householder's Schedule was received.

(b) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received.

(c) Shipping, railway and air travellers.

Wood has been the most extensively used material in the construction of the outer walls, followed by brick and fibro cement, and in 1954 the respective proportions for Australia for occupied private dwellings for which the material of the outer walls was specified were—wood, 44.4 per cent., brick, 33.5 per cent. and fibro cement, 12.7 per cent. The latter has shown a most spectacular increase since 1933, when the proportion was 1.6 per cent. (23,696 dwellings), compared with 6.3 per cent. in 1947 (117,631 dwellings). The proportions of both brick and wooden dwellings have shown small decreases since 1947. The numbers of dwellings of all other materials except fibro cement and concrete have decreased. Brick dwellings in 1954 represented 51.5 per cent. of all occupied private dwellings in the Metropolitan Urban Divisions, whilst in the Other Urban and Rural Divisions wooden dwellings predominated, the percentages of such dwellings being 60.0 per cent. and 59.4 per cent. respectively.

<sup>4.</sup> Occupied Private Dwellings.—(i) Material of Outer Walls. In the following table, occupied private dwellings are classified according to the material of which the outer walls were built.

## OCCUPIED PRIVATE DWELLINGS CLASSIFIED ACCORDING TO MATERIAL OF OUTER WALLS, AUSTRALIA, 1947 AND 1954.

(a) See letterpress on p. 664 regarding comparability as between Censuses.

Note.-Minus sign (-) denotes decrease.

(ii) Number of Rooms. For Census purposes, the kitchen and any permanently enclosed sleep-out were included in the number of rooms in the dwelling, but the bathroom, pantry, laundry and storehouse were excluded unless generally used for sleeping.

Excluding houses with rooms unspecified, private houses of four, five and six rooms represented 78.3 per cent. of the total number of private houses in Australia at 30th June, 1954, compared with 79.2 per cent. in 1947, and three-quarters of the total increase in the number of private houses since 1947 consisted of houses containing these numbers of rooms. Houses of seven and more rooms also showed substantial increases.

<sup>(</sup>a) Includes kitchen and permanently enclosed sleep-out but does not include bathroom, pantry, laundry or storehouse, unless generally used for sleeping. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received. (d) See letterpress on p. 664 regarding comparability as between Censuses.

(iii) Number of Inmates. A classification of occupied private dwellings according to the number of inmates is shown in the following table.

For Australia as a whole, private houses with four inmates were most numerous, followed very closely by those with two and three inmates in that order.

An increase of nearly 51 per cent. (149,348 houses) in the number of private houses occupied by two inmates brought this group from third position in 1947 to second position in 1954. Houses with two inmates in 1954 constituted 22 per cent. of the total number of occupied private houses in Australia, about the same proportion as for houses with four inmates. In 1947, houses with two inmates constituted 18 per cent. of the total and houses with four inmates 21 per cent. Houses with three inmates constituted 21 per cent. at both the 1947 and 1954 Censuses. The average number of inmates in private houses was 3.69 in 1954, compared with 3.91 in 1947.

The number of private houses which were shared, and for each share of which a separate Householder's Schedule was furnished, increased slightly between 1947 and 1954, but the average number of inmates therein decreased from 2.87 to 2.71. Separate particulars of shared houses for which only one Householder's Schedule was furnished were not compiled in 1954. These particulars are included with private houses in all tables in this section.

Flats and other classes of private dwellings increased in both numbers and total inmates, but the average number of inmates fell from 2.84 to 2.58 for flats and from 2.18 to 2.11 for others.

In flats those with two inmates and in other classes of occupied private dwellings those with one inmate predominated.

(iv) Nature of Occupancy. At the 1954 Census, 52.5 per cent. of occupied private houses in Australia for which particulars were supplied were occupied by owners, 16.8 per cent. by purchasers by instalments, 28.1 per cent. by tenants, and 2.6 per cent. by others. The corresponding percentages in 1947 were—owners, 50.5 per cent; purchasers by instalments, 9.0 per cent; tenants, 37.6 per cent; and others, 2.9 per cent. Owner-occupied houses in Australia increased by 33.4 per cent. between 1947 and 1954, and those being purchased by instalments by 139.3 per cent., the increase in these two groups combined being nearly 50 per cent., while tenant-occupied houses decreased by 4.1 per cent.

In the Metropolitan Areas, 70.5 per cent. of all occupied private houses were either owner-occupied or being purchased by instalments, as compared with 69.0 per cent. in the Other Urban areas, and 66.9 per cent. in the Rural Areas.

Tenants occupied by far the greater proportion of flats and other private dwellings.

(v) Weekly Rent. (a) All Tenanted Private Dwellings. The following table shows tenanted private dwellings in the Metropolitan Urban, Other Urban and Rural Areas of Australia classified according to weekly rent (unfurnished).

Information tabulated concerning rents was restricted to the actual rent paid per week by tenants for unfurnished private dwellings. Particulars of rents shown in the following tables are therefore on an *unfurnished* basis. Dwellings shown as rent "Not Stated" include those whose rents were shown on Householders' Schedules on a furnished basis, and those whose rents were not applicable (e.g., for shop and dwelling combined). In this section information on "tenanted private dwellings" relating to the 1954 Census excludes particulars of dwellings occupied by "Tenants" (Governmental Housing) in each State, i.e., those who furnished answers in response to the instruction on the Census Householder's Schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'". For the Australian Capital Territory and the Northern Territory, particulars of all tenanted private dwellings are included. Particulars for the 1947 Census relate throughout to all tenanted private dwellings.

<sup>(</sup>a) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received.

(b) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received.

(c) See letterpress on p. 664 regarding comparability as between Censuses. (d) These figures were compiled from the answers furnished in response to the instruction on the Householder's Schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'".

<sup>(</sup>a) The figures shown for 1954 exclude dwellings occupied by "Tenants" (Governmental Housing), except those in the Northern Territory and the Australian Capital Territory.

(b) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received.

(c) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received.

(d) Includes "other private dwellings" not shown in the table.

(e) See letterpress on p.664 regarding comparability as between Censuses.

At the 1947 Census, nearly 83 per cent. of the tenanted private houses in Australia shown in the table above had weekly rentals of between 10s. and 35s.; at the 1954 Census, only 61 per cent. were within these limits. In 1947, 6 per cent. had rentals below 10s. and 11 per cent. above 35s. In 1954, 3 per cent. had rentals below 10s. and 36 per cent. above 35s. At the 1947 Census, 88 per cent. of the flats shown for Australia had rentals of between £1 and £3 a week, 5 per cent. were below this range, and 7 per cent. above it. At the 1954 Census, the corresponding proportions were:—74 per cent., 2 per cent. and 24 per cent. Dwellings whose rents were not stated were excluded in obtaining these proportions.

The average rentals shown in this table for all tenanted private dwellings in Australia at the 1954 Census were 45 per cent. higher than in 1947 (42 per cent. higher for houses and 38 per cent. higher for flats). Metropolitan rentals in 1954 were higher by 40 per cent., 35 per cent. and 38 per cent., respectively, than in 1947.

In all such comparisons as these, the difference in basis between the 1947 and 1954 Censuses, referred to in the opening paragraph above, and also the differences in the Urban and Rural divisions (see p. 664), should be borne in mind.

(b) Tenanted Private Houses of Three to Six Rooms. The comparisons in the following table, restricted to houses of three to six rooms, with outside walls of wood, brick or stone, are of particular interest, since this group comprises more than three-quarters of all tenanted private houses in Australia.

# AVERAGE WEEKLY RENT(a) PER ROOM OF TENANTED PRIVATE HOUSES, THREE TO SIX ROOMS, WITH WALLS OF WOOD, BRICK OR STONE, AUSTRALIA, 1947 AND 1954.

	5 3	4 5	3 4	4 9	7 0.	6 5	; 4 7	6 7	1 10

(a) Rents relate to tenanted private houses (one family) in 1947 and to tenanted private houses, excluding those occupied by "Tenants" (Governmental Housing) in each State, in 1954.

The average rent of 3- to 6-roomed tenanted private houses of wood, brick or stone increased by about 40 per cent. between 1947 and 1954 (wood by 46 per cent. and brick by 34 per cent.). The average for 3-roomed tenanted houses of wood, brick or stone increased by about 53 per cent., 4-roomed houses by about 42 per cent., 5-roomed houses by about 39 per cent., and 6-roomed houses by 33 per cent. The increases in respect of houses of wood were higher than those for brick or stone in each case. The increases in the Metropolitan Areas were relatively lower than for Australia as a whole.

- (vi) Date of Building. The numbers of occupied private dwellings in Australia at the Census of 30th June, 1954, classified according to date of building, were as follows:—Built before 30th June, 1947, 1,758,448; 1st July—31st December, 1947, 19,742; 1948, 60,360; 1949, 63,897; 1950, 78,965; 1951, 85,852; 1952, 91,712; 1953, 88,467; 1954, 44,725; built after 30th June, 1947 but particular year not stated, 19,641; not stated 31,612; total, 2,343,421.
- (vii) Facilities, etc. At the 1947 Census, a detailed question was asked concerning facilities, and a summary of the information obtained therefrom was published on p. 571 of Official Year Book No. 38. The question asked at the 1954 Census was much less detailed, and was designed partly to clarify replies to the question on class of dwelling. Information obtained in reply to this question and to that on farm dwellings in 1954 was not compiled.

### CHAPTER XIX.

#### LOCAL GOVERNMENT.

#### § 1. Introduction.

1. Local Government Authorities.—In each State of the Commonwealth, there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local government authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers.

While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc., differ considerably.

The areas over which local government bodies exercise general control, numbering 914, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, municipalities and road districts; and in Tasmania as cities and municipalities. In New South Wales, some local government authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g., the county councils. Within shires, there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia and the Commonwealth Territories, practically the whole of Australia comes within local government jurisdiction.

The financial statistics in § 2 following are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

- 2. Semi-Governmental Authorities.—In addition to local government authorities, a large number of authorities have been set up to control specific activities, which are often identical with some of those performed by either, or both, of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g., roads and bridges, or water and sewerage, or electricity and irrigation, or harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority.
- In §§ 3 to 7, which deal with debt, roads and bridges, water supply and sewerage, harbours, and fire brigades, particulars are included of the more important of these authorities which operate within the range covered by this chapter.
- 3. Roads, Bridges, etc.—The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a government department whose duties relate to the construction, reconstruction and maintenance of "main" and "developmental" roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Although roads and bridges constructed and maintained directly by the government or by the central road authority do not properly come under the heading of "Local Government", they have been included in this chapter for the

sake of convenience. Owing to difficulty in obtaining complete particulars of receipts and expenditure by the various local governing bodies in respect of roads under their control, the details of receipts and expenditure given in § 4 are those of central governments only, relating either to the supervisory board or commission in the State or to direct activities of a department. In § 2, some information is given of the revenue and expenditure of local government authorities in respect of roads.

- 4. Water Supply and Sewerage.—In the cities of Sydney and Melbourne, the control of water supply and sewerage is in the hands of special boards, while in Adelaide and Perth these services are under the direct supervision of government departments. In most of the other cities and towns, the municipal councils, or, in some cases, water trusts, are the controlling bodies which either construct the works out of their own resources or take them over after they have been constructed by the government.
- 5. Harbours.—The majority of the harbours in Australia are managed by boards, the members of which are either elected by persons interested, or are appointed by the government. In a few instances, however, they are directly controlled by the government.
- 6. Fire Brigades.—In all the States, the management of fire brigades is undertaken by boards. These boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the government. Occasionally volunteer or country fire brigades are represented.
- 7. Other Local or Semi-Governmental Activity.—The activities referred to above are not the only forms of local or semi-governmental undertakings. There are others, the most important being tramways and omnibus services, and electricity and gas undertakings, which are not dealt with in this chapter, except to the extent that they are represented in the finances as shown in the following section. Chapter XI.—Transport and Communication contains information on municipal transport services, and Chapter VIII.—Electric Power Generation and Distribution deals with the various types of electricity undertakings in each State. In addition, particulars of municipal electricity and gas undertakings, although not shown separately, are included in the relevant sections in Chapter VII.—Manufacturing Industry.

### § 2. Local Government Authorities.

1. New South Wales.—For purposes of local government, the whole of the Eastern and Central land divisions and a small portion of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which embrace important towns). At the end of 1954, the area incorporated was 184,000 square miles, or nearly three-fifths of the total area of the State.

All local government authorities in the State are subject to the general provisions of the Local Government Act.

Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g., electricity, water, sewerage. There were 38 county councils and the Grafton and South Grafton Water Board at 31st December, 1954.

- 2. Victoria.—Local government is established throughout the State, the various divisions being termed cities, towns, boroughs or shires. The only unincorporated areas are French Island (42,000 acres) in Westernport Bay, Julia Percy Island (650 acres), off Port Fairy, and Tower Hill (1,350 acres), adjacent to the Borough of Koroit. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act.
- 3. Queensland.—The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under the Local Authorities Act 1902 and its amendments.
- 4. South Australia.—The settled portion of South Australia is incorporated, being mostly under municipal corporations in the larger cities and towns, and district councils in the agricultural areas.
- 5. Western Australia.—In this State, local government is carried on by means of municipalities and district road boards, the whole of the State being so incorporated.
- 6. Tasmania.—The whole State is divided into municipal districts, Hobart and Launceston being incorporated as cities under separate Acts.

7. Area, Population, Dwellings and Value of Ratable Property.—The area, population, dwellings and value of ratable property in the incorporated areas of each State are shown in the following table. The valuations relate to ratable property only and exclude Government and other non-ratable property, whose value in the aggregate is considerable. In this table, particulars of dwellings are in accordance with the definition used in the 1954 Census, and are compiled from information collected on the Census Schedules. For the purpose of the Census, a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide meaning and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include "week-end" and holiday dwellings and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

(h) Municipalities—Year ended 31st October, 1955; Road Districts—Year ended 30th June, 1955.

<sup>8.</sup> Finances.—(i) General. The following tables show the latest available financial statistics for local government authorities. The figures relate to the year 1954-5, except for New South Wales, where they relate to the year 1954 and for Queensland, where they relate to the year 1953-54.

(ii) Ordinary Services. In the returns of revenue and expenditure for 1954-55 in the following table, the proceeds from loans and expenditure thereof have been excluded. The financial operations of business undertakings controlled by the various local government authorities are given in the next paragraph. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

#### § 3. Local and Semi-Governmental Authorities' Debt.

- 1. General.—Statistics of local and semi-governmental debt for the years 1938-39 and 1952-53 to 1955-56 are given in the following paragraph. The information covers all local government authorities and those semi-governmental authorities responsible for the provision of the following services:—
  - New South Wales. Water Supply, Sewerage and Drainage, Electricity Supply, Fire Brigades, and Banking. County Councils are included among these authorities.
  - Victoria. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity and Gas Supply, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, Housing, and Miscellaneous.
  - Queensland. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Electricity Supply, Fire Brigades, Universities, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.
  - South Australia. Irrigation and Drainage, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, and Miscellaneous.
  - Western Australia. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), and Housing.
  - Tasmania. Harbours, Electricity Supply, Fire Brigades, Transport, and Housing.

A detailed list of the authorities included is shown in Finance, Bulletin No. 47, 1955-56.

2. Local and Semi-Governmental Authorities' Debt.—The following table provides a summary of new money loan raisings, provisions for debt redemption, debt outstanding and interest payable by local and semi-governmental authorities for the year ended 30th June, 1956. For greater detail see Finance, Bulletin No. 47, 1955-56.

Annual Interest Payable(a)	(c)	17,314	2,410	3,898	1,583	2,756	(c)

<sup>(</sup>a) Includes debt or interest payable in London and New York. The former is expressed in United Kingdom currency, the latter is payable in dollars which have been converted at the rate of 4.8665 dollars to £1. (b) Included in debt figures above. (c) Not available.

In this and the following tables, debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalized and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalized), trade creditors, amounts held in trust and other debts which are to be repaid in less than one, year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised to repay indebtedness to the Government, and interest capitalized. Loans raised and redeemed within the year, increases in overdrafts and loans raised for conversion or redemption of existing debt are

excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

In the following table, a summary is given of new money loan raisings, provisions for the redemption of debt and debt outstanding of local and semi-governmental authorities for the years 1938-39 and 1952-53 to 1955-56.

### § 4. Roads and Bridges.

1. Commonwealth Government Grants.—The following table shows the allocation, under the several Commonwealth Aid Roads Acts, to the States for road construction, maintenance, repair and other works connected with transport for each of the years 1938-39 and 1950-51 to 1955-56, and to the Commonwealth for expenditure on the construction and maintenance of strategic roads and for the promotion of road safety practices for each of the years 1950-51 to 1955-56. See also Chapter XXI.—Public Finance, and Finance bulletins.

ROAD CONSTRUCTION, MAINTENANCE, ETC.: GRANTS UNDER THE COMMONWEALTH AID ROADS ACTS.

(£'000.)

1956	 7,282	4,660	5,097	2,976	5,178	1,326	950	27,469

(a) Allocation for expenditure on the construction and maintenance of strategic roads and the promotion of road safety practices. (b) Includes £5,000,000 paid into the Commonwealth Aid Roads (Supplementary) Trust Account to be expended on grants to the States for roads purposes in subsequent years.

2. New South Wales.—(i) General. A central road authority, known as the Main Roads Board, was created by legislation in 1925 for the purpose of providing improved and uniform standards of construction, reconstruction and maintenance of the principal roads of the State and to administer government subsidies for works on those roads. Subsequently, the Main Roads administration was reorganized as a separate department under the control of a Commissioner. The activities of the Department of Main Roads embrace works on main and developmental roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system.

Public roads, except those within the City of Sydney, may be proclaimed as main roads on the recommendation of the Commissioner for Main Roads, who takes into consideration the representations made by the councils concerned, availability of funds for construction and maintenance purposes, and the value of the roads as connecting links between centres of population or business. The classes of main roads are (i) the State Highways which form the principal avenues of road communication throughout the State and connect with similar avenues in other States; (ii) Trunk Roads, which, with the State Highways, form the framework of a general system of intercommunication throughout the State; (iii) Ordinary Main Roads, which provide a network of roads connecting towns and important centres of population with the State Highways and Trunk Roads and with each other. In addition to the Main Roads, there are also (i) Secondary Roads (in the County of Cumberland) which carry a substantial volume of through traffic and, thereby relieve neighbouring main roads of traffic, and (ii) Developmental Roads which help to develop country districts.

In the County of Cumberland, which for the purposes of the Main Roads Act is deemed to include the City of Blue Mountains and small sections of other councils' areas on the boundary of the County of Cumberland, the full cost of road and bridge construction is paid from the funds of the Department of Main Roads. The Councils contribute towards the cost at the rate of ½d. in the £ on the unimproved value of ratable property. The rate payable in respect of lands used principally for primary production is one-half the rate levied on other lands. In country districts, the Department meets the full cost of road and bridge works on state highways; the full cost of bridge works and three-quarters of the cost of road works on trunk roads; and three-quarters of the cost of bridge works and two-thirds of the cost of road works on main roads. The cost of constructing developmental roads and works is borne in full by the Department of Main Roads, but local Councils are required to maintain them in a satisfactory condition. The Department of Main Roads meets half the cost of works on secondary roads.

(ii) Length of Roads. (a) Proclaimed Roads. The following table shows lengths of proclaimed roads at 30th June, 1956, according to class of road:—

PROCLAIMED ROADS, NEW SOUTH WALES: LENGTHS, 30th JUNE, 1956.

(a) Metropolitan area.

During 1955-56, 62 miles of new developmental roads were proclaimed and 158 miles were removed from the list of proclaimed roads. There were no new main roads proclaimed during the year.

The length of main and secondary roads maintained by the Department of Main Roads at 30th June, 1957 (excluding the Western Division) was 2,979 miles (17 per cent.), while the length maintained by councils was 14,872 miles (83 per cent.). The proportions of the several classes of main roads maintained by the Department and councils respectively were:—State highways, 45 per cent., 55 per cent.; trunk roads, 2 per cent., 98 per cent.; ordinary main roads, 6 per cent., 94 per cent. Secondary roads were wholly maintained by councils. In the County of Cumberland (the metropolis and adjoining areas), the Department maintained 56 per cent. of the roads (516 miles).

- (b) Composition of Roads. In 1956, the total length of all roads in New South Wales was estimated at 125,040 miles, including 8,645 miles in the Western Division. The lengths of roads, according to their composition or nature, were as follows:—cement concrete, 404 miles; asphaltic concrete, 200 miles; tar or bituminous macadam, 4,684 miles; surface water-bound macadam, 5,440 miles; water-bound macadam, 1,794 miles; gravel or crushed rock, 39,550 miles; formed only, 27,281 miles; cleared or natural surface only, 45,687 miles.
- (iii) Main Roads Department. (a) General. Progress has continued with the implementation of the Main Roads Department plan for main road development in the metropolis and the balance of the County of Cumberland. The plan has been incorporated in the County of Cumberland Planning Scheme approved by Parliament under the Local Government (Amendment) Act 1951. Detailed planning of the Newcastle and District Arterial Roads System is well advanced and some sections of the system have already been constructed. Surveys and designs have been advanced in the planned Wollongong-Port Kembla District Main Roads System.

In addition to its construction and maintenance work on roads, the Main Roads Department is engaged on a scheme for widening metropolitan roads. The acquisition of land required to implement approved schemes is proceeding.

During 1956-57, 67 new bridges were constructed. In addition, 45 concrete box culverts having a waterway width of 20 feet or more were completed. Major bridge works under construction include steel and concrete bridges over Middle Harbour at the Spit, Sydney (length 745 feet), George's River at Liverpool (length 912 feet), the Karuah River at Karuah (length 716 feet), the Wallambo River at Nabiac (length 668 feet), the Macleay River at Kempsey (length 917 feet) and the Wallambo River to connect Forster and Tuncurry (length 2,000 feet).

(b) Receipts and Payments. The funds of the Department of Main Roads are derived principally from taxation of motor vehicles, contributions by the Commonwealth Government under the Commonwealth Aid Roads Acts (see Chapter XXI.—Public Finance, for some particulars of the basis and distribution of grants under these Acts and para. 1 of this section for particulars of the amounts allocated in recent years), contributions by municipal and shire councils, and special (not statutory) assistance by the State Government by way of loan moneys or special grants from revenue funds. Receipts and payments for the four years 1953-54 to 1956-57 compared with the income and expenditure for 1938-39 are shown below.

Note.—Minus sign (-) indicates excess of receipts over payments.

The figures shown above represent the aggregate receipts and payments of three funds—the County of Cumberland Main Roads Fund, the Country Main Roads Fund and the Developmental Roads Fund.

The total expenditure on roads, streets and bridges in the State by all authorities during the years 1938-39 and 1951-52 to 1955-56 was, respectively, £8,891,000, £14,904,000, £20,004,000, £22,510,000, £26,878,000, and £29,595,000. These figures are approximate and they include expenditure on construction, maintenance and direct administration, but not on debt charges. Expenditure on the Sydney Harbour Bridge is not included.

- (c) Sydney Harbour Bridge. The Sydney Harbour Bridge was opened for traffic on 19th March, 1932. The main span is 1,650 feet and the clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway, two railway tracks and two tramway tracks, and there is also a footway on each side. The capital cost of the bridge to the 30th June, 1957, was £9,578,006, but this amount will be reduced slightly on completion of the disposal of the remaining surplus resumed property. The portion met from repayable loan funds, over £7,900,000, is repayable from toll income. The accumulated balance of the Bridge Account at 30th June, 1957, showed a surplus of £40,095, after the transfer of sums totalling £2,085,000 to a reserve account. Annual income, after a decline to less than £300,000 during the 1939-45 War, has risen from about £400,000 in 1938-39 to over £980,000 in 1956-57, while expenditure over the same period has remained relatively stable, varying between £424,000 and £656,000. In 1956-57, income included road tolls, £803,012, railway passenger tolls, £136,095, and tram and omnibus passenger tolls, £18,763. Expenditure amounted to £656,613, including interest, exchange, flotation expenses, etc., £296,669, sinking fund, £98,000, and maintenance and improvement £150,991. During 1956-57, 24,075,000 rail travellers, 17,455,000 tram and omnibus travellers, and 36,724,000 road travellers in 22,094,000 road vehicles crossed the bridge, contributing, respectively, 14 per cent., 2 per cent. and 84 per cent. of the total toll revenue.
- 3. Victoria.—(i) General. With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine the main roads, State highways, tourists' roads, etc., to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance, and to recommend deviations in existing roads or the construction of new roads in order to facilitate communication or to improve the conditions of traffic.
- (ii) Length of Roads. (a) Declared Roads. The total length of declared roads in Victoria at 30th June, 1956, the latest date for which details are available, was 14,430 miles, classified as follows:—State highways, 3,850 miles; main roads, 9,787 miles; tourist roads, 416 miles; forest roads, 377 miles. The total length of the surface treated (black) or higher type of pavements included in the foregoing totals was 8,571 miles or 59 per cent.

<sup>(</sup>a) Income and expenditure. (b) Excludes plant and motor vehicles. (c) Includes purchase and operation of Department's Plant and Vehices not included elsewhere.

Stores and Materials

Vehicles Act ...

Total

Road Charges-Commercial Goods

. .

. .

Hire of Plant

Other ..

- (b) Composition of Roads. It is estimated that, in addition to the 14,430 miles of classified roads as above, there were approximately 85,500 miles of unclassified roads at 30th June, 1954. The latest detailed estimate of the length of roads and streets in Victoria (as at 30th September, 1954) provides the following information:—Wood or stone, 61 miles; portland cement concrete, 135 miles; asphaltic concrete and sheet asphalt, 233 miles; tar or bitumen surface seal, 12,197 miles; water-bound macadam, gravel, sand and hard loam pavements, 31,766 miles; formed only, 25,040 miles; not formed, 30,531 miles; total, 99,963 miles.
- (iii) Country Roads Board. (a) General. During 1955-56, 1,117 miles of declared roads under the Board's control were treated with bitumen. In addition, 329 miles of undeclared roads, for which the Board contributed funds, were similarly treated. Work for other authorities carried out by the Board's plant amounted to 141 miles. The total length of bitumen treatment carried out in 1955-56 was 1,587 miles. Of the work on the roads under the Board's control, 367 miles related to State highways.

During 1955-56, 221 bridge projects with a total value of £1,363,500 were initiated. Of these new projects, 47 with a total value of £857,000 were supervised by the Board and 174 with a total value of £506,500 were supervised by municipalities.

(b) Receipts and Payments. The funds of the Country Roads Board are derived principally from motor registration fees, two thirds of all money received by way of owners' certificates, one half of drivers' licence fees, fines, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, road charges under the Commercial Goods Vehicles Act and repayments by municipalities. In addition, loans have been authorized from time to time under the Country Roads Acts for permanent works on main and developmental roads, State highways, tourists' and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. During the year ended 30th June, 1956, loan receipts and payments each amounted to £1,092,950, and expenditure included £460,755 for restoration of flood and bush fire damage. The total loan expenditure to 30th June, 1956, was £12,125,808. This figure does not include loan expenditure from the Developmental Roads Loan Account, a fund which was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan money raised on this account was exhausted at 30th June, 1937, the total expenditure at that date being £6,425,758.

Total receipts and payments during each of the years 1938-39 and 1952-53 to 1955-56 are shown below :---

- (a) Figures for 1938-39 are not directly comparable with those of succeeding years owing to a change in the method of compilation adopted by the Country Roads Board. (b) Prior to 1st July, 1949 drivers' licence fees were paid into Consolidated Revenue Fund. From that date until 31st December, 1950 the fees were credited to the funds of the Country Roads Board. Since then one half of the fees has been credited to the funds of the Country Roads Board while the remaining half has been credited to the Municipalities Assistance Fund. (c) Excludes portion of Commonwealth Aid Roads Acts advances drawn by the Public Works Department for expenditure on wharfs, jetties, etc. (d) Includes £54,662 expenditure on unemployment relief works.
- (iv) Level Crossings. In 1954-55, the Level Crossings Fund was created under the Country Roads and Level Crossings Funds' Act 1954 to finance (a) the elimination of level crossings or the provision of alternative routes to enable road traffic to avoid level crossings, (b) the provision of lights, signs, and lighting at and the improvement of approaches to level crossings and (c) generally, the reduction of danger at level crossings. A third of all moneys received by way of owners' certificates is paid into the Fund as well as payments under other Acts for similar purposes. In 1955-56, the Fund received £225,397 from collections in respect of additional registration fees. Expenditure from the Fund amounted to £227,378 comprising £51,936 incurred by the Railways Department and £175,442 incurred by the Country Roads Board.
- 4. Queensland —(i) General. Under the Main Roads Act 1920, a Main Roads Board was constituted, consisting of three members appointed by the Governor-in-Council. In 1925, the Board was abolished and its powers conferred upon a single Commissioner. The Main Roads Commission was constituted a Department under the name of the Department of Main Roads in February, 1951, with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, secondary, mining access, farmers' and tourist roads and tourist tracks, and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases, construction is financed by the State Government by means of Treasury loans. Other roads are built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.
- (ii) Length of Roads. (a) Declared Roads. The total length of declared roads in Queensland at 30th June, 1956, was 20,985 miles, comprising State highways, 8,252 miles; main roads, 10,635 miles; developmental roads, 235 miles; secondary roads, 646 miles; mining access roads, 606 miles; farmers' roads, 311 miles; tourist roads, 299 miles; tourist tracks, one mile. The length of roads improved in Queensland from the date of commencement of work under the Main Roads Acts 1920-1952 to 30th June, 1956, was 13,194 miles (63 per cent.). At that date also, 1,183 miles of new road construction and 644 miles of stage construction work were proceeding.
- (b) Composition of Roads. The total length of roads and streets in Queensland at 30th June, 1956, was:—Concrete, 101 miles; bitumen, 6,604 miles; macadam, 15,238 miles; other formed, 41,815 miles; unconstructed, 59,558 miles; total, 123,316 miles.

- (iii) Department of Main Roads. (a) General. During 1955-56, the Department completed 1,227 miles of roads including new construction and stage construction. Bridges of all types to a length of 6,559 linear feet were constructed, bringing the total constructed by the Department at 30th June, 1956, to 184,050 feet. In addition, at 30th June, 1956, 6,540 feet were under construction.
- (b) Receipts and Payments. The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collections, fees, etc., under the Transport Acts, contributions under the Commonwealth Aid Roads Acts and loans, grants and advances from the State Government. The total receipts and payments, including amounts for defence works, during each of the years 1938-39 and 1952-53 to 1955-56 are shown below:

- 5. South Australia.—(i) General. The Highways and Local Government Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads, to undertake the construction, maintenance and protection of the main highways of the State. In addition the Commissioner—
  - (a) allocates grants to councils for roadworks and supervises the expenditure.
  - (b) assists Councils to purchase road-making plant and to defray the cost of roadworks.
  - (c) advises Councils on any question concerning the construction, maintenance or repair of road-works.
  - (ii) Source of Funds. Funds of the Department are derived mainly from-
    - (a) State Government. The Highways Fund, into which are paid the proceeds from motor vehicle registrations and drivers' licences (less cost of collection), appropriations from loan funds, repayments of advances made to Councils and contributions by the Municipal Tramways Trust.
    - (b) Commonwealth Government. Contributions under the Commonwealth Aid Roads Acts.

- (iii) Length of Roads. In South Australia, there are only two classifications of roads. These are Main Roads proclaimed under the provisions of the Highways Act and all other roads, commonly designated District Roads. At 30th June, 1957, there were 8,188 miles of proclaimed Main Roads and 44,743 miles of District Roads, totalling 52,931 miles. Of these, 24,719 miles are unformed and carry little or no traffic and a further 8,880 miles, which have been formed only, are open to traffic during most of the year. Of the remainder, there are 13,636 miles of road constructed with gravel or crushed rock and 5,696 miles of a higher standard constructed with either bitumen or concrete.
- (iv) State Highways and Local Government Department, Receipts and Payments. The following table shows particulars of receipts and payments, during the years 1938-39 and 1952-53 to 1955-56, of funds controlled by the Highways and Local Government Department.

 <sup>(</sup>a) Figures for 1938-39 are not completely comparable with those for following years.
 (b) Includes special contribution of £620,000 from Consolidated Revenue for roads for war service land settlement and developmental roads.
 (c) Roads, plant, etc.
 (d) Interest and sinking fund payments.
 (e) Not separately available; included elsewhere.

The total expenditure, both revenue and loan, by State and local governments on roads, streets and bridges in South Australia during the years 1938-39 and 1952-53 to 1955-56 was, respectively, £1,966,000, £4,667,000, £6,131,000, £7,539,000 and £8,812,000.

6. Western Australia.—(i) General. Under the Main Roads Act 1930-54, the Main Roads Board previously existing was abolished and a Commissioner of Main Roads was

appointed. His duties relate to the determination of main roads after consideration of the funds available and the services to be rendered by the roads, the declaration and provision of developmental roads, the construction and maintenance of main roads, and the carrying out of surveys, investigations and experiments connected with roads and road materials. The Act authorizes two trust accounts (Main Roads Trust Account and Main Roads Contribution Trust Account) to record the moneys prescribed as available to the Commissioner for expenditure associated with roads, etc. In addition, the Commissioner operates on other Trust Accounts which are used for funds made available under the Commonwealth Aid Roads Acts.

(ii) Length of Roads and Streets. The total known lengths of roads and streets in existence in the various municipalities at 31st October, 1956, and in road districts at 30th June, 1956, were as follows:—Bituminous, 5,876 miles; gravel water-bound, 14,214 miles; other constructed surfaces, 1,354 miles; formed only, 39,580 miles; unprepared, 26,978 miles (incomplete); total, 88,002 miles.

The lengths of declared roads at 30th June, 1956, were :—Main roads, 3,487 miles; important secondary roads, 6,929 miles; developmental roads, 12,775 miles; total, 23,191 miles.

- (iii) Main Roads Department. During the year 1955-56, the activities of the Department included:—clearing, 1,838 miles; forming, 1,994 miles; gravelling, 1,275 miles; reconditioning, 4,495 miles; stabilizing, 200 miles; side drains, 111 miles. In addition, the length of tar and bitumen work performed aggregated 1,049 miles. Construction of the 260 miles of the Wyndham-Ord River-Nicholson road was continued during the year. Bridges constructed numbered 22. Two major bridges, one of timber over the Swan River at Upper Swan and the other also of timber over the Moore River, 20 miles west of Gingin, were completed during the year. Tenders were called later in 1956 for the construction of the projected bridge across the Swan River at the Narrows, Perth.
- (iv) Receipts and Payments—Combined Road Funds. The following table shows the combined transactions of the Main Roads Trust Account, the Main Roads Contributions Trust Account, the Metropolitan Traffic Trust Account, and the Commonwealth Aid Roads and Works Trust Accounts during the years ended 30th June, 1939 and 1953 to 1956.

- 7. Tasmania.—(i) General. Under the Road Construction (Transfer of Functions) Act 1951, which came into operation on 1st July, 1951, the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorized by the Minister in respect of roads classified as State highways, tourists' and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund into which are paid the proceeds from Commonwealth Aid Roads grants, motor vehicle registration fees and taxes, licence fees for drivers and public transport and other moneys made available by Parliament. In addition, provision was made under the Road Construction (Transfer of Functions) Act for certain works authorized by the Transport Commission to be carried out and constructed by the Department. The expenditure by the Public Works Department during 1955-56 on the construction of roads, tracks and bridges amounted to £2,798,238 of which £1,898,207 was charged to road funds, £41,446 to revenue, £781,347 to loan and £77,238 to other funds. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads.
- (ii) Length of Roads. (a) Classified Roads. The mileages of classified roads in Tasmania at 30th June, 1956 were as follows:—State highways, 1,161 miles; main roads, 651 miles; secondary roads, 186 miles; tourist roads, 45 miles; developmental roads, 50 miles; subsidized roads, 92 miles; total 2,185 miles. Country roads totalled more than 10,000 miles. The mileages of sealed roads, and their proportions to the respective totals, were:—State highways, 586 miles (50 per cent.); main roads, 228 miles (35 per cent.); secondary and other roads, 23 miles (6 per cent.); total, 837 miles (38 per cent. of all classified roads, and 6 per cent. of all roads, in Tasmania).
- (b) Composition of Roads. The length of all roads in Tasmania, including those with surfaces of lower grade, at 30th June, 1956, was as follows:—Bituminous, 1,166 miles; concrete, 22 miles; granite, limestone, etc., water-bound, 8,560 miles; surfaces of lower grade, 2,926 miles; total, 12,674 miles.
- (iii) Receipts and Payments—Combined Road Funds. The table hereunder shows particulars of the receipts and payments of the combined Road Funds for the years 1939-40 and 1952-53 to 1955-56:—

8. Summary of Roads used for General Traffic .- (i) Proclaimed or Declared Roads. The table hereunder is a summary of the roads proclaimed or declared under the Acts of the several States relative to the operations of the central road authorities, and shows the lengths of various classes proclaimed or declared as at 30th June, 1956. These proclaimed or declared roads are those for which the central road authority assumes responsibility under the Act for the whole, or a proportion, of the cost of construction and/or maintenance, the extent varying from State to State and with the class and locality of the roads. Before proclamation of a main road, consideration is given, in general, to the following points: availability of funds; whether the road is, or will be, within one of several classes of main trunk routes; whether the district is, or will be, sufficiently served by railways. Provision is also made in some States for the declaration of roads other than main roads. The absence of a particular class in any State does not necessarily imply that there are no roads within that State that might be so classified; the classes are restricted only to roads proclaimed or declared under the Acts. A further point to make is that, through various causes, e.g., insufficiency of funds, man-power or materials, etc., construction or maintenance may not. keep pace with gazettals of mileages, and therefore the condition of a road may not match its status.

PROCLAIMED OR DECLARED ROADS: LENGTHS, 30th JUNE, 1956. (Miles.)

Class of Road.		N.S.W.	Vic.	Q'land.	S Aust.	W. Aust.	Tas.	Total.

(a) As at 30th June, 1954. (b) As at 30th June, 1957. (c) Forest roads. (d) Includes mining access roads, 606 miles; farmers' roads, 311 miles; tourist tracks, 1 mile. (e) Subsidized roads.

(ii) Composition of Roads. The following table represents an attempt to classify all the roads used for general traffic in Australia, at the latest dates available, according to States and Territories and to certain broad composition groups. The results are not entirely satisfactory, (i) because it is doubtful whether the whole of Australia is covered, (ii) because the dates of reference differ, and (iii) because the figures constituting each group are not wholly comparable for the States and Territories. It is hoped, however, that despite these defects the table will provide an approximate and general idea of the main types of roads in Australia.

The figures in the table for the States are obtained from the State Government Statisticians, and are derived mainly from local government sources. Unincorporated areas in some States are probably excluded and the figures on the returns supplied by the local government authorities are in some cases of doubtful accuracy. Details of the composition of roads, as far as they are available, vary to such an extent that it is considered preferable to show here only major divisions.

Groups 1-4 as shown in the table include, respectively, the following types of composition:—

- 1. Wood or Stone. Wood blocks; stone paved.
- Concrete. Cement concrete; asphaltic concrete; bituminous concrete; sheet asphalt on concrete base.
- 3. Bituminous. Tar or bituminous macadam; tar and bituminous surface seal; surfaced water-bound macadam or gravel; bituminous or cement penetration.

 Macadam and Other. Water-bound macadam; granite, limestone, and blastfurnace slag, water-bound; water-bound gravel; gravel or crushed rock; metalled (gravel or rubble); gravel, sand and hard loam pavements.

Groups 5 and 6 include roads so-called mainly because they are used for general traffic, irrespective of their surfaces, prepared or otherwise.

It will be noticed that some of the terms used above are practically synonymous. Such terms are, of course, not used by any one State, but are the classifications adopted by different States.

For details of any particular State, see the respective paragraphs in the preceding pages.

(a) Municipalities, 31st October; Road Districts, 30th June,

It will be seen from the foregoing table that only about one-third of the road lengths of Australia have actually been constructed, the remainder, for the greater part, being in little more than the natural state. The percentages for each group are as follows:—Group 1, 0.01; group 2, 0.33; group 3, 7.80; group 4, 25.07; groups 5 and 6, 66.79. The percentage of constructed lengths to total length in each State is as follows:—New South Wales, 42; Victoria, 44; Queensland, 18; South Australia, 37; Western Australia, 24; Tasmania, 77; Northern Territory, 12; Australian Capital Territory, 61. Comparisons between the States should be made with caution, however, because, in addition to the defects enumerated at the beginning of this section, factors such as the area, physiography, density and distribution of population, nature of economic activity, other facilities for transport, etc., in each State must be taken into account.

9. Summary of Expenditure on Roads and Bridges.—(i) General. In most States there are three classes of authorities—the State Government, the central road authority, and the numerous local government bodies. Most of these authorities may expend money either directly on road construction or indirectly by means of grants and miscellaneous payments to other authorities. Insufficient information is given in the accounts of many authorities to permit the exclusion of these indirect payments which would, if included in the aggregate, duplicate the expenditure. In addition, a number of authorities are not able to supply separate information concerning their expenditure on roads. For these reasons it has not been possible, up to the present, to compile statistics of the aggregate expenditure on roads.

The two paragraphs following therefore represent only: (a) aggregate expenditure from the various State road funds referred to in the foregoing pages, and (b) loan fund expenditure by State Governments. Expenditure by local government bodies is not included. Paragraph 8, Finances, of § 2. Local Government Authorities, contains some particulars of local government revenue and expenditure on roads, streets and bridges (see pages 682 and 685).

(ii) Aggregate Expenditure from State Road Funds. The following table shows expenditure on the construction and maintenance of roads, including payments to local government bodies, by each State during the years 1938-39 and 1951-52 to 1955-56, as summarized from the foregoing tables dealing with the receipts and payments of the various State road authorities. Expenditure on plant and materials, not charged to construction

and maintenance of roads and bridges and expenditure on debt charges and payments to State consolidated revenues are not included. In some instances, expenditure on works other than roads and bridges is included. Because of differing accounting methods, figures are not completely comparable as between States, nor, in some States, as from year to year.

ROADS AND BRIDGES: AGGREGATE EXPENDITURE FROM ROAD FUNDS. (£'000.)

Year ended 30th June—		N.S.W.(a)	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
1939		3,358	2,569	2,557	1,374	1,138	(b) 319	11,091
1952		9,006	6,576	7,379	3,267	3,564	1,550	31,272
1953		9,357	6,472	5,979	3,404	4,320	1,683	31,215
1954		11,972	7,237	6,235	4,708	3,591	2,096	35,839
1955		12,938	9,131	8,975	5,256	4,060	2,752	43,112
1956		13,679	10,659	9,772	6,145	5,768	2,832	48,855

<sup>(</sup>a) Excludes Sydney Harbour Bridge.

The foregoing particulars do not represent the total expenditure on roads and bridges in each State. To obtain this information, additions must be made on account of (a) State Government expenditure from revenue and loan through Departments or authorities other than the central road authority and (b) local government expenditure from revenue and loan, while, on the other hand, allowances must be made for grants and miscellaneous payments to other authorities (see (i) above).

(iii) State Net Loan Expenditure. In recent years, expenditure from State loan funds on roads and bridges has not been large, and it would appear, also, that a considerable proportion passes through the funds of the central road authorities and is therefore included in the figures of their financial operations in the foregoing sections. Gross loan expenditure by all State Governments during 1955-56 amounted to over £2,000,000, while net expenditure was about £350,000 less. Aggregate net loan expenditure on roads and bridges in each State to 30th June, 1956, amounted to the following approximate sums:—New South Wales, £22,000,000; Victoria, £20,000,000; Queensland, £11,000,000; South Australia, £5,000,000; Western Australia, £3,000,000; Tasmania, £10,000,000; total, £71,000,000.

### § 5. Water Supply, Sewerage and Drainage.

Note.—See also Chapter IX.—Water Conservation and Irrigation.

- 1. New South Wales.—(i) General. The two largest domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e., in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, and (b) the Hunter District Water Board, serving the Newcastle area. At Broken Hill, a similar board includes a representative of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.
- (ii) Water Supply—to 30th June, 1956. (a) Metropolitan. The storage reservoirs of the metropolitan system, with a combined available capacity of 124,944 million gallons, drain catchment areas of 376 square miles (Upper Nepean, 347 square miles and Woronora, 29 square miles). Water is drawn also from the Warragamba River, with a catchment of 3,383 square miles. This system is being developed, and building has commenced on a dam to have an overall height of 415 feet (greatest depth of water 340 feet) having a storage capacity of 460,000 million gallons and giving a net safe draught estimated at 263 million gallons per day in addition to 11 million gallons per day for riparian purposes. The existing temporary storage is supplied by a weir 50 feet high with a maximum storage of 579 million gallons. At 30th June, 1956, there were 112 service reservoirs in use with a

<sup>(</sup>b) Year 1939-40.

combined capacity of 554 million gallons. Rating for water for 1955-56 was 10d. in the £1 of assessed annual value and the charge for water measured by meters 1s. 9d. per 1.000 gallons.

(b) Newcastle. The water supply is drawn from two sources (1) the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of 76 square miles, and (2) the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens. Service reservoirs and tanks distributed throughout the Water Supply District have a total storage capacity of 111 million gallons. Water rating for 1955-56 was 1s. 6\frac{1}{4}d. in the \frac{1}{2}1 on assessed annual value for occupied properties and 1s. 3\frac{1}{2}d. in the \frac{1}{2}1 for unoccupied properties. The price of water to domestic and industrial consumers is 2s. per 1,000 gallons.

(c) Water Supplied, etc. The following tables show, for the Sydney and Newcastle systems, the number of properties, the estimated population supplied, and other details for the years 1938-39 and 1951-52 to 1955-56:—

(iii) Sewerage and Drainage—to 30th June, 1956. (a) Metropolitan. Sydney and suburbs are served by 3 major sewerage systems and 5 minor systems consisting of 6 outfalls discharging direct into the Pacific Ocean and 2 treatment works. A further treatment works is in course of construction near Kurnell and is designed to serve the whole of the Cronulla Peninsula. In addition, 4 centres outside the metropolitan area (Camden, Campbelltown, Liverpool and Wollongong) are served by local treatment works.

Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30th June, 1956 were 175 miles long. Sewerage rating for 1955-56 was 9\frac{1}{2}d. in the £1 of assessed annual value and drainage rating \frac{1}{2}d. in the £1.

(b) Newcastle. The main sewerage system of the Newcastle area discharges into the Pacific Ocean at Merewether Gulf. In some of the outlying districts, treatment works have been installed.

Sewerage rates for 1955-56 were 1s. 1½d. in the £1 of assessed annual value of occupied lands and 10½d. in the £1 for unoccupied lands and drainage rates (on certain areas served) 1½d. in the £1.

(c) Particulars of Services. The following table gives, for the Metropolitan system, details of sewerage services and stormwater drains as at 30th June, 1939 and 1952 to 1956.

SEWERAGE AND DRAINAGE, METROPOLITAN(a): SERVICES.

<sup>(</sup>a) Includes part of South Coast.

At 30th June, 1956, 50,209 premises had been connected to the Hunter District Water Board's sewerage system (Newcastle area). The total length of sewers under the Board's control was 655 miles, and the length of drains was 49 miles.

(iv) Finances, Sydney and Newcastle Systems. The following table shows the debt, revenue and expenditure of the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board for each of the services of water supply, sewerage and drainage during 1955-56 and for the three services combined during the years 1938-39 and 1951-52 to 1955-56.

<sup>(</sup>a) Includes provision for renewals, long service leave, loss on exchange, etc. (b) Includes part of South Coast. (c) Excludes non-interest bearing capital in respect of stormwater drains transferred from Public Works Department—£2,219,823 at 30th June, 1956.

- (v) Country Water Supply and Sewerage Systems. At 31st December, 1954, country water supply services were conducted or under construction by 62 municipalities, 64 shires and 4 county councils, and country sewerage services by 57 municipalities and 20 shires. The capital indebtedness of these schemes was £17,560,325 at 31st December, 1954, namely, £12,455,748 for water and £5,104,577 for sewerage. Debt of the municipalities amounted to £9,498,540, shires to £4,327,433 and country councils to £3,734,352. Government advances amounting to £485,684 are included in these figures. Aggregate income and expenditure amounted to £2,822,749 and £2,067,653, respectively, in 1954.
- (vi) Other Water Supply and Sewerage Systems. The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31st December, 1955, was £2,981,865. In 1955, income (excluding subsidies, State Government £96,513 and Mining Companies £276,985) amounted to £176,033 and expenditure (excluding debt redemption £138,294) amounted to £409,266.

The following country water supply systems—South-West Tablelands, Junee and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department, and other large consumers; only a small quantity is sold directly to private consumers. The capital indebtedness of these systems was £4,035,467 at 31st December, 1956.

The Mulwala Water Supply and Sewerage Service was constructed as an urgent wartime work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

- 2. Victoria.—(i) Melbourne and Metropolitan Board of Works. (a) General. The Board was established by Act of Parliament on 20th December, 1890. Since August, 1955, the Board has consisted of a Chairman and 50 Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The Chairman is elected by the Commissioners for a four-year term. The principal functions of the Board until 1954 were to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage; to deal with main drains and main drainage works; and to control and manage the rivers, creeks and watercourses within the metropolitan area. The Board has carried out since December, 1954, the additional functions of a permanent planning authority and in June, 1956, it became the authority directly responsible for metropolitan main highways, bridges, parks and foreshores.
- (b) Water Supply. There are five storage reservoirs serving the metropolitan area—Yan Yean, 7,234 million gallons (available for consumption, 6,649 million gallons). Toorourrong, 60 million gallons; Maroondah, 6,289 million gallons (4,870 million gallons); O'Shannassy, 930 million gallons; and Silvan, 8,853 million gallons (8,823 million gallons); total, 23,366 million gallons (21,332 million gallons). Service reservoirs number 25, with a total capacity of 257 million gallons. Two major projects, which were under construction at 30th June, 1956, have been completed. One is the 18 mile conduit carrying water from the Silvan Reservoir to the existing Mt. Waverley service reservoir and to the new service reservoir (Mount View) south of Glen Waverley which is able to supply an additional 110 million gallons a day. The other project is a dam on the River Yarra immediately upstream from the confluence of the Yarra and Doctors Creek. This dam is 293 feet high and impounds 45,800 million gallons of water.

The water rate levied by the Board in 1955-56 was 8d. in the £1 on the net annual value of the properties served. The charge for water consumed in excess of the quantity which at 1s. per 1,000 gallons would equal the water rates payable on each property was 1s. 6d. per 1,000 gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1938-39 and 1951-52 to 1955-56.

The metropolitan sewerage system consists of the Main system (serving an area of 71,372 acres) and three subsidiary systems—the Sunshine system (serving an area of 1,526 acres), the Kew system (serving an area of 103 acres) and the South-eastern system (serving an area of 2,559 acres in Cheltenham, Parkdale, Mentone and Mordialloc). The Metropolitan Sewage Farm, 26,854 acres in extent and situated about 24 miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of approximately 95 per cent. of the sewage flow of the metropolis before its discharge into Port Phillip Bay. The total capital cost (less depreciation) of the Farm to 30th June, 1956 was £3,025,374. Revenue during 1955–56 amounted to £122,623, cost of sewage disposal to £189,029, trading expenses to £99,578, interest to £122,303, and net cost of sewerage purification to £288,287. These financial particulars are included in the sewerage items of the summary below.

(d) Finances. The following table provides a summary for the year 1955-56 of the financial operations of the three services conducted by the Melbourne and Metropolitan Board of Works.

### MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES, 1955-56 (£.)

		Capital Cost of			Expen	diture.			
Service, etc	; <b>.</b>	Works and Buildings at 30th June.(a)	Revenue.	Working Expenses.	Interest and Exchange.	Debt Redemp- tion.	Total.	1 6	lus(+) or cit(-).

- (ii) Geelong Waterworks and Sewerage Trust. (a) General. The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the Geelong Waterworks and Sewerage Act in 1910. It was further reconstituted in September, 1950, to include a Government nominee (Chairman) and provision was made for a commissioner to be elected by the ratepayers of the Shire of Corio, making a total of seven commissioners instead of five as formerly. The amount of loan money which may be raised is limited to £6,500,000 for water supply undertakings, and £1,250,000 for sewerage undertakings. The population supplied is estimated by the Trust at 86,000. This and other general information relates to 30th June, 1956.
- (b) Water Supply. The catchment area is about 32,000 acres. There are seven storage reservoirs and eleven service basins whose total storage capacity is 8,640 million gallons. The length of water mains and reticulation is 423 miles. The total expenditure on water supply to 30th June, 1956 was £1,959,544. Expenditure for 1955-56 comprised £116,121 for working expenses and £100,158 for interest, redemption and reserves, while revenue amounted to £206,974. The sinking fund appropriations at June, 1956, amounted to £161,371. The replacement and contingencies reserve amounted to £245,845. There is a water rate of 1s. 5d. in the £1 (with minima of 10s. for vacant land and £1 for tenements) on the net annual value of ratable properties.
- (c) Sewerage Works. The sewerage scheme consists of a main outfall sewer to the ocean at Black Rock, about 9 miles from Geelong, and 193 miles of main and reticulation sewers. The sewerage area is 10,559 acres, and the number of buildings within the sewered areas is 17,800, of which 17,716 have been connected. The total expenditure on sewerage works to 30th June, 1956, was £1,104,667. The revenue in 1955-56 amounted to £131,962 and the expenditure comprised £70,995 on working expenses and £63,531 on interest, redemption and reserves. Sinking fund appropriations at June, 1956, were £133,806.

<sup>(</sup>b) Statutory and general expenditure not

Replacement and contingencies reserve amounted to £235,128. A general rate of 1s. 4d. in the £1 is levied on the net annual value of ratable properties.

- (iii) The Ballarat Water Commission and the Ballarat Sewerage Authority. (a) General. The Ballarat Water Commission was constituted on 1st July, 1880, and the Ballarat Sewerage Authority on 30th November, 1920. The members of the Water Commission constitute the Sewerage Authority. The Commissioners number eight, three (one of whom is chairman) being appointed by the Government, four being elected by the Council of the City of Ballarat and one being elected by the Councils of the Borough of Sebastopol and the Shires of Ballarat, Bungaree, Buninyong and Grenville. General and financial information given herein relates to the year ended 31st December, 1956.
- (b) Water Supply. The Water Supply District embraces an area of about 65 square miles, containing a population of about 53,000. The total storage capacity of the seven reservoirs is 5,605 million gallons and the catchment area is 22,562 acres.

The capital cost of construction of the waterworks was £2,122,890 to 31st December, 1956. The liabilities amounted to £1,149,720 at 31st December, 1956, including loans due to the Government totalling £1,100,508. The revenue for the year 1956, was £145,548. Working expenses during 1956 amounted to £64,358 and interest and other charges to £81,015. A rate of 1s. 1d. in the £1 is levied on the net annual value of all ratable properties, with a minimum of £1 per annum for land on which there is a building or water supply.

(c) Sewerage. The Ballarat sewerage district embraces the City of Ballarat and parts of the Shires of Ballarat and Bungaree and the Borough of Sebastopol. Work was commenced in 1922 and up to 31st December, 1956 the Authority had constructed a disposals works, a nightsoil depot, an ejector station and more than 100 miles of sewers. The capital cost of sewerage construction works to 31st December, 1956, was £748,363. The method of sewage disposal is by sedimentation, oxidation and sludge digestion. One hundred and fifty-four sewered areas had been declared as at 31st December, 1956. Assessments in the sewerage district numbered 15,748, while those in sewered areas numbered 12,356. There were 10,674 buildings connected.

The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31st December, 1956, amounted to £595,026; redemption payments at that date totalled £231,547. An expenditure of £157,122 was incurred for house connexions, the whole of which has been redeemed. Revenue during 1956 amounted to £75,720 and expenditure, which included £36,634 on interest and redemption, was £73,907.

A sewerage rate of 1s. 4d. in the £1 is levied, with a minimum charge of £2 4s., on the net annual value of any ratable sewered property on which there is a building and £1 on any ratable sewered property on which there is no building.

(iv) Other Sewerage Authorities. At 30th June, 1955, 60 sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts in districts outside the areas under the control of the Melbourne and Metropolitan Board of Works, the Geelong Waterworks and Sewerage Trust, and the Ballarat Sewerage Authority, and systems were in operation in 30 districts (including five partly operating) serving a population of 269,000 persons.

The operations of the other 30 districts constituted at this date had either been suspended or not commenced.

(v) Water Supply in Country Towns and Districts. Most of the country waterworks are controlled by the State Rivers and Water Supply Commission, but in some instances the control is by waterworks trusts or by municipal corporations.

The waterworks controlled by the State Rivers and Water Supply Commission at 30th June, 1956, included 38 large reservoirs and 240 subsidiary reservoirs and service basins with a total storage capacity of 1,342,070 million gallons (4,929,550 acre feet). Length of channels was 15,122 miles (irrigation, 4,976 miles, domestic and stock 8,012 miles, drainage and flood protection, 2,134 miles) and of pipe lines 1,281 miles. The quantity of water delivered to water users during 1955–56 was 744,391 acre feet which was well below normal because of the wet summer. The Commission administered 65 rural districts during 1955–56 (29 irrigation districts, 31 waterworks districts, 4 flood protection districts and 1 drainage district), and the reticulated pipe supplies for domestic and industrial purposes in 130 urban districts. In addition, 127 urban districts were administered by waterworks trusts and 16 by local governing bodies. The population served in these groups of urban districts numbered, respectively, 194,990, 357,910 and 103,810 persons. The table below is a summary of the Commission's finances for operations in districts under its control for the years 1938–39 and 1951–52 to 1955–56.

### STATE RIVERS AND WATER SUPPLY COMMISSION, VICTORIA: FINANCES.(a)

	Total Loan				Payments.		
Year.	Capital Expenditure to 30th June.	Receipts.	Operating Expenses.	Interest on Capital Allotted.	Deprecia- tion.	Debt Redemp- tion.	Total,
1938-39	 24,223,037	560,680	476,085	145,105	27,553	4,922	653,665
1951-52		1,871,810		47,547		1,497	2,434,612
1952-53	 57,464,776	1,989,289	2,669,419	26,555	90,024	3,284	2,789,282
1953-54	 65,143,250	2,412,382	2,717,862	75,101	90,616	5,181	2,888,760
1954-55	 73,456,588	2,532,946	2,781,621	95,335	120,475	2,465	2,999,896
1955-56	 79,847,923	2,779,599	2,940,637	118,379	127,774	5,491	3,192,281

<sup>(</sup>a) Excludes waterworks and river improvement trusts and local governing bodies under the general supervision of the Commission.

The total loan capital expenditure of waterworks and river improvement trusts and local governing bodies to 30th June, 1956, was £10,806,505, making a grand total of £90,654,428 when added to the figure for works under the control of the Commission. The net loan capital after redemption payments of £3,032,252 was £87,622,176.

The financial operations of the State Rivers and Water Supply Commission form part of the Consolidated Revenue Fund, but are included in this section for convenience. The major proportion of the interest payable is borne by the State and is additional to that shown above. The net expenditure borne by the State during 1955-56 was £3,246,477.

- 3. Queensland.—(i) Brisbane City Council—to 30th June, 1956. (a) General. This organization conducts the water supply and sewerage systems of the City of Brisbane. Prior to 1928, water and sewerage activities had been controlled by the Metropolitan Water and Sewerage Board, but were then absorbed by the Brisbane City Council, which also supplies, in bulk, the whole of the water used by the City of Ipswich and the Town of Redcliffe.
- (b) Water Supply. Water storage facilities comprise the following (available capacities are shown in parentheses):—Somerset Reservoir, 200,000 million gallons (55,000 million gallons); Lake Manchester, 5,806 million gallons (5,725 million gallons); Brisbane River, 543 million gallons (484 million gallons); Pure Water Reservoir, Holt's Hill, 8.3 million gallons (8.3 million gallons); Enoggera Reservoir, 1,000 million gallons (600 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are sixteen service reservoirs with a capacity of approximately 41 million gallons. The Somerset reservoir is under the control of Stanley River Works Board and is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 55,000 million gallons to be for water storage and 145,000 million gallons for flood mitigation. Water rating at 30th June, 1956, was 3\fmathfrak{1}{2}d. in the £1 of unimproved capital value for improved properties, and 2d. in the £1 for vacant lands, with a minimum charge of £5 5s. and £4 0s. Od. respectively. The following table is a summary of operations of the complete Brisbane City Council system (metropolitan area, Ipswich and Redcliffe) for the years 1938-39 and 1951-52 to 1955-56:—

### WATER SUPPLY, BRISBANE(a): SERVICES.

			Esti-		Total		e Daily	Length of		
Year.		Services Con- nected.	mated Popu- lation Supplied.	Average Daily Con- sumption.	Con- sumption for the Year.	Per Service.	Per Head of Esti- mated Popu- lation.	Trunk and Reticu- lation Mains.	Number of Meters.	
1938-39		81,389	345,903	Mill. gals. 15.9	Mill. gals. 5,791	Gallons. 195	Gallons. 45.9	Miles. 1,169	(b)	
1951-52 1952-53 1953-54 1954-55 1955-56		124,992 131,895 139,172 144,459 148,632	483,000 501,000 520,000 530,000 543,000	32.4 31.5 33.9 34.1 36.4	11,860 11,486 12,379 12,458 13,283	259 239 244 236 245	64.3	1,696 1,760 1,817 1,870 1,929	52,496 52,360 51,976 51,138 (b)	

<sup>(</sup>a) Includes Ipswich and Redcliffe.

(b) Not available.

(c) Sewerage. The sewage treatment works is situated at Luggage Point at the entrance to the Brisbane River. An activated sludge system of treatment was originally planned but, since the commencement of pumping operations, a sedimentation plant only has been used. Sewerage rating at 30th June, 1956, was 2½d. in the £1 of unimproved capital value for improved properties, and 2d. in the £1 for vacant lands, with a minimum charge of £6 and £5 respectively. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1938-39 and 1951-52 to 1955-56:—

#### SEWERAGE, BRISBANE: SERVICES.

	Year.		Premises Connected.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Main, Branch, Reticulation etc., Sewers.	
1938–39	 	 	33,200	150,000	Mill. Galis.	Miles. 484	
1951-52	 	 	46,300	179,000	4,663	615	
1952-53	 	 	47,500	182,000	4,791	630	
1953-54	 	 	48,700	183,000	4,868	647	
1954-55	 	 	50,400	187,000	4,944	665	
1955-56	 	 	53,100	196,000	6,222	696	

(a) Not available.

(d) Finances. The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1938-39 and 1951-52 to 1955-56:—

WATER SUPPLY AND SEWERAGE, BRISBANE: FINANCES.

1955-56		13,125,463	719,623	217,238	408,917	707,476	+ 12,147	

<sup>(</sup>ii) Country Towns. (a) Water Supply. In addition to the City of Brisbane, there were, at 30th June, 1955, 118 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils.

<sup>(</sup>b) Sewerage Systems. At 30th June, 1955, there were 13 cities and towns outside the metropolitan area—Bundaberg, Charleville, Cunnamulla, Goondiwindi, Hughenden, Ipswich, Mackay, Maryborough, Quilpie, Rockhampton, Toowoomba, Townsville and Warwick—with sewerage systems. Sewerage systems were in course of construction at Mt. Isa, Dalby, Barcaldine and Longreach.

(c) Finances. The receipts (other than loan) of water undertakings controlled by the cities and towns referred to above amounted to £1,750,102 in 1953-54. Expenditure amounted to £1,688,672, including £364,248 for debt charges. In addition, loan expenditure amounted to £1,105,034.

Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

- 4. South Australia.—(i) General. The water supply and sewerage systems in this State were constructed and are maintained by the Engineering and Water Supply Department under the control of the Minister of Works. The works controlled comprise the Adelaide, Barossa, Baroota Creek, Beetaloo, Bundaleer, Tod River, Warren and other country water districts systems, the Morgan-Whyalla water supply system, the Adelaide metropolitan sewerage system, the Murray River Weirs water conservation, and the Metropolitan Flood Waters Scheme. In 1955–56, construction commenced on the Salisbury-Elizabeth Sewerage Scheme.
- (ii) South Australian Waterworks. (a) Services. The table hereunder shows particulars of the area, capacity, etc. of combined metropolitan and country waterworks for the years 1938-39 and 1952-53 to 1956-57:—

Year.		Assessr	nents.(a)	Area	Capacity		
		Number. Annual Value.		of Districts Supplied. (a)	of Reservoirs, Tanks, etc.	Length of Mains.	Number of Meters.
			£	Acres.	Mill. gals.	Miles.

(iii) Adelaide Waterworks. At 30th June, 1957, the Adelaide waterworks supplied a district of 144,772 acres. The capacity of its five reservoirs and storage tanks was 14,469 million gallons and there were 1,982 miles of mains.

The Mannum-Adelaide pipeline conveys water from the River Murray to Angas Creek and supplements the Metropolitan and Warren systems, serving country areas en route. Another major project, the construction of a large reservoir on the South Para River, is still under construction but is nearing completion. This reservoir will provide additional storage to serve the lower northern areas of the State and will make some additional provision for the metropolitan area. The capacity of the new reservoir will be about 10,000 million gallons.

Particulars of finances for the years 1938-39 and 1952-53 to 1956-57 are shown below:—

### ADELAIDE WATERWORKS: FINANCES.

(£.)

	i	Invested			Expenditure.		Surplus (+)
Year.		Capital to 30th June.	Revenue.	Working Expenses.	Interest and Debt Redemption.	Total.	or Deficit (-).
1938-39		4,676,110	446,459	111,347	202,279	313,626	+ 132,833
1952–53 1953–54 1954–55 1955–56 1956–57		11,849,046 14,438,595 17,922,472 20,434,323 23,115,689	968,575 1,078,614 1,358,896	534,074 614,308 939,317 930,138 1,232,267	313,252 377,909 511,127 646,720 759,012	847,326 992,217 1,450,444 1,576,858 1,991,279	+ 60,851 - 23,642 - 371,830 - 217,962 - 484,687

(iv) Adelaide Metropolitan Sewerage. The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg and Port Adelaide areas, with drainage areas of 109 square miles in all, includes a sewage farm, and treatment works at Glenelg and Port Adelaide. The total quantity of sewage pumped by the various stations was 6,342 million gallons during 1956-57. Other particulars for 1938-39 and 1952-53 to 1956-57 are shown hereunder:—

### ADELAIDE METROPOLITAN SEWERAGE: SUMMARY.

			Invested		E	xpenditure		
Year.	Length of Sewers.	Number of Con- nexions.	Capital to 30th June.	Revenue.	Working Expenses.	Interest and Debt Redemp- tion.	Total.	Surplus(+) or Deficit(-)
	Miles.		£	£	£	£	£	£
1938-39	923	80,745	3,361,034	268,880	77,023	150,273	227,296	+ 41,584

<sup>(</sup>v) Country Sewerage Schemes. In 1956-57, the total length of the Salisbury sewerage scheme was 42 miles and the number of its connexions 3,242. The Port Lincoln scheme, which is one mile in length, had 31 connexions in that year.

<sup>(</sup>vi) Country Water Supply. Water district systems outside Adelaide at 30th June, 1957, comprised an area of 12,715,736 acres, and the capacity of the reservoirs was 9,546 million gallons. These figures exclude the Morgan-Whyalla supply system, which obtains its water from the River Murray. The storage tanks of this system had a capacity of 44 million gallons.

The Uley-Wanilla sub-artesian basin has been utilized to augment the Tod River District supplies. Pumping began in 1947. In 1956-57, nine bores were in operation and 374 million gallons were pumped from the basin to meet the needs of Port Lincoln. At 30th June, 1957, £5,112,810 had been invested in the Tod River District.

Construction work is proceeding on the scheme to reticulate water to Yorke Peninsula. The section of the new 20 inch to 26 inch steel main between Bundaleer Reservoir and Bute is in service.

The following table gives financial information on country waterworks for 1938-39 and 1952-53 to 1956-57:--

### COUNTRY WATERWORKS, SOUTH AUSTRALIA: FINANCES.(a)

(£.)

		Invested			Expenditure.		
Year.	Year. C		Revenue.	Working Expenses:	Interest.	Total.	Deficit.
1938-39	· · ·	10,015,613	207,569	130,523	449,691	580,214	372,645
1952-53		14,018,673	407,944	757,727	394,750	1,152,477	744,533
1953-54		17,718,282	630,466	903,212	505,967	1,409,179	778,713
1954-55		19,430,759	646,403	915,709	584,787	1,500,496	854,093
1955-56		21,066,810	861,564	1,128,294	681,348	1,809,642	948,078
1956-57		22,123,508	963,406	1,215,103	726,474	1,941,577	978,171

(a) Excludes Morgan-Whyalla system.

- (vii) Morgan-Whyalla Water Supply Scheme. This scheme, which involved the laying of 223 miles of main, was officially opened on 31st March; 1944, the capital invested to 30th June, 1957, being £2,593,554. Particulars of this scheme, where applicable, are included in the tables of the combined waterworks in (ii) above. During 1956-57, the water used from the system between Hanson and Whyalla amounted 1,239 million gallons. Revenue for the year 1956-57 was £195,876, working expenses, etc., £175,519, interest charges, £83,983 and deficit, £63,626. Corresponding figures for 1955-56 were respectively, £182,398, £178,248, £83,734 and £79,584.
- 5. Western Australia.—(i) General. The water supply and sewerage systems of Western Australia are principally under the management of Government Departments, and are divided into the following categories:—(a) Metropolitan Water Supply, Sewerage and Drainage area bounded by Kwinana, Marmion, Greenmount and Serpentine; (b) Country Areas Water Supply consisting of the Goldfields and Agricultural Water Supply (formerly the Goldfields Water Supply), the Great Southern Towns Water Supply, and water supplies to other country towns (except those controlled by the Local Authority). Individual water supplies serve railways, isolated mines, stock routes and agricultural areas.
- (ii) Metropolitan Water Supply, Sewerage and Drainage. (a) General. The sources of the metropolitan water supply are the Canning Dam, Churchman's Brook, Wungong Brook, and Victoria Reservoir, supplemented by a number of artesian bores. The largest reservoir, the Canning Dam, has a capacity of 20,550 million gallons, about 5,000 million gallons more than that of the Mundaring Reservoir.

The sewage treatment works of both Perth and suburbs consist of primary sedimentation with separate sludge digestion and discharge of all effluent direct to the ocean. Fremantle treatment works consists of septic tanks with ocean outfall for effluent. There are three treatment works, situated at West Subiaco, Swanbourne and Fremantle.

(b) Water Supply. The following table shows particulars of water supply services for 1938-39 and 1951-52 to 1955-56.

METROPOLITAN WATER SUPPLY, WESTERN AUSTRA	ALL	4	:	SERVICES.
---	-----	---	---	-----------

Year.	Number of Services.	Esti- mated Popu- lation Supplied.	Average Daily Con- sumption.	Total Con- sumption for Year.	Average Daily Consumption.  Per Hea of Estimated Population.		Length of Mains.	Number of Meters.
1938–39	61,467	248,248	Mill. gals. 14.1	Mill. gals. 5,147	Gallons. 229	Gallons. 56.8	Miles. 953	40,014
1951–52 1952–53 1953–54 1954–55 1955–56	90,436 96,155 102,093 108,755 113,437	309,854 316,423 323,131 367,429 380,294	31.0 30.7 34.9 38.2 39.5	11,337 11,201 12,743 13,948 14,408	343 319 342 351 348	100.0 97.0 108.0 104.0 103.5	1,327 1,422 1,500 1,597 1,709	61,146 69,262 73,780 78,194 82,636

Water rating for 1955-56 was 1s. 9d. in the £1 on annual valuation.

(c) Sewerage and Drainage. Some particulars of the metropolitan sewerage and drainage services for 1938-39 and 1951-52 to 1955-56 are shown below:—

### METROPOLITAN SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA:

				DIJI	VICES.			
Year.				Houses Connected.	Estimated Population Served.	Sewage Pumped for the Year.(a)	Length of Sewers.	Length of Stormwater Drains.
						Mill. gals.	Miles.	Miles.
1938-39				36,652	162,457	1,030	444	31
1951-52				52,171	224,000	3,080	626	34
1952-53				54,467	229,700	3,333	648	34
1953-54				56,526	238,400	3,372	654	34
1954-55				58,543	232,000	3,214	675	34
1955-56				60,702	240,860	3,067	692	34

(a) Aggregate of quantities pumped by the various stations.

Sewerage rating for 1955-56 was 1s. 9d. in the £1 on annual valuation, while stormwater drainage rating was 4d.

(d) Finances. The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Department for the years 1938-39 and 1951-52 to 1955-56:—

# METROPOLITAN WATER SUPPLY AND SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA: FINANCES. (£.)

1955-56		6,421,032	675,419	313,514	296,904	610,418	1+	65,001

(iii) Country Areas Water Supply. (a) Goldfields and Agricultural Water Supply. The source of supply for Kalgoorlie (370 miles from Perth), Coolgardie and adjacent goldfields, as well as for agricultural districts and some 65 towns situated on or near the pipe line and its branches, is the Mundaring Reservoir (26 miles from Perth) whose capacity is 15,100 million gallons. The Reservoir is linked by pipe line to the Metropolitan system, which thereby supplements its summer requirements.

(b) Great Southern Towns Water Supply. This system is currently under construction as part of the Comprehensive Water Supply Scheme to serve principally the towns on the Great Southern Railway between Brookton and Katanning. For this purpose, it is planned

to increase the storage capacity of Wellington Dam to 40,800 million gallons.

(c) Other Country Towns. Water is derived from stream flow, natural and artificial catchments, bores and wells. A total of 44 such supplies is administered by the Minister of Works.

The Comprehensive Scheme is now under construction in two main parts. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply; and the Southern section is the Great Southern Towns Water Supply Scheme. When completed, over 4 million acres of agricultural land will be served, and increased supply to the Eastern Goldfields will permit expansion of the gold mining industry. The cost of the scheme now estimated to be about £10 million is being shared by the Commonwealth and State Governments. Expenditure on this work to 30th June, 1956 totalled £4.387,681.

The following table shows details of the Country Areas Water Supply for 1938-39 and 1951-52 to 1955-56:—

### COUNTRY AREAS WATER SUPPLY, WESTERN AUSTRALIA: SUMMARY.

Year.		Number of Services.	Total Con- sumption.	Length of Water Mains.	Number of Meters.	Capital Cost.	Revenue.	Expendi- ture.(a)	Surplus (+) or Deficit (-).
1938-39		13,670	Mill. gals. 1,735	Miles. 1,720	10,872	£ 5,527,890	£ 331,457	£ 298,531	£ + 32,926
1951-52 1952-53 1953-54 1954-55 1955-56		16,598 17,124 17,375 18,034 18,458	2,314 2,374 2,565 2,536 2,812	1,802 1,810 1,821 1,841 1,864	14,640 15,289 15,500 16,045 16,477	7,916,564 8,314,816 8,770,042 9,417,014 9,984,368	398,057	806,398 1,010,036 1,071,597 998,202 1,103,344	- 439,643 - 611,979 - 639,101 - 555,106 - 634,112

(a) Includes interest and debt redemption.

- (iv) Water Supply of Other Towns, etc. (a) Controlled by Public Works Department. During 1955-56, water supplied to other towns and districts, excluding minor water supplies, amounted to 950 million gallons, including service to adjacent mines, 31 million gallons, and railways, 69 million gallons. There were in all 17,852 services connected.
- (b) Controlled by Commonwealth and State Government Railways. Consumption for the year ended 30th June, 1956 was 212 million gallons. In addition, 358 million gallons were obtained from other sources, mainly the Country Areas Water Supply and the Metropolitan Water Supply.
- (c) Water Boards not Controlled by Government. During 1955-56, approximately 455 million gallons of water were supplied, the number of services being 5,140.
- (v) Agricultural Water Supply. From 1st July, 1904 to 30th June, 1956, 586 tanks were built, 1,159 wells sunk, and 5,630 bores (including artesian) put down. Of the bores put down, 1,604 yield fresh or stock water.
- (vi) Artesian and Sub-artesian Waters. Up to 30th June, 1956, the total number of bores put down in search of artesian or sub-artesian water (inclusive of operations by Defence Services) was 346, ranging in depth from 21 to 4,006 feet. Water (fresh or stock) was struck in 295 bores, 178 of which were artesian and 117 sub-artesian.
- 6. Tasmania.—(i) Waterworks. At the end of 1956-57, there were 64 municipal waterworks in Tasmania. The capacity of the reservoirs was 1,002 million gallons, the estimated population served was 243,000, the number of tenements served was 61,000. In addition, two regional schemes operated by the State Government were serving an estimated population of 28,000 in 7,000 tenements.
- (ii) Sewerage. At the end of 1956-57, there were 11 municipal sewerage schemes in operation in Tasmania. They served an estimated population of 155,000 and the number of tenements served was 39,000.

#### § 6. Harbour Boards and Trusts.

Note.—The number and net tonnage of all vessels which entered the major ports in each State during the years 1955-56 and 1956-57 are shown in Chapter XI.—Transport and Communication, Part I, Division A. §5. Shipping at Principal Ports. Particulars of oversea and interstate cargo discharged and shipped during 1956-57 are shown in Part I, Division A. §6 of the same chapter.

1. New South Wales.—(i) Maritime Services Board of New South Wales. (a) General. The Maritime Services Board of New South Wales is a corporate body of five Commissioners comprising three full-time members and two part-time members representing shipping and other interests. The Board was constituted on 1st February, 1936, under the Maritime Services Act 1935, to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation.

The Board exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft, and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State.

At the Port of Sydney, the Board is also responsible for the provision of adequate wharfage and channels, and carries out all construction, maintenance and dredging work. At other ports of New South Wales, such work is undertaken by the Department of Public Works.

(b) Port of Sydney. The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as "The Heads", and the Harbour proper, a distance of 4 miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 42 feet deep (low water ordinary spring tide) and the Eastern Channel 41 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated in close proximity to the business centre of the city, about four or five miles from the Heads. At present, there are 6 dolphin berths each 550 feet long, and 122 effective commercial cargo berths with a total length of 49,948 feet controlled by the Board. Accommodation for harbour craft amounts to 4,835 feet while the length of other berths including oil and private wharves totals 25,463 feet. Depth of water at wharves is up to 40 feet. Special facilities for the storage and handling of staple products such as wheat, wool, etc., are provided and modern plant has been installed for replenishing ships' bunkers with oil or coal.

Docking facilities are available for the largest vessel affoat. The Captain Cook Graving Dock, opened in March, 1945, ranks amongst the largest graving docks in the world being 1,133 feet by 147 feet  $7\frac{1}{2}$  inches with a depth of 45 feet 2 inches over the sill at high water. There are also several smaller dry docks and floating docks in the port.

The following table shows particulars of the finances of the Board in respect of the Port of Sydney for 1938-39 and 1951-52 to 1955-56:—

MARITIME SERVICES BOARD: FINANCES OF THE PORT OF SYDNEY.
(£.)

			Revenue.		:	Expenditure	•		
Year.	at 30th June.	Wharfage and Tranship- ment Rates.	Tonnage Rates and Berthing Charges.	Total.	Adminis- tration and Mainten- ance.	Interest, Debt Redemption, Exchange, etc.	Total.	Surplus(+) or Deficit(-).	
						I	l		
1938-39	11,276,399	773,501	38,180	1,155,627	380,120	536,781	916,901	+ 238,726	
1951-52 1952-53 1953-54 1954-55 1955-56	12,194,585 12,562,700 12,799,104 13,408,326 13,775,278	971,553 1,482,492	334,530 254,637 333,320 515,480 459,783	2,354,154 2,021,121 2,471,540 3,093,315 3,042,924	1,455,711 1,529,050 1,517,811 1,735,504 1,740,698	533,401 546,590 550,654 593,478 644,783	2,189,112 2,075,640 2,318,465 2,978,982 2,910,481	+ 165,042 - 54,519 + 153,075 + 114,333 + 132,443	

<sup>(</sup>a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account: 1951-52, £200,000; 1953-54, £250.000; 1954-55, £650,000; and 1955-56, £525,000.

Capital expenditure for each of the years 1938-39 and 1951-52 to 1955-56 was £28,576, £496,489, £468,026, £473,516, £599,752, and £553,329 respectively. Expenditure on renewals and replacements from the Renewals Fund Reserve Account was: 1951-52, £291,454: 1952-53, £299,286; 1953-54, £317,493, 1954-55, £306,542 and 1955-56, £630,537.

- (c) Port of Newcastle. The Maritime Services Board of New South Wales is the port authority but other government bodies are responsible for certain functions and activities of a maritime character at Newcastle. These include—
  - (i) The Department of Public Works, which is the constructing, dredging and maintenance authority at Newcastle as well as at other New South Wales ports except Sydney;
  - (ii) The Department of Railways, which is responsible for the control of wharfage and shipping arrangements in connexion with the coal industry and the provision and maintenance of appliances necessary for the transport and shipment of coal.

An Advisory Committee consisting of eight members, appointed by the Governor, assists the Board in matters associated with the operation of the port. In respect of volume of trade, Newcastle ranks second in importance in New South Wales. It is primarily a coal-loading port, and the proximity to the coal fields has led to the establishment of important industries, including iron and steel works, in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the narbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 25 feet 6 inches at low water, is 350 feet wide. Wharfage accommodation amounts to 16,100 feet, the Maritime Services Board controlling 6,500 feet and the Railways Department 7,000 feet while 2,600 feet is privately owned. There are also several dolphin berths available for tie-up purposes. A floating dock of 15,000 tons capacity is available at the port.

- (d) Port Kembla. As from 3rd May, 1948, the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. The Department, however, continues to be the constructing authority in respect of works, dredging and maintenance. An Advisory Committee consisting of seven members appointed by the Governor has been formed to assist the Board in the operation of the Port. In respect of volume of trade, Port Kembla ranks third in the ports of New South Wales. It has an area of approximately 330 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation totalling 4,800 feet has been provided for large ocean-going vessels. No cargo sheds are available as the nature of trade at the port does not call for the provision of sheltered storage accommodation at the berths. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong. The developmental programme for Port Kembla includes the construction of an inner harbour to provide wharfage for the steelworks in addition to general cargo berths.
- (e) Botany Bay. The Maritime Services Board of New South Wales is the administrative and controlling authority. The port is primarily a discharging centre for the oil refinery at Kurnell and two berths are available as well as tanker mooring buoys. The entrance to the Bay is approximately 1½ miles wide, with a minimum depth of about 36 feet.
- (f) Other Ports. In addition to the ports of Sydney, Newcastle, Port Kembla and Botany Bay, the Board controls 28 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.
- (ii) Port Charges. The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1st February, 1936, the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to £4,587,796 in 1955-56. These figures include the Port of Sydney revenue (see table above)

and State navigation service collections (£1,544,872 in 1955-56). Commonwealth Government revenue from light dues and navigation receipts, for the whole of Australia, amounted to £270,011 in 1955-56.

2. Victoria.—(i) Melbourne Harbor Trust. (a) General. Information regarding the origin and constitution of this Trust, which controls the Port of Melbourne, appears in Official Year Book No. 12, p. 970 et seq. The membership of the Board of the Melbourne Harbor Trust Commissioners was increased to five during 1954 by the appointment of a further part-time Commissioner to represent waterside workers' interests. At 31st December, 1956, the sheds available for wharfage accommodation had a length of 21,579 feet, covering an area of 1,561,162 square feet. The area of water in Port Philip Bay and the River Yarra under the control of the Trust is approximately 5,327 acres and the total length of wharves, piers and jetties in the port is 66,083 feet, giving an area of over 63 acres of wharfage, and 58,170 feet of effective berthing space. During 1956, work was continued on the new berths at Appleton Dock (ultimately to have eighteen berths), Victoria Docks, South Wharf and Williamstown. The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is about 31 to 34 feet, the maximum being about 40 feet.

(b) Finances. The following table shows particulars of the financial operations of the Trust during the years 1939 and 1952 to 1956.

### MELBOURNE HARBOR TRUST: FINANCES.

		Gross	Reve	enue.		Expen	diture.			
Yea	ar.	Loan Indebted- ness at 31st Decem- ber.	Wharfage and Tonnage Rates.		Adminis- tration and Mainten- ance.	tration Redemp- tion, Mainten-Exchange		Total.	Surplus (+) or Deficit (-).	
1939		4,018,527	689,100	843,899	282,533	270,650	129,160	837,577	+ 6,322	
1952		7,914,146	1,256,581	1,941,252	1,204,863	292,485	179,047	1,947,085	- 5,833	
1953		9,581,933	1,423,345	2,052,272	1,230,195	381,914	98,182	2,013,554	+ 38,718	
1954		9,641,361	1,800,811	2,593,347	1,232,574	418,818	479,393	2,509,947	+ 83,400	
1955		9,978,842					532,372	2,906,406	+112,642	
1956		11,296,811	1,841,176	2,676,698	1,649,047	483,905	145,825	2,662,047	+ 14,651	

<sup>(</sup>a) Includes statutory payments to Consolidated Revenue and Geelong Harbor Trust:—1939 £155,234; 1952, £270,690; 1953, £303,263; 1954, £379,162; 1955, £452,219;; 1956, £383,270, Excludes capital expenditure:—1939, £128,567; 1952, £2,246,097; 1953, £1,255,613; 1954, £1,255,625; 1955, £1,509,665; 1956, £1,609,928.

(ii) Geelong Harbor Trust. The Geelong Harbor Trust, which was constituted in 1905, was reconstituted in 1934 under the provisions of the Melbourne and Geelong Harbor Trusts Act 1934. The Trust is under the control of three Commissioners appointed by the Governor-in-Council. At 31st December, 1955, the minimum depth of all berths (except Yarra Pier 29 feet) was 32 feet low water. During 1956, a contract was arranged to carry out the dredging, to 36 feet low water, of the approaches to Refinery Pier.

Revenue for the year 1956 was £937,581, and revenue expenditure was £488,738. The value of the Trust's fixed assets less depreciation was £4,270,378 and £5,431,089 at 31st December, 1955 and 1956 respectively. Loans outstanding at the end of 1956 amounted to £2,990,219.

(iii) Other Ports. Apart from Melbourne and Geelong, Portland is the only Victorian port of other than minor importance.

- 3. Queensland,—(i) General. The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.
- (ii) Brisbane. Brisbane accommodates comfortably, in its dredged and improved river, the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly, because of the increasing size of vessels, are still within

easy access of the city. The maximum depths (low water ordinary spring tide) of the shipping channel decrease from 32 feet in the North-West channel to 20 feet in the Bulimba Reach to Victoria Bridge section. Depths at wharves vary between 23 and 33 feet. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1938-39 and 1951-52 to 1955-56 are shown below:—

## BRISBANE HARBOUR: FINANCES. (£'000.)

			İ	Rece	ipts.	Payı	ments.
	Year.		Loan Indebtedness at 30th June.	Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Redemption).
1938–39			1,179	165	173	36	112
1951–52			1,862	276	326	348	463
1952-53			2,168	318	393	426	558
1953-54			2,528	603	753	460	611
1954-55			2,633	688	853	522	693
1955-56			2,899	701	817	582	772

In addition to Brisbane Harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, the Brisbane River, and ten smaller harbours not administered by harbour boards.

(iii) Harbour Boards. Harbour boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton and Townsville. From 1st January, 1953, the harbour boards adopted the financial year ended 30th June for accounting purposes instead of the calendar year as previously. Finances for each port for the year ended 30th June, 1956, are shown below, together with a summary for the years 1939, 1951 and 1952, for the period of eighteen months ended 30th June, 1954 and for the year ended 30th June, 1955.

<sup>(</sup>a) Years 1939, 1951 and 1952, 31st December. (b) Eighteen months ended 30th June, 1954. (c) Includes expenditure on capital works from accumulated revenue.

4. South Australia.—The South Australian Harbors Board. All South Australian harbours are controlled by the South Australian Harbors Board, which consists of three Commissioners appointed by the Governor for a period of five years and eligible for reappointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions. The most important ports are the five deep sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln and Thevenard. At a few ports, the wharves or jetties are privately controlled, the principal of these being Whyalla (controlled by the Broken Hill Pty. Co. Ltd. under a Private Act of Parliament), Ardrossan where the Broken Hill Pty. Co. Ltd. has installed a bulk loading plant for handling dolomite, grain and salt and Rapid Bay which is also controlled by the Broken Hill Pty. Co. Ltd. Maximum depths of water (low water ordinary spring tide) at the wharves of the main ports range from 20 to 24 feet at Port Pirie to 35 feet at Port Adelaide (Outer Harbour). The following table shows the finances of the Board for 1938-39 and 1952-53 to 1956-57:

THE SOUTH AUSTRALIAN HARBORS BOARD: FINANCES.

(£.)

		Capital	1	Ex	penditure fr	om Revenue	·,	Surplus(+)

(a) State Treasurer's Funds and Reserve employed.

5. Western Australia.—(i) Fremantle Harbour Trust. Fremantle Harbour is controlled by a board of five Commissioners appointed by the Government. The Inner Harbour has a maximum water depth of 36 feet at the entrance and 33 feet depth at the wharf face. Wharf berth accommodation is 10,432 feet. The Outer Harbour consists of various sections south of the Inner Harbour with jetty facilities including the Kwinana Oil Refinery jetties which are approached through the Success and Parmelia Channels each 500 feet wide and 38 feet deep. The depth of water at the berths is a minimum of 44 feet.

Gross earnings for the years 1955-56 and 1956-57 amounted to £2,056,141 and £2,515,118 respectively, working expenses to £1,838,650 and £2,031,368, interest charges to £174,280 and £209,519, debt redemption to £51,723 and £55,806 and renewals fund to £2,000 in each year. Special payments were £155,848 and £213,432 and the total amounts debited to loan capital account were £4,655,975 and £6,260,562.

- (ii) Albany Harbour Board. The Albany Harbour is controlled by a board of five members appointed by the Government. The depth of water in the Harbour is 30 feet but dredging to accomplish a water depth of 34 feet is nearing completion. Wharf accommodation consists of 563 feet and in addition the Deepwater Jetty has 2,500 feet of accommodation. Gross earnings for the years 1955-56 and 1956-57 amounted to £50,975 and £92,431 respectively, working expenses to £41,311 and £48,487, interest and sinking fund charges to £15,521 and £19,650 and amounts debited to loan capital account to £1,535,902 and £1,652,461.
- (iii) Bunbury Harbour Board. The Bunbury Harbour is controlled by a board of five members appointed by the Government. The depth of water in the Harbour is 27 feet and berthing accommodation is 3,700 feet. Gross earnings for the years 1955–56 and 1956–57 amounted to £33,955 and £47,338 respectively, working expenses to £45,978 and £39,197, interest charges to £29,084 and £32,719 and amounts debited to loan capital account to £1,458,788 and £1,521,691.
- (iv) Other Ports. The following ports are controlled by the State Government Harbour and Lights Department:—Geraldton, Yampi, Port Hedland, Carnarvon, Wyndham, Derby, Point Samson, Busselton, Onslow and Broome. The Port of Esperance is under the control of the Railways Commission.
- 6. Tasmania.—There are eight marine boards and two harbour trusts in Tasmania The marine boards control the ports of Hobart, Launceston, Stanley (Circular Head) Burnie and Wynyard (Table Cape), Devonport, Strahan, Currie (King Island), and Whitemark (Flinders Island) and the harbour trusts those of Smithton and Leven. Aggregate receipts of revenue accounts of all these authorities during the year 1955-56 were £1,068,087.

and expenditures £1,091,044 including loan charges £165,282. The total receipts of the Hobart Marine Board during 1955-56 were £496,201, loan charges amounted to £54,202 and total expenditure to £536,372. Launceston Marine Board receipts during 1955-56 amounted to £223,473, loan charges to £17,709 and total expenditure to £217,687. Loan indebtedness of all marine boards and trusts at 30th June, 1956, was £2,568,502, of which £815,130 was in respect of Hobart and £311,835 in respect of Launceston.

Hobart, Launceston, Burnie and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic, there is also considerable oversea shipping. Depths of water at wharves vary, in general between 16 and 34 feet (low water ordinary spring tide), but at Hobart there is a depth of water of from 30 to 52 feet.

### § 7. Fire Brigades.

1. New South Wales.—A Board of Fire Commissioners, consisting of five members, one each representing the State Government, (President), insurance companies, local government authorities, volunteer firemen and permanent firemen, operates under the Fire Brigades Act 1909-1956, and 154 fire districts had been constituted at the end of 1956. Up to the end of 1949, the cost of maintenance of fire brigades was borne in proportions of one quarter, one quarter, and one half respectively by the Government, the municipalities, and the insurance companies concerned and the expenditure was so regulated that the proportion payable by the councils in a fire district should not, except in special circumstances, exceed the amount obtainable from \$\frac{1}{2}d\$. in the £1 rate on the unimproved capital value of ratable land in the fire district. In June, 1949, legislation was introduced (i) increasing the limit of the Board's borrowing power from £250,000 to £500,000, (ii) providing for the varying of the maximum rate that may be levied by councils and (iii) altering the basis of contributions so that from 1st January, 1950, local councils and the Government will each pay one-eighth and the insurance companies three-quarters.

Other legislation, introduced in September, 1949, to improve and modernize the law dealing with the prevention of bush fires and to build up the organization of the bush fire-fighting services, provided for the establishment of Fire Regions and a Bush Fire Fighting Fund to be financed from contributions by the Government, councils and insurance companies in the proportion of one-quarter, one-quarter and one-half, respectively. The contribution of any council shall not exceed one-twentieth of a penny in the £1 on the unimproved capital value of ratable land in the area of the council not being land within a fire district constituted under the Fire Brigades Act 1909–1956.

- At 31st December, 1956, the authorized strength of the Fire Brigade throughout the fire districts of New South Wales was 366 officers and 954 permanent and 2,510 volunteer firemen. Corresponding figures for the Sydney Fire District were 303, 895 and 355. The revenue for the year 1956 was £2,371,788, made up as follows:—From the Government, £294,253, municipalities and shires, £294,253; fire insurance companies and firms, £1,765,518; and from other sources, £17,764. The disbursements for the year were £2,269,436.
- 2. Victoria.—(i) General. The Fire Brigades Act of 1928 provided for a Metropolitan Fire Brigades Board and a Country Fire Brigades Board each consisting of nine members. In December, 1944, the latter Board was superseded by the Country Fire Authority under an Act of that title, and the number of members was increased to ten. The number of members of the Metropolitan Fire Brigades Board was increased in December, 1954, from nine to ten to include an employees' representative.
- (ii) Metropolitan Fire Brigades Board. Since 1st October, 1952, the Metropolitan Fire Brigades Board has received contributions from the municipalities and the insurance companies in the proportion of one-third and two-thirds respectively. Prior to 1st October, 1952, the Board received contributions in equal proportions from the Treasury, the municipalities and the insurance companies. On 30th June, 1956, the Board had under its control 44 stations, 709 permanent staff, 74 special service and clerical, etc., staff, and 15 part-time firemen. The total receipts for 1955-56 were £1,118,088 comprising contributions, £889,767, receipts for services, £115,470 and interest and sundries, £112,851. The expenditure was £1,174,584.
- (iii) Country Fire Authority. This authority, constituted in 1944, is responsible for the prevention and suppression of fires in the "country area of Victoria", which embraces the whole of the State outside the metropolitan fire district, excluding State forests and certain crown lands. The country area has been divided into 24 fire control regions, three of which (Ballarat, Bendigo and Geelong) are wholly urban and the remainder mixed urban and rural. The Country Fire Authority has received contributions in the proportion of two-thirds from

insurance companies and one-third from the Treasury as from 1st January, 1954. Prior to that date the Treasury contributed two-thirds while the insurance companies contributed one-third. At 30th June, 1956, the Act applied to 169 insurance companies, 200 urban and 1,020 rural fire brigades. The effective registered strength of the brigades was 93,222 members.

The receipts for the year 1955-56 amounted to £397,169. Total expenditure other than loan amounted to £405,095.

- 3. Queensland.—(i) General. The Acts of 1920–1931 made provision for the retention of existing fire districts, and for the constitution of new districts. For each district, there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows:—The Treasury two-sevenths, insurance companies three-sevenths, and local authorities two-sevenths. All volunteer fire brigades in a district must be registered.
- (ii) Fire Brigade Boards. At 30th June, 1956, there were 72 Fire Brigade Boards. The total number of stations was 124 and full-time staff numbered 494, including 13 administrative, 93 officers and 388 firemen. Workshop staff numbered 16. Volunteers numbered 326. Part-time staff numbered 653 including 70 administrative, 96 officers and 487 firemen. The total revenue for the year 1955-56 was £639,023, received mainly from the following sources:—Government £170,532, local authorities £170,532, insurance companies £255,834. Loan receipts (Government and other) were £75,226. The total expenditure for the year was £650,514, the chief items being salaries and wages £465,935 and interest and redemption of loans £41,899.
- 4. South Australia.—The Fire Brigades Act 1936-1944 provides for a board of five members, and the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury (subject to certain limits when the contribution exceeds £10,000), five-ninths by insurance companies, and two-ninths by the municipalities concerned. At 30th June, 1956, there were altogether 35 fire brigade stations, of which 12 were metropolitan and 23 country.

The authorized strength of the permanent staff was 383, including 273 officers and men and 87 country auxiliary firemen. The total revenue for the year 1955-56 was £344,517, including contributions of £303,840 made up as follows:—insurance companies £183,014, Treasury £47,620 and municipalities £73,206. The Treasury contribution includes an additional grant of £35,670.

5. Western Australia.—In 1942, certain municipal and road board districts were constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 35 fire districts at 30th September, 1956. The contribution to the Board is made in the proportion of two-ninths from the Government, two-ninths from local government authorities, and five-ninths from insurance companies. The number of local government authorities and insurance companies who contributed numbered 59 and 143 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30th September, 1956 numbered 52, with a staff of 1,533 including 252 permanent officers and firemen and 1,250 volunteer brigade officers and firemen. The revenue for the year ended 30th September, 1956, was £343,204 and the expenditure £345,886.

Under the Bush Fires Act, a Bush Fires Board (appointed April 1955 and superseding the Rural Fires Prevention Advisory Committee) consisting of ten members, five of whom are nominated by the Road Board Association, was set up to advise the Minister for Lands on bush fire control. The Act also provides for the registration of bush fire control officers, who numbered 1,009 at 30th June, 1956 and the establishment of bush fire brigades, the number of which was 627 at 30th June, 1956.

6. Tasmania.—The Fire Brigades Act 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of existing fire brigades boards, while leaving the responsibility for individual control and management with the boards. The Commission consists of five members nominated or elected by the fire brigades boards and one member nominated by the Minister. Contributions towards the cost of operations are on the basis of one-third each from the Treasury, the municipalities, and the insurance companies concerned. The cost for the year 1955-56 amounted to £110,438. There were at 30th June, 1956, 24 brigades controlling 33 stations and their aggregate staffs numbered 512, including 85 permanent officers and 427 part-time firemen, including officers.

### CHAPTER XX.

### PRIVATE FINANCE.

#### A. CURRENCY.

#### § 1. General.

The Australian monetary system is based on the British system, of which the unit is the pound  $(\pounds)$  divided into 20 shillings (s.) each of 12 pence (d.). When the Australian currency was introduced in 1909 the Australian pound was specified as equivalent to 123.27447 grains of gold  $^{11}$ /<sub>12</sub>ths fine or 113.002 grains of fine gold and, until the depression in 1930, was identical with the pound sterling. There was a gradual depreciation of the Australian pound in terms of sterling from the beginning of 1930 until 3rd December, 1931, when it was stabilized at the rate of £125 Australian = £100 sterling. This relationship has been maintained until the present time. Following the depreciation, no action was taken to define the value of the Australian pound in terms of gold until 5th August, 1947, when the Australian Government advised the International Monetary Fund, in terms of the membership agreement, that the par value of the Australian pound was 2.86507 grammes (44.2148 grains) of fine gold. From 18th September, 1949, this was reduced to 1.99062 grammes (30.720 grains) of fine gold.

When the Commonwealth was established in 1901, the currency in Australia consisted of United Kingdom gold, silver and bronze coins, notes issued by the banks, and Queensland Treasury notes. Queensland Treasury notes were in circulation in Queensland only, having superseded bank notes in that State after the 1893 crisis. Under the Commonwealth Constitution, the control of currency, coinage and legal tender and the issue of paper money was vested in the Commonwealth. The Commonwealth assumed these powers by enacting the Coinage Act 1909 and the Australian Notes Act 1910.

Australian notes are legal tender in Australia for any amount. Australian silver coins are legal tender for any amount not exceeding forty shillings and Australian bronze coins are legal tender for any amount not exceeding one shilling.

#### § 2. Coinage.

1. Coins in Circulation.—Brief historical notes relating to the Australian Coinage are given in Official Year Book No. 37, pp. 557 and 558. For weight, metal, composition, etc., of Australian coins in circulation see Official Year Book No. 39, p. 697.

The silver coins issued prior to July, 1947, have a millesimal fineness of 925 (thirty-seven fortieths silver and three fortieths copper) and those issued since 1st July, 1947 (dated 1946 and later) have a millesimal fineness of 500 (one-half silver and one-half other metals).

From 1910 to 1916, Australian coins were minted in England by the Royal Mint, London, and the Mint, Birmingham Ltd., and in 1916 and 1917 by the Indian Mints. The minting of Australian coins was undertaken by the Australian Mints in 1916 and coins have been minted at the Melbourne branch of the Royal Mint from 1916 to the present time, at the Sydney branch from 1919 until that Mint closed in 1926 and at the Perth branch in 1922 and since 1940.

During the 1939-45 War, the two Australian mints were unable to meet the demand for Australian coins and some coins were minted in the United States of America and India. In 1951-52 and 1952-53, some coins were minted at the Royal Mint, London, to meet the heavy demand for coins. Details of Australian coins obtained from each mint to 30th June, 1957, are as follows:—Melbourne, £40,849,000; Perth, £1,345,000; Sydney, £488,000; United Kingdom Mints, £3,016,000; United States Mints, £6,000,000; Indian Mints, £169,000; Total, £51,867,000.

2. Issues of Australian Coins.—The net issues of Australian silver and bronze coin from 1910 to 30th June, 1957 were:—Crown (5s.), £276,000; Florin (2s.), £17,777,000; Shilling (1s.), £7,051,000; Sixpence (6d.), £4,801,000; Threepence (3d.), £5,568,000; Total silver coin, £35,416,000; Penny (1d.), £2,228,000; Half-penny (\frac{1}{2}d.), £706,000; Total bronze coin, £2,934,000. Except in the total no allowance has been made for £57,000 worth of damaged silver coin, for which denominations are not available, withdrawn since 1910.

3. Profits on Coinage of Silver and Bronze.—Australian silver and bronze coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table, details are given of the value of coins issued, the cost of bullion, the cost of minting and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1938-39 and 1952-53 to 1956-57.

4. Australian Mints.—(i) General. Soon after the discovery of gold in Australia, a branch of the Royal Mint was established in Sydney. The formal opening took place on 14th May, 1855. The Melbourne branch was opened on 12th June, 1872, and the Perth Branch on 20th June, 1899. The States of New South Wales, Victoria and Western Australia provided an annual endowment in return for which the mint receipts were paid to the respective State Treasuries. Owing to losses incurred in its operations, the Sydney branch was closed at the end of 1926.

Since their establishment, the Australian branches of the Royal Mint have been primarily concerned with the refining of gold, minting of Imperial gold coins and the production of bars and ingots of gold bullion for export. The minting of Imperial gold coins was discontinued in September, 1931. In 1916, the Melbourne branch took over the minting of Australian silver and bronze coins from the Royal Mint, London. Australian coins were also minted at the Sydney Mint from 1919 to 1926 and at the Perth Mint in 1922 and from 1940 to the present time. The Melbourne branch has also minted token coins for the Territory of New Guinea and for New Zealand.

(ii) Gold Receipts and Issues. (a) Receipts. The receipts of gold at Australian mints during 1956 amounted to 965,734 fine ounces (Melbourne, 149,152 fine ounces; Perth, 816,582 fine ounces).

Notes. 723

- (b) Issues. The Australian mints issue gold bullion for the use of local manufacturers (jewellers, dentists, etc.,) and for export. Since September, 1931, when the United Kingdom departed from the gold standard, the minting and issue of gold coins by Australian mints has ceased. Australian exports of gold are mainly in the form of 400-oz. ingots, but in earlier years a considerable amount of gold was shipped to India in 10-oz. bars. Since early in the 1939-45 War, all gold has been acquired by the Commonwealth Bank and the export and use of gold has been subject to regulation by the Commonwealth Government. From December, 1951, export of a proportion of newly-mined gold for sale on premium markets overseas was permitted (see para. 5 below). The issues from Australian mints during 1956 amounted to 965,440 fine ounces (Melbourne, 148,074 fine ounces, Perth, 817,366 fine ounces).
- 5. Price of Gold.—The following table shows the average prices of gold and the average value of the sovereign in London and Australia for the years 1938-39 and 1952-53 to 1956-57. The average price of gold in Australia is based on the Commonwealth Bank's buying price for gold lodged with the mints.

		Lon	don.	Australia.

1956–57		12 10 0	2 18 10	15 12 6	3 12 6	267.8			

PRICE OF GOLD: LONDON AND AUSTRALIA.

In December, 1951, arrangements were made whereby producers could sell a proportion of newly-mined gold for industrial purposes on oversea premium markets. Under the arrangements, gold is acquired by the Commonwealth Bank in the usual manner and sold, at the Bank's buying price, to an association representing gold producers participating in the scheme. The association pays the Bank's handling charges and the costs of preparation of the gold and makes arrangements for export and sale. The gold can be sold only against payment in United States dollars. Profits earned by the association after meeting administrative expenses are distributed to members in proportion to the quantity of gold delivered to the Commonwealth Bank. Until August, 1952, when permission was given for the export of fine gold, gold exported under this arrangement was not to exceed a fineness of 22 carats (11/12 ths.).

The average prices per fine ounce in Australian currency (f.o.b.) obtained for gold exported under this scheme for each of the months during 1956-57 for which there were sales, were:—July, £15 12s. 10d.; August £15 13s. 11d.; September, £15 13s. 8d.; October, £15 13s. 8d.; November, £15 14s.; December, £15 13s. 4d.; January, £15 13s.; March, £15 12s. 10d.; April, £15 13s.; June, £15 13s.

### § 3. Notes.

- 1. General.—Brief historical notes relating to the circulation and issue of notes in Australia are given in Official Year Book No. 37, pp. 561 and 562. The issue of notes intended for circulation as money other than by the Commonwealth Bank is prohibited.
- 2. The Australian Note Issue.—(i) General. Notes in circulation in Australia are issued by the Commonwealth Bank through the Note Issue Department. The Bank is authorized to issue Australian notes in denominations of 5s., 10s., £1, £5, £10 and any multiple of £10. The Commonwealth Bank is not required to hold a specific reserve in gold against the note issue, but the assets of the Note Issue Department must be held or invested in gold, on deposit with any bank, or in securities of the Government of the United Kingdom, the Commonwealth or a State. In 1957, all the profits of the Note Issue Department were paid to the Commonwealth Consolidated Revenue Fund. A distribution of the profits prior to 1957 may be found in the section dealing with the Commonwealth Bank (see para. 5 (iv) page 728).

Australian notes are legal tender to any amount within Australia and have been issued in denominations of 10s., £1, £5, £10, £20, £50, £100 and £1,000. Notes of denominations higher than £10, however, have not been issued to the public since 1945.

(ii) Australian Notes in Circulation. Particulars of the average values of notes in circulation for the years 1938-39 and 1952-53 to 1956-57 are given in the following table:—

## AUSTRALIAN NOTE ISSUE. (£'000.)

	-	•	wealth Treasury Bills)	259,368	257,693
			Other Assets	50	57
Total Liabilities	380,249	395,177	Total Assets	380,249	395,177

<sup>(</sup>a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years, and notes of a denomination exceeding one pound which have been on issue for more than 40 years are not included in the item "Notes on Issue" but are included in the item "Other Liabilities".

In 1956-57, the net profits of the Note Issue Department amounted to £10,053,635 and were paid to the Commonwealth Consolidated Revenue Fund.

### B. BANKING.

### § 1. Cheque-Paying Banks.

- 1. Banking Legislation.—(i) Commonwealth Legislation. Under Section 51 of the Commonwealth Constitution, the Commonwealth Parliament has power to legislate with respect to "Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money". The principal Commonwealth Acts at present in force relating to Banking are—
  - (a) The Commonwealth Bank Act 1945-1953, which provides for the constitution and management of the Commonwealth Bank, Commonwealth Trading Bank and Commonwealth Savings Bank and the management of the Australian note issue; and

(b) The Banking Act 1945-1953, which provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth.

The Banking Act 1945 was assented to on 3rd August, 1945, and came into operation on 21st August, 1945. It applies to all banks, except State banks, operating in Australia or Territories of the Commonwealth. The objects of the Act are:—(a) To provide a legal framework, uniform throughout Australia, for regulating the banking system; (b) to safeguard depositors of the banks from loss; (c) to provide for the co-ordination of banking policy under the direction of the Commonwealth Bank; (d) to control the volume of credit in circulation and bank interest rates; (e) to mobilize and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the Act is given in Official Year Book No. 37, p. 565.

The Banking Act 1953, assented to on 1st April, 1953, amended the Banking Act 1945. Details of the main amendments are given in Official Year Book No. 40, p. 616.

- (ii) State Legislation. State banking legislation relates to the incorporation of banks and the constitution and management of State banks. The Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g., the Bank of New South Wales by Act of Council 1817, The Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the crisis of 1893. State banks, constituted under State Acts, transacting general banking business are The Rural Bank of New South Wales, the State Bank of South Australia and The Rural and Industries Bank of Western Australia.
- 2. Royal Commission on Monetary and Banking Systems.—A Royal Commission was appointed by the Commonwealth Government in November, 1935, to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interest of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report on 15th July, 1937, and a summary of the recommendations appears in Official Year Book No. 31, p. 1010.
- 3. Presentation of Banking Statistics.—Because of the different purposes they serve in the Australian financial system, Australian banks have been divided for statistical purposes into four groups and a separate series is presented for each. These groups are:—
  - (a) The Commonwealth Bank. This is the Central Bank. It also provides special banking facilities through the Rural Credits, Mortgage Bank and Industrial Finance Departments. It transacted general banking business through a General Banking Division up to 3rd December, 1953, when that business was transferred to the Commonwealth Trading Bank of Australia. Statistics of the Central Banking Business (including the Note Issue Department), and Rural Credits, Mortgage Bank and Industrial Finance Departments are presented in separate series.
  - (b) The Commonwealth Trading Bank of Australia. This bank commenced operations on 3rd December, 1953. On that date, under the provisions of the Commonwealth Bank Act, 1953, it took over the business of the General Banking Division of the Commonwealth Bank. The statistics presented in the Commonwealth Trading Bank series include averages for the General Banking Division of the Commonwealth Bank up to 3rd December, 1953.

- (c) Private Trading Banks. This group was formerly known as the Nine Trading Banks but the number of banks included has been reduced to seven by amalgamations. With the Commonwealth Trading Bank, these banks provide the major part of the general banking facilities in Australia. The banks included in this group are—the Australia and New Zealand Bank Ltd. (an amalgamation of the Bank of Australaia Ltd. and the Union Bank of Australia Ltd.), The Bank of Adelaide, the Bank of New South Wales, The Commercial Bank of Australia Ltd., The Commercial Banking Company of Sydney Ltd., The English, Scottish. and Australian Bank Ltd. and The National Bank of Australasia Ltd. (which has absorbed The Queenland National Bank Ltd. and The Ballarat Banking Co. Ltd.).
- (d) Other Banks. This group consists of (i) three State Government Banks—The Rural Bank of New South Wales, the State Bank of South Australia and The Rural and Industries Bank of Western Australia, which, in their general banking business, specialize mainly in financing rural industries, (ii) one joint stock bank—The Brisbane Permanent Building and Banking Co. Ltd., which has specialized business in one district only, and (iii) branches of three oversea banks—the Bank of New Zealand, Comptoir National d'Escompte de Paris and the Bank of China, which transact limited business in Australia and are mainly concerned with financing trade, etc., between Australia and oversea countries.

In addition to the series mentioned above, a series for all cheque-paying banks is presented. This series covers the Commonwealth Trading Bank, the Private Trading Banks and the other cheque-paying banks included in the fourth group.

Unless otherwise stated, the statistics presented are averages of weekly returns. Averages of liabilities and assets are the averages of the liabilities and assets of the banks on the several weekly balance days during the period concerned. Averages of bank clearings and debits to customers' accounts are the averages of transactions for weeks ended on the balance days during the period.

4. Banks Transacting Business in Australia.—(i) Number of Branches. At 30th June, 1957, the 15 banks operating in Australia transacted all classes of banking business at 3,524 branches and 1,412 agencies. The Commonwealth Trading Bank and the Private Trading Banks have branches throughout the Commonwealth. The Rural Bank of New South Wales, the State Bank of South Australia and The Rural and Industries Bank of Western Australia, being State Government banks specializing mainly in financing rural industries, have branches only in their respective States. The Brisbane Permanent Building and Banking Co. Ltd., transacts business in Brisbane only. The remaining three banks are branches of oversea banks.

### CHEQUE-PAYING BANKS: NUMBER OF BRANCHES(a) AT 30th JUNE, 1957.

Banks.	New South Wales.	Vic- toria.	Q'land.	South Aust.	West. Aust.	Tas- mania.	Nor. Terr.	Aust. Cap. Terr.	Total.

<sup>(</sup>a) For the Commonwealth Trading Bank, the amount shown in this column is the amount specified as capital in the Commonwealth Bank Act 1945-1953. This amount was appropriated out of Reserve Funds built up from profits of the Commonwealth Bank. For the State Bank of South Australia and The Rural and Industries Bank of Western Australia, the amounts shown in this column are capital funds provided by the respective State Governments. Capital of The Rural Bank of New South Wales consists of Inscribed Stock and Debentures issued by the Bank for capital purposes. (b) Includes dividends declared but not paid at date of balance-sheet. (c) For the Commonwealth Trading Bank and the State Banks, the amount shown in this column is total capital and reserves. (See footnote (a).) (d) Includes uncalled capital. (e) For the State Government Banks, the net profit is the profit positing off bank premises and payment of interest on capital. For the other Banks, the net profit is the profit before writing off bank premises. (f) Dividends paid and payable out of profits earned during 1955-56. (g) These banks are in process of liquidation consequent upon the amalgamation of their business with The National Bank of Australasia Ltd.

- 5. Commonwealth Bank of Australia.—(i) General. An account of the progress and development of the Commonwealth Bank is given in earlier issues of the Official Year Book (see No. 37, pp. 570 to 573). The general functions of the Bank are set out in section 8 of the Commonwealth Bank Act 1945–1953 which states—
  - "8. It shall be the duty of the Commonwealth Bank, within the limits of its powers, to pursue a monetary and banking policy directed to the greatest advantage of the people of Australia, and to exercise its powers under this Act and the Banking Act 1945 in such a manner as, in the opinion of the Bank, will best contribute to:—
    - (a) the stability of the currency of Australia; (b) the maintenance of full employment in Australia; and (c) the economic prosperity and welfare of the people of Australia."

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department and provides special services through the Rural Credits Department, Mortgage Bank Department and Industrial Finance Department. The Commonwealth Bank also provided general banking facilities through the General Banking Division up to 3rd December, 1953. On that date, in accordance with the provisions of the Commonwealth Bank Act, 1953, the Commonwealth Trading Bank took over the business of the General Banking Division of the Commonwealth Bank. The Commonwealth Savings Bank, a separate institution providing for small depositors, is controlled by the Commonwealth Bank Board and is operated in conjunction with the Commonwealth Trading Bank.

- (ii) Management. Under the Commonwealth Bank Act 1911, the Bank was managed by a Governor. From 1924 to August, 1945, it was controlled by a Board of Directors. Under the Commonwealth Bank Act 1945, control was vested in a Governor, assisted by an Advisory Council. Since 21st August, 1951, under the Commonwealth Bank Act 1951, the policy of the Commonwealth Bank and the Commonwealth Savings Bank has been determined by the Commonwealth Bank Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary to the Treasury and seven other members appointed by the Governor-General. The Bank is managed by the Governor who acts in accordance with the policy of the Bank and with any directions of the Board. The Board is required to inform the Government of the monetary and banking policy of the Bank. of a disagreement between the Government and the Board as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General, acting with the advice of the Executive Council, may determine the policy to be adopted by the Bank. The Commonwealth Trading Bank is managed by a General Manager under the Governor of the Commonwealth Bank and its policy is determined by the Commonwealth Bank Board.
- (iii) Central Banking Business. Under the powers it possessed under the Commonwealth Bank Act 1911–1943, and under its war-time powers under the National Security Regulations, the Commonwealth Bank had gradually assumed the functions of a Central Bank. Part III. of the Commonwealth Bank Act 1945 formally constituted the Commonwealth Bank as a Central Bank and granted the Bank the necessary powers to carry on the business of a Central Bank. The capital for the Central Banking Business is £4,000,000 and such other sums as are transferred from the Reserve Fund. Since 1951 and until 1956, the profits of the Commonwealth Bank were distributed as follows:—(a) One-half to the National Debt Sinking Fund; (b) £500,000 per annum to the Capital accounts of the several departments of the Bank and the Commonwealth Trading Bank, distributed as follows:—Commonwealth Trading Bank, Mortgage Bank Department, and Industrial Finance Department each two-sevenths and the Rural Credits Department one-seventh; and (c) the balance to the Commonwealth Bank Reserve Fund. For the year ended 30th June, 1957, the profits were distributed one-half to the National Debt Sinking Fund and one-half to the Commonwealth Bank Reserve Fund.
- (iv) Note Issue Department. This Department was established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank. The Bank may, through this department, issue, re-issue and cancel Australian notes. Until June, 1951, all profits of this Department, with the exception of £2,000,000 and £1,200,000 paid to the capital accounts of the Rural Credits Department and Mortgage Bank Department respectively, were paid to the Consolidated Revenue Fund. For the years ended 30th June, 1952 to 1956, the profits were distributed as follows:—(a) £500,000 per annum to the capital accounts of the Commonwealth Trading Bank and the several departments of the Commonwealth Bank, distributed two-sevenths each to the Commonwealth Trading Bank, Mortgage Bank Department and Industrial Finance Department and one seventh to the Rural Credits Department, and (b) the balance to the Commonwealth Consolidated Revenue Fund. For the Year ended 30th June, 1957, all of the profits were paid to the Commonwealth Consolidated Revenue Fund.
- (v) General Banking Division. Under the Commonwealth Bank Act 1911–1943, no provision was made for the separation of the general banking business of the bank from its central banking business. Under the Commonwealth Bank Act 1945, the General Banking Division was set up to carry on the general banking business of the Bank and the accounts and transactions of this division were kept separate and distinct from the other accounts of the Bank. The capital of the General Banking Division was £4,000,000, and

such other sums as were transferred from the General Banking Division Reserve Fund, or from the profits of the Central Banking Business and the Note Issue Department. Transfers from these two sources increased the total capital to £4,572,000 at 30th June, 1953. The profits of the General Banking Division were distributed as follows:—(a) one-half was credited to the General Banking Division Reserve Fund, and (b) one-half was paid to the National Debt Sinking Fund. Under the Commonwealth Bank Act 1953, the business of the General Banking Division was transferred to the Commonwealth Trading Bank on 3rd December, 1953. (See also para. 6, p. 734, Commonwealth Trading Bank of Australia.)

- (vi) Rural Credits Department. The Rural Credits Department was established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce. The Bank may, through this department, make advances, upon the security of primary produce placed under the legal control of the Bank or other security associated with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or of a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not be more than one year. The capital of the Rural Credits Department is £2,000,000 and such amounts as are transferred from the profits of the Central Banking Business and the Note Issue Department. At the 30th June, 1957, total capital was £2,714,000. Profits are distributed as follows:—(a) one-half is credited to the Rural Credits Department Reserve Fund, and (b) one-half is credited to the Rural Credits Department Fund for the promotion of primary production.
- (vii) Mortgage Bank Department. The Mortgage Bank Department was established in 1943 for the purpose of making long-term loans to primary producers. Through this department, the Bank may make a loan to any person engaged in farming, agricultural, horticultural, pastoral or grazing operations or other form of primary production, upon the security of a mortgage to the Bank of an estate or interest in land in the Commonwealth owned by the borrower. The term of the loan shall not be less than five years nor more than forty-one years. The capital of the Department is £4,000,000 and such amounts as are transferred from the profits of the Central Banking Business and the Note Issue Department. Total capital at the 30th June, 1957, amounted to £5,428,000. Profits are credited to the Mortgage Bank Department Reserve Fund.
- (viii) Industrial Finance Department. The functions of the Industrial Finance Department, established in January, 1946, are:—(a) to provide finance for the establishment and development of industrial undertakings; (b) to assist in the establishment and development of industrial undertakings; and (c) to provide advice on the operations of industrial undertakings with a view to promoting the efficient organization and conduct thereof. To exercise these functions the Bank may, through the Industrial Finance Department, lend money and purchase and sell shares or securities in an industrial undertaking. The capital of this department is £4,000,000 and such amounts as are transferred from the profits of the Central Banking Business and the Note Issue Department. At the 30th June, 1957, total capital amounted to £5,429,000. The Treasurer, the Bank and the Savings Bank may advance money to the Industrial Finance Department. The amount that may be advanced by the Bank is limited to £1,000,000. The profits of the Department are credited to the Industrial Finance Department Reserve Fund.
- (ix) Housing Loans. Provision is made for the Bank, through the Commonwealth Trading Bank, to make loans to individuals or building societies for the erection or puchase of homes or for the discharge of mortgages on homes. These loans must be made at the lowest possible rate of interest. Loans to individuals are to be on cridit foncier terms, to be secured by first mortgage on an estate or interest in land owned by the borrower and to be repaid in periods of not less than five years nor more than 35 years. Loans to building societies are to be made on such security and on such terms and conditions as the Bank determines.
- (x) Liabilities and Assets—All Departments. Liabilities and assets of each Department of the Commonwealth Bank at 30th June, 1957, are shown in the following table. The

Commonwealth Trading Bank and the Commonwealth Savings Bank, which are operated as separate institutions, are not included (see § 1, para. 6 (ii) and § 2, para. 7 (ii) following):—

6. Commonwealth Trading Bank of Australia .-- (i) General. The Commonwealth Trading Bank was established by the Commonwealth Bank Act, 1953, and on 3rd December. 1953, took over the business of the General Banking Division of the Commonwealth Bank. The Commonwealth Trading Bank is a body corporate with its own General Manager who is appointed by the Governor-General on the recommendation of the Commonwealth Bank Board for a term of seven years. The General Manager, under the Governor of the Commonwealth Bank, is responsible for the administration of the Commonwealth Trading Bank in accordance with policy determined by the Commonwealth Bank Board. Under the Banking Act 1945-1953, the Commonwealth Trading Bank is subject to the same central banking controls as the private trading banks and is required to maintain a Special Account with the Commonwealth Bank on the same basis as those of the private trading banks. The capital of the Commonwealth Trading Bank is the total of the capital of the General Banking Division of the Commonwealth Bank immediately before 3rd December, 1953, and such other sums as are transferred from the Commonwealth Trading Bank Reserve Fund, or from the profits of the Central Banking Business and the Note Issue Department of the Commonwealth Bank. The net profits of the Commonwealth Trading Bank are divided as follows:—(a) one-half placed to the credit of the Commonwealth Trading Bank Reserve Fund, and (b) one-half paid into the National Debt Sinking

(ii) Liabilities and Assets. The liabilities and assets of the Commonwealth Trading Bank at 30th June, 1956 and 1957 are shown in the following table:—

11. Classification of Advances within Australia-Commonwealth Trading Bank of Australia and Private Trading Banks (Major Trading Banks) .- (i) States, June, 1957. A classification of bank advances made by the Commonwealth and Private Trading Banks at the end of June, 1957, is shown in the following table. In this table, advances to resident borrowers and non-resident borrowers are shown separately. Resident borrowers cover institutions (including branches of oversea institutions) engaged in business in Australia and persons permanently residing in Australia. Non-resident borrowers cover all other persons and institutions incorporated abroad, which though represented, do not carry on business in Australia. Advances to resident borrowers have been classified as business advances, advances to public authorities, personal advances and advances to non-profit organizations. Business advances have been further classified to the main industry of the borrower and include advances to partnerships, companies and other institutions engaged in business in Australia, advances to persons actively engaged in business on their own behalf if the advance is mainly for business purposes, advances to mutual, co-operative and benefit societies which distribute their profits or surpluses (if any) to members by way of dividends, rebates on charges for goods and services or increased benefits. Advances to public authorities cover advances to local and semi-governmental authorities including separately constituted government business undertakings but not Commonwealth or State Governments. Personal advances cover advances to persons for purposes other than carrying on a business. Advances to non-profit organizations cover advances to organizations which are not carried on for the purpose of making a profit or gain to their individual members, any income of the organization being used for the purposes of the organization or for the benefit of the community.

For the June, 1957, survey, the classification used in previous surveys was revised and because of changes in definition and regrouping of some classes, a complete review of the classification of all accounts was necessary. The main changes made in the classification were (a) the provision of separate classes for advances to non-residents and non-profit organizations and (b) changes in the definition of and grouping of several industrial classes. The main changes under (b) were:—

- (i) Manufacturing.—This class now includes motor repairs previously included in the class, Transport, Storage and Communication.
- (ii) Finance.—This class was previously Finance and Proper.y. The pr vious sub-class (a), Builders and Contractors, has been transferred to a new class 6, Building and Construction. The sub-class (b), Building Investment Companies and Housing Societies, has been restricted to Building and Housing Societies and the sub-class (c), Other (Banking and Insurance etc.), has been restricted to financial institutions only. Business services (e.g., Stock Brokers, Estate Agencies, etc.) previously included in this sub-class have been transferred to the class 7, Other Businesses. Holding companies also previously included are now classified to the main industry of their subsidiary companies.
- (iii) Commerce.—The sub-class, Retail Trade, now includes motor garages and service stations previously included in the class, Transport, Storage and Communication.

These revisions should be noted when comparing the figures for June 1957 with those for earlier periods.

(a) Excludes transactions connected with the issue and redemption of Treasury Bills.

14. Debits to Customers' Accounts—All Cheque-paying Banks.—Statistics of debits to customers' accounts have been collected since September, 1945. Generally they represent the total of all cheques drawn by the customers of the banks. In the following table, the average weekly debits to customers' accounts of all cheque-paying banks are shown for each State for the years ended June, 1953 to 1957. In this table, debits to accounts of Australian Governments in capital cities are excluded, as they are subject to abnormal influences and are not uniform for each State.

# AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS: ALL CHEQUE-PAYING BANKS.

15. Rates of Exchange.—(i) Oversea Exchange Rates. In the following table, the par of exchange (based on par values agreed with the International Monetary Fund) and average telegraphic transfer selling rates of exchange for Sydney on a number of oversea countries are shown. Generally, the averages, which are averages of daily quotations, are based on rates quoted by the Commonwealth Bank, but where these were not available rates issued by the Department of Customs and Excise have been used.

(a) Unchanged since 1st January, 1940.

There is no charge for transfers within a city or a town. In all States excepting Queensland and Western Australia, the exchange for transfers between towns in the same State is 2s. per £100. Queensland and Western Australia are divided into zones. The exchange rate for transfers between towns in the same zone is 2s. per £100, with higher rates for inter-zone transfers.

The exchange rate between Papua and New Guinea and the mainland is 10s. per £100 for all points.

<sup>(</sup>b) No par value

#### § 2. Savings Banks.

1. General.—The inauguration of savings banks in Australia dates from 1819, when a private savings bank was opened in Sydney. In 1832, the legislature created "The Savings Bank of New South Wales" under the control of trustees, and shortly after its establishment the funds of the private savings bank were transferred to the new institution. In the other States provision for placing deposits with savings banks dates from 1841 in Victoria; 1854 in Queensland; 1848 in South Australia; 1863 in Western Australia (a savings bank was opened in 1856 but was closed a year later); 1835 in Launceston; and 1845 in Hobart. These early banks functioned as trustee savings banks, but, with the exception of the Hobart and Launceston institutions, were later absorbed by, or amalgamated with, State government savings banks. The Commonwealth Savings Bank, established as a branch of the Commonwealth Bank in 1912 and separately constituted in 1928, absorbed the Tasmanian State Savings Bank in 1931.

Post Office savings banks were established in all States from 1864 onwards. These were separate government institutions except in South Australia, where the Post Office acted as agent for the savings bank. Since the federation of the Australian States in 1901, post offices have been controlled by the Commonwealth Government, but they continued to act as savings bank agencies for the State institutions until the establishment of the Commonwealth Bank in 1912. They now act as agents for the Commonwealth Savings Bank.

During 1956, four new savings banks, the Bank of New South Wales Savings Bank Ltd., the Australia and New Zealand Savings Bank Ltd., the C.B.C. Savings Bank Ltd., and The Rural and Industries Bank of Western Australia, were established. Three of these are associated with and operate from the same premises as existing private trading banks and the other is a division of a State bank—The Rural and Industries Bank of Western Australia. Savings banks operating at the end of 1957 were—the Commonwealth Savings Bank (in all States and Territories), the Bank of New South Wales Savings Bank Ltd. and the Australia and New Zealand Savings Bank Ltd. (in all States and Territories except South Australia and Tasmania), the C.B.C. Savings Bank Ltd. (in all States except South Australia and Tasmania, and in the Australian Capital Territory), The State Savings Bank of Victoria, The Savings Bank of South Australia, The Rural and Industries Bank of Western Australia, and the two trustee banks, The Launceston Bank for Savings and The Hobart Savings Bank.

The prime object of the foundation of savings banks in Australia was the encouragement of thrift, deposits of one shilling and upwards being accepted. Although depositors (other than non-profit organizations) may not operate on their accounts by means of cheques, they have practically all the other advantages of a current account and in addition receive interest on their minimum monthly balances. No charge is made by the banks for keeping the accounts.

Cheque facilities are available at most savings banks to non-profit organizations such as friendly, co-operative and charitable societies. As with other depositors, interest is allowed on the deposits of these organizations and no charge is made for keeping their accounts.

2. Branches and Agencies.—The number of branches and agencies in Australia of the various savings banks at the 30th June, 1957, are given in the following table.

ALL SAVINGS BANKS: NUMBER OF BRANCHES AND AGENCIES AT 30th JUNE, 1957.

Bank.		Branches.	Agencies.	
Commonwealth Savings Bank		[	544	5,586

- 6. Cheque Accounts.—At most savings banks, cheque facilities are available to non-profit organizations such as Friendly, Co-operative and Charitable Societies. Details of the transactions on these accounts during the year ended June, 1957, (excluding the Savings Bank of South Australia) together with the number of operative accounts and the amount on deposit at the end of June, 1957 were as follows:—Deposits during the year, £157,718,123; withdrawals during the year, £154,519,251; interest added during the year, £404,442; number of operative accounts at end of year, 49,617; amount on deposit at end of year, £23,906,135.
- 7. School Banking.—With the object of encouraging principles of thrift amongst children, agencies of the savings banks have been established at most of the schools throughout Australia. Particulars of operative accounts for the Commonwealth at the end of June of the years 1939 and 1953 to 1957, appear below:—

SCHOOL	SAVINGS	BANKS :	AUSTRALIA.

<sup>(</sup>a) Includes assets in Papua, New Guinea and Norfolk Island.

<sup>9.</sup> War Savings and Savings Certificates.—Sales of savings certificates and stamps under the War Savings and Savings Certificate schemes, particulars of which were given in earlier issues of the Official Year Book (see No. 37, page 586), were discontinued after 31st January, 1949, except for some sales made to wind up savings groups, etc. This method of saving was replaced by special savings schemes to operate through the savings banks. Employers were asked to co-operate by forming employee savings groups and by making regular deductions from wages and salaries for payment into group savings bank accounts, and thence, at the end of each quarter to individual accounts. The total value of certificates outstanding at 30th June in each of the last five years was:—1953, £35,601,000; 1954, £30,310,000; 1955, £26,615,000; 1956, £23,366,000; 1957, £20,043,000.

- 10. Commonwealth Savings Bank of Australia.—(i) General. The Savings Bank Department of the Commonwealth Bank opened for business in Victoria on 15th July, 1912; in Queensland on 16th September, 1912; in the Northern Territory on 21st October, 1912; in Tasmania on 1st January, 1913, and in New South Wales, South Australia and Western Australia on 13th January, 1913. The Tasmanian State Savings Bank was absorbed by the Commonwealth Bank on 1st January, 1913, the Queensland State Savings Bank was taken over in 1920 and the New South Wales and Western Australian State Savings Banks in 1931. The Savings Bank Department was separated from the General Bank on 9th June, 1928, and established as a separate institution known as the "Commonwealth Savings Bank of Australia". It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The Commonwealth Bank Act 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the savings bank. This Commission was never appointed and the Commonwealth Bank Act 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank.
- (ii) Balance-sheet, 30th June, 1956 and 1957. Particulars of the liabilities and assets of the Commonwealth Savings Bank as at 30th June, 1956 and 1957, were as follows:—

## COMMONWEALTH SAVINGS BANK(a): LIABILITIES AND ASSETS, 30th JUNE. (£'000.)

Liabilities.	1956.	1957.	Assets.	1956.	1957.

<sup>13.</sup> Private Savings Banks.—(i) General. The Bank of New South Wales Savings Bank Limited and the Australia and New Zealand Savings Bank Limited on the 18th January, 1956, and the C.B.C. Savings Bank Limited on the 2nd June, 1956, were granted authority under section 8 of the Banking Act 1945–1953 to carry on banking business subject to the following conditions:—

<sup>1.</sup> The Savings Bank shall not, in the course of that business, receive a deposit from a company or other body engaged in or formed for the purpose of trading or acquiring pecuniary profit.

- 2. The Savings Bank shall not, in the course of that business, permit a cheque to be drawn on an account maintained with the Savings Bank, not being an account maintained by a local authority, friendly society, co-operative society, or any other society, body or club.
- 3. The Savings Bank shall not, in the course of that business, place money on deposit in Australia (whether fixed or in current account) with a bank other than a bank specified in Part I. of the First Schedule to the Banking Act 1945-1953, the Commonwealth Bank of Australia, or the Commonwealth Trading Bank of Australia.
- 4. The Savings Bank shall at all times maintain in investments of the following kinds an amount which, together with cash on hand in Australia and moneys on deposit in Australia with banks, is not less than the amount on deposit in Australia with the Savings Bank:—
  - (a) securities issued by the Government of the Commonwealth, including Commonwealth Treasury Bills;
  - (b) securities issued by the Government of a State;
  - (c) securities issued or guaranteed by an authority constituted by or under a Commonwealth or a State Act;
  - (d) loans to building societies the repayment of which is guaranteed by the Commonwealth or a State; and
  - (e) loans for housing or other purposes on the security of land in Australia.
- 5. The Savings Bank shall at all times maintain in investments of the following kinds an amount which, together with cash on hand in Australia and moneys on deposit with the Commonwealth Bank of Australia, is not less than seventy per centum of the amount on deposit in Australia with the Savings Bank:—
  - (a) securities issued by the Government of the Commonwealth, including Commonwealth Treasury Bills;
  - (b) securities issued by the Government of a State; and
  - (c) securities issued or guaranteed by an authority constituted by or under a Commonwealth or a State Act.
- 6. The Savings Bank shall at all times maintain in investment in Commonwealth Treasury Bills an amount which, together with moneys on deposit with the Commonwealth Bank of Australia, is not less than ten per centum of the amount on deposit in Australia with the Savings Bank.
- For the purposes of these conditions, the amount on deposit in Australia with the Savings Bank includes interest credited to the accounts of depositors.

The Bank of New South Wales Savings Bank Limited and the Australia and New Zealand Savings Bank Limited commenced business on the 19th January, 1956 and the C.B.C. Savings Bank Limited on 16th July, 1956.

(ii) Assets. The assets of the private savings banks as at the date of their respective balance-sheets are shown in the following table:—

14. Classification of Depositors' Balances.—The classification of deposits published by savings banks does not permit a fully detailed analysis with respect to Australia as a whole, but information supplied to the Royal Commission on Monetary and Banking Systems, for all savings banks except the Hobart trustee savings bank, shows that at 30th June, 1936, the amount on deposit in accounts with balances of less than £100 represented 21 per cent. of the total deposits; balances of over £100 but under £250, 21 per cent.; over £250 but under £500, 23 per cent.; over £500 but under £1,000, 25 per cent.; while those of over £1,000 accounted for 10 per cent. School, penny bank and small inoperative accounts were excluded in determining these percentages.

A similar classification as at 30th June, 1936, 1939 and 1953 to 1957, but relating only to the combined State Savings Banks of Victoria and South Australia, is shown below.

STATE SAVINGS BANKS: CLASSIFICATION OF DEPOSITS.

(Per cent.)

At	At 30th June-		£100 and under. £101-£300. £				£301–£500.	Total under £501.	£501–£1,000.	Over £1,000.

3. Co-operative Housing Societies, Victoria.—In addition to the information shown above, the following details of co-operative housing societies in Victoria have been extracted from the 10th Annual Report of the Registrar of Co-operative Housing Societies. At 30th June, 1955, 266 co-operative housing societies were registered in Victoria with 24,422 members who had subscribed for 860,142 shares giving a nominal share capital subscribed of £45,178,814. For the twelve months ended 30th April, 1955, returns were submitted by 260 societies, the total income of those societies being £188,971, and total expenditure £172,760. The liabilities at 30th April, 1955 of the societies submitting returns were:—bank overdraft, £28,525,635; subscriptions, £4,081,762; surplus interest and management expenses, £406,022; other liabilities, £662,137, total liabilities, £33,675,556. Assets at the same date consisted of:—advances, £33,434,593; other assets, £240,963; total assets £33,675,556.

#### § 3. Co-operative Societies.

Co-operative societies are divided into three classes—(i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operative Act 1923–1950. A summary of the business of all co-operative societies for the years 1954–55 or 1955 for all States except Western Australia is given in the following tables. For Western Australia, details of the business during 1940–41 (the latest year available) are given. Separate particulars for each of the three types of Co-operative Societies are given in the annual bulletin Finance (see No. 47, pages 173 and 174).

#### D. INSURANCE.

#### § 1. Introductory.

1. Legislation.—Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate with respect to "insurance other than State insurance; also State insurance extending beyond the limits of the State concerned". Commonwealth legislation includes the Marine Insurance Act 1909 defining the limits of marine insurance and regulating the terms of contracts, etc., the Insurance

Act 1932-1937 requiring the lodgment of deposits by insurance companies, and the Life Insurance Act 1945-1953 generally regulating life assurance business in Australia. The Marine Insurance Act 1909 and the Insurance Act 1932-1937 have limited application, and, except for life assurance business, which is regulated by the Life Insurance Act 1945-1953, insurance business is conducted under State laws.

2. Insurance Act 1932-1937.—Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to lodge a deposit with the Commonwealth Treasurer.

Money deposited is invested by the Treasurer in prescribed securities selected by the depositor, and all interest is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies.

Deposits held by States on 1st February, 1932, could, however, remain with the States subject to the conditions embodied in the laws of the States, and depositors to the extent of the value of these deposits were exempt from liability to make deposits under the Commonwealth Act.

The following are not regarded as insurance businesses under the Act:-

Staff superannuation schemes; schemes of religious organizations solely for insurance of their property; and friendly society, union and association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and, under the Life Insurance Act 1945-1953, ceased to apply to life assurance business.

3. Life Insurance Act 1945-1953.—The objects of this Act are:—(a) To replace all State legislation on the subject of life assurance and to provide uniform legislation for the whole of Australia; (b) to appoint an Insurance Commissioner to exercise active supervision of the activities of life assurance companies, with a view to securing the greatest possible protection for policy holders; (c) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency.

The Act was assented to on 16th August, 1945, and came into operation on 20th June, 1946. A summary of the provisions of the Act is given in Official Year Book No. 37 (pages 595 to 597).

The main amendment by the Life Insurance Act, No. 94 of 1953 was to repeal Part VI. of the principal Act, which provided for the establishment of a Commonwealth Government Insurance Office.

4. Deposits under Insurance Acts.—Deposits lodged under the Insurance Acts at 30th June, 1957, totalled £6,840,422, comprising £1,212,162 held by the Commonwealth in respect of Life Assurance and £5,405,970 held by the Commonwealth and £222,290 held by the States in respect of other forms of insurance. The deposits consisted of government, local and semi-governmental securities £5,069,772, fixed deposits £1,000, bank guarantees and undertakings £1,337,000 and titles and mortgages £432,650.

#### § 2. Life Assurance.

1. General.—Statistical returns have been collected from life assurance institutions since 1907. Until 1946, these returns were collected under the Census and Statistics Act. Since 1947, returns lodged under the Life Insurance Act 1945-1953 have been used to compile life assurance statistics. This change in method of collection has resulted in some slight changes in definition and, as a result, the statistics for 1947 and later years are no in all cases strictly comparable with those for earlier years. In earlier years, statistics o

revenue and expenditure and of assets and liabilities, although generally related only to the life assurance business of the offices making the returns, included, in some cases, a small amount of other classes of business. Under the Life Insurance Act 1945–1953, companies transacting life assurance business are required to set up separate statutory funds for their life assurance business. As a result of this, it has been possible to separate life assurance business from other classes of business. Except where otherwise indicated, the figures in the succeeding paragraphs refer to Australian business only. Business in the Territories of Papua and New Guinea is, however, included in the Australian figures.

- 2. Offices Transacting Business.—The number of offices which transacted life assurance business in Australia during 1956 was 24, including five oversea companies. Of the nineteen Australian offices, six are purely mutual, including one which transacts general business in respect of which share capital is used, eleven are public companies, and two are State Government institutions. Of the total offices, eleven transacted ordinary business only and the remainder both ordinary and industrial business. Where possible ordinary and industrial business have been kept separate.
- 3. Australian Business—Policies in Existence.—In the following table, details of policies on the registers in each State and in the Australian Capital Territory are given for the year 1956—

4. New Policies issued in Australia.—During 1956, 316,620 new policies for £372,436,000 were issued in the Ordinary Department. The average amount per policy was £1,176 as compared with an average of £619 per policy for all ordinary policies existing at the end of 1955.

In the Industrial Department, 211,411 new policies were issued during 1956, assuring £32,977,000. The average amount per policy was £156 as compared with an average of £82 per policy for all industrial policies existing at the end of 1955.

In the following table, details are given of new policies issued in each State and the Australian Capital Territory during 1956 for each class of business:—

<sup>(</sup>a) Includes other expenses of management, licence fees, rates and taxes, etc.

<sup>(</sup>ii) Total Expenditure. The next table supplies details of the total expenditure, both within and beyond Australia, of life assurance offices during each of the years 1939 and 1952 to 1956:—

- 8. Liabilities and Assets.—(i) General. The liabilities of the Australian offices consist mainly of their assurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. Separate details of liabilities and assets in respect of Australian business are not available.
- (ii) Total Liabilities and Assets. In the two tables which follow, the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life assurance business of the two State Government offices, all business of the Provident Life Assurance Co. Ltd. (incorporated in New Zealand) and the Australian business only of the Prudential Assurance Co. Ltd. (incorporated in England). For various reasons several offices do not attempt the dissection of liabilities and assets between the industrial and ordinary branches, and, therefore, the figures in the following tables relate to the ordinary and industrial branches combined. Details of the total liabilities of life assurance offices for the year 1956 are given in the following table:—

ORDINARY AND INDUSTRIAL LIFE ASSURANCE: TOTAL LIABILITIES, 1956. (£'000.)

(b) Includes Papua and New Guinea.

(c) Includes Northern Territory.

#### § 3. Fire. Marine and General Insurance.

1. General.—The following statistics which are in respect of the Australian business of companies operating in Australia and State Government insurance offices, conform to the following definitions and should be interpreted in accordance therewith.

(a) Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from "earned premium income" appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than "earned premium income" appropriate to the year. The converse applies when business is declining.

(b) Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.

(c) Contributions to Fire Brigades, Commission and Agents' Charges, and Expenses of Management represent mainly charges paid during the year.

(d) Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The tables contain selected items of statistics and the information shown is not suitable for the construction of a "profit and loss" statement or "revenue" account.

In cases where the business is underwritten in one State and the risk is situated in another the business is included in the State in which the policy was issued.

During 1956-57, revenue from premiums amounted to £138,111,000 and that from net interest on investments, etc., to £5,052,000, a total of £143,163,000. Expenditure on claims amounted to £82,577,000, contributions to fire brigades £3,562,000, commission and agents charges £13,862,000, expenses of management £22,465,000 and taxation £4,992,000, a total of £127,458,000.

2. States.—The following table shows, for each State, the aggregate premium income less reinsurances and returns, and claims or losses less amounts recoverable, for all classes of insurance other than life for the years 1938-39 and 1952-53 to 1956-57.

FIRE, MARINE AND GENERAL INSURANCE: PREMIUMS AND CLAIMS—STATES (£'000.)

<sup>(</sup>a) From 1947-48 excludes Workers' Compensation in coal-mining industry in New South Wales.

The volume of business measured by the amount of premium income shows that fire insurance represented 20.8 per cent. during 1955-56 and 20.2 per cent. during 1956-57, workers' compensation 20.7 per cent. during 1955-56 and 21.0 per cent. during 1956-57, motor vehicles (including compulsory third party insurance) 36.7 per cent. in 1955-56 and 37.8 per cent. in 1956-57, and marine insurance 5.8 per cent. in 1955-56 and 5.0 per cent. in 1956-57.

#### E. RETAIL HIRE PURCHASE OPERATIONS OF FINANCE BUSINESSES.

1. General.—Information relating to hire purchase operations in Australia is given in the following tables. Information in more detail may be found in the annual bulletin—Finance, and in monthly bulletins relating to hire purchase operations.

The statistics (the collection of which commenced in 1953) relate to businesses which finance the retail sale of goods, but do not retail goods themselves. These businesses cover public and private companies, partnerships, banks and other finance businesses. Businesses which finance hire purchase exclusively for their own employees are not included. All types of goods sold to final purchasers are included whether producer goods (such as plant and machinery) or consumer goods.

2. New Retail Agreements 1956-57.—Details of new retail agreements made during the year ended 30th June, 1957, are given in the following table.

### HIRE PURCHASE FINANCE COMPANIES: NEW RETAIL AGREEMENTS—STATES.

<sup>(</sup>a) Value at net cash or list price (excluding hiring charges and insurance). (b) Excludes hiring charges and insurance. (c) Includes new and used motor cars, motor cycles, commercial vehicles, tractors, caravans, motor:parts and accessories. (d) Includes farm machinery and implements, earthmoving equipment, industrial plant and machinery, business machines and equipment (including commercial refrigeration equipment), etc. (e) Includes furniture and furnishings, domestic refrigerators, electrical goods, radios, musical instruments, bicycles and other household and personal goods. (f) Includes Australian Capital Territory. (g) Includes Northern Territory.

3. Balances outstanding on Retail Agreements at 30th June,—Details of the balances outstanding on retail agreements at 30th June, 1953 to 1957, are given below:—

### HIRE PURCHASE FINANCE COMPANIES: BALANCES OUTSTANDING ON RETAIL AGREEMENTS—STATES.

(Including Hiring Charges and Insurance.) (£'000.)

As at 30th Ju	ine—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1953 (c) 1954 1955 1956 1957	:: :: ::	35,246 50,883 69,240 79,176 85,412	20,052 30,806 44,590 56,025 64,042	15,087 22,385 29,067 32,046 36,551	8,532 13,318 18,416 21,412 25,038	6,765 10,154 14,151 15,388 15,488	3,108 4,772 7,012 8,163 9,010	88,790 132,318 182,476 212,210 235,541

(a) Includes Australian Capital Territory. (b) Includes Northern Territory. (c) Excludes balances outstanding on agreements originally financed by retailers but subsequently assigned to finance companies. At 31st March, 1954, these balances amounted to less than £1 million in Australia.

#### F. CAPITAL RAISINGS BY AUSTRALIAN COMPANIES.

1. General.—Information relating to capital raised by companies in Australia is given in the following tables. More detailed information may be found in the annual bulletin—Finance, Part I., and in quarterly bulletins dealing with capital raisings.

The statistics (the collection of which commenced in July, 1954) relate to capital raised by companies through issues of shares, and, in the case of listed companies, through the issue of debentures, notes and similar securities and the acceptance of deposits and, in the case of unlisted companies, by way of loans secured over the entire assets of the company. Capital obtained by way of bank overdraft, trade credit, temporary advances, and loans secured over part only of the assets of the company is not included, and, in the case of unlisted companies, capital raised through loans not secured over any of the assets of the company is excluded.

Separate statistics are given for listed and unlisted companies. Listed companies are companies incorporated in Australia or the Australian territories and listed on one or more of the Australian stock exchanges. All other companies incorporated in Australia, including subsidiaries of listed companies, are classified as unlisted companies. Companies incorporated overseas, whether listed on an Australian stock exchange or not, are excluded from the statistics of share issues. However, subsidiaries of oversea companies if incorporated in Australia, are included. The statistics of new capital raised through issues of debentures, notes, etc., and the acceptance of deposits includes, in addition to capital raised by Australian companies, capital raised in this way from Australian sources by oversea public companies through their Australian offices.

The following are explanatory notes relating to some of the items shown in the tables:—

New Money. This is the net amount of cash transferred from the investing public to the companies. For this purpose the investing public includes banks, life insurance companies and government and private superannuation funds but excludes other Government agencies. Subscriptions by associated companies, whether local or overseas, are excluded. In the tables which follow, the amount of new money is obtained by deducting from the total cash raised the "amount not involving a net transfer of funds from the investing public."

Amounts not involving new money. These amounts include cash subscriptions received by issuing companies from associated companies. Such subscriptions represent intercompany transfers only, and do not involve a receipt of funds from the "investing public". Also included are amounts which, although subscribed by the "investing public" (i.e. subscribers other than "associated companies"), are not retained by the issuing company or its associates, but are used to redeem shares, debentures or unsecured notes, etc., or are used to purchase, from individuals, existing shares, debentures, etc., in other companies, including existing shares, etc., in associated and subsidiary companies. The funds used in this way are thus returned to another section of the "investing public", and do not represent a net transfer of cash from the "investing public" to the companies. (Besides these purchases of existing shares, etc., from individuals, purchases of existing shares, etc., from companies other than associates of the issuing company might also be included in this item, but the amounts involved are small and separate details have not been collected.)

2. Listed Companies (a).—Details of New Capital raised through issues of shares, debentures, or registered notes or accepting deposits for each of the years 1954-55 to 1956-57 are given in the following table.

LISTED AUSTRALIAN COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES, DEBENTURES, OR REGISTERED NOTES, ETC.(b) OR ACCEPTING DEPOSITS(c).

(f million)

#### G. FRIENDLY SOCIETIES.

- 1. General.—The total membership of friendly societies in Australia is just over 500,000 but as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies, even when due allowance is made for young and unmarried members. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports are published in most of the States dealing with the returns received.
- 2. Societies, Members and Revenue.—The following table sets out the number of societies, members, etc., and revenue and expenditure and funds of registered societies for the year 1954-55. More detailed information is available in *Finance*, *Part I.*, Bulletin No. 47.

#### I. LOTTERIES AND BETTING.

#### § 1. Lotteries.

State Governments operate lotteries in New South Wales, Queensland and Western Australia. Tattersalls Lotteries and Tasmanian Lotteries are operated under Government licences in Victoria and Tasmania respectively.

New South Wales State Lotteries are conducted in accordance with the New South Wales State Lotteries Act, 1930 and the first drawing took place on 20th August, 1931. Net profits of the lotteries, with the exception of the net profits of the Opera House lotteries introduced in November, 1957, are paid to the Consolidated Revenue Fund from which grants are made to hospitals. The net profits of the Opera House lotteries are to be paid to the Sydney Opera House Appeal Fund.

<sup>(</sup>b) Estates dealt with by Taxation

Tattersalls Lotteries, which were previously conducted in Tasmania, were transferred to Victoria in 1954 and the first drawing in Melbourne took place on 8th July, 1954. The Tattersalls Consultations Act, 1953, provides that prizes in each consultation shall not be less than sixty per cent. of total subscriptions to that consultation, and that a duty equal to thirty-one per cent. of subscriptions shall be paid into the Consolidated Revenue Fund from which an equivalent amount will be paid out into the Hospitals and Charities Fund and the Mental Hospitals Fund in such proportions as the Treasurer determines from time to time.

In Queensland, the Golden Casket Art Union commenced in 1916 with the specific object of augmenting the funds of the Queensland War Council. Subsequently, Anzac Cottages and Nurses Quarters Funds benefited until 1920 but since then net profits have been paid to the Department of Health and Home Affairs (Hospitals, Motherhood and Child Welfare Trust Fund) and used for the maintenance of hospitals, grants to institutions, and for motherhood and child welfare purposes. A stamp duty is imposed on tickets sold. The proceeds of this are paid to Consolidated Revenue Fund.

In Western Australia, lotteries are conducted by the Lotteries Commission under the Lotteries Control Act of 1932. Profits are paid by the Commission to hospitals and other charities.

In Tasmania, lotteries are subject to the provisions of the Racing and Gaming Act 1950–1952. With the transfer of Tattersalls from Hobart to Melbourne, Tasmanian Lotteries commenced operations under Government licence and the first drawing took place on 30th June, 1954. The stamp duty on tickets sold and the tax on prize money are paid into Consolidated Revenue.

Details of ticket sales, prizes allotted, and taxes paid and other net contributions to State Government revenues relating to lotteries drawn during each of the years ended 30th June, 1953 to 1957 are given in the following table:—

LOTTERIES: VALUE OF TICKET SALES, PRIZES ALLOTTED, TAXES PAID AND OTHER NET CONTRIBUTIONS TO STATE GOVERNMENT REVENUES.

### J. GOVERNMENT, SEMI-GOVERNMENTAL AND PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES.

# § 1. Government and Semi-Governmental Pension and Superannuation Schemes.

The Commonwealth and all State Governments have established pension or superannuation schemes for their employees. These schemes are operated through funds to which both the Government and the employees make contributions. Employees of semi-governmental authorities are in some cases covered by the Commonwealth or State Government scheme and in other cases by a separate scheme of the authority.

In the following table, aggregate details are given, for the year 1955-56, of the receipts, expenditure, accumulated funds and number of contributors and pensioners of the Commonwealth and State Government and main semi-governmental schemes. The funds included are:—

- (a) Commonwealth.—The Superannuation Fund and Defence Forces Retirement Benefits Fund.
- (b) New South Wales.—State Superannuation Fund, Government Railways Superannuation Fund and Police Superannuation and Reward Fund.
- (c) Victoria.—The State Superannuation Fund, Police Superannuation Fund, Police Pensions Fund, Melbourne Harbor Trust Superannuation Account, Geelong Harbor Trust Superannuation Fund, Melbourne and Metropolitan Board of Works Superannuation Fund, State Electricity Commission Provident Fund, Gas and Fuel Corporation Superannuation Fund, Metropolitan Fire Brigades Board Superannuation Fund, Country Fire Authority Superannuation Fund and Port Phillip Pilots' Sick and Superannuation Fund.
- (d) Queensland.—Public Service Superannuation Fund and Police Superannuation Fund.
- (e) South Australia.—South Australia Superannuation Fund, Police Pensions Fund and Public Service Superannuation Fund.
- (f) Western Australia.—The Superannuation Fund.
- (g) Tasmania.—Public Service Superannuation Fund (Old and New Funds),
  Police Provident Fund and State Teachers' Superannuation Fund.

For details of the individual funds summarized above see Finance, Bulletin No. 47, issued by this Bureau.

#### § 2. Parliamentary Pension and Superannuation Schemes.

Pension and superannuation schemes have been established for members of the Commonwealth and State Parliaments. Details of these schemes, except for Tasmania, are given in pp. 91 to 99 of Official Year Book No. 38. Details of the Tasmanian scheme, which came into operation in November, 1955, are given in Chapter III.—General Government, p. 72 of this Year Book. All the schemes are operated through funds to which the members of Parliament and the Commonwealth or States contribute. Details of the receipts, expenditure, funds and number of contributors and pensioners for the year 1955-56 are given in the following table:—

PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES. 1955-56.

#### K. SURVEY OF PRIVATE SUPERANNUATION SCHEMES, 1955-56. SURVEY OF PRIVATE PENSIONS AND RETIRING ALLOWANCE SCHEMES, 1955-56.

1. General: In this section, details are given of the results of a survey of private pension and retiring allowance schemes conducted by businesses during 1955-56 or their latest financial year. The previous survey in this field related to 1951-52, details of which may be found in Finance, Bulletin No. 44. The main differences between the two surveys are set out in paragraph 7, page 781.

For the 1955-56 survey separate information was requested for the following:—

(i) Schemes operated wholly through life assurance companies.

(ii) Schemes not operated wholly through life assurance companies but through a separate fund.

(iii) Direct payments by the employer of pensions and/or retiring allowances. The survey was based on a sample of businesses subject to pay-roll tax, that is, all those with a payroll of over £120 per week or employing (in male units) about 7 employees. To assist in sampling and analysis, businesses were divided into the following sizes on the basis of their monthly payrolls:-

(i) Small Businesses—Payroll of more than £500 and less than £3,000 monthly or employing between 7 and 40 employees.

(ii) Medium Businesses-Payroll over £3,000 but under £20,000 monthly of employing between 40 and 250 employees.

(iii) Large Businesses-Payroll over £20,000 monthly.

Forms were sent to all the large businesses and to a selected number of small and medium businesses. Government airlines and banks were included if contributing to their own separate funds rather than to State or Commonwealth Superannuation Funds: but other government business undertakings were excluded. Also excluded from the survey were Rural Industries, Private and Domestic Services and Statutory Coal Miners' Pension Funds.

The figures shown in the tables, with the exception of those in the table in paragraph 2, are estimated totals for the whole field from which the sample was drawn. Some indication of the extent of the field surveyed is given by the fact that the figures relate to businesses employing approximately 85 per cent. of the total number of employees in private employment excluding rural wage earners and female private domestics.

In view of the comparatively small number of small businesses covered, some of the percentage distributions of these numbers in the tables in paragraphs 1 to 4 should be regarded as giving no more than a very broad picture of the situation. The tables showing details of the financial operations of the various types of schemes are less subject to error since they are weighted heavily by the operations of large firms in which the coverage is practically complete.

2. Number of Businesses and Superannuation Schemes Surveyed.—The following table shows the number of businesses from whom satisfactory returns were received and the percentage which operated a pension or retiring allowance scheme of any of the types described in paragraph 1 above.

From this table it can be seen that 92 per cent. of all large businesses have some form of scheme. The percentage falls to 64 per cent. in the medium size group and to 28 per cent. for small businesses. This tendency for the percentage to fall substantially in the smaller size groups is common to all industries.

The percentage of businesses operating schemes was greatest in the wholesale and retail trading group. This was the same as the pattern found in the 1951-52 survey. Schemes were relatively fewest in the building industry component of the "other industries" group where only 11 per cent. of the small businesses, 35 per cent. of the medium size businesses and 41 per cent. of the large businesses had a scheme of any type.

NUMBER OF BUSINESSES AND SUPERANNUATION SCHEMES SURVEYED (a)

			<del>55-56.</del>

<sup>(</sup>a) State branches and subsidiary companies who completed a return are treated as separate businesses, even though they may have contributed to a scheme organized by their head office or parent company.

3. Type of Superannuation Scheme.—The following table shows the relative importance of the three main types of schemes. This table shows that the most common types of schemes are those organized wholly through life assurance companies. They account for 75 per cent. of the schemes of small businesses, 71 per cent. of the schemes of medium sized businesses and 52 per cent. of the schemes of large businesses. This general pattern applies to all the industrial groups shown in the above table and to all the industries combined.

Among large businesses, schemes organized wholly through life assurance companies are relatively less important than among the smaller businesses and a correspondingly greater proportion of schemes are organized through separately constituted funds. Only 18 per cent. of the schemes operated by the smaller businesses are run entirely through separate funds as against 32 per cent. for large businesses.

Schemes organized through a separate fund are relatively most important in the "other industries" group while the combination of a life assurance scheme and a separate fund within the one business is of greatest importance in the wholesale and retail trading industries.

<sup>(</sup>ii) Schemes organized through Separately Constituted Funds. In the following table, a summary of the dates at which schemes organized through separately constituted funds continenced is given. From this table it can be seen that a much higher percentage were in existence prior to 1940 than was the case with schemes organized wholly through life assurance companies. Whilst this pattern applies to businesses of all sizes, it is particularly noticeable in the case of large businesses.

<sup>4.</sup> Date of Commencement of Schemes.—(i) Schemes organized wholly through Life Assurance Companies. A summary of the dates at which schemes organized wholly through life assurance companies commenced is given in the following table. From this table it can be seen that for small and medium sized businesses the majority of the schemes commenced since 1945. For large businesses more than half were commenced prior to 1945 and an appreciable number prior to 1940.

Į	Large	47	27	14	12	100

In analysing the figures contained in the two preceding tables, it should be remembered that the larger firms generally have been in operation longer than the smaller ones and, to that extent, a larger proportion of long established schemes would be expected.

5. Financial Operations of Private Superannuation Schemes.—(i) Schemes operated wholly through Life Assurance Companies. The following table shows details of schemes operated wholly through life assurance companies. In these schemes, the whole of the amounts contributed by both employee and employer are used to pay premiums on life assurance policies which will mature either on the death or retirement of the employee.

From this table it can be seen that while the relationship of the employees' to the employers' contribution varies between industries, in each industrial group the employers contribute much more than the employees. In many cases, employees do not contribute and the total premiums are paid by the employer. Between the 1951-52 and 1955-56 surveys, the relationship of employees' to employers' contribution for all industries combined has not altered. In both surveys, it was found that employees contributed 39 per cent. and employers 61 per cent. of the total contributions.

(ii) Schemes operated through separately constituted funds. (a) Income and expenditure. The following table shows details of the estimated income and expenditure of schemes organized through separate funds. On the income side, the most important item is the employers' contribution which accounts for 50 per cent. of the total income. This is more than twice the amount of the employees' contributions whereas in funds run through life assurance companies, employers contribute about 55 per cent. more than employees. As in the previous survey, total contributions to schemes run through separate funds exceeded total contributions to schemes run through life assurance companies. This difference, however, has been considerably narrowed since the 1951-52 survey reflecting a slower rate of growth in the schemes run through separately constituted funds.

On the expenditure side, lump sum payments and refunds increased and exceeded pensions by a substantial margin. Total payments from the funds, however, were only 26 per cent. of income and approximately £19½ million was added to accumulated funds. The percentage of total income added to accumulated funds decreased slightly when compared with the 1951-52 survey.

<sup>(</sup>a) Includes profit on sale of investments and receipts from assurance companies for surrendered policies, etc. (b) Includes loss on sale of investments, administrative expenses paid from funds, and life assurance premiums paid.

(b) Assets. In the following table an analysis of the investments held by separately constituted funds is given. The largest single avenue of investment is in Commonwealth Securities. However, there has been a marked reduction in the proportion of Commonwealth Securities to total assets. While there has been a big increase in investment in local and semi-government securities, government securities as a whole have declined in relative importance in favour of company shares and debentures.

<sup>(</sup>c) Persons covered and the number of Pensions and Retiring Allowances paid. In the table which follows, details are given of the number of persons covered by Schemes organized through separately constituted funds and the number of pensions and retiring allowances paid.

6. Direct Payments of Pensions and Retiring Allowances.—Some businesses make direct payments of pensions and retiring allowances either instead of, or in addition to, operating a scheme through a life assurance company or a separately constituted fund. Details of such payments are shown in the following table.

Total direct payments made by employers amounted to £4,111,000. Of this total, pensions accounted for 46 per cent. and retiring allowances for 54 per cent. These were exactly the same percentages as were found from the 1951-52 survey. However, over the same period average pensions have increased by 37 per cent. and average retiring allowances by 90 per cent.

#### DIRECT PENSIONS AND RETIRING ALLOWANCES, 1955-56.

			Pensi	ons.	Retiring Allowances.

Average per Head— 1955–56 Survey 1952–52 Survey (a)		••	£ 22 16	1	£ 632 333		

<sup>(</sup>a) See para. 7 below.

In the 1951-52 survey, businesses were classified into two size groups, those with a monthly payroll of between £2,000 and £10,000, and those with a monthly payroll in excess of £10,000. In the present survey there were three groups, also determined by the size of the monthly payroll. These groups were, those with a monthly payroll of between approximately £500 and £3,000, from £3,000 to £20,000, and over £20,000. After taking into consideration the increased level of wages, the medium and large size businesses in the present survey would cover a slightly smaller field (relatively) than the 1951-52 survey. If the coverage of the present survey had been the equivalent of the 1951-52 survey, most,

<sup>7.</sup> Main differences between 1951-52 and 1955-56 Surveys.—The more important differences between the two surveys were:—

<sup>(</sup>i) The wider field covered by the 1955-56 survey. The 1951-52 survey covered businesses with a monthly payroll in excess of about £2,000 whereas the present survey covers businesses with a payroll in excess of £120 per week or approximately £500 per month.

but not all, of the figures for small businesses would have to be omitted from the present survey. Some of the more important figures for small businesses included in this survey, were approximately:—

Schemes run through life assurance c	ompanies	_	£
Contributions by employees	•••		 850,000
Contributions by employers	• •		 1,450,000
Separately constituted funds—			
Contributions by employees			 150,000
Contributions by employers			 850,000
Total Receipts			 1,200,000
Total Assets at end of year			 7,100,000

- (ii) Industrial classification. Some minor variations have been made in the classification of businesses to industrial groups.
- (iii) Treatment of businesses which contribute to a common fund. In the 1951-52 survey, each branch and subsidiary included in the sample was classified to the industry of the parent company or the predominant industry of the group and the common scheme was counted once only. In the present survey, each branch and subsidiary was allocated to its own industry and was treated as having a separate scheme of its own. In both surveys, subsidiaries were counted as separate businesses, but in the present survey State Branches were also counted as separate businesses.
- (iv) Employees contributing to or covered by superannuation schemes. The 1951-52 survey refers to the number of employees contributing to, and the present survey the number of employees covered by, schemes operated through life assurance offices or separate funds.

#### CHAPTER XXI.

#### PUBLIC FINANCE.

Note.—The subject of "Public Finance" is dealt with in this Chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand also a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement, the Commonwealth assumed the liability to bondholders for the States' Debts existing at the date of the Agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of the Public Debts of the Commonwealth and the States. In view of this, it has been found convenient to deal with the Commonwealth and State Public Debt in a separate division.

The subject of income taxes is also dealt with in a separate division.

#### A. COMMONWEALTH FINANCE.

#### § 1. General.

1. Financial Provisions of the Constitution.—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (see pp. 17-20 of this Year Book). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer from the States to the Commonwealth of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Section 87 deals with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Official Year Book and on pp. 804-808 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The majority of the tables relating to Commonwealth Finance have been compiled from the annual Budget Papers as presented to Parliament by the Treasurer of the Commonwealth.

2. Accounts of Commonwealth Government.—The Commonwealth Government bases its accounts upon three funds, the Consolidated Revenue Fund, the Trust Fund and the Loan Fund.

#### § 2. Commonwealth Consolidated Revenue Fund.

#### I. Nature of Fund.

- 1. Provisions of the Constitution.—The provisions made for the establishment of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on the fund, are contained in Sections 81 to 83 of the Constitution (see p. 17 of this Year Book).
- 2. Annual Results of Transactions.—In the early 1920's, receipts and expenditure of the Consolidated Revenue Fund each ranged between £60 million and £70 million. After allowing for special appropriations amounting to one or two million pounds each year utilized for a variety of purposes, e.g., for debt redemption, naval construction, main roads, science and industry investigations, prospecting for oil and precious metals, civil aviation, etc., the receipts and expenditure of the Fund were balanced. In the later twenties and early thirties, when receipts and expenditure were each about £70 million or £80 million a year, there were annual deficiencies, which by the end of 1930-31 had accumulated to more than £17 million.

In the years 1931-32 to 1938-39, receipts and expenditure ranged from £70 million to £95 million and were in balance after allowing for special appropriations of up to £3.5 million a year for reduction of the accumulated deficiency, non-recurring grants to the States, post office works and the provision of defence equipment. The amount applied towards reduction of the accumulated deficiency was approximately £1.5 million and the balance of the deficiency (approximately £15.7 million) was funded in 1937-38.

For most of the 1939-45 War years and thereafter, the Consolidated Revenue Fund was balanced, all available revenue after charging expenditure on ordinary services being used for defence, war and repatriation purposes.

During the years 1951-52 to 1955-56, the Fund was balanced after special payments of £98.5 million to the National Debt Sinking Fund, £13.4 million to the War Pensions Trust Account, £56.3 million and £70.1 million to the Debt Redemption Reserve Trust Account, and £61.6 million to the Loan Consolidation and Investment Reserve Trust Account. The amounts so transferred were subsequently invested wholly or partly in special loans for State works requirements.

Receipts and expenditure increased from £95 million in 1938-39 to £377 million in 1944-45. By 1950-51, they had risen to £842 million and by 1953-54 to £1,023 million. Receipts and expenditure for 1955-56 were £1,138 million.

#### II.-Revenue.

1. General.—The following table shows details of the revenue from each source and the amount per head of population under each of the main headings during the years 1938-39 and 1951-52 to 1955-56. Taxation constitutes the main source of Commonwealth revenue e.g. 88.2 per cent. in 1955-56.

# COMMONWEALTH CONSOLIDATED REVENUE FUND: SOURCES OF REVENUE. (£°000.)

<sup>(</sup>ii) Customs Revenue. The classification of customs receipts by Tariff Divisions published in earlier issues of the Official Year Book was discontinued in 1955-56. In the following tables, customs duty receipts have been dissected according to the classification used for Oversea Trade Statistics. For years prior to 1955-56, refunds and drawbacks were not classified by statistical classes and consequently details of gross receipts only are available for those years. The following table shows gross receipts for the years 1938-39 and 1951-52 to 1955-56 according to statistical classes.

- (iv) Other Taxation. (a) General. Taxes other than customs and excise are, in general, assessed and collected by the Commissioner of Taxation. The organization comprises an office in each State assessing the returns of taxpayers whose interests are restricted to that State only, and a Central Office assessing taxpayers whose interests are in more than one State.
- (b) Sales Tax. The sales tax was first imposed in August, 1930. The operation of the tax is controlled chiefly by a system of registration of taxpayers whereby all manufacturers and wholesale merchants, who are the taxpayers under the Act in respect of goods sold in Australia, must be registered with the Department. The tax on imports subject to sales tax is collected by the Customs Department at ports of entry.

Since the inception of the tax, certain exemptions have been allowed. These exemptions, which have been extended from time to time, relate mainly to goods of an essential nature or those for use in primary production. The most recent exemptions were those granted from 4th September, 1957.

A general rate of Sales Tax is levied on all goods other than those specified in the schedules of the Sales Tax (Exemptions and Classifications) Act 1935-1957. These schedules set out details of goods exempt from sales tax and those subject to special rates. The general and special rates which operated from 8th September, 1949, were:—

Period.		General Rate.	Special Rates.
8th September, 1949 to 12th October, 1950		8t per cent	25 per cent.
13th October, 1950 to 26th September, 1951		81 per cent	10, 25 and 331
27th September, 1951 to 6th August, 1952		12½ per cent	per cent. 20, 25, 33\frac{1}{2}, 50 and 66\frac{2}{3} per
7th August, 1952 to 9th September, 1953	••	12½ per cent	cent. 20, 33\frac{1}{2} and 50 per cent.
10th September, 1953 to 18th August, 1954		12½ per cent	163 per cent.
19th August, 1954 to 14th March, 1956		12½ per cent	10 and 163 per
			cent.
15th March, 1956 to 3rd September, 1957		12½ per cent	$10, 16\frac{2}{3}, 25$ and
From 4th September, 1957		12½ per cent	30 per cent. 8\frac{1}{3}, 16\frac{2}{3}, 25 and 30 per cent.

For particulars of rates applicable from the inception of Sales Tax in August, 1930, to 7th September, 1949, see Official Year Book No. 37, p. 617.

Particulars of the net amount of sales tax payable, and the sales of taxable and exempt goods in each State for 1955-56, are given in the following table. The figures relate to sales during the period 1st July to 30th June. The figures for sales tax payable differ from those for net collections shown on p. 785, because the latter include some adjustments in respect of earlier years tax and include only tax payable on returns lodged during the year, which in general cover sales for the period June to May.

(a) Includes Australian Capital Territory.

(b) Operative from 15th March, 1956.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole, are shown in the following table for the years 1938-39 and 1951-52 to 1955-56:—

## SALES TAX AND AMOUNT OF SALES. (£'000.)

	Year.	 	Net Sales on which Sales Tax was Payable.	Sales of Exempt Goods by Registered Persons.	Total Sales of Taxable and Exempt Goods.	Sales Tax Payable.
1938-39	 	 	196,491	280,656	477,147	9,363
1951-52	 	 	623,390	1,321,696	1,945,086	91,332
1952-53	 	 	555,390	1,342,279	1,897,669	86,085
1953-54	 	 	687,946	1,466,323	2.154,269	96,079
1954-55	 	 	766,940	1,699,342	2,466,282	101,427
1955-56	 • •	 	798,774	1,856,865	2,655,639	111,469

In the foregoing tables, sales include goods transferred to stock for sale by retail, goods imported by persons other than registered taxpayers, and goods used in the business of the taxpayer. Exempt sales relate to goods exempted from sales tax under the Sales Tax (Exemptions and Classifications) Act 1935-1957. The figures shown in the foregoing tables do not represent the total sales of all commodities, as vendors trading in exempt goods only are not required to be registered and consequently the volume of their sales is not included in the statistics above. In addition, non-taxable sales (i.e. goods sold by one registered taxpayer to another registered taxpayer) are excluded.

(c) Land Tax. Commonwealth Land Tax was levied annually from 1910-11 to 1951-52 on the unimproved value of land. It was abolished from 1st July, 1952. For rates of tax payable from 1942-43 to 1951-52, see Official Year Book No. 40, 1954, p. 669. Receipts for the years 1938-39 and 1951-52 to 1955-56 were as follows:—1938-39, £1,489,000; 1951-52, £6,199,000; 1952-53, £1,250,000; 1953-54, £221,000; 1954-55, £13,000; 1955-56, £356.

(d) Pay-roll Tax. The Pay-roll Tax Act 1941 and the Pay-roll Tax Assessment Act 1941–1942 imposed a pay-roll tax of 2½ per cent. on all wages and salaries in excess of £20 per week paid by an employer after 30th June, 1941. Employers who are liable for tax are required to register and to furnish a monthly return of all wages paid. These measures formed part of the Commonwealth scheme of child endowment, the revenue from the tax being designed to provide part of the money required. The exemption was increased to £80 per week (£4,160 per annum) from 1st October, 1953, to £120 per week (£6,240 per annum) from 1st September, 1954, and to £200 per week (£10,400 per annum) from 1st September, 1957.

Receipts from pay-roll tax for the years 1951-52 to 1955-56 were, 1951-52, £37,170,000; 1952-53, £40,171,000; 1953-54, £40,384,000; 1954-55, £41,455,000; 1955-56, £45,543,000.

(e) Income Taxes. Details of taxes on income are given in division E of this Chapter. (f) Wool Sales Deduction. The Wool Sales Deduction Act 1950 and the Wool Sales Deduction (Administration) Act 1950 came into operation on 2nd December, 1950, and required that a deduction be made from the sale value of wool'sold or exported, the amount deducted being set off against the Income Tax and Social Services Contribution assessed in respect of the income of the year 1950-51. These Acts were repealed by the Wool Sales

Deduction Legislation Repeal Act 1951 which came into operation on 17th November, 1951, and provided for the refund to producers, etc., of amounts paid on the value of wool sold or otherwise disposed of, after 30th June, 1951. The amount of deduction collected in 1951-52 was, £5,963,000. In 1952-53 and 1953-54, refunds amounted to £2,223,000 and £239,000 respectively.

(g) Estate Duty. The Commonwealth Estate Duty was first levied in 1914. Particulars of exemptions allowed and the rates imposed prior to November, 1957, are given in earlier issues of the Year Book (see No. 43, p. 758).

Under the Estate Duty Assessment Act 1914–1957, Estate Duty is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula:—(a) where the whole of the estate passes to the widow, children (including adopted children, step-children and ex-nuptial children), or grand-children of the deceased, the sum of £5,000 decreasing by £1 for every £3 by which the value exceeds £5,000 and ceasing to apply at £20,000; (b) where no part of the estate passes to the widow, children or grand-children, the sum of £2,500 decreasing by £1 for every £3 by which the value exceeds £2,500 and ceasing to apply at £10,000; and (c) where part only of the estate passes to the widow, children or grand-children, the statutory exemption is to be calculated proportionately under (a) and (b).

An amendment to this Act, assented to on 20th November, 1957, provided for rebates of duty on estates which become liable for duty on two or more occasions within a period of five years.

The rates of duty levied under the Estate Duty Act 1914-1941 increase as the value of the estate increases as follows:—£1 to £10,000, 3 per cent.; £10,001 to £20,000, 3 per cent. to 6 per cent.; £20,001 to £120,000, 6 per cent. to 26 per cent.; £120,001 to £500,000, 26 per cent. to 27.9 per cent.; over £500,000, 27.9 per cent.

Total collections for the years 1938-39 and 1951-52 to 1955-56 were as follows:—1938-39, £1,915,000; 1951-52, £7,778,000; 1952-53, £8,393,000; 1953-54, £9,825,000; 1954-55, £9,614,000; 1955-56, £10,120,000.

Particulars of the number and value of estates and duty assessed, for each of the assessment years 1938-39 and 1951-52 to 1955-56, are given in the following table:—

#### ESTATE DUTY ASSESSMENTS.

Particulars.		1938-39.	1951-52.	1952-53.	1953-54.	1954–55.	1955–56.
Number of Estates Gross Value Assessed Deductions. (h) Gift Duty. The Gift Duty Act 1941-1947 and the Gift Duty Assessment Act 1941-1957 impose a gift duty on all gifts made after the 29th October, 1941. A gift has been defined as any disposition of property, which is made otherwise than by will, without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty are levied under the Gift Duty Act 1941-1947 and relate to the value of all gifts made by the donor within a period of eighteen months:—Not exceeding £2,000, nil; £2,001 to £10,000, 3 per cent.; £10,001 to £20,000, 3 per cent to 6 per cent.; £20,001 to £120,000, 6 per cent. to 26 per cent.; £120,001 to £500,000, 26 per cent. to 27.9 per cent.; £500,001 and over, 27.9 per cent.

An amendment which operated from 3rd June, 1947 provides that gift duty will not exceed one-half of the amount by which the value of the gift exceeds £2,000.

Total receipts from gift duty for the years 1951-52 to 1955-56 were as follows:— 1951-52, £1,202,000; 1952-53, £1,162,000; 1953-54, £1,386,000; 1954-55, £1,618,000; 1955-56, £1,820,000.

(i) Entertainments Tax. The Commonwealth levied an Entertainments Tax from 1st October, 1942 to 30th September, 1953. Details of rates are given in earlier issues of the Official Year Book (see No. 40, pp. 672 and 673).

Entertainments tax receipts during the three years 1951-52 to 1953-54 were as follows:—1951-52, £6,161,000; 1952-53, £6,708,000; 1953-54, £1,977,000. There was an excess of refunds over payments of £2,000 in 1954-55 and of £1,000 in 1955-56.

(j) Flour Tax. Particulars of the rates of flour tax which operated from 4th December, 1933 to 21st December, 1947 are given in Official Year Book No. 37, pp. 618 and 619. Because of the rise in wheat prices, the rate was declared to be nil as from 22nd December, 1947.

(k) Wool Levy. The Wool Tax Act 1936 and Wool Tax Assessment Act 1936 provided for a levy on all wool grown in Australia and shorn on or after 1st July, 1936. Details of this levy are given in earlier issues of the Official Year Book. This levy was suspended from 1st July, 1946, until 30th June, 1952, while the Wool Contributory Charge was imposed.

With the repeal of the Wool Contributory Charge, however, a levy on wool produced in Australia was re-introduced from 1st July, 1952. The Wool Tax Acts (Nos. 1 and 2) of 1952 provide for the payment of a levy of four shillings a bale until 30th June, 1953, after which date the rate of tax may be varied within prescribed limits. There was no variation to 30th June, 1957. The purpose of the tax is to provide funds for publicity and research previously provided by the Wool Contributory Charge. Collections during 1952-53, 1953-54, 1954-55 and 1955-56 were £675,000, £772,000, £784,000 and £851,000

(1) Wool Contributory Charge. The Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 imposed a charge on all wool produced in Australia and sold, manufactured or exported. Wool sold by the Australian Wool Realization Commission was not liable to the charge. Details of the rate of the charge and collections made were given in earlier issues of the Official Year Book (see No. 40, p. 675).

The various Wool (Contributory Charge) Acts were repealed by the Wool Tax Assessment Act of 1952 and the charge superseded by the wool levy. Collections during the years 1951-52 and 1952-53 were as follows:-1951-52, £2,230,000, and 1952-53, £28,000.

(m) Wheat Export Charge and Wheat Tax. A summary of the provisions of the Wheat Export Charge Acts 1946, 1948 and 1952 is contained in previous issues of the Official Year Book (see No. 40, p. 676 and No. 41, p. 604).

The Wheat Export Charge Act 1954 repealed previous Acts and provided for an export charge on wheat and wheat products for the seasons 1953-54 to 1957-58 inclusive. The charge levied is based on the difference between the cost of production and the export price with a maximum levy of 1s. 6d. per bushel. Under the Wheat Industry Stabilization Act 1954, to which the Wheat Export Charge Act is complementary, the Commonwealth Government guarantees a return to wheat-growers of the ascertained cost of production in respect of up to 100 million bushels of wheat exported from Australia during each of the five seasons. Collections from the wheat export charge are paid into the Wheat Prices Stabilization Fund, out of which payments will be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. If the Fund is exhausted, additional payments will be made from the Consolidated Revenue Fund.

Collections of the wheat export charge amounted to £12,202,000 in 1951-52, £8,139,000 in 1952-53, nil in 1953-54, £5,063,000 in 1954-55, and £4,294,000 in 1955-56.

(n) Miscellaneous Export Charges. These consist of charges levied on exports of apples and pears (Apple and Pear Export Charges Act 1938-1947), canned fruits (Canned Fruits Export Charges Act 1926-1952), dairy produce (Dairy Produce Export Charges Act 1924-1937), dried fruits (Dried Fruits Export Charges Act 1924-1929), eggs (Egg Export Charges Act 1947) and meat (Meat Export Charge Act 1935-54) and on grapes used in the manufacture of wine (Wine Grapes Charges Act 1929-1954). The collections are paid into funds to be applied for the purposes of Export Boards established under various Acts, in controlling the quantity and quality of produce exported.

Collections for the last five years were as follows:—1951-52, £72,000; 1952-53, £166,000;

1953-54, £168,000; 1954-55, £300,000; and 1955-56, £414,000.
(o) Stevedoring Industry Charge. The Stevedoring Industry Charge Act 1947 and the Stevedoring Industry Charge Assessment Act 1947 imposed a charge of 4½d. per manhour on the employer of a waterside worker after 22nd December, 1947.

The amounts received are paid to the Stevedoring Industry Board for the payment of attendance money to waterside workers and for other expenses of the Board.

Since 1947, the charge has been amended as follows:—11th October, 1949, a reduction to 2½d. a man-hour; 11th December, 1951, an increase to 4d. a man-hour; 28th October, 1952, an increase to 11d. a man-hour; 4th May, 1954, a reduction to 6d. a man-hour; 30th October, 1956, an increase to 1s. 7d. a man-hour; and from 21st May, 1957, an increase to 2s. a man-hour.

Collections during the years 1951-52 to 1955-56 were as follows:—1951-52, £551,000; 1952-53, £1,144,000; 1953-54, £1,630,000; 1954-55, £998,000; and 1955-56, £973,000.

(p) Gold Tax. Particulars of the Gold Tax which operated from 15th September,

1939, to 20th September, 1947, are given in Official Year Book No. 39, p. 767.

(q) Tobacco Industry Charge. The Tobacco Charge Acts Nos. 1, 2 and 3, 1955 and the Tobacco Charges Assessment Act 1955, which came into operation on 1st January, 1956, provided for charges on tobacco leaf grown in Australia.

The Tobacco Charge Act No. 1, 1955 imposed a maximum charge of ½d. per pound on all Australian tobacco leaf sold to a manufacturer.

The Tobacco Charge Act No. 2, 1955 imposed a charge at twice the rate to be levied under the Tobacco Charge Act No. 1, on all Australian tobacco leaf purchased by a manufacturer. The Tobacco Charge Act No. 3, 1955, imposed a charge on all Australian tobacco leaf grown by a manufacturer and appropriated by him for manufacturing purposes. Where the manufacturer grew, in Australia, not less than nine-tenths of the tobacco leaf used by him in manufacturing, the charge was at the rate imposed by the Tobacco Charge Act No. 1. In other cases the charge was at twice that rate.

The charges collected under the Tobacco Charges Assessment Act 1955 were paid into the Tobacco Industry Trust Account which was established by the Tobacco Industry Act 1955. Moneys in this account are used for the promotion of the tobacco industry.

Collections in 1955-56 amounted to £4,739.

3. Business Undertakings.—(i) Postmaster-General's Department. Particulars of net receipts for each of the financial years 1938-39 and 1951-52 to 1956-57 are contained in the following table:—

POSTMASTER-GENERAL'S DEPARTMENT: NET RECEIPTS. (£'000.)

				(* 000.)

<sup>(</sup>a) Includes revenue for Airmail Services previously received by Department of Civil Aviation.

Further particulars of the Postmaster-General's Department's receipts to 1956-57 are given in Chapter XI.—Transport and Communication (Part II, Division A. Posts, Telegraphs, Telephones. Cable and Radio Communication).

(ii) Broadcasting Services. Following the amendment of the Australian Broadcasting Act 1942–1946 by Act No. 64 of 1948, the Broadcasting Control Board was set up on 15th March, 1949. (See also Chapter XI.—Transport and Communication).

Details of net receipts for the years 1951-52 to 1955-56 are shown in the following table:—

### BROADCASTING SERVICES: NET RECEIPTS.

		 , 000.,

Further particulars to 1956-57 are given in Chapter XI.—Transport and Communication (Part I. Division B. Government Railways).

4. Other Sources of Revenue.—Revenue derived by the Consolidated Revenue Fund from the Territories of the Commonwealth during 1955-56 amounted to £2,249,000 (Australian Capital Territory, £1,512,000; Northern Territory, £737,000). Of other sources of revenue, amounting in 1955-56 to £44,508,000, the following are noteworthy:—Interest, £14,179,000; Defence, £3,820,000; Net Profit on Australian Note Issue, £7,866,000; Joint Coal Board—Repayment of Advances, £2,488,000; Tea Importation Board—Repayment of Advance, £2,000,000; Australian Shipping Board, Transfer of Surplus Funds, £3,000,000; and Surplus Balances of Trust Accounts, £1,981,000.

#### III.-Expenditure.

1. Details of Expenditure from Consolidated Revenue.—The following table shows details of the expenditure from the Consolidated Revenue Fund during the years 1938-39 and 1951-52 to 1955-56.

<sup>(</sup>a) Excludes debt charges, Pension and Superannuation payments and Defence Division of the Department of the Treasury. (b) Excludes Government contributions under Superannuation Act. (c) Includes £13,400,000 special payment to War Pensions Trust Account. (d) Revised to include Pension and Superannuation payments relating to Defence and War and Repatriation Services. (e) Invalid and Age Pensions and Maternity Allowances. (f) Provided in part from Postmaster-General's Department votes and balance from Broadcasting Trust Account. (g) Includes assistance to Primary Producers.

Further details of the expenditure in each section are given in paragraphs 2 to 14 following.

A graphical representation of the revenue and expenditure of the Commonwealth Consolidated Revenue Fund appears on p. 797. In this diagram, Public Debt Charges (interest and debt redemption, etc.) are shown as a separate item, whereas, in the table above, these charges are included in the section to which they relate.

Details of Commonwealth expenditure on public debt charges for 1938-39 and 1951-52 to 1955-56 are shown in the following table:—

(b) Includes repatriation debt.
(c) Redemption, conversion and loan management, etc., expenses.

<sup>2.</sup> Defence Services.—Details of the expenditure on Defence Services by the Departments of Defence, Navy, Army, Air, Supply and Defence Production are shown in the following table. The expenditure shown under Department of Supply includes the former Departments of Shipping and Fuel, Supply and Development, Supply and Shipping, and Munitions. This table covers expenditure by the service and associated departments only, and includes the cost of maintaining forces in Korea and at other oversea posts.

The figures represent the combined expenditures from revenue, trust and loan funds for the years 1938-39 and 1951-52 to 1955-56.

<sup>(</sup>a) Excludes Interest and Redemption on War (1914-18) Debt due to the United Kingdom Government, payment of which was suspended in 1931. (b) From Service Departments and Australian Soldiers' Repatriation Trust Account. (c) Revised to exclude Government contributions under Superannuation Act. (d) Excludes International Monetary Fund Charges. (e) Munitions, stores, etc., supplied to the Government of United Kingdom and other administrations. Includes repayments and waivure of war-time indebtedness of other administrations. (f) Receipts credited to Defence revenue.

Note.—Minus sign (-) indicates excess of credits or repayments over expenditure.

4. Subsidies and Bounties.—The following table shows details, for the years 1938-39 and 1951-52 to 1955-56, of Commonwealth expenditure from revenue on subsidies, bounties and assistance to primary producers. Expenditure on special relief such as drought, frost, flood and bush fire, etc. (see table, p. 800, for more important items), is not included, nor is expenditure from the proceeds of certain taxes on primary products and profits from marketing schemes, which have been paid to trust funds for the purpose of price or other stabilization schemes or for distribution to producers (see paragraph 14, p. 808). Further information relating to these schemes and other assistance to, primary producers is given in Chapter XXII.—Agricultural Production.

Details of price stabilization subsidies and of various forms of assistance to primary producers for earlier years may be found on pp. 414 and 1014-15 respectively of Official Year Book No. 38.

5. Total Cost of Departments.—Expenditure under this heading covers expenditure by departments, other than the defence and repatriation departments and business undertakings, on administrative services and other activities. Expenditure on defence (other than interest and debt redemption in respect of the defence departments, which is included in the expenditure of the Department of the Treasury), war and repatriation services, subsidies and bounties, social services paid from the National Welfare Fund, business undertakings, Commonwealth territories and capital works and services is excluded.

Information on the functions of departments and the acts administered by the Ministers of departments was published in Official Year Book No. 37, pp. 76-86, and particulars of subsequent changes in departmental structure were given in later issues (see No. 43, p. 81).

In the following table, details are given of that expenditure on the branches of each department which might be termed running expenses. Miscellaneous expenditure and debt charges, etc., are not included in this table but are in the one following.

<sup>(</sup>a) Includes rent, repairs and maintenance. Pension and superannuation contributions and interest and debt redemption in respect of the various departments are included under the Department of the Treasury. (b) League of Nations. (c) Unallocated debt charges, in respect of all departments including defence departments. (d) Includes pension and superannuation contributions in respect of all departments, including defence departments. (e) Included with Department of the Interior. (f) Expenditure from Postmaster-General's Department. (g) Department of Customs and Excise. (h) See Department of Commerce and Agriculture. (i) See Departments of Trade and Primary Industry. (j) Included with Prime Minister's Department.

<sup>6.</sup> National Welfare Fund.—The National Welfare Fund was established for the purpose of providing a fund for the payment of Commonwealth social services benefits. During the year 1949-50, an amount equivalent to the total collections of pay-roll tax and social services contribution was paid to the fund from Consolidated Revenue. During 1950-51, the social services contribution was amalgamated with the normal income tax and it became necessary to base the contributions on another formula. For the year 1950-51, the amount paid to the fund was the total of collections of pay-roll tax and social services contribution plus £30,000,000. In 1951-52, the amount paid to the fund was the amount paid in 1950-51 increased in the same proportion as collections of pay-roll tax increased over the collections of pay-roll tax in 1950-51. By an amendment to the National Welfare Fund Act 1943-1950, the amount to be paid to the fund in 1952-53 and subsequent years was changed to the amount of moneys paid out of the fund. In addition to these payments from Consolidated Revenue, the fund received a small amount of interest from investments.

In the following table, details are given of the income and expenditure of the National Welfare Fund and the balance in the fund at the end of each year for the years 1951-52 to 1955-56. A dissection of expenditure into the various types of benefits is given in Chapter XV.—Welfare Services (see p. 546).

NATIONAL WELFARE FUND: RECEIPTS, EXPENDITURE AND BALANCES. (£'000.)

1955-56				214,866	2,086	216,952	214,866	193,124

- 7. National Debt Sinking Fund.—During 1951-52, a special appropriation of £98,500,000 was paid to the National Debt Sinking Fund for investment in a special loan raised to finance State works expenditure.
- 8. Debt Redemption Reserve Trust Account.—Section 4 of the Appropriation Act (No. 2), 1953-1954 provided for payments from Consolidated Revenue Fund of such sums as the Treasurer may determine. These sums are appropriated to the Debt Redemption Reserve Trust Account for the purpose of expenditure in redeeming any securities forming part of the National Debt of the Commonwealth.

The following payments were made to the Trust Account from Consolidated Revenue Fund.—1953-54, £56,271,000; 1954-55, £70,151,000. There was no expenditure from the Trust Account until November, 1955, when the total balance of £126,422,000 was paid to the credit of the Loan Consolidation and Investment Reserve. The balance of the Trust Account at 30th June, 1954 and 1955 formed part of General Trust Funds which were invested in special loans to finance Commonwealth and State works programmes.

9. Loan Consolidation and Investment Reserve Trust Account.—The Loan Consolidation and Investment Reserve Act 1955 established the Loan Consolidation and Investment Reserve Trust Account for the purpose of repurchase or redemption of securities representing portion of the public debt of the Commonwealth.

In 1955-56, the Account was credited with a transfer from the Debt Redemption Reserve Trust Account, £126,422,000, a payment from Consolidated Revenue Fund of £61,613,000 and Interest, etc. amounting to £2,399,000. Expenditure from the Trust Account on repurchase of securities was £28,701,000. The major portion of the balance of the Trust Account at 30th June, 1956, was invested in Commonwealth securities in special loans to finance Commonwealth and State works programmes.

10. Business Undertakings.—(i) Postmaster-General's Department. From the beginning of 1949-50, Broadcasting Services were separated from the Postmaster-General's Department. Prior to 1949-50, part of the expenditure on these services was included with the Postmaster-General's Department. Details of the expenditure of this Department for the years 1938-39 and 1951-52 to 1955-56 are given in the following table:—

POSTMASTER-GENERAL'S DEPARTMENT: EXPENDITURE. (£'000.)

Item.	1938–39.	1951–52.	1952–53.	1953–54.	1954-55.	1955-56.

Grand Total	18,729	93,110	98,344	98,230	102,085	114,597

Further details of expenditure for 1956-57 on account of the Postmaster-General's Department appear in Chapter XI.—Transport and Communication (Part II., Division A., Posts, Telegraphs, Telephones and Cable and Radio Communication).

(ii) Broadcasting Services. Since 1949-50, all expenditure on broadcasting services has been brought together in one section. Previously these services had been financed partly by the Postmaster-General's Department and partly from the Wireless Broadcasting Trust Account. Details of expenditure for the years 1951-52 to 1955-56 are shown in the following table.

COMMONWEALTH BROADCASTING SERVICES: EXPENDITURE. (£'000.)

(iii) Railways. The Commonwealth Railways, previously administered by the Department of the Interior, were transferred in March, 1950, to the newly-formed Department of Fuel, Shipping and Transport, which became the Department of Shipping and Transport in May, 1951. The expenditure on railways for the years 1938-39 and 1951-52 to 1955-56 is shown below.

COMMONWEALTH RAILWAYS: EXPENDITURE.

		. 000.)

(a) Includes loan redemption and conversion expenses, 1952-53, £1,000; 1954-55, £19,000.

Additional details of the financial operations of the Commonwealth Railways to 1956-57 are given in Chapter XI.—Transport and Communication (Part I., Division B. Government Railways).

11. Territories.—The following table shows the expenditure on account of Commonwealth Territories for the years 1938-39 and 1951-52 to 1955-56. The Australian Capital Territory is administered by the Department of the Interior, and the Department of Territories controls the Northern Territory and the external territories. The expenditure has been grouped in one table for convenience. Information in greater detail will be found in the annual bulletin. Finance.

### COMMONWEALTH TERRITORIES: EXPENDITURE. (£'000.)

(c) Excludes Overseas Telecommunications Commission included under Postmaster-General's Department. (d) From National Defence Contributions Trust Account and other trust funds.

Note.—Minus sign (-) indicates excess of credits or repayments over expenditure.

13. Payments to or for the States.—(i) General. An outline of the provisions of the Constitution requiring the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Official Year Book (see No. 37,

pp. 633 to 638). In the following paragraphs, reference is made to the arrangements at present in operation.

(ii) Amounts Paid. (a) Year 1955-56. The table below shows particulars of the amounts paid to each of the States as grants for the several purposes referred to in subsequent paragraphs.

<sup>(</sup>a) Excludes relief to primary producers and other payments for medical research, etc.
(b) Paid to National Debt Sinking Fund. (c) Excludes expenditure on strategic roads and road safety practices, 1951-52 to 1953-54, £600,000; 1954-55, £900,000; 1955-56, £950,000. (d) Paid to Trust Fund.

Particulars of special Commonwealth grants for the relief of primary producers are not included in the foregoing tables. For details see Chapter XXII.—Agricultural Production. See also para. 4, Subsidies and Bounties, and para. 14, Other Expenditure, of this subsection.

<sup>(</sup>b) 1938-39 and 1951-52 to 1955-56. The following table shows particulars of payments by the Commonwealth to or on behalf of the States during each of these years.

(iii) Financial Agreement. Details of the Financial Agreement between the Commonwealth and the States are given in Official Year Book No. 37, pp. 685 to 690. Under this Agreement, the Commonwealth undertook to contribute £7,584,912 per annum towards interest payable on the State Debts for a period of 58 years from 1st July, 1927. This amount is to be distributed amongst the States as follows:—New South Wales, £2,917,411; Victoria, £2,127,159; Queensland, £1,096,235; South Australia, £703,816; Western Australia, £473,432; Tasmania, £266,859.

These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926-27 at the rate of 25s. per head of population, the rate at which the Commonwealth had contributed annually to the States since 1st July, 1910, as compensation for the States relinquishing, after Federation, the right to levy Customs and Excise Duties.

In addition, under the Financial Agreement, the Commonwealth agreed to make certain contributions to the National Debt Sinking Fund for redemption of State Debts. Details of these payments are given in division D of this Chapter (§ 2, p. 825).

(iv) Special Grants. The Constitution provides in Section 96 for the granting of special financial assistance to the States. Prior to 1933, financial assistance of varying amounts was granted by the Commonwealth to South Australia, Western Australia and Tasmania. Details of this may be found in earlier issues of the Official Year Book (see No. 40, p. 695).

In 1933, the Commonwealth Government appointed the Commonwealth Grants Commission of three members to inquire into and report upon claims made by any State for a grant of financial assistance and any matters relevant thereto.

Applications have been received from South Australia, Western Australia and Tasmania each year from 1933 onwards and the recommendations of the Commission in respect of the years 1938-39 and 1952-53 to 1956-57 are shown in the following table. Commencing with 1949-50, the Commission has divided the grants recommended into two parts. One part is the Commission's estimate of the indispensable need of the claimant State for the year in which the payment is to be made after allowing a sufficient margin for safety. The other part is an adjustment of this estimate for an earlier year after an examination of the audited accounts for that year. Thus the grants for 1956-57 include an estimate of the indispensable need of the claimant State for 1956-57 and an adjustment to the estimated grant for 1954-55.

(a) Adjustment to estimated grant paid two years previously.

(v) Tax Reimbursement Grants. Details of the States Grants (Income Tax Reimbursement) Act 1942 and the States Grants (Entertainments Tax Reimbursement) Act 1942 are given in earlier issues of the Official Year Book (see No. 37, pp. 635 to 637). These Acts provided for grants to the States as compensation for vacating the fields of Income Tax and Entertainments Tax. Grants under these Acts ceased after 1945-46 and were replaced by grants under the States Grants (Tax Reimbursement) Act 1946-1948.

This Act provided for reimbursement grants of certain specified amounts to be paid to the States during 1946-47 and 1947-48. For 1948-49 and subsequent years, the grants were assessed on the aggregate paid in 1947-48 (£45,000,000) increased in accordance with a formula based on increases in population and average wages. Details of the formula and of the treatment of arrears of State income taxes were given in earlier issues of the Official Year Book (see No. 40, p. 696).

In 1950-51, an amount of £5,000,000 was paid to the States under the States Grants (Additional Tax Reimbursement) Act 1950. As this was considered as a non-recurring grant, the formula outlined above was not amended.

(vi) Special Financial Assistance Grants. During the years 1951-52 to 1955-56, there were heavy additions to the financial needs of the States and special assistance grants amounting to £33,577,000, £27,146,000, £21,915,000, £19,902,000 and £15,348,000 respectively were made. For details of amounts paid to each State during 1955-56 see p. 805 and for payments during 1951-52, 1952-53, 1953-54 and 1954-55 see Official Year Books No. 40, p. 698, No. 41, p. 619, No. 42, p. 783 and No. 43, p. 775.

(vii) Grants for Road Construction. (a) Main Roads Development Act 1923-25, Federal Aid Roads Acts 1926, 1931 and 1936, Federal Aid Roads and Works Act 1937, Commonwealth Aid Roads and Works Act 1947-1949 and Commonwealth Aid Roads Act 1950. Details of these Acts are given in earlier issues of the Official Year Book (see No. 38, pp. 787-8 and No. 41, p. 62) and in the annual bulletin Finance.

(b) The Commonwealth Aid Roads Act 1954 repealed the Commonwealth Aid Roads Act 1950 and provided for payment to the States, for a period of five years from 1st July, 1954, of an amount equivalent to 7d. per gallon on all petrol except aviation spirit which is entered for home consumption and which is subject to Customs and Excise duties as specified in Customs Tariff Items 229 c and 229 (d) (2) and Excise Tariff Item 11. Out of this amount, the following grants are to be made to the States, for construction and maintenance of roads and the purchase of roadmaking plant:—

- (a) Sixty per cent. of the amount, less £900,000 per annum, for expenditure on roads, and
- (b) Forty per cent. of the amount for expenditure on roads in rural areas other than highways, trunk or main roads.

The States may spend from the Commonwealth road grants up to £1,000,000 per annum on works connected with transport by road or water. Five per cent. of the grants is payable to Tasmania and the remainder is to be divided among the other five States, three-fifths according to population and two-fifths according to area. In addition, the Commonwealth may spend each year £800,000 on strategic roads and £100,000 on the promotion of road safety practices.

An amendment to the Commonwealth Aid Roads Act 1954 increased the allocation for road safety purposes to £150,000 per year as from 1st July, 1955.

- (viii) Tuberculosis Act 1948. Reimbursement of Capital Expenditure. The Tuberculosis Act 1948 provided for the reimbursement by the Commonwealth of capital expenditure incurred by the States in the provision of facilities for the diagnosis, treatment and control of tuberculosis, as from 1st July, 1948.
- (ix) States Grants (Mental Institutions) Act 1955. This Act provides for financial assistance to the States for capital expenditure on mental institutions to a maximum amount of £10,000,000. Each State is entitled to one-third of expenditure on buildings or equipment of a mental institution made on or after 1st July, 1955.
- (x) Other Payments. (a) Price Control Reimbursement. These grants were made from 1948-49 to 1953-54 to reimburse the States for expenditure incurred in administering prices, rents and land sales controls.
- (b) Western Australian Waterworks. The Western Australia Grant (Water Supply) Act, 1948, provides for grants to Western Australia not exceeding an aggregate of £2,150,000 for the development of the agricultural areas, great southern towns and Goldfields Water Supply scheme. The amount provided by the Commonwealth is not to exceed half the total expenditure on the scheme.
- (c) Coal Mining Industry—Long Service Leave. To provide funds for the payment for long service leave in the coal mining industry, the Commonwealth imposed an excise duty of 6d. a ton on coal produced from 1st November, 1949. The rate of duty was raised to 7½d. a ton from 26th August, 1951 and to 8d. a ton from 30th May, 1952. The proceeds of this excise duty are paid to a trust fund out of which the States are reimbursed for expenditure incurred in granting long service leave to employees in the coal mining industry.
- (d) Imported Houses. A subsidy is paid to the States for houses imported by a State or a housing authority of a State after 12th October, 1949. The amount of the subsidy is the amount by which the cost of imported houses exceeds the cost of building comparable houses from local materials. The subsidy is limited to £300 a house and in aggregate to 30,000 houses or £9,000,000.
- (e) Contribution to South Australia—Port Augusta to Port Pirie Railway. The Port Augusta to Port Pirie Railway Act 1935-1950 approved an agreement between the Commonwealth and South Australia to provide for the extension of the Trans-Australian Railway by the construction of a railway in South Australia from Port Augusta to Port Pirie. As a contribution towards reimbursing South Australia for the cost of the section to be constructed by the State, and for any additional expense incurred by the State in carrying out

the Agreement, the Act provided for a payment by the Commonwealth to the State of South Australia of £20,000 per annum for twenty years, the first payment being made after the opening of the Railway in 1937-38.

(f) Encouragement of Meat Production. To develop meat production in Queensland and Western Australia, grants are made to these States for the provision and improvement of roads and other facilities for the movement of live-stock. Provision is made for the Commonwealth to meet the cost of the construction and improvement of certain specified roads in both States and the construction of eight cattle loading and unloading points in Queensland. Provision is also made for the Commonwealth to meet half the cost of improving watering facilities on specified stock routes in both States. The amount of the grants for improving watering facilities on stock routes is limited to £75,000 in Queensland and £31,500 in Western Australia. These limits were extended as from 20th April, 1954 to £150,000 in Queensland and £50,000 in Western Australia.

(g) Grants to Universities. The States Grants (Universities) Act 1951 provides for grants to be made to the States for the purpose of financial assistance to Universities during the three years 1950-51 to 1952-53. The Act was superseded by the States Grants (Universities) Act 1953 which came into operation on 1st January, 1953, and which increased

the assistance payable.

14. Other Expenditure.—Expenditure under this item represents the proceeds of special industry taxes and profits from marketing schemes which are paid to trust funds or other authorities for the purposes of the industries concerned. Advance payments in respect of sales of uranium paid to the Atomic Energy Commission are also included.

Information relating to the taxes levied is given in sub-section II.—Revenue, of this section (see p. 790). Details of expenditure from the trust funds are given in § 3., Commonwealth Trust Funds. Details of the price stabilization and other assistance schemes for primary industries may be found in Chapter XXII.—Agricultural Production. Details of expenditure from the Consolidated Revenue Fund during the last five years are given in the following table.

#### § 4. Commonwealth Loan Fund.

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Official Year Book (see No. 37, p. 640). In the following table, details are given of the net expenditure from the Commonwealth Loan Fund for the years 1938–39 and 1951–52 to 1955–56 and of the aggregate expenditure to 30th June, 1956. The figures shown represent "net" loan expenditure, i.e., after adjustments have been made for refunds of amounts expended in earlier years.

See p. 838. (f) Payment to Canadian Loan Trust Account. See p. 839.

Note.—Minus sign (-) indicates excess of repayments to Loan Fund.

Information relating to the Public Debt of the Commonwealth is given in Division D, Commonwealth and State Public Debt, of this chapter.

#### B. STATE FINANCE.

#### § 1. General.

1. Functions of State Governments.—In comparing the financial returns of the States, allowances must be made for the various functions discharged by the respective Governments, and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another relegated to

municipal or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the Central Government. Care, therefore, is needed in making comparisons, and the particulars contained in this Chapter should be read with those contained in Chapter XIX.—Local Government. In many respects, moreover, the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such as railways, tramways, water supply, etc., which in other countries are often left to private enterprise.

2. Accounts of State Governments.—The various financial transactions of the States are in each case mainly concerned with one or other of three Funds—the Consolidated Revenue Fund, the Trust Fund, and the Loan Fund. All revenue (except certain items paid into special funds) collected by a State is paid into its Consolidated Revenue Fund, from which payments are made under the authority of an annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special act.

Figures in § 2 following relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the business undertakings included in the annual budget papers. These latter are as follows:—Railways, Tramways and Omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to obviate duplications caused by inter-fund payments. In previous issues of the Year Book, payments from the Commonwealth National Welfare Fund—Hospital Benefits, were deducted from both revenue and expenditure. These payments are now included and figures for previous years have been adjusted accordingly. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The Trust Fund comprises all moneys held in trust by the Government, and includes such items as superannuation funds, road funds, insurance companies' deposits, etc.

The Loan Fund is debited with all loan moneys raised by the State, and credited with the expenditure therefrom on public works or other purposes.

3. Inter-relation of Commonwealth and State Finances.—A statement in some detail, covering the inter-relation of Commonwealth and State Finances during the period from the inception of Federation to the passing of the Financial Agreement Act 1928, was published in Official Year Book No. 22, pp. 379-380. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Official Year Book from year to year (see also pp. 825-827).

#### § 2. State Consolidated Revenue Funds.

#### I.—Revenue.

- 1. General.—The principal sources of State revenue are:—
  - (a) Taxation; (b) The business undertakings controlled by the State Governments; (c) Sale of and rental from crown lands; (d) Payments by Commonwealth Government under the Financial Agreement, Special Grants and Tax Reimbursement Acts, etc.; (e) Interest on advances; and (f) Miscellaneous sources, comprising fines, fees, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of business undertakings, the principal contributors being the government railways and tramways. Next in magnitude are Commonwealth payments under the Tax Reimbursement Acts, followed in order by taxation receipts, Commonwealth special financial assistance and special grants, and lands receipts. With the introduction of uniform taxation by the Commonwealth in 1942-43, the States vacated the fields of income and entertainment taxation, and payments by the Commonwealth under the Income and Entertainments Tax Reimbursements Acts and, from 1946-47, under the Tax Reimbursement Act, replaced revenue previously received from those sources. The Commonwealth, however, ceased to impose Entertainments Tax in 1953-54 and in the same year Victoria, Western Australia and Tasmania re-imposed an Entertainments Tax.

2. Revenue Received.—The following table shows particulars of the total amounts, and the amounts per head of population, of consolidated revenue received by the several States during the years 1938-39 and 1951-52 to 1955-56.

#### STATE CONSOLIDATED REVENUE.

<sup>(</sup>a) See § 1, para. 2, p. 811. (b) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (c) Includes payments under Financial Agreement, Special Grants, Special Financial Assistance, Grants to Universities, etc. (d) Consolidated Revenue Fund receipts only: Excludes payments to Trust Funds.

(ii) Revenue from Taxation. (a) General. The following table shows, for the year 1955 -56, particulars of all State taxation collections irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason, the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and represent a comprehensive statement of all taxation collections by the Government in each State. In this and the succeeding statements of taxation, the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under "Racing Tax" instead of under "Stamp Duties" and "Licences" respectively. Commonwealth payments under the State Grants (Tax Reimbursement) Act are not included.

(b) 1938-39 and 1951-52 to 1955-56. Prior to federation, customs and excise duties constituted the principal source of revenue from taxation. Thereafter, until the introduction of the uniform income tax scheme in 1942-43, the most productive State taxes were the various income taxes which, in 1941-42, included unemployment relief, State development and hospital taxes. Since 1941-42, the States have been reimbursed by the Commonwealth for the revenue lost by the discontinuance of these taxes. Details of the reimbursement grants are given on pp. 806 and 812. Information relating to the State income taxes which were levied prior to 1942-43 may be found in earlier issues of the Official Year Book.

The total amounts and the amounts per head raised from all sources of taxation by the several State Governments, including amounts not paid into the Consolidated Revenue Fund, during the years 1938-39 and 1951-52 to 1955-56 are shown in the following table:—

(iii) Business Undertakings. (a) 1955-56. A very large proportion of State gross revenue is made up of receipts from business undertakings under the control of the Governments. The principal of these are railways and tramways, harbour works, water supply and sewerage, and electricity supply and, in addition, State batteries for the treatment of auriferous ores in Western Australia and various minor revenue-producing services rendered by the Governments of all States are included. For the year 1955-56, the revenue from these sources was £199,900,000 or 38.0 per cent. of the revenue from all sources. Details of revenue are as follows:—

STATE REVENUE FROM BUSINESS UNDERTAKINGS, 1955-56. (£'000.)

Source.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.(a)	Total.

<sup>(</sup>iv) Lands. The revenue from the sale and rental of crown lands has, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and has been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of crown lands for the year 1955-56.

## STATE LAND REVENUE, 1955-56. (£'000.)

(a) Includes mining royalties, rents, etc.

The total land revenue for all States for the years 1938-39 and 1951-52 to 1955-56 respectively was:—£4,144,000, £11,722,000, £12,589,000, £11,903,000, £12,308,000, and £13,629,000.

(v) Commonwealth Grants. Commonwealth grants to the States represent a considerable proportion of the States' Revenue. In 1955-56, the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was £183,440,000 (34.9 per cent.). This was made up of the contribution towards interest on States' debts under the Financial Agreement, £7,585,000, special grants to the States of South Australia, Western Australia and Tasmania, £18,500,000, special financial assistance, £15,348,000, tax reimbursement grants, £141,578,000, grants to Universities, £393,000 and other grants, £36,000.

In addition to these, the States receive a number of other grants which are paid to trust funds. The main items in this class are the contribution towards the sinking fund on States' debts (£4,310,000 in 1955-56) paid to the National Debt Sinking Fund and grants for Commonwealth Aid Roads (£26,519,000 in 1955-56) paid to State trust funds.

More detailed information concerning Commonwealth grants to the States is given on pp. 804-808.

- (vi) Commonwealth National Welfare Fund Payments. The States also receive payments from the Commonwealth in respect of Hospital and Pharmaceutical Benefits, Nutrition of Children and reimbursement of maintenance expenditure on Tuberculosis Sanatoria. These receipts are paid into Consolidated Revenue Funds or Trust Funds according to the varying accounting procedures in the States. In 1955-56, the total amount paid to State Consolidated Revenue Funds was £8,214,000 (1.6 per cent.). This was made up of Hospital Benefits, £2,578,000; Pharmaceutical Benefits, £549,000; Nutrition of Children, £1,042,000; and Tuberculosis—Reimbursement of maintenance expenditure, £4,045,000.
- (vii) Interest and Miscellaneous. In addition to the foregoing, there are in each State several miscellaneous sources of revenue, including such items as interest, fines, fees, etc. In 1955-56, interest, mainly from loans to local governing bodies, on public account balances and for soldier land settlement amounted to £15,920,000, whilst "Miscellaneous" revenue which includes fines of the courts and fees for services, amounted to £32,501,000.

#### II.-Expenditure.

- 1. General.—The principal heads of State expenditure from Consolidated Revenue Funds are:—
  - (a) Interest, exchange and debt redemption charges in connexion with public debt; (b) Working expenses of railways, tramways and other business undertakings; (c) Education; (d) Health and charitable expenditure; (e) Justice; (f) Police; (g) Penal establishments; and (h) all other expenditure, under which heading is included public works, lands and surveys, agriculture and forestry, legislative and general administration, pensions and miscellaneous.

In earlier years, the working expenses of railways and tramways were the most important item of State Governmental expenditure but for a period prior to 1941-42 public debt charges were the heaviest item. Since then, however, railways and tramways expenditure has again taken the major place. In the year 1955-56, the working expenses of the railways, tramways and omnibuses were 34.2 per cent. of the total expenditure from the State Consolidated Revenue Funds; next in importance were education, 16.1 per cent.; public debt charges, 14.7 per cent.; charitable, public health and hospitals, 13.1 per cent.; and law, order and public safety, 5.3 per cent.

2. Total Expenditure.—The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1938-39 and 1951-52 to 1955-56 are shown in the following table:—

<sup>(</sup>a) See § 1, para. 2, p. 811. (b) Tasmanian transport services are under the separate control of the Transport Commission. (c) Balance of Special Grant, 1953-54. The Special Grant for 1955-56 was brought into the Western Australian Consolidated Revenue Fund and the first part, £25,000, in respect of 1953-54 transferred to offset the Net Accumulated Deficit. The Special Grant for 1955-56 taken into Tasmanian Consolidated Revenue Fund was £4,384,000, although the Commonwealth payment was £4,200,000. The difference was offset in the Tasmanian accounts against the adjusted surplus for 1953-54.

(a) Special Deposits Account and Special Accounts.

#### § 4. State Loan Funds.

1. General.—As far back as 1842, revenue collections were supplemented by borrowed moneys, the earliest loan being raised by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2\frac{1}{2}d. to 5\frac{1}{2}d. per £100 per diem, or approximately

from 4½ per cent. to 8 per cent. per annum. State public borrowing however is mainly due to the fact that the State Governments, in addition to ordinary administrative duties, undertake functions which in other countries are usually entrusted to local authorities or left to private enterprise. Foremost amongst these are the construction and control of the railway systems. Loan moneys have also been largely used for improvements to harbours and rivers, and for the construction of roads, water supply and sewerage works. The State loan expenditure and public debt thus differ very materially from those of most European countries, and from those of the Commonwealth, where such expenditure was very largely incurred for defence or war purposes. As shown above, the State debts consist chiefly of moneys raised and expended with the object of assisting the development of the resources of the country, and are to a very large extent represented by tangible assets.

Statements relating to "gross" loan expenditure are shown below. The gross expenditure represents the amounts disbursed during each year. Details of "net" loan expenditure, i.e., gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds may be found in *Finance*, Bulletin No. 47, 1955-56. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made. (See also following page).

2. Gross Loan Expenditure.—(i) 1955-56. Particulars of gross loan expenditure on works, services, etc., are shown in the following table:—

<sup>(</sup>a) Includes exchange, discounts and flotation expenses, revenue and general cash deficits.
(b) From Consolidated Revenue Fund.

Information relating to the State Public Debt is given in division D. Commonwealth and State Public Debt (pp. 827 and 829).

#### C. COMMONWEALTH AND STATE FINANCE.

1. Revenue and Expenditure.—(i) Consolidated Revenue Funds. The following tables show the aggregate revenue and expenditure of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1938-39 and 1951-52 to 1955-56. In these tables, the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other divisions of this Chapter. The items excluded from the total figures are:—payments made by the Commonwealth to the States and included in the State Consolidated Revenue Funds on account of tax reimbursements, interest under the Financial Agreement special grants, special financial assistance, coal strike emergency grants, price control reimbursements, grants to universities, tuberculosis capital expenditure, National Welfare Fund payments, and estimated payments of pay-roll tax by the States to the Commonwealth. There are other relatively minor payments for which adjustments have not been made and the adjusted figures are therefore still slightly overstated.

COMMONWEALTH AND STATES: REVENUE AND EXPENDITURE.

				Revenue.		Expenditure.				
Year ended	30th	June-	Common- wealth.	States.	TotaL	Common- wealth.	States.	Total.		
1939			£'000. 95,065	£'000. 124,283	£m. 209.6	£'000. 95,065	£'000. 128,159	£m. 213.5

(ii) Loan Expenditure. The aggregate gross loan expenditures of the Commonwealth and States on works and services for the years 1938-39 and 1951-52 to 1955-56 are shown in the following table:—

# COMMONWEALTH AND STATE GROSS LOAN EXPENDITURE: WORKS AND SERVICES.(a) (£'000.)

Gross Loan Exp	1938–39.	1951–52.	1952-53.	1953–54.	1954-55.	1955-56.		
Commonwealth(b) State			3,913 21,399	31,667 210,938	35,684 182,215	41,399 182,948	33,189 175,327	44,003 177,511
Total	••	••	25,312	242,605	217,899	224,347	208,516	221,514

<sup>(</sup>a) Excludes expenditure on loan flotations, funding deficits, etc. (b) Includes expenditure on Defence, War (1939-45) and Repatriation Services. Excludes payments to National Debt Sinking Fund from proceeds of loan from International Bank of Reconstruction and Development, payments to Swiss Loan Trust account from proceeds of Swiss Loan and payments to Canadian Loan Trust account from proceeds of Canadian Loan (see pp. 838-839).

2. Taxation.—The following table shows the combined Commonwealth and State taxation, and the amount per head of population, for the years 1938-39 and 1951-52 to 1955-56. Taxation collections by the State Governments which are not paid into the Consolidated Revenue Funds have been included.

#### D. COMMONWEALTH AND STATE PUBLIC DEBT.

#### § 1. General.

Under the Financial Agreement between the Commonwealth and the States in 1927, the Commonwealth and State Public Debts were amalgamated and the Commonwealth Government accepted responsibility for the State Public Debts. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf and the debt is redeemed from the National Debt Sinking Fund to which both the Commonwealth and the States make contributions. Under the agreement, the Commonwealth arranges for all borrowings on behalf of the Commonwealth and the States, and Commonwealth securities are issued for all money borrowed.

In the statistical tables relating to Public Debt, the units of currency for debt outstanding and interest payable, except in § 3, para. 5, are :-Debt in Australia-£ Australian; Debt in London-£ Sterling; Debt in New York-£ (converted from dollars at the rate of \$4.8665 to £1); Debt in Canada—£ (converted from dollars at the rate of \$4.8665 to £1); Debt in Switzerland—£ (converted from Swiss francs at the rate of 1,000 Swiss francs = £A.102 1s. 10d).

The totals shown represent the total "face" or "book" value of the debt without adjustment on account of the difference in currency mentioned above.

In § 3, para. 5 only, details of the debt for the Commonwealth and each State are given in Australian currency.

#### § 2. The Financial Agreement between the Commonwealth and the States.

- 1. General.—Full details of the Financial Agreement between the Commonwealth and the States are given in earlier issues of the Official Year Book (see No. 37, pp. 685-690). In this issue, a summary of the main provisions only is given.
- 2. Australian Loan Council.—The Australian Loan Council was set up to co-ordinate the public borrowings of the Commonwealth and the States. It consists of the Prime Minister of the Commonwealth, or another Minister nominated by him in writing, as Chairman, and the Premier of each State, or Ministers nominated by them in writing. Each year the Loan Council examines the loan programmes of the Commonwealth and the States and determines the total amount to be borrowed during the year. Borrowings by the Commonwealth for defence purposes are not subject to decisions of the Loan Council.
- 3. Loan Raisings for the Commonwealth and States .- Subject to the decisions of the Loan Council, the Commonwealth arranges for all borrowings for or on behalf of the Commonwealth or any State, and for all conversions, renewals, redemptions, and consolidations of the Public Debts of the Commonwealth and of the States.

If the Loan Council unanimously decides, however, a State may borrow outside Australia in the name of the State, and may issue securities for the amount so borrowed. The Commonwealth then guarantees that the State will fulfil all its obligations to bondholders in respect of the money so borrowed and the money is deemed to be borrowed by the Commonwealth for and on behalf of the State.

Subject to any maximum limits decided upon by the Loan Council for interest, brokerage, discount and other charges, the Commonwealth or any State may-

- (i) borrow within its own territory, for any purpose, money from any authorities, bodies, funds or institutions (including Savings Banks) constituted or established under Commonwealth or State law or practice:
- (ii) borrow from the public by means of counter sales of securities; and
- (iii) use any available public moneys.

However, any securities issued for money so borrowed or used must be Commonwealth securities on terms approved by the Loan Council.

- 4. Taking over of State Public Debts.—The Commonwealth took over on 1st July, 1929-
  - (a) the balance then unpaid of the gross public debt of each State existing on 30th June, 1927; and
  - (b) all other debts of each State existing on 1st July, 1929, for money borrowed by that State deemed by the Agreement to be money borrowed by the Commonwealth for and on behalf of the State,

and in respect of these debts assumed, as between the Commonwealth and the States the liabilities of the States to bond holders.

- 5. Transferred Properties.—In relation to State properties transferred to the Commonwealth under Section 85 of the Constitution, the States as from 1st July, 1929, were discharged from any liability in respect of principal, interest or debt redemption on so much of the debts bearing interest at 5 per cent. per annum, taken over by the Commonwealth as amounted to the agreed value of these properties, namely £10,924,323.
- 6. Payment of Interest.—For a period of 58 years from 1st July, 1927, the Commonwealth agreed to contribute the sum of £7,584,912 each year towards the interest payable on the State debts. The balance of the interest payable on the State debts is paid to the Commonwealth by the States.
- 7. Sinking Fund.—(i) State Public Debt existing at 30th June, 1927. A sinking fund at the rate of 7s. 6d. per annum for each £100 of the net public debts of the States existing on 30th June, 1927, and conversions thereof, was established under the terms of the Agreement. The Commonwealth contributes annually from revenue 2s. 6d. per £100 on the net public debts of the States existing at 30th June, 1927, and each State contributes annually 5s. per £100 on the net public debt of such State at 30th June, 1927. The payments of the Commonwealth and of all States except New South Wales will continue for a period of 58 years from 1st July, 1927, and those of New South Wales for a similar period from 1st July, 1928.
- (ii) New Borrowings. On new borrowings after 1st July, 1927, (except those for redemptions or conversions, or funding a State deficit) a sinking fund at the rate of 10s. per £100 per annum was established and the State and the Commonwealth contribute from revenue equal shares for a period of 53 years from the date of raising. (New South Wales did not commence sinking fund contributions in respect of new loans raised in the financial year 1927-28 until 1st July, 1928.)
- (iii) Loans raised to meet a Revenue Deficit. In respect of any loan (except any of the loans referred to in para. (iv) below) raised by a State after 30th June, 1927, to meet a revenue deficit accruing after that date, no sinking fund contribution is made by the Commonwealth, but the State makes a sinking fund contribution at the rate of not less than 4 per cent. per annum of the loan for a period sufficient to provide for the redemption of the loan, the contributions being deemed to accumulate at the rate of 4½ per cent. per annum compound interest.
- (iv) Loans raised to meet Revenue Deficits between 30th June, 1927 and 1st July, 1935. In respect of loans raised by a State or by the Commonwealth on behalf of a State, on the security of Commonwealth Treasury Bills, to meet a revenue deficit accruing after 30th June, 1927, and before 1st July, 1935, special contributions are payable. Details of these contributions are given in Official Year Book No. 37, pp. 688 and 689.
- (v) National Debt Commission. The sinking funds established are controlled by the National Debt Commission, which may arrange with any State to act as its agent in connexion with payments due to bond holders. Except where the conditions relating to sinking funds, redemption funds, and funds of a like nature held by a State on 30th June, 1929, precluded such transfer, all such funds were transferred to the National Debt Commission.
- (vi) Operation of Sinking Fund. Sinking fund contributions made in respect of the debts of a State, and funds of that State transferred to the National Debt Commission, are not accumulated but must be applied, whenever expedient, to the redemption and repurchase of loan securities. When such a loan security is repurchased or redeemed by the National Debt Commission, it is cancelled, and the State, in addition to sinking fund contributions otherwise payable, pays a further annual sinking fund contribution at the rate of 4½ per cent. on the face value of the cancelled security for the balance of the period during which the original contribution is payable in respect of that debt.
- (vii) Oversea Debt. Sinking fund contributions in respect of oversea debt shall be calculated at the mint par of exchange prevailing on 1st July, 1927.

8. Borrowing by Semi-Governmental Authorities.—It was realized at the inception of the Loan Council that, in the interests of co-ordinated borrowing, the Council should be advised of borrowing of large amounts by semi-governmental authorities. In May, 1936, all resolutions passed by the Loan Council in connexion with semi-governmental borrowings were consolidated into one set of rules, which superseded all previous resolutions. This set of rules provides, inter alia, for the submission of annual loan programmes in respect of semi-governmental authorities proposing to raise £100,000 or more in a year, for the consideration of such programmes in conjunction with the loan programme of the Government concerned, and for the fixing of the terms of individual semi-governmental loans coming within the scope of the annual programme.

#### § 3. Commonwealth and State Public Debt Outstanding.

1. Public Debt, Annual Interest Payable and Average Rate of Interest at 30th June, 1956.—In the following table, details are given of the Commonwealth and State Public Debt, annual interest payable and average rate of interest at 30th June, 1956.

In some States, certain public utilities such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which, in addition to receiving advances from the central Government, raise loans by public borrowing on their own behalf, while in other States these services are controlled by the central Government. Comparison of the debts of the States is therefore difficult, but on page 834 figures showing the aggregate debts of the States, including these local and semi-governmental authorities, are shown

for the years 1938-39 and 1951-52 to 1955-56.

5. Public Debt and Interest Payable in Australian Currency.—In the foregoing tables relating to Commonwealth and State public debt, the debt outstanding in London is expressed in sterling, debt outstanding in New York and Canada is expressed in pounds converted from dollars at the rate of \$4.8665 to £1 and debt outstanding in Switzerland is expressed in pounds converted from Swiss francs at the rate of 1,000 Swiss francs = £A.102 1s. 10d. This method of showing the debt does not indicate the amount that the Australian Government would have to find to repay the debt at current rates of exchange. In the following table, the public debt and the interest payable are shown in terms of Australian currency throughout. Debt in London, New York and Switzerland has been converted to Australian currency at the selling rate of exchange on 30th June, 1956.

<sup>(</sup>a) See § 1, p. 825. (b) Short-term debt. (c) Consists of overdue indefinite and interminable debt, debt due at Treasurer's option and half-yearly drawings.

8. Short-term Debt.—(i) Amount. Particulars of the short-term debt (Treasury Bills and Debentures) of the Commonwealth and States in London and in Australia at 30th June, 1939 and at intervals from 30th June, 1952, to 30th June, 1956, are shown in the following table. This debt is included in the public debt as shown elsewhere.

- (a) Excludes Overdrafts and Internal Treasury Bills.
- (ii) Interest Rates. (a) London. The rates of interest payable on Treasury Bills and Debentures in London during the following periods were: 1938-39—minimum rate, 2 per cent., maximum rate, 2½ per cent.; 1949-50 to 1950-51—minimum rate, 2 per cent., maximum rate, 2½ per cent. On 8th November, 1951, the rates were increased to—minimum rate, 2½ per cent., maximum rate, 2½ per cent.
- (b) Australia. The Treasury Bill rates in Australia were as follows:—1\frac{1}{2} per cent. from 1st January, 1935; 1\frac{1}{2} per cent. from 1st May, 1940; 1\frac{1}{2} per cent. from 1st May, 1943; 1 per cent. from 1st March, 1945; \frac{3}{2} per cent. from 1st May, 1949; 1 per cent. from 1st August, 1952.
- 9. State and Municipal and Semi-Governmental Authority Public Debt.—For the reasons indicated on p. 831, direct comparisons of the debts of the several States should be made with caution. The table following shows, for 1938-39 and 1951-52 to 1955-56, particulars of the debts of the States and the debts due to the public by municipal and semi-governmental authorities in each State.

#### § 4. Commonwealth Loan Raisings.

1. General.—Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising all loan moneys required by both the Commonwealth and the State Governments. Details of loan transactions given in this section relate, therefore, to all loans raised for the Commonwealth and the States.

2. New Loans Raised, 1953-54 to 1955-56.—(i) Australia. The following table shows details of new loans raised in Australia by the Commonwealth during the three years 1953-54 to 1955-56.

<sup>(</sup>a) Includes loans raised for redemption of Treasury Bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see below).

(b) Special issue. For details see following paragraph.

Note.—Minus sign (-) indicates an excess of allocations over receipts.

The loans of £80,000,000, £48,000,000 and £93,205,000 issued in June, 1954, 1955 and 1956 respectively were for the purpose of fulfilling an undertaking given by the Commonwealth that the States would have access to loan funds for their works programmes up to the approved Loan Council borrowing programmes. These programmes totalled £200,000,000 in 1953-54, £180,000,000 in 1954-55 and £190,000,000 in 1955-56. Subscriptions to these special loans came from the following sources:—

		Total	200,000,000	180,000,000	190,000,000

(a) Excludes amounts provided for War Service Land Settlement; 1953-54, £5,407,000; 1954-55, £3,452,000; and 1955-56, £8,354,000; and for Emergency Wheat Storage 1955-56, £3,198,000.

In addition to the new loans raised, as shown in the foregoing tables, and the redemption and conversion loans shown in the following section, there were other miscellaneous debt operations during 1955-56, namely:—Savings Certificates and War Saving Certificates (Five and Seven Years' Series), decrease of £3,250,000; War Savings and Savings Stamps, decrease of £1,000; National Savings Bonds and Stamps, decrease of £2,000,000; "Over the Counter Sales" (small amounts borrowed by the States by virtue of certain statutory rights) £5,498,100. Advance loan subscriptions in hand increased from £5,175,000 at the end of 1954-55 to £7,943,000 at the end of 1955-56.

- (ii) London. No new loans were raised in London during the period 1953-54 to 1955-56.
- (iii) New York. A cash loan was raised in New York in June, 1956. This loan was the first since May, 1928, other than loans raised from the International Bank for Reconstruction and Development (see para. 4, below). The following table gives details of the new loan.

Note.—Minus sign (-) denotes increase in liability for interest.

4. International Bank for Reconstruction and Development Loans .- To provide dollar funds for the purchase of certain types of capital equipment and plant which were indispensable to the furtherance of development in Australia and which could be obtained only in the United States of America and Canada, the Commonwealth Government, in August, 1950, arranged a loan of \$100,000,000 from the International Bank for Reconstruction and Development. The loan is for a term of 25 years with interest at 4½ per cent. per annum on the amount of the loan withdrawn and outstanding from time to time. addition, there is a commitment charge of 3 per cent. per annum on the amount of the loan not withdrawn from time to time. Repayment of the loan is to be made in half-yearly instalments commencing on 1st September, 1955. The last instalment is payable on 1st September, 1975. At the 31st December, 1953, the whole of the loan had been drawn.

In July, 1952, a further loan of \$50,000,000 was arranged. This loan is for a term of 20 years with interest at 43 per cent. per annum on the amount of the loan withdrawn and outstanding from time to time. There is also a commitment charge of ‡ per cent. per annum similar to that of the previous loan. Repayment of the loan is to be made in halfyearly instalments from 1st June, 1957 to 1st December, 1972. At 30th September, 1954, the whole of the loan had been drawn.

In March, 1954, a third loan of \$54,000,000 was arranged. This loan is for a term of 15 years with interest and commitment charges similar to those for the previous loan for \$50,000,000. Repayment of the loan will be made in half-yearly instalments from 1st March, 1957 to 1st March, 1969. At 30th September, 1955 the whole of the loan had been drawn.

In March, 1955, a fourth loan of \$54,500,000 was arranged. This loan is for a term of 15 years with interest at 4\frac{1}{2} per cent. per annum. There is also a commitment charge of 3 per cent. per annum similar to that of previous loans. Repayment is to be made in half-yearly instalments from 15th March, 1958 to 15th March, 1970. Up to 30th June, 1956, \$43,010,000 had been drawn on the loan.

The capital equipment and plant purchased from the proceeds of these loans are made available to Commonwealth and State Government departments and agencies and private firms and individuals for use in the development of Australian resources. Subject to a special import licence being obtained, the goods are imported and distributed through normal channels and payment made through the Australian banking system. Periodically, schedules of dollar payments for goods imported against loan licences are submitted to the International Bank for Reconstruction and Development. These schedules form the basis for periodical drawings by the Commonwealth against the loan. The amounts drawn are paid to the Commonwealth Bank to replace the dollar funds used in making the purchases. In return, the Commonwealth Government receives Australian currency from the Commonwealth Bank. This is paid to the Commonwealth National Debt Sinking Fund out of which the loans will subsequently be redeemed.

5. Swiss Loan.—To foster industrial development in Australia and to stimulate trade relations between the two countries, the Commonwealth Government arranged for the issue in Switzerland in November, 1953, and February, 1955, of two public loans each of 60,000,000 Swiss francs. The loans were underwritten by a Swiss banking group headed by the Swiss Bank Corporation, the Crédit Suisse and the Union Bank of Switzerland. Certain Swiss taxes connected with the issue and servicing of the loan were paid on an agreed basis by the Australian Government.

The first loan was for a period of 15 years with an option on the part of the Australian Government to repay the loan in full or in part after 12 years. The rate of interest was 4 per cent. and the issue price £99. Bondholders have the option of requiring payment either in Australian pounds or in the foreign currency equivalent of Australian pounds.

The second Swiss loan was for a period of 15 years with an option to redeem after 10 years. The rate of interest was 3\frac{3}{4} per cent. and the issue price £99 10s. Bonds and interest are payable only in Swiss francs.

The loans were both fully subscribed and Swiss franc proceeds, after deducting borrowing expenses, were sold by the Commonwealth Government to the Commonwealth Bank in return for an equivalent amount of Australian currency. A trust account, named the Swiss Loan Trust Account, was opened and the proceeds from the two loans were transferred to this account and were used in assisting the Loan Council borrowing programmes for the 1953-54 and 1954-55 financial years. The Swiss Loan Trust Account will also be used as a sinking fund for the loans, and, when the time comes for repayment, the trust account investments can be realized. The provisions of the National Debt Sinking Fund Act do not apply to the loans.

6. Canadian Loan.—In October, 1955, the Commonwealth Government arranged for the issue in Canada of a public loan of 15,000,000 Canadian dollars raised to assist Australia's development programme. The loan was underwritten by Wood, Gundy & Company Limited of Toronto, Canada.

The loan was for a period of 15 years with an option on the part of the Australian Government to repay the loan in full or in part at any time prior to 1st November, 1970. The rate of interest was 4 per cent. payable half-yearly and the issue price. \$98.50. Bonds and interest are payable in Canadian dollars.

The loan was fully subscribed and the net Canadian dollar proceeds were sold to the Commonwealth Bank for Australian currency. A trust account, named the Canadian Loan Trust Account, was opened and the Australian currency proceeds of the loan were transferred to this account and used in assisting the Loan Council borrowing programme in 1955-56.

The Canadian Loan Trust Account will provide the necessary sinking fund payments and, when the time comes for these sinking fund payments and for the final repayment, the Trust Account investments will be realized to provide funds for that purpose. The provisions of the National Debt Sinking Fund Act do not apply to this loan.

7. Summary of Loan Transactions, 1951-52 to 1955-56.—The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the five years 1951-52 to 1955-56.

#### E. TAXES ON INCOME.

Note.—The following section contains details of taxes on individuals and companies for the 1957-58 financial year.

1. General.—A description of the development of income taxes in Australia appeared in Official Year Book No. 35, p. 926. Since July, 1942, the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income. Taxes on income are assessed and imposed under the Income Tax and Social Services Contribution Assessment Act 1936-1957 and the Income Tax and Social Services Contribution Act 1957. The latter Act is an annual measure and its primary purpose is to declare the rates of tax and contribution payable for the financial year. The rates for the financial year are levied, in the case of companies, on the income of the preceding year. Thus tax for the financial year 1957-58 is levied on the income of individuals in 1957-58 and on the income of companies in 1956-57.

- 2. Present Taxes.—For individuals, a single tax known as the Income Tax and Social Services Contribution is levied. All companies are liable for primary income tax and in addition, private companies are subject to tax on undistributed income.
- 3. Assessable Income,—Income taxes in Australia are levied, primarily, on all income derived from Australian sources by any person, rather than on income derived from all sources by Australian residents. Thus a non-resident is taxed on income derived in Australia, while a resident is, in general, not taxed on income other than dividends derived from overseas, if the income is taxed in the country in which it is derived.

Certain types of Australian income are exempt from tax in Australia, the more important being (i) pensions, child endowment and other payments under the Social Services Act 1947-1957 and the Tuberculosis Act 1948, (ii) income from gold-mining and uranium mining, (iii) twenty per cent. of certain mining profits, (iv) dividends paid out of exempt mining profits, and (v) income received from a scholarship, bursary or other education allowance.

No amount is included in assessable income on account of a house occupied by its owner. Profits derived from the sale of property are not assessable income if such property was not purchased with a view to resale at a profit.

The further tax on property income imposed on individuals in cases where the total taxable income exceeded £400 and the amount of property income exceeded £100 was discontinued from the 1953-54 financial year.

Expenses incurred in earning income, certain subscriptions to business associations, and trade union dues, are allowable deductions. Losses incurred in previous years may be carried forward as a deduction.

Because of uncongenial climatic conditions, isolation, and high cost of living, taxpayers living in certain areas are allowed an additional deduction. Two zones,have been prescribed, and the allowances are Zone A, £180 and Zone B, £30. A deduction of £180 is also allowed to members of the defence forces serving for more than one half of the year of income at declared localities outside Australia.

Income Tax and Social Services Contribution is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in paragraph 4 following.

4. Concessional Deductions.—Concessional allowances for dependants, medical expenses, life assurance and superannuation contributions, etc., are made by way of a deduction from income. The maximum deduction allowed for each dependant, for a parent or parent-in-law, or for a housekeeper employed by the taxpayer for the financial year 1957-58 is shown in the following table.

#### CONCESSIONAL DEDUCTIONS FOR DEPENDANTS, ETC.

(£.)

Depend		Maximum Deduction (a)				
Spouse	,		• ••			:143
Daughter-housekeeper (b)						143
Housekeeper (b) having care	of taxpa	yer's ch	ildren un	der 16	years	
of age						143
Parent or Parent-in-law .					** . *	143
One child under 16 years of a	age					91
Offic Citing under 10 years of 4						.65
	s of age					
Other children under 16 year		• •				9.1

<sup>(</sup>a) These deductions are allowed only if the dependant, parent or parent-in-law is a resident of Australia. If the dependant is maintained for part only of the year a partial deduction is allowed.

(b) Of a widower or widow.

(c) Child, step-child, brother or sister over 16 years of age. The amount of the deduction is reduced by any invalid pension received.

(d) The amount of the deduction is reduced by the value of any assistance provided by the Commonwealth or a State.

When the dependant or person maintained derives separate income, the amount of the concessional deduction allowable is reduced as follows:—

In the case of a spouse or daughter-housekeeper, by £2 for every £1 by which the separate net income exceeds £65; for each parent or parent-in-law maintained, by £1 for each £1 of separate income; and for each dependent child or invalid relative, by £2 for every £1 by which the separate net income exceeds £52.

For the 1957-58 financial year, medical expenses paid by a taxpayer who is a resident, in respect of himself or dependants, including children under 21 years of age, up to £150 for each person, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or a hospital, in respect of an illness or operation, payments for dental services not exceeding £30 for any one person, payment for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, and the remuneration of an attendant of a person who is blind or confined to bed or invalid chair.

Other concessional deductions allowed to resident taxpayers include, (i) payments of life, etc., insurance premiums and contributions to superannuation funds and friendly societies, not exceeding an aggregate of £300, (ii) payments to medical or hospital benefits funds, (iii) funeral expenses of a dependant not exceeding £30 and (iv) expenditure incurred for the full-time education of children or dependants who are less than 21 years of age (maximum £100 per child or dependant).

In addition to concessional deductions, all taxpayers (residents and non-residents) are allowed a deduction from income of rates and taxes on land which are annually assessed, gifts to charitable, benevolent or patriotic funds and one-third of amounts paid as calls to certain mining, forestry and oil-prospecting companies.

5. Effective Exemptions from Tax.—For the financial years 1950-51 to 1957-58, resident taxpayers without dependents were exempt from Income Tax and Social Services Contribution if their income did not exceed £104. The effect of the deductions for dependents was to exempt taxpayers up to the incomes shown hereunder.

RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX.

Taxpayer	with—		Income Tax and Social Services Contribution— Financial Years 1950-51 to 1952-53.	Income Tax and Social Services Contribution— Financial Years 1953–54 to 1956–57.	Income Tax and Social Services Contribution— Financial Year 1957–58.

" " two children				338	364	403
", ", three children				390	416	468
" " four children		•		442	468	533

For the 1957-58 financial year, an aged person (i.e., a man who has attained the age of 65 years or a woman who has attained the age of 60 years) is exempt from Income Tax and Social Services Contribution if his net income (i.e., gross income less expenses of earning that income) does not exceed £410. A married couple both of whom qualify by age for the concession, are exempt from tax if their combined net incomes do not exceed £819.

6. Rates of Income Tax and Social Services Contribution on Individuals.—The following table shows the rates of income tax and social services contribution for the financial years 1953-54 to 1957-58.

For primary producers, the rate of Income Tax and Social Services Contribution for the current year is determined by the average of the taxable incomes for the five years up to and including the current year. A taxpayer may elect not to have these averaging provisions applied to his assessment, but the election once made, is irrevocable. The application of the averaging provisions is limited to that part of the taxable income which does not exceed £4,000, and when the taxable income exceeds £4,000, the balance is taxed at ordinary rates. When the taxable income is less than £4,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of £4,000.

Commencing with 1953-54, the taxable income, including any abnormal receipts, of actors, artists, composers and inventors, is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest on Commonwealth Loans issued prior to 1st January, 1940, is subject to the condition that it shall not be taxed at rates higher than those for 1930-31. Interest on Commonwealth Loans issued after 1st January, 1940, and interest on certain State semi-governmental loans issued free of State income tax receive a rebate of 2s. in the £1.

The minimum amount of Income Tax and Social Services Contribution payable is 10s. and the amounts payable and rebates are calculated to the nearest shilling.

7. The Income Tax (International Agreements) Act 1953.—This Act provided for relief from double taxation of incomes flowing between Australia and the United States of America. It also provided similar relief in respect of the United Kingdom, which had been covered by the Income Tax Assessment Act since 1947.

8. Taxes on Specified Incomes.—The following table shows the Income Tax and Social Services Contribution payable by taxpayers, with various incomes and numbers of dependants, on income derived in each year from 1951-52 to 1957-58:—

Pay-as-you-earn.—Individual taxpayers pay tax on a pay-as-you-earn basis. A similar scheme does not operate for companies.

<sup>(</sup>a) Salary and Wage Earners. Salary and wage earners are subject to instalment deductions for payment of tax at current rates out of weekly (or fortnightly) earnings. Employers are required to deduct tax and contribution from each payment of wages and salary to an employee at the appropriate rate in accordance with a prescribed instalment scale. This scale shows the amount to be deducted according to the income and number of dependants of the employee.

Under the group scheme of deduction, which covers most employers of more than ten persons, the amount deducted is remitted to the Taxation Department, and after 30th June each year each employee is given a group certificate by his employer showing the amount of deductions made during the year. This certificate is forwarded to the Taxation Department with the employee's return of income for the year. If the tax assessed on the basis of this return is less than the amount shown on the group certificate a refund is forwarded to the employee with his assessment. If the tax assessed is greater than the amount shown on the group certificate the employee is required to pay the balance.

Under the stamp scheme used by small employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of the deductions made each pay day and sticks one part on each half of the sheet. At the end of the year, the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

(b) Taxpayers with Income other than Salary and Wages. These taxpayers pay provisional tax in respect of income other than salary and wages. Collection of tax and contribution for the current year is made at the same time as collection and assessment for the previous year is adjusted. The notice of assessment shows an amount of provisional tax and contribution for the current year. This provisional amount is an approximation to the tax and contribution which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged) but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax and contribution paid in the previous year as a credit against the tax and contribution assessed on the basis of the return for that year. On receipt of his assessment the taxpayer may elect to substitute his estimate of income for the current year and pay tax on the basis of this estimate. To protect the revenue, a penalty is imposed if the taxpayer elects to pay provisional tax on an estimate of income more than 20 per cent. lower than the income of the previous year and he underestimates his income by more than 20 per cent.

Employees with income of £100 or more from sources other than salaries and wages are required to pay provisional tax in respect of that income.

- 10. Lodgment of Returns and Assessment of Tax.—All persons with assessable income in excess of £104 are required to lodge returns by the 31st July each year (31st August for business incomes). Income Tax and Social Services Contribution payable is assessed, and assessment notices showing the amount payable are issued, during the year following the year of income (in most cases from September to June following the lodgment of the return). The approximate amount payable, however, has already been collected during the income year—from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already collected and any difference either collected or refunded.
- 11. Company Income Taxes.—(i) General. For taxation purposes, companies are divided into two main groups—public and private. A private company is defined as a company in which all the issued shares are held by not more than twenty persons or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested or a subsidiary of a public company. All

other companies are regarded as public companies. Both public and private companies pay primary Income Tax and Social Services Contribution assessed on a taxable income ascertained by the same principles as for individuals.

Dividends received are assessable income, but resident companies receive a rebate at the average rate on the amount of dividends included in the taxable income. This rebate is not allowed to non-resident companies.

(ii) Rates of Tax. The rates of Primary Tax, in the case of public companies, and Primary and Additional Tax for private companies, for the financial years 1953-54 to 1957-58, are shown in the table below.

Super Tax and Undistributed Income Tax ceased to be levied on public companies in the 1951-52 financial year and Additional Income Tax and Social Services Contribution ceased in the 1953-54 financial year. For details see Official Year Book No. 39, p. 846 and No. 40, p. 743.

RATES OF TAX: COMPANIES, 1953-54 TO 1957-58 FINANCIAL YEARS.

<sup>(</sup>a) Incomes not exceeding £104 are exempt from tax. (b) Where the taxable income does not exceed £208 (1953-54 to 1955-56), £228 (1956-57) or £231 (1957-58) the tax may not exceed one half (1953-54 to 1955-56, 1957-58) or eleven-twentieths (1956-57) of the amount by which the taxable income exceeds £104. (c) The rate of 72d. (1953-54 to 1955-56), 84d. (1956-57) or 78d. (1957-58) is levied on the amount by which the £5,000 exceeds the mutual income. (d) For non-resident companies dividends included in this part of the taxable income are taxed at 60d. (1953-54 to 1955-56), 72d. (1956-57) and 66d. per £1 (1957-58). (A resident company is allowed a rebate of tax in respect of dividends received.) (e) If the non-resident is not a company, tax is paid only on income in excess of £104.

A private company incurs liability for additional tax on its undistributed income if it fails to make a sufficient distribution of income within a specified period after the close of the year of income. The tax is levied on the undistributed amount which, for practical purposes, is the taxable income less—

- (a) Primary income tax and social services contribution payable:
- (b) Retention allowance (i.e., the proportion of the reduced distributable income which a company may retain without incurring liability for undistributed income tax); and
- (c) Certain dividends paid by the company.

For the financial years 1953-54 to 1957-58, the retention allowance is the following proportion of the reduced distributable income :-

On the first £1,000 or part, 50 per cent.

On the next £1,000 or part, 40 per cent.

On the next £1,000 or part, 35 per cent. On the next £1,000 or part, 30 per cent.

On the balance, 25 per cent., and

Ten per cent. of distributable income from property, except dividends from other private companies.

For the financial years 1953-54 to 1957-58, the reduced distributable income is calculated by deducting from the taxable income the primary tax payable and the amount of all property income included in taxable income. The additional tax imposed on undistributed income was imposed at a flat rate of 10s. in the £1 on the undistributed amount.

12. Yield of Income Taxes.—(i) Collections from Income Taxes. The following table shows the collections of taxes imposed on income for the years 1938-39 and 1951-52 to 1955-56 :--

#### INCOME TAX COLLECTIONS.

(£'000.)

					Total.					
	Y	ear.			Common- wealth.(a)	State.(b)	Total.			
1938–39		• •	••		11,883	29,796	41,679			
1951-52					551,142	155	551,297			
1952-53					554,737	132	554,869			
1953-54					528,181	92	528,273			
1954-55					532,916	52	532,968			
1955-56					573,988	74	574,062			

<sup>(</sup>a) Includes Social Services Contribution, War Time (Company) Tax, Super Tax, Undistributed Profits Tax and Wool Deduction. (b) Amounts shown for years other than 1938-39 are arrears of State Income Taxes.

(ii) Commonwealth Income Tax Assessed. The amounts of Commonwealth Taxes assessed on the income of recent years are shown in the following table. The amounts are shown under the year in which most of the assessments were made, i.e., the year following the income year. Income taxes assessed on income for past years and for the years shown after the close of the normal assessing period, are not included.

#### CHAPTER XXII.

#### AGRICULTURAL PRODUCTION.

Note.—Values of Australian oversea trade shown throughout this chapter are expressed as £A. f.o.b. Port of Shipment, except where otherwise indicated.

#### § 1. Introductory.

In general, statistics in this chapter relating to agricultural production are derived from "census" returns supplied by approximately 250,000 farmers who utilize one acre or more of land for agricultural or pastoral purposes and the latest figures available are those for the year 1956–57. The returns are collected by the Statisticians of each State and by the Commonwealth Statistician in respect of the Northern Territory and the Australian Capital Territory. The returns are collected on a substantially uniform basis in all States at 31st March, each year, and relate to areas sown and crops produced in the previous twelve months. Where harvests are not completed by March (e.g. potatoes) provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources, these are used in conjuction with the "census" returns. The statistics published in this Chapter are therefore shown in agricultural years. For most purposes there will be little error involved in considering them as applying to years ending on 30th June.

#### § 2. Progress of Agriculture.

1. Early Records.—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797", Governor Hunter gives the acreage of crops as follows:—Wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

The following details of crops were collected in 1808:—Wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (See No. 22, p. 670.)

By the year 1850, the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850, the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres.

2. Progress of Cultivation.—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860-61 and during each of the eleven seasons 1946-47 to 1956-57. On page 863 there is a graph showing the area of crops in Australia from 1900-01 onward.

(a) Not available.

The progress of agriculture was practically uninterrupted from 1860-61 to 1915-16, when, as the result of a special effort to raise wheat during the 1914-18 War, 18.5 million acres were cultivated in Australia. Four years later the area of crops declined to 13.3 million acres owing to the accumulation of wheat stocks because of the difficulty of securing freight space during the war years. After the termination of hostilities, the area again began to expand and rose steadily to the record area of 25.2 million acres in 1930-31. Thereafter, the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935-36.

By 1938-39, the industry had recovered from the depression and the total area under cultivation reached the high level of 23.5 million acres. Thereafter, as a result of war-time man-power shortages and shipping difficulties, the area declined to less than 16 million acres in 1943-44. After 1943-44, production gradually increased again until, in 1947-48, 22.3 million acres were sown to crops. This upward trend was reversed after 1948-49, largely as a result of the transfer of many primary producers from agricultural to pastoral production following on high prices for wool. In recent years, the area sown increased from 19.7 million acres in 1951-52 to 22.5 million acres in 1955-56 but in 1956-57, due largely to the excessively wet conditions in the Eastern States, the area sown dropped to 19.4 million acres. As the area under wheat in Australia constitutes a large proportion of the total area cropped (55 per cent. during the ten years ended 1955-56) fluctuations in the latter follow broadly the same pattern as changes in wheat areas.

- 3. Area under Sown Pastures.—In all the States, there are considerable areas of grasses mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas, which are not included in "area of crops", have expanded from about 5.3 million acres in 1929-30 to about 32.6 million acres in 1956-57.
- 4. Australian Agricultural Council.—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters, held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Ministers for Primary Industry and for Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are:—(i) the promotion of the welfare and development of agricultural industries generally; (ii) exchange of information on agricultural production and marketing; (iii) the improvement

of the quality of agricultural products and the maintenance of high grade standards; (iv) to ensure, as far as possible, balance between production and available markets; and (v) organized marketing, etc.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

#### § 3. Distribution, Production and Value of Crops.

1. Area of Crops in States and Territories.—The following table shows the areas in the several States, the Northern Territory and the Australian Capital Territory of each of the crops for the season 1956-57.

<sup>(</sup>a) Excludes pasture land sown to lucerne and oats for grazing.
(b) Excludes pasture land sown to lucerne for grazing.
(c) Not available. Included in "All other Crops".
(d) Not available for publication. Included in "All other Crops".

2. Relative Areas of Crops in States and Territories.—The proportion of each of the major crops cultivated in the various States and Territories to the total area of crops for the season 1956-57 is shown in the next table. In four of the States, namely, New South Wales, Victoria, South Australia and Western Australia, wheat-growing for grain is by far the most extensive crop. In Queensland, the most extensive crops are green fodder, wheat, and sugar-cane, and in Tasmania, hay and green fodder.

As pointed out previously, wheat is the main crop in Australia, the area thereof, for

grain only, representing 41 per cent. of the total area of crops in 1956-57.

RELATIVE AREAS OF CROPS, 1956-57.

<sup>3.</sup> Area of Principal Crops in Australia.—The area of the principal crops during each of the five seasons ended 1956-57, compared with the average for the ten years ended 1938-39, is shown hereunder:—

- 4. Size Classification of Principal Crops.—A special series of tabulations relating to rural holdings in Australia was compiled for 1955-56 and published in full detail in a series of mimeographed bulletins, Size Classification of Rural Holdings, 1955-56. Condensed tables also appear in the bulletin Primary Industries—Part I.—Rural Industries No. 51. The tables show a classification by size (area) of crop and size (area) of holding for wheat, oats, barley, sugar-cane, tobacco, potatoes, other vegetables for human consumption, vineyards, and orchard and non-orchard fruit.
- 5. Weights and Measures.—Details of the weights and measures used in recording production of agricultural commodities appear in the introduction to the bulletin *Primary Industries—Part I.—Rural Industries*.
- 6. Production of Crops in States and Territories.—The following table shows production of crops in the various States and Territories for the season 1956-57.

10. Value of Production and Indexes of Price and Quantum of Production:—(i) Gross and Net Values, 1955-56. Values of agricultural production for each State are shown for 1955-56 in the following table. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXX.—Miscellaneous.

In computing the net value of production, no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant; consequently, the figures stated are inflated to that extent.

GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1955-56.

<sup>(</sup>a) No deduction has been made for depreciation and maintenance.

(iii) Indexes of Quantum and Price of Agricultural Production. Indexes of quantum and price of agricultural production are shown in the following table. The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average "prices" of farm products realized at the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. Further details on weights used, &c., are to be found in Chapter XXX.—Miscellaneous.

#### § 4. Wheat.

1. Royal Commission on the Wheat Industry.—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

<sup>(</sup>b) Not available.

WHEAT. 861

- 2. Wheat Costs of Production Committee.—A Wheat Costs of Production Committee was appointed by the Commonwealth Government in February, 1947, to inquire into and report upon:—(i) the reasonable costs of production of wheat per bushel in Australia's main wheat-growing districts, and (ii) whether basic items of costs could be established as an index to periodical variations in costs of the production of wheat. The Committee in its report to the Commonwealth Government in March, 1948, found that the cost of growing wheat in the Commonwealth at that time was 6s. a bushel at sidings and advised that basic items of cost could be established as an index to periodical variations in wheat production costs.
- 3. Licensing of Areas Sown to Wheat, and Acreages Sown.—Details of the operations of the Wheat Stabilization Board in licensing wheat growing during the seasons 1941-42 to 1948-49 will be found in Official Year Book No. 38, pp. 940, 941. The Board ceased to function on 31st December, 1948.
- 4. Legislation relating to Wheat Industry.—(i) Stabilized Marketing. A detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914–18 and 1939–45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, was given in the Appendix to Official Year Book No. 37 (pp. 1295–99).
- (ii) The Australian Wheat Board. The Australian Wheat Board was constituted in September, 1939, under National Security (Wheat Acquisition) Regulations to purchase, sell, or dispose of, wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations.

The Board was reconstituted, with similar powers, under the Commonwealth Wheat Stabilization Act 1948, to administer the stabilization plan. The new Board commenced to function on 18th December, 1948.

- (iii) Wheat Stabilization Plan. (a) 1947-48 to 1952-53. Details of the Wheat Stabilization Plan which operated during the seasons 1947-48 to 1952-53 inclusive were published in Official Year Book No. 40, pp. 841 and 842, and previous issues. All contributions paid into the Fund established as a part of the plan have now been refunded.
- (b) 1953-54 to 1957-58. Agreement was reached in July, 1954, at a conference of Premiers and Ministers for Agriculture on the terms of a new wheat industry stabilization plan. The plan was submitted to polls of wheat growers in the mainland producing States, 94 per cent, of growers voting in favour of the plan.

The necessary legislation was subsequently passed by Commonwealth and State Governments and the plan operated from the 1953-54 season.

The principal features of the plan are as follows:—

- The period of the Wheat Stabilization Plan to be five years, 1953-54 to 1957-58 inclusive.
- (ii) The Australian Wheat Board will be the sole authority for marketing wheat within Australia and wheat and flour for export from Australia.
- (iii) The Commonwealth Government will guarantee a return to growers of the ascertained cost of production in respect of up to 100 million bushels of wheat exported from Australia from each of the crops covered by the plan.
- (iv) The home consumption price will not be less than the guaranteed price. Subject to this understanding, the home consumption price will be fixed at 14s. a bushel, bulk f.o.r. ports, but will vary downwards to conform with the International Wheat Agreement price current at the commencement of each season. If no international agreement is operating, the home consumption price will vary downwards with the current export price fixed by the Wheat Board.
- (v) A premium of 3d. a bushel on wheat grown in Western Australia and available for export from that State to places outside Australia will be paid in recognition of the natural freight advantage applying to that State.
- (vi) The home consumption price will be loaded by an amount necessary to cover the cost of freight on wheat to Tasmania.
- (vii) A Stabilization Fund will be established by means of an export tax of 1s. 6d. a bushel when wheat export prices exceed the costs of production by this amount or more, and by that portion of 1s. 6d. by which the export prices exceed the costs of production when the excess is less than 1s. 6d. a bushel.
- (viii) The maximum amount of the Stabilization Fund will be £20 million. As the Fund accumulates beyond this figure, repayments will be made to the oldest contributing pool.
- (ix) When average export realizations fall below costs of production, export returns will be raised, in respect of up to 100 million bushels, first by drawing upon the Stabilization Fund and when that Fund is exhausted the Commonwealth Government will make the necessary payments.

(iv) Wheat Industry Research. In 1957, the Commonwealth Parliament passed legislation providing for a levy of a farthing a bushel on wheat handled by the Australian Wheat Board. This money, contributed by the growers, is to be spent by the Wheat Research Committees recently set up in the wheat growing States.

The Commonwealth Government has undertaken to supply additional funds for research (with a maximum of £1 for £1 against the growers' contribution) and has set up the Wheat Industry Research Council to make recommendations on the appropriate expenditure of the Commonwealth contribution.

The Council had its inaugural meeting in February, 1958, and it was considered that possible avenues of research would include the breeding of better varieties, cereal chemistry, soil fertility, mechanization, the industry's cost structure and marketing problems.

5. Marketing of Wheat.—(i) Wheat Acquired and Disposed of. (a) Wheat Acquired. Particulars of wheat acquired by the Australian Wheat Board from the 1951-52 to 1956-57 harvests are shown in the following table:—

AUSTRALIAN WHEAT BOARD: WHEAT ACQUIRED, 1951-52 TO 1956-57. ('000 Bushels.)

WHEAT. 867

(iii) Advances to Growers. Details of advances made to wheat growers in respect of the various pools are published in Statistical Bulletin: The Wheat Industry, Australia, last issued in April, 1958.

6. International Wheat Agreements.—Details of the first and second International Wheat Agreements operative from 1st August, 1949, to 31st July, 1953, and from 1st August, 1953, to 31st July, 1956, respectively, were published in Official Year Book No. 42 (see pp. 840-1) and previous issues.

A new International Wheat Agreement covering a period of three years from 1st August, 1956, to 31st July, 1959, came into force on 1st August, 1956. The 1956 Agreement is identical in form with the 1949 and 1953 Agreements, although amendments have been made to many of the more important provisions.

The annual quota of 395 million bushels determined by the 1953 International Wheat Agreement was reduced in the new Agreement by almost a quarter to 303 million bushels.

As previously, 44 importing countries submitted figures for inclusion but many quotas were substantially less than those in the previous Agreement. The number of exporting countries was increased to six. Argentina and Sweden were the two additional exporting countries included and France was given a substantial quota instead of the nominal one it had in the 1953 Agreement.

As a result of the reduction in quantities submitted by importing countries and the participation of France, Argentina and Sweden, there has been a substantial reduction in the export quotas available for Australia, Canada and the United States. Australia's original quota was reduced from 45 million bushels under the 1953 Agreement to 30 million bushels.

The new Agreement was to be ratified by both exporting and importing countries on 1st December, 1956. On that date, 37 importing countries had ratified and Iceland had joined the Agreement as an importer although not included in the original list. Of the remaining seven countries which submitted import quotas, three countries (Lebanon, the Netherlands and Panama) had ratified the Agreement by 31st March, 1957, bringing the total to 41, while Brazil was given a further extension of time by the Executive Council administering the Agreement and finally ratified on 31st December, 1957. Three countries (Ceylon, Colombia and Jordan) will not ratify the Agreement. All six exporting countries have acceded.

In accordance with the terms of the Agreement, the original quotas allotted to exporting countries were reduced in conformity with the reduction in importers' quotas. The adjustment was made on the basis of ratifications as at 1st December, 1956. This pro rata adjustment gave Australia an export quota of 25.6 million bushels but this was increased to 29.3 million bushels when countries which had indicated their intention of doing so formally ratified the Agreement. The quota for 1957-58 and 1958-59 was set at 29.4 million bushels.

Particulars of guaranteed sales and purchases and transactions actually recorded during 1956-57 are shown in the following table.

(ii) Size Classifications of Wheat Holdings.—A special series of tabulations relating to rural holdings in Australia was compiled for 1955-56 and published in full detail in a series of mimeographed bulletins, Size Classification of Rural Holdings, 1955-56. Condensed tables also appear in Primary Industries, Part I.—Rural Industries, Bulletin No. 51. The tables relating to wheat holdings show area under wheat for grain (classified by size), and the number of such holdings also under oats and barley and the number with sheep, beef cattle and pigs.

8. Area, Production and Yield per Acre.—(i) Area. Wheat is the principal crop grown in Australia, and its progress since 1860-61 has been almost continuous. Prominent features in its early development were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

The area, production and yield per acre of wheat for grain in each State are shown below for the years 1952-53 to 1956-57 in comparison with the averages for the ten-year periods ended 1938-39 and 1955-56:—

(a) 60 lb. per bushel.

A graph showing the expansion of the area sown to wheat for grain in Australia since 1900-01 appears on p. 864 while a map showing the distribution of areas growing wheat for grain throughout Australia in 1954-55 appeared on p. 833 of Official Year Book No. 43. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39 and 1947-48 appeared respectively in Official Year Books No. 22, p. 695, No. 34, p. 451 and No. 39, pp. 977-8.

(ii) Production. Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season and inconsistencies in this respect are reflected in the yearly production.

The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports wheat from the mainland to satisfy its needs, though it ships flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and from half to two-thirds of the crop is exported.

Australia's wheat production in 1956-57 was 134.5 million bushels, representing an average yield of 17.1 bushels per acre. This was 50.3 million bushels less than the average for the ten years ended 1955-56 and 34.9 million bushels less than the average for the ten years ended 1938-39.

(iii) Yield per Acre. Short-term variations in yield per acre are due chiefly to the vagaries of the seasons. The best yields per acre for single seasons since 1901 were obtained in 1920-21, 16.1 bushels; in 1942-43, 16.8 bushels; in 1949-50, 17.8 bushels; in 1952-53, 19.1 bushels; in 1953-54, 18.4 bushels and in 1955-56, 19.2 bushels (the record).

(iv) Decennial Averages, 1861-70 to 1948-57. The following table shows the average area, production and yield per acre for decennial periods since 1861.

WHEAT FOR GRAIN: AVERAGE AREA AND PRODUCTION, AUSTRALIA.

	Period.		Агеа.	Production.	Yield per Acre	
				'000 Acres.	'000 Bushels.	Bushels.
1861-70				831	10,622	12.8
1871-80				1.646	17,711	10.8
1881-90				3,258	26,992	8.3
891-1900				4,087	29,934	7.3
901-10			1	5,711	56,058	9.8
911-20			[	8,928	95,480	10.7
921-30				11,291	135,400	12.0
931-40				14,176	177,758	12.5
941-50			/	11,358	145,599	12.8
948-57				11,042	186,469	16 9

It should be noted that with improved farming methods, including the proper tillage of the soil, rotation of crops, the growing of suitable varieties and the application of fertilizers, average yields per acre in the five decades since 1901 have shown a continued improvement.

9. Varieties of Wheat Sown.—(i) General. The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845–1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have since followed him have proved of immense benefit to the wheat industry of Australia. Their efforts have resulted in better average yields, a greater uniformity of sample with which have accrued certain marketing advantages, as well as an improvement

in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown during each season is restricted to about 45.

- (ii) States, 1956. The principal varieties of wheat sown and the percentage of each to the total area sown in the five main producing States during 1956 were as follows:—New South Wales, Gabo (24.4), Bencubbin (22.1), Glenwarie (11.1); Victoria, Insignia (54.1), Pinnacle (19.5), Quadrat (11.5); Queensland, Festival (24.7), Charter (15.3), Gabo (12.0); South Australia, Gabo (25.5), Insignia (18.4); Western Australia, Gabo (23.4), Bungulla (20.1), Bencubbin (15.1). A detailed table of wheat varieties sown in these five States appears in the annual bulletin Primary Industries—Part I.—Rural Industries.
- 10. F.A.Q. Standard of Wheat.—Up until the 1957-58 season, the Chambers of Commerce in each of the four main wheat-producing States have determined the "f.a.q." (fair average quality) standard for each season's crop. This standard is used as a basis for sales of each crop and it varies from year to year and from State to State.

Samples of wheat have been obtained each year by the Chambers of Commerce from the different wheat districts and mixed to give a representative sample of the whole crop. From this representative sample the f.a.q. weight is determined by the use of the Schopper I-litre scale chondrometer. It is proposed that, commencing with the 1958-59 season, the f.a.q. standard should be determined by State committees comprising representatives of the Australian Wheat Board, the silo authorities, the growers and State Departments of Agriculture. "F.a.q." is an Australian term, and the method differs from that of other countries which sell according to sample, or (as in Canada) according to grades which are fixed and do not vary from year to year.

The f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States for the 1957-58 season's crop was as follows—New South Wales, 64\frac{1}{4} lb.; Victoria, 65\frac{1}{2} lb.; South Australia, semi-hard, 66 lb., soft, 65\frac{1}{2} lb.; and Western Australia, 64\frac{1}{4} lb.

- 11. Price of Wheat.—(i) Home Consumption. The price charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed was as follows:—Year ended 30th November, 1954, 14s. 1½d.; 1955, 14s. 1½d.; 1956, 13s. 5½d.; 1957, 13s. 9½d.; 1958, 14s. 4d. These prices include an amount used to meet freight charges incurred on wheat shipped to Tasmania (1½d. from 1954 to 1957; 2d. in 1958). The figure quoted for 1958 does not apply to New South Wales and Queensland where, because of the necessity of meeting the extra cost of importing wheat from Canada and Western Australia, the prices were 18s. 4½d. and 16s. 9½d. respectively.
- (ii) Export Wheat Prices—Australian Wheat Board's Basic Selling Price.—The monthly average of the Wheat Board's basic export selling prices for f.a.q. bulk wheat f.o.b. basis was 13s. 5\frac{1}{4}d. for the season ended 31st July, 1957, both for wheat sold under the International Wheat Agreement and for "free" wheat sold on the open market. Actual selling prices have been lower than the basic prices in some cases, particularly where other exporting countries enjoy a geographical freight advantage.

The maximum and minimum prices fixed under the 1956-59 International Wheat Agreement are expressed in terms of "Canadian currency per bushel, at the parity of the Canadian dollar determined for the purposes of the International Monetary Fund for No. 1 Manitoba Northern wheat in bulk in store Fort William—Port Arthur." Expressed in terms of Australian currency the maximum price for f.a.q. Australian wheat sold under the Agreement is approximately 18s. per bushel. The direct currency conversion of the minimum price is 12s. but this price will vary according to movements in transportation costs.

Details of export wheat prices in previous years, including those received for wheat sold under the terms of the 1949-1953 International Wheat Agreement, are given in Official Year Book No. 40, pp. 849-50, and Statistical Bulletin: *The Wheat Industry, Australia*, No. 93, of April, 1958, and in previous issues of these publications.

12. Value of the Wheat Crop.—The estimated gross value of the wheat crop in each State and in Australia during the season 1955-56 and the value per acre are shown below.

WHEAT FOR GRAIN:	VALUE OF	CROP(a),	1955-56.

WHEAT. 871

13. Production and Disposal of Wheat in Australia.—In the following table, details are given of the production of wheat and its disposal during each of the years ended 30th November, 1953 to 1957 in comparison with the average for the three years ended November, 1937 to 1939. The particulars respecting local consumption refer to sales actually executed by the Australian Wheat Board, whilst those respecting exports represent actual shipments. (For particulars of production and yield from 1900-01 see graph, p. 864.)

<sup>(</sup>a) Includes wheatmeal from 1953, and sharps from July, 1954. (b) In terms of wheat. (c) Included with flour (local consumption). (d) Included with stock feed. (e) Includes allowance for unrecorded movements in stocks, gain or loss in out-turn, etc.

<sup>14.</sup> Exports of Wheat and Flour.—(Note: Statistics in this paragraph relate to years ended 30th June). (i) Quantities. The following table shows particulars of the exports of wheat and flour and total of both in terms of wheat for each of the years 1952-53 to 1956-57 compared with the average for the five years ended 1938-39. For the sake of convenience, flour has been expressed at its equivalent in wheat, 1 ton of flour being taken as equal to 46.3 bushels of grain. Wheat and flour have been imported in substantial quantities on only two occasions since 1900; in 1902-3 the wheat harvest was as low as 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, whilst an equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. During the five years ended 1956-57, exports in terms of wheat averaged 99,285,000 bushels, compared with the average of 106,432,000 bushels for the five years ended 1938-39.

(a) One ton of flour is treated as equivalent to 46.3 bushels of wheat.

16. Bulk Handling and Storage of Wheat in Australia.—(i) Description and Development of the Bulk Handling System. A detailed description of the bulk handling system including its advantages and disadvantages compared with other methods of handling appeared on pp. 954–8 of Official Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, but until recently no efforts were made to introduce such a system in the other States.

Late in 1953, it became clear that Australia could not clear its stocks of wheat as quickly as in past years and in April, 1954, the Commonwealth Government arranged to finance the construction of additional storage space in New South Wales, Victoria and South Australia (Western Australia and Queensland were later included in the scheme). The Australian Wheat Board was authorized to control the expenditure of the money provided, amounting to  $\mathfrak{L}3\frac{1}{2}$  million.

- (ii) Bulk Handling and Storage in the States. Particulars of the operation of the bulk handling and storage system and projected extensions in the States concerned are set out below:—
- (a) New South Wales. Bulk handling facilities are operated by the Grain Elevators Board of New South Wales. The capacity of storages in the country for the 1957-58 season totalled 57,558,000 bushels and comprised 180 elevators (25,228,000 bushels), 4 subterminals (16,500,000 bushels), 71 bulkheads (7,130,000 bushels) and 12 bulk depots (8,700,000 bushels). In addition, port terminal facilities provided storage for 4,200,000 bushels at Newcastle and 7,500,000 bushels at Sydney, making a total capacity of 69,258,000 bushels for the State.

The Grain Elevators Board has advanced its plans for major works, i.e., for supplementary bins to the existing small capacity silos, as well as for new installations to replace temporary bulkheads in certain areas.

(b) Victoria. The Victorian Grain Elevators Board operates 186 elevators with a storage capacity of 25,874,000 bushels and a terminal elevator at Geelong with a capacity of 4,100,000 bushels. Storages for 18,000,000 bushels, adjacent to the permanent terminal, have been constructed at Geelong.

Temporary measures for extending bulk handling facilities have been adopted and subterminals constructed or acquired at Dunolly, Murtoa and Warracknabeal with a capacity of 22,000,000 bushels. Temporary bulkheads have also been used and in the 1957-58 season there were 23 in use with a total storage for 2,684,000 bushels.

In 1957-58, 98.5 per cent. of the total crop was received in elevators, compared with 98.6 per cent. in 1956-57 and 28.1 per cent. in 1939-40.

(c) Queensland.—Bulk storages in this State are controlled and operated by the State Wheat Board. The capacity in the country for the 1957-58 season totalled about 2,500,000 bushels.

Expansion of bulk facilities is proceeding. Several bagged wheat sheds are being converted into bulkhead type storages and a further 1,000,000 bushels capacity will be available in temporary steel mesh bins being erected.

A new bulk terminal storage is being erected at Pinkenba with a capacity of 1,300,000 bushels and is expected to be completed towards the end of 1958.

(d) South Australia. Since the formation of the South Australian Co-operative Bulk Handling Ltd. in 1955, steady progress has been maintained in the expansion of the system.

The present capacity of bulk storages is 1,000,000 bushels at Ardrossan; 1,500,000 at Wallaroo and 5,660,000 in the country; a combined total of 8,160,000 bushels.

For the 1957-58 season, wheat was received in bulk at 13 installations in the country in addition to the terminals at Ardrossan and Wallaroo. To date, the only bulk shipping facility to operate is that at Ardrossan, but it is expected that the Wallaroo shipping facility will be completed in July 1958.

At Port Lincoln, a terminal storage of 1,250,000 bushels and a shipping facility are under construction, and two country storages are also being erected on Eyre Peninsula, each with a capacity of 400,000 bushels in readiness for the 1958–59 season. For the 1958–59 season, the South Australian Co-operative Bulk Handling Ltd. will have an initial capacity to handle 10,210,000 bushels of wheat in bulk.

(e) Western Australia. The bulk handling system is operated by Co-operative Bulk Handling Ltd., which is a company controlled by growers. In 1957-58, there were 280 sidings equipped with bulk handling facilities and 29,280,000 bushels, which comprised the whole of the marketable harvest, were received.

The system of storage at country stations in Western Australia comprises fixed installations of galvanized iron bins, and iron and timber horizontal bulkheads. In addition, a type of temporary roofed bulkhead, consisting of timber and iron is used. This latter type of storage can be transferred to suit operational requirements, and therefore lends flexibility to the system. Terminal installations comprise concrete silos, and timber and iron horizontal bulkheads, with the exception that one port is equipped with iron silos instead of concrete. Plans are in hand to increase the number of vertical concrete cell type storages at the main ports.

- (f) Tasmania. In order to meet the change to bulk handling of wheat in the mainland exporting States, the Tasmanian Government is constructing three import grain elevators, one each at Hobart, Launceston and Devonport. Each elevator will have a capacity of 300,000 bushels.
- 17. World Area and Production of Wheat.—The details in the following table of the world area and production of wheat by principal countries and by continents have been compiled from official sources so far as they are available, but more particularly from the records published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Service. The harvests shown for countries in the Northern Hemisphere are those reaped during the period March to October whilst those for the Southern Hemisphere cover the period November to February following.

(f) Average of less than five years.

18. Exports—Principal Countries.—The following table shows the quantities of wheat exported from the chief exporting countries for the period 1934-38 and the years 1955 and 1956 according to statistics recently published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Service.

While Australia's production of wheat averages about 3 per cent. of the world's total, its exports account for a much higher proportion of the total quantities shipped. During the five years 1934-38, Australia's share of world wheat exports was 16 per cent., but in 1955 and 1956, the proportion had fallen to a little more than 10 per cent.

OATS.

# § 5. Oats.

1. Area, Production and Yield per Acre.—Oats are usually next in importance to wheat amongst the grain crops cultivated in Australia, but while wheat grown for grain in 1956-57 accounted for 40.6 per cent., oats grown for grain represented only 13.2 per cent. of the area of all crops. The area, production and yield per acre of oats for the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table:—

(a) 40 lb. per bushel.

A graph showing the production of oats appears on p. 865.

Due to the extremely wet conditions early in the season, which affected most crops in the Eastern States during 1956-57, the area and production of oats were markedly smaller than in 1955-56, particularly in New South Wales.

The production of oats for grain in Australia during 1955-56 was a record (56,487,000 bushels). Pre-war the average was approximately 16,000,000 bushels whilst the crop in 1956-57 was 35,396,000 bushels.

During the five seasons ending 1955-56, an average of 8.4 million bushels were exported; 1.9 million bushels were used in factories for oatmeal; and 7.5 million bushels were used for seed purposes; leaving a balance of 22.3 million bushels for stock feed (principally-unprocessed) and carry-over.

The largest yield per acre recorded for Australia in the ten years ended 1956-57 was that of the season 1947-48, amounting to 19.3 bushels per acre, this being the highest yield since 1920-21. The yield per acre recorded in the abnormally dry season 1944-45, namely 4.4 bushels, is the lowest ever recorded for Australia.

2. Price of Oats.—The average wholesale price in the Melbourne market for oats of good milling quality in 1956-57 was 7s. 4d. per bushel. This represents an increase of 8.0 per cent. on the price in 1955-56 (6s.  $9\frac{1}{2}$ d.) and an increase of 112.5 per cent. on the price in 1938-39 (3s.  $5\frac{1}{2}$ d.).

3. Value of Oat Crop.—The estimated gross value of the oat crop in each State for the 1955-56 season and the value per acre were as follows:—

OATS:	VALUE	OF	CROP.	1955-56.
-------	-------	----	-------	----------

Particulars.	N.S.W. Vic.	Q'land.	S. Aust.	W. Aust. Tas.	A.C.T.	Aust.
Aggregate value £'000	6,615	427	2,061	5,350 247	3 £6 7 9	19,373
Value per acre	£7 6 8 £5 7 3	£11 17 3	£4 17 0	£4 18 1 £8 12		£5 15 6

4. Exports.—The production of oats in Australia is sufficient to admit of a regular export trade. The quantities and values of oats exported from Australia during the years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 are shown hereunder:—

OATS: EXPORTS, AUSTRALIA.

Par	Particulars.   Average, 1934-35 to 1938-39.			1953–54.	1954–55.	1955–56.	1956–57.
Quantity	'000 bus.	286	11,846	3,275	2,872	9,608	8,165
Value	£'000	36	4,851	1,219	1,376	3,578	2,972

In 1956-57, the principal countries of destination of the exports were the Federal Republic of Germany, the Netherlands, the United Kingdom and New Zealand. Imports of oats are not recorded separately.

- 5. Oatmeal, etc.—The production of oatmeal amounted in 1956-57 to 15,430 tons equivalent to about 1,728,000 bushels of oats, or about 4.9 per cent. of the total production.
- 6. World Production.—The world's production of oats for the year 1957, according to preliminary details released by the United States Department of Agriculture, amounted to 4,050 million bushels, harvested from 121.4 million acres, representing an average yield of 33.4 bushels per acre. This compared with the estimated production in the previous year of 4,275 million bushels from an area of 122.6 million acres giving an average yield of 32.3 bushels per acre. The world's average production, for the years 1934 to 1938 amounted to 3,588 million bushels from 143 million acres giving an average yield of 25.09 bushels per acre.

# § 6. Maize.

- 1. States Growing Maize.—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1956-57 season being 178,831 acres, or 98 per cent. of the total for Australia. In all States except South Australia, the crop is grown to some extent for green fodder, particularly in connexion with the dairying industry.
- 2. Area, Production and Yield per Acre.—Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only 188,710 acres during the ten years ended 1955-56. Compared with the previous year, the area in 1956-57 increased by 14,135 acres but it was still considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910-11 and 1927-28 respectively.

There has been a considerable increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize necessitates a parallel development in the specialized industry of growing hybrid strains for seed.

The area, production and yield per acre of maize for grain in each State for the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are given in the following table. Separate details for hybrid and other varieties are shown for New South Wales, Victoria and Queensland for 1956-57.

(a) Includes 3 acres in the Northern Territory.

(h) 56 lb. per bushel.

The average yield for Australia for the ten-year period ended 1955-56 was 27.4 bushels per acre. Among principal producing countries during 1956, the United States of America averaged 45.4 bushels per acre and Italy 40.1 bushels.

3. Price of Maize.—The average wholesale price of maize in the Melbourne market in 1956-57 was 17s. 0\frac{1}{2}d. per bushel compared with 16s. 5d. in 1955-56. In 1938-39, the comparable price for maize of similar quality was 5s. 2\frac{1}{2}d.

4. Value of Crop.—The estimated gross value of the crop in each State for the 1955-56 season and the value per acre were as follows:—

MAIZE FOR GRAIN: VALUE OF CROP. 1955-56.

MAILE FOR GRAINT. TIESE OF CROT, 1965 St.										
Particulars.		N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

Value		. £'000	9	703	353	301	119	26

Imports of Maize are not recorded separately.

Exports of cornflour, which prior to the 1939-45 War were very small, increased considerably during the war years, the principal country of destination being New Zealand. In 1956-57, 1,585,000 lb., valued at £50,102, were exported, compared with an annual average of only 37,000 lb. during the five years ended 1938-39. It should be noted that these figures include some quantities of "cornflour" made from wheat. Imports of cornflour into Australia are not recorded separately.

6. World Production.—According to preliminary details released by the Food and Agriculture Organization of the United Nations, world production of maize in the year 1956, excluding that of the U.S.S.R., amounted to 6,397 million bushels, harvested from 232 million acres, giving an average yield per acre of 27.6 bushels. This compared with production in the previous year of 6,248 million bushels from 236 million acres, yielding an average per acre of 26.5 bushels. Production (including that of the U.S.S.R.) over the years 1934 to 1938 averaged 4,525 million bushels from 218 million acres, giving an average yield per acre of 21.0 bushels.

The United States of America is the most important maize-producing country in the world and during the three years ended 1956 the area sown to maize in that country averaged 79 million acres or 34 per cent. of the world total. During the same period, production averaged 3,246 million bushels or about 53 per cent. of the world total. These figures are not strictly comparable with those for other countries included in the abovementioned world totals as the area, and an estimate of grain equivalent, of maize used as green fodder are included. In recent years, maize grain actually harvested in the United States has amounted to about 90 per cent. of the total crop.

A graph showing the production of maize in Australia appears on p. 865.

# § 7. Barley.

1. Area, Production and Yield per Acre.—The area sown to barley for grain expanded considerably during the ten years preceding the 1939-45 War—from 383,000 acres in 1930-31 to 836,000 acres in 1939-40. This increase was followed by a decline to 443,000 acres in 1943-44, but the area sown has increased in succeeding years, and in 1956-57 reached the record level of 2,093,000 acres. Victoria was originally the principal barley-growing State, but since 1913-14 its place has been taken by South Australia which accounted for 58 per cent. of the Australian acreage in 1956-57. There has been a substantial increase in the acreage sown in most States in recent years particularly in Western Australia and Queensland. Small areas of barley are sown for hay, and larger quantities are sown for green forage but these are not included in this section. The production of barley for grain in Australia in 1956-57, at 49,278,000 bushels was the highest ever recorded. The area, production and yield per acre of barley for grain in the several States for the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table:—

<sup>(</sup>a) 50 lb. per bushel.

For Australia as a whole, 81 per cent. of the area of barley for grain in 1956-57 was sown with malting or 2-row barley while the remainder consisted of 6-row, or feed, varieties. The proportion, however, varied considerably in the several States. The consumption of barley during the season 1955-56 was as follows:—malt works, 7,829,000 bushels; flour and other grain mills, 592,000 bushels; distilleries, 42,000 bushels; exports, 28,246,000 bushels; leaving a balance of 4,946,000 bushels for feed, seed and other purposes.

The following table sets out the acreage and production of malting and other barley in Australia during the seasons 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56.

BARLEY, MALTING AND OTHER: AREA AND PRODUCTION, AUSTRALIA.

Season.	Area.			Production.			Yield per Acre.		
	('000 Acres.)			('000 Bushels.)			(Bushels.)

Average, 1929-30 to 1938-39 1952-53 1953-54 1954-55 1955-56 Average 1946-47	428 1,123 1,482 1,391 1,510	67 254 321 300 384	495 1,377 1,803 1,691 1,894	7,480 29,633 35,923 25,622 35,470	1,073 5,412 5,349 3,778 6,185	8,553 35,045 41,272 29,400 41,655	17.5 26.4 24.2 18.4 23.5	16.0 21.3 16.7 12.6 16.1	17.3 25.5 22.9 17.4 22.0
to 1955–56	1,067	193	1,260	22,993	3,200	26,193	21.6	16.6	20.8
1956–57	1,705	388	2,093	43,870	5,408	49,278	25.7	13.9	23.5

A graph showing the production of barley appears on p. 865.

During the last ten-year period shown, the average area of barley of the malting, or 2-row, class was nearly six times the corresponding figure for barley of the 6-row, or feed, class. The yield per acre for malting barley was 30 per cent. higher than that for 6-row barley.

2. Australian Barley Board.—Following the outbreak of war in 1939, the Australian Barley Board, representative of the whole industry, was formed, and the Commonwealth

Government acceded to its request to acquire the entire 1939-40 barley crop, which was placed under the control of the Board. A pool was established from which proceeds were distributed with appropriate margins for different grades of barley.

The Board was responsible for the marketing and storage of barley, and, like the Australian Wheat Board, appointed licensed receivers to receive grain on its behalf and to act as agents for all local and oversea sales.

Following the decision of the Commonwealth Government not to acquire barley in the smaller producing States after 1941-42, the Governments of Western Australia and Oueensland established State Barley Boards to control marketing in these States.

The Commonwealth Government did not acquire barley after the 1947-48 crop, and the Victorian and South Australian Governments formed a joint board under the same name as the former Commonwealth board to market the 1948-49 and subsequent crops of the two States. Details of the seasons from 1951-52 to 1956-57 are shown in the table below.

# AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC.

Pool.		Quantity Received.	Quantity. Sold.(a)	Total Advances made per Bushel on 2-row No. 1 Grade less freight.	Total Net Payments to Growers.
		'000	'000		
		bushels.	bushels.	s. d.	£
No. 13 (1951-52 Crop)		19,340	19,488	15 8.28	14,563,936

10 (1056 57 )		39,029	38,974	(b) 9 3	15,088,785

<sup>(</sup>a) Includes surplus in out-turn. (b) As at 31st December, 1957. At that date it was estimated that the amount still to be paid to growers was 10.518d. per bushel.

- 3. Prices.—The average wholesale price for 2-row English malting barley in the Melbourne market during 1956-57 was 14s. 1d. compared with 14s. 7½d. in 1955-56 and 3s. 5¾d. in 1938-39.
- 4. Value of Barley Crop.—The estimated gross value of the barley crop in each State for the 1955-56 season and the value per acre are shown in the following table:—

# BARLEY FOR GRAIN: VALUE OF CROP, 1955-56.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Aggregate value £'000 Value per acre	£13 7 0		1,913 £13 3 0	12,613 £12 2 0	£6 7 0	151 £23 18 0	20,994 £11 2 0

5. Exports.—Exports of barley during the five years ended 1956-57 averaged 23,124,000 bushels, South Australia being the principal exporting State and Japan, the United Kingdom and the Federal Republic of Germany the principal countries to which barley was shipped. Particulars of Australian exports for the years 1952-53 to 1956-57 together with the average for the five years ended 1938-39 are shown in the following table:—

BARLEY: EXPORTS, AUSTRALIA.

Particulars.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954-55.	1955–56.	1956-57.
Quantity	'000 bus.	3,279	22,239	26,949	18,867	21,065	26,501
Value	£'000	483	19,245	14,870	10,357	10,471	12,745

Imports of barley are not recorded separately.

RICE. 883

In addition to exports of barley grain, there is also an export of Australian pearl and Scotch barley, the total for 1956-57 amounting to 354,724 lb., valued at £12,221, consigned mainly to Malaya.

6. Malt.—(i) Production. Details of the quantity of grain used and the production of barley malt are given in the following table:—

BARLEY	MALT:	GRAIN	USED	AND	MALT	PRODUCED.	AUSTRALIA.
Direction	WILLIAM .	OWNE	COED		1714	TRODUCED	. AUSTRALIA.

Particulars.	1938–39.	1951–52.	1952–53.	1953–54.	1954–55.	1955–56.				
Grain used'000 bus. Malt produced	3,730	6,063	6,505	7,118	7,629	7,803				
'000 bus.(a)	3,621	6,073	6,620	7,078	7,517	7,782				

(a) 40 lb. per bushel.

- (ii) Exports. Since 1952-53, the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports amounting to 451,687 bushels (value £502,046) and 748,598 bushels (value £764,630) were recorded in 1955-56 and 1956-57 respectively.
- 7. World Production.—In comparison with the barley production of other countries, that of Australia is extremely small. The main producers in 1956 were the United States of America, France and Canada. China is also normally a major producer, but details for 1956 are not available. Australian production in that year was only a little more than one per cent. of the world total.

According to preliminary results compiled by the Food and Agriculture Organization of the United Nations, world production of barley in the year 1956, excluding that of the U.S.S.R., amounted to 3,316 million bushels harvested from 138.1 million acres, equivalent to a yield per acre of 24.0 bushels. This compared with the production of 3,051 million bushels in the previous year from 136 million acres, giving a yield per acre of 22.4 bushels. Production, including that of the U.S.S.R., over the years 1934–38 averaged 2,273 million bushels from 114.6 million acres, representing an average yield of 19.8 bushels per acre.

#### § 8. Rice.

The rice-growing areas of the world are confined almost entirely to Asia although rice is grown in limited quantities in other countries. In Australia, rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924–25 when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Area until local requirements were met and a small surplus became available for export. The acreage to be sown in this area is controlled, as the quantity of water available is limited.

The area sown in 1956-57 was a record at 50,477 acres, the previous highest area being 41,182 acres in 1943-44. Production was 4,262,000 bushels in 1956-57 which was 818,000 bushels less than the record production of 5,080,000 bushels in 1954-55.

A graph showing the production of rice appears on p. 865.

The bulk of Australia's exports of rice in 1956-57 was shipped to Papua and New Guinea, the Pacific Islands, the United Kingdom and New Zealand. During the years prior to 1938-39 exports were largely to the United Kingdom.

Details relating to area, production and trade for the years 1952-53 to 1956-57, compared with the averages for the years 1934-35 to 1938-39, are shown in the following table:—

	No. of Hol-		Production (Paddy Rice).		(D-14-, D:)		Average Yield		orts.	Exports.	
Season.	dings Growing Rice. (b)	Area.	Quan- tity.	Gross Value. (c)	(Paddy) per Acre.	Un- cleaned.	Cleaned.	Un- cleaned.	Cleaned.

(d) 99.7 114.8 104.6 131.3 114.7 84.4	Cwt. 1,896 121 (5) (5)	Cwt. 34,171 1,985 (f) (f)	Cwt. 8,354 1,898 16,748 55,867 179,297 177,123	Cwt. 242,724 475,739 692,222 552,065 678,929 408,634		

<sup>(</sup>a) Rice-growing in Australia has been practically confined to New South Wales with very small acreages only being sown in Queensland, Western Australia and the Northern Territory in recent seasons. (b) Twenty acres or more in area. (c) Excludes the value of straw. (d) Forty-two lb. per bushel. (e) 1938-39 figure, previous years not collected. (f) Not available.

In 1956, the Commonwealth Government entered into an agreement for the development of large scale rice-growing in the Northern Territory. The agreement, which was made with a company financed by American and Australian interests, granted a 30 year lease over 750,000 acres of sub-coastal plains east of Darwin and provided for the development of 500,000 acres of land for rice-growing within 15 years.

# § 9. Sorghum for Grain.

The growing of sorghum for grain on an extensive scale is a recent development in Australia. No details of the area and production of this cereal are available prior to 1939-40, but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited for the growing of sorghum and so far, development has been restricted mainly to these areas, and more particularly to Queensland which accounts for the greater portion of the area sown. The grain produced is fed to livestock and has become an important source of supply for supplementing other coarse grains for the feeding of livestock. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). Particulars of the area and production of sorghum grown for grain are given in the following table.

GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, AUSTRALIA.

Season.			Area.		P	roduction.	(a)	Yield per Acre.(a)

# § 10. Potatoes.

1. Area, Production and Yield per Acre.—Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands, and the south-western and Gippsland districts. Tasmania comes next in order of acreage sown, although the production exceeded that of Victoria in some of the war years. New South Wales occupies third place in acreage and production. The area of these three States accounted for 73 per cent. of the total for Australia in 1956-57.

The area sown, production and yield per acre of potatoes in each State during the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown hereunder:—

(a) Not available.

After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes increased rapidly and reached a maximum of 241,803 acres in 1944-45. Areas sown in subsequent seasons were considerably less, however, and showed a general decline to the figure for the 1956-57 season, 101,048 acres.

The average yield in Australia in 1956-57 was a record at 5.14 tons exceeding the previous record yield of 4.36 tons in 1954-55.

2. Gross Value of Potato Crop.—The estimated gross value of the potato crop of each State for the 1955-56 season and the value per acre are shown in the following table.

POTATOES:	VALIE	OF CROP.	1955-56.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000 Value per acre £	1,727 130	12,486,	1,653 162	-		,	31 415	25,895 277

- 3. Consumption.—The annual consumption of potatoes in Australia during each of the three years 1954-55 to 1956-57 amounted to 417,100 tons, 368,900 tons and 467,500 tons respectively, or 102.8 lb., 88.7 lb. and 109.8 lb. respectively per head of population. These figures exclude the quantities used for seed, which averaged about 53,500 tons annually over this period. Consumption during the three years ended 1938-39 averaged 318,500 tons (103.8 lb. per head of population) excluding 37,000 tons for seed. New South Wales, Queensland and, in some seasons, South Australia do not produce the quantities necessary for their requirements and must import from Tasmania and Victoria which have a surplus.
- 4. Marketing.—Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948 with the completion of sales of the 1947–48 crop.

Potato Marketing Boards were subsequently established in all States under separate State legislation. The Queensland Board was not extended when its term ended in 1954, and the New South Wales Board was voted out by growers in 1956. As the Victorian Board does not acquire the State crop, potato marketing is conducted now chiefly on an open marketing system.

5. Exports.—Prior to the 1939-45 War, small quantities of potatoes were exported, principally to the Pacific Islands and Papua. After the war, the export trade expanded considerably. It reached a peak in 1952-53 but then declined. Details showing exports for the years 1952-53 to 1956-57 and the annual average for the period 1934-35 to 1938-39 are given in the following table:—

POTATOES: EXPORTS, AUSTRALIA.

Pa	rticulars.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956–57.

Value		£'000	17	1,237	155	109	225	263

Imports of potatoes are not recorded separately.

### § 11. Onions.

1. Area, Production and Yield per Acre.—Australia's supply of onions comes chiefly from Victoria, which accounted for 48 1 per cent. of the total area and 49.5 per cent. of the quantity produced in 1956-57. Queensland came next with 34.8 per cent. of the area and 26.4 per cent. of the production, leaving a balance of 17.1 per cent. of area and 24.1 per cent. of production distributed among the remaining four States. The Victorian crop consists almost entirely of brown onions of good keeping qualities, and the bulk of the crop is grown in a small section of the Western Division of the State, where soil conditions have been found to be particularly suitable for onion growing on a commercial scale. Details of the area, production and yield per acre are given in the following table for the years 1952-53 to 1956-57 together with averages for the ten-year periods ended 1938-1939 and 1955-56.

2. Gross Value of Onion Crop.—The estimated gross value of the onion crop and the value per acre are shown in the following table for the 1955-56 season:—

ONIONS: VALUE OF CROP, 1955-56.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value	107	940	532	211	175	6	2	1,973
Value per acre £	335	282	215	403	544	274	210	281

<sup>3.</sup> Consumption.—The annual consumption of onions in Australia averaged 47,715 tons or 11.5 lb. per head of population during the three years ended 1956-57, compared with 40,600 tons or 13.2 lb. per head during the three years ended 1938-39. These figures exclude an estimated wastage which averaged 2,500 tons and 2,100 tons respectively.

4. Exports.—Onions are the only root crop, other than potatoes, in which any considerable oversea trade is carried on by Australia. In 1956-57, exports amounted to 2,473 tons, valued at £114,106, and were shipped mainly to Singapore, New Caledonia, Fiji and Papua. The quantity of exports in 1955-56 was 981 tons, valued at £54,944. Imports of onions are not recorded separately.

# § 12. Hay.

1. General.—(i) Area and Production. As already stated, the chief crop in Australia, in terms of area, is wheat grown for grain. Up to and including 1946-47, hay was next, but in recent years it has dropped in relative importance. In 1956-57, the areas planted to green fodder, oats for grain and barley were larger than that sown to hay.

In 1956-57, the hay area represented 9.6 per cent. of the total area cropped. A graph showing the area sown to hay crops since 1900-01 appears on p. 863. In most European countries, the hay consists almost entirely of meadow and other grasses, but, in Australia, a very large proportion consists of oats, lucerne and wheat. The area, production and yield per acre of hay of all kinds in the several States during the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown below:—

HAY: AREA, PRODUCTION AND YIELD PER ACRE.

Owing to various causes, particularly the variation in the relative prices of grain and hay and the favourableness or otherwise of the season for a grain crop, the area of hay is apt to fluctuate considerably. The area under hay in Australia during the season 1915-16, 3,598,000 acres, was the largest on record, whilst the average for the ten-years ended 1955-56 was 1,801,000 acres.

A graph showing the production of hay appears on p. 865.

(ii) Varieties Grown. Information regarding areas cut for hay in 1956-57 is given in the following table.

HAY: AREA UNDER VARIOUS KINDS GROWN, 1956-57. (Acres.)

State.	Wheaten.	Oaten.	Lucerne.	Other.	Total.
New South Wales	. 32,891	46,079	142,696	144,907	366,573
Victoria	. 19,332	122,844	58,361	581,415	781,952

Australia	. 145,144	412,368	(a)262,416	1,041,434	a1,861,362

<sup>(</sup>a) Includes two acres in the Northern Territory.

For all States and the Territories combined, the proportions of the areas sown to the principal kinds of hay in 1956-57 were 22 per cent. for oaten, 8 per cent. for wheaten, 14 per cent. for lucerne, and 56 per cent. for other hay. In that year, oaten hay predominated in Western Australia, lucerne in Queensland, and meadow and grass in the remaining States.

2. Value of Hay Crop.—The following table shows the estimated gross value, and the value per acre, of the hay crop of the several States for the 1955-56 season:—

HAY: VALUE OF CROP, 1955-56.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000 Value per acre	9,949 £27 3 0	14,061 £18 0 0	1,921 £42 4 0	3,473 £11 12 0	3,076 £12 14 0	2,248 £18 5 0		34,807 £18 14 0

3. Farm Stocks of Hay.—Details of stocks of hay held on farms are now collected at the annual census of farm production. Particulars of stocks so held at 31st March in each year 1953 to 1957 are given in the table below.

STOCKS OF HAY HELD ON FARMS.

(Tons.)

31st March—		N.S.W. Vic.		Q'land.	nd. S. Aust. W. Aust.		Tas.	A.C.T.	Australia.
1953		628,977	1,347,363	97,492	402,477	186,523 <sup>!</sup>	145,375	5,119	2,813,326
1954		700,367	1,479,299	106,794	420,423	216,023	185,549	4,775	3,113,230
1955		809,263	1,553,289	156,115	447,102	207,664	145,112	3,269	3,321,814

1957		775,464	2,008,678	156,599	555,681	222,941	296,257	7,617	4,023,237
	,		' '						1

4. Exports.—Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely amongst the exports of Australia. During 1956-57, exports amounted to 2,867 tons, valued at £55,558. Imports are not recorded separately.

# § 13. Green Fodder.

1. Nature and Extent.—Considerable areas are devoted to the growing of green fodder, mainly in connexion with the dairying industry. Consequently, green fodder ranks after wheat and oats (for grain) as the third most important crop, in area, grown in Australia. The areas recorded in respect of green fodder include areas of crops cut for feeding to livestock as green fodder, or ensilage, together with areas fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting

for grain, but which, due to adverse seasonal conditions, showed no promise of producing grain or even hay and were fed off to live-stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye and sugarcane are also so used. In 1956-57, the area under green fodder (2,684,894 acres) consisted of oats (1,566,665 acres), lucerne (453,835 acres), wheat (103,686 acres), sorghum (77,398 acres), maize (37,392 acres), barley (133,711 acres), rye (32,387 acres), sugar-cane (1,436 acres) and other crops (278,384 acres). Particulars concerning the area of green fodder in the several States during each of the years 1952-53 to 1956-57 are given in the following table, together with the average for the period of ten years ended 1938-39.

# GREEN FODDER: AREA.

(a) Not available.

2. Value of Green Fodder Crops.—The value of these crops is variously estimated in the several States, and the Australian total for the season 1955-56, excluding Western Australia, may be taken as approximately £5,950,000.

# § 14. Sugar-cane.

1. Area.—Sugar-cane growing appears to have commenced in Australia in or about 1862, and is confined to New South Wales and Queensland. A brief outline of the development of the industry was included in earlier issues of the Official Year Book (see No. 38, p. 985). The area of sugar-cane in Australia for the seasons 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table. In 1956-57, the total area of sugar-cane (excluding areas cut for green fodder) was 499,239 acres which was slightly below the record area of 501,859 acres in 1954-55.

(a) Excludes areas cut for green fodder.

- 2. Productive and Unproductive Cane.—The areas shown in the preceding table do not include the small acreage cut for green fodder, which in 1956-57 amounted to 1,436 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of productive cane cut for crushing.
- 3. Production of Cane and Sugar.—For Queensland, statistics of the production of sugar-cane are not available for seasons prior to 1897-98. In that season, the total for Australia was 1,073,883 tons, compared with 9,272,168 tons in the 1956-57 season. The record production was 10,086,517 tons in 1954-55.

The average production of cane during the ten seasons ended 1955-56 was 6,934,839 tons, and of raw sugar 940,631 tons. Particulars of the total production of cane and sugar for the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are as follows.

# SUGAR-CANE: PRODUCTION OF CANE AND SUGAR.

Average,	1946-47	to	ŕ						
1955–56		٠	275,853	33,996	6,658,986	906,635	6,934,839	940,631	
195657			294,087	35,918	8,978,081	1,171,879	9,272,168	1,207,797	

(a) Raw sugar at 94 net titre.

The production of raw sugar in Australia in 1956-57 amounted to 1,207,797 tons manufactured from 9,272,168 tons of cane, compared with the record production of 1,327,546 tons in 1954-55.

Official annual data are not available regarding the total number of persons engaged in the sugar industry in New South Wales and Queensland. The number of separate holdings growing 5 acres or more of cane was 6,868 in 1956-57.

According to data obtained from the population census of 30th June, 1954, the number of persons engaged in the sugar-cane industry in New South Wales and Queensland comprised 20,185 males and 431 females, a total of 20,616 persons, of whom 4,245 were employers and 5,118 were self-employed.

4. Average Production of Cane Sugar.—Owing to climatic variation, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be made accurately except on an annual basis. In New South Wales, the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. Allowing for the disparity in maturing periods the average annual yields of cane per productive acre during the ten years ended 1955-56 were 36.68 tons for New South Wales, and 23.42 tons for Queensland. Similarly, the yields of sugar per acre crushed for the same period were estimated at 4.52 tons and 3.19 tons respectively. Apart from the consideration mentioned above, the yields of cane and sugar per acre crushed for Australia for the ten years ended 1955-56 were 23.76 tons and 3.22 tons respectively, as compared with 19.73 tons and 2.76 tons for the ten years ended 1938-39.

5. Quality of Cane.—The quantity of cane required to produce a ton of sugar varies with the variety planted, the district, and the season. For the ten years ended 1955-56, it required on the average 7.37 tons of cane to produce one ton of sugar, or 13.6 per cent. of its total weight, as compared with 7.15 tons for the ten years ended 1938-39. As the result of the systematic study of cane culture in Queensland and improvements in field and mill methods, the sugar content of the cane has been considerably increased since the turn of the century, when over 9 tons of cane were required to produce 1 ton of sugar. It is believed that it is the highest sugar content obtained anywhere in the world.

The Bureau of Sugar Experiment Stations in Queensland is rendering useful serviceto the sugar industry by advocating and demonstrating better methods of cultivation and themore scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

6. Production and Utilization.—Details of the production and utilization of raw sugar for the three years ended 1938-39 and each year 1952-53 to 1956-57 are shown below. It should be noted that the details of sugar production refer to the annual periods shown, without regard to the season in which the sugar was produced and include the small quantities of beet sugar produced in certain of these years. Consumption is shown in terms-of refined sugar, including that consumed in manufactured products.

			) .					

<sup>(</sup>a) Includes sugar content of manufactured products. in refining. (c) In terms of refined sugar.

7. Consumption in Factories.—The quantity of sugar used in factories in 1955-56-amounted to 266,065 tons compared with 252,012 tons in 1954-55 and 123,883 tons in 1938-39. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1955-56, consumption by factories engaged in the production of jams, jellies and preserved fruit (including condiments, pickles, etc.) amounted to 71,056 tons and by those producing confectionery, ice cream, etc., amounted to 52,784 tons.

<sup>(</sup>b) Includes industrial uses and losses:

8. Control of Cane Production in Queensland.—Agreements between the Commonwealth and Queensland Governments have fixed the wholesale price of sugar and sugar products from time to time. Details of prices are shown in para. 14 of this section (see

The Queensland Government acquires the whole of the sugar production of that State and New South Wales by legislation and private agreement respectively. The net proceeds

of all sugar sold are pooled and a uniform price paid to mills.

Sugar production barely met local requirements in 1923 but increased rapidly until 1925 when approximately 44 per cent. of the production was exported. Steps were taken by the Government to restrict planting of new areas and production was fairly stable until 1929. In that year, the pool was reorganized and mills received full pool price for sugar up to the amount of their previous maximum production, further supplies being acquired at

Between 1929 and 1939, production rose by more than 70 per cent. despite the restrictions mentioned above and the fact that export prices were generally less than half

the pool price.

- In 1939, following the International Sugar Agreement, which limited exports, the Queensland Government limited the pool (mill peaks) to 737,000 tons in respect of Queensland production. Mill quotas were allotted on the understanding that mills would allot quotas to individual growers. Mill peaks have been raised to 942,300 tons in 1950, 1,045,000 tons in 1953 and 1,170,900 tons in 1954. These latter increases followed the negotiation of the Commonwealth Countries Sugar Marketing Agreement of 1949, which allowed the Queensland Government to initiate a planned expansion of the industry.
- 9. Sugar Agreement in Australia-Embargo on Imports, etc.-Reference was made in Official Year Book No. 37 (pp. 940-41) to the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The current agreement operates for a five year period from 1st September, 1956 to 31st August, 1961.
- 10. International Sugar Agreement.—The International Sugar Agreement of 1937 was superseded by the International Sugar Agreement of 1953 which came into force on 1st January, 1954. Details of the 1937 Agreement were given in Official Year Book No. 40, pp. 881 and 882, and previous issues.
- The new agreement, which was negotiated by 38 countries, is for a five year period ending 31st December, 1958. It was amended by protocol operating from 1st January, 1957. It is designed to assure supplies of sugar to importing countries at equitable and stable prices and also to increase the consumption of sugar throughout the world. Basic export quotas of exporting countries are established. The mechanism for the adjustment of quotas under the 1953 Agreement revolved largely around a minimum and maximum price. Under the Agreement as amended, no minimum or maximum prices are established but a number of different prices at which action may or must be taken are stipulated. The International Sugar Council has considerable discretion to adjust quotas during the quota year.

The British Commonwealth, as a whole, has been granted an export quota of 2,375,000 tons, rising to 2,500,000 tons in 1958, which is not subject to the fluctuations mentioned above. The allocation of this total between exporting members of the British Commonwealth is a matter for the countries and territories themselves, Australia's share being fixed at 637,215 tons for 1958. Details of the marketing arrangements for Australian sugar are given in para. 15 below.

11. Net Return for Sugar Crop.—Details of the disposal of the crop, net value of exports and the average price realized during each of the years 1938-39 and 1952-53 to 1956-57 will be found in the following table:-

RAW SUGAR(a): NET RETURNS, AUSTRALIA.

Year.		Proportion Exported. (b)	Net Value of Exports per Ton. (b)	Average Price per Ton for Whole Crop.	Estimated Value of Crop	
			Per cent.	£ s. d.	£ s. d.	£'000.
1938-39			55.78	8 4 3	15 3 11	12,806
1952-53			49.66	41 2 0	42 12 9	40,781
1953-54			58.39	38 13 9	42 10 8	52,572
1954-55			59.11	37 8 0	41 6 11	53,984
1955-56			53.46	38 11 4	42 9 0	53,244
1956-57			56.01	41 6 5	46 14 3	57,686

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but including concessions to the fruit industry and other rebates which in 1956-57 amounted to £601,207. The value thus obtained represents the net market value of all raw sugar sold, which is divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively.

12. Exports of Sugar.—Particulars of the exports of cane sugar (raw and refined) for the five years ended 1938-39 and for each year from 1952-53 to 1956-57 are as follows:—

SUGAR:	EXPORTS,	AUSTRALIA.
--------	----------	------------

Particu	lars.	Average, 1934-35 to 1938-39.	1952-53.	1953–54.	1954–55.	1955–56.	1956-57.
Quantity	tons	377,930	459,370	706,801	737,184	592,229	675,282
Value	£'000	3,481	21,655	31,592	31,148	24,723	28,780

13. Sugar By-products.—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the amounts used for distilling, fuel, manure and other purposes will be found in Chapter VII.—Manufacturing Industry.

Other by-products include industrial chemicals and building boards. These boards are made from the residue of crushed fibre after removal of the sugar content from sugarcane and possess high insulating and sound-absorbing properties which make them particularly suitable for use in walls and ceilings.

14. Sugar Prices.—The prices of sugar in Australia from 1952 to 1956 in the case of raw sugar; and from 1952 to 1961 in the case of refined sugar (as determined under the Sugar Agreement in Australia—See para. 9 above) are shown in the following table.

SUGAR: PRICES IN AUSTRALIA.

		D .	C 04 NI		201				
		Raw	Sugar, 94 Ne	i itre.	Refined Sugar.

			1	j			1		

(a) Including "Excess" Sugar.

15. Marketing Arrangements.—From 1939 to 1952, the British Ministry of Food purchased Australia's surplus raw sugar at prices negotiated annually and varying from £ stg. 11 5s. in 1939 to £ stg. 38 10s. in 1952 including tariff preference (for prices in other years see earlier issues of the Year Book).

On 1st January, 1953, the British Commonwealth Sugar Agreement became effective. This agreement, which has been extended to 1965, provides for Australia to export a maximum of 600,000 tons per annum. The United Kingdom agrees to take 300,000 tons at an annually negotiated price, the balance being sold at world prices, plus tariff preferences. The negotiated prices for 1957 and 1958 were £ stg. 42 3s. 4d. and £ stg. 43 16s. 8d. respectively.

The Sugar Bill introduced into the House of Commons on 5th July, 1955, provided for the reversion of dealings in sugar in the United Kingdom to a trader to trader basis as

from 1st January, 1957. However, under the Bill, a Sugar Board was created which is responsible for the purchase of the negotiated price sugar which the United Kingdom Government has contracted to take under the British Commonwealth Sugar Agreement.

VINEYARDS.

16. Fruit Industry Sugar Concession Committee and Sugar Rebates.—The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the Sugar Industry.

A rebate of £2 4s. per ton of refined sugar used in processing approved fruit products is paid to Australian manufacturers provided they buy the fresh fruit at prices not lower than those declared by the Committee as reasonable.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for Australian sugar than the price for which the cheapest imported sugar could be landed duty free in Australia.

Under the Sugar Agreement 1956-1961, the Queensland Government contributes to the fund £120,000 annually and also reimburses the Committee for the actual expenditure on export sugar rebates. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for scientific research for the purpose of increasing the yield per acre of Australian fruit.

17. Bulk Handling of Sugar.—A terminal for the bulk loading of sugar was opened at Mackay in 1957; additional bulk terminals are in course of construction at Bundaberg, Townsville and Lucinda Point.

Bulk unloading facilities are in operation at Pyrmont refinery, Sydney. The three raw sugar mills in New South Wales despatch all their raw sugar production in bulk.

# § 15. Vineyards.

1. Progress of Cultivation.—(i) Area of Vineyards. Since the early days of Australian settlement, the expansion of the cultivation of vines has been most rapid in Victoria and South Australia, the area under vineyards in the 1957 season in these two States comprising 78 per cent. of the total area. The purposes for which grapes are grown in Australia are (a) for wine-making, (b) for table use, and (c) for drying. The total area of vines in the several States during each of the years 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table.

<sup>(</sup>a) Excludes particulars for Australian Capital Territory and Northern Territory.

(ii) Wine Production, Bounties, etc. The total production of wine (beverage and distillation) in Australia has shown a marked increase in recent years, rising from 14.3 million gallons in 1938-39 to 30.7 million gallons in 1956-57. In the same period, consumption of beverage wine in Australia has expanded from 4.5 million gallons (0.7 gallons per head of population) to 10.9 million gallons (1.2 gallons per head of population). For many years prior to the 1939-45 War, a bounty was paid on wine shipped overseas under the provisions of the Wine Export Bounty Act 1930, as amended from time to time. Details of the bounty, payment of which was discontinued in 1947, may be found in Official Year Book No. 39, p. 992.

The quantity of wine produced in the several States during the 1952-53 to 1956-57 seasons, together with the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table:—

WINE: PRODUCTION.(a) ('000 Gallons.)

Season.		N.S.W.	N.S.W. Victoria.	Queensland.	S. Aust.	W. Aust.	Australia.
Average, 192	9–30

<sup>(</sup>a) Net factory and farm production of beverage and distillation wine excluding the liquid gallonage of spirits added in wine fortifying.

2. Imports and Exports of Wine.—(i) Imports. Imports for 1956-57 amounted to 33,505 gallons valued at £74,407 compared with 48,547 gallons valued at £106,462 in the previous year and an average of 36,685 gallons valued at £39,577 for the five years ended 1938-39.

During 1956-57, Italy supplied 14,491 gallons valued at £16,079, France supplied 11,687 gallons valued at £42,922, and Spain supplied 2,427 gallons valued at £6,380. The bulk of the sparkling wines were obtained from France.

(ii) Exports. Exports in 1956-57 totalled 1,750,349 gallons, of which the United Kingdom received 1,307,538 gallons, New Zealand 56,688 gallons, Canada 292,864 gallons, and other countries 93,259 gallons.

Exports for the five years ended 1956-57 are shown in the following table in comparison with average exports during the five years ended 1938-39:—

WINE: EXPORTS FROM AUSTRALIA.

Year.		Qu	antity (Gallo	ns).	Value (£).			
		Sparkling.	Other.	Total.	Sparkling.	Other.	Total.

3. Oversea Marketing of Wine.—(i) The Wine Overseas Marketing Act 1929–1954. This Act was introduced to place the oversea marketing of surplus wine on an orderly basis. The Australian Wine Board (formerly The Wine Overseas Marketing Board), consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board has a London agency which advises on marketing conditions.

During 1954, the Act was amended to enable the Board to engage in the sales promotion of wine in Australia in addition to overseas.

- (ii) The Wine Grapes Charges Act 1929-1957. This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wines or spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.
- 4. Other Viticultural Products.—(i) Table Grapes. Grapes for table use are grown in all States except Tasmania, but the area of this type is only about 7 per cent. of the productive area of vines. The quantities of table grapes produced during the season 1956-57 in each State are shown in § 3 of this chapter. (See p. 857).
- (ii) Raisins and Currants. The quantities of raisins (sultanas and lexias) and currants dried during each of the seasons 1952-53 to 1956-57 and the averages for the ten-year periods ended 1938-39 and 1955-56 are shown in the following table. Production in 1956-57 was 79,857 tons, compared with 58,871 tons in 1955-56.

(a) Sultanas and lexias.

5. Production and Disposal of Dried Vine Fruit.—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export. The quantities disposed of in Australia and overseas, as recorded by the Commonwealth Dried Fruits Control Board for the season ended December, 1956, totalled 57,449 tons, Australian consumption amounting to 16,190 tons and oversea exports 41,259 tons. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

The following table shows the oversea exports of raisins and currants during each of the years 1952-53 to 1956-57 compared with the average for the five years ended 1938-39.

RAISINS	AND	CURRANTS(a	):	EXPORTS,	AUSTRALIA.

1956–57	••	38,496	5,377	6,521	831	45,017	6,208	

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian raisins and currants are the United Kingdom, Canada and New Zealand, the quantities exported thereto in 1956-57 being 23,917 tons, 13,624 tons and 5,608 tons respectively.

- 6. Post-war Contracts.—Agreements were negotiated between the Governments of the United Kingdom and Australia for the purchase of Australia dried vine fruits during the period 1946–1953. Up to and including 1951, the quantity of fruit to be purchased was limited but in 1952 and 1953 there was no restriction. In April, 1953, it was agreed to extend the contract for one year but in August, 1953 the United Kingdom Government abolished all controls and on 1st December of that year exports reverted to a trader to trader basis. The British Ministry of Food agreed, however, to subsidize returns from sales of fruit of the 1954 crop sold in the United Kingdom up to 31st May, 1955, if average returns were less than the level of prices agreed upon.
- 7. Oversea Marketing of Dried Fruits.—(i) The Dried Fruits Export Control Act 1924–1953. This Act was passed to organize oversea marketing of Australian dried vine fruits. The Dried Fruits Control Board, consisting of growers and Government representatives and members with commercial experience and experience in marketing dried fruits, controls the sale and distribution of dried fruit exports and recommends the conditions under which export licences are issued.

In conjunction with its London agency the Board has improved dried fruit marketing overseas by its system of appraisement, regulation of shipments and advertising.

(ii) Dried Fruits Export Charges Act 1924–1929. This Act provides for a levy on exports of dried fruits to defray costs and expenses incurred by the Board. Provision is made for exemption from the levy upon recommendations by the Board.

# § 16. Orchards and Fruit-gardens.

1. Area.—The largest area of orchards and fruit-gardens prior to the 1939-45 War was 281,899 acres which was attained in 1933-34. Since then the acreage has varied but it has not fallen below 260,000 acres. The peak was reached in 1947-48 when 290,000 acres were planted; in 1956-57 the area was 270,000 acres.

# ORCHARDS AND FRUIT-GARDENS: AREA.

2. Varieties of Crops.—The varieties grown differ in various parts of the States, ranging from such fruits as pineapples, papaws and mangoes in the tropics, to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums pears and cherries are extensively grown. The principal varieties grown in Victoria are apples, peaches, pears, oranges, plums and apricots. In Queensland, pineapples, apples, bananas, oranges, mandarins, peaches and plums are the varieties most largely cultivated. In South Australia, in addition to apples, oranges, apricots, plums, peaches and pears, almonds and olives are extensively grown. In Western Australia, apples, oranges, pears, plums, peaches, lemons, apricots and figs are the chief varieties. In Tasmania, apples occupy over three quarters of the fruit-growing area, but small fruits, such as currants, raspberries and gooseberrics are extensively grown, while the balance of the area is mainly taken up with pears, apricots and plums. The following table shows the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantity of fruit produced.

4. Production of Jams and Jellies and Preserved Fruit.—In Austra'ia considerable quantities of fruit are used in the production of jams and jellies and preserved fruit. During 1955-56, output of jams and jellies amounted to 84,096,000 lb. whilst output of preserved fruit, excluding preserved apples, amounted to 283,611,000 lb. Production of preserved apples was 20,296,000 lb.

The recorded consumption of fruit in factories for all purposes, including that used for juice and cordial manufacture and for drying, was 231,548 tons in 1955-56.

- 5. Consumption of Fruit and Fruit Products.—Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1956-57 are shown in Chapter XXX.—Miscellaneous, of this Year Book.
- 6. Imports and Exports of Fruit.—(i) General. The imports of fresh fruit into Australia are negligible, whilst those of dried fruit consist mainly of dates.
- A considerable export trade in both fresh and dried fruit is carried on by Australia with oversea countries. The values of the shipments in 1956-57 amounted to £8,585,355 and £6,586,536 respectively. Apples constitute the bulk of the fresh fruit exported, although the exports of citrus fruit and pears are considerable.
- (ii) Fresh Fruit. Particulars of the Australian export trade in fresh and frozen fruit for each of the years 1952-53 to 1956-57 and the average of the five years ended 1938-39 are shown in the following table:—

FRESH AND FROZEN FRUIT: EXPORTS, AUSTRALIA.

- (a) Excludes raisins and currants referred to separately under Vineyards, § 15, para. 5. (b) Imports
- (iv) Jams and Jellies. Exports of jams and jellies reached large proportions immediately following the 1939-45 War and in 1946-47 amounted to 65,434,000 lb., compared with the average for the five years ended 1938-39 of 7,118,000 lb. Since 1949-50, when exports totalled 65,229,000 lb., there has been a marked decline and in 1956-57 exports amounted to only 6,725,000 lb., valued at £439,000. Imports of jams and jellies are negligible.
- (v) Preserved Fruit. The total quantity of fruit preserved in liquid, or partly preserved in liquid or pulped, imported into Australia during 1956-57, was 1,222,000 lb. valued at £77,946. Large quantities of fruit preserved in liquid are normally exported from Australia, the value of shipments in 1938-39 amounting to £1,271,525. In 1956-57, the value of exports was £10,079,000. In addition, the exports of pulped fruits during 1956-57 amounted to 1,707,160 lb., valued at £175,460. Quantities of fruit preserved in liquid exported from Australia in 1956-57 amounted to 134,002,000 lb. compared with average exports of 68,896,000 lb. for the five years ended 1938-39. Exports in 1956-57 were principally made up of pears (57,461,000 lb.), peaches (32,896,000 lb.), pineapples (18,185,000 lb.) and apricots (12,087,000 lb.)
- 7. Marketing of Apples and Pears.—(i) Apple and Pear Organization Act 1938-1953. This Act, which was passed by the Commonwealth Parliament at the request of the apple and pear industry, provides for the establishment of an Australian Apple and Pear Board comprised of representatives of growers, exporters, employees and the Commonwealth Government. Oversea representatives may also be appointed by the Board.

The function of the Board is the organization and control of exports of fresh apples and pears and it has the power to regulate shipments, determine export quotas and allocate consignments from each State.

- (ii) Apple and Pear Export Charges Act 1938-1957. This Act provides for an export levy to meet the expenses of the Board.
- (iii) Apple and Pear Acquisition. Exports of apples and pears were seriously curtailed during the war and the 1940 to 1948 crops were acquired and marketed under National Security and Defence Regulations. Details of the acquisition scheme will be found on pp. 1003 and 1004 of Official Year Book No. 38 and in earlier issues.
- 8. Oversea Marketing of Canned Fruit.—(i) The Canned Fruits Export Control Act 1926–1956. This legislation was introduced with the object of organizing the oversea marketing of canned fruit. The Australian Canned Fruits Board, comprising members representing the Commonwealth Government and canners of apricots, peaches, pears, pineapples and fruit salad, was appointed with functions mentioned above and also to recommend conditions under which export licences are issued.

The system of marketing adopted by the Board has resulted in the satisfactory disposal of the exportable surplus of canned fruits.

(ii) The Canned Fruits Export Charges Act 1926-1956. This Act provides for a levy on exports to meet the Board's expenses. Provision has been made for certain exemptions when recommended by the Board.

# § 17. Vegetables for Human Consumption.

1. Area and Production of Fresh Vegetables.—Details of the areas planted and production of individual kinds of vegetables, excluding potatoes and onions referred to in §§ 10 and 11 of this chapter, are shown below for the seasons 1954-55 to 1956-57.

FRESH VEGETABLES(a) FOR HUMAN CONSUMPTION: AUSTRALIA.

Total	135,583		155,298		171,800	

<sup>(</sup>a) Excludes potatoes and onions.

2. Production of Canned and Dehydrated Vegetables.—Total production of canned vegetables in 1956-57 amounted to 97,152,000 lb., which was considerably higher than pre-war production, and approximately 82 per cent. of the peak war-time production. The principal canned vegetables produced in 1956-57 were green peas 24,760,000 lb., green beans 10,312,000 lb., baked beans (including pork and beans) 19,965,000 lb., tomatoes 11,796,000 lb. and asparagus 7,146,000 lb.

The production of dehydrated vegetables, which was initiated during the 1939-45 War by the Commonwealth Government, rose to a maximum of 22,000,000 lb. in 1945-46, but by 1955-56 had declined to approximately 392,000 lb.

3. Imports and Exports of Vegetables.—Oversea exports of pulse and fresh vegetables during 1956-57 consisted of:—Pulse, 12,078 tons, £619,000, onions, 2,473 tons, £114,000, potatoes, 3,959 tons, £263,000; other vegetables, 1,618 tons, £176,000. Imports of pulse amounted to 5,190 tons, valued at £342,000, whilst imports of fresh vegetables were 1,878 tons, valued at £320,109.

In 1956-57, exports of vegetables preserved in liquid consisted of:—Peas, 202,000 lb., £18,000; tomatoes, 321,000 lb., £15,000; other vegetables, 1,793,000 lb., £210,000.

4. Consumption of Vegetables.—Details of the estimated consumption of vegetables for a series of years ending with 1956-57 are shown in Chapter XXX.—Miscellaneous, of this Year Book.

# § 18. Tobacco.

1. States, Area and Production.—Tobacco has been grown in Australia for a considerable number of years. As early as the season 1888-89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. Thereafter, the industry fluctuated for many years reaching a peak in 1932-33 when 26,272 acres were planted.

In 1956-57, the area planted was 12,172 acres which was 8 per cent. more than the average for the ten years ended 1938-39. Owing to improvement in average yields, however, the production of dried leaf in 1956-57 was 71 per cent. higher than the pre-war average.

<sup>(</sup>b) Incomplete; excludes New South Wales.

In the following table, particulars of the area and production of tobacco are given by States for each of the seasons 1952-53 to 1956-57, together with averages for the ten-year periods ended 1938-39 and 1955-56:—

	Date Co.						
Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.(a)
		AREA	(Acres).		·

(a) Includes small amounts produced in Northern Territory from 1954-55 onwards.

2. The Tobacco Industry.—(i) Marketing. In the early days, purchase of the leaf at the farms was the usual practice but towards the later part of the 1930's the auction system was introduced by arrangement between the growers' associations and the manufacturers.

On the 9th May, 1941, the Australian Tobacco Board was constituted under the National Security (Australian Tobacco Leaf) Regulations for the purpose of facilitating and regulating the marketing of Australian grown tobacco leaf. All leaf was under the control of the Board, the growers being paid on the valuation as appraised by the Board. The Board ceased to function on the 24th September, 1948 and subsequent crops have been marketed at open auction in the respective States. Queensland has had its own Tobacco Leaf Marketing Board since 1948 and leaf sold in that State has a reserved price, determined by the Board's appraiser. Growers in New South Wales voluntarily submit their leaf to the Queensland Board.

(ii) Central Tobacco Advisory Committee. The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems.

The Committee was reconstituted by the Agricultural Council during 1952-53 and its terms of reference were as follows:—

- "To report annually to the Agricultural Council, through the Standing Committee on Agriculture and also to the Commonwealth Minister for Trade and Customs, through the Chairman of the Council, on the following:—
  - (i) The percentage of Australian tobacco which should be incorporated in locally manufactured tobacco under Customs regulations, having regard to the anticipated volume of Australian production of usable leaf available for absorption by the manufacturing industry;
  - (ii) The progress of the industry during the year with particular reference to—
    (a) marketing problems encountered,
    - (b) a review of prices being paid to farmers in relation to quality of leaf,
    - (c) such other problems as may be retarding the progressive development of the industry, such as the volume of importation of manufactured tobacco and cigarettes."
- (jii) Industry Inquiries. The tobacco industry has been the subject of a number of investigations during the past 30 years. The Tariff Board inquired into the industry in 1923, 1926, 1931 and 1940 and reports were issued in respect of the last three inquiries.
- (iv) Commonwealth Grants. Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30th June, 1953, were given in Official Year Book No. 40, pp. 895, 896 and in previous issues.

(v) Research and Investigations. The Commonwealth Scientific and Industrial Research Organization has been investigating many fundamental problems connected with tobacco culture. One of the major achievements of this organization was the development of a technique to control "Field Blue Mould" and investigations are now being made into the control of this disease in the field. State Departments of Agriculture are also carrying out investigations over a wide range of problems, being concerned mainly with variety trials, irrigation, disease and pest control, crop rotation and cultural practices.

In 1955, the Central Tobacco Advisory Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme are estimated at £168,000 of which the Commonwealth Government has agreed to contribute £84,000 and tobacco manufacturers the remaining £84,000. It has been estimated that to maintain the programme, it will cost approximately £63,000 per annum, of which the Commonwealth Government is contributing £21,000, tobacco growers £14,000 and tobacco manufacturers £28,000 per annum. A Tobacco Industry Trust Account has been established to receive these contributions. This programme commenced in 1956.

(vi) War Service Land Settlement. Tobacco growing under the War Service Land Settlement Scheme commenced in 1949 and is being carried out on 67 farms in Queensland. Each farm is designed to have a minimum of 40 acres of suitable land to permit ten acres being cropped annually on a one in four rotation.

Due to technical difficulties in certain districts in Western Australia tobacco growing under the War Service Land Settlement Scheme has been considerably curtailed.

- (vii) Tobacco Factories. Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages rose from 3 per cent. for cigarettes and 5 per cent. for tobacco in November, 1946, to 7½ per cent. and 17½ per cent. respectively from 1st July, 1955. Originally, the Commonwealth Government announced that the percentages to apply, from 1st July, 1958, would be 14½ per cent. and 22½ per cent. respectively but subsequently the rates were revised to 15½ per cent. and 16½ per cent. because of the adverse effects of climatic conditions on the Australian crop, particularly in relation to leaf for tobacco as distinct from that intended for cigarette manufacture. In 1956-57, the quantity of cured leaf used in tobacco factories in Australia amounted to 47.9 million lb. of which 5.6 million was of local origin, the balance being imported, chiefly from the United States of America.
- 3. Oversea Trade.—Imports of tobacco and manufactures thereof into Australia during 1956-57 were valued at £14.2 million, including 40.8 million lb. of unmanufactured tobacco valued at £13.6 million. Exports of tobacco and manufactures thereof during 1956-57 were valued at £482.000.

# § 19. Hops.

Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1956-57 being 1,839 acres, of which 1,438 acres were in Tasmania, and 401 acres in Victoria. A small area was also grown in Western Australia, but the details are not available for publication. The Tasmanian area, though still small, has increased during the present century, the total for 1901-2 being 599 acres. The cultivation of hops was much more extensive in Victoria some 60 years ago than at present, the area in 1883-84 being 1,758 acres.

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table, details of the production, imports and exports of hops and the quantity of hops used in breweries are shown for each of the years 1952-53 to 1956-57 in comparison with the average for the five years ended 1938-39.

HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA.

			Produ	ction.			Net	Quantity

(a) Disregards movements in stocks.

(b) Not yet available.

The Tariff Board conducted an inquiry into the hop-growing industry and issued a report on 12th June, 1945.

# § 20. Flax.

1. Flax for Fibre.—During the 1914-18 and 1939-45 Wars, there was an acute shortage of flax fibre and the expansion of production was encouraged by the Commonwealth Government, the area sown reaching a maximum of more than 61,000 acres in 1944-45.

The growing of flax for fibre purposes is now confined to the States of Victoria, South Australia and Western Australia. In Victoria and South Australia, production is directed and controlled by the Flax Commission which took over the Commonwealth flax undertakings from the Flax Production Committee on the 1st November, 1954. In Western Australia, the industry is carried on by a Co-operative Company.

Following on the Tariff Board's Report on Flax Fibre dated the 5th August, 1954, the Government introduced a bounty on flax fibre for a period of two years to permit the modernization of plant and machinery. The amount of the bounty is related to the difference between oversea prices and local production costs and it came into operation on the 1st November, 1954. The Tariff Board conducted a further inquiry into flax fibre in 1956 and in its report dated 8th February, 1957, recommended the continuance of bounty payments for a further period of three years. The Government decided, however, in May 1957, that a complete examination should be made of the possible future of the industry, from the economic, defence and other viewpoints. It decided that bounty payments should continue until 31st October, 1957, while the enquiry was proceeding.

In November, 1957, the Government approved a three year extension of bounty assistance to flax producers and decided that the Commonwealth should withdraw from the field of flax fibre production by selling or closing the mills operated by the Flax Commission, as and when this was practicable.

One important factor which influenced the Government in making the last-mentioned decision was the view expressed by the defence authorities that the industry no longer has the same defence significance as it had when the Flax Commission was first established.

Details of the area under flax and the production of straw are given in the following table:—

FLAX FOR FIBRE: AREA AND PRODUCTION.

		Season.			Victoria.	S. Aust.	W. Aust.	Australia.
				AREA	(Acres).			
Average,	1934–35	to 1938-39			1,021			(a) 1,030

1956-57					4,013	4,606	2,051	10,670

<sup>(</sup>a) Includes nine acres of unproductive flax in Queensland.

2. Flax for Linseed.—Prior to 1948-49, the growing of flax for linseed oil had not been developed extensively in Australia. Since then however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. Development of the industry proceeded rapidly until 1951-52 when the record total of 53,741 acres was sown. In 1952-53, there was a decline in the acreage and a further decline in 1953-54 when 6,343 acres only were sown. Since then an increase to £70 per ton, f.o.r. ports, in the guaranteed price notified to growers by the crushers early in each season has led to an increase in the area sown to 19,403 acres in 1954-55, 47,727 acres in 1955-56, and 90,102 acres in 1956-57.

The question of assistance to the industry was investigated by the Commonwealth Tariff Board in 1953 and their conclusions are contained in their Report on Linseed and Linseed Products dated 23rd October, 1953.

Details of the area and production of flax for linseed are shown in the following table for the seasons 1952-53 to 1956-57.

FLAX FO	)R	LINSEED:	AREA	AND	PRODUCTION.

# § 21. Peanuts.

The production in Australia of peanuts, or groundnuts, is mainly confined to Queensland, although small quantities are grown in New South Wales, Western Australia and the Northern Territory. Details of the area and production are given in the table below.

PEANUTS: AREA AND PRODUCTION, AUSTRALIA.

Season.		Aı	ea (Acre	s).		Production (Tons).				
season.	N.S.W.	Qld.	W.A.	N.T.	Aust.	N.S.W.	Qld.	W.A.	N.T.	Aust.
Average, 1929-3 to 1938-39	0 29	8,320	100	(a)	8,449	(b) 11	3,715	24	(a)	3,750
1953-54	. 789 . 1,525 . 769 . 414 . 419	18,920 36,617 37,971 31,493 25,017	(c) (c) (c) (c)	(a) (a) 780 544 208	19,719 d 38,142 d 39,520 d 32,451 d 25,644	718 346 174	8,438 17,866 14,001 8,633 8,676	(c) (c) (c) (c)	(a) (a) 135 40 17	8,854 d 18,584 d 14,482 d 8,847 d 8,927

<sup>(</sup>a) Not available. (b) Average for five years. (d) Excludes Western Australia.

The gross value of the 1955-56 crop was £888,000 which was approximately £301,000 less than in 1954-55. This decrease was largely the result of the low level of production at 8,847 tons. This was due to very wet conditions at harvest time in Queensland where the yield per acre was the lowest ever recorded in that State.

Formerly, considerable quantities of peanut kernels were imported annually, chiefly from India, for oil expression purposes. These imports were suspended from 1946 to 1949, but have since been resumed on an increasing scale. Total supplies available for consumption in Australia in 1956-57, 9,813 tons (shell equivalent), consisted of 8,846 tons grown locally in the 1955-56 season and 967 tons imported.

# § 22. Cotton.

1. General.—The production of cotton in Australia is restricted to Queensland, where cultivation began in 1860. Details of areas sown for years prior to 1930 and of Government financial assistance to growers up to 1940 appear in Official Year Book No. 39 and earlier issues.

Australia produces only portion of its requirements of raw cotton, the balance being obtained in 1956-57 chiefly from the United States of America, Mexico, Pakistan, Brazil and India. Efforts have been directed towards increasing production by an extension of area, the introduction of irrigation methods, and payment of bounties, but so far have not met with much success. Production increased very considerably during the early years of the 1939-45 War, reaching a peak of 17,550,000 lb. unginned cotton in 1939-40, but has since fallen away. The expansion of the industries connected with the spinning and weaving of cotton is referred to in Chapter VII.—Manufacturing Industry.

<sup>(</sup>c) Not available for publication.

The Raw Cotton Bounty Act 1940 provided an extension until 31st December, 1946, of assistance previously granted by way of bounty. The Act was amended in August, 1946 to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947. It was superseded by the Cotton Bounty Act 1951, which guaranteed a net average return of 9½d per lb. of seed cotton for five years from 1st January, 1951. The 1951 Act was amended in 1952 to provide for a guaranteed return of 14d. per lb. of seed cotton for the 1953 crop, and for variation by regulation of the guaranteed return, in succeeding seasons, with a minimum of 9½d. per lb. The Cotton Bounty Act, as amended in 1955, extended the period of the guaranteed return for three years to 31st December, 1958. The guaranteed return has remained at 14d. per lb. of seed cotton since the 1953 season and the Government has announced that the guaranteed return for 1957 and 1958 seasons will not be less than 14d. per pound.

2. Area and Production.—The area under cultivation and the production in Queensland for the years 1952 to 1956 are shown hereunder together with the average for the period of ten years ended 1939. Details of the production of ginned cotton are derived from published statistics of the Queensland Cotton Marketing Board.

COTTON: AREA AND PRODUCTION IN QUEENSLAND.

1954-55				1,365	43,218	44,583	47,098
1955-56				2,164	37,614	39,778	45,262

# § 23. Financial Assistance to Primary Producers.

Note.—See also Chapter XXI.—Public Finance, page 795.

Direct financial assistance to primary producers by the Commonwealth Government takes the form of bounties, subsidies and other financial assistance. Brief details of some of the more important payments are given below:—

(i) Cotton Bounty. The Cotton Bounty Act provides for payment of a bounty on seed cotton delivered by growers to processors. The present rate of bounty is designed to give growers an average return of 14d. per lb. The total payment in 1956-57 was £150,665 in respect of 6,390,685 lb. of cotton. In 1955-56, the total payment was £67,284 in respect of 5,650,785 lb.

(ii) Tractor Bounty. Under the Tractor Bounty Act, bounties are payable on tractors produced and sold for use in Australia. In 1956, the period for payment of bounty was extended for three years from 24th October, 1955. The rate of bounty, which has increased from time to time, varies according to the belt horse-power of the engine. A further

<sup>(</sup>b) Not yet available.

amendment to the Act in 1956 widened the Scheme to include tractors of higher belt horse-power than previously. Payments in 1956-57 amounted to £158,303 on 797 tractors as compared with €55,034 on 253 tractors in 1955-56.

- (iii) Dairy Products Bounty. Under the provisions of the Dairy Industry Assistance Act 1952, a subsidy is paid to dairymen to ensure them a return equal to the average cost of production of their produce. The Dairy Industry Act 1957, provided for continuation of the scheme for a further five years. In 1956-57, total payments amounting to £13,499,974 were made compared with £14,499,587 in 1955-56.
- (iv) Flax Fibre Bounty. From 1954 to 1957, a bounty was paid on scutched flax fibre produced from flax grown in Australia. In 1957, the Act was amended to provide for the calculation of the bounty payable on the basis of fibre sold, in lieu of fibre produced. In 1956-57, payments amounted to £49,823. Expenditure in 1955-56 was £58,070.

Other forms of financial assistance to primary producers include payments for Cattle Tick Control, the Dairy Industry Extension Grant, Flood, Drought and Bush Fire Relief, Food Production, Expansion of Agricultural Advisory Services and Assistance to the Tobacco Industry.

#### § 24. Fertilizers.

1. General.—In the early days of settlement in Australia, scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture and the relevant Commonwealth authorities, such as the Bureau of Agricultural Economics and the Commonwealth Scientific and Industrial Research Organisation, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill, acting also as a fertilizer-distributor, has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive. During the last few years, the application of fertilizers from aircraft, particularly to pastures, has become a feature of modern farm technique, and has enabled the artificial fertilization of some areas which would not be readily accessible to ground machinery. For further details, see § 25 below.

In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features is given in Official Year Book No. 12, p. 378.

2. Imports and Exports.—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphate and is sufficient for local requirements.

The chief sources of Australia's supplies of rock phosphate are Nauru, Christmas Island (Indian Ocean) and Gilbert and Ellice Islands. Sodium nitrate is obtained chiefly from Chile.

The imports of artificial fertilizers during the five years ended 1956-57, compared with average imports for the period 1934-35 to 1938-39, are shown in the following table:—

AKII	FICIAL	FERTILIZ	FK2: IMI	OKIS IN	ITU AUSI	KALIA.	
Fertilizer.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956-57.

Total	tons	682,457	1,295,675	1,190,634	1,161,456	1,481,700	1,400,108
	£'000	1,144	3,002			4,047	4,338

Exports of fertilizers (practically all of which are manufactured locally) amounted to 16,622 tons valued at £380,000 in 1956-57 compared with 1,962 tons valued at £37,000 in 1955-56 and 4,826 tons valued at £34,000 for the average of the five years ended 1938-39.

3. Quantities Used Locally.—Information regarding the area fertilized with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1956-57 season is given in the following table. Details of the area manured with natural manure (stableyard, etc.) are no longer collected.

#### AREA FERTILIZED AND QUANTITY OF ARTIFICIAL FERTILIZERS USED, 1956-57.

State of Tarrite on	Area Fe	rtilized ('000	Acres).	Fertilizers Used (Tons).			
State or Territory.	Crops.	Pasture Lands.	Total.	Crops.	Pasture Lands.	Total.

(a) Not available.

4. Local Production.—Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1955-56 was 54, made up as follows:—New South Wales, 15; Victoria, 9; Queensland, 8; South Australia, 8; Western Australia, 6; and Tasmania, 8. The production of superphosphate in Australia during 1956-57 amounted to 1,975,000 tons.

#### § 25. Aerial Agriculture.

During recent years, aircraft have been used in agriculture for topdressing and seeding (principally of pastures) and for spraying and dusting of crops and pastures. During the year ended 31st March, 1957, the first year for which data are available, the total area treated by aircraft was 1,465,959 acres—1,002,605 acres were topdressed and/or seeded and 463,354 acres were sprayed or dusted with insecticides, fungicides and herbicides. The following table shows details of area treated and materials used in topdressing and seeding for each State for the year ended 31st March, 1957.

<sup>(</sup>a) Includes Northern Territory. operation is counted once only.

#### § 26. Ensilage.

- 1. Government Assistance in Production.—The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.
- 2. Quantity Made and Stocks Held on Farms.—Information regarding production and farm stocks of ensilage for the years ended 31st March, 1955, 1956 and 1957 are given in the following table.

ENSILAGE: PRODUCTION AND FARM STOCKS.

			(Tons.)			<del></del> -,		
Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.

(a) Not available.

The drought of 1902-3 drew increased attention to the value of stocks of ensilage, and in the following seasons there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought, though far less than would have been the case if more attention had been paid to production during the previous years when there was a surplus of green fodder. The quantities made since that date have fluctuated considerably, but the output increased up to 1939-40 in which year the production was 303,495 tons. During subsequent seasons, output declined to the extremely low level of 94,744 tons during the drought year 1944-45, rising to 180,622 tons in 1947-48 but decreasing again in succeeding years to 110,474 tons in 1951-52. Since then production has increased substantially each year up to 1956-57 when a record quantity of 464,184 tons was made.

<sup>(</sup>b) Area treated with more than one type of material in one

#### § 27. Agricultural Colleges and Experimental Farms.

Agricultural colleges, administered by State Departments of Agriculture, have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agricultural work and livestock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree, they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying, etc., according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are primarily concerned with agricultural research and experimentation, each farm concentrating on problems specific to the district in which it is located. The results of the work undertaken are passed on to farmers at field days, which are held at regular intervals, through publication in various agricultural or scientific journals and through the agricultural extension officers of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations scattered throughout Australia, and sometimes undertakes joint research with the appropriate State authorities. It also has a number of regional laboratories throughout the country. These laboratories conduct research into agronomic problems as they occur in each particular region. The most recently established laboratory is the one at Mareeba, Northern Queensland, which is concerned with all aspects of the culture and production of tobacco. The State Departments of Agriculture study problems of particular significance within their own boundaries. The universities also carry out valuable research work on their own experimental farms.

#### § 28. Tractors on Rural Holdings.

The growth of mechanization in agriculture is indicated by the increase in the number of tractors on rural holdings from 41,943 in 1939 to 211,845 in 1957, an increase of 405 per cent.

The table below sets out the total number of tractors on rural holdings in 1939, and the number of wheeled type and crawler tractors for the five years ended 1957. More detailed information showing the number of tractors classified according to age, horse-power and type of fuel used was compiled for the years ended 31st March, 1954 and 1957. This information is shown in *Primary Industries*, Part 1,—Rural Industries, Bulletin No. 51.

#### § 29. Number and Area of Rural Holdings and Employment Thereon.

Tasmania.

Note.—In New South Wales, in 1955-56, the lists of rural holdings used in the collection of agricultural and pastoral statistics were reconciled with lists of ratable land of one acre or more in extent recorded by country shires for rating purposes. This reconciliation led to

the addition of a number of holdings to the annual collection. To permit continuity of comparison of the statistics included in paras. 1, 3 and 4 of this Section, number and area of holdings, employment, and wages and salaries paid, as recorded for the additional holdings in 1955-56, are set out below.

Number of holdings			4,784
Area of holdings, (acres)			3,131,462
Persons engaged on rural holdings at 31s			
March, 1956—	Male.		Female.
Permanently			
Owners, lessees or sharefarmers	2,943		94
Relatives of owner, etc., not receive	ing		
wages or salary	323		153
Employees, including managers a	ınd		
relatives working for wages or sale	агу 584		15
Total	3,850		262
	<del></del>		
Temporarily	1,068		112
Wages and salaries paid during 1955-56-			
To permanent employees	£340,000	1	£13,000
To temporary employees	£319,000	٠٠ ٢	£13,000

The above data show the only items of agricultural and pastoral statistics which were materially affected by the inclusion of the additional land holdings.

1. Number and Area.—A holding in Australia has been defined by statisticians on a more or less uniform basis and discrepancies which exist are not of sufficient importance to vitiate comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of livestock or the products of livestock.

There are considerable fluctuations from time to time in numbers of very small holdings and it is very difficult to determine in some cases whether or not they are rural holdings within the definition.

In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied under short-term lease or other arrangement and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some states which are also occasionally occupied.

The following table shows the recorded number and area of the holdings in each State for the seasons 1938-39 and 1952-53 to 1956-57.

2. Special Tabulation Relating to Rural Holdings.—(i) Classification by Size of Holding. Some of the information obtained from the 1955-56 Agricultural and Pastoral Census was classified by size of rural holding, and the results of these tabulations are shown in detail

in Primary Industries Part I—Rural Industries, Bulletin No. 51. The table below shows the number and area of Rural Holdings in each State according to size of holding in 1955-56:—

RURAL HOLDINGS: NUMBER AND AREA CLASSIFIED IN AREA SERIES, 1955-56.

The previous occasion upon which such a classification was made was for the 1949-50 season. The following table compares, for Australia as a whole, the number and area of holdings in 1949-50 and-1955-56 according to the size of the holdings. The 1949-50 figures exclude the Northern Territory which affects comparisons mainly in the larger size groups.

<sup>(</sup>b) See NOTE at beginning of § 29.

(ii) Classification by Type. An experimental classification of holdings by type was carried out for New South Wales for 1955-56 in conjunction with the classification by size referred to above. This was the first attempt at a detailed classification of this kind in Australia although a very simple classification into the three categories—agricultural, pastoral or dairying (on the basis of main activity)—had been performed in some earlier years. It is probable that the methods used in the 1955-56 experimental classification will serve as the basis for an Australia wide classification in 1959-60 and thereafter at five yearly intervals.

In the experimental classification carried out in New South Wales, gross receipts at the farm (estimated from data shown on the annual statistical returns) were used as the measure of the relative importance of each type of farming activity on each holding. Holdings for which the total farm value was less than £400 were treated as "sub-commercial" and these together with unused holdings, holdings used for intermittent grazing, and holdings attached to hospitals, prisons, etc., were not classified by type of farming activity. Having eliminated these types of holdings, farms were classified in the manner set out in the following paragraph.

Briefly, if a single activity accounted for 50 per cent. or more of the total gross receipts, that activity determined the main holding type. Where no single activity accounted for 50 per cent. of the total gross receipts, the holdings were classified as "multi-purpose". Principal exceptions to this general rule were holdings reporting sheep and wheat, or dairy cows and pigs. In the former case, the holding was treated as a composite sheep-wheat type if the combined receipts obtained from these activities accounted for 75 per cent. or more of the total gross receipts, and provided the gross receipts obtained from sheep were no more than 4 times and not less than ½ of the gross receipts obtained from wheat. In the latter case, if the combined receipts obtained from dairying and pigs represented 50 per cent or more of total gross receipts, the holding was classified as dairying. Subsidiary activity was recorded where receipts were 50 per cent or more of the gross receipts obtained from the major activity.

The following table sets out details of the number of holdings in New South Wales in 1955-56 classified according to each type of activity. It also shows the area of holdings and the number of permanent male workers in each type.

NEW SOUTH WALES RURAL HOLDINGS CLASSIFIED ACCORDING TO TYPE OF ACTIVITY, 1955-56.

<sup>3.</sup> Employment on Rural Holdings.—The following table shows, for each State of Australia, the recorded number of persons working on rural holdings as at 31st March, 1957. Additional particulars relating to the number of males employed in agriculture are available up to 1941—42 in Official Year Book No. 36, p. 852, and previous issues. Similar details for later years are not available.

PERSONS ENGAGED ON RURAL HOLDINGS AT 31st MARCH, 1957.

4. Salaries and Wages Paid to Employees on Rural Holdings.—Particulars of salaries and wages paid to employees (including amounts paid to contractors) working full-time on rural holdings have been collected uniformly in all States from 1949-50. Details are set out below for each State for the year 1956-57, and for Australia as a whole for the years 1953-54 to 1956-57.

RURAL HOLDINGS: SALARIES AND WAGES(a) PAID TO EMPLOYEES, 1956-57. (£'000.)

#### CHAPTER XXIII.

#### PASTORAL PRODUCTION.

Note.—Except where otherwise indicated, values of Australian oversea trade shown throughout this chapter are expressed as f.o.b., Australian currency, port of shipment.

#### § 1. Initiation and Growth of Pastoral Industry.

1. Livestock Numbers.—A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given in previous issues of the Year Book. Since 1860, annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State Police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia at decennial intervals from that year to 1950, and from 1953 onwards in single years, are given in the following table, and are shown continuously on the graph on p. 931.

LIVESTOCK: AUSTRALIA.

Yea	ır.	Horses.	Cattle.	Sheep.	Pigs.	Yea	ır.	Horses.	Cattle.	Sheep.	Pigs.
1860		432	3,958	20,135	351	1940		1,699	13,080	119,305	1,45

1910	• • •	2,166	11,745	98,066	1,026	1955		803	15,836	130,849	1,297
1920 1930	• •	2,416 1,793	13,500 11,721	81,796 110,568	764 1,072	1956 1957		770 737	16,457 17,257	139,124	1,160

While livestock numbers (particularly sheep) have increased substantially since 1860, marked fluctuations have taken place during the period, mainly on account of droughts which have from time to time left their impress on the pastoral history of Australia. These occurred in 1868, 1877, 1883-4, 1892, 1893, 1895, 1901-2, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41 and 1944-45 to 1946-47.

The years in which the numbers of livestock attained their maxima are as follows:—Horses 1918 (2,527,000); cattle, 1957 (17,257,000); sheep, 1957 (149,802,000); and pigs, 1941 (1,797,000).

The distribution throughout Australia of beef cattle, dairy cattle, sheep and pigs as at 31st March, 1955 was shown in the maps on pp. 909-12 of Official Year Book No. 43.

The numbers of horses, beef cattle and sheep in each State and Territory are shown later in this chapter; similar information for dairy cattle and pigs appears in Chapter XXIV.—Farmyard, Dairy and Bee Products.

- 2. Minor Classes of Livestock.—Statistics of the minor classes of livestock (goats, camels, mules, donkeys, etc.) have not been collected in recent years. The last year in which all States, other than Victoria, collected this information was 1941, when total numbers were as follows:—Goats, 80,366; camels, 2,267; and mules and donkeys, 10,881. Of these, goats were most numerous in Queensland, and camels, mules and donkeys in Western Australia. Further details have been published in earlier issues of the Official Year Book.
- 3. Carrying Capacity of Pastoral Holdings.—The carrying capacity of pastoral holdings has been increased in recent years by the succession of good seasons since 1946-47. Other important contributing factors have been the reduction of rabbit infestation by the introduction of myxomatosis, and increased attention to pasture improvement.

Since myxomatosis was first introduced in 1950 there has been a dramatic increase in the spread of the disease over much of Australia and in many areas the rabbit population is at the lowest level for many years.

Statistics of the area under sown grasses and clovers have been collected on a uniform basis in all States since 1952-53 only, but here also there are indications that the area sown has been considerably increased. In 1956-57, the area under sown grasses and clovers

(excluding native grasses) totalled 32.6 million acres, an increase of 4.2 million acres (15 per cent.) over 1955-56 and 11.5 million acres (55 per cent.) over 1952-53. In recent years, the sowing and top-dressing of pastures has been facilitated by the increasing use of aircraft in these operations, an area of 1.0 million acres being sown and/or top-dressed in the year ended March, 1957.

4. Value of Pastoral Production.—(i) Gross, Local and Net Values, 1955-56. Values of pastoral production for each State are shown for 1955-56 in the following table. Further details of the source of the information and an explanation of the terms used in this compilation will be found in Chapter XXX.—Miscellaneous. Maintenance costs have not been computed in all States and depreciation has not been deducted; consequently the net values are inflated to the extent of these costs.

(b) No allowance has been made for costs of power, power kerosene, petrol and other oils. (c) Includes estimates for Northern Territory and Australian Capital Territory.

5. Indexes of Quantum and Price of Pastoral Production, 1952-53 to 1956-57.—The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average "prices" of farm products realized in the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. For further details of the methods of calculating these indexes and of the weights used see Chapter XXX.—Miscellaneous.

## INDEXES OF QUANTUM(a) AND PRICE OF PASTORAL PRODUCTION: AUSTRALIA.

Total' Pastoral	531	534	489	451	529

<sup>(</sup>a) Index of value at constant prices, i.e., quantities revalued at average unit values of base years (1936-37 to 1938-39). (b) Subject to revision.

Although it is not easy to obtain strictly comparable particulars for other countries, it appears from data published by the Food and Agricultural Organization of the United Nations in its Food Balance Sheets that in recent years consumption of meat in Australia has been at approximately twice the level of that in Canada and about one and a half times the level of that in the United States of America.

<sup>6.</sup> Consumption of Meats.—The quantity of meat (including cured and canned meat) in terms of carcass weight and edible offal available for consumption in Australia in 1956-57 was 1,001,781 tons. This is equivalent to 235.3 lb. per head compared with 231.6 lb. per head in 1955-56, and an average of 253.0 lb. during the years 1936-37 to 1938-39.

- 7. Marketing of Meat.—(i) General. The Australian Meat Board, consisting of representatives of producers, processers, exporters and the Commonwealth Government, is responsible for the control of all exports of Australian meat and meat products. Further information on the powers, etc., conferred on the Board under the Meat Export Control Act 1935–1953 was given on p. 801 of Official Year Book No. 40.
- (ii) United Kingdom Long-term Purchase Agreements. Details of the long-term meat contracts with the United Kingdom Government from the outbreak of the 1939-45 War up to 30th June, 1952 and of the Fifteen Year Meat Agreement (1952-67) were given on p. 710 of Official Year Book No. 41 and in earlier issues of the Year Book.

The Fifteen Year Meat Agreement (1952-67) between the United Kingdom and Australian Governments has as its objectives the promotion of meat production in Australia enabling increased exports to be made to the United Kingdom and the provision of a satisfactory market in the United Kingdom for that meat. It covers chilled and frozen beef, frozen veal, frozen mutton and lamb, frozen cattle and sheep sundries and edible offal.

- (iii) Cessation of Bulk Purchasing. Following the announcement in September, 1953, that the United Kingdom Ministry of Food would cease bulk purchasing of meat, arrangements were made between the Australian Meat Board and the Ministry for the reversion to private trading in the United Kingdom. The main features of the arrangements are:—
  - (a) Mutton and lamb exported after 1st July, 1954, and beef, veal and pig meats exported after 1st October, 1954, direct to United Kingdom importers are to be sold on the open market under methods similar to those which applied pre-war.
  - (b) The following minimum prices, to operate until 30th September, 1955, were agreed upon:—Beef and veal, 13.18d. stg. f.o.b. per lb.; lamb, 13.61d. stg. f.o.b. per lb.; and mutton, 6.05d. stg. f.o.b. per lb. The minimum prices are to be reviewed for subsequent years.
  - (c) In the event of market prices for the various classifications of meat averaging below the minimum, the Ministry is to make a payment to the Australian Government corresponding to the amount of the deficiency. So as to determine the extent of any deficiency, a procedure designed to measure as accurately as possible the weighted average level of wholsesale prices of Australian meat on the United Kingdom market has been agreed upon.
- (iv) Private Trading. After eight months of open trading, the Board estimated that a deficiency payment would be received in respect of beef for the first year. In order to make arrangements for this anticipated deficiency to be passed on to the producer, the Meat Agreement (Deficiency Payments) Act was passed by the Commonwealth Government in May, 1955. Payments were to be made on the understanding that they were, or would be, reflected in the price paid to producers.

To make provision for recoupment by the Board of any overpayment, the Meat Export (Additional Charge) Act was also passed in May, 1955.

Negotiations were made in Australia during August and September, 1955, to review minimum prices and the working of the Agreement generally. The following minimum prices were fixed for the three years ended 30th September, 1958:—For beef and veal and lamb the same as for the year ended 30th September, 1955, and for mutton the average prices realized to the end of April, 1955, (approximately 5.8d. stg. per lb.). In addition, minimum beef and veal prices were fixed for the three years 1958-61 at 5 per cent. below those for the 1955-58 period. Under the terms of the Agreement, Australia will be entitled to export 10,000 tons of beef, veal, lamb and mutton to destinations other than the United Kingdom and the Colonies. Additional free quotas can be requested and sympathetic consideration can be expected for any such requests should depressed prices or other circumstances justify an approach of this kind.

Under this arrangement, for the year ended 30th September, 1956, an additional 5,000 tons of beef for export to any destination was agreed upon.

Because of a rise in beef prices in the United Kingdom, the deficiency payments made by the Board during the year ended 30th September, 1955, exceeded the sum received from the United Kingdom for the same period. In an endeavour to recoup some of this overpayment, under the terms of the Meat Export (Additional Charge) Act, a levy of one eighth of a penny per lb. was imposed on certain classes of beef exported to the United Kingdom out of stocks placed into store from 1st February to 16th April, 1956.

Since the beginning of the 1955-56 season on 1st October, 1955, beef prices in the United Kingdom have been consistently below the level of the guarantee and consequently Australia has "earned" regular deficiency payments. The rates of payment made by the Australian Meat Board during the 1954-55 and 1955-56 seasons were given on pp. 888-9 of Official Year Book No. 43. For the 1956-57 season the rate was 1½d. per lb. to the end of December. It was increased to 3d. per lb. for January and February, and was continued at this rate for bone-in beef right through 1957; the rate on bone-out beef however, was increased to 4d.per lb. from the beginning of March until the end of December, 1957. The Australian

CATTLE. 921

Meat Board not only maintained bounty payments at these rates on beef placed into store for export to the United Kingdom during 1957, but commenced 1958 with sufficient funds in hand to continue bounty payments at the same basic rates for that year.

Deficiency payments received from the United Kingdom in 1954-55 were £150,000; in

1955-56 they were £3.25 million and in 1956-57, £5.93 million.

For 1958, a new "chiller" grade of export beef was introduced. Beef of the new grade, whether exported in the chilled or frozen form receives a bounty of 5d. per lb. The bounty on bone-out piece beef has been increased from 4d. to 5d. per lb., and on certain classes of bone-in piece beef from 3d. to 5d. per lb. The basic rate of 3d. per lb. has been maintained for other 1st and 2nd quality quarter beef.

In July and August, 1956, the annual review of the operation of the Agreement took place in London. It was agreed that Australia be entitled to export 15,000 tons of beef, weal, mutton and lamb to destinations other than the United Kingdom and Colonies during each of the meat years 1956-57 and 1957-58.

#### § 2. Horses.

1. Distribution throughout Australia.—About 80 per cent. of the total number of horses in Australia are in the States of New South Wales, Queensland and Victoria. In the following table, figures are shown for each State and Territory for the years 1953 to 1957 in comparison with the average for the years 1935 to 1939:—

HORSES	:	NUMBER.
C	'n	OO )

					( 000.)					
Year.		N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Average, 19	935									
to 1939		537	355	444	198	154	31	33	1	1,753
1953		298	154	282	57	50	18	35	1	895
1954		280	141	273	52	49	17	37	1	850
1955		258	132	267	49	47	16	33	1	803
1956		247	119	261	44	46	15	37	1	770
1957		235	108	255	41	45	14	38	1	737

The number of horses in Australia attained its maximum during 1918, when a total of 2,527,149 was recorded. The United States of America recorded its highest number in the same year and Canada in 1921. The number in Australia has declined considerably since 1918 owing to the mechanization of transport and farming. During the period 1918 to 1957, the decrease in numbers has averaged 45,000 per annum.

A graph showing the number of horses in Australia from 1860 onwards appears on p. 931.

The percentage distribution of the number of horses in each State and Territory for 1957 was:—New South Wales, 32; Victoria, 15; Queensland, 34; South Australia, 6; Western Australia, 6; Tasmania, 2; and Northern Territory, 5.

- 2. Oversea Trade in Horses.—(i) Exports. The export of horses from Australia during the early years of this century was fairly considerable, averaging about 15,000 head per annum between 1901 and 1920, exclusive of those used for war purposes during the 1914–18 War. Since then, exports have gradually declined and in 1956–57 amounted to only 682.
- (ii) Imports. The few horses imported into Australia consist mainly of valuable stud animals from the United Kingdom and racehorses from New Zealand. The total number imported in 1956-57 was 374 valued at £376,715.

#### § 3. Cattle.

1. Purposes for which Raised.—Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry led to a considerable increase in numbers and an improvement in quality of the dairy herds in the coastal districts of Victoria, New South Wales and southern Queensland in particular, the portion of Australia in the temperate zone which is best adapted to this industry. On the other hand, beef-producing cattle are more widely distributed, particularly in the eastern States, and are raised in areas unsuitable for dairy cattle, such as the tropical area of northern Queensland, the Northern Territory, and the Kimberley district in the north of Western Australia.

2. Distribution throughout Australia.—Until 1880, New South Wales was the principal cattle-raising State, but in that year Queensland took the leading position, which it has since maintained. There was a very rapid increase in the number of cattle in Australia up to the year 1894, when 12,312,000 head were depastured. From 1895 onwards, however, the effects of droughts and the ravages of tick fever reduced the number to 7,063,000 in 1902. Following the disastrous drought which terminated in the latter year, the herds were gradually built up, and, despite recurring droughts, they continued to increase up to 14,441,000 in 1921. Thereafter the number dropped each year till 1929, largely owing to the decline in the oversea demand for frozen beef. With the expansion of dairying it recovered to 14,049,000 in 1934, but from that year declined again to 1939 when it stood at 12,862,000. The upward movement which commenced in 1940 was continued until 1944, the total number of cattle (14,184,000) in the latter year being at its highest level since 1923. Drought conditions and other factors caused a decline in numbers to 13,427,000 in 1947. This was followed by a general upward movement in numbers to a record 17,257,000 in 1957. A graph showing the number of cattle in Australia from 1860 appears on p. 931.

The numbers of cattle (beef and dairy) in the several States and Territories in each year 1953 to 1957 compared with the average for the years 1935 to 1939 are shown below.

CATTLE	:	NUMBER.
(	'n	00.)

				( 000.,					
Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Aust.
Average, 1935 to 1939 1953 1954 1955 1956 1957	3,198 3,649 3,554 3,461 3,678 3,911	1,952 2,297 2,370 2,456 2,616 2,765	6,018 6,751 7,086 7,238 7,331 7,462	331 483 491 524 566 621	819 846 830 861 897 957	262 275 295 319 332 354	889 936 966 969 1,028 1,176	9 10 9 8 9	13,478 15,247 15,601 15,836 16,457 17,257

Although the proportion was not as high as it has been in the past, Queensland was carrying 43 per cent. of the cattle in Australia in 1957. The percentage in each State and Territory during that year was:—New South Wales, 23; Victoria, 16; Queensland, 43; South Australia, 3; Western Australia, 6; Tasmania, 2; and Northern Territory, 7.

Maps showing the distribution of beef and dairy cattle in Australia have been published in previous issues of the Official Year Book (see No. 43, pp. 909-10 for 1955; No. 39, pp. 905-6, for 1948; No. 34, pp. 453-4, for 1938-39; and No. 22, p. 660, for 1924-25).

3. Classification of Cattle According to Purpose.—Of the total number of cattle in Australia in 1957, 12,139,000 or 70 per cent. were classified as beef cattle. The numbers classified as beef cattle in the several States and Territories during the years 1943 and 1953 to 1957 were as follows:—

BEEF CATTLE: NUMBER.

			<del></del>			( 000.)	· · · · · · · · · · · · · · · · · · ·	· · · · · ·

A classification of numbers on this basis is not available prior to 1943.

Particulars relating to dairy cattle numbers will be found in Chapter XXIV.—Farm-yard, Dairy and Bee Products.

- 4. Size Classifications of Cattle Herds.—A special series of tabulations relating to rural holdings in Australia was compiled for 1955-56 and published in full detail in a series of mimeographed bulletins, Size Classification of Rural Holdings, 1955-56. Condensed tables also appear in Primary Industries, Part I, Bulletin No. 51. The tables relating to beef and dairy cattle show classifications according to size of herd, area of holding, area of wheat for grain and area of sown pastures.
- 5. Comparison with other Countries.—The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world for the years 1936-40 and at the latest available date. The figures, which, in general, have been compiled by the United States Department of Agriculture for publication in Foreign Crops and Markets and Foreign Agriculture Circular, relate to areas embraced by post-war boundaries, but do not cover identical areas for the two periods in all cases.

CATTLE: NUMBER IN VARIOUS COUNTRIES. ('000.)

	Country.			Average, 1936–40.(a)	Year and Month.	Number.
India(b)				180,000	1955 (January)	209,000
United States o	f America			66,706	1957 (January)	95,166
U.S.S.R.				59,800	1957 (October)	70,400
Brazil				40,807	1956 (December)	64,000
Argentina				33,762	1956 (July)	45,400
Pakistan(b)				33,000	1955 (January)	30,000

Germany, Fede	ral Republ	ic of		12,114	1957 (December)	11,815

<sup>(</sup>a) In some cases census for a single year, and in others an average for two to four years. (b) Includes buffaloes.

6. Imports and Exports of Cattle.—The products of the cattle-raising industry figure largely in the export trade of Australia, although until recently the export of live cattle has never been large. In 1956-57, exports of cattle mainly to the Philippines for slaughter, amounted to 18,360 valued at £754,000. The number of cattle imported is small, consisting, as in the case of horses, mainly of valuable animals for stud purposes. Details for the years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 are as follows.

CATTLE: IMPORTS AND EXPORTS, AUSTRALIA.

1955-56				304	229	8,025	475
1956-57				145	123	18,360	754

The average value per head of the cattle imported during the last five years was £292, while the average value per head of the cattle exported during the same period was £48-

7. Cattle Slaughtered.—The numbers of cattle slaughtered during each of the years ended June, 1953 to 1957 compared with the average for the years 1934-35 to 1938-39 are shown in the following table:—

### CATTLE (INCLUDING CALVES) SLAUGHTERED.

('000.)

		Slaughterings passed for Human Consumption.

<sup>(</sup>a) Year ended March.

9. Consumption of Beef and Veal.—For the three years 1936-37 to 1938-39, the average annual production of beef and veal in Australia was 569,000 tons of which 127,000 tons were exported, leaving a balance of 442,000 tons (or the carcass equivalent of 144 lb. per head per annum) available for consumption as fresh and canned meat. Since the 1939-45 War, consumption per head of beef and veal has been at a somewhat lower level. In 1956-57 it amounted to 132.7 lb. per head, consisting of 129.3 lb. of carcass meat and 3.4 lb. of canned meat (carcass equivalent).

In the following table, details of the production and disposal of beet and veal are shown or the years 1952-53 to 1956-57 compared with the average for the three years 1936-37 o 1938-39.

<sup>(</sup>b) Year ended previous December.

<sup>(</sup>b) Year ended previous December.

## PRODUCTION AND DISPOSAL OF BEEF AND VEAL (BONE-IN WEIGHT) : AUSTRALIA.

('000 tons.)

			:				_	Consumpt tralia as Hu	ion in Aus- ıman Food.

(a) Included with exports.

10. Exports of Frozen Beef and Veal.—The export of frozen meat from Australia dates from about 1881, and since that year the trade has grown considerably. The quantities and values of frozen beef and veal exported during the five pre-war years ended 1938-39 and in each year 1952-53 to 1956-57 are shown in the following table:—

#### EXPORTS OF FROZEN BEEF AND VEAL: AUSTRALIA.

	Yea		 Exports of Froz Bee		Exports of F	rozen Veal.
	I Ca		Quantity.	Value.	Quantity.	Value.
			 '000 lb.	£'000	'000 lb.	£'000
Average, 1	934-35 t	o 1938-39	 231,355	3,188	10,353	165
1952-53			 189,176	13,443	3,324	339
1953-54			 313,198	21,697	3,779	349
1954-55			 271,772	21,408	4,626	491
1955-56			 306,354	22,025	4,689	495
1956-57			 331,170	22,835	3,391	409

The largest purchaser of Australian beef and veal is the United Kingdom, which during 1938-39 took about 90 per cent. of the total shipments. In 1956-57, shipments to the United Kingdom were valued at £17,007,000 or 73 per cent. of the total value of beef and veal exports whilst exports to other Commonwealth countries amounted to £2,573,000 or 11 per cent. of the total.

In view of the preference overseas for chilled beef, the Australian beef industry was at a serious disadvantage until investigations proved that beef could be successfully transported from Australia to the United Kingdom in a chilled condition. Trial shipments began in 1932-33 and exports in subsequent years increased to a maximum of 58,963,000 lb. in 1938-39. However, the advent of war seriously affected the export trade in chilled beef, which declined to a negligible amount after 1939-40. In 1956-57, chilled beef exports were 13,991,000 lb. valued at £943,000 whilst frozen beef exports amounted to 317,264,000 lb. valued at £21,920,000.

#### § 4. Sheep.

- 1. Initiation of the Pastoral Industry.—The suitability of the Australian climate and general conditions for the production of a high class of wool were recognized at an early date by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. While it would appear that the introduction of the merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.
- 2. Movement in Sheep Numbers in Australia.—Fluctuations in the number of sheep recorded in Australia for each year from 1860 onwards may be seen from the graph on p. 931. Up to 1945, there were five marked periods of decline, but the losses were made up rapidly. In each of the years 1925 to 1945, the sheep flocks exceeded 100 million, reaching 125.2 million in 1942. During the three years ended 1947, however, a sharp decline to 95.7 million occurred. This was largely attributable to the severe drought conditions experienced during 1944, 1945 and 1946. The passing of the drought and consequent re-stocking have resulted in a steady increase in sheep numbers which at 31st March, 1957, amounted to 149.8 million, the highest ever recorded.

The following table shows the approximate movement in sheep numbers in Australia in 1938-39 and 1952-53 to 1956-57.

SHEEP AND LAMBS: ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA. ('000.)

Season.		Lambs Marked.	Excess of Exports.	Sheep and Lambs Slaughtered.	Estimated Number of Deaths from Disease, Drought, etc.(a)	Number at 31st March.	Annual Net Increase (+) or Decrease(-)

1952–53		31,778	84	21,034	5,235	123,072	+ 5,425
1953-54		32,231	86	20,922	7,351	126,944	+ 3,872
1954-55		32,804	97	22,454	6,348	130,849	+ 3,905
1955-56		36,914	97	21,180	7,362	139,124	+ 8,275
1956–57	• •	39,902	122	19,142	9,960	149,802	+ 10,678

<sup>(</sup>a) Balance figure. (b) As at 1st January, 1939—Queensland, South Australia, Western Australia, Tasmania, Northern Territory; as at 1st March, 1939—Victoria.

3. Distribution throughout Australia.—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing almost one half of the sheep of Australia.

Maps showing the distribution of sheep in Australia have been published in previous issues of the Official Year Book (see No. 43, p. 911, for 1955; No. 39, p. 907, for 1948; No. 34, p. 432, for 1938-39; and No. 22, p. 659, for 1924-25).

The numbers of sheep in the several States and Territories at 31st March of each year 1953 to 1957 compared with the average for the years 1935 to 1939 are shown in the following table:—

SHEEP: NUMBER. ('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Aus- tralia.
Average, 1935 to 1939 1953 1954 1955 1956 1957	51,774	17,555	21,061	8,515	9,839	2,312	23	240	111,319
	57,461	21,368	17,030	12,036	12,475	2,421	34	247	123,072
	59,639	21,438	18,194	11,838	13,087	2,465	31	252	126,944
	59,200	22,330	20,222	12,817	13,411	2,595	29	245	130,849
	62,988	23,343	22,116	13,585	14,128	2,673	33	258	139,124
	67,670	25,831	23,190	14,984	14,887	2,943	30	267	149,802

Except when affected by drought, the relative number of sheep depastured in the different States in recent years has remained fairly constant.

The percentage distribution in 1957 was:—New South Wales, 45; Victoria, 17; Queensland, 16; South Australia, 10; Western Australia, 10; and Tasmania, 2.

4. Classification of Sheep According to Age, Sex and Breed.—In the following table, numbers of sheep in Australia are classified according to age and sex at 31st March of the years 1953 to 1957.

SHEEP: AGE AND SEX, AUSTRALIA.

<sup>(</sup>a) As at 31st December, 1955. (b) Merino comeback is the progeny of a crossbred merino ewe and a merino ram, i.e., finer than half-bred. (c) Half-bred and coarser.

- 5. Numbers of Sheep on Rural Holdings.—A special series of tabulations relating to rural holdings in Australia was compiled for 1955-56 and published in full detail in a series of mimeographed bulletins—Size Classification of Rural Holdings 1955-56. Condensed tables also appear in Primary Industries, Part I. Bulletin No. 51. The tables relating to sheep farming show classifications according to size of flock, area of holding, area of wheat for grain and area of sown pasture.
- 6. Comparison with other Countries.—As regards the size of its flocks and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep raising countries of the world. In 1955-56, Australian flocks numbered 139 million sheep, compared with an estimate of 200 million for the U.S.S.R., China, and Eastern Europe, with about 45 million in Argentina and about 40 million in New Zealand. The total world sheep population was estimated at about 890 million in 1955-56. Further details of sheep numbers in the principal wool producing countries of the world for 1938-39, 1954-55 and 1955-56 are given in the table on p. 935.
- 7. Oversea Imports and Exports of Sheep.—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively little importance. On 27th November, 1929, the export of stud merino sheep was prohibited, except with the approval of the

Minister for Primary Industry. Exports of sheep are now principally for slaughter overseas. Consignments for this purpose in recent years were made chiefly to Singapore from Western Australia. The following table shows the imports and exports of all sheep for the years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39.

SHEEP:	<b>IMPORTS</b>	AND	EXPORTS,	AUSTRALIA.

9. Production of Mutton and Lamb.—Details of the production of mutton and lamb in each State and Territory are shown below:—

## PRODUCTION OF MUTTON AND LAMB. (Tons.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Average, 1934–3; to 1938–39	103,706 125,731 124,530 122,499	135,149 153,030 135,622 155,611 146,228 121,253	20,166 20,371 19,692 18,550 23,020 23,866	29,710 51,484 45,471 49,853 44,339 42,563	20,476 32,506 27,266 28,413 32,759 33,303	6,035 10,656 11,073 11,901 11,778 12,607	1 82 72 78 59 49	396 1,230 1,086 1,259 1,333 1,198	315,639 395,090 364,812 388,164 380,131 366,786

10. Consumption of Mutton and Lamb.—For the three years 1936-37 to 1938-39, the annual production of mutton and lamb averaged 319,000 tons of which 88,900 tons were exported leaving a balance of 230,100 tons (or the carcass equivalent of 74.8 lb. per head per annum) available for consumption.

<sup>(</sup>b) Average, years ended December 1934 to 1938.

Sheep. 929

Civilian consumption of mutton and lamb (in carcass equivalent weight including that used for canning) during the 1939-45 War rose substantially, but fell again in 1946-47 and up to 1951-52 was lower than in pre-war years. It rose during the years 1952-53 to 1954-55 to a steady level of just over 78 lb. per head, but fell again in 1955-56 to 76.1 lb. and in 1956-57 to 75.1 lb. per head.

In the following table details of the production and disposal of mutton and lamb are shown for the periods stated:—

# PRODUCTION AND DISPOSAL OF MUTTON AND LAMB (BONE-IN WEIGHT) : AUSTRALIA.

('000	tons.)
-------	--------

<sup>11.</sup> Exports of Frozen Mutton and Lamb.—The export trade in mutton and lamb preserved by cold process expanded rapidly up to 1913 when 205 million lb. were shipped. It declined in subsequent years and it was not until 1942–43 that it almost reached this level again. In earlier years, shipments consisted mainly of frozen mutton, but in 1923–24 lamb supplanted mutton and the exports of lamb were largely responsible for the increase in total shipments during the ten years to 1942–43. Exports have, however, fallen again since 1942–43 and in 1956–57 amounted to only 76,274,000 lb. consisting of 53,262,000 lb. lamb and 23,012,000 lb. mutton.

The quantities and values of exports of frozen mutton and lamb in each year 1952-53 to 1956-57 compared with the average for the five years ended 1938-39 are shown in the following table:—

EXPORTS O	F FROZEN	MUTTON	AND	LAMB:	AUSTRALIA.
-----------	----------	--------	-----	-------	------------

Year.				Exports o		Exports o Lan		Exports of Frozen Mutton and Lamb.		
				Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	
				'000 lb.	£'000.	'000 lb.	£'000.	'000 lb.	£'000.	
Average,	1934-35 to	1938-39		40,584	656	153,606	4,208	194,190	4,864	
1952-53				80,774	2,790	86,070	5,971	166,844	8,761	
1953-54				55,590	1,964	44,102	3,298	99,692	5,262	
1954-55				33,811	1,626	94,982	10,191	128,793	11,817	
1955-56				34,657	1,885	81,626	7,867	116,283	9,752	
1956-57				23,012	1,326	53,262	4,773	76,274	6,099	

As with beef, the principal customer in this trade is normally the United Kingdom. In 1956-57, exports of mutton and lamb to this country represented 66 per cent. and 83 per cent., respectively of the total quantities exported.

#### § 5. Wool.

1. General.—Australia is the leading wool-growing country in the world. With less than one-sixth of the world's sheep, Australia produces more than one-quarter of the world's wool, (30 per cent. in 1956-57) and about one-half of the total fine-quality merino wool. The bulk of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonized wool and wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The remainder, which is used by Australian manufacturers, has amounted to only five per cent. of the total production (greasy basis) in recent years.

The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on p. 935.

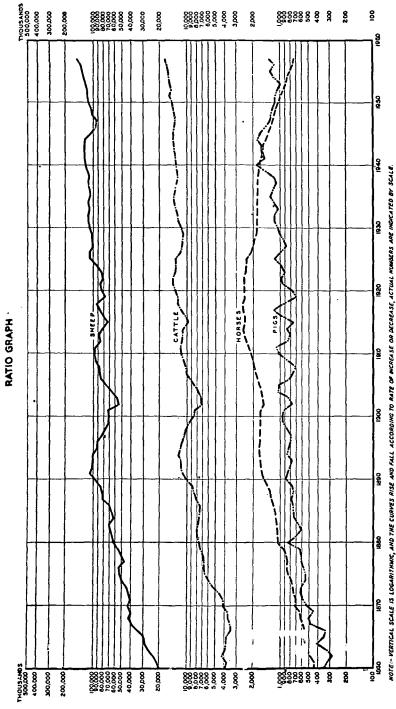

2. Greasy and Scoured Wool.—Whether the weight of the wool clip should be stated as "in the grease" or as "clean" is a matter which seriously affects comparisons between the clips of different seasons and of different countries. The quantity of grease and other extraneous matter in a fleece differs, not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep.

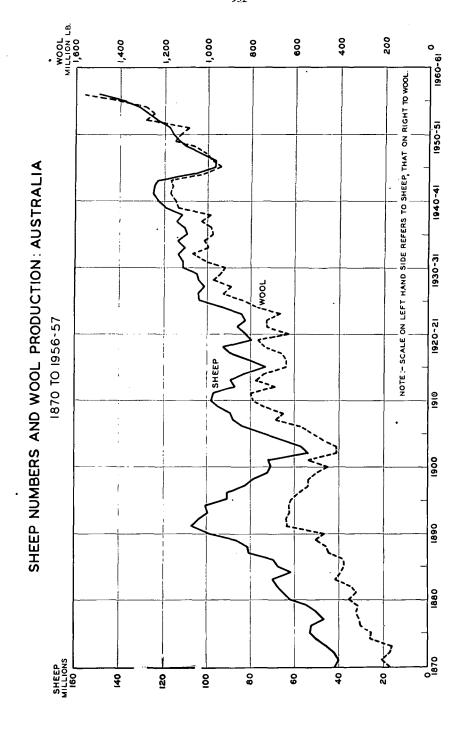

From 1946-47 to 1952-53, the Australian Wool Realization Commission, and from 1953-54, the Wool Statistical Service, has assessed annually the clean yield of the Australian wool clip. A steady rise was recorded from 53.4 per cent. clean yield from greasy in 1946-47 to 57.5 per cent. in 1951-52 and 1952-53. This was followed by a fall to 55.7 per cent. in 1953-54 but in succeeding years there was a further steady rise to 57.7 per cent. in 1956-57. A standard factor of 93 per cent. is taken as the clean yield of Australian scoured wools.

Wool scoured, washed and carbonized in Australia before export, however, has a clean yield somewhat lower than for the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonized includes a large proportion of dirty and low-grade wool. In recent years, it has approximated 53 per cent. The quantity of this wool exported during 1956-57 was approximately 12 per cent. of the total raw wool exports (excluding wool exported on skins) in terms of greasy.

3. Production.—The bulk of the Australian wool production is shorn from live sheep; in recent years, approximately 3 per cent. has been obtained by fellmongering and about 5 per cent. has been on skins exported. Statistics of wool production are compiled from data received from growers, fellmongers, etc. The following table shows the production for the five years 1952-53 to 1956-57 compared with average production for the five years ended 1938-39. Particulars of the gross value of wool produced are based, for shorn wool, upon the average price realized for greasy wool sold at auction, and for skin wools on prices recorded by fellmongers and skin exporters.

- (a) Estimated.
- 4. Care Needed in Comparing Clips.—In comparing successive clips, allowance must be made for the circumstance that, owing to climatic or other conditions, the time of shearing may be so far delayed in some areas that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth.
- 5. Average Weights of Fleeces Shorn.—The average weights of sheep and lamb fleeces shorn in each of the States of Australia and in the Australian Capital Territory are shown in the following table for each season 1952-53 to 1956-57 compared with the average for the five seasons 1934-35 to 1938-39.

6. Wool classified according to Quality.—Under control exercised during the 1939-45 War, records were kept of the classification of each lot of wool appraised according to quality, degree of fault and combing or carding type for each of the years 1940-41 to 1945-46. From the resumption of auctions in 1946-47 to 23rd October, 1953, this analysis was continued by the Australian Wool Realization Commission and from 23rd October, 1953, by the Wool Statistical Service, but the basis of the data has been changed to the catalogues of auction sales, and not upon appraisement as previously. The following table provides a detailed analysis of wool sold at auction according to quality, for the years 1952-53 to 1956-57. "Quality" ("64's, 60's, 58's," etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from I lb. of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb. of tops (combed wool) of that particular wool.

7. World Sheep Population and Wool Production.—The following table shows particulars of the sheep population and total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred and carpet type wool for the latest available years compared with prewar years. The data have been taken from reports published by the Commonwealth Economic Committee compiled from questionnaires prepared by the Committee and the International Wool Textile Organization and from other official sources.

In 1956-57, Australia produced 31 per cent. of the world total of all types of wool, the share of the British Commonwealth representing approximately 50 per cent. The principal wool producers, other than Australia, are New Zealand with 10 per cent. of the world total, Argentina, 8 per cent., United States of America, 6 per cent., and Union of South Africa, 6 per cent. Production in the U.S.S.R., China, and Eastern European countries together amounted to 16 per cent. World production of wool (all types) in 1956-57 was about 1,240 million lb. (33 per cent.) greater than the average for 1934-38.

Australia's wool clip is predominantly merino; New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. is largely of the carpet type. World production of merino wool in 1956-57 was 26 per cent. above the average for 1934-38, and the production of crossbred types has risen by about 55 per cent. Carpet wool production has risen by about 14 per cent.

8. War-time Contracts.—(i) Wool. Details of the contract entered into between the Governments of Australia and the United Kingdom for the purchase of the surplus wool clip of Australia for the duration of the war and one full clip thereafter (1939–40 to 1945–46) will be found in Official Year Book No. 36, p. 1106.

(ii) Sheepskins. Details of the war-time contract arrangements for the period April, 1940, to June, 1946, between the Australian and United Kingdom Governments for the purchase of Australia's exportable surplus of woolled sheepskins will be found in Official Year Book No. 37, p. 875.

9. Australian Wool Realization Commission.—The Australian Wool Realization Commission was the Australian subsidiary of a Joint Organization (commonly referred to as "J.O.") set up by the Governments of the United Kingdom, the Commonwealth of Australia, the Dominion of New Zealand and the Union of South Africa, under the title of "U.K.—Dominion Wool Disposals Limited" to dispose of accumulated war-time stocks of Dominion wool held by the United Kingdom Government at the end of the war. Details of the functions and operations of these organizations appear in earlier issues of the Year Book, particularly No. 38 (pp. 919–923).

By the end of 1951, the Joint Organization had disposed of all stocks of wool held and shortly after it went into voluntary liquidation. Liquidation proceedings were completed

on 15th February, 1954.

Australia's share of the profits arising from the operations of J.O. amounted to approximately £93 million (including interest). The task of distributing the profits to growers was entrusted to the Australian Wool Realization Commission and up to May, 1956, all but £2.5 million of the total value of the profits, plus a small amount representing mainly

unclaimed moneys, had been distributed to growers.

The distribution of the remaining £2.5 million was held up by the protracted litigation known as the "Poulton Case". The moneys concerned represented the profits on wool which was submitted by growers for wartime appraisement through dealers. Mr. Poulton, a dealer, sought to establish the right of the dealers to these profits, but the High Court ruled against him on two occasions. The single High Court judgment was given in November 1953, and the unanimous decision of the Full High Court was given in December, 1953. However, as the possibility existed that Mr. Poulton might seek leave to appeal to the Privy Council against the High Courts's decision, the Government withheld distribution for that reason. By May, 1956, Mr. Poulton had not taken any action to seek leave to appeal to the Privy Council and the Government, after consulting its legal advisers, decided to distribute the profits to the growers. The Commission is now engaged in completing this task.

10. Australian Wool Bureau.—(i) General. The Australian Wool Bureau was constituted under the Wool Use Promotion Act 1953 and replaced the Australian Wool Board which was established in 1936. The Bureau's main function is to promote the use of wool by publicity and other means in Australia and overseas.

The Bureau consists of seven members. Of these, six represent wool-growers (three nominated by the Australian Woolgrowers' Council and three by the Australian Wool and Meat Producers' Federation) and are appointed by the Governor-General for a period of three years, while one (the Commonwealth Wool Adviser) represents the Commonwealth Government and is appointed by the Minister for Primary Industry.

Particulars of the wool promotional activities of the Bureau are given in paragraph 12,

Wool Publicity and Research.

(ii) Wool Statistical Service. The Wool Statistical Service, formerly conducted by the Australian Wool Realization Commission, was taken over by the Australian Wool Bureau on 23rd October, 1953. The statistical Service is responsible for the preparation and publication of statistical material relating to the Australian wool market and the composition of the Australian clip and other special statistical work which may be assigned to it.

It is financed out of the income received by the Australian Wool Bureau from wool stores under its control and from an annual contribution by the Commonwealth Government.

A Statistical Service Committee, consisting of the representatives of the Australian Wool Bureau, the Commonwealth Government, wool buyers, wool growers and wool selling brokers' organizations, acts in an advisory capacity to the Australian Wool Bureau.

(iii) Wool Stores. Some three hundred wool stores, formerly the property of the

- (iii) Wool Stores. Some three hundred wool stores, formerly the property of the Joint Organization and purchased from it by the Commonwealth Government, were transferred to the ownership of the Australian Wool Bureau by virtue of the Wool Stores Act 1953. The Bureau formally assumed control of these stores on 11th January, 1954, and at the same time received a substantial sum of money representing accumulated rentals and receipts from sales which had come to hand whilst the stores were held by the Commonwealth Government. Under the Act, the Bureau may only dispose of these stores with the permission of the Minister for Primary Industry and, in the event of war, may be required to return the stores without compensation to the Commonwealth Government. The stores are being let by the Wool Bureau as a commercial proposition. The rental income is used to meet the expenses of maintaining, managing and insuring the stores, to defray the cost of operating the Wool Statistical Service and to help finance the wool promotion activities of the Bureau.
- (iv) The Contributory Charge.—Associated legislation, namely, the Wool (Contributory Charge) Act 1945 (subsequently replaced by the Wool (Contributory Charge) Act (No. 1) 1950–1951 and the Wool (Contributory Charge) Act (No. 2) 1950–1951) and the Wool (Contributory Charge) Assessment Act 1945–1951, provided for a contributory charge to be imposed on all wool produced in Australia and sold, purchased or processed by a manufacturer or exported on or after a date fixed by proclamation. The passage of amending Wool Tax legislation in June, 1952, made it possible to cease collection of the contributory charge at 30th June, 1952, and the legislation under which it was imposed was repealed. Further particulars of the Wool Contributory Charge and the amounts collected appear in Year Book No. 40, pp. 675 and 819.
- (v) The Wool Levy. Whilst the contributory charge legislation, mentioned above, was in force, the Wool Levy, which was imposed by the Wool Tax Act 1936 and the Wool Tax Assessment Act 1936, was temporarily suspended. When the Wool Levy was first imposed in 1936, the rate of tax was 6d. per bale of wool delivered into the store of a wool dealer or wool selling broker, or exported. The proceeds were paid into the Wool Publicity and Research Fund administered by the Australian Wool Board.

When collection of the contributory charge ceased, (i.e., from July 1st, 1952), the Wool Levy again became operative but at a higher rate. This rate was provided for in the Wool Tax Acts (No. 1 and 2) of 1952, under which a rate can be prescribed between the limits of 2s. and 5s. per bale of shorn wool produced. For the years 1952-53 to 1956-57, the rate imposed was 4s, per bale.

- 11. Marketing of Wool:—(i) Minimum Reserve Price Plan. Details of the minimum reserve price plan which was completed by the Governments of Australia, New Zealand, South Africa and the United Kingdom in May, 1951, and which was subsequently rejected at a referendum of wool-growers in Australia, may be found in Official Year Book No. 39, p. 925.
- (ii) Subsidy on Woollen Goods, 1950-51. Details of the subsidy paid on woollen goods manufactured for consumption in Australia from wool sold during the 1950-51 season will be found in Official Year Book No. 41, p. 727.
- 12. Wool Publicity and Research.—(i) Wool Use Promotion. The Wool Use Promotion Act of 1953 defines the powers and functions of the Australian Wool Bureau as including

Wool. 937

measures for promoting, by publicity or other means, the use of wool in Australia or in other countries.

The Bureau is also authorized to take measures for improving the production of wool in Australia and encouraging research directed to the promotion of the use of wool.

The Bureau is associated with the New Zealand Wool Board and the South African Wool Board in maintaining the International Wool Secretariat, which was established in 1937 with head-quarters in London and with branches in fourteen countries. The function of the Secretariat is to promote the use of wool through a broad programme of publicity, education and research.

The activities of the Australian Wool Bureau are financed from the Wool Use Promotion Fund into which are paid the proceeds of the Wool Levy, and contributions from the rental

income of the wool stores as mentioned in 10 (iii) above.

(ii) Research. Until 1945, the Australian Wool Board was responsible for the supervision of economic and scientific research but in that year the Commonwealth Scientific and Industrial Research Organization was made responsible for scientific, technical and biological research into sheep raising and wool production, as well as wool textile research. Economic wool research is the responsibility of the Bureau of Agricultural Economics, a division of the Commonwealth Department of Primary Industry. The economic research work falls into two main categories, namely, farm production economics dealing with economics of wool growing and sheep-station management generally, and commodity research dealing with the economic aspects of the wool industry in Australia and of wool as a commodity in world trade.

To finance the research programme, the Wool Research Trust Account was established under the Wool Use Promotion Act in 1945. Originally, a sum equal to the amount raised by the Wool Levy was paid annually into this account from Consolidated Revenue. The Wool Use Promotion Act, 1953, fixed the rate of contribution at 2s. for each bale of shorn wool produced.

In addition, finance was available for research from the Wool Industry Fund. This Fund was established in 1946 from various moneys accumulated by the Central Wool Committee in war-time.

Under the Wool Research Act, 1957, these sources of income together with an increased Government contribution (now totalling 4s. a bale) and a contribution of 2s. a bale from woolgrowers (collected under the Wool Tax Acts, 1957) were combined into one fund known as the Wool Research Trust Fund. The use of this Fund is limited to sheep and wool research and expenditure therefrom is based on the recommendations of the Wool Research Committee. This committee comprises representatives of the C.S.I.R.O., the Universities, the Department of Primary Industry and other interested bodies.

Ample opportunity is afforded for co-operation with State Departments of Agriculture and other organizations in research and extension activities.

13. Consumption of Wool.—(i) Consumption of Raw Wool. Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonized wool used on the woollen and worsted systems (mill consumption) plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects as they disregard oversea trade in semi-processed wool (e.g., tops and yarn) as well as woollen goods. They are, however, comparatively simple to calculate and are useful in providing an approximate indication of trends in wool consumption. Estimates of raw wool used on the woollen and worsted systems and by felt manufacturers in Australia are shown below for the years 1938–39 and 1952–53 to 1956–57.

Total.   Used on Woollen and Worsted Systems.	Used on Woollen and Worsted Systems		

(ii) Consumption of Locally Processed Wool. As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown above is over-stated to this extent. The series entitled "Consumption of Locally Processed Wool" provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. This series is shown below for the years 1938-39 and 1952-53 to 1956-57. Briefly, the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes, and scoured wool used for felt manufacture. No allowance has been made for oversea trade in woollen piece goods, clothing, etc., because of the obvious difficulties of accurately estimating the wool content of these products.

<sup>(</sup>a) Includes hand knitting yarns used except in 1938-39. containing a mixture of wool and other fibres.

14. Exports of Wool.—(i) Greasy—Quantities. Prior to the 1939-45 War, Australian greasy wool exported overseas was sent principally to the United Kingdom and other European countries. In 1938-39, 42 per cent. of total shipments were sent to the United Kingdom, other important consignees being France, 20 per cent., Belgium, 13 per cent., and Japan, 9 per cent. During the 1939-45 War, exports to the United States of America showed great expansion but have since dwindled to about 3 per cent. Of the total shipments in 1956-57, 25 per cent. went to the United Kingdom, 19 per cent. to Japan, 18 per cent. to France, 10 per cent. to Italy and 9 per cent. to Belgium-Luxemburg. The following table shows the quantities of greasy wool exported, and the principal countries of recorded destination.

# EXPORTS OF GREASY AND SLIPE WOOL. ('000 lb. actual weight.)

Country to which Exported.	Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956–57.

Total Wool	(a)	705,776	681,409	673,507	753,274	856,363

(v) Total Value of Exports. The value of wool (other than wool on sheepskins) exported from Australia during the five years ended 1956-57 averaged 48 per cent. of the total value of exports of merchandise of Australian origin, and during 1956-57 the proportion was 50 per cent. The value during the period under review, together with the principal countries to which wool was exported is shown in the following table.

#### VALUE OF WOOL EXPORTS(a).

(£'000.)

Country to which Exported.	Average, 1934-35 to 1938-39.	1952-53.	1953-54.	1954-55.	1955–56.	1956-57.

Total	48,767	402,907	410,433	353,108	337,529	483,725

- (a) Excludes wool exported on sheepskins.
- (b) Pre-war Germany.
- 15. Local Sales of Wool.—Auction sales are conducted at Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballaarat, Brisbane, Adelaide, Perth, Hobart and Launceston, and are attended by buyers representing manufacturers and merchants in the United Kingdom, France, the United States of America, Japan, U.S.S.R. and many other countries. More than 95 per cent. of the Australian wool clip is now disposed of at auction in Australia.
- 16. Stocks of Wool.—Stocks of raw wool held in Australia at 30th June, 1957, other than wool which had been sold but not shipped, amounted to 83.9 million lb. (as in the grease) of which 58.1 million lb. (39.7 million lb. as greasy and 18.4 million lb. as scoured and carbonized) were held by woollen mills, wool scourers and fellmongers and 25.8 million lb. (unsold wool assumed to be all greasy) were held by brokers. These stocks exclude wool on skins, since this wool is not recorded as production until fellmongered in Australia or exported on skins.

Stocks at 30th June, 1957, were higher than at the same time for any other year since 1950. During the war and post-war years up to 1951, raw wool stocks were exceptionally high because of the large quantities held in Australia by the Australian Wool Realization Commission on account of Joint Organization. They reached a maximum of 1,749.9 million lb. at 30th June, 1945, but declined in each successive year to 30th June, 1952, by which time all Joint Organization stocks had been sold.

17. Price.—Wool is the chief factor in the pastoral wealth of Australia and the nation's prosperity is largely dependent upon its satisfactory sale. During the five years ended 1956-57, the price of greasy wool sold in the selling centres of Australia averaged 74.9d. per lb. compared with the average selling price of 11.5d. per lb. during the ten years ended 1938-39. The average for the nine years ended 1928-29 was 18d. per lb., and for the seven years ended 1913-14, 9d. per lb.

As indicated in para. 8 above, the price of wool during the 1939–45 War was determined by the British Government wool contract. With the return to auction sales since 1945–46, the average price of greasy wool sold rose rapidly from the contract price of 15.45d. per lb. applicable in 1945–46 to the unprecedented level of 144.19d. per lb. in 1950–51. This was followed by a sharp fall in 1951–52 to 72.42d. per lb. or slightly more than half the price in 1950–51. There was, however, a partial recovery to 81.80d. per lb. in 1952–53 and 81.50d. per lb. in 1953–54. There was a further decline in the two following years to 70.88d. per lb. in 1954–55 and 61.46d. per lb. in 1955–56, the lowest recorded since 1948–49. In 1956–57, however, prices rose again to 79.66d. per lb.

Wool. 941

The prices quoted above, except for United Kingdom contract prices, are as compiled by the National Council of Wool Selling Brokers and represent the average price realized for all greasy wool, of whatever type or quality, marketed during the years indicated.

18. Value.—Fluctuation in Australian wool prices has a marked effect on the nation's rural income. In 1945-46, the gross value of wool production was £58,597,000 representing 17.4 per cent. of the gross value of all rural industries while in 1950-51, when prices reached a peak, wool was valued at £651,902,000 or 55.6 per cent. of the total for all rural industries. The value of wool production fell in subsequent years and in 1956-57 was £510,941,000.

Details of the value of wool production for the years 1952-53 to 1956-57 compared with the average for the three pre-war years are shown below.

WOOL (AS IN THE GREASE)—ESTIMATED GROSS VALUE OF TOTAL PRODUCTION.(a) (£'000.)

<sup>(</sup>a) Greasy and Scoured.

Australian wool represented 47 per cent. of the total quantity imported into the United Kingdom during 1957. New Zealand supplied 24 per cent. and South Africa 7 per cent., while the total quantity received from British countries constituted 84 per cent. of all United Kingdom imports of wool.

20. Principal Importing Countries and Sources of Supply.—The following table, prepared from information published by the Commonwealth Economic Committee, furnishes, in respect of the principal importing countries, details of their production and imports of wool for 1956 together with the chief sources of supply. The quantities imported refer to the actual weight of wool without distinguishing between greasy and scoured except in the case of the United States of America where estimated clean content of raw wool is quoted.

<sup>19.</sup> United Kingdom Importation of Wool.—The important position which Australia occupies in the supply of wool to the United Kingdom is indicated in the following statement of the quantities of wool imported into that country from the principal wool-producing countries during each year 1953 to 1957.

WOOL: PRINCIPAL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1956.
(Million lb.)

	Pro- duction	j					
Importing Country.	of Importing Country.	Australia.	Union of South Africa.	Argen- tina.	New Zealand.	Other Countries.	Total Imports.
United Kingdom .	102	310.6	61.2	32.7	163.6	131.2	699.3
Belgium	. (c)	103.7	14.3	13,9	22.7	34.3	188.9

Republic)	(c)	84.8	46 0	15.7	29.9	60.8	237.2
Italy	2.4	93.5	20.8	4.1	17.2	39.4	177.0
Japan	(c)	204.8	17.9	43.0	5.3	11.5	282.5
United States o	ſ	1	:	İ			
America	305	(d) 41.8	(d) 13.5	(d) 62.5	(d) 39.7	(d) 89.1	(d)246.6

<sup>(</sup>a) As in the grease, 1955-56. (b) Actual weight of greasy and scoured wool. (c) Not available. (d) Imports are in terms of estimated clean content of greasy and scoured wool. Actual weight of total United States of America imports was 340.6 million lb.

As a considerable transit trade exists between continental countries, it must not be assumed that the whole of the imports recorded by these countries are retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom (11 per cent. of total imports re-exported in 1956) and Belgium.

#### § 6. Trade in Hides and Skins.

- 1. Extent of Trade.—In addition to the hides and skins treated locally, considerable quantities are exported: the value of cattle and horse hides, and sheep and other skins, sent overseas during 1956-57 amounted to £24,269,000 compared with a total of £20,882,000 in 1955-56 and £19,704,000 in 1954-55.
- 2. Sheepskins with Wool.—The exports of sheepskins with wool constitute the most important item in the values referred to in the preceding paragraph. Of the total exports of £19,438,000 during 1956-57, France obtained 83 per cent. by value and the United Kingdom 11 per cent. The exports of sheepskins with wool during each of the years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 were as follows:—

## EXPORTS OF SHEEPSKINS WITH WOOL : AUSTRALIA.

Partículars.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956- <b>57.</b>	
Number Value		000°£	12,009 2,780	15,681 16,584	13,647 15,569	14,841 15,569	14,891 15,268	14,239 19,438

3. Sheepskins without Wool.—Up to 1943-44, sheepskins without wool were exported chiefly to the United States of America. During 1943-44, that country accounted for 97 per cent. of the total shipments. In subsequent years, however, there has been a decline in shipments to the United States of America and an increase in the quantities shipped to other countries; of the total value of £479,000 of sheepskins without wool exported in 1956-57 the United States of America received only 33 per cent., France received 39 per

cent. and the United Kingdom 19 per cent. Quantities and values for the five years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 are shown in the table hereunder:—

EXPORTS OF SHEEPSKINS WITHOUT WOOL: AUSTRALIA.

Particulars.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956-57.	
Number		'000	808	3,242	2,482	2,147	1,771	1,353
Value		£'000	70	749	671	372	424	479

4. Hides.—(i) Exports. The export trade in cattle hides and calf skins during 1956-57 was distributed as follows:—Italy, £514,000; Federal Republic of Germany, £421,000; Japan, £342,000; Panama, £335,000; United Kingdom, £301,000; Sweden, £153,000 and other countries, £458,000.

The exports during each of the five years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 are shown in the table below:—

EXPORTS OF CATTLE HIDES AND CALFSKINS: AUSTRALIA.

Particulars.			Average, 1934-35 to 1938-39.	1952–53.		1953–54.	1954–55.	1955–56.	1956-57.

(a) '000 skins.

Horse hides exported during 1956-57 weighed 1,939,984 lb. and were valued at £116,928.

(ii) Imports. The imports of cattle hides and calfskins are fairly large, the chief sources of supply being New Zealand and the Pacific Islands. The quantities and values of cattle hides, including calfskins, imported into Australia during the years 1952-53 to 1956-57 compared with the average for the years 1934-35 to 1938-39 were as follows:—

IMPORTS OF CATTLE HIDES AND CALFSKINS: AUSTRALIA.

Pa	rticulars.		Average, 1934-35 to 1938-39.	1952–53.	1953–54.	1954–55.	1955–56.	1956-57.

These skins were shipped principally to the United States of America, the United Kingdom, and Belgium and Luxemburg, the values shipped to each in 1956-57, with 1955-56 values in parentheses, being:—United States of America, £952,000 (£1,427,000); United Kingdom, £147,000 (£407,000) and Belgium-Luxemburg, £125,000 (£146,000).

- 6. Marketing of Hides and Skins.—(i) Sheepskins with Wool. Details of the agreement between the United Kingdom and Commonwealth Governments for the purchase by acquisition of the "exportable surplus" of woolled sheepskins in Australia during the 1939-45 War were given in Official Year Book No. 37, p. 886. The contract expired on 30th June, 1946, and sheepskins have since been marketed mostly at open auction.
- (ii) Sheep and Lamb Pelts. Details of the marketing control of sheep and lamb pelts were given in Official Year Book No. 38, p 930. Pelts have reverted to open marketing without export restrictions.
- (iii) Hides and Leather. A hide acquisition and marketing scheme operated from November, 1939 to August, 1954. Until 31st December, 1948, the scheme operated under the National Security Regulations. From 1st January, 1949, it continued under a Commonwealth Act and supporting State Acts. In June, 1952, the Tasmanian legislation lapsed and the scheme did not operate in Tasmania after that date. By August, 1954, the wide gap which had existed between fixed local prices and export prices for hides and leather had almost disappeared and, having in view certain legal difficulties which were hampering the operation of the scheme, the Commonwealth Government decided on its immediate termination.

The Australian Hide and Leather Industries Board, which administered the scheme, acquired all cattle hides and yearling and calf skins produced in Australia at set prices and allocated them to tanners at these prices. The prices were 15 per cent. to 20 per cent. above August, 1939 levels until May, 1952 when they were increased by an average of 50 per cent. Surplus hides were disposed of by tender or open auction. The Board retained the amounts realized in excess of appraised values, and supplemented the price to the producers in cases where the realized amount was less than the appraisement values.

Returns from sales of surplus hides and deferred payments levied on leather exported, based on the difference between world and Australian prices for the hides involved, were paid into a fund by the Board. From this fund, premiums were paid to producers as a proportion of appraised values. These premiums compensated hide producers to some extent for the margin between local and oversea prices. Further details of the war-time operations of the scheme will be found in Official Year Book No. 37, p. 887 and Official Year Book No. 38, pp. 930-1.

Pre-war, about 40 to 45 per cent. of Australian production was exported, but with the development of the local tanning industry, the proportion is now approximately 30 per cent.

(iv) Rabbit Skins. A marketing control scheme for rabbit skins was introduced under the National Security (Rabbit Skins) Regulations on 10th June, 1940, and terminated in April, 1949. Details of the scheme will be found in Official Year Book No. 38, p. 931.

#### § 7. Tallow and Lard.

1. Production.—Australia's production of tallow and lard is in excess of local requirements and considerable quantities are normally available for export. Details of the production of edible and inedible tallow and lard in each State are shown in the table below for the years 1954-55 and 1955-56.

<b>TALLOW</b>	AND	LARD:	PRODUCTION.
		(cwt.)	

		1954-55.	†	1955-56.

Tasmania	1,227	33,153	1,176	1,786	42,484	1,369	
Australia	851,295	1,393,716	42,946	936,367	1,527,490	41,473	

2. Consumption of Tallow in Factories.—Details of consumption are collected from the principal factories using tallow (soap and candle, chemical and woolscouring works).

Total consumption of tallow in factories as shown in the table below for the years 1938-39 and 1952-53 to 1956-57 is deficient, however, to the extent that no allowance is made for the small unrecorded amounts used in other types of establishments.

TALLOW: CONSUMPTION IN FACTORIES, AUSTRALIA. (cwt.)

Y	Year.			Ye	ar.		Quantity Used.
1938–39 1951–52 1952–53			539,095 1,205,307 1,068,181	1953-54 1954-55 1955-56		•••	1,172,710 1,193,368 1,210,694

3. Exports of Tallow and Lard.—Particulars of exports of edible (including lard) and inedible tallow are shown in the following table for the five years 1952-53 to 1956-57 in comparison with the average for the five years ended 1938-39.

TALLOW AND LARD: EXPORTS, AUSTRALIA.

Total	 (b)	541,247	982,691	440,386	971,901	1,065,600

<sup>(</sup>a) Including lard and sweetened fats.

4. Marketing of Tallow.—Until 30th September, 1952, the bulk of Australia's exportable surplus tallow, other than collar white mutton tallow was sold to the United Kingdom Ministry of Food under a series of annual contracts. The 1951-52 contract was not renewed and on 9th November, 1952, tallow export control was removed following termination of the industry's equalization pool arrangement and price de-control in most States.

<sup>(</sup>b) Not available.

### § 8. Exports of Principal Pastoral Products.

The quantities and values of the principal pastoral products of Australia exported for the years 1954-55 to 1956-57 were as follows:—

EXPORTS OF PASTORAL PRODUCTS: AUSTRALIA.

#### CHAPTER XXIV.

### FARMYARD, DAIRY AND BEE PRODUCTS.

Note.—Values of Australian oversea trade shown throughout this chapter are expressed as £A. f.o.b. Port of Shipment, except where otherwise indicated.

### § 1. Introductory.

- 1. General.—The introduction of cattle into Australia and the early history of the dairying industry are referred to in some detail in earlier issues of this publication. It may be noted here that an increased and improved milk supply has resulted from the crossing of imported stud cattle with the original stock and from the further judicious crossing of strains. In Australia, dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter and, in certain districts, rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the wider application of scientific methods in the treatment of animals and pastures and in the processes of manufacture, coupled with herd testing and effective State supervision, the dairying industry has shown rapid expansion. It has been demonstrated that Australian production and marketing methods do not adversely affect the vitamin content of the butter and that the loss during cold storage even for as long as two years is insignificant.
- 2. Mixed Farming.—Dairying is not, as formerly, wholly confined to agriculturists since many graziers also give it their attention. In non-coastal regions, it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met and, in many places remote from the metropolis, well-equipped factories have been established. The extent to which dairy cattle were run in conjunction with beef cattle, sheep, and pigs in 1955-56 is shown in the relevant tables published in a series of mimeographed bulletins Size Classification of Rural Holdings, 1955-56, and also appears in summarized form in Primary Industries, Part 1 Rural Industries, 1956-57, Bulletin No. 51.
- 3. Employment.—The numbers of persons employed in rural industries are ascertained at the annual census of rural production. The particulars collected are in respect of those persons who were permanently engaged in the actual work of the farm and include owners, lessees, tenants or sharefarmers, relatives over 14 years of age not receiving wages, and other permanent employees, including managers and relatives, working for wages or salary. For some earlier years, and uniformly from March, 1950, particulars have also been collected as to numbers of temporary employees at 31st March of each year. Details of the numbers so engaged are given in Chapter XXII.—Agricultural Production, § 29.

Persons who described themselves at the population census as being engaged in dairy farming comprised 96,508 males and 10,018 females, a total of 106,526 persons at the Census of 30th June, 1947, and 100,553 males and 11,004 females, a total of 111,557 persons, at the Census of 30th June, 1954.

4. Growth of the Dairying Industry.—The following table gives some indication of the growth of the dairying industry since 1918-19:—

Number of Dairy 31st March			r of Dairy C 31st March.		1	Production of

#### DAIRYING INDUSTRY: AUSTRALIA.

5. Official Supervision of Dairying Industry.—Dairy experts of the various State Agricultural Departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce. A high standard of cleanliness, both of personnel and matériel, prevails.

The export trade is regulated by the terms of the Commonwealth Customs Act 1901–1954 and the Commonwealth Commerce (Trade Descriptions) Act 1905–1950, and regulations thereunder. It will be sufficient to state here that the true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter, the goods are given a certificate by the inspector.

6. Australian Agricultural Council.—General information on the constitution and functions of the Australian Agricultural Council is given on p. 854 of Chapter XXII—Agricultural Production. On pp. 833-4 of Official Year Book No. 40, details were given of the production aims for the five-year period ending 1957-58 (including specific targets for the principal dairy products) as set by the Council at its 36th Meeting in April, 1952.

# § 2. Value of Farmyard, Dairy and Bee Production and Indexes of Price and Quantum of Production.

1. Gross Value of Farmyard, Dairy and Bee Production, 1936-37 to 1938-39 and 1951-52 to 1955-56.—The following table shows the gross value of recorded farmyard and dairy production at the principal markets in Australia.

<sup>(</sup>a) "Number of Stands" indicates the number of cows that can be milked simultaneously—i.e., the cow capacity of installed milking machines. (b) Not available. (c) Subject to revision.

Other Products	108	110	113	117	114
Total Farmyard and Dairy	97	108	107	117	120
Total per Head of Population	78	85	83	88	88
Price—					
Milk	319	373	379	370	380
Other Products	363	423	435	375	423
Total Farmyard and Dairy	332	387	395	371	392

<sup>(</sup>a) Indexes of value at constant prices, i.e. quantities revalued at average unit values of base years (1936-37 to 1938-39).

### § 3. Dairy Cattle and Dairy Products.

1. Dairy Herds.—Lack of uniformity in the schedules used by the various States in the collection of livestock statistics makes it impossible to measure with complete accuracy the growth of dairy herds prior to 1943. Statistics of dairy cows—which form the largest part of herds—are, however, available on a comparable basis for a series of years. These statistics show that in 1918-19 there were 1,902,036 dairy cows (in milk and dry), compared with 2,345,070 in 1928-29 and 3,209,519 in 1938-39. The numbers remained at this level until March, 1944, but declined in succeeding years and did not regain the level of 1944 until 31st March, 1954, when the number recorded was 3,258,674. Since then numbers have increased, rising to 3,451,469 in March, 1957. In New South Wales, Victoria, South Australia, and Tasmania, the proportion of dairy to all cattle is high. In Queensland, the Northern Territory, and Western Australia, there is a great preponderance of other cattle, the main object in these areas being the production of beef. The numbers of dairy cows for 1953 to 1957 shown in the following table refer to those recorded by farmers as being in milk and dry as at 31st March. The figures shown for the years 1935 to 1939 cover the same categories, but the period differs in some States (see footnote (a)). To this extent the figures lack comparability.

Maps showing the distribution of dairy cattle in Australia at 31st March, 1955, and 1948 appeared on p. 910 of Official Year Book No. 43 and p. 906 of Official Year Book No. 39, respectively.

- 2. Size of Dairy Herds.—A series of special tabulations relating to rural holdings, undertaken for all States for the year 1955-56, covered, inter alia, a classification of holdings by size of dairy cattle herd and by area of holding, area of sown grasses and clovers, size of sheep flock, size of beef cattle herd, size of pig herd and number of milking machine stands. The tabulations have been published in full detail in a series of mimeographed bulletins Size Classification of Rural Holdings, 1955-56, and also appear in summarized form in Primary Industries Part I, Rural Industries, 1956-57, Bulletin No. 51.
- 3. Factory System.—(i) General. Cream separation and butter-making are often carried on together under the co-operative system. The establishment of large central butter factories either on the co-operative system or on an independent basis has resulted in a considerable reduction in the cost of manufacture. The product is also of a more uniform quality and, whereas formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, factory butter requires less than 2½ gallons. In addition, subsidy payments by the Commonwealth Government are made only on factory produced butter. As a result, the production of farm made butter has declined substantially and in 1956–57 represented only about 1.4 per cent. of all butter made. A similar position exists in the cheese-making industry where a negligible amount is now made on farms.
- (ii) Number of Factories. In 1955-56, the factories in Australia for the manufacture of butter, cheese and condensed milk numbered 375 and were distributed among the States as follows:—New South Wales, 77; Victoria, 130; Queensland, 85; South Australia, 42; Western Australia, 18; and Tasmania, 23. More details regarding numbers of factories, output, etc., are given in Chapter VII.—Manufacturing Industry.
- 4. Butter and Cheese—Stabilization Schemes.—(i) Voluntary Plan. During the period from January, 1926 to April, 1934, a voluntary scheme known as the "Paterson Plan" was in operation which had the effect of stabilizing the price of butter in Australia. Details of this scheme may be found on p. 1028 of Official Year Book No. 38 and in earlier issues.
- (ii) Compulsory Plan. On 1st May, 1934, the "Paterson Plan" was superseded by a compulsory price equalization plan, details of which were shown on p. 1029 of Official Year Book No. 38 and earlier issues. This compulsory plan was invalidated in 1936 by the decision of the Privy Council which declared in the James (Dried Fruits) Case that the Commonwealth had no power under the Constitution to regulate trade between the States.
- (iii) Equalization Scheme. Since the Privy Council decision, the butter price equalization scheme has continued to operate by voluntary action based on the agreements between the manufacturers and the Commonwealth Dairy Produce Equalization Committee Limited. The Committee, which comprises members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed in equitable proportions among the manufacturers by means of quotas. The Committee fixes basic prices and equalizes returns to factories through an Equalization Fund. The States originally participating in the scheme were New South Wales, Victoria, Queensland and Tasmania in respect of both butter and cheese, and South Australia in respect of cheese. South Australia and Western Australia entered the scheme in respect of butter on 1st April, 1946, and Western Australia extended its participation to include cheese in January, 1947.

The home consumption prices of butter and cheese were fixed by the Commonwealth Prices Commissioner up to 19th September, 1948, from which date they have been a matter for State Prices Authorities. At present, however, the power to fix prices is being exercised in only two States, Queensland and South Australia, the prices in all other States being determined by the Commonwealth Dairy Produce Equalization Committee.

5. Commonwealth Subsidies.—(i) Butter, Cheese and Processed Milk Products. Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter, cheese and processed milk products. Subsidies were paid on a seasonal basis prior to 1st April, 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalization Committee Limited through factories to milk producers by payments on butter, cheese and processed milk products manufactured. Subsidy on milk supplied for the manufacture of processed milk products was discontinued from 1st July, 1948, to 30th June, 1949, and again from 1st July, 1952.

The following table shows in respect of butter and cheese, particulars of the ratesrealized on local, interstate and oversea sales and the average equalization and subsidyrates in operation for the years ended June, 1939 and 1953 to 1957.

(Source: Commonwealth Dairy Produce Equalization Committee Limited.)

Following representations by industry organizations, the Commonwealth Government established the Joint Dairy Industry Advisory Committee in November, 1946, comprising a chairman nominated by the Government, four representatives of Commonwealth Government Departments and four industry representatives from the several States. The Committee's functions, broadly, were to advise and assist in conducting cost and other surveys of dairy farm production and to act as an advisory body to the Government in these matters. From 1st April, 1947, to 30th June, 1952, the rates of overall return to milk producers determined by the Commonwealth Government for the purpose of subsidy payments were based on recommendations made by the Committee following surveys of production costs in the dairy industry.

Under the Five-year Stabilization Plan, which came into operation on 1st July, 1952, the Commonwealth Government, with the approval of the States, determined each season the ex-factory prices of butter and cheese, guaranteed to dairy farmers a return, based upon costs of efficient production, in respect of quantities of butter and cheese sold within the Commonwealth, plus an additional 20 per cent. (if produced), and hence determined the amount of subsidy it would make available to lift the return on that part of output covered by the guarantee to the guaranteed level.

A second Five-year Stabilization Plan, continuing all the important features of the first plan, came into operation on 1st July, 1957.

Early in 1953, the Dairy Industry Investigation Committee, an independent body consisting of three members, was appointed to advise the Commonwealth Government on the guaranteed return to producers during 1953-54. The Committee was re-established in March, 1954, to advise the Government on the guaranteed return for each year of the remaining three year period of the Stabilization Plan. For the current five year plan, the Committee has been re-appointed to determine the cost of efficient production of butter-fat only.

Amounts realized on exports of butter and cheese in excess of the f.o.b. equivalent of the guaranteed return have been credited to the Dairying Industry Stabilization Fund, which was established in July, 1948, for the purpose of stabilizing returns from exports. During 1951–52, the Stabilization Fund met the deficiency in respect of all exports which did not return sufficient to meet the basic return to the factory. From 1st July, 1952, to 30th June, 1957, it was available to the industry to be used, in whatever manner considered desirable by it, to make good any deficiency in respect of all exports other than the 20 percent. provided for under the Commonwealth Government's Five-year Stabilization Plan. The Act was amended in 1957 to enable the Board to use the fund for such other purposes as are approved by the Minister for Primary Industry. After allowing for outstanding debits, the amount standing to the credit of the Dairying Industry Stabilization Fund at 30th June, 1957, totalled approximately £1,445,000.

(ii) Whole Milk. In addition to the subsidies referred to above, the Commonwealth Government subsidized the production of whole milk consumed directly from 1943-44 to 1948-49. Details of the amounts distributed during each year will be found in Official Year Book No. 38, p. 1031.

6. Total Dairy Production.—The dairy production for each State in 1956-57 is shown below:—

<sup>(</sup>a) Subject to revision. (b) Includes milk, the produce of New South Wales, sent as cream to factories in Victoria and Queensland. (c) Includes milk, the produce of Victoria, sent as cream to New South Wales. (d) Includes milk, the produce of Queensland, sent as cream to New South Wales. (e) Includes butter made from cream, the produce of Victoria and Queensland. (f) Includes butter made from cream, the produce of New South Wales. (g) Includes cheese made in establishments not classified as factories.

7. Whole Milk.—(i) Production and Utilization. During the five years ended 1938-39, approximately 80 per cent. of Australia's milk supply was used for making butter, 4 per cent. for cheese manufacture, 2 per cent. for condensery products and 14 per cent. for fluid consumption and other purposes. There has since been a considerable decline in the proportion of milk used for butter-making, with corresponding increases in the quantities used for other purposes. In 1956-57, 66 per cent. of the total milk supply was used for butter, 7 per cent. for cheese, 6 per cent. for condensery products and 21 per cent. for other purposes.

Details of the production of whole milk for various purposes are shown in the following table for each year 1952-53 to 1956-57 in comparison with the average for the years 1934-35 to 1938-39:—

In the following table, particulars of production of whole milk in the several States are shown for the years 1952-53 to 1956-57, compared with the average for the five years ended 1938-39. Victoria is the principal milk-producing State and in 1956-57 the output from that State, 590.7 million gallons, represented 43 per cent. of total production. Output from New South Wales was 307.6 million gallons, or 23 per cent. of the total, and that of Queensland 254.5 million gallons (19 per cent.). Production in the remaining States accounted for 15 per cent. of the total Australian output.

### TOTAL PRODUCTION OF WHOLE MILK.

<sup>(</sup>ii) Production per Cow. The quantity of milk produced by a dairy cow reaches as high as 1,000 gallons a year, varying greatly with breed, locality and season. For the whole of Australia for all dairy cows and for all seasons prior to 1916 production averaged considerably less than 300 gallons per annum. In recent years, not only has there been an

improvement in the quality of the cattle, but the application of scientific methods has been continually extended, and the 300-gallon average has been exceeded in each year since 1924. In 1956-57, the average yield was 398 gallons. The annual average yields per cow shown in the following table are based on the approximate number of dairy cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater part of the year. It should be noted that there are many difficulties attending the collection of particulars of the total quantity of milk obtained during any year. In addition, there is the further difficulty of ascertaining with reasonable accuracy the average number of cows in milk during the same period. The average yield per cow shown hereunder may be accepted as sufficiently reliable to show the general trend:—

8. Butter Production.—There was a steady increase in the annual output of butter for many years prior to the 1939-45 War. The average annual production rose from 126,000 tons for the five years ended 1928-29 to 195,000 tons for the five years ended 1938-39.

Following the record output of 211,987 tons in 1939-40, the general trend of butter production declined until 1946-47, when 143,308 tons were produced. Output increased again to 173,599 tons in 1949-50, but was at a lower level in subsequent years until 1954-55, when a substantial increase was recorded due to a recovery in New South Wales and Queensland and a considerable increase in production in Victoria. Production in 1956-57 amounted to 192,380 tons. The foregoing figures include butter produced on farms which has shown a decline from 8,714 tons in 1938-39 to 2,693 tons in 1956-57.

The following table shows production of butter in factories in each State for the years 1952-53 to 1956-57, compared with the average for the five years ended 1938-39.

9. Cheese Production.—Until 1916, the annual production of cheese in factories and onfarms had not reached 10,000 tons. From 1916 to 1932-33, it ranged between about 10,000 and 16,000 tons, rising in subsequent years with some reversals of trend to an output of 44,796 tons in 1949-50. Production decreased in 1950-51 and 1951-52 but by 1953-54 had risen to a record output of 49,057 tons. Production declined in the next two years to 38,700 tons, but recovered to 44,819 tons in 1956-57 mainly because of fluctuations in Victorian output. The States contributing chiefly towards the general increase over the years are Victoria and South Australia.

The following table shows production of cheese in factories in each State in the years 1952-53 to 1956-57 in comparison with average output during the years 1934-35 to 1938-39:—

10. Condensed, Concentrated and Powdered, etc., Milk Production.—The manufacture of these products has expanded greatly since 1938–39 to meet the needs of the Services during the 1939-45 War and for export purposes since the war. The output of condensed milk (sweetened and unsweetened) in 1956-57 was more than double that in the three years ended 1938-39, while that of powdered milk (full cream and skim) was more than five times as high. Over the same period, the quantity of whole milk used in the manufacture of the products shown below increased from 33.2 million gallons to 81.7 million gallons or by 146 per cent. These products are manufactured mainly in Victoria, which produced 64 per cent. of the total (in terms of whole milk equivalent) in 1956-57. New South Wales accounted for 25 per cent. and the remaining States for 11 per cent.

The following table shows details of the output of condensed, concentrated, powdered, etc., milk during the years 1952-53 to 1956-57, compared with the available details for the years 1936-37 to 1938-39.

<sup>(</sup>c) Year ended March.

11. Local Consumption of Butter and Cheese.—A system of butter rationing introduced as a war-time measure and retained until 16th June, 1950, had the effect of considerably reducing civilian consumption. In the last year of rationing, 1949-50, consumption was 25.3 lb. per head per annum compared with an average of 32.9 lb. during the years 1936-37 to 1938-39. Following the cessation of rationing, consumption rose sharply to 31.2 lb. in 1951-52, and until 1955-56 fluctuated between 29 lb. and 31 lb. per head per annum. In 1956-57 however consumption fell to 28.0 lb. per head.

Cheese consumption rose considerably during the period of butter rationing, from 4.4 lb. per head pre-war to 6.3 lb. per head in 1949-50. Owing to a change in the method of computation, revised figures are shown below for the changes in stock and consumption of cheese for the years 1952-53 to 1956-57. The trend in consumption was not materially affected by these revisions. Consumption increased from 5.6 lb. per head in 1952-53 to 6.3 lb. per head in 1954-55, but since then has decreased to 5.3 lb. in 1956-57.

The following table shows details of the production and disposal of butter and cheese for each of the years 1952-53 to 1956-57 compared with the average for the years 1936-37 to 1938-39.

12. Marketing of Dairy Products.—(i) The Dairy Produce Export Control Act 1924–1954. Introduced at the request of the dairying industry, this Act was passed by the Commonwealth Parliament with the object of organizing the oversea marketing of Australian dairy produce. A Dairy Produce Control Board was appointed and was in existence from 1924 to 1935. In the course of its functions, the Board regulated shipments to ensure regularity of supply in the London market, controlled forward selling, obtained reductions in oversea freights and insurance rates and participated in an advertising campaign in the United Kingdom.

Prior to the appointment of the Dairy Produce Control Board, a voluntary body—the Australian Dairy Council—was established to advise and make recommendations to the Governments on problems connected with the production, manufacture and quality of dairy produce, pasture improvements and diseases of dairy cattle.

Following a recommendation by the Australian Agricultural Council, the functions of these bodies were combined by an amending Act of 1935 under the Australian Dairy Produce Board and provision was made for the allocation of money from the Board's

funds for research and investigation into pastures, diseases of dairy cattle and the quality of butter. The functions of the Board were later extended to enable it to advise the Government in connexion with the transport of dairy produce, the securing of new markets, the expansion of existing markets and other matters.

The Australian Dairy Produce Board was re-constituted in 1947 by an amendment to the Dairy Produce Export Control Act, its membership being reduced from seventeen to twelve. The functions of the Board were extended to enable it to purchase and sell, on behalf of the Commonwealth, dairy produce intended for export, and to control all matters concerning the handling, storage, protection, treatment, transfer and shipment of the produce so purchased or sold. In 1953, the direct farmer representation on the Board was increased from two to three members, thus raising the total membership from twelve to thirteen.

In April, 1954, the Act was further amended to prepare for the implementation of an export marketing plan to follow the expiration of the United Kingdom-Australia Butter and Cheese Contract. The amendment enabled the Board to purchase dairy produce intended for export to the United Kingdom and to sell such produce on behalf of the dairying industry in lieu of its present function of selling on behalf of the Commonwealth Government. In the interests of the stability of the industry, the Act provides that the Board may be the sole Australian exporter of butter and cheese to the United Kingdom.

- (ii) The Dairy Produce Export Charges Act 1924-1937. This Act provides for the imposition of a levy on all butter and cheese exported from Australia to cover the administrative expenses of the Board and for advertising and other purposes. The rate of the levy is fixed by regulation.
- (iii) Butter and Cheese Contracts. Details of the war-time contracts arranged between the United Kingdom and Australian Governments, whereby the former undertook to purchase Australia's surplus butter and cheese, were shown on pp. 985 and 986 of Official Year Book No. 37. The purchase of butter and cheese from 1944-45 to 1954-55 was covered by the Long-Term Purchase Agreement. Details of this Agreement and of the prices paid for various grades of butter and cheese each year under the Agreement were given in pp. 943 and 944 of Official Year Book No. 42 and in earlier issues of the Official Year Book.
- 13. Oversea Trade in Butter, Cheese and Milk.—(i) General. The production of butter and cheese in Australia is considerably in excess of local requirements and consequently a substantial surplus is available for export overseas. In normal circumstances, the extent of this surplus is chiefly dependent upon the seasonal conditions. Exports of butter, which averaged 90,000 tons in the three years prior to the 1939–45 War, were maintained to a certain extent during the war and post-war years by the restriction of supplies for local consumption, but because of lower production they nevertheless fell as low as 41,800 tons in 1944–45. In the last year of rationing, 1949–50, exports were 79,200 tons, but they fell to 11,300 tons by 1951–52. There was a substantial increase in exports in subsequent years and in 1956–57, 72,265 tons were shipped. In addition, small quantities of butter concentrate and ghee have been exported during the post-war period. Exports of cheese, which averaged 11,500 tons pre-war, rose to a maximum of 26,000 tons in 1948–49, but they subsequently fell and in 1956–57 amounted to 17,529 tons.

During 1938-39, 96,900 tons of butter (95 per cent. of all butter exported) were shipped to the United Kingdom. With the decline in total exports, there was also a substantial reduction in the proportion shipped to the United Kingdom up till 1954-55. This increased again to 72,400 tons (88 per cent.) in 1955-56 but there was a slight decline again in 1956-57 to 62,553 tons (82 per cent. of the total butter exports).

In 1938-39, exports of cheese totalled 16,000 tons of which 15,500 tons or 97 per cent. were exported to the United Kingdom. Of the total of 17,529 tons exported in 1956-57, 13,432 tons or 77 per cent. were shipped to the United Kingdom.

Total quantities and values of exports of Australian origin of butter, cheese and condensed, concentrated, etc., milk and cream are shown on p. 969.

(ii) Butter and Cheese Exports graded according to Quality. All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to the supervision, inspection and examination of officers appointed for that purpose. These commodities are graded according to quality which has been fixed by regulation as

follows:—Flavour and aroma, 50 points, texture, 30 points, and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality, at 90 to 92 points, first quality, at 86 to 89 points, second quality, and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table, particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Primary Industries*, *Part I.—Rural Industries*, 1955-56, Bulletin No. 50.

BULK BUTTER AND CHEESE GRADED FOR EXPORT: AUSTRALIA.

### § 4. Pigs and Pig Products.

1. Pigs.—The number of pigs in Australia first reached a million in 1905. It fluctuated about this level up to 1940, when it reached 1,455,341, while in 1941 the record number of 1,797,340 was recorded. There was a decline in the following two years but the numbers rose again to 1,746,721 in 1944; thereafter, there was an almost continuous decline until 1953 when the number of pigs was only 992,532. Numbers increased in succeeding years and, despite a set-back in 1956, they rose to 1,325,057 in 1957. Details of the number of pigs in each State and Territory for each of the five years 1953 to 1957, together with the average for the five years 1935 to 1939, are given in the following table:—

### NUMBER OF PIGS.

As at 31st March.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	N.T.(a)	A.C.T.	Aust- ralia.
Average, 1935 to 1939(b) 1953 1954 1955 1956 1957	391,874 298,690 371,608 375,019 343,030 386,789	287,140 182,824 232,384 263,666 227,223 258,336	294,777 335,809 384,453 406,879 372,871 394,518	80,548 58,657 60,619 84,502 72,920 92,180	83,999 76,195 100,912 107,039 99,097 139,982	42,772 39,378 46,256 58,382 49,498 52,358	479 799 1,132 911 1,076 755	180 276 104 115	1,182,133 992,532 1,197,640 1,296,502 1,165,830 1,325,057

<sup>(</sup>a) As at 1st January. (b) As at 31st March for New South Wales and Australian Capital Territory; 1st March for Victoria; 1st January for Queensland, South Australia, Western Australia and Tasmania.

Further details relating to pig numbers are given in Chapter XXIII.—Pastoral Production. Maps showing the distribution of pigs in Australia at 31st March, 1955 and 1948 appeared on page 912 of Official Year Book No. 43 and on page 908 of Official Year Book No. 39, respectively.

2. Size of Pig Herds.—A series of special tabulations relating to rural holdings undertaken for all States for the year 1955-56 covered, *inter alia*, a classification of holdings by size of pig herd and by area of holding, area of wheat grown for grain, and size of dairy cattle herd. The tabulations have been published in full detail in a series of mimeographed bulletins Size Classification of Rural Holdings, 1955-56 and also appear in summarized form in Primary Industries, Part I, Rural Industries, 1956-57, Bulletin No. 51.

<sup>(</sup>b) Included with Second Quality.

3. Pigs Slaughtered.—The number of pigs slaughtered during each of the years 1952-53 to 1956-57 and the average for the years 1934-35 to 1938-39 are shown in the following table:—

### PIGS SLAUGHTERED.

		Slaughterings Passed for Human Consumption.							
Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.	Slaughter- ings (including Boiled Down).	
Average, 1934- 35 to 1938-								·	
39	555	484	525	154	119	61	1,899	1,912

1956-57(b)	539	383	446	122	158	85	1,738	1,748	

- (a) Including Australian Capital Territory and Northern Territory.
- (b) Subject to revision.
- 4. Pork.—(i) *Production*. In the following table, details of the production of pork in each State are shown for the years 1952-53 to 1956-57 compared with average production during the years 1934-35 to 1938-39.

### PRODUCTION OF PORK (BONE-IN WEIGHT). (Tons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Australia.
Average, 1934-35 to 1938-39 1952-53 1953-54 1954-55 1955-56 1956-57(a)	9,938 9,611 12,949 17,026 14,952 14,941	12,236 6,925 7,332 11,078 10,709 10,748	9,867 6,548 7,216 8,948 8,016 7,022	3,215 2,836 2,253 3,521 3,247 2,603	1,741 2,436 2,032 4,362 3,529 3,273	1,240 1,920 1,399 2,027 2,215 2,163	7 60 69 65 67 59	38 132 146 192 204 204	38,282 30,468 33,396 47,219 42,939 41,013

(a) Subject to revision.

(ii) Consumption. As in the case of other meats, pork was subject to rationing during the 1939-45 War and immediate post-war years and consumption was at a much lower level than pre-war. In 1954-55, consumption reached 10.2 lb., only slightly below the immediate pre-war average. During 1955-56 and 1956-57, consumption declined again, the figure recorded for the latter year being 8.7 lb. per head. In the following table, details of the production and disposal of pork are shown for the years 1952-53 to 1956-57 compared with averages for the three years 1936-37 to 1938-39.

#### PRODUCTION AND DISPOSAL OF PORK (BONE-IN WEIGHT): AUSTRALIA.

			Changes in	Production.	_			Consumption in Australia.	
Year.		Stock.	(a)	Exports. Canning.		Total.	Per Head per annum.		
			'000 tons.	'000 tons.	'000 tons.	'000 tons.	'000 tons.	lb.

- (a) Includes an estimate of trimmings from baconer carcasses.
- (b) Subject to revision.

5. Bacon and Ham.—(i) Production. As in the case of pork, the increased demand for bacon and ham during the 1939-45 War stimulated production to a level not previously attained. Production reached its peak in 1944-45 when 56,246 tons of bacon and ham were cured. This was followed by a decline in output in each succeeding year to 36,628 tons in 1951-52. Production was maintained at about this level for several years but declined further to 35,233 tons in 1956-57. Details of production are shown by States in the following table for each year 1952-53 to 1956-57 compared with the average production for the five pre-war years ended 1938-39.

### PRODUCTION OF BACON AND HAM (CURED WEIGHT).(a)

(Tons.)

7	ćeаг.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia

<sup>(</sup>a) Pressed and canned bacon and ham have been converted to bone-in weight, except in pre-war years. (b) Subject to revision.

(ii) Consumption. Consumption per head declined in the early stages of the 1939-45 War from the pre-war average of 10.2 lb. per annum, but subsequently increased to 12.7 lb. in 1946-47. Since that year, there has been a decline to a relatively steady level of from 7 lb. to 8 lb. per head per annum. In 1956-57, consumption amounted to 7.0 lb. per head. Details of production and disposal of bacon and ham for the years 1952-53 to 1956-57 compared with average production and disposal for the period 1936-37 to 1938-39 are shown in the following table:—

### PRODUCTION AND DISPOSAL OF BACON AND HAM (CURED WEIGHT)(a): AUSTRALIA.

<sup>(</sup>a) Pressed and canned bacon and ham have been converted to bone-in weight, except in pre-war years.

(b) Not available.

(c) Subject to revision.

<sup>6.</sup> United Kingdom Contracts.—Details relating to the several war-time contracts and the more recent Long-term Purchase Agreement between the Governments of the Commonwealth and the United Kingdom for the sale of Australia's surplus production of meats (including pigmeats) are included in Chapter XXIII.—Pastoral Production.

<sup>7.</sup> Oversea Trade in Pigs and Pig Products.—Total quantities and values of exports of Australian origin of pigs and pig products (bacon and ham, lard and frozen pork) for the years 1954-55 to 1956-57 are shown on p. 969.

### § 5. Poultry-farming.

- 1. General.—Poultry-farming has been carried on in Australia for many years and the State Departments of Agriculture have encouraged its development by appointing experts to advise on the care and management of poultry and by conducting egg-laying competitions. Originally the industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry and it is from this source that the bulk of the commercial production is obtained. Practically all farms keep poultry for the purpose of supplying their own domestic requirements and in many cases some supplies from this source are also marketed. In addition, many private homes keep small numbers of fowls in backyard runs and this helps to maintain domestic needs, particularly when eggs are in short supply.
- 2. Numbers of Poultry.—In pre-war years, the numbers of the principal kinds of poultry were a normal feature of the annual census of livestock in all States except Victoria and Tasmania. These data were collected on a restricted scale by all States in 1942–43, the details obtained being confined to farms of one acre or more producing eggs or poultry for sale. The collection has since been discontinued in some States. Because of their incompleteness, details of poultry numbers are not published.
- 3. Recorded Production and Disposal of Eggs.—(i) Shell Eggs. Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Egg Boards of the several States. As Boards were not set up in all States until 1943, comparable statistics of recorded production of eggs for Australia as a whole are not available prior to 1943-44. Details of production in the respective States as recorded by these authorities for the years 1952-53 to 1956-57 are shown in the following table:—

SHELL EGGS: PRODUCTION(a) RECORDED BY EGG BOARDS.
('000 Dozen.)

State.			1952-53.	1953–54.	1954–55.	1955–56.	1956-57.

Tasmania			1,107	934	889	943	912
Total			104,694	108,002	111,903	104,918	106,932

<sup>(</sup>a) Receivals from consignors and sales by producer agents.

(ii) Egg Pulp. Prior to the 1939-45 War, production of egg pulp was about 7 million lb. per annum. This was used almost entirely for the manufacture of cakes, pastry and biscuits, only negligible quantities being exported. Production was expanded greatly during the war years to meet the requirements of the Armed Services and has since been maintained at a high level for export purposes and to meet increased local requirements.

Particulars of the production of whole egg pulp as recorded by the Egg Boards in the several States are shown in the following table.

LIQUID WHOLE EGG: PRODUCTION RECORDED BY EGG BOARDS. ('000 lb.)

State.		4	1952-53.	1953–54.	1954–55.	1955 <b>-5</b> 6.	1956–57.
New South Wales			16,991	20,942	17,057	14,649	18,755
Victoria			6,467	8,295	6,564	6,879	6,245
Queensland			2,315	3,703	2,419	2,901	3,302
South Australia			6,284	8,178	6,516	5,991	4,501
Western Australia			3,490	3,894	1,924	1,532	2,024
Tasmania			359	239	246	236	133
Total	· <u>·</u>	• •	35,906	45,251	34,726	32,188	34,960

6875/57.—30

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1956-57 amounted to 571,184 lb. and 360,837 lb. respectively, compared with 540,643 lb. and 337,844 lb. respectively in the previous year.

(iii) Egg Powder. The production of dried egg powder was established in Australia in 1942, to treat Australia's surplus eggs so as to maintain exports under war-time conditions to the United Kingdom. Production was continued after the end of the war for export purposes, but since 1946-47 has declined to negligible proportions.

4. Production and Consumption of Eggs.—Statistics of total egg production must necessarily be accepted with some reserve. The production shown in the following table together with details of exports and consumption is based upon the records of Egg Boards of production from areas under their control plus estimates of production from uncontrolled areas and from "back-yard" poultry-keepers.

#### ESTIMATED PRODUCTION AND DISPOSAL OF EGGS IN SHELL(a): AUSTRALIA.

(b) The average weight of an egg in Australia is taken as

5. Marketing of Eggs.—(i) United Kingdom Market. Details of the annual contracts entered into between the United Kingdom and Australian Governments up to 1952-53 and of the results of trading under free market conditions in the three following years appear in earlier issues of the Official Year Book.

During the 1956-57 export season, prices for shell eggs in the United Kingdom were well below those of the previous year and sales were reduced by more than half. Over 8,000 tons of egg pulp were shipped to the United Kingdom under contract with a group of pulp importers at a price of £225 8s. sterling per ton f.o.b., £11 13s. sterling higher than the 1955-56 contract price.

(ii) West German Market. Western Germany again proved valuable as an alternative shell egg market to the United Kingdom. Sales in Western Germany increased to 3.1 million dozen, from 2.2 million dozen in 1955-56, and average realizations were higher than in the United Kingdom. Western Germany also took 1,000 tons of egg pulp.

(iii) Egg Export Control Act 1947. Following the termination of Commonwealth control over the production and marketing of eggs on 31st December, 1947, functions relating to the local marketing of eggs reverted to State Egg Boards, which became responsible for stabilizing prices and marketing of eggs produced in the respective States. In order to assist in marketing Australia's surplus production of eggs under the Long-term Purchase Agreement with the United Kingdom, the Commonwealth established the Australian Egg Board under the Egg Export Control Act 1947. The Board, which commenced to operate on 1st January, 1948, was empowered to buy and sell, on behalf of the Commonwealth Government, eggs and egg products intended for export which comply with the provisions of the Export (Dairy Produce) Regulations. In addition, the Board was authorized to deal with all matters relating to the export of eggs and egg products from Australia, to make such experiments as are likely to lead to the improvement of the quality of Australian eggs and to promote their sale overseas. The Board consisted of ten members, including six representatives of egg producers and one representative of the Commonwealth Government.

Due to the discontinuance of inter-Governmental trading in eggs and egg products, the Egg Export Control Act was amended in April, 1954, to provide for the reconstruction of the Australian Egg Board and the implementation of an egg export marketing scheme. The new Board, established on 17th June, 1954, comprises nine members including a representative of the Commonwealth Government and representatives from each State Egg Marketing Board (except Tasmania). The Board is empowered to act as a trading authority selling eggs and egg pulp as agent for State Egg Boards. However, any State Board desiring to export on its own account may do so, subject to general terms and conditions to be laid down by the Australian Egg Board.

6. Oversea Trade in Poultry Products.—The Australian oversea export of poultry products has been confined in the past chiefly to eggs in shell and egg contents, which are consigned mainly to the United Kingdom. In 1949-50, exports of eggs in shell reached the record level of 23 million dozen. Shipments were at a lower level in subsequent years and, in 1956-57, 10.1 million dozen were exported.

Prior to the 1939-45 War, exports of egg contents were small and in 1939-40 there was an excess of imports. During the war years, exports expanded greatly, mainly to meet Service requirements, and after the close of the war there was a further expansion to 37.9 million lb. of egg contents in 1953-54. There was a decline in subsequent years and in 1956-57 20.5 million lb. were exported.

Since the close of the war, there has also been a considerable increase in the exports of frozen poultry. Exports, which amounted to 1.1 million lb. in 1956-57, were, however, much lower than in preceding years.

Total quantities and values of exports of Australian origin of poultry products (live poultry, frozen poultry, eggs in shell, egg pulp and powder) for the years 1954-55 to 1956-57, are shown on p. 969.

### § 6. Bee-farming.

1. Production of Honey and Bees-wax.—Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming, but its place in Australia's rural economy is not very significant. The returns of honey from productive hives during 1956-57 showed an average of 119 lb. per hive and the average quantity of wax was 1.5 lb. per productive hive.

The number of hives and the production of honey and bees-wax during the year 1956-57 are shown in the following table.

BEEHIVES, HONEY AND BEES-WAX, 1956-57. Bees-wax Produced. Beehives. Honey Produced. State or Territory. Pro-Unpro-Gross Gross Quantity. Total. Quantity. ductive. Value. Value. ductive. '000. '000 lb. £'000. '000. **2000.** '000 lb. £'000. New South Wales 125 934 188 61 57 182 14,946 8,210 590 90 29 Victoria 76 26 102 Oueensland 29 10 39 3,075 168 42 12 33 South Australia 74 13 87 8,169 389 116 19 Western Australia 31 5,650 266 70 6 37 372 23 5 2 Tasmania 4 1 5 Aust. Cap. Territory. 1 1 36 2 Australia 340 113 453 40,458 2,372 511 156

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora of the eucalypts, which varies greatly from year to year. In recent years, there has been a pronounced upward trend in the output of honey, the 1948-49 figure, 53,200,000 lb., being an all-time record. Production in 1956-57 at 40,458,000 lb., although lower than in 1948-49, was still higher than pre-war.

The table hereunder shows the production of honey and bees-wax for the five years ended 1956-57 in comparison with the averages for the years 1934-35 to 1938-39.

# HONEY AND BEES-WAX PRODUCTION.

<sup>(</sup>a) Excludes the Australian Capital Territory and the Northern Territory. (b) Excludes the Northern Territory.

2. Oversea Trade in Bee Products.—Prior to the 1939-45 War, the production of honey exceeded Australian requirements and a small quantity was available for export. In 1948-49, the record quantity of 32.1 million lb., was exported. Exports amounted to 27.2 million lb. in 1955-56 and 12.8 million lb. in 1956-57.

The wider use of frame hives has reduced the production of wax, and as a result the quantity of bees-wax imported generally exceeded that exported up to 1945-46. During each year since 1946-47, however, with the exception of 1951-52, production has been high on account of exceptionally good seasons, and exports have exceeded imports by substantial margins. In 1956-57, exports exceeded imports by an amount of 109,000 lb.

Total quantities and values of exports of honey and bees-wax for the years 1954-55 to 1956-57 are shown in § 7 below.

### § 7. Exports of Australian Farmyard, Dairy and Bee Products.

The quantities and values of Australian farmyard, dairy and bee products exported during the years 1954-55 to 1956-57 are shown below.

### EXPORTS OF FARMYARD, DAIRY AND BEE PRODUCTS: AUSTRALIA.

<sup>(</sup>a) Excludes pork in airtight containers.

<sup>(</sup>b) Including day-old chicks.

2. Butter.—Until 1950, Australia had regularly supplied between 20 and 30 per cent. of the butter imported into the United Kingdom. After 1950, when butter rationing was abolished in Australia, the quantity shipped was considerably lower, but in 1956 it again amounted to 1,515,000 cwt., or 21.4 per cent. of the total United Kingdom imports. New Zealand supplied 44.0 per cent., of the total quantity imported during 1956 and Denmark 25.0 per cent.

In the following table, particulars of the quantity and value of butter imported into the United Kingdom are shown for the years 1938, 1955 and 1956, according to country of origin.

				1938.		5.	1956.	
Country from which	ountry from which Imported,		Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
			'000 cwt.	£'000.	'000 cwt.	£'000.	'000 cwt.	£'000.

BUTTER: IMPORTS INTO UNITED KINGDOM.

- 3. Cheese.—The value of cheese imported into the United Kingdom in 1956 was £35,568,000. Of this, £24,179,000 was imported from New Zealand, £3,189,000 from Australia, £2,737,000 from Denmark and £1,586,000 from the Netherlands.
- 4. Bacon.—Of a total import in 1956 of bacon (excluding bacon in airtight containers), valued at £84,182,000, the value of that supplied by Denmark was £60,505,000, Poland, £10,917,000 and the Netherlands, £10,683,000.
- 5. Pork.—The value of the United Kingdom imports of pork (excluding pork in airtight containers) was £4,341,000 in 1956. Imports from New Zealand, valued at £1,727,000, Argentina, £1,257,000 and the Republic of Ireland, £549,000, comprised 81 per cent. of these imports into the United Kingdom.
- 6. Eggs.—In 1956, the value of eggs imported into the United Kingdom was £10,257,000, comprising eggs in shell, £6,160,000, and liquid or frozen eggs, £4,097,000. Eggs in shell were supplied principally by Denmark, £2,560,000, and the Union of South Africa, £1,277,000.
- 7. Milk Products.—In 1956, the value of preserved milk imported into the United Kingdom was £5,324,000. Of this total, imports from New Zealand amounted to £2,795,000 and Australia, £1,239,000.
- 8. Other Dairy and Farmyard Products.—The imports into the United Kingdom from Australia of poultry, bees-wax, lard and honey in 1956 were unimportant.

#### CHAPTER XXV.

#### FORESTRY.\*

### § 1. General.

Note.—Values of Australian oversea trade shown throughout this chapter are expressed in £A. f.o.b., port of shipment, except where otherwise indicated.

1. Objects of Forestry.—The main object of forestry is to manage the forests of a country in the way that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oils and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, and aesthetic effects.

Forestry aims to improve existing forests and woodlands by properly controlled exploitation, by protection from destructive agencies such as fire, and by inducing natural regeneration where it is desirable. Forestry also aims to provide a partial tree cover on denuded lands when such cover is necessary for protective purposes, and a complete cover when the land is better under forest than under any other crop.

2. General Account of Forests and Timbers.—The area of land in Australia suitable for the production of commercial timber as the primary crop is very small in comparison with the size of the continent. It is concentrated mainly around the wetter coastal belts and the eastern highlands and it includes the bulk of the land suitable for intensive development by agricultural or pastoral undertakings.

The allocation of land for agricultural and pastoral purposes led to the clearing of much of the original forest of Australia, particularly of the more readily accessible parts. In the early period of agricultural and pastoral expansion, only the best timbers found their way into commerce, and species now prized as providing high quality woods were often put to inferior uses. During this period, the forest resources of the country were considered by the majority of the people to be inexhaustible, and relatively little care was taken to prevent the degradation of the remaining forests by fire and uncontrolled grazing. This state of affairs is rapidly changing; it is now recognized that the remaining forest land must be protected and properly managed in the interests of the community.

The trees which make up the forests of Australia are mainly evergreen hardwoods. The characteristic genus is *Eucalyptus*. There are over six hundred different kinds of eucalypts and with few exceptions the natural occurrence of all of them is restricted to Australia. The genus includes species such as the mountain ash (*Eucalyptus regnans*) of Victoria and Tasmania, the world's tallest growing hardwood, and the karri (*E. diversicolor*) of Western Australia, another forest giant. At the other end of the scale there are many eucalypts which do not grow to tall trees, including the species collectively known as the "mallees". The mallees develop a number of small stems from an underground structure called the "mallee root".

A specially contributed article dealing with Forestry in Australia appeared as part of Chapter XIX. in Official Year Book No. 19 (see pp. 701-12 therein). See also "The Commercial Timbers of Australia, Their Properties and Uses" by I. H. Boas, published by the Council for Scientific and Industrial Research in 1947, "Timbers and Forest Products of Queensland" by E. H. S. Swain, published in 1928 and "Australian Standard Nomenclature of Australian Timbers" published by the Standards Association of Australian

Less than 100 eucalypts are used for sawmilling and not more than 30 to 40 are exploited extensively. The main commercial eucalypts were listed in Official Year Book No. 39 and earlier issues.

The eucalypts satisfy the Australian requirement for timbers having great strength and durability. They also provide a large proportion of the building timber and some of the wood required for packaging. In recent years, some eucalypts have been used extensively for papermaking and for the manufacture of hardboard and fibreboard. The species most commonly used for pulping are mountain ash (*E. regnans*), alpine ash (*E. gigantea*), and messmate, stringybark or Tasmanian oak (*E. obliqua*).

A large number of other genera represented in the Australian forest flora also produce commercial hardwoods. Among the outstanding furniture, cabinet and veneer timbers are red cedar (Cedrela toona var. australis), Queensland maple (Flindersia brayleyana), Southern and Northern silky oak (Grevillea robusta and Cardwellia sublimis, respectively), Queensland walnut (Endiandra palmerstoni), blackwood (Acacia melanoxylon), rose mahogany (Dysoxylum fraseranum), etc. Turpentine (Syncarpia laurifolia) ranks with the world's best as a harbour piling timber. Coachwood (Ceratopetalum apetalum) came into prominence for rifle furniture and for aircraft plywood during the 1939-45 War.

The foregoing are but a few examples indicating the range of use of the timbers of the Australian hardwood forests.

The most important indigenous softwood resources of Australia were in the forests of hoop pine (Araucaria cunninghamii) of Queensland and New South Wales. These forests occurred on rich land suitable for intensive agriculture. The greater part of the original hoop pine forest has gone but the wood removed made an important contribution to the Australian timber industry. Some areas of the hoop pine forest have been replanted with this species in Queensland and, to a lesser extent in New South Wales.

There are still considerable areas of the useful white-ant-resisting cypress pine (Callitris spp.) in the inland areas of Queensland and New South Wales. They have been seriously overcut but are gradually being brought under management.

Other native softwoods which have played a useful but minor part in the Australian timber industry include bunya pine (Araucaria bidwillii) and kauri (Agathis spp.) of Queensland, and huon pine (Dacrydium franklinii), celerytop pine (Phyllocladus rhomboidalis) and King William pine (Athrotaxis selaginoides) of Tasmania.

The savannah woodlands of the interior of Australia yield commercial commodities such as sandalwood, tanbarks and essential oils. They also have an important function in providing fuel and rough timbers for the development of agricultural and pastoral holdings.

3. Extent of Forests.—According to data assembled for the Seventh British Commonwealth Forestry Conference held in Australia and New Zealand in 1957, the total area of forest in Australia is estimated at 186,791 square miles, or about 6.3 per cent. of the total land area of the continent. This is an increase of 27,040 square miles over the estimate made for the 1952 Conference, and has resulted from the inclusion of a large area of mallee in South Australia, together with 4,500 square miles of forests, mainly low grade woodlands, in the Northern Territory. The estimated forest area is distributed amongst the States as follows (the proportion of forest land to the total area of each State is shown in parentheses):— New South Wales and the Australian Capital Territory, 37,942 square miles (12 per cent.): Victoria, 26,222 (30 per cent.); Queensland, 28,000 (4 per cent.); South Australia, 36,000 (including 25,000 square miles of mallee suitable for firewood only) (10 per cent.); Western Australia, 41,826 (4 per cent.); Tasmania, 12,301 (47 per cent.) and the Northern Territory, 4,500 (1 per cent.). The areas given are rough estimates only and are considerably in excess of those which are both suitable for reservation and likely to be maintained for timber production. Considerable areas of low grade forest which, in many cases, are suitable for little more than the production of firewood, are included. It is doubtful if the remaining prime native forest area of Australia exceeds 20,000 square miles. The proportion of Australia carrying commercial forests is therefore very low and apart from forests on the coastal fringe of the continent, the tree density is very low.

The table below shows a classification of the estimated total forest area referred to above:—

### CLASSIFICATION OF FOREST AREA(a): AUSTRALIA.

				Proportion						
Class of	Class of Forest.			Class of Forest.		State Forest.	Communal Forest.	Private Forest.	Total.	of Total Forest Area.
				!			Per cent.			
Exploitable—				!			i			
Softwood			10,512	5	2,808	13,325	7.1			
Mixed wood			754	i		754	0.4			
Hardwood			41,691	75	13,129	54,895	29.4			
Total		'-	52,957	80	15,937	68,974	36.9			
Potentially Explo	itable—				ļ					
Softwood			58		100	158	0.1			
Mixed wood		• • •	100	1		100	0.1			
Hardwood			13,002		12,200	25,202	13.5			
Total		,	13,160		12,300	25,460	13.7			
Other Lands Clas	ssed as	Forest	81,023	450	10,884	92,357	49.4			
Grand To	tal	, '	147,140	530	39,121	186,791	100.0			

(a) Based on the 1955 classification of forests.

State forests accounted for 78.8 per cent. of the total forest area, private forests for 20.9 per cent. and communal forests for 0.3 per cent.

The bulk of the softwood area of approximately 13,325 square miles is in Queensland and New South Wales and consists principally of slow-growing cypress pine (Callitris spp.) in low rainfall areas. The total area has been increased in comparison with previous estimates by the inclusion of a large area of crown land carrying scattered cypress pine. The volume of this species per acre is comparatively low.

4. Forest Reservations.—The first attempt to determine the forest areas which should be reserved solely for purposes of timber production was made at an Interstate Forestry Conference held at Hobart in 1920. This Conference decided that an area of 24½ million acres of indigenous forest should be permanently reserved. According to statements furnished by State and Commonwealth authorities, reservations of forest areas in Australia as at 30th June, 1957, totalled 32,901,370 acres, of which 22,391,728 acres were Dedicated State Forests and 10,509,642 acres were Timber and Other Reserves. The area of Dedicated State Forests increased by 262,000 acres during the year 1956–57 and Timber and Other Reserves by 41,853 acres. These changes were mainly a result of government policy to increase the forest estate but to dedicate only those areas which are suitable for permanent forest management. The distribution of these areas is shown by States in § 5, para. 2, p. 981.

In general, the Timber Reserves are temporary and are liable to be alienated after the timber on them has been exploited. Some of these areas contain land of high value for forestry purposes, but the greater part does not justify permanent reservation.

If the permanently reserved areas were all of good quality, accessible, and fully productive forests supplying the class of timber required, they could be regarded as adequate for a much larger population than exists in Australia at the present time. Actually, however, a considerable proportion is in inaccessible mountainous country and many of the forests contain a mixture of species only some of which are at present of commercial value; much of the area consists of inferior forest and a large proportion of the whole has been seriously degraded by recurrent fires. Also, the indigenous forest does not contain adequate supplies of soft-woods producing commercial timbers and Australia's requirements of these have to be met largely by imports from other countries.

It is freely acknowledged by Australian forestry authorities that information on forest resources is very imperfect. It is not possible at present to give a reliable estimate of the forest areas needed to meet all future demands because of the number of unknown variables involved—in particular, the yield capacity per acre, future consumption of different classes

of timber per head, and the future population. It appears, however, that all available potentially good forest country, including adequate areas for plantations of conifers, will need to be reserved, protected and systematically managed, if Australia is to approach the goal of self-sufficiency in timber supplies in the future. One of the most urgent requirements in this connexion is a comprehensive estimate of forest resources.

5. Plantations.—Reference has been made to the inadequacy of indigenous softwood supplies, but, as a result of the planned policy of the forest services of the States and the Commonwealth and, to a less extent, of several private commercial organizations, the area of softwood plantations, mainly of exotic species, is steadily increasing. It was natural that this aspect of forestry received earliest attention in South Australia as it is the State most poorly endowed with natural forest. This State now has a larger area of planted softwoods than any other State in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. The total production is now over 130,000,000 superficial feet per annum and is expected to be increased substantially during the next decade. Production is also increasing in the other States and first thinnings from their plantations are already supplying a significant portion of the requirements of the case-making industry.

The total net area of Commonwealth and State softwood plantations as at 30th June, 1957, was 346,750 acres. In addition, the area of privately owned plantations at 30th June, 1956, was about 98,000 acres. Hardwood plantations (mainly Eucalyptus spp.) comprise a much smaller area and the total acreage is about 30,000 acres, nearly two-thirds of which is mallet (Eucalyptus astringens), which has been established in Western Australia for tan bark production.

A special article giving a detailed account of the history and development of softwood plantations and of the characteristics of individual species has been prepared by the Commonwealth Forestry and Timber Bureau for inclusion in this Year Book, see § 2. Softwood Plantations, page 975.

6. Fire Protection.—Fire control measures in Australia are the responsibility of the individual State Governments, and the provision of adequate fire protection is one of the main problems facing forest authorities at the present day. The forest services are responsible for fire protection measures over an area of some 43 million acres of dedicated and reserved forest areas throughout Australia, including some 10 million acres of Crown Land in Victoria.

The responsibility for the protection of private property outside urban areas rests with volunteer bush fire brigade organizations which are co-ordinated in each State by a committee or board carrying out functions of an advisory or educational nature and fostering the growth and organization of the bush fire brigade movement. Throughout the main agricultural and forest areas of Australia there are over 4,500 registered volunteer bush fire brigades with a membership approaching 200,000. Although both forest and rural fire organizations are entirely separate entities, a high degree of co-operation and liaison is maintained.

In addition to the forest service and rural organizations, various private and semi-Governmental bodies in each State maintain fire protection organizations, which are generally concerned with the protection of private forestry operations and hydro-electric and water catchment areas.

Over the five-year period 1952-57, the annual cost of protecting from fire 43 million acres of forest land for which State Forest Services are directly responsible is estimated at £1,500,000 or about 8½d. per acre. The cost of rural fire control as a whole cannot be estimated with any degree of accuracy, owing to the fact that by far the greatest contribution comes from the personal efforts of volunteer brigade members.

The Australian fire season is very variable, with an average of a particularly bad fire season every seven years or so. Such years as 1926, 1939, 1944 and 1952 account for a large proportion of the average annual burn which, for the period 1945 to 1955, amounted to 2.16 million acres or 1.8 per cent. of the total forested area of Australia. In disastrous fire seasons, such as 1938-39 and 1951-52, the acreage burnt on protected forest areas was as high as 15 per cent., compared with an average burn of 1.2 per cent. when such seasons are excluded.

Since the 1939.45 War, forest services have greatly expanded their fire detection facilities and big advances have been made in the use of power pumping equipment. Radio communication is now being used extensively by both forest services and rural organizations, and considerable progress has been made in the provision of legislative power for the rural bush fire movement, although the volunteer movement itself dates back to the turn of the century.

Recognizing that fire prevention is one of the most important aspects of the problem, intensive campaigns have been conducted to reduce the incidence of man-caused fires. A study of fire causes in recent years reveals that human agencies account for 95 per cent. of all fires, and of this figure at least 80 per cent. are preventable. It is estimated that burning off, much of which is started illegally, accounts for 35 per cent. of all fires; smokers, hunters, fishermen and travellers cause 13 per cent. of all fires; whilst only 5 per cent. of fires in Australia are caused by lightning.

### § 2. Softwood Plantations.

- 1. Introduction.—In recent years, there has been a growing awareness of the importance of softwood plantations in the Australian timber industry. In view of this, the following special article has been prepared by the Commonwealth Forestry and Timber Bureau, outlining the current position and future prospects of softwoods in the industry.
- 2. General.—The term "softwood" has long been used to represent the wood of the Coniferae, of which the most important family is the Pinaceae. This family consists primarily of trees and includes such well known producers of commercial timbers as the genera Pinus (pines), Picea (spruces), Abies (firs) and Pseudotsuga (Douglas fir).

The timber of the *Coniferae* is, in general, relatively light, of satisfactory strength in relation to weight, straight-grained, moderately soft and easy to work, machine and nail. In contrast, hardwoods as a group, and particularly the genus *Eucalyptus*, are heavy, strong, hard, not straight-grained and not readily nailed or worked by hand. Certain other properties, especially microscopic cell structure, result in softwoods seasoning much faster and more evenly than hardwoods. Because of these features, softwoods are more suitable than hardwoods for light building construction such as houses, fittings, most furniture and the very large box and case industry. The conifers also produce the bulk of the world's pulpwood and, in most industrial countries, represent 80–90 per cent. of the timber consumption.

3. Timber Resources, Production and Consumption.—Compared with countries of the temperate regions in the northern hemisphere, the indigenous forest resources of Australia are markedly deficient in softwoods. In "A Statement on Forestry in Australia 1951-55", prepared by the Forestry and Timber Bureau for the Seventh British Commonwealth Forestry Conference, which was held in Australia and New Zealand during the latter half of 1957, it was estimated that the total volumes of softwoods and hardwoods in the forests were:—

	Type of Timber.				Million cubic feet under back, true volume.	Per cent.	
Softwoods						1,336	4.1
Hardwoods	• •		• •	• •		31,473	95.9
Total						32,809	100.0

In contrast to the above, the availability (corresponding roughly to consumption) of sawn timber for the year 1955-56 was as follows:—

					Milli superfici

1945-46				79.6	38.0	67.2	184.8

The trend of Australian softwood sawn timber production during recent years is given in the following table:—

Notable in the above table is the steady decline in the production of hoop pine and associated softwood species from the virgin rain forests of Queensland and northern New South Wales, and the striking increase in plantation-grown timber. The latter is mainly *Pinus radiata*, but already includes a small amount of plantation-grown hoop pine.

42.0

37.8

56.3

78.0

103.2

173.5

201.5

289.3

In future, rain forest production will probably stabilise at a still lower figure, whereas plantation-grown timber will steadily increase in quantity. In the case of South Australia alone, the State which has the largest area of softwood plantations, the output of *Pinus radiata* within a decade is expected to exceed 250,000,000 superficial feet in the round.

4. Early Plantation Establishment in Australia.—The first steps for the creation of government plantations in Australia were taken, most appropriately, by the State which had the poorest natural resources—South Australia. This was in 1870, when attention was drawn to the seriousness of the position. Planting commenced in 1876, and has continued without interruption ever since, though it was not until shortly before the 1914-18 War that appreciable areas were established each year. These very early plantings here and elsewhere provided valuable evidence in later years as to the suitability of various sites for *Pinus radiata* and other species. The commencement of plantings in South Australia also led to the formation of the Woods and Forests Department of that State, one of the oldest forest services in the British Commonwealth.

Under the aegis of Lands Departments and other State organizations, small plantations were established in other States, notably Victoria, shortly after that time, although it was not until much later that independent forest services were created.

5. The Planting Programme and the Future of Softwood Plantations.—The States have long been aware of the desirability of establishing coniferous plantations, and in the 20 years following the 1914–18 War substantial areas were established under softwoods. It is largely due to this planting that Australia is now in a position to provide a significant part of its softwood consumption from locally-grown timber.

After the 1939-45 War, planting programmes were reviewed and, in most cases, were substantially increased. At the present time the objectives in total softwood areas by State forest services are: Queensland, New South Wales, Victoria and South Australia each 200,000 acres, Western Australia 100,000 acres, Tasmania 50,000 acres and the Australian Capital Territory 40,000 acres, comprising a total of 990,000 acres.

There are a number of factors to be considered in estimating the need for softwood plantations in the future. Some of these are:—

- (a) The relative demand for softwood and hardwood. Because of the general suitability of softwood for many purposes, it seems likely that the future demand for softwood will trend upwards until it reaches at least 60-75 per cent. of total timber consumption. In this connexion it is interesting to note that in South Australia, the only State which has significant home-grown softwood supplies in relation to population, softwoods at present comprise 83 per cent. of the total sawn timber consumption. For Australia, as a whole, the figure is only 32 per cent.
- (b) Forestry and land utilization. Many species of the genus Pinus can grow satisfactorily on relatively poor sandy soils with a mean annual rainfall which may be less than 30 inches. Under such conditions only the poorer types of eucalypts will grow and the mean annual increment in timber is very low, whereas with the pines it may average 165 cubic feet or 1,980 super. feet of timber in the round per acre. Since land of the above type is usually not good enough for agriculture and only of moderate value for pasture, utilization for softwood plantations may produce the greatest benefit to the nation. The main species of introduced pines now grown in Australia will grow to maturity within 40 years, whereas the better types of eucalypts require double that length of time to mature and, unless on exceptionally favourable sites, do not produce as high a mean annual increment of timber.

(c) Policy in relation to self-sufficiency in timber supplies. Since most of Australia's timber imports consist of softwoods, any policy directed towards increasing self-sufficiency in timber supplies, and reducing the amount of foreign exchange needed, will require expansion of the present rate of softwood plantation establishment. Growth in population will also increase the overall demand for timber. It has been stated recently that the need for plantations, even on a conservative estimate, will amount to 1,700,000 acres 35 years hence and that, allowing for increased population and using 60-70 per cent. of softwoods instead of the present 32 per cent. the requirements in 70 years could amount to 4,000,000 acres.

Heads of forest services agree that the target of one million acres decided upon immediately after the 1939-45 War is now conservative in relation to the potential requirements of Australia and that an increase of an additional one million acres would not be excessive.

6. The Extent of Existing Softwood Plantations.—The position as at 30th June, 1956, was estimated to be as follows:—

		Government.	Private		
State or Territory.	Pinus radiata.	Other species.	Total.	(mainly P.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.
New South Wales	42,937	17,265	60,202	9,041	69,243
Victoria	33,091	13,395	46,486	45,057	91,543
Queensland	976	68,335	69,311	2,000	71,311
South Australia	94,555	7,022	101,577	39,226	140,803
Western Australia	4,125	17,408	21,533	100	21,633
Tasmania	9,914	397	10,311	2,832	13,143
Australian Capital Territory	16,640	1,942	18,582	100	18,682
Australia	202,238	125,764	328,002	98,356	426,358

This table shows the predominance of *Pinus radiata* in all States except Queensland and Western Australia. This species is not climatically adapted to growing in the former State, where the native hoop pine is the most important plantation species, with slash pine (*Pinus elliottii* var. *elliottii*) in second place. The main species in Western Australia is maritime pine (*P. pinaster*), which is particularly adapted to growing on sandy soils too poor for the satisfactory growth of other species.

Private plantations have now assumed a position of importance in the softwood economy. The bulk of them comprise relatively large areas belonging to tree-planting or sawmilling companies, or to larger organizations in the pulp and paper industry. The first phase of extensive private planting was in South Australia and Victoria during the decade 1925–35, and these plantations now form the basis of expanding timber-using industries. The second phase began after the 1939–45 War, when the pulp and paper industry commenced planting on a fairly large scale in order to provide part of the raw material for its future requirements. An encouraging aspect of recent years has been that several sawmilling companies are planting in order to assure future timber supplies. With the exception of the relatively small areas in Queensland and New South Wales, *P. radiata* has been used almost exclusively.

7. Notes on the More Important Softwood Species used in Plantations.—(i) Native species. (a) Hoop pine—Araucaria cunninghamii. Hoop pine is a high class softwood and is the main species used in plantations in Queensland. It is also planted to a less extent in northern coastal areas of New South Wales. Where it occurs naturally in the rain forests, it attains very large dimensions, reaching 150 feet in height and four feet or more in diameter. To grow hoop pine to this size in plantations would take too long, and it is considered that a height of 100 feet and a diameter of 20 inches will be satisfactory for utilization. On good sites this would require a rotation of 50-60 years.

All tests to date indicate that the rapid, controlled growth possible in plantations does not affect the quality of the wood in the case of hoop pine; in fact, the wood properties of rapidly-grown plantation trees are equal to and sometimes superior to those of average wood from virgin forests. On the evidence available, branch size (with its effect on the knottiness of the timber) appears to be a factor that can be more readily influenced by genetic rather than silvicultural measures. The Forestry Department of Queensland is conducting research on this and other aspects of tree breeding.

The timber of hoop pine is in strong demand for most purposes where durability is not a prime consideration.

- (b) Bunya pine—Araucaria bidwillii. This species, which is closely related to hoop pine, is planted to only a limited extent on account of its slow growth, is more heavily-branched and more difficult to establish than hoop pine.
- (c) South Queensland kauri—Agathis robusta. Kauri has been planted to a more limited extent by the Forestry Department of Queensland because seed supplies are less readily obtained and establishment is more difficult.
- (ii) Exotic species. (a) Radiata pine—Pinus radiata. This pine was first introduced into Australia, as well as into New Zealand and South Africa, about 100 years ago, and has become one of the most important softwood species. It is a native of the Monterey Peninsula in southern California, where it is of negligible importance. When it was introduced to countries overseas it frequently showed a far superior rate of growth and attained much greater dimensions than in its native habitat, with the result that one of its common names is "remarkable pine". Heights at 20 years of age may vary from 60 to over 100 feet, and at maturity attain 130-140 feet. In Australia its planting is mainly restricted to the winter rainfall regions where the summers are dry and warm. Successful plantations have been established in south-eastern South Australia, southern Victoria, in Tasmania and on the southern and central tablelands and the south-western foothills of New South Wales. The mean annual increment of timber per acre varies from about 165-300 cubic feet, or 2,000-3,500 superficial feet in the round, true volume. Expressed in terms of a 40-year rotation, an average acre can be expected to produce a total volume of about 120,000 super. feet of sawn timber and possibly ten cords of pulpwood or small case logs. The timber, like that of most species, needs to be mature, and requires careful milling and Under these conditions it is at least equal to red deal (the timber of Pinus sylvestris) which is one of the main building timbers of northern Europe.
- (b) Slash pine—Pinus elliottii var. elliottii. This species replaces Pinus radiata as the main exotic species in Queensland and in coastal New South Wales north of Newcastle, which are areas of summer rainfall. Slash pine is one of the main timber species of the southern States of U.S.A., and in that country it is used extensively for pulp, sawn timber and veneers. Thinnings from plantations in Queensland have yielded sawn timber of good quality and there is no reason to expect that the quality will be in any way inferior to that of timber in its natural habitat. The rotation will probably be much the same as for P. radiata—about 40 years. Slash pine was first introduced into Queensland in 1925 and after 1930 began to play an important part in the planting programme of the State.
- (c) Loblolly pine—Pinus taeda. This is another species from southern and eastern parts of the U.S.A., where it grows on a wide variety of soils and under a similar range of climatic conditions to slash pine. It is not generally quite as uniformly healthy and vigorous as slash pine, and for this reason has not been planted as extensively, though, if certain apsects of development can be controlled, it is likely to receive increased attention.
- (d) Patula pine—Pinus patula. Patula pine is a fairly common species on the moist mountains of south-eastern Mexico at elevations of 7,000 to 8,000 feet above sea level. It is planted to a moderate extent in selected localities by the Forestry Department of Queensland.
- (e) Maritime pine—Pinus pinaster. This is the most important exotic pine in Western Australia, where it grows on sandy soils which are too poor for satisfactory development of P. radiata. It is also used in similar areas in South Australia. Maritime pine is a native of the Mediterranean region and very large areas of it have been planted for sand dune control in Les Landes region of France.

Maritime pine does not attain a height comparable with *P. radiata*, 80-90 feet being common for well-grown mature trees, but diameters are relatively large. The timber is useful for a wide range of purposes.

(f) Other species. In addition to the pines already mentioned, there are several other conifers which have a place in the Australian softwood plantation programme. Possibly the most important species of the future will be Douglas fir (Pseudotsuga menziesii) in the higher rainfall zones of the mountains of Victoria and southern New South Wales. The timber of this tree (sometimes known under the name of Oregon) has been, and still is, imported on an extensive scale from Canada and the U.S.A. In suitable areas in Australia it shows considerable promise, but the rotation will be considerably longer than that of P. radiata. A pine which is very suitable for hard soils in areas of rainfall as low as 20 inches is Canary Island pine (P. canariensis). This species is a native of the Canary Islands and grows well under conditions too dry and hot for most other exotic conifers. It is of excellent form and has a marked resistance to fire damage once it has attained pole size. The timber is of exceptional strength and density for a conifer.

In addition to the conifers referred to above, there may be afforestation possibilities with artificial hybrids on which forestry research institutions in Australia are now working. Controlled pollination offers wide scope since pollination can be carried out not only between individuals of the same species but also between closely allied species. Work on agricultural plants has shown that cross pollination not uncommonly has produced new varieties possessing more desirable features than those of either parent alone. Work on these lines is a long-term project, but one that is nevertheless of fundamental importance in forest research.

### § 3. Forestry Activities of the Commonwealth.

- 1. Prior to 1925.—When the Commonwealth of Australia was established on 1st January, 1901, forestry was not included among the matters transferred from the States to the control of the Commonwealth, and Federal jurisdiction was therefore restricted to the then relatively unimportant forests of the Australian Territories. After the 1914–18 War, these Territories (including Papua-New Guinea and Norfolk Island) covered a large area, and in the aggregate contained substantial forest resources. In the early twenties of this century, a professional forester was appointed as forestry adviser to the Commonwealth Government, and he submitted preliminary reports on the forest resources of Papua-New Guinea, Norfolk Island and the Australian Capital Territory, with suggestions for future policy.
- 2. Forestry and Timber Bureau.—In 1925, the Commonwealth Forestry Bureau was instituted, and the Commonwealth Forestry Adviser became the Inspector-General of Forests. By an Act of 1930, the Bureau received statutory powers, and its functions included the advising of the various Territorial Administrations on forestry matters, the management of forests placed under its control, the establishment of experimental forest stations, the training of students in forestry, etc.

At the end of the 1939-45 War, the Commonwealth Government decided to continue certain advisory functions which during the War had been carried out by War-time Timber Control, and such functions were incorporated in the Forestry and Timber Bureau Act 1946, under which the title of the Bureau was altered to Forestry and Timber Bureau. The powers and functions of the Bureau were extended to embrace the collection of statistics and information, and advising the Governments of the Commonwealth and the States or other interested bodies on matters relating to the supply, production, oversea trade and distribution of timber in Australia. The Bureau was placed under the administration of a Director-General.

The activities of the Bureau under its statutory functions are summarized below:—

(a) Forestry Education. The Australian Forestry School was opened at Adelaide University in 1926 in continuation of the School of Forestry of that University established in 1911. In 1927, the School was transferred to Canberra. The purpose of the School is to train students as professional officers to manage the forests of Australia. It also accepts students from overseas.

Training at the School covers the third and fourth years of a four-year course. The first two years are spent at an Australian university in a study of prescribed science subjects. Courses at the School lead to Commonwealth Diplomas in Forestry and in Forest Technology and, in the case of the former, can lead further to a degree in forestry of an Australian university. Applicants possessing a university degree granted for approved natural science subjects, or applicants with academic qualifications accepted by the Director-General as equivalent, may also be admitted to this School and proceed to the Diplomas. Graduates or Diploma holders approved by the Director-General may be admitted to the School to take selected subjects or to carry out research work.

The Board of Higher Forestry Education advises regarding pre-requisite university courses leading to the diploma courses and in regard to the maintenance of the standard of the School Diploma course.

In addition to students nominated by State Governments and other Australian and oversea authorities and organizations, private students are accepted at the School, and the Commonwealth Government offers up to ten forestry scholarships each year. These scholarships provide a salary allowance for the four years of the full diploma course.

During 1950, the number of students enrolled reached 80, owing to the intake of ex-servicemen taking university courses under the Commonwealth Reconstruction Training Scheme. The normal capacity of the School is 40.

(b) Silvicultural Research. Research headquarters and a Central Experimental Station have been established at Canberra. Other Forest Experimental Stations have been established at Mount Burr in the south-east of South Australia, in Tasmania, and at Dwellingup in Western Australia, on a co-operative basis with the Forest Services of those States. It is proposed to establish similar co-operative experimental stations in other States and Territories.

With its present limited staff, the research work of the Bureau has been concentrated largely upon studies of forest and climatic conditions, the genetical relationships and silvicultural requirements of various species, forest nutrition and the improvement of forest yields. A considerable expansion in the research activities is planned for the next few years as suitable trained staff becomes available.

(c) Forest Management Research. In the national interest, it is essential that overcutting of forests should be avoided and in consequence it is a matter of primary importance that reliable information be available as to the country's forest resources and potentialities. To this end, a national forest stocktaking is being carried out by the Bureau in co-operation with the Forest Services of the States and, to assist in the work of forest assessment, special consideration is being given to the development of the use of aerial surveys.

Consideration is also being given, in co-operation with the State Forest Services, to the establishment of increased areas of plantations of exotic pines with a view to providing additional supplies of softwood timber to meet requirements.

The general economics of forest management are also being studied.

(d) Timber Supply. The value of reliable statistical data covering availability of timber and timber requirements was so forcibly demonstrated during the 1939-45 War that it was considered essential to maintain at least a skeleton organization against times of future national emergency. Apart from this, it became clear that, for many years to come, shortages of timber on the one hand and heavy post-war reconstruction demands on the other, accentuated by a rapidly increasing population, would necessitate assessment of requirements and availability of supplies being kept constantly under review as a basis for short and long term policies of timber supply and distribution.

Advice is currently provided to government departments and the trade in matters pertaining to timber supply, including—(a) the availability of total quantities and quantities of particular grades and specifications required to meet Australia's needs; (b) the quantity of timber that should be imported; (c) the extent to which exports of timber and related products might be allowed without detriment to local needs; and (d) distribution of timber within Australia.

- (e) Management of Forests. The Bureau manages the forests of the Australian Capital Territory and maintains a forestry officer in the Northern Territory. In addition, it is responsible for advising the administrations of the Northern Territory and the External Territories on the management of the forests under their charge.
- 3. Commercial Forests.—The forest areas under Commonwealth control include the following:—.
  - (a) Australian Capital Territory. The forests of the Australian Capital Territory are administered by a Division of the Forestry and Timber Bureau. Further information is contained in Chapter V.—The Territories of Australia.
  - (b) Northern Territory. The forests of the Northern Territory are administered under ordinance by the Administrator of that Territory. The native forests of the Territory are very limited, consisting largely of open eucalypt forest in the north, with very restricted patches of rain forest along streams, river-fringing forests of paper bark tea-tree, patches of cypress pine, and elsewhere savannah woodland deteriorating to mallee and mulga in the interior. The Bureau maintains a forestry officer in the Territory for investigation and advisory purposes.
  - (c) Norfolk Island. The forests of Norfolk Island are administered by the Administrator of that Territory. The area reserved for forest covers 1,037 acres, of which the main species is Norfolk Island pine.
  - (d) Papua and New Guinea. The forests of the Territory of Papua and New Guinea are managed by a Forestry Department under the control of a Director, and are administered under an ordinance of the Territorial Administration. Forestry in the Territory commenced with the appointment of two officers in 1938. Further information is contained in Chapter V.—The Territories of Australia.

4. Forest Products Research.—Fundamental investigations connected with the properties and uses of timber and forest products generally are carried out by the Forest Products Division of the Commonwealth Scientific and Industrial Research Organization. These investigations cover a very wide field, e.g., pulp, paper, seasoning, structure and chemistry of wood, tans, etc.

Details can be obtained from the annual reports and publications of the Forest Products Division.

### § 4. Forestry Conferences.

The first British Empire Forestry Conference was held in London in 1920. Subsequent conferences were held in Ottawa in 1923, Australia and New Zealand, 1928, South Africa, 1935 and again in the United Kingdom in 1947. In conformity with the development of the British Commonwealth of Nations, the name of these conferences was changed to British Commonwealth Forestry Conference. The sixth was held in Canada in 1952 and the seventh was held in Australia and New Zealand in 1957.

#### § 5. State Forestry Departments.

- 1. Functions.—Except for Queensland, the powers and functions of State forest authorities are laid down under Forestry Acts and Regulations. In each State, there is a department or commission to control and manage the forests of the State. The functions of these administrations are as follows:—(a) The securing of an adequate reservation of forest lands; (b) the introduction of proper measures for scientific control and management of forest lands; (c) the protection of forests; (d) the conversion, marketing and economic utilization of forest produce; and (e) the establishment and maintenance of coniferous forests to remedy the existing deficiency in softwoods. Annual reports are issued by each State forest authority. In Queensland, forestry is a sub-department of the Department of Public Lands. Victoria maintains a forestry school at which recruits are trained for the forestry service of that State.
- 2. Forest Reservations.—As mentioned in § 1, para. 4, p. 973, State forest authorities agreed that, in order to secure Australia's future requirements, an area of 24½ million acres should be permanently reserved. At June, 1957, the area of State Forests reserved in perpetuity totalled 22,391,728 acres or 91.4 per cent. of the area recommended as the goal to be attained.

In addition to the work of permanently reserving areas in each State, foresters are endeavouring to survey all timbered lands with a view to the elimination of those unsuitable for forestry. Considerable areas have been revoked in certain States, while dedications of new areas have resulted in gains to the permanent forest estate. The Forestry Departments also usually control all timber on open Crown lands as well as over 10 million acres of timber reserves, national parks, etc., but, while these areas contain some land of high value for forestry purposes, the greater part does not justify permanent reservation.

In the following table, details of forest areas as recorded by State Forest Authorities, distinguishing between dedicated State forests, timber reserves and other forest reserves, are shown for each State as at 30th June, 1957. In addition details of forest reservations in Northern Territory and Australian Capital Territory are shown.

AREA OF FOREST RESERVATIONS, 30th JUNE, 1957. (Acres.)

State o	 State Forests.	Timber Reserves (Forest Acts)	Other Reserves.	Total.

<sup>(</sup>a) Excludes the Australian Capital Territory and the Northern Territory, details for which are not available.

The next table shows the sawn output of native timber in sawmills and other woodworking establishments in each State for the years 1938-39 and 1951-52 to 1955-56.

SAWN OUTPUT (a) OF NATIVE TIMBER:	ALL MILLS.
('000 super. feet.)	

State.		1938-39.	1951-52.	1952–53.	1953–54.	1954-55.	1955-56.
New South Wales		179,350	380,633	350,792	370,279	372,920	362,709
Victoria		120,197	348,478	322,209	338,957	362,334	351,271
Oueensland		193,250	291,681	285,074	288,380	264,914	261,730

Western Australia		125,453	178,290	203,314	216,021	225,794	222,397
Tasmania		84,228	126,563	109,908	118,271	140,384	150,632
Australia (b)		717,015	1,392,766	1,339,797	1,400,098	1,449,288	1,449,722

(a) Includes the sawn equivalent of timber peeled or sliced for plywood and veneers. (b) Excludes the Australian Capital Territory and the Northern Territory, details for which are not available.

In addition to the sawn timber shown in the preceding table, a large amount of other timber, e.g., sleepers, piles, poles, fencing material, timber used in mining, and fuel, is obtained from forest and other lands. Complete information in regard to the volume of this output is, however, not available. The annual reports of the Forest Departments of the States contain particulars of the output of timber from areas under departmental control but, owing to lack of uniformity in classification and measurement, accurate determination of total production cannot be made. Moreover, there is a moderate quantity of other timber produced from privately owned land, but information regarding output is not available.

- 2. Wood Pulp and Paper.—(i) Wood Pulp. The manufacture of wood pulp from Australian-grown timber was established in Australia in 1939, after years of experimentation with eucalypt hardwoods, production in 1938-39 being 6,165 tons of wood pulp. At the end of 1956, four wood pulp mills were operating in three States and production during 1955-56 was 110,998 tons of chemical pulp and 75,055 tons of mechanical pulp, a total of 186,053 tons.
- (a) Victoria. In Victoria, Australian Paper Manufacturers Ltd. produce wood pulp at Maryvale in Gippsland by a chemical process known as the kraft or sulphate process. The timber used at this mill consists mainly of eucalypt hardwoods at present unsuitable for other purposes and, in addition, a small quantity of plantation pine thinnings and mill waste and special softwood for production of cellulose. During 1956-57, the wood taken from Crown lands for the production of pulpwood and cellulose amounted to 6,799,949 cubic feet, of which 5,925,490 cubic feet were hardwood and 874,459 cubic feet were softwood. Pine plantations are being established in Gippsland by A.P.M. Forests Pty. Ltd. The initial aim is 20,000 acres to provide a perpetual yield of 20,000 tons of long-fibred pulp per annum. Planting commenced in 1951 and it is estimated that 19,700 acres were planted by the end of 1957.
- (b) South Australia. In South Australia a paper board mill operates near Millicent, using raw material in the form of logs from the State Forests in the south-east of South Australia. Up to date, groundwood pulp has been produced, but future expansion allows for the introduction of an additional semi-mechanical process. During 1955-56 and 1956-57, 6,046,309 and 6,577,728 super. feet of pulpwood respectively were used in this establishment. The forests of South Australia are also supplying large quantities of pulpwood in log form to Australian Paper Manufacturers Ltd., Victoria.
- (c) Tasmania. In Tasmania, two large mills are making pulpwood from indigenous hardwoods. At Burnie, on the north-west coast, Associated Pulp and Paper Mills Ltd. use a chemical method, the soda process, to produce wood pulp for fine writing and printing papers from eucalypt hardwoods. This plant is of the most modern design and pulp and paper manufacture are combined with sawmilling and hardboard production. Officuts and rejects from the timber mill are used for pulping and the manufacture of hardboard. Utilization of the freehold and concession forest areas held by the company is being extended to logging areas held by other sawmilling firms, who supply logs unsuitable for milling to the pulp mills. A continuous digester has been installed at the Burnie mill, making it the only one in Australia using a continuous pulping process. The forests are managed on a permanent yield basis with regeneration of the eucalypts in all suitable areas. Pine plantations are being established to provide softwoods for pulping.

Australian Newsprint Mills Ltd. at Boyer, 20 miles from Hobart, is the only producer of newsprint in Australia. Wood pulp is produced by mechanical process from hardwoods drawn from State timber concession areas. Eucalypts provide about 80 per cent. of its requirements for wood pulp, the remainder being imported long fibre softwood pulp. To secure more complete bush utilization, the company has established three sawmills to convert understory species such as myrtle, sassafras, blackwood and celery top pine to sawn timber. The forests are managed on a sustained yield basis. Forest utilization and management are designed to obtain eucalypt regeneration. Experimental work into the problems involved is being carried out by the company and the Tasmanian Forestry Commission.

- (ii) Paper and Paper Board. Paper and paper board are manufactured in all States but the industry is centred mainly in New South Wales, Victoria and Tasmania. At the end of 1956, seventeen paper mills were operating, six in Victoria, five in New South Wales, three in Tasmania and one each in Queensland, South Australia and Western Australia. A new mill, Shoalhaven Paper Mills Pty. Ltd., commenced production in February, 1956, when the first of two mills to be installed began operating. The mill, situated near Nowra in New South Wales, is the first superfine paper mill to operate in Australia, and is expected to produce 8,000 tons of watermarked, rag-content and other fine writing, printing and industrial papers each year. A wide variety of papers and paper boards is produced in Australian mills, the quantity and value of paper produced in 1955–56 being as follows:—newsprint, 79,015 tons valued at £5,649,906; blotting, 732 tons, £112,785; duplicating, 4,122 tons, £642,454; printing and writing, 43,363 tons, £6,557,826, kraft wrapping, 46,450 tons, £5,594,919; other wrapping, 1,227 tons, £181,889; felt and carpet felt, 3,739 tons, £306,635; and other paper, 35,124 tons, £3,312,933. In addition, 140,257 tons of paper boards valued at £10,787,706 were produced in 1955–56.
- 3. Other Forest Products.—(i) Veneers, Plywood, etc. Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. Recently, however, this has been considerably extended, and much greater use has been made of locally-grown timbers, both hardwoods and softwoods. In recent years, special attention has been paid to the selection of logs suitable for peeling.

The following table shows the production of plywood for each of the years 1938-39 and 1951-52 to 1955-56:—

# PLYWOOD PRODUCED. ('000 square feet— $\frac{3}{10}$ in. basis.)

State.	1938-39.	1951–52.	1952-53.	1953-54.	1954-55.	1955–56.
New South Wales Queensland Other States	24,194 66,100 14,511	31,784 110,028 17,341	22,557 81,400 11,771	28,601 114,545 18,435	35,039 130,330 21,235	39,256 133,230 28,213
Australia	104,805	159,153	115,728	161,581	186,604	200,699

Of the total plywood produced in 1955-56, 158,507,000 square feet ( $\frac{3}{16}$  in. basis) was classed as "Commercial", 19,833,000 as "Waterproof", 4,949,000 as "Case" and 17,410,000 as "Sliced Fancy".

During 1955-56, 501.8 million square feet ( $\frac{1}{16}$  in. basis) of veneers were produced by the rotary process for the manufacture of plywood, and 147.1 million square feet ( $\frac{1}{16}$  in. basis) were sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 49.7 million square feet of sliced veneers were produced.

(ii) Hardboard. The production of hardboard for building purposes from pulped wood has increased considerably in Australia in recent years. There were three factories producing hardboard in 1956 (two in New South Wales and one in Tasmania) and during the three years ended 30th June, 1956, the following quantities and values were produced:—1953-54, 16,992,000 square yards, £3,284,000; 1954-55, 19,834,000 square yards, £3,810,000 and 1955-56, 22,619,000 square yards, £4,326,387. Preliminary figures for 1956-57 show a recorded total production of 22,456,000 square yards, £4,360,051.

Most of this hardboard enters into normal usage in the condition in which it leaves the producing factories. The remainder is further treated and surfaced mainly to a glossy "tiled" finish, and in 1955-56 this production accounted for 1,011,000 square yards valued at £679,000.

- (iii) Eucalyptus Oil. Oil may be distilled from the foliage of all varieties of Eucalyptus, and several of them furnish a product widely known for its commercial and medicinal uses. Complete information regarding Australian production and consumption of eucalyptus oil is not available, but considerable quantities are manufactured, particularly in New South Wales and Victoria. The value of oversea exports of eucalyptus oil distilled in Australia was £215,283 in 1952-53; £163,763 in 1953-54; £155,291 in 1954-55; and £274,037 in 1955-56. The quantities exported in the years 1952-53 to 1955-56 were 721,330 lb., 504,628 lb., 451,741 lb. and 683,131 lb. respectively.
- (iv) Gums and Resins. Gums and resins are produced in most States of Australia, the main product being grass tree, or yacca gum. This gum, which is used in the preparation of varnishes and lacquers, comes chiefly from South Australia while small quantities are also produced in New South Wales and Western Australia. In 1955-56, the recorded production for Australia of gums and resins was 15,578 cwt. Exports of yacca gum from Australia during the same period amounted to 14,324 cwt. valued at £36,429.
- (v) Tanning Barks. The forests of Australia are capable of yielding a wealth of tanning materials; many species of Eucalyptus and other genera contain varying proportions of tannin, chiefly in the bark, but also in the wood and twigs. Scattered distribution however, has resulted in only the richest tan-bearing species being used in Australia. These are:—Golden wattle (Acacia pycnantha), black or green wattle (Acacia decurrens or mollissima), and mallet (Eucalyptus astringens). Mallet (E. astringens), of Western Australia, is not extensively used in Australian tanneries, but is exported to Europe and other countries. Reference to oversea trade in tanning barks is made in § 7, para. 3, p. 988.

The production of extract from the bark of karri (E. diversicolor), of which very large quantities are available at karri sawmills, has passed the experimental stage, and private enterprise has started production on a commercial scale. The experimental work in kino impregnated marri (E. calophylla) bark is not yet complete. The total factory production of tanning bark in Australia approximated 25,000 tons per annum in the years prior to 1939, but since then production has declined and in 1955-56 was only 9,288 tons. However, this decrease is offset by the increased use of vegetable tanning extracts and synthetic tanning agents.

4. Value of Production.—(i) Gross and Local Values, 1955-56. The values of forestry production on a gross and local basis are shown in the following table for the year 1955-56.

GROSS AND LOCAL VALUE OF FORESTRY PRODUCTION, 1955-56. (£'000.)

			(2 000.)		
State.	State.		Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.
New South Wales			15,774	431	15,343
Victoria			12,668	845	11,823
Queensland			9,499	839	8,660
South Australia			4,736	140	4,596
Western Australia			5,237	360	4,877
Tasmania			5.174	583	4,591
Northern Territory			40	(a)	40
Australian Capital Te			140	11	129
Australia			53,268	3,209	50,059
			<u> </u>		<u>;                                    </u>

(a) Not available.

No information is available on the value of materials used in the process of production for 1955-56 and hence it is not possible to calculate net value of forestry production.

(ii) Local Values, 1934-35 to 1938-39 and 1951-52 to 1955-56. In the following table, the local value of forestry production and the local value per head of population are shown by States for the years 1951-52 to 1955-56 in comparison with the average for the five years ended 1938-39. Local value is gross value less marketing costs and is the value at place of production.

LOCAL VALUE OF FORESTRY PRODUCTION.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.(a)
		Locai	Value. (	£'000.)	•		<u> </u>

<sup>(</sup>a) Details for the Australian Capital Territory and the Northern Territory are excluded for years prior to 1954-55.
(b) Net value of production (i.e., local value less value of materials used in the course of production) has been included for certain years for Victoria and Western Australia.

- 5. Employment.—(i) Forestry Operations. The estimated number of persons employed in forestry operations at 30th June, 1954, including working proprietors, but excluding those employed in the sawmilling industry, as recorded at the 1954 Census, was 15,300.
- (ii) Milling Operations. Details of the average number of persons employed, including working proprietors, in the milling operations of sawmills during the year 1955-56 are shown in the next table. Further details regarding the operations of these mills are shown in Chapter VII.—Manufacturing Industry.

SAWMILLS: AVERAGE NUMBER OF PERSONS EMPLOYED, 1955-56.

<sup>(</sup>a) Excludes railway sleepers.

Most of the logs imported are hardwoods from Borneo, the value of all logs imported being £917,000 during 1955-56. In the same year, the value of undressed timber imported totalled £13,192,000, of which nearly 80 per cent. was softwood. Of the imports of undressed timber, softwoods came principally from Canada, United States of America and New Zealand, while hardwoods came mainly from Malaya and Borneo. The bulk of the imports of dressed timber now comes from Finland, Sweden and Norway. The total value of dressed timber shown in the table above amounted to £1,579,000 during 1955-56. The United Kingdom and New Guinea supplied the greater part of the imports of veneers, which were valued at £151,000 while New Guinea was the largest supplier of plywood, imports of which were valued at £658,000.

2. Exports of Timber, Railway Sleepers, Veneers and Plywood.—The quantities of timber, railway sleepers, veneers and plywood exported during the year 1955-56 are shown below, together with the countries of consignment.

EXPORTS OF TIMBER, RAILWAY SLEEPERS, VENEERS AND PLYWOOD FROM AUSTRALIA: COUNTRIES OF CONSIGNMENT.

Total	\	4,178	670	22.136	12,765	1,459	6,986	960

Exports of timber were consigned mainly to New Zealand and the United Kingdom, and consisted largely of the Western Australian hardwoods, jarrah and karri, which have earned an excellent reputation for such purposes as harbour works and wood paving, etc. The total value of exports of undressed timber, excluding railway sleepers, during 1955-56 was £1,363,000 (hardwood £1,303,000, softwood £60,000). Railway sleepers exported were valued at £711,000.

3. Classification of Imports and Exports.—(i) General. The quantities and values of timber, according to items, imported and exported during the year 1955-56 are shown in the following table:—

TIMBER: IMPOR	TS AND	EXPORTS,	, AUSTRALIA,	1955-56.

<sup>(</sup>a) Not recorded separately.

The imports of tanning bark consist almost exclusively of wattle bark from the plantations in South Africa. One species of Australian wattle, Acacia mollissima, is chiefly relied upon for the production of wattle bark in the South African plantations, most of the seed being obtained from the best wattle bark areas in eastern Tasmania and western Victoria. Two reasons are given to account for the success of the industry in the Union of South Africa:—(a) The suitability of the treeless, grassy highlands of Natal; and (b) the availability of native labour.

<sup>(</sup>b) Includes dunnage and timber for which quantity data are

<sup>(</sup>ii) Tanning Substances. The imports of tanning substances of natural origin in 1955-56 amounted to 173,035 cwt. valued at £602,555 (bark, 2,083 cwt., £4,192; extracts, 131,474 cwt., £500,189; and other tanning substances including valonia, myrabolans, cutch, etc., 39,478 cwt., £98,174) compared with 199,096 cwt. valued at £648,769 (bark, 2,499 cwt., £5,163; extracts, 154,390 cwt., £592,414; and other tanning substances 42,207 cwt., £51,192) in 1954-55. Exports during the same periods were 139,709 cwt. valued at £480,190 and 96,965 cwt. valued at £350,801 respectively.

#### CHAPTER XXVI.

#### FISHERIES.

### § 1. General.

1. Fish Resources.—The waters surrounding the Australian continent contain a great variety of marine fauna. Despite this, the fish stocks in Australian waters, in common with those of other countries of the Southern Hemisphere (with the exception of South Africa), are small by comparison with the stocks in the Northern Hemisphere. The reasons for this comparative shortage have not been fully explained but it seems clear that the basic factors involved are the absence of large expanses of shallow water and the much lower fertility of the oceans of the Southern Hemisphere.

The existence of greater fish stocks, of course, largely explains why approximately 98 percent. of the world production of fish comes from the Northern Hemisphere. Nevertheless, the Australian catch is low even after making allowance for the smaller resources available. Further explanation must be sought in terms of the socio-economic factors which determine the demand for and supply of fish.

Compared with countries in the Northern Hemisphere the per capita consumption of fish in Australia is small. Consequently, there is not the pressure on resources necessary to induce expansion in the fishing industry and to encourage the investment of large amounts of capital. On the other hand, even this somewhat restricted Australian demand for fish is not met from purely local sources of supply and quantities of fish are imported each year.

This apparent paradox is explained by the fact that the Australian fishing industry has consistently over-exploited some sources of supply and under-exploited others.

Thus, on the one hand, the fisheries in the estuaries of the Australian coasts (the so-called estuarine fisheries) and those offshore for fish that dwell on the bottom of the sea (the demersal fisheries) have frequently been overfished with a consequent diminution of stocks. On the other hand, those species of fish which dwell near the surface of the sea (the pelagic species) have barely been exploited at all.

It is anticipated that the greatest future development of the Australian fishing industry will take place in the pelagic fisheries. However, no great contribution to the supplies of fresh fish can be expected from this source since most of the pelagic species caught are canned or processed.

An increase in the supply of fresh fish available to the Australian consumer will therefore have to come largely from an expansion of the estuarine and demersal fisheries. In view of the over-exploitation of existing estuarine and demersal fisheries, such an expansion will require the development of new fishing areas.

While it is known that promising fishing grounds exist to the south and north of Australia, it appears that the trawling grounds of the Great Australian Bight are the most suitable for development.

2. Fishing Areas.—The principal fishing areas at present are the coastal lakes, streams, estuaries and beaches, from Cairns in Queensland to Ceduna in South Australia, and from Esperance to Geraldton in Western Australia. For the most part, these fishing grounds are associated with the coastal streams. The demersal grounds fall into two classes—(a) the reefs from which cod, snapper, etc. are taken; and (b) the grounds from which flathead, morwong, etc., are taken. The reefs extend intermittently from northern Queensland around the southern part of the continent to Shark Bay in Western Australia. The flathead grounds lie on the continental shelf off south-east Australia, chiefly from Crowdy Head to south of Cape Everard and further off the east Tasmanian coast from Babel Island southwards to Storm Bay. Other demersal grounds exist in the Great Australian shark grounds lie principally in Bass Strait and on the continental shelf off eastern South Australia. Other grounds have been located off southern Western Australia.

The grounds of existing pelagic fisheries include that for the Spanish mackerel off the north-eastern coast from about Coff's Harbour to Cairns and that for barracouta in Bass Strait and off eastern Tasmania. Jack mackerel is found in the waters of eastern Tasmania, the south-east coast of New South Wales, and Western Australia. Tuna is now being taken in commercial quantities on the New South Wales and South Australian coasts.

Of the crustaceans exploited in Australia, crayfish are the most important and are taken on reefs of the continental shelf in the waters of all southern States, the fishery extending (with a major interruption in the Bight) from Port Macquarie in New South Wales to Geraldton in Western Australia. Considerable development has taken place in the crayfish fisheries, particularly in South Australian and Western Australian waters, owing to the opening up of markets in the United States of America for frozen crayfish tails. Crabs of various species are found in practically all coastal waters. Prawns are taken in the temperate waters of Queensland and New South Wales.

In the Mollusc group, edible oysters are found chiefly in the temperate waters of Queensland, New South Wales and Victoria. Some cropping of natural resources takes place in Queensland, but the principal cultivation grounds are found in New South Wales. Until 1956, scallops were taken commercially in Tasmanian waters only, but since then they have been taken also in Queensland.

Pearlshell is fished from Cooktown in Northern Queensland, and from Thursday Island round the north coast of Australia to Exmouth Gulf in Western Australia. Trochus shell is obtained from Mackay in Queensland round the north coast to King Sound in Western Australia.

Whales emigrating from Antarctic waters to their breeding grounds in the warmer waters of low latitudes pass up both the western and eastern coasts of Australia, returning to the Antarctic in the spring. Two whaling stations operate in Western Australia (Babbage Island near Carnarvon and Cheynes Beach near Albany), one in New South Wales (Byron Bay) and one in Queensland (Moreton Island). The company operating at Byron Bay (N.S.W.) also operates a station at Norfolk Island.

3. Fishing Boats and Equipment.—The fishing equipment includes almost every possible type of gear, and appropriate boats are employed. The on-shore equipment includes mesh-nets, trawl-nets, and traps of various types. The demersal reef fishery is worked with traps, hand lines and long lines. The demersal flathead fishery is worked by both otter trawl (with Vigneron-Dahl gear) and Danish seine; in addition, some hand-lining is carried out. The demersal shark fishery is worked by long lines. The pelagic mackerel fishery employs trolling gear with lures of various types, while the pelagic barracouta fishery employs principally barbless jigs. Tuna is taken by trolling and, more recently, by pole fishing with live bait.

The boats for the on-shore fisheries are almost invariably small vessels fitted with low-power petrol engines. The vessels working the reefs are larger (up to 50 feet) and have more power. The otter trawl vessels are steam trawlers, and the Danish seine vessels are 40 to 70 feet in length with diesel engines. The shark boats have diesel power and range from 35 to 50 feet in length.

4. Administration.—The fisheries within the three-mile limit are administered by State Departments while the Commonwealth Fisheries Office, a division of the Department of Primary Industry, develops and administers fisheries in extra-territorial waters and co-ordinates fisheries administration.

The administration of the fisheries was discussed in greater detail in Official Year Book No. 41, p. 844, and in earlier issues.

## § 2. Development and Present Condition of the Fishery.

1. Fisheries Proper.—(i) General. The development of Australian fisheries has almost invariably followed the same sequence at each centre. The earliest fisheries were on-shore followed by demersal reef fishing using long lines. Trawling operations have followed line fishing in suitable areas and more recently the exploitation of pelagic fisheries has commenced.

Until about 1900, the expansion of the industry consisted chiefly of the extension of on-shore and demersal fishing with long lines into areas previously unworked. Barracouta was fished in Tasmanian waters at least by 1880, if not earlier, although the main development of this fishery occurred towards the end of the 1939-45 War and in later years to meet demands for canned fish.

The first major development of the industry came with the institution of trawling operations off the New South Wales coast in 1918 by the New South Wales Government. The State enterprise failed, but the fishery was found very profitable by private enterprise. In 1936, the use of Danish seine vessels began and the fleet of these vessels rapidly expanded, and in 1946 (after the return of vessels requisitioned in war-time) a peak was reached when thirteen steam trawlers and 120 Danish seine vessels were licensed. The total catch of trawled fish in 1946-47 was 16,000,000 lb. Of the species taken by the trawl fishery, tiger flathcad, morwong, and nannygai are the most important and of these, flathcad may be regarded as the prime fish and commands a higher price. Since 1947, the composition of the catch has changed, because of depletion of the flathcad stocks, and the lower-priced fish have become a larger proportion of the catch. In 1956-57, four steam trawlers (all based at Sydney but fishing right down the coast to Bass Strait) and a considerably larger number of Danish seine vessels in New South Wales and Victoria were engaged in the trawl fishery.

In Queensland waters, since 1930, the Spanish mackerel has been taken by line fishermen, operating in off-shore waters out to the Barrier Reef between Gladstone and Cairns.

In 1930 also, fishing for school (snapper) shark commenced in south-eastern waters, particularly off the Victorian and Tasmanian coasts. This fishery rapidly extended its area of operations, and in 1955-56 the catch of edible sharks was 7,000,000 lb. round weight.

Great impetus was given to the fishery during the war years by the demand for livers for fish oil production for medicinal purposes. Demand eased with the return of cod-liver oil and availability of synthetic vitamin "A". The shark fishery is still important, however, as the flesh, which is sold as "flake", brings substantial prices, mainly in Melbourne.

As far as pelagic fisheries are concerned, pilchards occur in the southern waters of Australia from Port Stephens to the south-west of Western Australia and also as far north as Moreton Bay. Commercial catches have been made with lampara nets and to a lesser extent with purse seines. Anchovies are caught in Port Phillip Bay and also in Lakes Entrance and are used for processing. Sprats in Tasmanian waters are caught in payable quantities, though there is usually some difficulty in finding a market for them. Jack mackerel have been caught in commercial quantities off the east coast of Tasmania and off Eden in New South Wales.

The tuna fishery was established on the New South Wales coast during 1949, when fishermen, using improvised trolling gear, caught 1,000 tons of southern bluefin tuna. The catch was canned at Eden and Narooma and some was frozen raw and sold direct to Californian canneries. The American-owned tuna clipper Senibua, whose operations were subsidized by the Commonwealth, demonstrated that Australian tunas could be caught by pole fishing with live bait. In 1955, 40 tuna boats were operating on the south coast of New South Wales, but their catch was limited by the canneries to quantities which could be marketed in canned form in Australia and overseas as the price of raw tuna in California was reduced below the level necessary to make export profitable. In 1955, a new plant on the south coast of New South Wales began producing smoked and cooked tuna, giving further support to the tuna fishery.

Southern bluefin tuna occurs all along the southern coastline of the continent. In addition, albacore, yellowfin, striped (skipjack) and northern bluefin tuna occur, but the taking of these fish has not been developed.

(ii) Production. The statistics of production published in this chapter are in terms of "round" or "gross" weights. Round weights are calculated from recorded weights using conversion factors which allow for the fact that the weights of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Publication on a round weight basis has been made possible in recent years largely as a result of the efforts of the Commonwealth Fisheries Office.

In interpreting Australian fisheries statistics, allowance should be made for the incomplete coverage. Returns are collected in most States from licensed professional fishermen only, and as a result the published totals fall short of total fish production to the extent of the catch by amateur fishermen, the commercial catch by persons not licensed as professional fishermen and unrecorded catch by professional fishermen.

Production by States for the years 1951-52 to 1955-56 is shown in the following table on a round weight basis.

# RECORDED PRODUCTION OF FISH. (EQUIVALENT ROUND WEIGHT.)

<sup>(</sup>a) Catch by Victorian fishermen in Tasmanian waters is included in Victoria. (b) Less than 500 lb.

2. Crustaceans and Molluscs.—Crayfish are taken (in pots) in all States other than Queensland. Cray fisheries have developed greatly since the 1939-45 War to take advantage of the market in the United States of America for frozen crayfish tails, the total catch increasing from approximately 3 million lb. in 1945-46 to 20.2 million lb. in 1954-55. Due largely to adverse weather conditions in the eastern States and the presence of an unusually large number of octopuses in crayfishing grounds off South Australia the catch in 1955-56 dropped to 18.5 million lb.

Prawns are taken by otter trawl in the waters of New South Wales, Queensland and Western Australia. Prawns have been found in considerable quantity in the ocean waters of northern New South Wales and southern Queensland. An important development is anticipated with improvement of handling and distribution and opening up of oversea markets.

Initially the Australian oyster fisheries depended solely upon the harvesting of naturally grown stock in littoral and submarine areas. However, the stocks soon deteriorated and attention was turned to methods of cultivation. This is carried on mainly in New South Wales where there has been constant improvement in methods, and the present technique in certain areas is highly efficient. The production for Australia in 1955–56 was 9,561,000 lb. (in-shell). Scallops are taken by dredge in the D'Entrecasteaux Channel in Tasmania and by trawl in Hervey Bay, Queensland.

Details of production of crustaceans and molluscs are shown by States in the table below on a gross (in-shell) weight basis for the year 1955-56.

RECORDED PRODUCTION OF CRUSTACEANS AND MOLLUSCS, 1955-56.
(GROSS (IN-SHELL) WEIGHT.)
('0000 lb.)

(a) Catch by Victorian fishermen in Tasmanian waters is included in Victoria. (b) Not available for publication. (c) Incomplete. (d) Excludes oysters in Western Australia.

3. Pearl-shell and Trochus.—The industry, which ceased operations on Japan's entry into the war in December, 1941, did not resume on a commercial basis at Queensland centres until late in 1945, and at Western Australian centres until 1946, while operations off the Northern Territory coast were not resumed until 1948.

Before the war, a large proportion of the key men were Japanese; the others included Malays, Chinese, Koepangers, Filipinos, Papuans and Torres Strait Islanders. On the resumption of operations without the Japanese, the labour available was, with few exceptions, inefficient. The expansion of the industry at Darwin has been retarded by the fact that the key men lack the local knowledge acquired by the Japanese. Western Australian centres also suffered from lack of skilled labour. In 1953, the Commonwealth permitted the employment at Broome, under certain conditions, of 35 Japanese divers, tenders and engine-drivers. Queensland, with a more ready source of labour from the Torres Strait Islands and mainland, was able to expand its fishing more rapidly, and in the 1949 season achieved its second highest pearl-shell production on record.

In 1953, a Japanese fleet, which had been pearling in the Arafura Sea while a Japanese Mission in Canberra was discussing a fisheries agreement with the Australian Government, moved into an area in which it had been asked not to fish. This action was regarded

as having broken off the negotiations, and proclamations were issued in September, 1953, declaring Australia's sovereign rights over the natural resources of the sea bed and sub-soil of the Continental Shelf adjoining Australia, its territories and the Trust Territory of New Guinea. In September, the Pearl Fisheries Act 1952-53, providing for licensing and control of pearling, was brought into operation.

Japan disputed Australia's right to apply this legislation to foreign ships, and Australia agreed to refer the dispute to the International Court of Justice on condition that meantime Japanese pearling in Australian waters would be conducted in conformity with the Australian Government's policy of regulation and conservation, and that Japan would abide by the Court's decision. On these conditions, a Japanese pearling fleet has operated in prescribed waters since 1954.

Australian production of pearl-shell and trochus-shell was 2,913,000 lb. and 2,114,000 lb. respectively in 1955-56. In addition, Japanese pearlers took 1,657,000 lb. of pearl-shell in Australian waters.

Reference to inquiries into the pearl-shell fishing industry by a Royal Commission in 1912, and by the Tariff Board in 1935, is made on p. 1031 of Official Year Book No. 37.

#### § 3. Marketing and Distribution.

- 1. Marketing.—Most of the fish taken in Australian waters is sold in metropolitan markets. In Queensland, fish marketing is under the control of a Fish Board, which has representatives of producers, wholesalers and consumers, and a Government nominee as chairman. A central market is located in Brisbane and there are branch markets or depots at fourteen centres along the coast. The organization ensures that all fish is marketed through these channels, and the board has encouraged to a very marked extent the steadily increasing fish production of the State. The fish marketing methods in this State have proved successful. In New South Wales, the central market in Sydney is conducted by the Chief Secretary's Department, and the port depots in various centres along the coast by fishermen's co-operatives. These co-operatives distribute some of their fish to local centres and to inland country districts, and send the balance to the central market in Sydney. In Victoria, South Australia and Western Australia, fish is sold in central markets by agents. The greater part of the catch of fish in Tasmania is either processed in canneries in that State or exported to the mainland. There is some interstate export of fish from the northern rivers of New South Wales to Queensland, from Tasmania to New South Wales and Victoria, and from South Australia to Victoria.
- 2. Consumption of Fish.—Prior to the 1939–45 War, Australians consumed annually the fresh and canned equivalent of about 131 million lb. of round fish, or 19.0 lb. per person. About 70 million lb. were produced locally and the remainder was imported. Total consumption (including canned and cured) during 1955–56 is estimated at 94.8 million lb. edible weight (10.2 lb. per head) as compared with 94.2 million lb. edible weight (10.4 lb. per head) in the previous year. This is equivalent to approximately 186.5 million lb. fresh round weight (20.0 lb per head) and 185.8 million lb. fresh round weight (20.4 per head) respectively.
- 3. Processing, including Canning.—The equipment for handling fish was in the past rather inadequate, but in most States cold storage facilities have been improved and increased in recent years. In Queensland and New South Wales, particularly, the depots which have been established at fishing ports have been equipped with cold storage space. In several States, there has been a development of establishments equipped for snap freezing of fish, in particular the freezing of crayfish tails, prawns and scallops for export. A number of vessels have been equipped with freezing plants to process crayfish at sea.

In all States, there has been a development of facilities for light processing of fish.

Reference to the production of processed fish and number of factories operating will be found in § 5, para. 4, p. 999. Considerable expansion has taken place in the industry. particularly since 1945-46. In 1938-39, 1,472,592 lb. of fish valued at £29,581 were processed, whereas in 1955-56 10,603,479 lb., valued at £384,945 were processed.

4. By-products.—Processing of offal for fish-meals, etc., has been established in certain States. The processing of livers for vitamin-rich oils was undertaken in several States but as mentioned previously production has fallen to a low level in recent years.

### § 4. Inquiries and Research.

- 1. General.—The Australian fishing industry has been the subject of a number of official inquiries seeking an explanation of the very slow rate of development and the unfortunate conditions prevailing within the industry as well as the paucity of supplies available to the public. Details of the inquiries undertaken, the recommendations arising from them, and subsequent developments will be found in Official Year Book No. 38. p. 1082.
- 2. Commonwealth Scientific and Industrial Research Organization, Division of Fisheries and Oceanography.—Details of the establishment, organization and functions of the Division of Fisheries of the Commonwealth Scientific and Industrial Research Organization will be found in Official Year Book No. 38, p. 1083. The scientific basis on which the work of the Division is carried out has now been widened, and, to provide for this, the name of the Division has been amended to "Division of Fisheries and Oceanography

Research carried out by the Division has assisted greatly in the development and preservation of Australian fisheries. Details may be found in Official Year Book No. 41. p. 848, and in previous issues.

3. Commonwealth Fisheries Office.—The Commonwealth Fisheries Office, a division of the Department of Primary Industry, arose out of a Tariff Board recommendation in 1941, following a public inquiry into the fishing industry, that a Commonwealth developmental authority should be established. Details of the establishment, organization and functions of the office will be found in Official Year Book No. 38, p. 1084.

In accordance with the Tariff Board report, scientific research, as distinct from developmental and administrative functions, was left to the Commonwealth Scientific and Industrial Research Organization, which had established a Division of Fisheries for this purpose in 1937.

The Commonwealth is responsible for extra-territorial waters, whaling, pearling, rehabilitation of ex-servicemen in the fishing industry, fishery training schools, commercial development of fisheries, promotion of uniform conditions governing catches of various species of fish, statistics, information and publications.

- 4. Fisheries Development Trust Account.-In early 1956, the assets of the Australian Whaling Commission, an authority set up by the Commonwealth Government in 1949. were disposed of to private interests. The finance derived from the sale, authorized by the Fishing Industry Act 1956, was paid into a fund, known as the Fisheries Development Trust Account. Provision was made in the Act for the moneys to be used for the purposes of developing the fishing industry through research, direct financial assistance, the development of particular fisheries, training schemes and the dissemination of information and advice through various publications and the press.
- An Advisory Committee on fisheries development, which comprises representatives of the Commonwealth Departments of Primary Industry, Trade, Treasury, and the Commonwealth Scientific and Industrial Research Organization, has been formed to advise the Minister on specific projects for fisheries development.
  - Projects which have so far been approved include:-
- (i) The purchase of a modern diesel trawler to test the commercial potentialities of trawling in the Great Australian Bight. This area is so far unexploited, although, in the past, scientific and commercial fishing operations have revealed a vast fishing area.
- (ii) The chartering of a vessel to survey the prawn resources off the east coast of Australia. This survey met with initial success with the discovery of large prawn resources off Fraser Island (Queensland).
- (iii) A survey of the pilchard resources off the New South Wales coast, with a view to ascertaining whether pilchards can be taken in commercial quantities.
- 5. North Australia Development Committee.—In 1946, the North Australia Development Committee recommended that a hydrological and oceanographical survey should be made of North Australian waters. It also suggested that a biological survey should be made of the pearl oyster with particular reference to the possibility of instituting pearl culture.

Further reference to these and other recommendations may be found in Official Year

Book No. 41, p. 848.

The C.S.I.R.O. Division of Fisheries subsequently set up a biological research station on Thursday Island, mainly for the pearl and pearl-shell investigations. Since 1951, a research vessel has been based on Thursday Island and is used for diving, biological and hydrological work.

6. Whaling.—The Commonwealth Fisheries Office carried out extensive investigational and preparatory work for the establishment of an Australian whaling industry. In 1949, a privately-owned station began operating at Pt. Cloates, Western Australia. The Australian Whaling Commission, referred to in paragraph 4, above, built a station on Babbage Island, near Carnarvon, Western Australia, which began operations towards the end of the 1950 season. There is also a small station in Western Australia at Cheynes Beach near Albany. A large station began operating in 1952 at Moreton Island (Queensland), and in 1954 a small station began operating at Byron Bay (New South Wales). In 1956, the company operating the Byron Bay station established a station at Norfolk Island. In the same year, the station operating at Pt. Cloates (W.A.) closed down. In 1956, the five stations operating processed 1,990 whales, producing whale oil and other products valued at £2,233,000. A table showing statistics of whaling operations appears in § 5, para. 2, following.

The Director of Fisheries represents Australia on the International Whaling Commission which controls whaling throughout the world.

### § 5. The Fishing and Whaling Industry—Statistics.

1. Fisheries.—(i) Quantity and Gross Value of Take. Recorded production for all fisheries is shown in the following tables.

RECORDED FISHERIES PRODUCTION: QUANTITY AND GROSS VALUE OF TAKE, 1955-56.

<sup>(</sup>a) Includes details for the station at Norfolk Island, which commenced operations during this season.
(b) In terms of humpback whales, as determined by the Minister for Primary Industry, acting on the advice of the Director of Fisheries. For quota purposes, I blue whale is taken as equivalent to 2 fin whales, 2½ humpback whales or 6 sei whales.

(c) Includes one blue whale.

(d) 6 barrels = 1 ton.

3. Value of Production.—(i) Gross and Local Values, 1955-56. Although statistics of the value of production of the fishing industry have been on an established basis for some years, attention is drawn to the fact that the actual collection of statistics of the quantity of fish taken presents many difficulties and consequently, any defects which may occur in the collection, must necessarily be reflected in the value of production. Particulars of the value of materials used in the process of production are not available for all States, so the values can only be stated at the point of production, and not on a not basis, as has been done with other industries. Variations in the relative proportions of marketing costs to gross production suggest that complete uniformity in method has not yet been attained.

# GROSS AND LOCAL VALUE OF PRODUCTION: FISHING AND WHALING, 1955-56. (£'000.)

<sup>(</sup>ii) Local Values, 1934-35 to 1938-39 (Average) and 1951-52 to 1955-56. In the following table, the local value of fisheries production and the local value per head of population are shown by States for the average of years 1934-35 to 1938-39 and for each of the years 1951-52 to 1955-56. Local value is gross value less marketing costs and is the value at the place of production. Because the value of materials used in the course of production is not available for all States it is not possible to show a comparison of net values.

(a) Includes Northern Territory.

4. Fish Preserving.—The attempt to establish the fish preserving industry at the commencement of this century met with little success although a bounty was paid to encourage production. The industry, however, continued to operate, but there was no marked development until about 1945-46 when the production of canned fish amounted to 1,700,000 lb. After that year, production increased considerably and reached a peak of 10,900,000 lb. in 1948-49, but by 1951-52 it had declined to 7,300,000 lb. It increased again to 7,700,000 lb. in 1952-53, but declined again to 6,600,000 lb. in 1953-54 and was at approximately the same level in 1954-55. Production, however, declined to 6,000,000 in 1955-56.

In addition to the canning of fish, other fish products are produced. In 1955-56, these included 123,000 lb. of smoked fish, 1,097,000 lb. of fish paste and considerable quantities of frozen crayfish tails for export and quick-frozen fish for the local market.

In 1939, New South Wales and Tasmania were the only States canning fish, but the industry has since been extended to Victoria, South Australia and Western Australia. Details of production are given in the following table for the years 1938-39 and 1951-52 to 1955-56.

#### PRODUCTION OF CANNED FISH(a): AUSTRALIA.

Particulars.	1938–39.	1951-52.	1952–53.	1953–54.	1954-55.	1955-56.
Number of factories operating	3	17	13	11	9	11
Quantity produced lb.	603,302	7,294,622	7,705,081	6,604,587	6,645,552	
Value £	13,700	965,100	1,020,307	838,179	834,090	844,359

(a) Including the canning of fish loaf and crustaceans.

The varieties canned in the several States differ according to the species caught, but separate details for each variety are not available. In New South Wales, Australian salmon and tuna are the principal varieties. Barracouta is of major importance in Victoria and Tasmania, and Australian salmon predominates in South Australia and Western Australia. Herrings are also important in the latter State.

5. State Revenue from Fisheries.—The revenue from fisheries during the year 1955-56 was £66,632, compared with £63,971 in 1954-55 and £34,273 in 1938-39. Of the total of £66,632 in 1955-56, New South Wales collected £31,302, Victoria £4,221, Queensland £13,794, South Australia £5,249, Western Australia £6,809, Tasmania £5,217 and Northern Territory £40.

#### § 6. Oversea Trade in Fishery Products.

Note.—Values of Australian oversea trade shown in this section are expressed in £A. f.o.b., port of shipment.

1. Imports of Fish.—The equivalent, in the round, of imported fish consumed in Australia in 1955-56 was 37 per cent. of the total consumption. Particulars of the imports of fish are shown below for the years 1951-52 to 1955-56 in comparison with 1938-39.

FISH (INCLUDING SHELL FISH): IMPORTS INTO AUSTRALIA. (Cwt.)

Other (including salted)	7,987	11,911	6,878	11,296	12,294	18,348

(a) Not recorded separately.

The value of fish and fish products imported during 1955-56 amounted to £6,474,000, compared with £5,612,000 in 1954-55.

Canned fish (total imports of which in 1955-56 were valued at £3,856,000) accounted for most of the imports. Salmon from the U.S.S.R., Canada and Japan, herrings from the United Kingdom and Norway and sardines from Norway and West Germany were the chief varieties imported. A considerable proportion of the fresh fish imported in 1955-56 came from the United Kingdom, the Union of South Africa and New Zealand; the potted fish came chiefly from the United Kingdom; and the bulk of the remainder came from South Africa and the United Kngdom.

- 2. Exports of Fish.—During 1955-56, the exports of fish of Australian origin were as follows:—Fresh or frozen crayfish tails, 39,684 cwt., £1,881,132; other fish (including shell fish) fresh or preserved by cold process, 3,984 cwt., £113,461; oysters in shell, 40 cwt., £1,869; potted or concentrated fish, 15 cwt., £666; fish preserved in tins, 2,486 cwt., £54,730; shell fish in tins, 449 cwt., £14,432; smoked or dried fish (including salted), 23 cwt., £306.
- 3. Exports of Pearl and other Shell.—The exports of pearl, trochus and other shell of Australian origin are shown hereunder for the years 1938-39 and 1951-52 to 1955-56.

#### CHAPTER XXVII.

#### MINERAL INDUSTRY.

### § 1. The Mineral Wealth of Australia.

- 1. Place of Mining in Australian Development.—Population was first attracted to Australia in large numbers by the discovery of gold in payable quantities. This discovery was thus a significant factor in Australia's early development. In more recent times, the rapid growth of Australia's secondary industries has been associated with considerable expansion in mining for silver-lead-zinc, copper and iron ores, and coal. The value of mineral production, however, has lagged behind that recorded for Australia's large rural industries and in 1955, represented only about 12 per cent. of the net value of production of all primary industries.
- 2. Extent of Mineral Wealth.—The extent of the mineral wealth of Australia, as of any country, is not determined fully at any point of time. Regional and detailed investigations are being carried out by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics, by the Geological Surveys of the State Governments and by the exploration departments of mining companies, but large areas of the country still await geological survey. Important prospects of copper, iron, lead and zinc, oil, uranium ore, bauxite (aluminium ore) and some other minerals have been recorded recently and are being investigated in detail.
- 3. Standardization of Mineral Statistics.—At the 1945 Conference of Australian Statisticians, consideration was given to the defective nature of Australian mineral production statistics arising from the widely differing methods adopted by individual States in collecting, compiling and publishing the data. Further attention was given to the problem by a conference in 1948 of officers of the Bureau of Mineral Resources, Geology and Geophysics, State Mines Departments and State and Commonwealth Statistical Bureaux. Following work subsequently undertaken by the Bureau of Mineral Resources, the Commonwealth Bureau of Census and Statistics and other authorities concerned, a specific plan for standardization of Australian mineral production statistics was adopted in 1950. In accordance with the plan, numerous improvements have been introduced and with the introduction of annual Australia-wide industrial censuses for mining and quarrying in 1952, Australian mineral statistics are now considered to be adequate for present needs.

The fundamental provision of the plan for standardization of Australian mineral statistics is that quantities and values of individual minerals produced should be reported in terms of the products in the form in which they are dispatched from the locality of each mine. This involves the inclusion in the mining industry of ore-dressing and elementary smelting of metallic minerals (e.g., in the case of gold) and miscellaneous treatment of non-metallic minerals, where these operations are carried out in an associated plant at or near the mine. For example, in the case of a metal mine, the output is recorded as ore when no treatment is undertaken at the mine or as a concentrate where ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the plan provides for the reporting of contents of metallic minerals and of contents or average grade of selected non-metallic minerals. Wherever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a "pay-metal" or a "refiners' prize" when present in the particular mineral.

For the purpose of compiling and publishing data relating to employment, value of output, value of production, etc., a detailed statistical classification for the mining industry has been used in Australia since 1950. For the purpose of this classification, the "Mining Industry" includes all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc. As mentioned above, ore dressing and miscellaneous treatment of non-metallic minerals (where these are carried out in an associated plant at or near the mine) are included in the mining industry. However, establishments primarily engaged in smelting and/or refining (including the smelting and refining sections of the large plants operated at Mt. Morgan and Mt. Isa in Queensland and at Mt. Lyell in Tasmania) are omitted and classified to the manufacturing industry. The classification divides the industry into four major groups, namely, Metal Mining, Fuel Mining, Non-metal (excluding Fuel) Mining and Construction Material Quarrying.

The adoption of revised methods of compiling and presenting mineral statistics in 1950 caused a break in continuity of the data published for earlier years, and the introduction of industrial censuses of the mining and quarrying industry in all States in 1952 has caused a further break in continuity of data, particularly those relating to values.

In the main, the data consist of official statistics of Mines Departments furnished to this Bureau by the statisticians of the several States and by the Northern Territory Mines Branch. These statistics have been supplemented, as necessary, by data obtained from the Australian Mines and Metals Association (Inc.), the Bureau of Mineral Resources, Geology and Geophysics and several other sources. The particulars shown have been compiled as far as practicable on the standardized basis. This has involved some re-arrangement of official statistics published by Mines Departments for some States.

In the tables, individual minerals are arranged in four groups, Metallic Minerals, Fuel Minerals, Non-metallic (excluding Fuel) Minerals, and Construction Materials, to correspond with the major groups of the statistical classification of the mining industry.

It should be noted that the statistics included in this chapter omit particulars relating to uranium-bearing minerals.

4. Quantity and Value of Minerals Produced in 1956.—(i) Quantities. In the following table, particulars of the quantities of principal minerals produced are shown for each State and the Northern Territory for 1956.

## QUANTITIES OF PRINCIPAL MINERALS PRODUCED, 1956.

5. Mine Production of Principal Metals and Production of Coal and Sulphur, 1952 to 1956.—Particulars of the mine production of principal metals (i.e., metallic contents of minerals produced) and production of coal and sulphur in the years 1952 to 1956 are shown in the following table. Graphs showing details of the mine production of principal metals and coal from 1930 to 1957 may be found on pp. 1029-30.

<sup>6.</sup> Value of Output and Value of Production for Mining and Quarrying.—(i) Individual Industries, 1956. The following two tables show particulars of the value of output and value of production of individual mining and quarrying industries and for all mining and quarrying for the year 1956. The data were obtained from industrial censuses of the mining and quarrying industry which were made on a substantially uniform basis in all States and Territories.

7. Industrial Census of the Mining and Quarrying Industry, 1956.—Since 1952, industrial censuses of the mining and quarrying industry have been taken annually in all States and Territories on a substantially uniform basis, thus providing important Australian statistics on mining and quarrying operations which were not previously available. A summary of the statistics collected in 1956 is shown in the following table.

#### MINING AND QUARRYING: SUMMARY OF OPERATIONS, AUSTRALIA, 1956.

Particulars.	Unit.	Metal Mining.	Fuel Mining.	Non- metal (exclud- ing Fuel) Mining. (a)	Total, All Mining.	Con- struction Material Quarry- ing.(b)	Total All Mining and Quarry- ing.
Mines and Quarries Persons Employed(c) Salaries and Wages Paid(d)(e) Value of Output(f) Total Fuel, Materials, etc.,	No. £'000	896 23,271 29,829 94,643	265 25,475 28,082 57,083	833 2,970 2,390 8,154	1,994 51,716 60,301 159,880	745 4,329 2,738 16,440	2,739 56,045 63,039 176,320

<sup>(</sup>a) Incomplete for some industries outside the normal administrative control of State Mines Departments (e.g., clays and salt). (b) Incomplete in some States. (c) Average number employed (including working proprietors) during whole year. (d) Excludes mines and quarries employing less than four persons. (e) Excludes drawings by working proprietors; the amounts are net after deducting value of explosives sold to employees. (f) Value at mine or quarry. (g) Value of output less cost of power, fuel, light and other materials and stores used; depreciation and maintenance costs have not been deducted.

In the next table, statistics of numbers of mines and quarries, persons employed, value of output and value of production are shown for each State, the Northern Territory and the Australian Capital Territory for the year 1956.

#### MINING AND QUARRYING: SUMMARY OF OPERATIONS, 1956.

State or Territory.	Mines and Quarries.	Persons Em- ployed. (a)	Salaries and Wages Paid. (b)(c)	Value of Output.	Total Fuel, Materials, etc., Used.	Value of Production.	Value of Addi- tions and Replace- ments to Fixed Assets.
New South Wales	839	28,316	33,330	88,790	16,741	72,049	8,401
Victoria	229	4,601	4,673	11.891	2,434	9,457	3,737
Oueensland	595	9,339	10,697	30,204	6,056	24,148	3,671
South Australia	577	2,213	1,938	11,910	2,423	9,487	1,540
Western Australia	287	8,030	8,289	20,230	5,880	14,350	2,238
Tasmania	80	2,866	3,337	10,555	2,256	8,299	682
Northern Territory	128	638	730	2,594	510	2,084	960
Aust. Cap. Territory	4	42	45	146	-41	105	182
Australia	2,739	56,045	-63,039	176,320	36,341	139,979	21,411

(a) Average number employed (including working proprietors) during whole year. (b) Excludes mines and quarries employing less than four persons. (c) Excludes drawings by working proprietors; the amounts are net after deducting value of explosives sold to employees. (d) Value at mine or quarry. (e) Value of output less cost of power, fuel and light and other materials and stores used; depreciation and maintenance costs have not been deducted.

### § 2. Gold.

- 1. Discovery in Various States.—A detailed account of the discovery of gold in the various States appears under this section in Official Year Books Nos. 1 to 4.
- 2. Mine Production.—The following table shows the recorded mine production of gold (i.e., gold content of minerals produced) in the several States and in Australia as a whole during each of the ten decennial periods from 1851 to 1950, and in single years from 1951 to 1956. Owing to defective information in the earlier years it is likely that the recorded production falls considerably short of the actual totals.

GOLD: MINE PRODUCTION.(a) ('000 fine oz.)

<sup>(</sup>a) Gold content of minerals produced.

<sup>(</sup>b) Less than 500 fine oz.

GOLD. 1009

The amount of gold won in Australia in any one year attained its maximum in 1903, when Western Australia also reached its highest point. For the other States, the years in which the greatest yields were obtained were as follows:—New South Wales, 1852; Victoria, 1856; Queensland, 1900; South Australia, 1904; and Tasmania, 1899. In recent years, output has expanded to record levels in the Northern Territory which is now the second largest producer in Australia.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining, the production of gold in Australia declined from 3,837,979 fine oz. in 1903 to 427,160 fine oz. in 1929, the lowest output since its discovery.

Increased activity in prospecting due to prevailing economic conditions resulted in some improvement in 1930, but the marked development between that year and 1939 was caused by the heavy depreciation of Australian currency in terms of gold. Following the outbreak of the 1939-45 War, there was a sharp fall in gold production to 656,867 fine oz. in 1944 and 657,213 fine oz. in 1945, but with the release of man-power after the war there has been a slight upward trend in mine production of gold, which, in 1953, exceeded 1,000,000 fine oz. for the first time since 1942. The devaluation of Australian currency in September, 1949 gave an impetus to gold production, but this was offset in the following years by increasing costs which brought about the closing of several large producers in New South Wates, Victoria and Western Australia.

To assist the industry in meeting the increase in costs, the Commonwealth Government decided in November, 1951, to permit Australian newly-won gold to be sold at a premium The Gold Producers' Association was incorporated in December, on oversea markets. 1951, to implement this decision. Under existing legislation, all gold produced in Australia must be sold to the Commonwealth Bank but the newly-formed Association was permitted to purchase from the Bank each month a maximum quantity of gold for resale on premium markets, equal to the amount of new gold delivered to the Bank by members in the previous month, less the quantity required for industrial purposes in Australia. The net proceeds from premium sales have been distributed to members in proportion to their production of gold. The actual volume of sales has been largely dependent on prices offering and, during 1952 and 1953, premium sales of gold brought an additional return to the industry amounting to about £1,800,000. Towards the end of 1953, however, the price of gold on oversea premium markets fell sharply and subsequent sales have been made at prices very little above the official price. This had an adverse effect on the financial position of the goldmining industry and as a result the Commonwealth Government passed the Gold-Mining Industry Assistance Act in 1954 to prevent any serious decline in gold-mining activity. The operation of this Act has since been extended from two years to five years. In October, 1957, a further amendment to the Act increased the maximum subsidy payable, and also increased the maximum expenditure allowed for mine development in determining costs of production. The production of gold in Australia increased from 1951 to 1954 but fell back in 1955 and 1956 under the pressure of rising costs.

- 3. Sources of Production.—(i) New South Wales. Gold production in 1956 was 28,821 fine oz. The only gold producer of any significance was Wellington Alluvials Ltd., who operate a dredge on the Macquarie River, but other small quantities were won in conjunction with silver, lead and zinc at Broken Hill and at Captain's Flat, and by small prospecting parties throughout the State.
- (ii) Victoria. In 1956, the gold yield in Victoria was 38,846 fine oz. This was slightly higher than in 1955 and halted the decline in production of previous years. Only five producers—four quartz mines and one dredge—produced more than 1,000 fine oz. during the year, the largest of these being the Wattle Gully mine at Chewton in central Victoria.
- (iii) Queensland. The output of 56,022 fine oz. during 1956 was lower than the previous year owing to the lower output from Mt. Morgan, the main producer. The only other major producer is Golden Plateau N.L. at Cracow.

- (iv) South Australia. Only 43 fine oz. of gold were won in 1956 by prospectors in central and northern parts of the State.
- (v) Western Australia. Production of gold during 1956 was 813,537 fine oz. This was lower than production in 1955. More than half the year's total production of gold in Western Australia came from the Coolgardie goldfields, most of the remaining production coming from the Murchison, Dundas, Yilgarn and Mt. Margaret goldfields. The Lake View and Star Mine at Fimiston maintained its position as the largest gold producer in Australia, winning 167,002 fine ozs. during 1956, and eight other mines each produced over 20,000 fine oz. in the same period.
- (vi) Tasmania. Production of gold in Tasmania during 1956 was 17,131 fine oz. Almost all of this production was won as a by-product of lead-zinc mining at Rosebery and of copper mining at Mt. Lyell in western Tasmania but a small amount was also won in tin dredging operations in the north-eastern area of the State.
- (vii) Northern Territory. Gold production in Northern Territory which has been steadily increasing in recent years, reached a record level of 75,421 fine oz. in 1956. Production is centred around Tennant Creek and mines in this area produced 68,308 fine oz., the main producer being the "Nobles Nob" mine.
- 4. Refinery Production.—The quantities and values of the refinery production of new gold of Australian origin are shown in the following table for each of the years 1947 to 1956. The value of the refined new gold is based on the price fixed by the Commonwealth Bank, but allowance is made, from 1952 onwards, for premiums on sales of gold overseas and for industrial purposes in Australia.

GOLD: REFINERY PRODUCTION OF NEWLY WON GOLD OF AUSTRALIAN ORIGIN.

Year.		Quantity.	Value.		Year.		Quantity.	Value.	
			'000. fine oz.	£'000.				'000. fine oz.	£'000.
1947			969	10,430	1952			979	16,037
1948	• • •	• • •	884	9,517	1953		• • •	1,053	16,780
1949	••		879	10,670	1954			1,063	16,589
1950		• •	844	13,077	1955			1,055	16,503
1951			850	13,172	1956			1,044	16,346

The unit value of refinery production of newly won gold of Australian origin rose to £12 2s. 10d. in 1949 as a result of the increase in the price to £15 9s. 10d. per fine oz. fixed by the Commonwealth Bank on 19th September, 1949, consequent upon alteration in the rate of exchange. In 1950 and 1951, the unit values were the Bank's price of £15 9s. 10d. per fine oz., and since 1952 allowance has been made for premiums on gold sold for industrial purposes in Australia and on premium markets overseas, the average value per fine oz. being £16 7s. 7½d. in 1952; £15 18s. 9½d. in 1953; £15 12s. 0d. in 1954; £15 12s. 11½d. in 1955 and £15 13s. 1d. in 1956. From 1st May, 1954, the official price of gold in Australia was raised to £15 12s. 6d. per fine oz. The previous gold price was based on the price for which gold could be sold abroad in official markets less costs of movement. The new price reflects the "parity" value of Australian currency established by the International Monetary Agreement Act 1947. Further information regarding the price of gold realized, including particulars of prices for newly won gold sold on oversea premium markets, is given in Chapter XX.—Private Finance (see page 723.)

5. Changes in Stocks of Gold held in Australia.—The following table shows particulars of production, imports and exports of gold and changes in stocks of gold held in Australia for each of the years 1952-53 to 1956-57.

# CHANGES IN STOCKS OF GOLD HELD IN AUSTRALIA. (Fine oz.)

<sup>(</sup>a) Excludes U.S.S.R.

<sup>7.</sup> Employment in Gold Mining.—Particulars of the numbers of persons employed in gold mining are shown in § 13 (page 1040).

<sup>8.</sup> Assistance to Gold-mining Industry.—In 1939, a tax was imposed on gold produced in Australia or any Australian Territory but this tax was suspended in 1947. Further relief was given to the gold-mining industry in 1952 and 1953 by permitting sales of gold on oversea premium markets, but with the disappearance of high premium prices overseas in late 1953, many producers were faced with the prospect of closing down. To meet this situation, the Gold-Mining Industry Assistance Act was assented to on 18th November, 1954. The purpose of this Act was to assist the gold-mining industry by the payment of subsidy subject to certain conditions on the production and sales of gold during the two financial years 1954-55 and 1955-56. In 1956, the operation of the Act was extended for a further three years to 1958-59. A further amendment enacted on 22nd October, 1957, raised the maximum

subsidy payable and increased expenditure allowances for mine development. Under this amendment, which operates from 1st July, 1957, the subsidy payable to small producers whose annual output does not exceed 500 fine ozs. was raised from £1 10s. 0d. per fine oz. to £2 per fine oz., irrespective of cost of production. For large producers, the formula for determining the amount of subsidy payable remained unchanged, that is: Three-quarters of the excess of average cost of production per fine oz. over £13 10s. 0d.

However, the maximum rate of subsidy payable was increased from £2 per fine oz. to £2 15s. 0d. per fine oz. Where a producer receives an amount in excess of the official price of £15 12s. 6d, per fine oz. as a result of sales on oversea premium markets or otherwise, the subsidy payable shall be reduced by the amount of the excess. The subsidy will also be limited to the extent that the annual net profit of a producer will not, with the addition of the subsidy, exceed 10 per cent. of the capital investment in the company. A further condition of the Act is that the recovery rate of the mine shall be maintained at the level of the year previous to the Act.

Payments under the Act commenced in March, 1955, and the amounts paid to gold producers in the various States and Territories of Australia during 1955, 1956 and 1957 are shown in the following table.

# NET SUBSIDY PAYMENTS TO GOLD PRODUCERS.

				(=-,					
Year.	New South Wales.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Papua and New Guinea.	Total.

### § 3. Silver, Lead and Zinc.

1. Mine Production.—The following table shows for 1956 the mine production (metallic content of ores and concentrates produced) of silver, lead and zinc in Australia, and the respective minerals in which these metals were contained.

SILVER, LEAD AND ZINC: CONTENT OF ORES AND CONCENTRATES PRODUCED, 1956.

which co	ntained.		Silver (fine oz.).	Lead (tons).	Zinc (tons).
oncentr	ate		1,016,671	2,355	••

Northern Territory	• •	•	• •	3,640	••	••
Australia				14,586,197	299,485	278,082

Particulars of the values ascribed to the various minerals containing silver, lead and zinc for the year 1956 are shown in the detailed table relating to mineral production on page 1004.

2. Sources of Production.—(i) New South Wales. By far the most silver-lead-zinc ore in Australia is won from the massive silver-lead-zinc sulphide deposit at Broken Hill. The companies concerned in operating this gigantic lode are North Broken Hill Ltd., which mines the northern limb of the ore-bearing structure, and Broken Hill South Ltd. and Zinc Corporation Ltd. (with which is associated New Broken Hill Consolidated), which are conducting operations on the southern limb.

The present-day sulphide ores are concentrated by gravity and flotation methods at Broken Hill. The lead (galena) concentrates are railed to Port Pirie and smelted to produce lead bullion which is later refined by a continuous lead refining process for the elimination of arsenic and antimony and the recovery of silver and gold. Lead concentrates produced at Broken Hill are now in excess of Port Pirie smelter capacity and part of the Broken Hill production is exported. About half of the zinc concentrate produced at Broken Hill is exported from Australia. Most of the remainder is treated at Risdon in Tasmania.

At Captain's Flat, Lake George Mines Ltd. is operating a lode of similar constitution. Concentration of the ore is carried out at the mine itself, after which process individual concentrates of zinc and lead (containing silver) are dispatched to Port Kembla, New South Wales, for further treatment. Concentrates of copper, pyrite and gold are also produced at this mine.

Silver-lead-zinc ore has been mined in small quantities in various other parts of the State, the more important localities being Howell, Yerranderie and Kangiara.

(ii) Victoria. Small quantities of lead sulphide ore occur on most of Victoria's gold-fields and in minor amounts in the Omeo, Bethanga and Cassilis districts. There has been no production of lead ore in recent years, the total recorded production being about 800 tons valued at £5.892.

The whole of the Victorian mine production of silver, 2,255 fine oz. in 1956, was won as a by-product of the gold mining industry.

(iii) Queensland. Silver produced in Queensland is obtained mainly as a by-product of ores of other metals such as lead-zinc and copper ores at Mt. Isa and copper-gold ore at Mt. Morgan.

Nearly all the output of lead in Queensland is produced at Mt. Isa in the far northwest of the State, where mining is carried out on extensive silver-lead-zinc ore and copper ore bodies. Lead concentrate produced at Mt. Isa is smelted to lead bullion at the mine. All Mt. Isa lead bullion is exported overseas, where certain impurities, such as antimony, arsenic and copper, as well as silver, are removed to yield a pure lead suitable for commercial use.

Zinc concentrates produced by Mt. Isa are also exported overseas. Copper ore is mined and smelted on a large scale at Mt. Isa and details of those operations are given in § 4.

- (iv) South Australia. Output of lead from local ores has been very small in recent years. In 1956, 51 tons of lead-silver ore, containing 17 tons of lead and 653 fine oz. of silver and 14 tons of zinc concentrate with a zinc content of seven tons, were produced. This was the first recorded production of zinc in South Australia since 1903.
- (v) Western Australia. Production of lead concentrate in Western Australia was considerably higher in 1956 than in the previous year. During 1956, 1,282 tons of leadsilver ore and 6,331 tons of lead concentrate were produced, mainly from the Northampton area and from Braeside, east of Port Hedland.
- Silver in Western Australia is obtained as a by-product of the gold-mining industry. which produced 182,820 fine oz. of silver out of the State's total production of 192,589 fine ozs. in 1956. There was no production of zinc in Western Australia during 1956.
- (vi) Tasmania. There are two large centres of silver-lead-zinc mining in Tasmania, the more important being that operated by the Electrolytic Zinc Company of Australasia Ltd. at Read-Rosebery. This company also operates the electrolytic zinc reduction works at Risdon near Hobart. Although the product of this field is primarily zinc, lead and copper-lead concentrates are also produced.

The lead concentrates and copper-lead concentrates produced at Rosebery are exported overseas, while the zinc concentrates, containing some lead, are treated at Risdon. The Risdon plant also treats considerable quantities of zinc concentrates from the Broken Hill mines.

Of secondary importance to Rosebery is the Mount Farrell field, situated 6 miles north-east of Rosebery. These ore-bodies are mainly silver-lead lodes which yield a lead concentrate with high silver content. The zinc content is insufficient to warrant recovery.

Most of the State's silver is contained in concentrates produced at Rosebery, the remainder being contained in copper concentrate produced at Mt. Lyell and in lead concentrate produced at several small mines in the west coast district.

- (vii) Northern Territory. There was no production of lead-silver ore in the Northern Territory in 1956.
- 3. Production and Sales of Refined Silver, Lead and Zinc.—In the following table, details are given of the production and sales of refined primary silver, lead and zinc as recorded from data received from the Australian Mines and Metals Association and the Bureau of Mineral Resources. The figures shown for refined silver production include small quantities recovered from imported materials.

## REFINED SILVER, LEAD AND ZINC: PRODUCTION AND SALES, AUSTRALIA.

5. Prices of Silver, Lead and Zinc.—The following table shows average prices in Australia and on the London Metal Exchange during the years 1952 to 1956. Lead and zinc prices were controlled in Australia and the United Kingdom after the outbreak of war in 1939, but were decontrolled in Australia on 21st April, 1953. Free trading in lead in the United Kingdom, after thirteen years of Government control, was resumed on 1st October, 1952, while the fixing by regulation of the price of zinc was abandoned from 1st January, 1953. Silver prices have not been controlled in Australia or the United Kingdom.

PRICES OF SILVER, LEAD AND ZINC.

<sup>(</sup>a) Silver prices shown represent export parity calculated from London Metal Exchange prices. (b) Prices fixed by regulation. (c) Price regulation was abandoned from 21st April, 1953; average market prices have been used thereafter. (d) Price regulation was abandoned from 1st October, 1952; average market prices have been used thereafter.

6. Employment in Silver, Lead and Zinc Mining.—Particulars of the number of persons employed in mining for these metals are shown in §-13, page 1040.

### § 4. Copper.

1. Mine Production.—Copper is widely distributed throughout Australia. However, the principal producing States in 1956 were Queensland, Tasmania, Northern Territory and New South Wales, in that order of magnitude. The opening of a new smelting plant at Mt. Isa in Queensland early in 1953 doubled the output of copper in Australia over the previous year, and production in 1956 was 53,041 tons. The table hereunder shows the quantity of mine production of copper (copper content of ores and concentrates produced) in Australia for the years 1952 to 1956. It should be noted that the minerals shown below contain, in addition to copper, certain other metals.

COPPER: CONTENT OF ORES AND CONCENTRATES PRODUCED, AUSTRALIA

	10113.7				
Mineral in which Contained.	1952.	1953.	1954.	1955.	1956.

Total	18,578	36,585	40,857	45,496	53,041

(a) Less than half a ton.

Particulars of the copper content of ores and concentrates produced in each producing State and the Northern Territory, as recorded by this Bureau from data obtained from the several State Mines Departments and other sources for the years 1952 to 1956, are shown in the table below.

COPPER: CONTENT OF ORES AND CONCENTRATES PRODUCED, STATES.

		(T)	ons.)		·····	
State.		1952.	1953.	1954.	1955.	1956.

Australia		18,578	36,585	40,857	45,496	53,041

(a) Less than half a ton.

2. Sources of Production.—(i) New South Wales. The copper content of all ores and concentrates produced in New South Wales amounted to 4,289 tons in 1956. The only producer of copper concentrate in the State was the Lake George mine at Captain's Flat, but the major production of copper was as a by-product of lead and zinc mining at Broken Hill.

- (ii) Queensland. In 1956, mine production of copper amounted to 34,898 tons. The main centre of production is the Cloncurry field in the north-western part of the State. Since the opening of the new copper smelter at Mt. Isa in February, 1953, copper production in Queensland has increased rapidly and the Mt. Isa mine now produces about half of the present total Australian output. Lead bullion and zinc concentrate are also produced at Mt. Isa. The only other major copper producer is Mt. Morgan, just south of Rockhampton, where copper is produced in conjunction with gold.
- (iii) South Australia. Deposits of copper were found in the past over a large portion of South Australia, but the principal fields have been exhausted and output in recent years has been negligible.
- (iv) Western Australia. During 1956, 212 tons of copper concentrate containing 46 tons of copper were produced. The bulk of copper ore mined in Western Australia in recent years has been for use in fertilizers as a trace-element and details of its production are given in § 12, Non-metallic Minerals (see page 1039).
- (v) Tasmania. The quantity of copper produced in Tasmania during 1956 was 8,807 tons, the Mount Lyell Mining and Railway Co. Ltd. providing the greater part thereof. The remainder consisted mainly of copper in copper-lead concentrates exported from Read-Rosebery.
- (vi) Northern Territory. The greatest part of the output of 5,000 tons of copper in the Northern Territory during 1956, came from the Peko mine at Tennant Creek. Although originally worked as a gold mine, high-grade copper ore was discovered there, and since the new milling plant came into operation in June, 1954, the mine has become the major producer of copper in the Northern Territory. Copper concentrate is also produced at Rum Jungle by Territory Enterprises Pty. Ltd. but details are not available for publication and are not included in the Northern Territory total.
- 3. Smelter and Refinery Production of Copper.—The production of blister copper in Australia has more than doubled since the copper smelter at Mt. Isa commenced operations in 1953. Blister copper is also produced at Mt. Lyell in Tasmania, Mt. Morgan in Queensland and at Port Kembla in New South Wales. Copper concentrate smelted at Port Kembla is mainly from Lake George Mines Pty. Ltd. at Captain's Flat, N.S.W. and Peko Mines N.L. at Tennant-Creek, N.T. The production of primary blister copper in Australia during 1956 was 49,030 tons compared with 37,439 tons in 1955 and 20,008 tons before the opening of the Mt. Isa smelter in 1952.

At present Mt. Isa has no facilities for refining copper, and depending on local requirements and the refining capacity available at Port Kembla, the excess blister copper is exported to the United States of America for refining. Mt. Isa Mines are at present constructing an electrolytic refinery near Townsville, Queensland with an initial annual capacity of 30,000 tons. Blister copper produced at Mt. Morgan is shipped to Port Kembla for refining and the recovery of gold, which in 1956 averaged just over 7 fine ozs. per ton of blister copper.

At Mt. Lyell, refined copper is produced by electrolytic process, and, apart from some sold in Tasmania, the cathode copper produced is shipped to Port Kembla for casting into refinery shapes.

The refining plant operated by the Electrolytic Refining and Smelting Co. at Port Kembla, is a custom smelter and refinery which treats copper ore, concentrates, and metal in all stages. It has an annual capacity of 32,000 tons of electrolytic copper. Fire-refining, which is a cheaper process, is done on a smaller scale when materials are amenable to that treatment. There is also a refinery for the recovery of precious metals from tank house slimes. In the following table, details are given of the production and sales of refined copper, as recorded from data received from the Australian Mines and Metals Association and the Bureau of Mineral Resources.

REFINED COPPER(a): PRODUCTION AND SALES, AUSTRALIA.

5. Prices.—From the outbreak of war in 1939 to August, 1953 in the United Kingdom and October, 1954 in Australia, the price of copper was fixed by regulation. Private trading has now been resumed in both countries. Details of the average price for the years shown are given in terms of Australian currency and sterling in the following table:—

AVERAGE PRICE PER TON OF ELECTROLYTIC COPPER IN AUSTRALIA AND THE UNITED KINGDOM.

6. Employment in Copper Mining.—Particulars of the numbers of persons engaged in the mining of copper and copper-gold ores are shown in § 13, page 1040.

#### § 5. Tin.

1. Mine Production.—The following table shows the tin content of concentrates produced in each State and the Northern Territory for the years 1952 to 1956 as recorded by this Bureau.

TIN: CONTENT OF TIN CONCENTRATES PRODUCED: STATES, (Tons.)

State.		1952.	1953.	1954.	1955.	1956.
New South Wales		396	342	272	270	269
Victoria		39	31	26	2	
Queensland		330	292	730	770	630
Western Australia		65	76	80	119	240
Tasmania		772	788	947	853	938
Northern Territory	]	9	24	20	3	1
Australia	-	1,611	1,553	2,075	2,017	2,078

- 2. Sources of Production.—(i) New South Wales. Production of tin concentrates in 1956 was 373 tons, with a tin content of 269 tons, compared with 378 tons (tin content 270 tons) in 1955. A large proportion of the output in this State is obtained by dredging and sluicing, principally in the New England district.
- (ii) Victoria. With the closing down of the Eldorado gold dredge in July, 1954, the production of tin in Victoria virtually ceased. Production during 1955 amounted to 3 tons of concentrates, with a tin content of 2 tons. In 1956, there was no production in the State.
- (iii) Queensland. The chief districts in Queensland producing tin concentrates during 1956 were Herberton, 793 tons; Cooktown, 29 tons; Kangaroo Hills, 17 tons; Chillagoe, 22 tons; and Stanthorpe, nine tons. The total production in 1956 amounted to 883 tons, compared with 1,092 tons in 1955. The tin content in 1956 and 1955 was 630 tons and 770 tons respectively. It is interesting to compare these production figures with those recorded in this State in the early years of this century when the output ranged between 2,000 and 5,000 tons per annum.
- (iv) Western Australia. The quantity of tin concentrates reported in this State in 1956 amounted to 358 tons with a tin content of 240 tons, compared with 180 tons in 1955 (tin content, 119 tons). Production was mainly in the Pilbara and Greenbushes fields.
- (v) Tasmania. For 1956, the output amounted to 1,311 tons of tin concentrates, an increase of 79 tons on the output of the previous year. The tin content for 1956 was 938 tons and for 1955, 853 tons.
- (vi) Northern Territory. The production for 1956 amounted to one ton of concentrate compared with five tons of concentrate produced during 1955. The tin content for 1956 and 1955 was one ton and three tons respectively.
- 3. Production of Refined Tin.—There are two firms engaged in the smelting of tin in Australia, both located in Sydney, New South Wales. Production recorded by the Bureau of Mineral Resources amounted to 1,850 tons in 1956, compared with 2,004 tons in 1955.
- 4. Production in Principal Countries and World Total.—The production of tin reached its maximum in 1941 when 241,400 tons were recorded. The chief producing countries of the world are—Federation of Malaya, Bolivia, Indonesia, Belgian Congo, Thailand and Nigeria and in recent years these countries have produced approximately 90 per cent. of the total production. Australia's share of the world's tin production is about 1 per cent.

The production of tin ore, in terms of metal, as published by the International Tin Study Group and other authorities, for the principal producing countries in 1955 and 1956, was as follows.

TIN: PRODUCTION IN PRINCIPAL COUNTRIES.

(Long Tons.)

C		Produc	ction.	G	Production.	
Country.		1955.	1956.	Country.	1955.	1956.

Nigeria		8,159	9,067	Estimated World		
China	[	8,400	8,400	Total(a)	177,400	174,600

(a) Excludes U.S.S.R.

5. Prices.—At the outbreak of war in September, 1939, the price of tin in Australia and in London was fixed by regulation. London control of tin prices ceased on 14th November, 1949, while the Australian price was decontrolled on the 21st April, 1953. Details of the movement in average prices for the years 1952 to 1956 are given in terms of Australian currency and sterling in the following table.

AVERAGE PRICE PER TON OF TIN IN AUSTRALIA	AND THE UNITED KINGDOM.
(£.)	

Country.	1952.	1953.	1954.	1955.	1956.
Australia—in Australian currency (a) United Kingdom—in sterling (b)	1,151	919	911	947	1,014
	965	731	<b>720</b>	741	788

<sup>(</sup>a) Prices fixed by regulation ex smelters for sales of 10 cwt. or more or in ingots of 70 lb. or more to 21st April, 1953; average market prices thereafter.

(b) Average spot market prices for standard tin.

6. Employment in Tin Mining.—The number of persons employed in tin mining is shown in § 13 (page 1040).

## § 6. Iron.

- 1. General.—Although iron ore is widely distributed throughout Australia, the only known ore bodies of large extent and high grade which are easily accessible are those situated at Iron Knob, South Australia and at Yampi Sound, Western Australia. Estimates of the high grade reserves at these centres place the quantities available at approximately 200 million tons and 100 million tons respectively. Bearing in mind the expansion of the iron industry in Australia, and the limitations of these reserves, the Commonwealth Government prohibited the export of iron ore from 1st July, 1938.
- 2. Mine Production.—(i) Australia. Production of iron ore for smelting purposes and estimated iron ore content are shown below for the years 1952 to 1956:—

IRON ORE: PRODUCTION, AUSTRALIA. (Tons.)

(Tolol)									
Particulars.	1952.	1953.	1954.	1955.	1956.				
Production of Iron Ore Estimated Iron Content	2,907,754 1,883,087	3,298,718 2,131,865	3,518,804 2,274,330	3,572,609 2,304,165	3,923,985 2,542,826				

(ii) New South Wales. Since 1945, no iron ore has been mined in this State for conversion into pig-iron. For many years, South Australia has been the chief source of supply for New South Wales blast furnaces.

Small quantities of iron oxide produced in New South Wales are used by the various gas-works for purifying gas, and also in the manufacture of paper, and for pigments. These supplies are drawn chiefly from the deposits in the Port Macquarie Division. During 1956, 3,527 tons of oxide were won.

- (iii) Victoria. Deposits of iron ore exist in the Nowa Nowa area of East Gippsland, but much larger quantities of ore than are at present known will have to be proved if the area is to become an economic source of iron. In 1955, 2,300 tons of limonite (iron oxide) were produced at Buchan for gas purification purposes.
- (iv) Queensland. Deposits of iron ore in the Constance Range area of north-west Queensland may prove to be the largest deposits in Australia. First indications were that the ore was too low in grade to warrant exploitation. Later investigations have been more promising and an extensive programme of drilling and detailed field mapping is now being carried out to evaluate the deposits. The output of 4,093 tons of iron oxide for 1956 came from the Townsville district.
- (v) South Australia. The main production of iron ore in Australia is from the deposits worked by The Broken Hill Proprietary Co. Ltd. at Iron Knob in the Middleback Ranges near Whyalla. Production in 1956 reached a record level of 3,587,095 tons (estimated iron content, 2,331,611 tons). The deposits of iron ore at Iron Baron and Iron Prince are

IRON. 1021

now being developed. Production from Iron Baron commenced early in 1958 and it is planned to reach a rate of one million tons of ore annually. The presence of thirty million tons of high grade iron ore has been proved near the leases held by B.H.P. Co. Ltd. and it is proposed to offer the company new leases in this area covering 250 square miles.

- (vi) Western Australia. The production of iron ore in Western Australia during 1956 was 336,890 tons with an estimated iron content of 211,215 tons. The major part of this production came from Yampi Sound, and was shipped to New South Wales for smelting. The Yampi Sound iron ore is of high grade but much of it is powdery and friable and a sintering plant was opened at Port Kembla, N.S.W. in 1957 to beneficiate the ore. The remaining production all came from Koolyanobbing.
- (vii) Tasmania. There has been no production of ironstone in Tasmania since 1943 when seven tons were produced. In 1956, 5,685 tons of iron oxide were produced for fluxing and other purposes.
- (viii) Northern Territory. Extensive deposits of low grade iron-bearing material have been discovered in the Roper River area. With modern ore beneficiation methods, these deposits may have some economic significance.
- 3. Imports.—Imports of iron ore from New Caledonia began in 1956. This ore has a lower iron content than ore from the Middleback Range and Yampi Sound. It contains impurities such as chromium and nickel and at present it is blended with Australian ores for smelting. During 1956, 14,052 tons of iron ore were imported into Australia, compared with 32 tons in 1955.
- 4. Sources of Production.—(i) Australia. The production of pig-iron and steel in Australia, of which New South Wales is the main producing State, is shown in the following table for each of the years ended 31st May, 1948 to 1957.

PIG-IRON AND STEEL: PRODUCTION, AUSTRALIA.
(Tons.)

 May.	Pig-iron. (a)	Steel Ingots.	Year Ended 31st May.		Pig-iron. (a)	Steel Ingots.

(a) Includes pig-iron for castings; excludes ferro-alloys.

In 1957, eight blast furnaces were operating in Australia; three at Newcastle and three at Port Kembla, in New South Wales, one at Whyalla, South Australia, and one at Wundowie, Western Australia.

(ii) New South Wales. The principal producers in Australia, both in New South Wales, are the Broken Hill Proprietary Co. Ltd. at Newcastle and Port Kembla and Australian Iron and Steel Ltd. at Port Kembla. The expansion of the steelworks at Port Kembla was carried a step further in October, 1956, when two new open hearth steel furnaces, each of 275 tons capacity, were brought into operation. In January, 1957, the iron ore sintering plant was installed to handle the fine friable iron ore from Yampi Sound in Western Australia. The hot-dip tinplate mill at Port Kembla began production in August, 1957. Plant capacity is 70,000 tons a year, about 60 per cent of present Australian requirements, but it is proposed to increase capacity to 150,000 tons annually and to use electrolytic methods for plating. In June, 1957, work commenced on the building of a £9,000,000 coke manufacturing plant. The project includes a battery of ninety-six coke ovens and associated by-products chemical plant. At Newcastle, the new skelp mill commenced operations in February, 1958. This

mill will produce high quality steel strip for processing into tubes and it will have a capacity of 400,000 tons annually. During 1956, the construction of an additional blast furnace at Port Kembla was commenced. When completed in 1959, its productive capacity of 600,000 tons of pig iron annually will at least equal the output of the world's largest blast furnace. In 1956, the B.H.P. Central Research Organization commenced activities at Newcastle. It has been designed to investigate problems in coal and ore beneficiation, fuel technology, iron and steel making, fabrication and heat treatment of steel, and the chemistry and physics of materials used in modern industry.

- (iii) South Australia. At Whyalla in South Australia, in addition to the blast furnace production, The Broken Hill Proprietary Co. Ltd. produces a small quantity of steel ingots from an electric furnace. In March, 1958, it was announced that the B.H.P. Co. Ltd. would build a steel plant at Whyalla at an estimated cost of £30,000,000. The project will include added blast furnace capacity, steelmaking plant, rolling mills and associated works.
- (iv) Western Australia. In Western Australia, the State-owned Wundowie Wood Distillation, Charcoal Iron and Steel Industry produces pig iron using charcoal for smelting instead of the non-coking local coal. This high grade iron is used for the manufacture of spheroidal graphite cast iron. The output of pig iron during the year 1955–56 amounted to 12,028 tons and during 1956–57 to 14,020 tons. At Kwinana in Western Australia, the steel rolling mill commenced operations in 1956. Billets are shipped from New South Wales steel works to Kwinana, and after cutting to fifteen foot lengths, they are heated in an oil-fired furnace and then broken down into merchant steel sections in the semi-continuous rolling mill. The capacity of this mill is over 50,000 tons of steel products annually.
- 5. Production in Principal Countries.—Particulars of the production in the principal countries and the estimated world total production during the years 1955 and 1956 according to figures published by the Mineral Resources Division of the Overseas Geological Surveys, are shown in the next table.

### § 7. Other Metallic Minerals.

1. Tungsten.—Tungsten ores occur in all States. Particulars of scheelite concentrates from King Island, in Bass Strait, the major producer, are included in Tasmanian production. Other important deposits of tungsten ores occur in Queensland, New South Wales, the Tasmanian mainland and the Northern Territory, but production from Victoria, South Australia and Western Australia has been comparatively unimportant. In recent years, the largest producer has been Tasmania. Production of tungsten concentrates and contents during 1956 in each producing State and Territory is shown below:—

TUNGSTEN CONCENTRATES: PRODUCTION, 1956.

(Tons.) N.S.W. Particulars. Q'land. Tas. N. Terr. Australia. Scheelite Concentrate 1,488 1,495 WO<sub>2</sub> Content 2 3 985 990 Wolfram Concentrate 4 70 647 156 877 2 WO<sub>3</sub> Content 46 443 101 592

The following table shows production for Australia for the years 1952 to 1956:—

## TUNGSTEN CONCENTRATES: PRODUCTION, AUSTRALIA.

- 2. Mineral Sands.—(i) General. In recent years, the growing world demand for titanium metal has brought about a rapid expansion of mineral sands mining in Australia. The recovery of mineral sands from Australian beaches commenced in 1933 when 550 tons of ilmenite were produced in Tasmania. This ilmenite proved unsuitable for pigment manufacture and operations ceased the same year. In 1934, operations to recover mineral beach sands commenced at Byron Bay in New South Wales. At first, the concentrates produced were mainly mixed zircon-rutile-ilmenite, but in 1941 electro-magnetic separators were installed to separate the ilmenite, and in 1943 electro-static separators were introduced to produce rutile concentrates. The Commonwealth Government banned the export of mixed concentrates in 1944, and all producers now turn out separate concentrates of rutile, zircon, ilmenite and monazite. Australia is the largest producer of rutile and zircon in the world.
- (ii) Titanium. The main raw material for titanium metal is rutile, which is an oxide of titanium and the principal mineral recovered from eastern coast beach sands. Ilmenite, an oxide of iron and titanium, is used largely in pigment manufacture, but owing to the presence of chromium as an impurity, eastern coast deposits are unsuitable for this purpose. However large scale operations to produce chromium-free ilmenite started in 1956 in the Bunbury-Capel district of Western Australia. Details of production of rutile and ilmenite and the titanium content thereof during the years 1952 to 1956 are shown in the following table:—

PRODUCTION OF TITANIUM (IN TERMS OF TiO<sub>2</sub>) IN AUSTRALIA. (Tons.)

				Rutile Co	ncentrate.	Ilmenite C		
Year.		Quantity.	TiO: Content.	Quantity.	TiO <sub>2</sub> Content.	Total TiOs Content.		
1952				38,014	36,861	48	20	36,881
1953				38,039	37,067			37,067
1954				44,659	43,011	469	230	43,241
1955				59,613	57,232	535	262	57,494
1956				96,816	93,242	4,274	2,260	95,502

(iii) Zircon. Zircon was the main product when beach sand mining commenced in Australia, but consumption of zirconium has not increased as rapidly as world demand for titanium. Although production of zircon concentrate has increased in recent years in association with rutile, many producers are not now extracting saleable zircon concentrate. The production of zircon concentrate during the years 1952 to 1956 is shown in the following table:—

#### ZIRCON PRODUCTION, AUSTRALIA.

#### (Tons.)

State.	1952.	1953.	1954.	1955.	1956.
New South Wales	 17,156	15,528	27,489	32,827	50,660
Queensland	10,540	11,679	13,964	15,846	21,798
Total	 27,696	27,207	41,453	48,673	72,458
Zircon Content	27,571	26,858	40,920	48,209	71,769

3. Cadmium and Cobalt.—The sources of cadmium in Australia are lead and zinc concentrates. The cadmium content of these concentrates produced was 844 tons during 1955 and 922 tons in 1956. Most of the concentrates are treated at Risdon, Tasmania, and at Port Pirie, South Australia, for the extraction of cadmium. The remainder is exported.

Cobalt is present in zinc concentrate produced at Broken Hill, New South Wales, and at Rosebery, Tasmania. The cobalt is recovered in the form of cobalt oxide at the zinc refining plant at Risdon, Tasmania, and is sold as such to industry. The cobalt metal content of zinc concentrate produced was estimated at 61 tons in 1955 and at 59 tons in 1956.

Production of refined cadmium and cobalt oxide for the years 1952 to 1956 is shown in the following table:—

# CADMIUM (REFINED) AND COBALT OXIDE: PRODUCTION.(a) (Tons.)

	<b>Y</b>	ear.	Extract	Cobalt Oxide.  Extracted from Ores Mined		
			New South Wales.	Tasmania.	Total.	in New South Wales.(b)

1954			 239	49	288	18
1955			 261	40	301	18
1956			 232	44	276	19

(a) Source: Bureau of Mineral Resources. (b) Excludes less than a ton of cobalt oxide produced from Tasmanian ores in each of the years shown.

The figures shown in the table above refer to production in Australia only and do not include the metallic contents of cadmium and cobalt oxide contained in the ores and concentrates exported overseas.

4. Manganese.—There has been considerable expansion of manganese ore production in recent years, due mainly to increased output in Western Australia at Ragged Hills, 250 miles south-east of Port Hedland, and at Horseshoe, north of Meekatharra. In 1955, the mining of manganese commenced near Muchetty in the Northern Territory and 1,462 tons of ore with a manganese dioxide content of 975 tons were produced during 1955, and 1326 tons with a manganese dioxide content of 914 tons during 1956.

COAL, 1025

The following table shows the production of metallurgical grade and battery and other grades of manganese ore for the years 1952 to 1956:—

- 5. Other.—The production, in 1956 (1955 shown in parentheses) of other metallic minerals worthy of note, is as follows:—
  - Antimony. The antimony content of antimony-bearing minerals produced was 903 tons (922 tons). Of this amount, 616 tons (615 tons) were in lead concentrate and 287 tons (307 tons) in 547 tons (650 tons) of antimony ore and concentrate.
  - Bauxite. 10,329 tons (7,563 tons) of bauxite ore were produced, mainly in New South Wales and Victoria. During recent years, extensive deposits of bauxite have been discovered on the west coast of Cape York Peninsula, Queensland, and on the Gove Peninsula and Wessel Islands of the Northern Territory. Extensive surveys in these and nearby areas are being carried out and reserves already proved have placed Australia among the large potential bauxite producers of the world. The Commonwealth Aluminium Corporation Pty. Ltd. has authority to prospect an area of about 2,500 square miles, and it plans to produce annually 1,500,000 tons of bauxite yielding 500,000 tons of alumina which will be exported.
  - Beryllium. Production of beryl ore was 318 tons (206 tons) which came mainly from Western Australia where the Pilbara gold field was the main producing area. The beryllium oxide content of the beryl ore was 3,768 units (2,428 units).
  - Chromium. Production of chromite was recorded as 6,096 tons in 1956, with a chromic oxide content of 2,624 tons. This all came from Coobina in Western Australia. There was no production recorded in 1955.
  - Tantalite-Columbite. The production of tantalite-columbite concentrate was 159,655 lb. (27,139 lb.) and the whole of this output came from Western Australia. The tantalum pentoxide and columbium pentoxide content of the concentrates was 85,690 lb. (15,454 lb.).
  - Other. Other metallic minerals produced in Australia in small quantities during 1956 were bismuth, molybdenite concentrate, native osmiridium, and platinum concentrate.

## § 8. Coal.

1. Mine Production.—An account of the discovery of coal in each State appears in earlier issues of the Official Year Book (see No. 3, pp. 515-16). The quantity and value of the production in each State in Australia for each of the years 1952 to 1956 are shown in the following table. Of the total production of black coal in 1956, 81,143 tons were classified as semi-anthracite, 17,681,258 tons as bituminous and 1,511,433 tons as subbituminous.

(a) At the mine.

The mining of black coal on a large scale by opencut methods first began in Australia at Blair Athol in Queensland, where in 1937, the first year of production, 18,494 tons were produced. Opencut mining of black coal was introduced in New South Wales in 1940, in Western Australia in 1943, in South Australia in 1944, and in Tasmania in 1950. The output from opencuts rose slowly up to 1943 when 119,406 tons were produced, increasing rapidly from 1944 and reaching an output of over four million tons in 1952. Since then however, the output from opencut mining has declined and in 1956 it was 2,149,952 tons only. This decline has been mainly due to the closing down of large opencuts in New South Wales, as overproduction of coal began to occur late in 1952 and it is the policy of the Joint Coal Board that opencut mining should provide the quantity of coal by which underground mine production fails to meet total requirements.

The production of black coal from underground and opencut mines in each State for the years 1952 to 1956 is shown in the following table.

BLACK COAL PRODUCTION: UNDERGROUND AND OPENCUT. ('000 Tons.)

COAL. 1027

2. Sources of Production.—(i) New South Wales. The coal deposits of New South Wales are the most important and extensively worked in Australia. The principal fields are known as the Northern, Southern and Western, and are situated in the vicinity of Newcastle. Bulli and Lithgow respectively.

The coal from the various districts differs in quality or, geologically speaking, rank—that from the Northern district being especially suitable for gas-making, household purposes and steam, while the product of the Southern and Western districts is essentially a steaming coal. The Permian Coal Measures in the Northern division are being worked extensively in the Hunter River Valley area, particularly in the vicinity of Maitland, Cessnock and, more recently, Muswellbrook. This district is the most important, from the aspect of coal mining, in Australia.

The following table shows particulars of New South Wales coal production classified according to rank and type of mining during the five years 1952 to 1956:—

	 	(Tons.)			
Particulars.	 1952.	1953.	1954.	1955.	1956.
Semi-anthracite	 420			1,658	
Bituminous	 15,008,489	14,164,603	15,065,979	14,718,426	14,792,853
Sub-bituminous	 13,191	9,228	17,281	16,313	17,312
Total :.	 15,022,100	14,173,831	15,083,260	14,736,397	14,810,165
Underground mines	 12,491,904	12,451,741	13,703,289	13,834,824	13,999,615

COAL: PRODUCTION, NEW SOUTH WALES.

(ii) Victoria. (a) Black Coal. Production of black coal in Victoria is restricted to the Gippsland district. The State Coal Mine at Wonthaggi is the main producer, the remaining production coming from small privately-owned mines. In 1956, production of bituminous coal was 118,827 tons compared with 132,888 tons in 1955.

1,722,090

1,379,971

901.573

810,550

2,530,196

Open-cut mines

(b) Brown Coal. The mining of brown coal in Australia is carried on only in Victoria, where extensive deposits exist; estimates place the available reserves at 40,000 million tons. Large-scale developmental projects are in progress and these, when completed, will greatly reduce the dependence on fuel from other States. In the past ten years, the output of brown coal in Victoria has doubled, and in 1955 it exceeded ten million tons for the first time. Of the 10,559,801 tons of brown coal produced in 1956, 9,661,180 tons, or 91 per cent., were won at the State opencuts at Yallourn.

The briquetting plant of the State Electricity Commission at Yallourn started operations in November, 1924, and the output, which in 1926 was 95,477 tons, had increased to 180,905 tons in 1930 and to 635,716 tons in 1955. Approximately two and a half tons of brown coal are required to make one ton of briquettes. In December, 1956, the Lurgi high pressure brown coal gasification plant at Morwell was opened. This plant is operated by the Gas and Fuel Corporation of Victoria and produces town gas which is sent to Melbourne through 103 miles of pipeline.

The table following shows the production and distribution of brown coal and the production of briquettes in Victoria for the years 1951-52 to 1955-56.

BROWN COAL: PRODUCTION AND UTILIZATION, VICTORIA. ('000 Tons.)

			Cons	umption as	Fuel.	Consump- tion as Raw	Balance (available

(iii) Queensland. The production of coal classified according to rank and type of mining during the years 1952 to 1956 was as follows:—

COAL: PRODUCTION IN QUEENSLAND.

(Tons.) Particulars. 1952. 1953. 1954. 1955. 1956. 83,373 80,979 72,459 80,442 79,316 Semi-anthracite . . 2,215,078 2,472,692 Bituminous ... 2,312,167 2,377,883 2,459,727 . . Sub-bituminous 346.696 220,755 310,468 206,996 182,651 . . Total .. 2,742,236 2,516,812 2,760,810 2,747,165 2,734,659 ٠. Underground mines 2,006,321 1.941.631 2,066,788 2.108.065 2,103,641 . . 694,022 Open-cut mines 735,915 575,181 639,100 631,018

The principal coal-producing districts in Queensland are Ipswich, Clermont, Mount Morgan and Bowen; output from these areas in 1956 amounted to 2,294,076 tons or 84 per cent. of the total.

The opencut method of mining for black coal has advanced considerably in Queensland in recent years. In 1946, 106,444 tons (or 7 per cent. of total production) were won from opencuts while in 1954, 694,022 tons (25 per cent.) were mined in this manner. In 1956, the output from opencuts declined to 631,018 tons, or 23 per cent. of the total.

(iv) South Australia. Coal mined in South Australia is won by opencut methods at Leigh Creek, some 380 miles by rail north of Adelaide. This important deposit yields a low grade sub-bituminous coal of Triassic age, and has known reserves of about 380 million tons. However, this State relies to a great degree on bituminous coal from New South Wales to supplement the demand created by industrial expansion. In 1944, the first year of major production of the Leigh Creek mine, 34,620 tons were won. Production has risen considerably in more recent years, and amounted to 481,463 tons in 1956.

(v) Western Australia. The only coal deposits which have been developed on a commercial scale are at Collie in the south-west of the State. Collie coal is sub-bituminous in rank. Production in 1956 was 830,007 tons, compared with 903,793 tons in 1955. Although a large proportion of the coal produced in Western Australia comes from opencut mines, the amount available from these mines is limited, as present surveys estimate that only 8,000,000 tons can be extracted by opencut methods. In 1956, 208,540 tons, or about one quarter of the total production, were won by opencut mining.

(vi) Tasmania. Two periods of coal formation are represented in Tasmania. The older (Permo-Carboniferous) seams contain fairly high ranking semi-anthracitic coal, with a high sulphur content, but production from these mines, 1,827 tons in 1956, represents less than one per cent. of Tasmanian black coal output. The more recent Mesozoic coal of bituminous rank is mined in the north-east of the island, the Cornwall and Mt. Nicholas mines being the most prolific producers. In 1956, output amounted to 298,713 tons of which 18,381 tons came from opencut mining.

(vii) Australia's Coal Reserves. The latest available estimate of the actual and probable coal reserves of Australia is that prepared by the Coal and Lignites Panel of the Power Survey Sectional Committee of the Standards Association of Australia, and is shown in the following table.

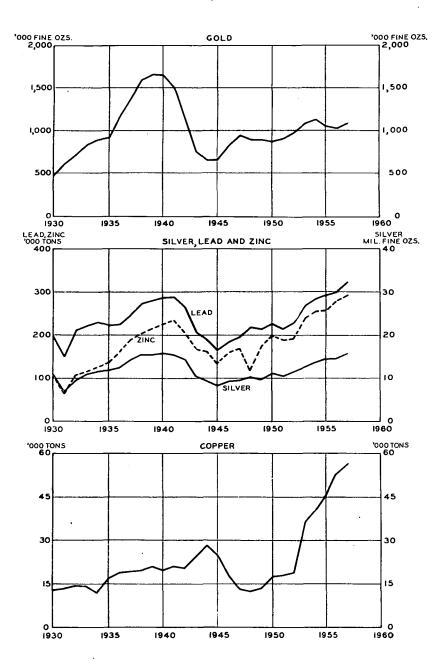

COAL RESERVES OF AUSTRALIA.

<sup>(</sup>a) Excludes bunker coal.

<sup>4.</sup> Exports.—(i) General. The quantities and values of the oversea exports of Australian coal and of bunker coal for oversea vessels for the five years 1952-53 to 1956-57 are shown in the following table. These shipments were made mainly from New South Wales.

<sup>(</sup>ii) New South Wales. New South Wales is the principal Australian coal-producing State and, in addition to meeting requirements within the State, supplies considerable quantities of coal to other States and for export overseas as well as bunker coal for vessels calling at New South Wales ports. Of the total New South Wales coal production in 1956-57 (15,175,232 tons), 12,442,107 tons (82 per cent.) were available for consumption in the State, 2,003,588 tons (13 per cent.) were exported interstate and 729,537 tons (5 per cent.) were exported overseas or supplied as bunker coal for interstate and oversea vessels.

<sup>5.</sup> Consumption in Australia.—Details of the production of black coal and its disposal in Australia are given in the following table for the years 1951-52 to 1955-56.

BLACK COAL: PRODUCTION AND DISPOSAL. ('000 Tons.)

	( 000	101-01)

<sup>(</sup>a) Includes miners' and colliery coal. change in stocks.

(c) Includes net

After the 1939-45 War, it was found necessary to augment local supplies of black coal in Australia by increasing imports. The quantity imported reached a post-war peak of 597,866 tons in 1950-51, but since then has declined, as in recent years production has expanded considerably. Since 1952-53, exports have exceeded imports by a wide margin; in 1956-57, exports of black coal were 545,101 tons and imports were 6,191 tons.

6. Value at the Mine in New South Wales.—Particulars of the average values at the mine (or at screens where these are at a distance from the mine) of saleable coal for each district and for New South Wales as a whole are shown in the following table for the years 1952 to 1956. Saleable coal is taken to exclude miners' coal, coal consumed at the mines and other producer-consumed coal. Stocks of coal held at grass by the Commonwealth Government are also excluded. No deduction has been made in respect of excise duty operative from 1st November, 1949.

AVERAGE SELLING VALUE AT THE MINE PER TON OF SALEABLE COAL:
NEW SOUTH WALES.

Year.				Northern District.	Southern District.	Western District.	Average for State.
1952				62 3	60 3	56 7	61 2
1953				62 1	61 0	56 9	61 1
1954				59 11	59 0	57 1	59 3
1955				59 3	58 10	55 3	58 7
1956			!	58 <b>2</b>	58 0	54 4	57 8

<sup>7.</sup> Values in New South Wales, Great Britain and the United States of America.—The following table shows, for the years 1952 to 1956, average values of coal produced in New South Wales, Great Britain and the United States of America. The figures give an indication of changes in average value or price within each country but they do not necessarily show the relative levels as between the countries concerned.

<sup>(</sup>b) Government railways only.

- (a) Average selling value at the mine per ton of 2,240 lb.; the figures relate to saleable coal and include excise duty. (b) Average value in tsterling at the mine per ton of 2,240 lb. (c) Average value in United States currency at the mine per ton of 2,000 lb.
- 8. Employment in Coal-mines.—The number of persons employed, both above and below ground, in coal-mines in each State for each of the years 1952 to 1956 is shown in the following table.

COAL-MINES: PERSONS EMPLOYED.

Year.			New South	Victoria.		Queens-	South	Western	Tas-	Australia.
	rear.		Wales.	Black.	Brown.	land.	Australia. Australia.		mania.	Austrana.
			20,151	848	1,694	3,715	220	1,326	349	28,303
1954		::	19,961 19,979	900 786	1,598 1,598	3,673 3,638	250 270	1,478 1,583	344 358	28,204 28,212
1955 1956		::	19,260 17,918	687 610	1,502 1,561	3,618 3,568	280 260	1,432 1,190	367 349	27,146 25,456

The year of maximum employment was 1926 when 31,774 persons were engaged in the coal-mines of Australia. Shortly after that year, the industrial depression and a prolonged stoppage of work on one of the principal fields of New South Wales during 1929 and 1930 seriously affected the figures of employment. After 1933, there was a gradual increase up to a level of about 23,000 which was maintained during the war years. There was a further increase after the war to 28,303 in 1952, but since then the number in employment has fallen again. In 1956, it was 25,456. In New South Wales in 1956, 9,243,545 tons of coal, or 66 per cent. of the total output of underground coal, were cut by machinery, compared with 3.594,000 tons or 32 per cent. in 1939. Similar details for other States are not available.

9. Production of Black Coal per Man-shift.—(i) Underground Mines. The following table shows particulars of estimated black coal output per man-shift worked, (a) at the coal face, and (b) by all employees, in respect of underground mines for each State concerned and for Australia for the years 1952 to 1956. These estimates have been calculated by the Joint Coal Board from data collected fortnightly in respect of coal production and the number of man-shifts actually worked. In South Australia, black coal is won only by open-cut mining.

PRODUCTION OF BLACK COAL PER MAN-SHIFT: UNDERGROUND MINES.

					Olis.)			
	Year.		N.S.W.	Vic.	Q'land.	W. Aust.	Tas.	Australia.
		Pre	ODUCTION I	PER MAN-SH	ift Worke	D AT COAL 1	FACE.	-

1956			10.36	13.06	6.72	6.37	8.56	9.19

(a) Figures prior to July, 1954, include man-shifts on other than mine work.

10. Joint Coal Board.—After the 1939-45 War, the Governments of the Commonwealth and New South Wales agreed to create jointly a coal authority with powers similar to, and in some respects wider, than those possessed under Commonwealth war-time legislation. Following this agreement, the Joint Coal Board was created and has functioned as from 1st March, 1947. Briefly, it is the responsibility of the Board to ensure that the coal of the State is conserved, developed, worked, distributed and used to the best advantage in the public interest, and to promote the welfare of the workers in the industry. Further details of the powers and functions of the Board are contained in earlier issues of the Official Year Book.

### § 9. Coke and Other By-products from Coal.

1. Coke.—The production of metallurgical coke in Australia was limited to about 250,000 tons per annum prior to the 1914-18 War. This was below local requirements and necessitated an annual import of about 27,000 tons. By 1920, production had risen to more than 500,000 tons, by 1938-39 to 1,164,873 tons, and in 1955-56 it reached the record level of 2,058,426 tons. Imports exceeded exports prior to 1952-53 but in 1952-53 and later years there has been a net export surplus. In 1955-56, exports amounted to 66,590 tons and 3,444 tons were imported, while in 1956-57 exports further increased to 129,397 tons (126,527 tons to New Caledonia) and imports amounted to 8,206 tons.

In addition to metallurgical coke referred to above (which is produced by specialized coke works), considerable quantities of coke are produced in gas works as a by-product of the manufacture of gas. Production in gas works in 1955-56 was 1,031,135 tons.

In order to avoid duplication with coal values, the figures for coke have not been included in the general tables of mineral production in the early part of this chapter.

In the following table, particulars of the production of coke in coke works and gas works in Australia are shown for the years 1951-52 to 1955-56. The figures exclude output of coke breeze, which in 1955-56 amounted to 340,834 tons.

#### **COKE PRODUCTION: AUSTRALIA.**

(Tons.)

Indi	ıstry.	 1951–52.	1952–53.	1953–54.	1954–55.	1955–56.
Coke Works	· · ·	 1,636,982	1.858,428	2,010,404		2,058,426
Gas Works		 1,203,602	1,071,106	943,344	1,099,859	1,031,135
Total		 2,840,584	2,929,534	2,953,748	3,146,649	3,089,561

2. Other By-products from Coal.—In addition to coke, other products are obtained from the treatment of coal by coke and gas works. Some of the main items produced, principally in coke and gas works, during 1955-56 (1954-55 in parentheses) were crude tar, 54,352,000 gallons (46,609,000 gallons); refined tar 25,914,000 gallons (17,120,000 gallons); and ammonium sulphate 75,321 tons (78,434 tons).

#### § 10. Mineral Oils.

1. Australia.—Natural oil has been proved to exist in Queensland and Victoria and also in Western Australia, where, in 1953, potential oil production was found at Rough Range. Following this discovery, structural control drilling and field exploration have increased enormously.

The Commonwealth Government has set aside the sum of £500,000 annually for four years to encourage drilling for stratigraphic information. This will be used to subsidize drilling by oil companies in areas not previously investigated at depth.

Individual subsidies will be limited to not more than half the cost of each hole.

Oil companies responded well to this offer and, at the end of February 1958, applications were receiving attention.

Drilling programmes are being carried out in all States of the Commonwealth except Tasmania and in the Northern Territory. A brief outline of these activities during 1957 and up to February, 1958, is given below.

2. New South Wales.—The Australian Oil & Gas Corporation Ltd. drilled Dural No. 1 to 5,203 feet. Low pressure methane gas was recorded at several horizons and salt water was encountered at 5,200 feet. Kurrajong Heights No. 1 was abandoned at 4,755 feet.

Dural No. 2 is drilling ahead and a number of shallow stratigraphical and geological holes are being drilled in the Camden, Morisset, and Yass districts.

3. Victoria.—Woodside (Lakes Entrance) Oil Co. Ltd. drilled Woodside No. 2 to 8,862 feet before abandoning. The casing was perforated over the intervals 1,310 to 1,345 feet and 5,583 to 5,618 feet, and a drill stem test held but no flow oil was recovered.

Oilco No. 1 reached basement at 1,366 feet and Hedley No. 1 was drilling ahead at 3,650 feet.

Frome Lakes Pty. Ltd.'s No. 3 in Gippsland was abandoned in brown coal at 1,876 feet.

4. Queensland.—Associated Australian Oilfield's N.L. drilled a well at Arcadia to 3,280 feet.

Frome Broken Hill Pty. Ltd. in association with other companies reached basement at 2,822 feet in a hole at Wyaaba.

South Pacific Pty. Ltd. drilled to 5,186 feet at Tambo before abandoning the well as a dry hole. Zinc Corporation Ltd. drilled a hole at Weipa on the Cape York Peninsula to a depth of 3,243 feet. Australian Oil and Gas Corporation Ltd. drilled a shallow stratigraphic test at Talbalba.

- 5. South Australia.—Following extensive seismic surveys by the Commonwealth Bureau of Mineral Resources, Santos Ltd. drilled a series of shallow stratigraphical holes in the Wilkatana, Oodnadatta and Cordillo Downs areas. Minor showings of oil were reported.
- 6. Western Australia.—West Australian Petroleum Pty. Ltd. drilled a number of structure holes in the Exmouth Gulf and Canning Basin areas. Dirk Hartog Island No. 1 and Rough Range No. 10 were completed as dry holes at 4,998 and 3,740 feet, and Learmonth No. 1 was drilling ahead at 5,228 feet. Yanrey No. 1 on the East Coast of Exmouth Gulf encountered basement at 1,395 feet, and a shallow stratigraphical hole at Wallal in the Kimberleys was drilled to 1,010 feet.

Seismic surveys followed gravity and magnetometer work in the Samphire Marsh area of the Kimberleys and the Meda area of the North Fitzroy Basin. Associated Freney Oilfields N.L. drilled their Sisters Well in the Kimberleys to 9,825 feet in grey, medium to coarse, micaceous sandstone before abandoning as a dry hole.

7. Papua.—Australasian Petroleum Co. Pty. Ltd. and Island Exploration Co. Pty. Ltd., the joint exploration companies operating in Western Papua, continued extensive geological and geophysical surveys and also drilled a series of deep tests. Komewa was completed in basement at 6,393 feet. Kuru No. 2 was abandoned at 7,305 feet due to formation difficulties. Morehead was abandoned at 8,087 feet after a velocity survey showed the close proximity of basement.

Sireru No. 1 was completed at 1,510 feet.

Barikewa No. 1 was drilling ahead at 8,025 feet and locations were being prepared to drill Kuru No. 3 and Puri No. 1

Papuan Apinaipi Petroleum Co. Ltd. were preparing to spud in on the Kaufana Anticline.

#### § 11. Sulphur.

Sulphur, although produced in Australia as a content of certain metallic minerals, is itself non-metallic in character. Sulphides such as zinc concentrate and pyrite, which contain sulphur, are produced in appreciable quantities. There is no production of elemental sulphur (brimstone) in Australia. A large proportion of the zinc concentrate produced is exported and therefore lost to Australia for utilization of the sulphur content. The sulphur recovered in Australia is in the form of acid, most of which is used in the manufacture of fertilizers, mainly superphosphate. As this recovery does not at present satisfy local requirements, it is necessary to import elemental sulphur to meet the balance.

Production of pyrite concentrate at Nairne in South Australia commenced early in 1955. The output from this mine is supplied to the new sulphuric acid plant which was opened at Port Adelaide in August, 1955. This new plant has an annual capacity of 100,000 tons of sulphuric acid and requires 70,000 tons of pyrite concentrate from Nairne annually. The production of pyritic ore and pyrite concentrate in Australia during 1956 is shown in the following table:—

## PYRITE PRODUCTION: STATES, 1956.

#### (Tons.)

Item.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Pyritic Ore Pyrite Concentrate	1,088	10,250	65,097	12,629 43,051	52,373	12,629 171,859

The following table shows for the years 1952 to 1956 the sulphur content of sulphurbearing minerals produced, quantities of sulphur recoverable therefrom, production of monohydrate acid (100 per cent. sulphuric acid), and sulphur content of monohydrate acid produced. Particulars regarding spent oxide roasted have been included to complete the statistics relating to recovery of sulphur and monohydrate acid production.

# SULPHUR PRODUCTION: AUSTRALIA. (Tons.)

#### § 12. Non-metallic Minerals.

1. Asbestos.—The production of asbestos in Australia at present is only sufficient to meet about one-sixth of domestic requirements. Production in recent years has been of two types, chrysotile and crocidolite, the former being the most important type economically. The deposits of chrysotile, however, are relatively small and widely scattered. The principal deposits of asbestos are of crocidolite, and they occur in the Hammersley Ranges in Western Australia, about 200 miles south-east of Roebourne. Large scale operations were commenced there in 1943 at Wittenoom Gorge by Australian Blue Asbestos Ltd. and reserves in seams over which the company holds leases are estimated at two million tons. However, high costs of production due to heavy freight charges and the difficulty of retaining labour in an isolated community have prevented greater development of the project.

The production of chrysotile and crocidolite in Australia during the five years 1952 to 1956 is shown in the following table:—

<b>PRODUCTION</b>	OF	<b>ASBESTOS:</b>	STATES.
	(I	ons.)	

				Chrysotile.	Crocidolite.		
	Year.		New South Wales.	Western Australia.	Australia.	Western Australia.	Australia.
1952			466	652	1,118	2,940	2,940
1953			569	606	1,175	3,795	3,795
1954			616	303	919	3,794	3,794
1955			590	275	865	4,487	4,487
1956			622	761	1,383	7,286	7,286

2. Clays.—Statistics of clay production in Australia are not entirely satisfactory, mainly because of differences between States in the classification of the various types of clays. In the following table, the recorded production of the main types of clays produced in each State of Australia is shown for the year 1956.

## PRODUCTION OF CLAYS: STATES, 1956.

Type.	New South Wales.	Victoria.	Queensland	South Australia.	Western Australia.	Tasmania.	Total.
Bentonite Brick Clay and Shale Cement Clay and	63 1,521,267	878,799	264,260	325,788	1,404 (a)361,923	(a) 74,292	1,467 3,426,329

(a) Estimated.

3. Gypsum.—There are very extensive deposits of gypsum in Australia, but only the more accessible and easily worked deposits have been exploited. These deposits lie in four main regions, (a) in New South Wales stretching from around Griffith to near Broken Hill, (b) in the north-west corner of Victoria, the south-west corner of New South Wales and adjoining parts of South Australia, (c) in South Australia on both sides of Gulf St. Vincent and extending to Lake MacDonnell in the west, and (d) between Perth and Kalgoorlie in Western Australia. The South Australian deposits are the most important and more than half of the total Australian production of gypsum in 1956 came from that State, where the main centres of production are Stenhouse Bay on Yorke Peninsula and Lake MacDonnell.

The building industry is the main user of the gypsum produced in Australia. The greater part is used in the manufacture of plaster and most of the remainder in cement manufacture. A small amount is also used as fertilizer. A considerable quantity is exported, mainly to New Zealand for use in the plaster industry, and to New Caledonia for use in nickel smelting operations.

The production of gypsum in Australia is set out in the following table for the five years 1952 to 1956.

PRODUCTION OF GYPSUM: STATES.

(Tons.)

	Year.	New South Wales.	Victoria.	South Australia.	Western Australia.	Australia.
1952		 89,226	47,295	164,825	50,332	351,678
1953		 71,819	36,286	181,640	40,247	329,992
1954		 128,790	75,012	194,772	41,142	439,716
1955		 136,356	89,190	204,522	39,946	470,014
1956		 94,203	83,024	263,136	27,121	467,484

4. Limestone.—Limestone is quarried in all States, but statistics of production are incomplete as Queensland figures do not include limestone quarried for cement manufacture. Limestone is used mainly for the manufacture of cement, other uses being in the steel industry as a metallurgical flux, in the chemical industry, and in agriculture.

The recorded statistics of limestone production in each State of Australia during 1955 and 1956 are shown in the following table. Details of limestone produced for use as building or road material are not included.

PRODUCTION OF LIMESTONE(a): STATES, 1955 AND 1956. ('000 Tons.)

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Total.
1955	1,690	714	121	987	(b) 280	206	3,998
1956	1,700	814	139	1,076	356	179	4,264

<sup>(</sup>a) Includes shell and coral.

5. Magnesite.—The major sources of magnesite at present are deposits at Fifield and Thuddungra in central New South Wales. Most of the output of magnesite in Australia is used for refractory purposes, particularly in the steel industry, and small amounts are used in chemical, paper, glass, rubber, and ceramic industries. Particulars of the production of magnesite in each State for the years 1952 to 1956, are set out in the table below.

PRODUCTION OF MAGNESITE: STATES.

(Tons.)

	Year.	 New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Australia.

1956		 63,050			831	8.04	64,685

<sup>(</sup>b) Estimated.

6. Mica.—Almost all Australian production of muscovite mica comes from the Northern Territory, though small quantities of inferior grades have been obtained from most of the States. The centre of mica production in the Northern Territory is the Harts Range area about 130 miles north-east of Alice Springs, where mining has been carried on intermittently since 1892, and the Plenty River field, 50 miles north-east of Harts Range.

The Commonwealth Mica Pool—details of which are given in § 15, Government Aid to Mining, on page 1045—purchases all mica which is in accordance with certain specifications. The following table shows the quantity of muscovite mica produced in Australia during the five years 1952 to 1956.

#### MUSCOVITE MICA PRODUCTION.

7. Salt.—Salt is obtained in Australia from evaporation of saline lakes and clay pans. Production satisfies local requirements and provides a considerable surplus for export. Recorded production in South Australia (the chief producing State) is shown in the following table for the years 1952 to 1956. Estimates of total Australian production are also shown.

- 8. Other Non-metallic Minerals.—(i) General. Many other non-metallic minerals are produced in Australia in considerable quantities, and are listed separately in the following paragraphs.
- (ii) Barite. The principal producing centre of barite is at Oraparinna in the north Flinders Range in South Australia where the deposits are of first-grade quality. The production of barite in Australia during 1956 was 6,009 tons, of which 4,040 tons came from South Australia, 1,042 tons from New South Wales, and 927 tons from Western Australia.
- (iii) Cupreous Ore and Concentrate. Cupreous ore is mined in Western Australia for mixing with superphosphate fertilizer. The quantity produced in 1956 was 7,713 tons with: an average grade of 8.60 per cent.
- (iv) Diatomite. Production of diatomite is carried on mainly in the eastern States of Australia. In 1956, 5,789 tons were produced, and of this total, New South Wales produced 5,002 tons.
- (v) Dolomite. Up to 1950, New South Wales was the main producer of dolomite, but in that year the Broken Hill Pty. Co. Ltd. opened up a large deposit of dolomite at Ardrossan in South Australia which now produces about 90 per cent. of the total output. In 1956, New South Wales produced 7,599 tons; Queensland, 5,510 tons: South Australia, 101,496 tons; Western Australia, 171 tons; and Tasmania, 788 tons, making an Australian total of 115,564 tons.

- (vi) Felspar. The main demand for felspar comes from the glass and ceramic industries. About half the Australian production of felspar comes from New South Wales which produced 10,244 tons of the Australian total of 18,629 tons in 1956. Of the remainder, 4,604 tons came from South Australia and 3,781 tons from Western Australia.
- (vii) Gemstones. (a) Diamonds. Gem quality diamonds are not produced in Australia, but, in 1956, 383 carats of industrial diamonds valued at £3,834 were recovered during gold dredging operations on the Macquarie River in New South Wales.
- (b) Opals. Most of the opals won in recent years came from the Coober Pedy and Andamooka fields in South Australia which produced opals worth £120,529 in 1956. Other production in 1956 was from the Quilpie district in Queensland, valued at £1,337, and £2,750 from Lightning Ridge in New South Wales.
- (c) Sapphires. The Anakie field in Central Queensland is the only Australian producer of sapphires. Output in 1956 was valued at £691.
- (viii) Silica. The production of silica is not recorded in Victoria and Queensland. The output of silica, which includes glass sand, quartz, quartzite, sand, sandstone, and silicious abrasives, was 131,155 tons in New South Wales; 16,532 tons in South Australia; 7,343 tons in Western Australia; and 4,858 tons in Tasmania, giving a total of 159,888 tons for those States during 1956.
- (ix) Sillimanite. In 1956, 2,181 tons of sillimanite were produced in Australia. New South Wales contributed 1,585 tons and the remaining 596 tons came from South Australia.
- (x) Talc. The Australian output of talc (including steatite), was 13,035 tons in 1956. New South Wales produced 673 tons, South Australia 7,906 tons and Western Australia 4,456 tons.
- (xi) Other. Other non-metallic minerals produced in Australia in small quantities during 1956 were fluorite, garnet, graphite, glauconite, mineral pigments, pebbles for grinding, phosphate rock, pyrophyllite, serpentine, slate and vermiculite.

## § 13. Persons Engaged, Wages Paid and Accidents in Mining.

1. Total Employment in Mining.—The number of persons engaged in the mining industry in Australia fluctuates according to economic conditions generally, the price of industrial metals, the state of the labour market, and according to the permanence of new finds and the development of the established mines. The following table shows the numbers engaged in the various mining industries in each State and Australia as a whole in 1956.

#### EMPLOYMENT IN MINING, 1956. (a)

2. Salaries and Wages Paid in Mining.—Statistics of total salaries and wages paid in the mining and quarrying industry are now available from the annual industrial censuses of the industry taken from 1952 onwards. Salaries and wages paid in the mining and quarrying industries in Australia during each year 1952 to 1956 are shown in the following table. Information regarding rates of wages paid in the mining industry is shown in Chapter VI.—Labour, Wages and Prices (p. 161) and also in the Labour Report.

SALARIES AND WAGES PAID IN MINING: AUSTRALIA. (£'000.)

<sup>(</sup>b) Incomplete.

<sup>3.</sup> Accidents in Mining.—Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States as varying criteria are used in determining what constitutes injury for the purpose of these

records. In 1955, 62 persons were recorded as having been killed and 1,788 as having been injured in mining and quarrying accidents. Of the total of 62 persons killed, 25 were in black coal mines, 11 in gold mines and 8 in silver-lead-zinc mines. Reported injuries were highest in black coal mines (552), gold mines (504), and silver-lead-zinc mines (398).

### § 14. Oversea Trade in Minerals and Metals.

Particulars of the quantity and value of imports and exports of the principal minerals and metals for Australia are shown in the following table for the years 1954-55, 1955-56 and 1956-57. In addition to the unfabricated metals shown, considerable quantities of partly fabricated metals (bars, rods, wire, etc.) enter into Australia's oversea trade.

IMPORTS AND EXPORTS OF PRINCIPAL MINERALS AND METALS: AUSTRALIA.

## § 15. Government Aid to Mining, and Mineral Control.

- 1. Aid to Mining.—(i) Commonwealth. (a) Assistance to marginal and sub-marginal gold mines. Under the terms of the Gold-Mining Industry Assistance Act 1954, large producers received a subsidy of up to three-quarters of that portion of the cost of production in excess of £13 10s. per fine oz., the maximum rate of subsidy being limited to £2 per fine oz. Persons producing less than 500 fine oz. per year received a flat rate subsidy of £1 10s. per fine oz. regardless of the cost of production. The Act remained in force for two years from 1st July, 1954, and was extended for a further three years to 30th June, 1959. In 1957, the flat rate to small producers was increased to £2 per fine oz. and the maximum rate to large producers was increased to £2 10s. per fine oz.
- (b) Rewards for Discovery of Uranium Ore. To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards up to a maximum of £25,000 for any one deposit.
- (c) Bureau of Mineral Resources, Geology and Geophysics. The Bureau of Mineral Resources, Geology and Geophysics has sections dealing with geology, geophysics, mining engineering, petroleum technology and mineral economics. The geological section provides geologists to conduct all surveys required in Commonwealth Territories, makes detailed and regional surveys in conjunction with or by arrangement with the State Mines Departments, surveys of possible oil-fields in Australia and New Guinea, surveys of mines for which financial assistance is sought, and investigations of deposits of radio-active minerals. The geophysical section conducts investigations throughout Australia and New Guinea connected with the search for metalliferous, radio-active and other mineral deposits; investigations connected with exploration for coal, oil and water; regional magnetic and gravity surveys; engineering and military geophysics: and the operation of geophysical (magnetic and seismic) observatories. The Bureau works in close co-operation with the Mines Departments of the States. It has assumed full responsibility for geological and geophysical surveys in Commonwealth Territories, but suitable arrangements have been made to ensure that the local Administrations have the necessary technical advice directly available to them
- (d) Diamond Drills. The drilling plant operated by the Bureau of Mineral Resources consists of two heavy, two medium and five light prospecting drills. These drills are used mainly in connexion with the Bureau's comprehensive programme of prospecting by aericl, geological, geophysical and geochemical methods.

(e) Search for Oil. No variation has been made in the policy described in Official Year Book No. 37, p. 850, regarding the search for petroleum throughout Australia and its Territories. In addition to its activities set out in that Year Book, the Bureau of Mineral Resources, Geology and Geophysics in Melbourne tests bore cores for porosity and permeability on behalf of companies engaged in drilling for oil. The Bureau also maintains two portable rotary plants for scout boring for geological information.

The Commonwealth Government has encouraged the search for oil in Australia, Papua and New Guinea; details of the efforts made are outlined in earlier issues of the Official Year Book and in § 10, Mineral Oils (p. 1035).

- (f) Survey of North Australia. Reference to this survey which was completed at the end of 1940 appears in Official Year Book No. 35, p. 744.
- (g) Ore-dressing and Mineragraphic Investigations. These investigations are conducted by the Commonwealth Scientific and Industrial Research Organization as required by the industry. Ore-dressing investigations are carried out at the Ore-Dressing Laboratory, situated in the Department of Mining, University of Melbourne, and at the Ore-Dressing Laboratory, Kalgoorlie, situated at the School of Mines. The Mineragraphic Investigations Section is located in the Geology Department, University of Melbourne.

These two groups of laboratories perform complementary services—the Mineragraphic Investigations Section assesses microscopically the state of dispersion and the mineral association of ore bodies while the Ore-Dressing Laboratories investigate the composition of ores and provide advice on suitable methods for their full-scale treatment. Much of this research is carried out on a co-operative research basis with the mining industry.

- (h) Petroleum Legislation. The petroleum ordinances of Papua and New Guinea have been amended and combined in a single ordinance entitled Petroleum (Prospecting and Mining) Ordinance 1951. Further minor amendments were passed in 1954 and 1957. A new Petroleum Ordinance for the Northern Territory was brought into force on 27th May, 1954. New legislation covering petroleum was brought down in New South Wales under the Petroleum Act, 1955, and several amendments to the Petroleum Act, 1951, were passed in Western Australia.
- (ii) States. (a) General. In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.
- (b) New South Wales. State aid to assist metalliferous mining may consist of grants to assist the prospecting and/or mining for gold and minerals and for the purchase, removal and installation of mining plant or equipment.
- (c) Victoria. Loans may be granted to assist prospecting and development or the purchase of machinery. The Mines Department has stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities. Drilling with diamond, rotary and percussion drills is carried out by the Mines Department for mining companies and for general mineral exploration. A survey of the States' underground water reserves is in progress, in conjunction with the opening up of town water supplies from underground sources for which new deep drilling equipment has been obtained.
- (d) Queensland. The Mines Department maintains a treatment works for tin ores, etc., at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State Mill at Charters Towers is available for the treatment of gold-bearing ores. In addition, many departmental compressor plants, pumping plants and other mining equipment are provided and made available on hire on the principal mining fields.
- (e) South Australia. The Department of Mines provides the following services and facilities to the mineral industry:—(i) Hire of boring plants and mining equipment; boring and testing of mineral deposits; financial subsidies in approved cases for prospecting and mining development; development of sub-surface water supplies for farming, pastoral, irrigation and mining purposes; purchase of basic metal ores from prospectors. (ii) Geological examination of mineral deposits, water supply, dam, foundation and drainage

problems; guidance on mining legislation; publication and issue of geological bulletins and maps. (iii) Chemical and metallurgical analytical and assay investigation; testing and treatment of ores and minerals; petrographic, mineragraphic and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

(f) Western Australia. Assistance is given to prospectors to the extent of £4 10s. 0d. per week south of the 28th parallel of latitude, and of £5 10s. 0d. per week north of that parallel; also provision is made of some tools required for prospecting.

There are twenty-one State batteries operating throughout the gold-fields for the treatment of ore from prospectors and small mine-owners, at a nominal charge. A cartage subsidy is also granted to such operators sending ore to State batteries for treatment.

Provision is made for loans to mine-owners who require assistance to develop mines. The Government has a drilling scheme, financing mine-owners on a £1 for £1 basis.

(g) Tasmania. The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or dewatering of shafts, for construction of dams and water races, for testing and proving a deposit of any mining product, for developmental work and for diamond and other types of drilling.

Other assistance is rendered to the industry by geological and engineering advice and through ore-dressing research into metallurgical recoveries and the selection and design of treatment plant.

- (h) Northern Territory. In order to encourage the development of the mining industry, the Northern Territory Administration provided Government batteries at Tennant Creek, Hatches Creek, and Maranboy for the treatment of miners' ores. The Hatches Creek battery is the only one in operation at the present time. The Tennant Creek battery is being reconstructed and is expected to reopen shortly, but the re-opening of the Maranboy battery will depend on a revival of tin mining at that centre. The crushing charges are subsidized by Government grants. In addition, the Administration provides cartage subsidies and financial advances to encourage miners to carry out developmental work. Roads and water supply services are provided and maintained for mines under active development throughout the Territory.
- 2. Control of Minerals.—(i) Mica Production. The Commonwealth Mica Pool purchases mica won in the Harts Range, Northern Territory, thus ensuring the miners a ready market for their output at fixed prices and also permitting an orderly distribution of mica to the trade. The Pool is controlled by a Committee of Management consisting of representatives of the Commonwealth Government, producers and consumers.
- (ii) Control of Exports of Metals and Minerals. Certain metals and minerals produced in Australia are subject to export control for one or more of the following reasons:—
  - (a) the necessity of conserving resources (e.g., iron ore and manganese);
  - (b) inadequacy of local production to fulfil domestic demand (e.g., mica, manganese ore, copper, iron and steel);
  - (c) the strategic importance of the minerals (e.g., beryllium ores, concentrates and metal; monazite; tantalite and tantalum products; uranium ore, concentrates, residues and metal; mica).

Mixed concentrates of beach sand minerals are prohibited exports, but rutile, zircon and ilmenite may be exported. Some non-ferrous scrap is also subject to control.

(iii) Radio-active Minerals. Since the discovery of the possibility of using atomic energy, considerable attention has been paid to the occurrence of uranium in Australia. To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government grants monetary rewards for such discoveries.

Up to the end of 1949, important deposits had been found only in the north-eastern part of South Australia where the Mt. Painter and Radium Hill fields had been investigated, largely by the South Australian Government, but in that year the presence of uranium was discovered in the Rum Jungle district of the Northern Territory, and investigations carried out by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics in the years 1949-1952 proved that these deposits are of substantial importance.

Towards the end of 1952, the Commonwealth Government placed the Rum Jungle deposits under the control of Territory Enterprises Pty. Ltd., a subsidiary of Consolidated Zinc Corporation Limited, to carry on the investigations on its behalf and to mine and treat the ore. The treatment plant at Rum Jungle was officially opened by the Prime Minister on 17th September, 1954. Investigation of an area adjacent to Rum Jungle was carried out by the Bureau, using an airborne scintillograph. This survey indicated the presence of many radio-active anomalies, and demonstrated the effectiveness of this method of search. During 1952, arrangements were completed between the Governments of the United States of America, South Australia and the Australian Commonwealth, for the purchase of ores by the United States.

In South Australia, the South Australian Government extensively explored the Radium Hill deposit by underground development and diamond drilling. A primary treatment plant was erected at the mine and went into operation in November, 1954; the concentrate is transported to a plant at Port Pirie, completed in mid-1955, where it is further reduced.

The construction of a plant for the extraction of uranium oxide at Mary Kathleen in north-west Queensland commenced in 1956. By the end of 1957, a township had been built, a dam constructed, and considerable progress made in the erection of the mill and treatment plant. Developmental work also continued and ore has been stockpiled.

The Bureau of Mineral Resources is carrying out further airborne scintillograph surveys and extensive geological, geophysical and geochemical surveys and diamond drilling operations, with a view to discovering further deposits and to assessing the value of known deposits.

During 1953, Commonwealth Legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilization of uranium in Australia. This Act, the Atomic Energy Act of 1953, supersedes the Atomic Energy (Control of Materials) Act of 1946, but retains a provision of that Act which provides for control of substances which could be used for production or use of atomic energy. It gives the Commonwealth power to acquire such substances in their natural state and in waste materials from mining operations, to carry on mining and other operations necessary for the recovery of such substances, and to pay compensation for such acquisition. It also gives the Commonwealth power to obtain possession of such substances held by any person.

Further reference to the Atomic Energy Commission appears in Chapter XXX.—Miscellaneous.

#### CHAPTER XXVIII.

#### DEFENCE.

### § 1. Department of Defence.

- 1. Introduction.—At the outbreak of the 1939-45 War, the Department of Defence comprised the three Fighting Services and a Central Secretariat. In November, 1939, separate Departments, each with its own Minister, were created for the control and administration of the Navy, Army and Air Force. The Defence Department as then reconstituted retained responsibility for over-all defence policy and for the conduct during the war of the business of the War Cabinet, set up in September, 1939, and the Advisory War Council, set up in October, 1940. These bodies ceased to function after the war.
- 2. Functions and Organization.—(i) Functions. Subject to the authority of Cabinet, the Minister and Department of Defence are responsible for:—
  - (1) The formulation and general application of a unified defence policy relating to the Defence Forces and their requirements, including:—(a) co-operation in British Commonwealth and regional defence and the defence aspect of the Charter of the United Nations; (b) the supply aspect of defence policy, including the review of production programmes and capacity; (c) the scientific aspect of defence policy; and (d) the financial requirements of defence policy, and the allocation of funds made available.
  - (2) The defence aspect of armistice and peace terms, contro! commissions, and forces of occupation.
  - (3) Matters of policy or principle and important questions having a joint Service or inter-Departmental defence aspect.
  - (4) The defence aspect of questions relating to the organization and machinery for:—(a) co-operation in British Commonwealth defence; (b) co-operation in regional security, including obligations under the United Nations Charter; (c) higher direction in war; and (d) higher direction of the Services.
  - (5) The Commonwealth War Book, which is a summary of national plans for an emergency as developed in Departmental War Books.
  - (6) The administration of inter-Service organizations, such as the joint intelligence machinery.
  - (7) The defence aspect of:—the strength and organization of the forces, higher appointments in the Services, honours and awards.
  - (8) Advice on the military aspect of civil defence.
- (ii) Organization, higher defence machinery, the control of the joint Service machinery and the Secretariat of the Council of Defence. The joint Service and inter-Departmental advisory machinery of the Department consists of various committees headed by the Defence Committee, the Chiefs of Staff Committee and the Joint War Production Committee.

The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, who is Chairman, the Chiefs of Staff of the three Services, the Secretary, Prime Minister's Department, the Secretary, Department of External Affairs, and the Secretary to the Treasury. Its function is to advise the Minister for Defence on:

- (a) The defence policy as a whole and also to co-ordinate military, strategic, economic, financial and external affairs aspects in framing defence programmes.
- (b) Matters of policy or principle and important questions having a joint Service or inter-Departmental defence aspect.
- (c) Such other matters having a defence aspect as are referred to the Committee by or on behalf of the Minister for Defence.

The main responsibility of the Chiefs of Staff Committee in peace is the preparation of strategic appreciations and military plans. The function of the Joint War Production Committee is, briefly, to examine the relation between strategic plans and their requirements to ensure that the war potential for them exists. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the Principal Administrative Officers Committee (Maintenance and Matériel), the Principal Administrative Officers Committee (Personnel), the Defence Research and Development Policy Committee, the Joint Planning Committee, the Joint Intelligence Committee and the Joint Administrative Planning Committee.

- (iii) Board of Business Administration. In view of the heavy defence expenditure, the Government, in July, 1953, established the Board of Business Administration in the Department of Defence. The Board deals with joint Service matters of common interest to the three Services, or important subjects on which the collective advice of the Board is desired. The Board comprises businessmen who serve in a part-time honorary capacity and consists of an independent chairman and deputy chairman and the business advisers of the three Service Departments.
- 3. Basis of Current Defence Policy.—The main strategic factors affecting current defence policy may be summarized as follows:—
- (i) Likelihood of War. Because of the nuclear deterrent, it is believed that global (or full scale) war is unlikely to occur as the result of deliberate planning, but could occur as the result of miscalculation. Limited war (or armed conflict short of global war) is always possible and could break out with little or no warning. Hostile powers will probably continue to seize every opportunity to attain their aims by cold war techniques, such as infiltration, subversion and armed insurrection.
- (ii) Area of Primary Strategic Interest. South East Asia is of great strategic importance to Australia, whose primary effort will be directed to that area in cold, limited or global war.
- (iii) Reliance on Collective Defence. The defence of South East Asia and Australia is to be sought through the concept of collective security. For this reason Australia is participating in regional arrangements such as SEATO and ANZUS, and arrangements for Commonwealth co-operation. Such arrangements are entirely in accord with the United Nations Charter.
- 4. The Defence Programme.—(i) Programme. The level of national defences must be adequate to enable Australia to meet her regional and home defence responsibilities. The proportion of the national resources that can be allotted to defence is, however, affected by the concurrent demands of the programmes of national development, industrial expansion and migration, which add to our basic defence capacity. Current defence planning and preparations provide for the maintenance of an efficient Service organization including fighting forces, together with command, training and maintenance elements, capable of rapid expansion in time of war. The emphasis is no longer so much on numbers as on mobility, equipment and fire power. Equipment used by Australian forces will be standard or compatible as far as possible with that used by United States forces, with whom they are likely to be associated in war. The defence programme provides for the acceleration of the naval construction programme, designed to produce ships of the appropriate types, the building up of a regular army brigade group, highly trained, mobile, and equipped with the most modern weapons available. Mobility will be greatly increased by the procurement of 12 modern transport aircraft for the R.A.A.F. The first ground to air guided weapons unit will also be introduced into the R.A.A.F., and additional mobile control and reporting units will be established. The army brigade group will be additional to the infantry battalion in Malaya referred to below, and the Citizen Military Forces will be maintained at an adequate strength.

In the field of research and development, Australia is making its principal contribution through the Long Range Weapons Establishment which is a joint United Kingdom-Australian effort for the testing of guided weapons. The executive authority for this project is the Department of Supply which is also responsible for design and inspection services and for the provision of the material requirements of the forces other than munitions. Australian support for atomic weapons tests carried out by the United Kingdom at Maralinga in South Australia will be maintained.

The Department of Defence Production is responsible for the manufacture and supply of munitions and aircraft. The new filling factory at St. Mary's has been handed over for operation and, at the Small Arms Factory at Lithgow, component production for the FN rifle for the Services has commenced.

The estimated cost of the defence programme for 1957-58 was £190 million.

(ii) Financial. Details of defence expenditure for 1956-57 and the allocation of the Defence Vote for 1957-58 are set out in the two tables which follow:—

# ALLOCATION OF DEFENCE VOTE OF £190,000,000 FOR 1957-58. (£'000.)

Servic	æ or Depa	rtment.	Maintenance.	Capital Material Requirements, Machinery, Plant and Equipment.	Capital Buildings, Works and Acquisition of Sites.	Total Expenditure.

(iii) Personnel Strengths. The personnel strengths of the Services at 31st December, 1957 were:—

Category.	Navy.	Army.	Air Force.	Total.	
Permanent Forces	(a) 11,016	20,771	14,407	46,194	
Citizen Forces— Volunteers	4.716	(b) 14,367 (c) 45,209	915 (c)	22,924 49,925	
Total Citizen Forces	12.358	59,576	915	72,849	
Total Permanent and Citizer Forces	22.274	80,347	15,322	119,043	

<sup>(</sup>a) Excludes 37 midshipmen not on pay. (b) Excludes 1,553 on Army Supplementary Reserve. (c) Excludes 73,572 Army and 16,164 Air Force National Service personnel who have completed training and are on the reserve.

<sup>5.</sup> Australian Forces Serving Overseas. (i) Malaya. Australia has participated with the United Kingdom and New Zealand in the Commonwealth Strategic Reserve in Malaya since it was first established in 1955. Malaya became a sovereign and independent member of the Commonwealth in 1957 and by arrangements agreed upon at that time, the Strategic Reserve has continued to be stationed in that country. In addition to its role as a strategic reserve, this force, at the request of the Malayan Government, continues to assist in the campaign against the communist terrorists.

The Australian contribution to the Strategic Reserve comprises the following forces— Navy—Two destroyers or frigates. An aircraft carrier also pays an annual visit, and additional ships would be provided in an emergency.

Army—An infantry battalion with supporting arms, and reinforcements in Australia. Air Force—An airfield construction squadron, which is engaged in the reconstruction of the airfield and ancillary facilities at Butterworth. A Canberra bomber squadron was deployed to Malaya in July, 1958, on completion of the airfield. This was followed by a fighter wing of two squadrons, of which the first squadron will arrive in Malaya before the end of 1958. The Lincoln bomber squadron which has been engaged in operations against the terrorists in Malaya since 1950 was withdrawn from Malaya on the arrival of the Canberra squadron.

- (ii) Korea. The final elements of the Australian Forces in Korea were withdrawn in 1957. United Kingdom, Australian and New Zealand representation on the United Nations Command, Korea, is maintained by a Commonwealth Liaison Mission. Australian ships will, however, continue to serve in Korean waters during their regular tours of duty with the Far East Fleet.
- 6. National Service Training.—Under the National Service training scheme, every male person, other than those mentioned below, ordinarily resident in Australia, who, on or after 1st November, 1950, attains the age of 18 years, is required to register for National Service when called upon to do so by notice published in the Commonwealth Gazette. The first registration of male British subjects took place in May, 1951, and since then successive groups of eighteen-year-olds have been required to register, usually at six-month intervals. In May, 1954, the obligation to register was extended to New Australians.

Exemption from the liability to register is confined to certain diplomatic personnel and officials in the service of international bodies, members of the permanent forces, and aboriginal natives of Australia. Exemption from the liability to undergo training may be granted to theological students, ministers of religion, members of religious orders, conscientious objectors, and registrants suffering from certain prescribed physical or mental disabilities.

Registrants not exempted from service are liable to be called up for training provided they attain the standard of medical fitness required. Deferment may be granted for limited periods to students or apprentices so as to avoid undue interruption to their studies or trade training and to registrants who can establish before a court that their call-up would cause exceptional hardship to themselves, their parents or dependants. Early in 1955, provision was made to defer the call-up of registrants living outside approved C.M.F. training centres and to rural workers permanently engaged full-time on a rural holding in the production of food or raw materials.

In 1957, a new selection procedure was introduced. This is in the form of a ballot conducted shortly after each new age group is called upon to register. Registrants included by ballot are regarded as available for call up subject to the existing rules and procedures for exemption and deferment. Those excluded by ballot are granted deferment.

Up to and including the intakes in January, 1957, training was carried out in all three Services. Since that date, all training has been carried out in the Army and the total number called up each year reduced from 34,000 to 12,000. Up to the time when training in the Navy and Air Force was abandoned, the total numbers called up for training in those services were Navy 6,967 and Air Force 22,267. Up to the latest Army intake in January, 1958, the total number called up for service in the Army was 176,465.

The total Army training liability is 140 days consisting of an initial continuous training period of 77 days and 21 days part-time and camp training in each of the following three years. Trainees remain on the Reserve of the Citizen Military Forces for five years from the date of call-up. The normal times for call-up are in January, April and August of each year.

Provision is made to safeguard the rights of registrants called up for training, notably with regard to reinstatement in civilian employment. There is no statutory obligation on employers to make up any difference between the civil and service pay of employees who are undergoing training, but some employers, e.g., the Commonwealth Government and the Government of New South Wales, do so voluntarily.

#### § 2. Naval Defence.

- 1. General.—(i) State Systems. Information regarding naval defence systems prior to 1901 will be found in Official Year Book No. 2, p. 1084.
- (ii) Royal Australian Navy up to the end of 1939-45 War. An outline of the development of Australian Naval policy was given in Official Year Book No. 3, p. 1060 and No. 12, p. 1012. Some account of the building of the Australian Navy, the proposed and modified cost

thereof, the compact with the Imperial Government, etc., appears in Official Year Book No. 15, pp. 921-23. An account of the growth and activities of the Royal Australian Navy during the 1939-45 War is given in Official Year Book No. 36, pp. 1023-27.

- 2. Naval Board.—The Australian Navy is administered by a Board consisting of the Minister for the Navy with four Naval Members, and the Secretary, Department of the Navy; the seat of administration is at Melbourne.
  - 3. Strength of the Fleet .- Ships in Commission:

H.M.A. Fleet.

- 1 Aircraft carrier.
- 1 Daring Class, 2 Battle Class, 1 Tribal Class destroyers.
- 3 Fast Anti-submarine frigates.
- 1 Cadet Training frigate.

Survey Ships.

- 1 Frigate.
- 1 Converted motor stores lighter.

Training Ships.

2 Ocean minesweepers.

Auxiliary Vessels.

- 2 Boom working vessels.
- 1 Ocean tug.
- 1 Armament Stores carrier.
- 5 Search and rescue craft.
- 4. Personnel.—The strength of the Royal Australian Navy has been pegged at 14,400, comprising 1,584 officers and 12,816 ratings.
- 5. Womens' Royal Australian Naval Service.—The strength of the W.R.A.N.S. remains pegged at 14 officers and 260 ratings. In June, 1957, new quarters for W.R.A.N.S. personnel serving in the Melbourne Area were opened at Greenwich House, Toorak. Ratings are serving at the following Establishments: H.M.A.S. Cerberus, where all initial training is also carried out, H.M.A.S. Harman, where telegraphists now complete their training, H.M.A.S. Lonsdale and H.M.A.S. Melville (Coonawarra W/T Station) and, since April 1957, in H.M.A.S. Watson as W.R.A.N.S. (Radar Plot). In addition to the new categories of W.R.A.N.S. (Radar Plot) and Motor Transport Driver (introduced in December, 1957), ratings are employed as Telegraphists; Writers (General Duties), (Pay), and (Shorthand Typist); Stores Assistants (Stores) and (Victualling); Sick Berth Attendants; Cooks; Stewards and Regulating.
- 6. Strength of Royal Australian Navy.—The serving strength of the Royal Australian Naval Forces, both permanent and reserves, at 31st December, 1957, was 1,307 officers and 9,445 ratings including 72 native ratings of the Papua and New Guinea Division of the Royal Australian Navy. In addition, 12 officers and 217 ratings of the Women's Royal Australian Naval Service were serving, and 72 cadet midshipmen were undergoing training, at the Naval College. Reserve strength comprised 1,497 officers and 10,583 ratings.
- 7. Reserve and National Service Training.—Reserve training was resumed as from 1st January, 1950, for members of the Royal Australian Naval Reserve. Training consists of 45 two-hour drill attendances at night or on Saturdays in naval training establishments in each of the capital cities, plus 13 days continuous training each year in H.M.A. ships or training establishments, including special schools. In addition, payment is made for further voluntary home training up to a maximum of 12 days. Selected members may undergo special courses up to a limit of six months during the whole of their service in the Reserve, whilst up to 12 months training or service may be performed in H.M.A. ships or establishments with similar qualifications. Engagements are for three years. Rates of pay have been aligned (with minor modifications) with those applicable to the Permanent Naval Forces. The training for members of the Royal Australian Naval Reserve (Sea-going) is normally 28 days every two years whilst members of the Royal Australian Naval Volunteer Reserve are under no training obligations.

Naval National Service personnel commenced training on 30th July, 1951. On completion of their 154 days initial training in naval establishments and H.M.A. ships, personnel have been attached to the Naval Reserve Training Establishments in their State until completion of their five-year liability for mobilization in war or emergency. After the intake of trainees in January, 1957, National Service Training by the Navy was discontinued.

Revised post-war conditions of service in the Royal Australian Fleet Reserve were introduced as from 13th December, 1950. This Reserve is comprised of two classes:—
(a) former ratings who receive full benefits under the Defence Forces Benefits Act and are required to serve five years in the Royal Australian Fleet Reserve as a consideration for receipt of these benefits and (b) former ratings who have previously served in the Permanent Naval Forces of the Royal Australian Navy, Royal Navy, or a Dominion Navy subject to a minimum period of three years' service and an absence of not more than five years. No retainer is payable to members under (a) and no obligatory training is carried out but 14 days paid voluntary training can be undertaken. Members under (b) receive an annual retainer of £24 subject to completing annual training; if enrolled within 12 months of discharge from Permanent Naval Forces—14 days; if enrolled after a lapse of 12 months since discharge from Permanent Naval Forces—14 days; additional paid voluntary training up to 14 days may be carried out. Subject to minor modifications ratings receive pay applicable to Royal Australian Navy personnel whilst under training.

- 8. Fleet Air Arm.—The Fleet Air Arm of the Royal Australian Navy consists of four front line squadrons, one operational carrier, H.M.A.S. *Melbourne*, and one Naval Air Station, H.M.A.S. *Albatross* at Nowra, New South Wales. The aircraft carrier H.M.A.S. *Melbourne*, fitted with an angled deck and steam catapult, carries three squadrons of aircraft including Gannet turbo-prop for anti-submarine operations and jet Sea Venom all weather fighters and ground attack aircraft.
- 9. Ship Construction and Repair.—Provision is made for the maintenance in Australia of a nucleus ship construction and repair industry capable of rapid expansion in war. The present approved programme provides for the construction of three Daring Class Ships (one was completed in February, 1957), and four anti-submarine frigates (at present under construction).
- 10. The Relation of New Weapons.—Careful consideration has been given to the implications of new weapons, and the decisions in regard to the Navy are based on the broad conclusions of great naval powers that these weapons should be introduced by the normal process of evolution, first into existing ships, and later perhaps into an entirely new form of fighting ship. The same authority supports the view that there will be no rapid development which will render vessels such as carriers, cruisers and destroyers obsolete in the near future.
- 11. Naval College.—The Royal Australian Naval College, transferred from Jervis Bay, A.C.T., to Flinders Naval Depot in 1930, has been re-established at Jervis Bay. It was commissioned as H.M.A.S. Creswell on 20th January, 1958. In January, 1958 there were 78 R.A.N. Cadets (25 having been appointed away and 31 newly entered) and 14 R.N.Z.N. Cadets undergoing training at the College.
- 12. Training Establishments.—Flinders Naval Depot, Victoria, remains the principal training establishment for ratings in the permanent forces, while several advanced training schools are established at Port Jackson, New South Wales. Air training is carried out at Nowra, New South Wales.
- 13. The Australia Naval Station.—Defined limits of the Australia Station are as follows:—

Eastern-

From 3° 30' North, 169° East, south to 1° South, thence east to 170° East, thence south along this meridian to 30° South, thence to 45° South, 160° East, thence south, along this meridian.

Northern-

From 3° 30' North, 169° East, west to 125° East, thence south to the Coast of Celebes, thence west along the Coast of Celebes to 120° East, thence south to 11° 30' South, thence west to 11° 30' South, 95° East.

Western-

From 11° 30′ South, 95° East, south along this meridian to 30° South, thence west along this parallel to 80° East, thence south along this meridian.

14. Foreign Service.—During the year ended June 1958, H.M.A. ships Melbourne, Anzac, Tobruk, Voyager and Warramunga served on the Far East Station as units of the Commonwealth Strategic Reserve. H.M.A.S. Melbourne paid a visit to Pearl Harbour for advanced A/s exercises in June, 1958, and H.M.A. Ships Quiberon, Queenborough and Quickmatch have made visits beyond the limits of the Australia Station.

15. Papua and New Guinea Division of the Royal Australian Navy.—A Papua and New Guinea Division of the Royal Australian Navy, consisting of native ratings, was inaugurated in July, 1951, as a separate part of the Permanent Naval Forces for employment in Papua and New Guinea and waters adjacent thereto.

16. Ships of the Royal Australian Navy.—The following ships were in commission or in reserve in June, 1957:—

### § 3. Military Defence.

1. State Systems.—A detailed historical account of the Australian defence forces prior to Federation will be found in Official Year Book No. 2, pp. 1075–1080. See also Official Year Book No. 12, p. 999.

The strength of the military forces of the States on 31st December, 1900 (the eve of Federation) was:—New South Wales, 9,338; Victoria, 6,335; Queensland, 4,028; South Australia, 2,932; Western Australia, 2,696; Tasmania, 2,024; total for Australia, 27,353. This total is exclusive of cadets, reservists and rifle club members.

2. Commonwealth Systems.—(i) General. Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in sixteen phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous army in 1902 up to the decision to increase the training strength of the militia to 70,000 in the year before the 1939–45 War (phases 1–7), see Official Year Book No. 36 and earlier issues.

Phases 8-10, covering the period immediately prior to, and just following, the outbreak of the 1939-45 War, relate to the initial steps necessary to put the Australian Military Forces on a war-time basis, and to its organization into commands.

The eleventh phase, in January, 1942, was the division of Northern, Eastern and Southern Commands into separate commands and base headquarters to handle operational and administrative matters respectively, and the twelfth phase was the revision of the machinery for command administration of lines of communication areas. The thirteenth phase was the appointment of Lieutenant-General Sir Iven Mackay as G.O.C.-in-C. Home Forces commanding the forces in Northern, Eastern and Southern Commands. The fourteenth phase covered the period following the outbreak of war with Japan and the entry of United States of America Forces into the South-West Pacific Area, and related to the appointment of General Sir Thomas Blamey as Commander-in-Chief, Australian Military Forces, the cessation of the Military Board, and the replacement of the system of commands and bases by the field army and lines of communication areas. In March, 1943, First and Second Armies took over from Queensland, New South Wales and Victoria Lines of Communication Areas the command of all coast and static anti-aircraft artillery defences and training establishments. On 16th June, 1944, Western Command was re-established and took over the combined responsibilities of Third Australian Corps and Western Australia Line of Communication Area.

The fifteenth phase was the re-introduction in March, 1946, of the Military Board and the organization of commands and military districts, and the sixteenth phase was the commencement of the National Service Training Scheme in August, 1951 (see § 1, para. 6 above and sub-para. (iv) (c) following).

For greater detail on phases 8-14, see Official Year Book No. 38 and earlier issues.

- (ii) Population of Military Age, 30th June, 1957. The following particulars show the estimated numbers of males of military age in the population of Australia as at 30th June, 1957. The total number of cadet age, 14 and under 18, was 282,676; of citizen soldier age, 18 and under 26, 516,830; and 26 and under 35, 686,156; making a total of 1,485,662 aged 18 and under 35, which is considered the best period for military service. In addition to the above-mentioned, there were 1,480,169 males, 35 and under 60, in Australia at 30th June, 1957.
- (iii) Allotment of Units. Under the Command Organization (see above), units are raised on a territorial basis, each State supplying its proportion of the personnel required for the fighting services. Commands and all formations and units under them conform generally to State boundaries as follows:—Northern Command, Queensland; Eastern Command, New South Wales; Southern Command, Victoria; Central Command, South Australia; Western Command, Western Australia; Tasmania Command and Northern Territory Command. New Guinea is the responsibility of Northern Command.
- (iv) Military Training Systems. (a) General. Particulars of the military training systems in operation prior to the 1939-45 War, first on a compulsory basis and later voluntary, will be found in Official Year Book No. 38 and earlier issues.

The current plan (1957-58) for the Australian Regular Army is based on an average strength of 25,600 full time duty personnel (including 4,800 civilians) and a Citizen Military Force of 70,300 including National Servicemen.

(b) The Australian Cadet Corps. The Australian Cadet Corps is a voluntary organization comprised of School Cadet units. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies an important position in the scheme of national defence. School Cadet units are raised at educational establishments in all States of the Commonwealth. The minimum age for enrolment is the year in which the applicant reaches the age of 14 years, and cadets, who in the large majority of schools receive a free issue of A.M.F. pattern uniform, may remain in the Cadet Corps until they cease to be pupils of the educational establishments concerned. A few units retain their own pattern school uniform and are not issued with A.M.F. pattern uniforms. Provision is made for the appointment of officers, warrant and non-commissioned officers on an authorized establishment scale from within school units.

The establishment of the whole Corps is 35,000 all ranks, and at 31st December, 1957, comprised 274 School Cadet units with a posted strength of 30,321 all ranks.

- (c) National Service Training Scheme. Under the National Service Training Scheme (see § 1, para. 6 above) the Army was initially required to train 29,250 trainees a year, effected by three intakes each of 9,750 trainees in January, April and August. The first intake commenced training in August, 1951. As from the second intake of 1957, the annual intake has been reduced to 12,000.
- (v) Women's Services. In November, 1950, approval was given for the enlistment of women into the Australian Regular Army, on a limited scale. Enlistment commenced immediately into the Australian Women's Army Corps. During June, 1951, the Australian Women's Army Corps was re-designated the Women's Royal Australian Army Corps (W.R.A.A.C.). Members are employed in establishments in direct substitution for male soldiers. The Women's Services in the Australian Regular Army now comprise two Corps only:—(a) Royal Australian Army Nursing Corps; (b) Women's Royal Australian Army Corps.

Women's Services have been incorporated in the Citizen Military Forces and it is proposed to raise sixteen companies of the Women's Royal Australian Army Corps and twelve companies of the Royal Australian Army Nursing Corps, a total of 3,900 all ranks, within the C.M.F.

At December, 1957, six companies of the Women's Royal Australian Army Corps and eight companies of the Royal Australian Army Nursing Corps, a total of approximately 1,900 all ranks, had been raised within the C.M.F.

(vi) Malaya. On 1st April, 1955, the Commonwealth Government announced its decision to dispatch troops to Malaya as an Australian component of the British Commonwealth Far East Strategic Reserve. 2nd Battalion, The Royal Australian Regiment and 105th Field Battery, Royal Australian Artillery and other minor units embarked from Australia on 6th October, 1955 and disembarked at Penang on 20th October, 1955. These units returned to Australia in 1957, disembarking at Sydney on 31st October. They were replaced by 3rd Battallon, The Royal Australian Regiment, 100 (a) Field Battery, Royal Australian Artillery and other minor units.

(vii) The Staff College. Until 1938, the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938, an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney, was established. Between 1939 and 1945, the training of staff officers was carried out under varying conditions by different schools in accordance with the changing needs of the war.

Early in 1946, the Staff School (Australia) was established at Seymour in Victoria and re-designated the Staff College in conformity with other Empire training establishments for training officers for command and staff appointments. The College was later moved to Queenscliffe, Victoria, where it is at present situated. The courses are of ten months' duration and are held from January to November each year. The normal intake is 30 students and, on successfully completing the course, an officer is awarded the symbol "psc". The course is designed to train selected officers for war, and in so doing to fit them for Command or Grade II. staff appointments. Each course includes, among the students, Army representatives of the United Kingdom, and other Dominions and countries. Included in the 1957 course are students from the United Kingdom, Canada, New Zealand, India, Pakistan, the United States of America, the Phillipines and Burma. Vacancies on each course are reserved also for officers who may be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service.

In order to ensure common standards in tactical doctrine and staff and command training throughout the Empire, liaison is maintained with other Staff Colleges; and to this end, there is also a reciprocal exchange of instructors. To this extent, it may be said that the Staff College is imperial in character.

(viii) The Royal Military College. The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained officers for the Army. The conditions of entry are laid down in the Royal Military College Regulations and provide for admission by "normal", "service", and "special" entries. The length of the normal course is four years; "service" entry cadets attend for three years; and "special" entries for one year.

While at the College, cadets receive pay and allowance of 15s. 10d. per day in their first year, rising to 25s. 6d. per day in their fourth. Uniform maintenance allowance of 1s. 9d. per day is additional, and a further 6d. per day is paid to cadets on attaining the age of 18 years. The course of instruction is organized into military and civil departments and the instructional staff comprises officers of the Army and civilian professors. On graduation, cadets are appointed lieutenants in the Australian Regular Army. The College also trains New Zealand cadets for commissions in the New Zealand Permanent Forces under an agreement made with the Government of that Dominion.

- (ix) The Officer Cadet School. The Officer Cadet School was established in 1951 at Portsea, Victoria, for the purpose of speeding up the supply of junior regimental officers for the Australian Regular Army. Serving members of the Australian Regular Army, the Citizen Military Forces, National Servicemen, and civilians between the ages of 18 and 23 years, are eligible to apply for entrance. The course is of eleven months' duration and on graduation cadets are appointed second-lieutenants in the Australian Regular Army. They then normally proceed to further training at the Army School of the Arm or Service to which they have been allotted before being posted to regimental duties.
- (x) The Women's Royal Australian Army Corps School. The W.R.A.A.C. School was established in 1952 at Mildura, Victoria. It has two wings, one whose primary task is the training of officer cadets for the W.R.A.A.C., the other being for the training of non-commissioned officers at all levels and for other special courses. The officer cadets are selected from eligible applicants, who may be serving members between 21 and 32 years of age, or civilians between 21 and 30 years of age. The course is of six months' duration and, on graduation, cadets are appointed lieutenants in the Women's Royal Australian Army Corps.
- (xi) The Army Apprentices' School. The Army Apprentices' School was opened in 1948 at Balcombe, Victoria, with the aim of training youths as skilled tradesmen for the Australian Regular Army, and to form a background for an Army career with prospects of promotion. The course is open to boys between the ages of 15 and 17 years and provides training in a number of highly skilled trades. A three-year course of intensive theoretical and practical work at the Apprentices' School is followed by one year in an appropriate Army workshop or technical unit. At the end of their third year, boys are

given their Army trade test and also take the Victorian Apprenticeship Commission final grade public examinations, which ensures that they will be accepted as qualified tradesmen in civil life when they eventually leave the Army. In addition to trade training, the Apprentices' School provides general educational facilities up to the school leaving standard.

(xii) Army Schools. Schools have been established for the major Arms and Services for the purpose of training officers and other ranks in the up-to-date techniques of their own Arm or Service, to qualify them for promotion requirements, and to produce trained instructors. In addition, a School of Tactics and Administration which has been established at Seymour, Victoria, provides qualifying and instructional courses in current tactical and administrative doctrine for members of all Arms and Services. Courses at Army Schools are conducted for members of both the Australian Regular Army and the Citizen Military Forces.

The following Schools have been established:—School of Tactics and Administration; Jungle Training Centre; Armoured School; School of Artillery; School of Military Engineering; School of Survey; School of Signals; School of Military Intelligence; School of Infantry; Royal Australian Army Medical Corps School of Army Health; Royal Australian Army Service Corps School; Royal Australian Army Ordnance Corps School; Royal Australian Electrical and Mechanical Engineers Training Centre; Transportation Training Centre; School of Music; Women's Royal Australian Army Corps School; Land/Air Warfare (Joint Services) School.

(xiii) Rifle Clubs. The Australian Rifle Club movement, which had its origin in 1888, is provided for in the Defence Act and comprises an Australian Council of State Rifle Associations (which functions in an advisory capacity to the Minister and in the promotion of oversea and interstate rifle competitions), State Rifle Associations, District Rifle Club Unions and Rifle Ctubs. When placed in recess, the efficient strength of the rifle club movement was 1,018 clubs and 36,478 members. Approximately 20 per cent. of this number served overseas and a further 60 per cent. performed home service duties during the 1939-45 War. Rifle shooting activities were resumed in 1946 and the strength of the movement as at 31st December, 1957, was 1,011 clubs and 46,207 members.

(xiv) The Australian Battles Nomenclature Committee. Reference to the formation of the Australian Battles Nomenclature Committee on 25th July, 1957, together with a broad outline of its functions and activities was given in Official Year Book No. 43, p. 1024. The Australian Battles Nomenclature Committee advised the United Kingdom Battles Nomenclature Committee regarding all operations of the Second World War and the Korean Campaign 1950-53 in which Australian Military Forces participated. The final report of the United Kingdom Battles Nomenclature Committee was published in November, 1957.

3. Strength of Australian Military Forces.—The effective strength of the Australian Military Forces at 31st December, 1957, was as follows:—Australian Regular Army, 17,498; Regular Army Special Reserve, 3,273; Citizen Military Force (including National Service Trainees), 89,207; Australian Cadet Corps, 30,321.

### § 4. Air Defence.

- 1. General.—A statement regarding the preliminary steps taken in connexion with the development of air defence will be found in Official Year Book No. 18, p. 610, and one on the expansion and development and zones and operations of the Royal Australian Air Force during the 1939-45 War appears in Official Year Book No. 36, p. 1027.
- 2. Operations in Korea and Malaya.—Reference to R.A.A.F. participation in operations in Korea is contained in Official Year Book No. 40, pp. 1112-13.

Australian assistance in the form of one transport squadron provided to the Malayan authorities is detailed in Official Year Book No. 40, p. 1113.

One bomber squadron was also provided for operations in Malaya. The Lincolns of No. 1 Squadron arrived in July, 1950, and were soon in action. Up till 1st February, 1958, No. 1 Squadron had dropped 32,800,350 lb. of bombs during operations against communist bandits. This bombing, which calls for extreme accuracy, was mainly on jungle hideouts frequented by the insurgents and was carried out in close co-operation with the ground forces.

3. Administration and Organization.—The Department of Air is responsible for policy for the organization and control of the Royal Australian Air Force. The Air Board is responsible, subject to approved policy, for the control and administration of the Royal Australian Air Force, and is constituted as follows:—Chief of the Air Staff, Air Member for Technical Services, Air Member for Personnel, Air Member for Supply and Equipment, Citizen Air Force Member and the Secretary, Department of Air.

Headquarters of the Royal Australian Air Force is located at Melbourne. An Oversea Headquarters is located at London and an Air Attaché at Washington.

The units of the Royal Australian Air Force are organized in three functional Commands throughout Australia and its Territories.

The Commands are:-

Home Command.—Home Command is responsible for the command of operational units and the conduct of their operations within Australia and its Territories.

Training Command.—Training Command is responsible for the command of training units, recruitment and individual training in the R.A.A.F.

Maintenance Command.—Maintenance Command is responsible for the command of supply and servicing units, and supply and servicing, including technical services, of the R.A.A.F. in Australia.

The organization of the Royal Australian Air Force includes the following types of formations and units:—

- (a) Sub-formations, comprising a headquarters unit to control the activities of a number of units at one location. Each formation has a base squadron which provides common services to all units at the location.
- (b) Flying Squadrons. These bomber, fighter, transport and maritime reconnaissance squadrons undertake the operational and operational training flying commitments of the R.A.A.F.
- (c) Aircraft Depots. These units specialize in major overhauls, etc., of aircraft and equipment and relieve flying unit ground staff of these commitments.
- (d) Stores Depots. Stores and equipment ordered by the R.A.A.F. are delivered to these centrally located depots for distribution to units.
- (e) Flying Training, Ground Training, Navigation, Radio and Air Armament Training Units, which specialize in the aircrew and ground staff training required by the R.A.A.F.
- (f) Airfield Construction Squadrons. These units specialize in the construction of R.A.A.F. aerodromes and associated buildings and works services.
- (g) Royal Australian Air Force College. This unit is the training college for officer cadet entrants to the R.A.A.F.
- (h) Telecommunications Units. These units are responsible for the communications services of the R.A.A.F.
- (i) R.A.A.F. Staff College. This college trains specially selected R.A.A.F. officers for higher staff and command posts.
- 4. Aircraft.—Some of the aircraft which are at present being used in the Royal Australian Air Force are: bomber squadrons—Lincoln and Canberra; fighter squadrons—Mustang, Vampire, Meteor and Avon Sabre; transport squadrons—Metropolitan and Dakota; maritime reconnaissance squadrons—Lincoln and Neptune; air observation post—Auster; training—Wirraway, Dakota, Lincoln, Winjeel, Vampire, Meteor and Avon Sabre.
- 5. Establishment.—The Royal Australian Air Force establishment, as proposed, comprises—(a) a Home Defence Organization, (b) a Field Operational Force, (c) an Operational Reserve and (d) a Training Organization, consisting in all of approximately 16,800 personnel.
- 6. Strength of Royal Australian Air Force.—At 1st February, 1958, the strength of the Royal Australian Air Force was as follows:—Permanent Air Force, 14,453; Active Citizen Air Force, 425; Active Reserve, 381 and General Reserve, 35,921, including National Service Trainees transferred to the Reserve on completion of their 154 days training. After the intake of trainees in January, 1957, National Service Training by the Air Force was discontinued (see p. 1050).
- 7. Women's Royal Australian Air Force.—At 1st February, 1958, the Women's Royal Australian Air Force had an establishment of 849, with an enlisted strength of 760. There are 27 musterings, excluding members of the W.R.A.A.F. in training. The entry age is 18 to 34 years inclusive. Parental consent must also accompany applications for those between the ages of 18 and 21 years. A good education is necessary and applicants must be of British nationality, single, or a widow without dependants, and must be physically fit. Engagement period is four years with the option of re-enlistment for further periods of four years.
- All W.R.A.A.F. trainees undergo a month's initial training course at Point Cook, Victoria. On graduating, they are posted for duty to R.A.A.F. units anywhere in Australia. Wherever possible, the Air Force endeavours to post members of the W.R.A.A.F. to R.A.A.F. units within their home State. This rule applies for those who wish to serve in their home State, but members of the W.R.A.A.F. who wish to travel may indicate their preference and be posted to whichever State they desire.

### § 5. War Gratuities.

Reference is made in earlier issues of the Official Year Book to the payments made under the provisions of the War Gratuity Acts 1920 (see No. 15, p. 930) and the War Gratuity Act 1945-1947 (see No. 41, p. 999).

### § 6. Department of Defence Production.

- 1. General.—On 11th May, 1951, a Department of Defence Production and a Department of Supply were established by a decision of the Commonwealth Government. These Departments took over the functions previously undertaken by a joint Supply Department. The Department of Defence Production is responsible broadly for the production in government-operated factories and in industry under contract to the Government of munitions (including aircraft) required by the Services. It is also responsible for all those matters incidental to production, including planning production capacity to meet expected future Service requirements. References to previous operations of the various sections and establishments of the Department are given in Official Year Book No. 38, pp. 1200-9.
- 2. Functions of the Department and Act Administered.—The functions of the Department of Defence Production, as defined in the Administrative Arrangements approved by the Governor-General, are:—
  - (i) Manufacture, acquisition, provision and supply of munitions for the defence forces, that is to say, armaments, aircraft, arms, ammunition, weapons, machine tools, war chemicals, radar and such other items as may be mutually agreed with the Department of Supply as falling within the definition of munitions, including the materials and plant necessary for the production of those things and all matters incidental thereto, including:—

The receipt from the Service Departments and other authorities or Departments of orders and forecasts of requirements of munitions; appropriate liaison with the Higher Defence Machinery, Service Departments and the Department of Supply to deal with Service munitions programmes; operation and management of factories, workshops and undertakings concerned in the production of munitions; arrangements and all action necessary to secure the manufacture, processing and delivery of munitions; investigations and development of Australian sources of munitions production, including the establishment of annexes or special capacity in industry for that purpose; acquisition by the Commonwealth and the establishment of factories and workshops for the purpose of producing munitions; provision and maintenance of stocks of materials and goods for the purpose of producing munitions.

(ii) Employment and training of technicians, workmen and others for the purpose of producing munitions.

(iii) Formation of Industry Advisory Committees to advise the Minister for Defence Production regarding:—

The allocation to industry of production programmes of munitions; the establishing of additional munitions production facilities, including annexes and undertakings; the obtaining of appropriate details of Australian industrial capacity required by the Department of Defence Production in allocating munitions production to industry; any other matters associated with munitions production as specified by the Minister.

- (iv) Provision and control of stores, magazines and similar undertakings required in connexion with production of munitions and for other purposes as
- (v) Arrangements for ascertaining costs and the control and limitation of profits in connexion with the production of munitions.
- (vi) Development of inventions originating in government factories in the interests of defence production.

The Act administered by the Department is the Supply and Development Act 1939-1948.

- 3. Production.—(i) Munitions. The Department is responsible for the production in Australia of the munitions (other than specialized Navy requirements) for the Armed Services. The production is undertaken in government-operated factories and industry. Broadly this production is allocated as follows:—
  - (a) Some processes are entirely undertaken by the government factories in peace and war because of special requirements.
  - (b) Some classes of equipment and components are produced entirely by industry in peace and war.

(c) Production techniques of advanced equipment and components of which industry may undertake mass production in war, are developed in the government factories in peace.

(d) Limited requirements of standard equipment and components produced in peace by the government factories are in war produced on a mass pro-

duction basis in industry.

The following factories are currently in operation:—Ammunition—Footscray, Victoria; Explosives and Filling—Albion and Maribyrnong, Victoria; Mulwala and St. Mary's, New South Wales; Ordnance—Maribyrnong, Bendigo, Echuca, Port Melbourne, all in Victoria; Small Arms—Lithgow, New South Wales; and certain annexes established in industry. Other government-owned factories and annexes are held on a care and maintenance basis against an emergency.

A new Munitions Filling Factory was completed in December, 1957, at St. Mary's, New South Wales. The factory, which cost approximately £26 million, will remedy a critical deficiency in the capacity to fill the empty components—depth charges, torpedoes, shells,

grenades, guided weapons—with explosives and propellants.

These factories are complementary to each other in the manufacture of a range of basic munitions. The Ammunition Factory makes the brass and non-ferrous components of gun ammunition, including melting and rolling, and these components are then passed to the Filling Factories for filling with explosives. In the case of small arms ammunition, however, the factory makes the complete round, receiving the propellant from the Explosives Factories. The Ordnance Factories principally make guns, but in addition make the steel shell bodies which are passed to the Filling Factories to be filled with explosives and assembled with the brass and other components received from the Ammunition Factory. The Explosives Factories make the propellant and high explosives for the brass components made at the Ammunition Factory and the steel components made at the Ordnance Factory. The Explosives Factories also assemble the gun ammunition. The Small Arms Factory is equipped to make the rifles and other small arms for which the Ammunition Factory makes the ammunition.

Production of munitions is also a joint effort between the Government factories and private contractors in industry. In peace, industry produces many components for ammunition and other stores plus complete units such as electronic equipment and motor vehicles for the Services. In war, industry would provide the major capacity not only for mass production of these and many other new items, but also for the mass production of equipment and components using engineering techniques developed in peacetime in the Government factories.

(ii) Aircraft. (a) General. Matters relating to the production in Australia of military types of aircraft and aero engines and of other aircraft components required by the Royal Australian Air Force and the Royal Australian Navy are administered by the Department of Defence Production. Aircraft repair and overhaul activities carried out for those Services in civilian establishments, as distinct from Service workshops, are also the function of the Department, together with the responsibility of supplying aircraft and engine spare parts and airborne equipment generally.

(b) Aircraft, Engine and Other Production. The approved production programmes for the major aircraft manufacturing organizations in Australia comprised Canberra jetengined bombers and Jindivik radio-controlled jet-propelled target aircraft at the Government Aircraft Factory, Melbourne; Avon Sabre jet-engined fighters, Winjeel basic trainers and Rolls-Royce Avon turbo-jet engines at Commonwealth Aircraft Corporation Pty. Ltd., Melbourne, and Vampire jet-trainers at De Havilland Aircraft Pty. Ltd., Sydney.

Associated concurrent production activities included the manufacture of parts of aero engines and of undercarriages at the Aircraft Engine Factory, Sydney, production of heavy forgings in light alloy materials at the Heavy Forge Annexe, Sydney, and the manufac-

ture of aircraft pressed metal parts at Chrysler Australia Ltd., Adelaide.

(c) Repair and Overhaul. During the year, the broad policy was continued by the R.A.A.F. of returning to the factories in which they were produced all Australian-made aircraft and aero engines requiring major overhaul and the incorporation of modifications. Repair and overhaul of R.A.A.F. aircraft of certain other types and of carrier-based aircraft operated by the R.A.N. were undertaken by civilian personnel in the aircraft factories or in the works of contractors specially equipped to handle this type of work.

Lincoln and Canberra bomber aircraft were repaired and modified at the Government Aircraft Factory, together with Jindivik target aircraft. Avon Sabre fighter aircraft were repaired and modified and Rolls-Royce Nene and Avon turbo-jet engines were overhauled by Commonwealth Aircraft Corporation Pty. Ltd., Melbourne. Rolls-Royce Merlin and Pratt and Whitney Twin Row Wasp engines from the R.A.A.F., Rolls-Royce Griffon, Bristol Centaurus and Armstrong-Siddeley Double Mamba turbo-propellor engines from the R.A.N., and Rover Meteor engines from the Department of the Army for Centurion tanks were overhauled at the Aircraft Engine Factory, Sydney. Wright turbo-compound engines from R.A.A.F. Neptune aircraft were overhauled by Oantas Empire Airways Ltd., Sydney.

Carrier-based Sea Venom aircraft, Vampire fighters and trainers, together with Goblin turbo-jet engines from Vampire trainers and Gipsy Major piston engines were repaired and overhauled at De Havilland Aircraft Pty. Ltd. Dakota transport and other miscellaneous aircraft were reconditioned and serviced at the Government workshops at Parafield, South Australia.

The repair and overhaul of carrier-based Fairey "Firefly", Hawker "Sea Fury" and Fairey "Gannet" aircraft were handled by the Fairey Aviation Company of Australasia Ltd., Sydney.

Sycamore helicopter aircraft built by the Bristol Aeroplane Company, Bristol freighter aircraft, Alvis and Leonides and Bristol Hercules engines from those aircraft were repaired and overhauled by Bristol Aviation Services, also in Sydney.

Repair and overhaul work on propellors was undertaken at the Propellor Annexe, Sydney, managed for the Commonwealth by De Havilland Aircraft Pty. Ltd., Sydney.

The reconditioning and servicing of aircraft instruments, ancillary equipment and airframe components were carried out by a large number of sundry contractors.

- (d) Avalon Test Field. During the year, the aircraft flight test field at Avalon, near Geelong (Victoria), was further developed for the final assembly, fitting out and testing in flight of the Canberra bomber, Avon Sabre fighter and Winjeel trainer aircraft, built at the aircraft factories near Melbourne.
- 4. Defence Production Planning.—The Defence Production Planning Branch is the executive instrument of a Committee of the same name which operates both as an advisory body and as a reviewing Committee of defence production matters for submission to the Higher Defence Machinery. Its membership includes representatives of the three Services and the Departments of Defence, Defence Production, Supply and Trade, thereby ensuring a close liaison between the Departments most concerned with defence, both directly and indirectly, in the formation of defence production planning policy.

A series of Industry Advisory Committees has been established by the Minister for Defence Production to advise him and the Department in the development of industrial mobilization plans to meet the requirements for munitions production in war. The Committees are:—Ammunition; Electrical; Explosives and Chemicals; Machine Tools and Gauges and Munitions Factory Equipment; Materials; Military Vehicles; Radar and Telecommunications; and Weapons and their Equipment.

Members of the Committees are industrialists of wide experience and the highest ability in their chosen fields.

5. Finance and Accounts.—The expenditure on munitions, munitions factories, aircraft production, etc., during 1955-56 and 1956-57 is shown in the following table:—

DEFENCE PRODUCTION: TOTAL EXPENDITURE.

(±'000.)											
Particulars.				Expenditure.							
Particulars.				1955-5	6. 1956	57.					
Parliamentary Appropriations Trust Fund Accounts—		• •	••	(a) 12,33	4 (b) 20,	512					
Government Factories and Estab	olishme	nts		16,78	1 13.9	984					
Manufacture of Munitions			•	13,54	- '	262					
Munitions Materials				2		5					
Defence Production Materials				34	9	194					
Aircraft Production				18,41	7 15,	709					
Strategic Stores and Equipment	• •	• • •	• •	23	9	9					
Total Trust Fund Accounts				49,34	9 42,	163					
Total Expenditure				61,68	3 62,0	575					

<sup>(</sup>a) Includes Audit; excludes contribution under Superannuation Act. (b) Excludes Audit and contribution under Superannuation Act.

### § 7. Department of Supply.

- 1. General.—Reference to the creation of the Department of Supply is contained in Official Year Book No. 39, p. 1257.
- 2. Functions of the Department.—The functions of the Department include (a) the manufacture, acquisition, provision and supply of services and goods other than "munitions" (that is to say foodstuffs, textiles, clothing, fibres, canvas goods, woodwork, hardware, boots, leatherware and other like supplies) required by the Services and other authorities; (b) research and scientific development in relation to war matériel, including the operation of the Joint United Kingdom-Australia Long Range Weapons Project, and Australian research and development through the Weapons Research Establishment, the Aeronautical Research Laboratories, Defence Standards Laboratories and associated establishments; (c) design and associated technical development and inspection of war matériel; (d) planning for and procurement of strategic materials; (e) planning and establishment of manufacturing facilities for the production of goods other than munitions; (f) formation of industry advisory committees in respect of production and procurement matters; (g) arranging contracts for supply of goods and performance of services; (h) operation and management of Government Clothing Factories; (i) acquisition, maintenance and disposal of stocks; (i) sale or disposal of surplus or unserviceable Commonwealth property (except buildings or land); (k) provision of Commonwealth transport facilities; (l) security service for Supply and Defence Production Departments; (m) arrangements for ascertaining costs and control and limitation of profits on production contracts; (n) co-ordinating estimates, allocation and commitment of resources for Defence Supply needs (including munitions) and liaison with the National Security Resources Board; (o) provision and control of stores required for or in connexion with matters administered by the Department of Supply; and general storage for other Departments as required.
- 3. Act Administered.—The Minister for Supply administers the Supply and Development Act 1939-1948.
- 4. Research and Development Branch.—(i) General. The Research and Development Branch, which is under the control of the Chief Scientist, is responsible for research and scientific development in relation to war matériel including the operation of the joint United Kingdom-Australia Long Range Weapons Organization. The Chief Scientist is also the Chairman of the Board of Management for Research and Development, which is responsible for the efficient and economical conduct of research and development undertakings. The headquarters of the Branch is situated at 339 Swanston Street, Melbourne, and the following establishments are included in the Branch:—Weapons Research Establishment, Salisbury, South Australia; Defence Standards Laboratories, Maribyrnong, Victoria; Aeronautical Research Laboratories, Fishermen's Bend, Victoria.
- (ii) Weapons Research Establishment, Salisbury, South Australia. This Establishment has two main sections, namely, the Trials and Instrumentation Wing and the Weapons Research and Development Wing.

The Trials and Instrumentation Wing is concerned with the Joint United Kingdom-Australia Long Range Weapons Project and is responsible for the testing of guided missiles developed in the United Kingdom. The Weapons Research and Development Wing is engaged chiefly on Australian-initiated research but also provides a supporting research service for the Joint Project.

The headquarters of Weapons Research Establishment consisting of the main laboratory, workshop and administrative services, is located at Salisbury.

Accommodation has been provided in the area for a number of United Kingdom firms which are developing guided weapons under contract to the British Ministry of Supply.

A modern airfield (Edinburgh Field) has been established adjacent to the Headquarters at Salisbury to meet the flying requirements of the establishment, the flying effort being provided by the R.A.A.F.

Testing ranges have been provided at Woomera, which is approximately 280 miles north-west of Salisbury and 9 miles north of Pimba, which is on the trans-continental railway line. A number of these testing ranges are now in operation. A modern township of 500 houses and extensive barracks accommodation has been built, complete with community store, hospital, school and all amenities usually found in an Australian country town.

(iii) Defence Standards Laboratories. The Defence Standards Laboratories at Maribyrnong continue to give comprehensive service to industry, the armed services and to other Commonwealth and State Departments.

The broad function of these laboratories is the application of scientific knowledge and research to the problems arising in design, development, manufacture, inspection, storage, and use of war *matériel*. Research is also carried out in connexion with the development of new and improved materials, methods and equipment of known or potential interest.

- (iv) Aeronautical Research Laboratories. The Aeronautical Research Laboratories at Fishermen's Bend have continued investigations in aerodynamics, structures, aircraft materials and general aeronautical engineering according to their approved programme with particular attention to defence problems. These laboratories also collaborate with the United Kingdom on aeronautical matters of mutual interest.
- 5. Design and Inspection Branch.—(i) General. The prime functions of the Branch are to design and test equipment to meet the Army's special requirements, and to inspect stores equipment for adherence to standards before acceptance on behalf of the Army.
- (ii) Design. Comparatively little of the Army's equipment is identical with commercial patterns. In many cases, these can be used as the basis, minor modifications being made to suit Service needs. In other cases, there is no commercial equivalent and a completely new equipment must be developed. Hence there is need for a design authority:—(a) to investigate, evaluate and recommend commercial types of equipment for adoption by the Army; (b) to devise modifications to bring commercial products, or oversea Service equipment, into line with Australian Army requirements; and (c) to design and develop completely new patterns of equipment for the Army.

The Design Establishment at Maribyrnong is equipped for these tasks. Its three design sections handle respectively armaments, vehicles, and general engineering and telecommunications. It has common facilities for dealing with defects, standards, rationalization and standardization, production drawings, specifications, publications, testing of components and complete electrical and mechanical units, and the construction of mockups and models. The establishment makes the maximum use of extra-mural facilities (universities, other government departments, and industrial firms) and itself undertakes equipment development only when this is clearly the best way of doing it.

A small amount of work is done for Services other than the Army, for non-service departments and for industry.

(iii) Inspection. The Inspection Service is primarily intended for the inspection of supplies for the Army, but undertakes inspection on behalf of certain other departments, and all proof of armament stores for the three Armed Services.

The Inspection Service is divided into four groups—Engineering, Ammunition and Small Arms, General Stores and Clothing, and Proof and Experimental. The headquarters of the service is predominantly technical. The size of elements in the States varies with the volume of production to be inspected.

The Proof and Experimental Group conducts a number of proof ranges, the chief of which are at Port Wakefield, South Australia, and Compton Vale, Victoria.

The General Stores and Clothing Group, in addition to its inspection function, is responsible for the design of general stores and clothing.

In addition, there is an Equipment Inspection Section which holds and issues a complete range of drawings and specifications for Army equipment, including United Kingdom and Australian Joint Service specifications. This Section provides the data on which production is based.

- 6. Contract Board.—(i) General. Under the Supply and Development Act 1939–1948, the Contract Board is the authority responsible for purchasing supplies and arranging services for the Military, Naval and Air Forces of the Commonwealth, as well as for the Departments of Supply and Defence Production. Under this Act and Regulations, it is charged also with the responsibility of arranging for the sale or disposal on behalf of Commonwealth departments of all surplus or unserviceable war matèriel, goods and services approved for disposal. In addition to its statutory responsibilities, the Board makes purchases and arranges disposals on behalf of numerous Commonwealth Government departments and authorities who have no public contracting organization of their own, e.g., Immigration, National Development and External Affairs (Colombo Plan supplies).
- (ii) The Board and its Administrative Organization. The Contract Board meets in Melbourne, and comprises representatives of the Departments of Supply, Defence Production, Navy, Army and Air. The Board's administrative organization is the Directorate of Contracts. In each State other than Victoria, there is a District Contract Board with an administrative organization similar to the Directorate of Contracts. The table following shows, in respect of the Contract Board Organization, the purchases and realizations from disposals for the years 1955-56 and 1956-57.

## CONTRACT BOARD ORGANIZATION: PURCHASES AND REALIZATIONS FROM DISPOSALS.

7. Stores and Transport Branch.—This Branch, administered by a Board of Management and working under the direction of a General Manager, functions as the central authority for meeting the storage and transport requirements of Commonwealth departments and authorities. It is the authority for the arrangement of furniture removals, at departmental expense, in all States but not in the Australian Capital Territory and the Northern Territory. It has agents in Canberra and Darwin.

At 30th June, 1957, it had under its control land, buildings, plant and machinery valued at £5,774,691 and 2,285,362 square feet of storage space, of which 1,938,800 square feet was Government-owned and the balance held under tenancy.

8. Finance Branch.—The expenditure for Department of Supply activities during the years 1955-56 and 1956-57 are shown in the following table.

#### CHAPTER XXIX.

#### REPATRIATION.

### § 1. General.

The Repatriation Commission, established under the Repatriation Act 1920–1957, is a body corporate consisting of three full-time members. It operates from departmental headquarters in Melbourne, but has a branch office in each State under the control of a Deputy Commissioner.

Its principal functions are-

- (i) the payment of war and service pensions to ex-service men and women and their dependants;
- (ii) the provision of medical treatment to ex-service men and women for injuries and illnesses caused or aggravated by their war service;
- (iii) the provision of medical treatment in certain circumstances to ex-service men and women, and to their dependants, who are suffering from injuries and illnesses not caused or aggravated by war service.

Other functions of the Repatriation Commission are outlined in a later section of this chapter (See § 5, General Benefits, page 1073).

Four statutes passed during the year 1956-57 affected the Repatriation Commission. They are the Repatriation (Far East Strategic Reserve) Act 1956, which provided benefits for members of the defence forces who served with the British Commonwealth Far East Strategic Reserve in Malaya; the Native Members of the Forces Benefits Act 1957, which provided war pensions and other benefits for the natives of Papua, New Guinea and the islands in Torres Strait and the Pacific Ocean who served with the special native units raised during the 1939-45 War; the Repatriation Act 1956, which made certain amendments to the provisions governing repatriation benefits; and the Repatriation Act (No. 2) 1956, which made certain amendments necessitated by the passing of the Repatriation (Far East Strategic Reserve) Act.

### § 2. War Pensions.

- 1. General.—The first provision for the payment of war pensions to members of the forces and their dependants was made by the Commonwealth Parliament in the War Pensions Act 1914, which came into operation on 21st December, 1914. This Act was repealed in 1920 by the Australian Soldiers' Repatriation Act (amended from 31st December, 1950, to the Repatriation Act). Owing to limitations of space, only some of the main features relating to war pensions under the Repatriation Act 1920-1957 are set out in the following paragraphs:—
- (i) Eligibility for Pension. There has been a considerable widening of the provision in this respect, to the benefit, mainly, of members of the Citizen Military Forces who have not served outside Australia. These provisions are summarized as follows:—
  - (a) A member of the forces who served (1) outside Australia, (2) in the Territories of Australia, such as Papua and New Guinea, or (3) within Australia in

circumstances which can be regarded as combat against the enemy, is covered for war pension purposes in respect of incapacity or death which may result from any occurrence that happened during the period from the date of his enlistment to the date of the termination of his service in respect of that enlistment.

- (b) In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.
- (c) There is a third ground applicable to all in (a) and (b) who have had at least six months' camp service. This provides that, where a condition existed at enlistment, a pension may accrue if it is considered that the condition was aggravated by service.
- (ii) Pensions for Incapacity. From 20th October, 1955, the 100 per cent. pension rate for a member's incapacity was increased from £4 10s. to £4 15s. a week (higher rates were payable in respect of certain commissioned ranks). The rates for wives and children of incapacitated members are £1 15s. 6d. and 13s. 9d. a week, respectively. From 17th October, 1957, the member's 100 per cent. incapacity rate was increased from £4 15s. to £5 2s. 6d. a week.
- (iii) Supplementation of Pensions. From 17th October, 1957, where a member is, because of his war disability, temporarily (for at least three months) precluded from earning other than a negligible percentage of a living wage an additional pension may be granted to bring the total pension to the member up to £11 a week.
- (iv) Women's Nursing and Auxiliary Services. Members of Women's Services are eligible for pensions and other benefits as prescribed in the Act on the same basis as male members of the Forces.
- (v) Pulmonary Tuberculosis. If at any time after discharge, a member of the Forces who served in a theatre of war became or becomes incapacitated, or died or dies, from pulmonary tuberculosis, war pension is payable as if the incapacity or death resulted from an occurrence on service. (See also § 3. Service Pensions.) Medical treatment may also be provided on application.
- (vi) Special Rates. Those who have been totally blinded as the result of war service and those who are permanently and totally incapacitated receive, as from 20th October, 1955, special pensions of £9 15s. a week. The rate for Tuberculars, Class "B" (fit for light employment) was increased from £6 10s. to £7 a week. The rates were further increased to £11 and to £7 17s. 6d. a week respectively from 17th October, 1957. In addition to the special pension, an attendant's allowance of £1 15s. a week is granted to the war-blinded and to certain others who are deemed to be in need of an attendant. A war-blinded member who is also affected with total loss of speech or total deafness was entitled from 2nd October, 1952, to an attendant's allowance of £3 10s. a week in lieu of that referred to above. Attendant's allowance rates were further increased from 20th October, 1955, to £2 15s. and to £4 10s. a week, respectively. The wife and any children under 16 years of age receive the same rates as shown in sub-para. (ii).
- (vii) Specified Disabilities. Where the disability is amputation of a limb or limbs or total loss of vision in one eye, amounts ranging from 8s. 6d. to £5 17s. 6d. a week in addition to the statutory rate of pension are payable as from 17th October, 1957. In addition, allowances of either £2 15s. or £4 10s. a week are payable in certain double amputation cases.
- (viii) Time Limit for Wives and Children Removed. Prior to the 1950 amending. Act, wives who were married and children who were born after 1st July, 1938, were ineligible to receive a war pension. This time limit was removed as from 2nd November, 1950.

- (ix) Rates of Pension for Death. (a) Widows. As already indicated, rates of pension, which were previously based on the daily rate of pay of the member, are now based on the rank of the member. From 17th October, 1957, the rates were increased by 7s. 6d. a week, the minimum rate being increased from £4 10s. to £4 17s. 6d. a week. In addition to the pension, the widow, if she has dependent children, receives an allowance if she is permanently unemployable, or if she is over 50 years of age; this allowance is £2 a week. The allowance may also be paid to a widow under 50 years of age, in certain cases, so long as the child (or one of the children if more than one child) over the age of sixteen, is undergoing education or training but has not qualified for (or is not receiving) the adult wage in the occupation for which the child is training.
- (b) Children. From 2nd October; 1952, the rate of pension for the eldest child (under 16 years of age) was increased to £1 6s. 6d. a week and that for each younger child to 18s. 6d. Additional pension of 6s. a week may be paid in certain circumstances. Where both parents are dead each child is pensioned at the rate of £2 8s. a week.
- (x) Widowed Mother on Death of Member. A pension ranging from £2 5s. to £4 3s. a week, according to the rank of the member; may be granted to a widowed mother of a deceased unmarried son, provided widowhood occurred either prior to or within three years after the death of the member. The pension may be supplemented by payment to a prescribed person of an additional amount (not exceeding £4 7s. 6d. a week as from the 17th October, 1957) according to the extent of other income of the pensioner. The value of property owned does not affect the pension.
- 2. Appeals Tribunals.—The principal Act was amended, as from 1st June, 1929, to create tribunals to hear appeals in respect of war pensions. The War Pensions Entitlement Appeal Tribunal is empowered to hear and decide any appeal by or on behalf of ex-members of the Forces or their dependants against a decision of the Repatration Commission that the incapacity or death of an ex-member did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a "Nil" assessment of war pension made by the Repatriation Commission in respect of the incapacity of an ex-member of the Forces which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the Tribunals to hear appeals by certain members for service pensions.
- 3. Summary of War Pensions, 1956-57.—At 30th June, 1957, the number of war pensions for the 1914-18 War was 133,240, for the 1939-45 War 476,675, and for the Korea and Malaya Operations 3,375, making a total of 613,290 with a liability of £44,872,736 per annum. The amount paid in war pensions during the year 1956-57 was £45,203,787. The outstanding features for 1956-57 for each war are listed in the following table:—

WAR PENSIONS: SUMMARY, AUSTRALIA, 1956-57.

### § 3. Service Pensions.

- 1: General:—The Repatriation Act 1920-1957, administered by the Repatriation Department, provides for a service pension to be paid subject to a means test of income and property to:—
  - (i) A male member of the Forces who is sixty years of age and who served in a theatre of war, or to a female member of the Forces who is 55 years of age and who served abroad. No pension is payable to the wife or children under 16 years of age of a member granted a service pension on account of age.
  - (ii) A member of the Forces who is permanently unemployable and who served in a theatre of war (or, in the case of a female member, who served abroad). Service pensions are also payable to a pensioner's wife and up to four children under 16 years of age.
  - (iii) A member of the Forces suffering incapacity from pulmonary tuberculosis whether or not the person served in a theatre of war. Service pensions are also payable to a pensioner's wife and up to four children under 16 years of, age.

Only those persons who qualify under (iii) are entitled to receive both service and invalid pensions at the same time.

2. Rate of Pension.—The maximum rate of service pension is the same as that for age and invalid pensions paid by the Department of Social Services, namely, £4 7s. 6d. a week. Since the 18th October, 1956, a member service pensioner with two or more children under 16 years of age in his care, custody and control, is eligible for a further 10s. a week for each child except the first, if he receives a service pension on the ground of being permanently unemployable, or suffering from pulmonary tuberculosis.

The maximum rate for a member's wife is £1 15s. a week; the rate for the first child under sixteen years of age is 11s. 6d. a week and for each other child (not exceeding three) 2s. 6d. a week.

A member who is single may have income up to £3 10s. a week from sources other than his pension and still receive the maximum service pension. If income from other sources exceeds £3 10s. a week the pension is reduced by the amount of the excess. No service pension is payable if income from other sources reaches or exceeds £7 17s. 6d. a week. For this purpose, the term "income" includes a war pension, and income derived from any source other than from property, but does not include a gift or allowance from a claimant's parents or children, maternity allowance, child: endowment or other payments in respect of children, a benefit from any friendly society, a payment in respect of illness, infirmity or old age from any trade union, the value of State food relief or like assistance granted under any-law of a State or Territory, Commonwealth hospital and medical benefits (including an amount received from a registered benefit organization up to the total amount of fees), pharmaceutical benefits or a tuberculosis allowance, or interest on Commonwealth war gratuities.

The rate of pension is further reduced by 4½d, a week for every complete £10 by which the value of property owned by a member exceeds £200. No pension is payable if the value of the property exceeds £1,750. For this purpose, the term "property" includes all real and personal property such as houses or land or interests therein, money in a bank or invested, or lent to any person, bonds, shares, interests in estates of deceased persons, and livestock, but excludes the value of the home of the pensioner and of his furniture and personal effects, the surrender value (up to £750) of any life assurance policies, the capital value of any life interest, annuity or contingent interest, the value of any reversionary interest, property to which the claimant or spouse is entitled from the estate of a deceased person but which has not been received, and the amount of any Commonwealth war gratuity.

For the purposes of the administration of the means test, the income and property of a married person are deemed to be half the total income and property of the husband and wife (unless they are legally separated or in certain other special circumstances). This

provision means that the pension of a married person, whether or not his spouse is a pensioner, will not be reduced because of the income he receives from sources other than his pension unless that income exceeds £7 17s. 6d. a week, nor will his pension be reduced on account of the value of his property unless that value exceeds £400.

On 1st November, 1941, eligibility for service pensions was extended to veterans of the South African War 1899–1902, and in 1943 to members of the Forces of the 1939–45 War. Members who served in Korea and Malaya are also eligible.

3. Operations, 1956-57.—The following table gives a summary relating to service pensions during 1956-57:—

## § 4. Medical Treatment of Ex-Servicemen Suffering from War Service Disabilities.

At 30th June, 1957, there were 4,435 in-patients in Repatriation medical institutions and State mental hospitals, including a number whose care was undertaken by the Repatriation Commission on behalf of other countries or Commonwealth departments. There were 385,752 out-patient attendances for treatment during the year, excluding approximately 841,735 treatments by local medical officers resident in metropolitan and country areas and in New Guinea. The expenditure for the year ended 30th June, 1957, was £10,288,344.

### § 5. General Benefits and Miscellaneous.

1. Other Departmental Activities.—(i) General. During the 1939-45 War, the ordinary activities of the Department in the way of general benefits for the welfare of members and dependants were carried on without interruption. They were mainly education and training of children under the Soldiers' Children Education Scheme, medical benefits for widows and children of deceased members and for widowed mothers of deceased unmarried members, funeral expenses for certain classes of members and dependants, and allowances to certain classes of dependants.

By legislation passed in June, 1940, these benefits were extended to members engaged in the 1939-45 War and in November, 1950, to those engaged in the Korea and Malaya Operations, and new benefits designed for the re-establishment of members after discharge from the Forces were made available. The re-establishment benefits administered by the Repatriation Commission are:-payment of re-employment allowance while awaiting employment; provision of tools of trade and equipment where such are necessary to the member's employment; transportation expenses to meet the cost of fares and removal of household belongings, where a member takes up training, employment, or a business, or settles on the land; supplementing of wages of apprentices whose apprenticeships were interrupted by war service; re-establishment loans to enable members and widows to establish themselves in business, practices or other occupations, including (until the Division of War Service Land Settlement began operations early in 1946) agricultural occupations; payment of re-establishment allowance during the early stages of establishment in business; gifts up to £75 for furniture to members who are blind or totally and permanently incapacitated, also to widows with children under 16 years of age; and free passages to Australia for wives, widows and children of members who married abroad (and passages outward from Australia in certain cases of members and dependants).

<sup>(</sup>b) Includes the Northern Territory.

In 1949, the Commission took over the functions of the Re-establishment Division of the former Department of Post-war Reconstruction, and it is now responsible for the coordination of all matters relating to training under the Commonwealth Reconstruction Training Scheme. Re-establishment of the more seriously disabled, where ordinary training is not sufficient, continues to be a function of the Commission, and special means have to be found to overcome each problem.

(ii) General Repatriation Benefits. The following table gives a summary of expenditure during 1956-57 on the more important general repatriation benefits for all wars.

- 3. Settlement of Returned Service Personnel on the Land.—Reference to the settlement on the land of returned service personnel will be found in Chapter IV.—Land Tenure and Settlement.
- 4. The Services Canteens Trust Fund.—(i) Introduction. The Services Canteens Trust Fund was established under the Services Trust Funds Act 1947. This Act transferred to the Fund the profits and assets of the Army, Navy and Air Force canteens, the mess and regimental funds of disbanded wartime units, money derived from the sale of amenities supplied to the defence forces between the 3rd September, 1939, and the 30th June, 1947, and funds held by the A.M.F. Special Benefits Committee, the trustees of the R.A.N. Relief Fund and the trustees of the R.A.A.F. Welfare Fund.
- (ii) Establishment and Administration of the Fund. The total amount transferred to the Fund to the 31st December. 1956, was £5,505,775. The Act prescribed that of this, £2,500,000, and such further amounts as the trustees of the Fund may from time to time decide, should be devoted to the provision of education facilities for the children of eligible ex-servicemen and women, and that the balance of the fund should be used to provide relief for ex-servicemen and women and their dependants in necessitous circumstances.

The Fund is administered by ten honorary trustees, appointed by the Commonwealth Government. The trustees have power to determine the persons or groups of persons to benefit from the Fund and the extent of benefits to be granted within the provisions of the Act, and to appoint regional committees to assist with the administration.

Regional committees have been established in all Australian States, the Australian Capital Territory, the Northern Territory, New Zealand and London. All Australian diplomatic and consular posts also act as local representatives of the trustees. They have delegated to them by the trustees specific powers to deal with applications for assistance from the Fund.

Members of regional committees are all persons who served in the 1939-45 War or are widows of men who served during the war, and, with the exception of regional chairmen and deputy chairmen, have been selected by the trustees from nominees of the major ex-service organizations. They also serve in an honorary capacity.

(iii) Assistance from the Fund. Persons eligible for assistance from the Fund are those who between 30th September, 1939, and 30th June, 1947, served in the Australian Naval, Military or Air Forces, including members of the Canteens Staff of any ship of the Royal Australian Navy, persons duly accredited to any part of the Defence Force who served in an official capacity on full-time paid duty, and their dependants.

The trustees are charged under the Services Trust Funds Act with:-

- (a) providing educational assistance including professional and trade training-
  - (i) for the children of deceased or incapacitated eligible servicemen or of eligible servicemen who are in needy circumstances; and
  - (ii) for the children of other eligible servicemen, which children are in the opinion of the trustees particularly deserving of assistance by reason of exceptional circumstances;

- (b) providing benefits for-
  - (i) eligible servicemen in necessitous or deserving circumstances;
  - (ii) the dependants of deceased or totally or partially incapacitated eligible servicemen or of eligible servicemen in necessitous or deserving circumstances:
  - (iii) the dependants of eligible servicemen other than those mentioned in paragraph (ii) above, which dependants are, in the opinion of the trustees, in necessitous circumstances or particularly deserving of assistance:
  - (iv) the provision of relief or benefit for eligible servicemen and their dependants in such other cases as the trustees think fit.

The trustees have introduced schemes for providing—

- (a) welfare relief for ex-service men and women who are eligible for benefits and their dependants;
- (b) benefits for children of eligible ex-service men and women who are suffering from serious and incapacitating afflictions; and
- (c) education benefits for the children of eligible ex-service men and women.

Because over 1,000,000 men and women and all their dependants are eligible for benefits, the assistance that can be provided in individual cases is limited and the trustees have prescribed a policy for welfare relief which makes assistance available only to those who are in genuine distress from which they cannot extricate themselves by their own efforts. In determining the nature or amount of relief to be granted, care is taken wherever possible to use the fund constructively with the object of assisting the applicant to achieve independence, and of discouraging any tendency towards increasing dependence on social welfare organizations. For example, the regular supplementing of pension or low income for an indefinite period is contrary to the policy of the trustees, as it is quite impossible for the fund to assume a general responsibility of that nature. Instead every effort is made to assist the applicant to adjust his mode of living or to increase his income himself so that he may live within it. Either the applicant, or his dependants, should be deserving of assistance. Though the fund is not used in such a way as to encourage improvidence, even the complete worthlessness of the eligible person will not debar deserving dependants.

From its inauguration in 1947, the Fund is to be available for 40 years for welfare relief, and for 30 years for educational benefits.

Applications are carefully investigated to determine the bona fides of the applicant and the case presented, and to help regional committees in deciding the kind of assistance, if any, to be given. Where possible, investigations are made by trained social workers either on the staff of the Fund or of recognized agencies.

I	Recipier	nts.		Year 1957.	Total to 31st December, 1957.
				£	£
Ex-service men and women			 \	52,289	594,734
Widows and orphans	• •	• •	 	28,120	267,267
Total			 [	80,409	862,001

A total of 22,329 ex-service men and women and 8,079 widows and orphans were granted welfare assistance from the Fund to 31st December, 1957.

Of all persons eligible for assistance from the Fund, widows and orphans are likely to be in greatest need, especially in the period immediately following the death of an exserviceman. Consequently a special effort is made to locate these widows and orphans and their degree of need is interpreted more liberally than is that of ex-servicemen.

Also particularly deserving of assistance are dependent children suffering from afflictions which permanently disable or seriously retard their progress or prevent the enjoyment of normal health and strength, and present a prospect of complete or partial dependence on others for all or part of their lives. The trustees introduced a plan to ensure that any eligible child suffering from a serious affliction may be assisted as necessary and may have access to whatever treatment or facilities are available to help the child to become as normal, self-reliant, self-supporting, socially acceptable, mobile, and happy as possible, despite his or her handicap. The extent to which assistance will be granted in a particular case depends largely on the nature of the child's affliction, the facilities available, the family circumstances, and the funds that can be made available.

Up to 31st December, 1957, 1,490 afflicted children had been assisted under the Afflicted Children's Scheme involving an expenditure of £69,564.

Educational assistance is restricted to children who are 15 years of age and over, except in the case of orphans, when assistance commences at the age of 12 years, or in the case of orphans eligible for education allowances from the Repatriation Department, where education assistance is granted from the age of 13. The object of the trustees is to assist eligible children to obtain the highest education within their capacity.

Educational assistance from the Fund is in the form of awards ranging from £5 to £200 a year depending on the cost of the course undertaken and the family circumstances. These awards are granted for practically every type of course of education, whether secondary, tertiary or commercial. They are designed to cover, or contribute towards, the cost of essential books, fees in cases where government school courses are not available, fares between the child's home and school, essential equipment and material, a uniform allowance in certain years and a maintenance allowance for the child while at school.

The educational scheme also provides for post-graduate courses. Two post-graduate scholarships are awarded each year. One scholarship valued at £800 per annum for three years is provided for study overseas and one scholarship valued at £600 per annum for three years is available for post-graduate study in Australia.

Two post-graduate nursing awards are tenable in Australia each year. They cover fees, fares, books and a maintenance allowance at the rate of £6 per week for the duration of the course. In addition, post-graduate nursing awards are granted for post-graduate nursing training overseas in courses which are not available in Australia.

The number of children assisted under the educational scheme to 31st December, 1957, was 22,881, and the expenditure on educational awards, post-graduate scholarships and post-graduate nursing awards to 31st December, 1957, was £994,444.

### § 6. Seamen's War Pensions and Allowances.

The Seamen's War Pensions and Allowances Act 1940 provides for the grant of-

- (a) pensions to Australian mariners and their dependants if the mariner, during the course of his employment, sustained injury through enemy action;
- (b) pensions to dependants of Australian mariners who, while in employment, were killed by enemy action;
- (c) detention allowances to Australian mariners and their dependants (if any) during any period of detention of mariners after capture by the enemy; and
- (d) compensation to Australian mariners in respect of personal effects lost or damaged through enemy action.

Regulations passed in 1942 provided that the wages of an Australian mariner, less the amount of any detention allowance, should continue if, while employed in sea-going service under articles of agreement entered into in Australia, or in the case of a pilot while employed on pilot duty, he fell into the hands of the enemy as a result of that employment and that the wages so continuing should be applied for the benefit of the mariner and his dependants. The wages would be paid by the Government of the Commonwealth of Australia for the first 18 months of the mariner's detention if he was employed in a ship owned by, or under requisition to, that Government, the United Kingdom Government or the Government of any country in the British Commonwealth, and thereafter irrespective of his employment.

Subsequent amendments to the Act and regulations raised pensions to rates corresponding to those payable under the Repatriation Act, and made mariners eligible for general benefits on the same scale as those available under that Act.

The following table gives a summary of the main statistics relating to seamen's war pensions and allowances.

#### CHAPTER XXX.

#### MISCELLANEOUS.

This chapter comprises miscellaneous statistics and other descriptive information not directly related to the subjects of the preceding chapters, arranged in sections as follows:—

Valuation of Australian Production;
 Indexes of Production;
 Consumption of Foodstuffs and Beverages;
 Patents, Trade Marks and Designs;
 Copyright;
 Australian Shipbuilding Board;
 Commonwealth Scientific and Industrial Research Organization;
 Mount Stromlo Observatory;
 Standards Association of Australia;
 Film Censorship Board;
 Australian National Film Board and the Film Division;
 National Safety Council of Australia;
 Australian Road Safety Council;
 Australian Atomic Energy Commission;
 The United Nations;
 Australian Representation Abroad: Oversea Representation in Australia;
 Retail Trade.

### § 1. Valuation of Australian Production.

1. General.—The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published below have been compiled by the State Statisticians from the latest data available, and relate to 1955-56. The adoption of substantially uniform methods of valuing production and of estimating elements of costs of production and marketing renders the results comparable as between States.

Attention is directed to the fact that the values shown in the tables herein refer only to the production of primary industries and factories and exclude the building and construction industry, those industrial establishments not classified as factories, and certain agricultural and farmyard produce obtained from areas of less than one acre.

The following is a brief explanation of the terms used:-

- (a) Gross Value of Production is the value placed on recorded production at the wholesale price realized at the principal markets. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) Local Value (i.e., the gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) Net Value of Production represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays and other costs. No deductions have been made for depreciation or certain maintenance costs as particulars are not available for all States. The Net Value of Production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

Power costs (power, power kerosene, petrol and other oils) have not been deducted in New South Wales since 1940-41 when they amounted to £1,892,000 and in Tasmania since 1941-42, when they amounted to £86,510. Consequently net values of production for later years in these two States are overstated. Costs of materials used in the process of production are not available for all States in respect of Bee-farming, Trapping, Forestry and Fisheries, and local values have been used for these industries with consequent overstatement in net values.

2. Value of Production, Australia, 1955-56.—The following table shows particulars of the gross, local and net values of production in Australia by industries during the year 1955-56:—

GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES AND FACTORIES: AUSTRALIA, 1955-56.

(£'000.)

<sup>(</sup>a) See letterpress on p. 1079.

In the chapters dealing with the respective industries (except trapping and mines and quarries) tables will be found showing the total value of production and the value per head of population for the industry by States for a series of years up to 1955-56.

### § 2. Indexes of Production.

In the first two tables in this section, indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups, namely:—Agriculture, Pastoral, Farmyard and Dairying, and All Farming combined (including separate indexes for Wool and Products other than Wool). In the third table, indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown. Indexes previously published in respect of Gold and Other Minerals, and All Mining combined, are under review and pending completion of investigations the publication of these results has been discontinued.

<sup>(</sup>b) Includes the Northern Territory and the Australian Capital

<sup>(</sup>b) Local value.

1. Farm Production Price Indexes.—The Farm Production Price Indexes shown in the following table relate to average "prices" of agricultural, pastoral, farmyard and dairying products realized at the principal markets of Australia. The "price" data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year, irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. "Prices" for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers, the average quantities of the relevant commodities produced in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base, average 1936-37 to 1938-39 = 100, was published in earlier issues of the Official Year-Book (see No. 43, page 1050). For 1936-37 and later years, the original series was replaced in December, 1952, by a revised series in which average quantities of each product marketed during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series, the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All Farming Index of quantities of crops marketed for livestock feeding in Australia.

<sup>(</sup>a) Revised.

<sup>(</sup>b) Subject to revision.

2. Indexes of Quantum (i.e. Value at Constant Prices) of Farm Production.—The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series, the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base, average 1936-37 to 1938-39 = 100, was published in earlier issues of the Official Year Book (see No. 43, page 1051). For 1936-37 and later years, the original series was replaced in December, 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All Farming Index, of quantities of crops fed to livestock in Australia.

(a) Indexes of value at constant prices, i.e., quantities revalued at average unit values for the base years (see text preceding table). (b) Revised. (c) Subject to revision.

3. Farm Products for Food Use: Indexes of Quantum (i.e. Value at Constant Prices) of Production, Exports and Consumption. The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas. Particulars are not available prior to 1946-47 except for the base years.

### § 3. Consumption of Foodstuffs and Beverages.

1. Quantities Consumed.—Issues of the Official Year Book up to No. 36 included a statistical survey of the movement in the consumption in Australia, in total and per head of population, of a selected number of commodities over a period of years up to 1940-41 (see Official Year Book No. 36, pp. 1098-1100). In issue No. 37, these long-term comparisons were replaced by more detailed information covering consumption of the principal foodstuffs and beverages in annual periods since 1944 in comparison with average annual consumption during the three years ended 1938-39. In this issue, the annual periods extend from 1952-53 to 1956-57.

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from production and allowing for recorded movements in stocks of the respective commodities. While the estimates may generally be accepted as reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of visible oils and other fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc., which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases, careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at "producer" level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years, wastage of foodstuffs has possibly been less than hitherto because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by an increase in the aforesaid production by householders for their own requirements. Neither of these factors has been taken into account, and it is possible that, as a result, some understatement has occurred in the following consumption estimates. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made, it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. Allowance has

not been made for the purchase of foodstuffs for dispatch overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been checked, wherever possible, with data from other sources (principally from the Food Consumption Survey conducted in 1944 by the Nutrition Committee of the National Health and Medical Research Council) which confirm the reliability of the methods used.

More detailed information on the consumption of foodstuffs and beverages is contained in the Statistical Bulletin: Food Production and the Consumption of Foodstuffs and Nutrients in Australia, issued by this Bureau.

<sup>2.</sup> Level of Nutrient Intake.—The table below shows details of the estimated supplies of nutrients available for consumption in Australia during annual periods since 1952-53 in comparison with the annual average for the three years 1936-37 to 1938-39. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

# § 4. Patents, Trade Marks and Designs.

1. Patents.—(i) General. Patents for inventions are granted under the Patents Act 1952–1955, which applies to the Commonwealth of Australia and the Territories of Norfolk Island, Papua and New Guinea. The Act is administered by a Commissioner of Patents. The principal fees payable up to and including the grant of a patent amount to £17 10s. Renewal fees are payable as follows:—£5 before the expiration of the fourth year, and an amount progressively increasing by £1 before the expiration of each succeeding year up to the final fee of £16, payable before the expiration of the fifteenth year. An extension of time for six months for payment of a renewal fee may be obtained. Patents granted under the repealed Acts (Patents Act 1903–1950) are subject to the renewal fees under those Acts.

(ii) Summary. The number of separate inventions in respect of which applications were filed and the number of letters patent sealed during the years 1953 to 1957 are shown in the following table.

# PATENTS: AUSTRALIA.

Particulars.	1953.	1954.	1955.	1956.	1957.

- 2. Trade Marks and Designs:—(i): Trade Marks. Under the Trade Marks Act 1905-1948, the Commissioner of Patents is also Registrar of Trade Marks. This Act has been amended from time to time, the last amendment having been made in 1948. Special provisions for the registration of a "Commonwealth Trade Mark" are contained in the Act of 1905, and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connexion with the manufacture of such goods are fair and reasonable. The Act of 1948 provides for the registration of users of trade marks, and also for the assignment of trade marks with or without the goodwill of the business concerned.
- (ii) Designs. Under the Designs Act 1906-1950, the Commissioner of Patents is also Registrar of Designs.
- (iii) Summary. The following table shows the applications for trade marks and designs received and registered during the years 1953 to 1957.

TRADE MARKS AND DESIGNS: AUSTRALIA.

3. Revenue.—The following table shows the revenue of the Commonwealth Patent Office, Trade Marks and Designs Office, and revenue obtained from Copyright for the year 1953. From 1st July, 1954, a system of payment of fees by "fee stamps" was introduced and fees have since been collected under one head of revenue. Consequently separate figures are not available for the years 1954 to 1957.

# § 5. Copyright.

1. Legislation.—Copyright is regulated by the Commonwealth Copyright Act 1912–1950 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America, under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order in Council which came into operation on 1st February, 1923, and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

 Applications and Registrations.—The following table shows under the various headings the number of applications for copyright received and registered for the years 1953 to 1957.

<sup>3.</sup> Revenue.—Revenue obtained from copyright during the year 1953 is shown in § 4, para. 3, above.

# § 6. Australian Shipbuilding Board.

- 1. Constitution.—Originally established in 1941 under National Security Regulations, the Board has been reconstituted a number of times since its inception and in 1948 was constituted on a permanent basis under the Supply and Development Act. At present it operates under the control of the Minister for Shipping and Transport. In order to link the activities of the Board more closely with the Department of Shipping and Transport, the constitution of the Board was altered in April, 1952, to provide for representation by senior departmental officers. The present membership of the Board consists of a Chairman who is the General Manager, a Deputy Chairman, a Finance Member and two other members, one of whom represents the Naval Board.
- 2. Functions.—The existing functions of the Board which have been summarized in earlier issues of the Official Year Book, are set out in detail in regulation 22 (4) of the Supply and Development Regulations.

In the exercise of its functions, the Board is responsible for—(i) the design of vessels; (ii) the calling of tenders and placement of orders; (iii) co-ordination of the Board's supplies to shipbuilders, e.g., machinery and certain equipment; (iv) supervision of construction; (v) acceptance of vessels after sea trials; and (vi) administration associated with ship repairs, marine engines, spare parts, etc.

The Board is also responsible for determining, within the limits prescribed by the Commonwealth Government, the amount of subsidy to be paid on merchant ships constructed in Australia. In 1956, the Government accepted a recommendation made by the Tariff Board that the maximum subsidy on ships built in Australia for the coastal trade should be increased from 25 per cent. to 33\{\frac{1}{2}} per cent. of the cost of construction. The method and level of assistance to the industry will be re-examined by the Tariff Board during 1958.

In order to take advantage of this, private shipowners are required to place their orders for vessels through the Board, which has thus become the ordering authority for all vessels built in Australian yards on which a subsidy is paid. The increased subsidy was payable on all orders placed with the Board after 12th April, 1956.

The Board has also undertaken the preparation of plans and drawings for the various yards, as the level of ship construction in Australia does not warrant each yard employing specialists in naval architecture. In this way, the Board has assisted in raising the efficiency of the industry as a whole and also in the development of individual yards. (For a more detailed reference to the constitution and functions of the Board see Official Year Book No. 37, p. 1170).

In order to assist the shipbuilding industry to become more self-sufficient, the Board has also encouraged the construction of marine engines in Australia including steam engines and several well known types of diesel engines manufactured under licence. The marine diesel engines under construction at 1st March, 1958, were:—"Doxford", two engines of 3,300 B.H.P., two of 4,400 B.H.P., and one of 2,600 B.H.P.; "Polar Atlas", two engines of 1,120 B.H.P.

3. Construction Programme.—From its inception to 1st March, 1958, the Board had arranged for the construction of 57 vessels of over 300 gross tons and totalling 323,561 tons deadweight. During the war, the Board was also responsible for the construction of numerous small craft and a 1,000 ton floating dock.

Current orders at 1st March, 1958, placed by the Board were for the construction of 11 vessels totalling 119,200 deadweight tons. The vessels consisted of two bulk ore carriers each of 19,000 d.w.t. on behalf of the Broken Hill Pty. Co. Ltd., and one 5,200 d.w.t. bulk sugar carrier on behalf of the Adelaide Steamship Co. Ltd., together with two bulk carriers of 14,000 d.w.t. each, four bulk carriers of 10,000 d.w.t. each, one bulk wheat/general cargo vessel of 2,000 d.w.t. and a 4,500 tons gross passenger/vehicular ferry all for the Australian National Line. The passenger/vehicular ferry has been designed for the carriage of passengers and their cars and loaded trailers on the Bass Strait run from Melbourne to northern Tasmania and when completed, late in 1959, will be the first of its kind to be operated in the Australian Coastal trade.

The Board is at present preparing working drawings for a second roll-on roll-off vessel which will be constructed in an Australian yard for the Australian National Line. This vessel, which will also be operated in the Bass Strait trade will be solely for the carriage of cargo.

The Commonwealth Government on 27th February, 1958, approved the payment of a subsidy on the construction of a 32,000 d.w.t. tanker to be built through the Board for Ampol Petroleum Pty. Ltd., by Broken Hill Pty. Co. Ltd. The official orders have not yet been placed for this vessel or the second roll-on roll-off vessel.

# § 7. Commonwealth Scientific and Industrial Research Organization.

- 1. General.—By the Science and Industry Research Act 1949, the previously existing Commonwealth Council for Scientific and Industrial Research was re-organized under the title of the Commonwealth Scientific and Industrial Research Organization. An account of the organization and work of the former Council, and of the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Official Year Book. (See No. 14, p. 1061 and No. 37, p. 1183.)
  - 2. Science and Industry Research Act 1949.—This Act provides for-
    - (a) an Executive of the Organization consisting of five members to be appointed by the Governor-General, at least three of whom shall be persons possessing scientific qualifications; and
    - (b) an Advisory Council of the Organization, consisting of the members of the Executive, the Chairman of each State Committee constituted under the Act, and such other members as the Advisory Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The powers and functions of the Organization are as follows:—(a) To initiate and carry out scientific researches in connexion with primary or secondary industries in Australia; (b) to train research workers and to establish industrial research studentships and fellowships; (c) to make grants in aid of pure scientific research; (d) to establish and make grants to industrial research associations in any industry; (e) to test and standardize scientific apparatus and instruments; (f) to collect and disseminate scientific and technical information; (g) to publish scientific and technical reports and periodicals; and (h) to act as a means of liaison between Australia and other countries in matters of scientific research.

- 3. Science and Industry Endowment Act 1926-1949.—Under this Act, the Government established a fund of £100,000, the income from which is used to provide assistance (a) to persons engaged in scientific research; and (b) in the training of students in scientific research. Provision is made for gifts or bequests to the fund which is controlled by a trust consisting of the Executive of the Organization. In accordance with the Act, arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.
- 4. Work of the Organization.—The activities of the Commonwealth Scientific and Industrial Research Organization have necessitated a widespread and adaptable arrangement of its research laboratories. Undesirable centralization has been avoided mainly in two ways. In the first place, the policy has been followed of establishing laboratories in different places in the Commonwealth wherever the necessary facilities, contacts and other suitable conditions could best be found. Secondly, the Act provides for the establishment of a State Committee in each of the six States. These Committees are widely representative of scientific and industrial interests, and advise the Executive or the Advisory Council on general matters and on particular questions of investigation and research.

For about twelve years after its establishment, the work of the previous Council was devoted mainly to the solution of problems affecting the agricultural and pastoral industries. Unlike manufacturing concerns, which can often employ their own scientific staffs, the farmers and the pastoralists are dependent on outside help for the solution of their problems which require research. It was a recognition of the greater need of the primary producer which directed the Council's early policy. In 1937, however, the Commonwealth Government decided to extend the activities of the C.S.I.R. so as to provide assistance to secondary industries, and several laboratories have been established for work in that field; it was thus in the fortunate position of being able to render to these industries assistance of vital importance almost immediately after the outbreak of war. In fact, the remarkable technological advances and developments in secondary industrial production during the war would have been to a large extent impossible had it not been for the assistance rendered by scientific research, and this may well serve as a forceful illustration of what may be accomplished in times of peace.

For the purpose of carrying out its research work, there are established within the Organization a number of Divisions and Sections. The Divisions, of which there are now eighteen, comprise the major establishments for which special laboratory buildings have been erected and equipped; the Sections generally include establishments which have not reached a stage of development, so far as the scope and magnitude of their operations are concerned, to justify their designations as Divisions. As the Organization's investigations extend on a Commonwealth-wide basis and as many of the investigations which are being conducted—particularly those concerned with problems affecting the agricultural and pastoral industries—necessitate experimental work in the field, a number of field stations are established in various parts of Australia.

The Divisions which have been established are as follows:-

- (1) Plant Industry, with main laboratories at Canberra and Brisbane and field stations.
- (2) Entomology, with main laboratories at Canberra and field stations.
- (3) Animal Health and Production with main laboratories in Melbourne, Sydney and Brisbane and field stations.
- (4) Biochemistry and General Nutrition, with main laboratories at Adelaide and field stations.
- (5) Soils, with main laboratories at Adelaide and extensive operations in the field.
- (6) Forest Products, with main laboratories in Melbourne and field experiments.
- (7) Food Preservation and Transport, with main laboratories at Homebush (New South Wales) and a subsidiary laboratory in Brisbane.
- (8) Fisheries and Oceanography, with main laboratories at Cronulla (New South Wales), subsidiary laboratories in Dunwich, (Queensland), Perth and Thursday Island, and experimental work in coastal waters of Australia.
- (9), (10), (11) Metrology, Physics and Electrotechnology, comprising the National Standards Laboratory at Sydney.
- (12) Radiophysics, with main laboratory at Sydney.
- (13) Industrial Chemistry, with main laboratories in Melbourne.
- (14) Tribophysics, with laboratories in Melbourne.
- (15) Building Research, with laboratories in Melbourne.
- (16) Mathematical Statistics, with main laboratory in Adelaide.
- (17) Meteorological Physics, with main laboratory in Melbourne and field station.
- (18) Land Research and Regional Survey, with headquarters in Canberra, and field stations at Ayr (Queensland), Katherine (Northern Territory) and Ivanhoe (Kimberley, Western Australia).

# The following are the Sections:-

- (1) Commonwealth Research Station, Murray Irrigation Area, Merbein (Victoria).
- (2) Irrigation Research Station, Griffith (New South Wales).
- (3) Radio Research Laboratories, Camden and Sydney (New South Wales).
- (4) Dairy Research, Melbourne.
- (5) Mineragraphic Investigations, Melbourne.
- (6) Ore-dressing Investigations, Melbourne and Kalgoorlie.
- (7) Fodder Conservation, Melbourne.
- (8) Physical Metallurgy, Melbourne.
- (9) Wool Textile Research Laboratories, Geelong, Melbourne and Sydney.
- (10) Coal Research, Sydney.
- (11) Mathematical Instruments, Sydney.
- (12) Wildlife Survey, with main laboratory in Canberra, subsidiary laboratory at Albury, and field experiments.
- (13) Animal Genetics, Sydney.
- (14) Engineering.

In addition to its investigational work, the Organization deals with inquiries covering a wide range of scientific and technical subjects and maintains Scientific Research Liaison Offices in London and Washington.

An Agricultural Research Liaison Section established at the Organization's Head Office assists in making results in agricultural research speedily available to State Departments of Agriculture for use in their extension work.

Recently an Industrial Research Liaison Section has also been established at Head Office to foster liaison in the secondary and manufacturing fields.

The Organization's Head Office, with administrative and executive staff, is in Melbourne, and associated with it are the Organization's Central Library, Agricultural Research Liaison Section and Industrial Research Liaison Section. The funds for the Organization are provided from two main sources, namely, from Commonwealth revenue by Parliamentary appropriation, and from industry directly or indirectly by way of contributions and special grants. The fact that contributions and grants account for over one-eighth of the total annual expenditure indicates that the C.S.I.R.O. has succeeded in a very large measure in gaining the confidence of the public.

The activities of the C.S.I.R.O. are now so comprehensive in their scope and so widely distributed that it is not an easy matter to present an adequate picture of them in a concise form. For details of the investigations in progress, reference should be made to the Annual Report of the Organization.

# § 8. Mount Stromlo Observatory.

- 1. General.—In January, 1957, the former Commonwealth Observatory was transferred from the control of the Department of the Interior to the Australian National University as part of the Research School of Physical Sciences of that University, and is now officially known as the Mount Stromlo Observatory.
- 2. Foundation of Observatory.—The Observatory was founded primarily to prosecute astrophysical research, including the study of the relations between solar and terrestrial phenomena. A short history of the foundation of the Observatory appears in Official Year Book No. 19, p. 979.
- 3. Site of Observatory.—The Observatory is situated on Mount Stromlo, which forms part of a ridge of hills about seven miles west of Canberra. The highest point in the ridge is 2,560 feet above sea level, that is about 700 feet above the general level of the surrounding country.
- 4. Equipment.—The major items of equipment at Mount Stromlo comprise a 74-inch reflector, a 50-inch reflector, which is the re-built Melbourne 48-inch telescope, a 30-inch reflector donated by the late J. H. Reynolds, Esq., a 20-inch reflector once the property of the late J. H. Catts, M.P., as well as a 9-inch refractor, a solar tower telescope of 45 feet focal length and other smaller telescopes. A photographic refractor of 26-inch aperture belonging to the Universities of Yale and Columbia is installed in a dome provided by the Commonwealth Government, and a 20-inch/26-inch Schmidt telescope from the University of Uppsala has been installed in a similar fashion.
- 5. Functions of Observatory.—Investigations in the fields of stellar spectroscopy, stellar photometry and variable stars are being carried out. The Observatory is responsible for the accuracy of the Australian Time Service. Considerable attention is being given to the development of this work, and a highly accurate quartz clock system has been installed. A photographic zenith tube has been acquired for time determination.
- 6. International Co-operation.—The Observatory works in close liaison with oversea observatories and major equipment has been or is being installed at Mount Stromlo in co-operation with the University Observatories of Yale and Columbia (U.S.A.) and Uppsala (Sweden).

# § 9. Standards Association of Australia.

The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice.

The Association was established in July, 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth

Association of Simplified Practice. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and industry. It was incorporated by Royal Charter in 1950.

The sole executive authority of the Association is vested in the Council, on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by several thousand individuals who are experts in their particular fields, and are organized into some hundreds of committees. These committees are grouped under broad industry headings including civil engineering and building construction, mechanical engineering, electrical engineering, chemical industry, timber industry, transportation, aircraft materials, ferrous and non-ferrous metallurgy, textiles, mining, ceramics, medical and dental materials, household and domestic economy, miscellaneous and general.

These committees are comprised of nominated representatives of manufacturing, distributing and purchasing organizations, and of scientific and other expert authorities in the particular field of the project being dealt with. The operations of these committees are co-ordinated and supervised by committees broadly representative of the whole industry within which the respective projects are included.

The specifications of the Association provide a suitable standard of performance, quality and dimension and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery and without the necessity of drafting individual specifications.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion.

Organizations, companies, firms and individuals interested in the work of the Association are eligible for subscription membership. Members are entitled to free copies of the publications of the Association and to the use of the library and its Special Information Service. Bibliographical research is undertaken for committees, members of the Association, and industry in general. Many hundreds of inquiries are answered each year.

The Association has international affiliations and the standards of all British and foreign countries are filed in the library and are accessible to members. It is a member, representing Australia, of the International Organization for Standardization (ISO). The Association also administers the Australian National Committees of the International Electrotechnical Commission and the International Commission on Large Dams.

The Association is also the representative of the British Standards Institution, and all British standards may be purchased from headquarters and branch offices in the various States.

The headquarters of the Association are at Science House, Gloucester Street, Sydney, and branches of the Association are situated at Temple Court, 422 Collins Street, Melbourne; School of Arts Building, 166 Ann Street, Brisbane; Alliance Building, Grenfell Street, Adelaide; Gledden Building, Hay Street, Perth; c/o Engineering Department, Hobart Technical College, Hobart; Department of Works, Canberra; and Howard Smith Chambers, Watt Street, Newcastle.

# § 10. Film Censorship Board.

1. Legislation.—The Commonwealth Government's powers over censorship extend only to imported films and advertising and stem from the Customs Act. Under that Act, the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films coming within certain defined categories are not admitted into Australia. Under those regulations, the Film Censorship Board may pass films in their original form, reject them, or pass them after eliminations have been made. The Commonwealth Regulations give the Board no power to classify films.

However, legislation passed by the State Governments of Victoria, Queensland, Western Australia and Tasmania names the Commonwealth Film Censorship Board as the censorship authority and vests in it the power to classify films as suitable for general exhibition or otherwise. The classification is advisory only and is designed to enable picture goers and particularly parents to obtain a general idea of any particular film.

The State Acts give the Commonwealth Board the authority to censor films made in Australia for commercial exhibition and advertising matter made in Australia.

The Censorship organization comprises a Censorship Board of five persons and an Appeal Censor, the headquarters being in Sydney. There is also a right of appeal to the Minister.

2. Import of Films.—Imported standard size (35-millimetre) films, including films for television, dealt with by the Censorship for the year 1957 were as follows:—1,191 films of 3,768,038 feet passed without eliminations, 164 films of 1,229,407 feet passed after eliminations and six films of 35,288 feet rejected, making a total of 1,361 films of 5,032,733 feet. The countries of origin were as follows:—United States of America, 685 films of 2,759,882 feet; United Kingdom, 440 films of 1,378,509 feet; and other countries, 236 films of 894,342 feet. Of the 440 films from the United Kingdom, 139 were for television screening only.

During 1957, 485 feature films for theatrical exhibition (4,001,798 feet) were imported, 289 (2,382,316 feet) from the United States of America, 108 (870,322 feet) from the United Kingdom and 88 (749,160 feet) from other countries. Three hundred and twenty nine (2,760,488 feet) were passed without eliminations, 150 (1,206,022 feet) were passed with eliminations and six films of 35,288 feet were rejected. During 1956, 431 feature films were dealt with, 273 being passed without eliminations and 156 passed with eliminations, while two films were rejected.

During 1957, 7,896,814 feet of imported 16-millimetre films were censored (commercial films, 3,254,971 feet and films for television, 4,641,843 feet.) Of these, six commercial films were rejected and 34 passed after eliminations, and 20 films for television were rejected and 448 passed after eliminations.

During 1957, 45,328 feet of 8-millimetre and 9.5-millimetre films were censored compared with 2,067,219 feet in 1956. Of these commercial films, six were rejected and one subjected to eliminations.

3. Export of Films.—The number of films exported for the year 1957 was 3,105 of 1,999,187 feet, of which 1,760 films of 1,186,981 feet were sent to British countries, including Trust Territories, 709 films of 507,342 feet were sent to the United States of America and 646 of 304,864 feet to other countries. This footage includes in many cases several prints of the one film.

#### § 11. Australian National Film Board and the Film Division.

1. The Australian National Film Board.—The Australian National Film Board was inaugurated in April, 1945, on the recommendations of a Commonwealth Government inter-departmental committee which considered the suggestions of a conference of interested individuals and Commonwealth and State officials, including Directors of Education, called in November, 1944, by the Ministers for Information and Post-war Reconstruction. It was attached, for administrative purposes, to the Department of Information.

With the abolition of the Department of Information in March, 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November, 1950, the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for the following purposes:—

- (a) for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration;
- (b) for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies and encourage immigration.

The constitution provides for a membership of ten, with the Secretary of the Department of the Interior, Chairman, the Director of the News and Information Bureau, Deputy Chairman, and the remainder representative of Commonwealth departments, State Government instrumentalities and organizations interested in the production, distribution or utilization of films for national publicity.

2. The Film Division of the News and Information Bureau.—Production and distribution of all films required by Commonwealth Departments is undertaken by the staff of the Film Division, News and Information Bureau, Department of the Interior, or by commercial enterprises under the supervision of officers of the Film Division. Theatrical distribution in Australia, and both theatrical and non-theatrical distribution overseas, of all Film Division productions are organized by the News and Information Bureau's home office or its oversea representatives. Non-theatrical distribution in Australia is organized through the National Library, Canberra, in co-operation with State film distribution agencies.

The first Australian Government organization for the production of motion pictures for national publicity purposes was the Cinema and Photographic Branch of the Department of Commerce, set up in Melbourne in 1920. Early in the 1939-45 War, the newly-established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit.

Since 1946, the Film Division has produced 293 films for general exhibition, as well as training and special purpose films. Prints are dispatched to 44 oversea centres, where distribution is arranged by News and Information Bureau officers or other Australian representatives. In Britain, there is regular distribution through more than a thousand theatres, and a large non-theatrical and educational series of circuits. By arrangement with the British Broadcasting Corporation, items of topical interest photographed by the Film Division are flown to London for television. In the United States of America, there is wide non-theatrical distribution and considerable use of the films by television networks. An exchange arrangement with the National Film Board of Canada secures extensive distribution in Canada. French versions, prepared in Paris under the supervision of the Australian Embassy, circulate through France and French-speaking countries. Selected films have also been recorded in Dutch, German, Italian, Japanese, Hindustani, Tamil and other Indian dialects.

In addition to films made on the initiative of the News and Information Bureau, the Film Division has produced, or is producing, films under the sponsorship of, or with the co-operation of, Commonwealth Departments and many other bodies such as the Commonwealth Bank of Australia, the Road Safety Council, Overseas Telecommunications Commission, Snowy Mountains Hydro-electric Authority, Australian Wine Board, the Australian National University and the Australian Broadcasting Commission.

The co-operation of the Australian motion picture industry with the Commonwealth, spontaneously offered at the outset of the 1939-45 War, continues. Special films for urgent national appeals are planned, produced and distributed, with the assistance of the National Films Council of the motion picture industry and its Film Production Advisory Committee.

# § 12. National Safety Council of Australia.

The National Safety Council of Australia was founded in Melbourne in 1927 for the purpose of developing, mainly by means of education, safety on the road, at work and in the home, and its activities have developed in other directions wherever the need for reducing the toll of accidents has been shown. To this end, it conducts continuous propaganda through the press and in other ways. It also forms Junior Safety Councils in the schools for developing a safety conscience among children. The children themselves are officers of these Councils and patrol the roads in the neighbourhood of the schools and conduct the scholars across in safety. Posters are available to schools in connexion with Health and Safety lessons. Specially taken films are available for child and adult road safety instruction.

A "Safe Driving" campaign for individual motor drivers is conducted as well as a "Freedom from Accidents" competition among employee drivers, those completing a year free from any accident for which they were responsible being given a certificate to that effect. An industrial service of four posters a month, together with slips for pay envelopes, constitutes a regular service for the dissemination of safety advice, and is supplied to over 150,000 workers in factories each year. Committees deal with specific problems regarding

traffic, films, safety in industry, air safety and home dangers. The Air Safety Committee has a plan for marking town and property names on buildings to assist aircraft in distress and to facilitate dropping supplies from the air in times of emergency, such as floods. This is being implemented throughout Australia, particularly in flood areas.

The Council is supported by Government grants, public subscriptions and payments for service, and is a non-profit organization. Its work is carried on by a small staff controlled by committees and governed by an executive. Six committees, whose work is of an entirely honorary nature, are in operation, namely, Executive, Traffic, Industrial Safety, Home, Air Safety and Publicity.

# § 13. Australian Road Safety Council.

1. Origin and Organization.—The Australian Road Safety Council was formed in June, 1947, through the instrumentality of the Australian Transport Advisory Council.

The prime movers for the establishment of the Council were the Australian Automobile Association, which submitted a comprehensive plan; the New South Wales Minister for Transport, who advocated expansion, on a nation-wide basis, of road safety activities on lines similar to those of the Road Safety Council of New South Wales; and the National Safety Council of South Australia, which conveyed recommendations from a Special Safety Convention held in Adelaide in 1946.

At that time, in addition to the above-mentioned organizations in New South Wales and South Australia, there was a road safety organization in Victoria. Steps were immediately taken to form Councils in Queensland, Western Australia and Tasmania, and subsequently in the Australian Capital Territory.

The Australian Road Safety Council is the composite body of Road Safety Councils of the following States and Territories of Australia:—

Governmental.—New South Wales, Road Safety Council of New South Wales; Queensland, Road Safety Council of Queensland; Tasmania, Road Safety Council of Tasmania; the Australian Capital Territory, Road Safety

Council of the Australian Capital Territory.

Non-Governmental.—Victoria, Victorian Road Safety Division, National Safety Council of Australia; South Australia, Road Safety Division, National Safety Council of South Australia; Western Australia, Road Safety Division, National Safety Council of Western Australia.

The Council is representative, geographically and technically, of the whole Commonwealth and comprises nominees of practically all classes of road users, together with representatives of road transport, the Department of Army (representing all Services) and police administrations from each State. National organizations represented on the Council are:—Australian Automobile Association, Australian Road Transport Federation, Auto Cycle Council of Australia, Council of Fire and Accident Underwriters, The Federal Chamber of Automotive Industries, Federation of Motor Cycle Importers and Distributors of Australia, and Transport Workers' Union of Australia.

The Council meets annually and an Executive Committee operates between conferences. The principal effort of the Council is directed through educational, advertising and public relations media.

An annual grant is made available by the Commonwealth Government under the Commonwealth Aid Roads Act for the promotion of road safety. Hitherto £100,000 annually, it has been increased to £150,000 for the five years commencing 1st July, 1955. Of this, £90,000 is allocated to State Road Safety Councils for local activities in the following proportions:—New South Wales, £22,500; Victoria, £18,000; Queensland, £16,650; Western Australia, £14,850; South Australia, £11,250; and Tasmania, £6,750. The remaining £60,000 is applied to the National Campaign, spread equitably over the entire Commonwealth.

2. Mode of Operation.—The role of the Australian Road Safety Council is primarily in the field of education and public relations. Its task is to inculcate the habit of safe use of the roads by all who travel on them and to promote the cause of road safety as a humanitarian and community ideal of the highest importance. To this end, it constantly strives to increase public awareness of the road accident problem, which for the year ended 30th June, 1957, resulted in 109,672 accidents involving casualties or damage in excess of £10 to property, the deaths of 2,113 persons and injuries to 50,450 persons. (For further information on the subject of Traffic Accidents see pp. 416-9.)

The campaign for road accident prevention resolves broadly into two main elements relating to (i) Road Users and (ii) Roads and Vehicles. The attack falls into three main divisions—(i) Education, (ii) Enforcement, and (iii) Engineering. The link between the components is, broadly:—

In addition to the foregoing activities, the Council convenes special national conferences, as required by the Australian Transport Advisory Council, to consider specific road safety problems. Typical of these have been the special committee appointed in 1951 to discuss level crossing accidents, which recommended, among other measures, the appointment in each State of a committee to investigate level crossings and report on safety provisions, the elimination of some railway level crossings and the closure of others where practicable and desirable; a special meeting held in June, 1953, to discuss methods of reducing the high incidence of motor cycle accidents, at which various measures to offset the greater vulnerability of both the machine and its rider were recommended; and special meetings held in May, 1954, and April, 1955, to consider the problems of "Youth and Road Safety" and "Pedestrian Behaviour" respectively. Road safety and traffic authorities from oversea countries took part in special "International Sessions" of the 1956 Congress of the Council. The Australian Road Safety Council has pioneered the advocacy of voluntary blood tests for intoxication in cases of suspected driving under the influence of drugs or alcohol. An Educational-Enforcement campaign to link more closely the work of the road safety movement and the police is planned for 1958–59.

The Council works in close collaboration with two other bodies also established by the Australian Transport Advisory Council, namely, the Australian Motor Vehicle Standards Committee and the Australian Road Traffic Code Committee. All three bodies are administered by the Commonwealth Department of Shipping and Transport, which is the executive department for the Australian Transport Advisory Council.

The Australian Motor Vehicle Standards Committee develops and promulgates essential basic motor vehicle standards such as maximum lengths, weights, heights, carrying capacity of vehicles, and minimum lighting, braking and other mechanical efficiencies. In addition to ensuring a greater safety factor, these standards have helped to eliminate many conflicting State requirements which had an adverse effect on design and production costs.

The Australian Road Traffic Code Committee is charged with the responsibility of progressively preparing a "blue print" uniform national traffic code for incorporation in State legislation. Speed limits, right-hand turns, rules governing approaches to intersections, qualifications of drivers, and pedestrian behaviour are a few of the numerous aspects which come within its purview, and a high degree of uniformity has been achieved.

# § 14. Australian Atomic Energy Commission.

In November, 1952, a Commission of three members was appointed to control the Commonwealth's activities in relation to uranium and atomic energy, and in April, 1953, upon the enactment of the Atomic Energy Act 1953, the Commission was established as a statutory authority, with powers and functions as defined in the Act. The Commission is a corporate and autonomous body, controlling its own service. It functions under the direction of the Minister for National Development.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium, and is empowered to co-operate with the appropriate authorities of the States in connexion with these and related matters. Secondly, it is authorized to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. These powers and functions are set out in detail in Part II. of the 1953 Act. In general, and subject to the Commonwealth's defence powers and particular provisions of the Act, they are exercisable only in or in relation to the Territories of the Commonwealth.

The search for and mining of uranium in the Territories of the Commonwealth are freely open to private enterprise, subject to the Atomic Energy Act 1953 and the Ordinances of the Territories. For the assistance of private prospectors, and with the object of ascertaining the uranium resources of the Territories, aerial and geological surveys are carried out to identify areas favourable to uranium occurrences. These surveys are undertaken for the Commission by the Bureau of Mineral Resources of the Department of National Development, and the results are published from time to time in map form for general information. As incentives to private enterprise to engage in the search for uranium, rewards have been paid for discoveries. Taxation concessions are allowed in respect of income derived from uranium mining. In addition, the Atomic Energy Commission, the Bureau of Mineral Resources and other Commonwealth agencies make available to prospectors and mining companies a wide range of technical and advisory services.

The development of the uranium resources of the States is governed by the legislation and policies of the States. Commonwealth aerial survey facilities are made available to the States for the radiometric examination of areas within the States, and the State Mines Departments undertake work, for the Commonwealth, on the testing of uranium ores and research on ore treatment problems.

Uranium oxide is being produced in Australia from large ore deposits at Rum Jungle, in the Northern Territory, and Radium Hill, in South Australia. The Rum Jungle deposits are being developed under arrangements between the Commonwealth and the Combined Development Agency, a joint procurement organization of the United States and United Kingdom Governments. The actual mining and treatment operations are being conducted for the Commonwealth by an Australian mining company. A treatment plant was brought into operation on the field in September, 1954, the substantial production from which is being sold to the Agency for defence purposes. The Radium Hill deposits are being developed by the South Australian Government, which has established an ore concentration plant on the field and a plant for the treatment of the concentrates at Port Pirie. Like the Rum Jungle project, the operations at Radium Hill and Port Pirie are carried out under arrangements with the Combined Development Agency, and the output from the operations is sold to the Agency.

Uranium ores have also been found elsewhere in the Commonwealth, most notably at the Mary Kathleen lease in the Mt. Isa-Cloncurry district in Queensland. The Mary Kathleen lease, containing a large body of ore, is being developed by commercial interests, which are erecting a treatment plant in the area at a cost of several million pounds. Production from the plant will be sold to the United Kingdom Atomic Energy Authority, under arrangements approved by the Commonwealth Government. Another company, operating in the South Alligator River area of the Northern Territory, sold some ore of exceptionally high grade to the Combined Development Agency.

The Commission has undertaken a research programme into the civil uses of atomic energy, with special reference to Australian needs. By arrangement with the United Kingdom Atomic Energy Authority, it has had a team of scientists working in the Authority's Research Establishment at Harwell in England. At the end of 1955, the Commission began the construction of its Research Establishment at Lucas Heights near Sydney. This consists of a high flux nuclear reactor of the most advanced type, with associated services and various laboratories. During 1958, the reactor came into operation and the scientific staff, with one or two exceptions, continued their research programme in Australia. So that the specialized facilities at Lucas Heights may be available to the universities for research and training, the Australian Institute of Nuclear Science and Engineering has been established. Within Australia, in addition to its programme at Lucas Heights, the Commission is supporting atomic energy research on a considerable scale in the various universities, and it has established a wide range of post-graduate studentships and undergraduate scholarships in the universities to train scientists for future work in atomic energy fields.

The broad objects of the Commission's research programme are to develop the production of electric power from nuclear fuels, and to investigate and promote the application of atomic energy and radioactive isotopes in industry, agriculture, medicine and biological research and other fields. In these endeavours, the Atomic Energy Commission is working in close co-operation with the United Kingdom Atomic Energy Authority, under arrangements which give Australia access to the results of the very large United Kingdom programme of research on peaceful atomic energy uses. The results of research in Australia will in like manner be made available to the United Kingdom. Work in Australia, though constituting a self-contained programme, is co-ordinated with the United Kingdom programme, to avoid overlapping of research objectives and duplication of investigations.

In the light of the vast amount of research now going forward overseas, and the programmes of many nations for the establishment of full-scale power-producing reactors, it seems clear that nuclear power is rapidly approaching the stage of being economically

practicable. A number of Government authorities, and several commercial organizations are undertaking serious study of the possible application of nuclear energy to their problems. The planned Australian research effort will enable Australia to make a full contribution to the advancement of atomic energy technology, both in power production and in other fields, and will, at the same time, place the country in a position to take advantage of the practical uses of atomic energy as they are developed.

# § 15. The United Nations.

1. General.—The Moscow Declaration of 1943 concerning a new international organization for the maintenance of international peace and security marked the end of the League of Nations. The dissolution of the League, and the transfer of certain of its functions to the new body, the United Nations, took place over subsequent years. Information concerning the League of Nations was given in issue No. 35 and earlier issues of the Official Year Book.

The Charter of the United Nations was drawn up by the delegates of fifty nations at the United Nations Conference on International Organization at San Francisco from 25th April to 26th June, 1945. Australia's ratification was deposited on 1st November, 1945. Following the admission of 16 new members during the Tenth Session and seven more subsequently, there are now\* 82 member States:—Afghanistan, Albania, Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Burma, Byelorussia, Cambodia, Canada, Ceylon, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, the Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, Finland, France, Ghana, Greece, Guatemala, Haiti, Honduras, Hungary, Iceland, India, Indonesia, Iran, Iraq, the Republic of Ireland, Israel, Italy, Japan, Jordan, Laos, Lebanon, Liberia, Libya, Luxemburg, Malaya, Mexico, Morocco, Nepal, the Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Paraguay, Peru, the Philippines, Poland, Portugal, Romania, Saudi Arabia, Spain, Sudan, Sweden, Syria, Thailand, Tunisia, Turkey, the Ukraine, the Union of South Africa, the Union of Soviet Socialist Republics, the United Kingdom, the United States of America, Uruguay, Venezuela, Yemen and Yugoslavia. The United Arab Republic has sought to replace both Egypt and Syria.

The full record of the Conference is contained in the Report by the Australian Delegates on the United Nations Conference on International Organization held at San Francisco,

from 25th April to 26th June, 1945.

At San Francisco, an Executive Committee and a Preparatory Commission were established, and when these bodies had completed their work of preparation for the first meeting of the United Nations, the General Assembly met in London on 10th January, 1946.

The principal organs of the United Nations are the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice, and the Secretariat.

- 2. General Assembly.—This is the forum of the United Nations. In it, each member State is represented and has one vote. It meets in regular annual sessions and has provision for special sessions. With the exception of disputes which are before the Security Council and matters essentially within the domestic jurisdiction of any State, it has power to discuss any matter within the scope of the Charter and to make recommendations upon it. The assembly elects the non-permanent members of the other major organs and considers annual reports from them. Upon the recommendation of the Security Council, it may expel a member which has persistently violated the principles of the Charter.
- 3. The Security Council.—This has the primary responsibility for the maintenance of international peace and security. It is composed of five permanent members, namely China, France, the United Kingdom, the Union of Soviet Socialist Republics and the United States of America, and six non-permanent members with two-year periods of office, of whom three retire at the end of each year. At the initial election three countries, including Australia, were elected for a term of two years and three others for a term of one year only. The following are the non-permanent members of the Security Council at present\*: Canada, Japan and Panama (whose terms commenced on 1st January, 1958), and Colombia, Iraq and Sweden (whose terms commenced on 1st January, 1957). On procedural matters, decisions are taken by an affirmative vote of any seven members. But on all other matters, decisions can be made only on the affirmative vote of seven members, including the concurring votes of all the permanent members. However, the powers which are parties to a dispute for peaceful settlement do not vote.

The Security Council is assisted by a Military Staff Committee consisting of the Chiefs of Staff of the permanent members of the Council or their representatives.

4. The Economic and Social Council.—This body consists of eighteen members, each elected for a period of three years. Its main functions are to make, or initiate, studies and reports, and to make recommendations to the General Assembly or to members of the United Nations, upon international, economic, social, cultural, educational, health and related matters. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

The present\* members of the Economic and Social Council are: Brazil, Canada, Greece, Indonesia, the United States of America and Yugoslavia (retiring 1958); Finland, Mexico, Pakistan, Poland, the United Kingdom, and the Union of Soviet Socialist Republics (retiring 1959); and Chile, China, Costa Rica, France, the Netherlands and Cuba (retiring 1960).

5. The Trusteeship Council.—The Charter declares the political, social, cultural and economic advancement of the Trusteeship Territories to be a sacred trust. A Trusteeship Council has been set up composed of those members of the United Nations who are administering trust territories and an equal number of members who are not administering trust territories (including any permanent members of the Security Council who are not administering trust territories). Territories which may be placed under trusteeship in accord with individual trusteeship agreements are those previously held under mandate, those detached from enemy states as a result of the 1939-45 War and those dependent territories placed under the system by the States responsible for their administration. Australia is automatically a member of the Trusteeship Council, as the power administering the Trust Territories of New Guinea and Nauru. The present\* members of the Trusteeship Council are: Australia, Belgium, France, Italy, New Zealand, the United Kingdom, the United States of America (administering States), and Burma, China, Guatemala, Haiti, India, Syria† and the Union of Soviet Socialist Republics. China and the Union of Soviet Socialist Republics are members of the Trusteeship Council by virtue of their permanent membership of the Security Council.

The Council has among its duties the consideration of annual reports submitted by the trustee states, the carrying out of periodic inspections by agreement with them, and the formulation of questionnaires on the welfare and advancement of the dependent peoples.

6. The International Court of Justice.—This consists of fifteen judges, no two of whom may be nationals of the same State. Its jurisdiction comprises all cases which the parties refer to it, and all matters especially provided for in the Charter or in treaties and conventions in force. Provision exists in the Statute of the Court whereby States, parties to the Statute, may accept the jurisdiction of the Court as compulsory, either conditionally or unconditionally in certain international disputes.

The present\* members of the Court are: Judges Hackworth (United States of America), Sir Zafrullah Khan (Pakistan), Klaestad (Norway), Kozhevnikov (U.S.S.R.), and Armand-Ugon (Uruguay)—all-retiring in 1961; Judges Lauterpacht (United Kingdom), Basdevant (France), Guerrero (El Salvador), Cordova (Mexico), and Quintana (Argentina)—all retiring in 1964; and Judges Badawi (Egypt), Wellington Koo (China), Winiarski (Poland), Sir Percy Spender (Australia) and Spiropoulos (Greece)—all retiring in 1967.

- 7. The Secretariat.—The Secretary-General is the head of the Secretariat of the organization. He is appointed by the General Assembly upon the recommendation of the Security Council, and he appoints his staff in accordance with the rules approved by the General Assembly. Mr. Trygve Lie (Norway) was appointed first Secretary-General, and at the Sixth Session of the General Assembly in 1950 was re-appointed for a further three years as from 1st February, 1951. In November, 1952, Mr. Lie announced his intention of retiring and in April, 1953, Mr. Dag Hammarskjöld (Sweden) was appointed in his place. Mr. Hammarskjöld was re-appointed for a further five years in September, 1957.
- 8. Specialized Agencies.—In addition to these organs of the United Nations there are specialized agencies which co-operate closely with the United Nations in many fields on economic and social questions.

Those now<sup>‡</sup> in operation are: The International Labour Organization; Food and Agriculture Organization; United Nations Educational, Scientific and Cultural Organization; International Civil Aviation Organization; International Bank for Reconstruction and Development; International Monetary Fund; Universal Postal Union; World Health Organization; International Telecommunication Union; World Meteorological Organization

To enable co-ordination of the work of the specialized agencies, arrangements have been made for them to submit reports on their activities and budgets to the United Nations where they are discussed by the Economic and Social Council and the General Assembly,

# § 16. Australian Representation Abroad: Oversea Representation in Australia.

1. General.—The following statements show particulars of the various Australian diplomatic and other representatives overseas and of oversea representatives in Australia Full details of Commonwealth and foreign representation in at 31st July, 1958. Australia—diplomatic and consular—and of permanent Australian missions overseas may be obtained from publications issued by the Department of External Affairs, Canberra. A statement is issued each quarter by the Department of Trade, showing the latest particulars of the Australian Trade Commissioner Service overseas.

# 2 Australian Representation Overseas.—

# AUSTRALIAN DIPLOMATIC AND OTHER REPRESENTATIVES OVERSEAS.

```
Her Majesty's Australian Ambassador Extraordinary and Plenipotentiary to-
    Burma (Rangoon)—A. H. Loomes.
    France (Paris)-A. T. Stirling, C.B.E.
    Germany, Federal Republic of (Bonn)-P. Shaw.
    Indonesia (Djakarta)—L. R. McIntyre, O.B.E.
Ireland (Dublin)—(Vacant); N. St. C. Deschamps (Chargé d'Affaires ad interim).
    Italy (Rome)-D. P. McGuire, C.B.E.
    Japan (Tokyo)-Sir Alan Watt, C.B.E.
    The Netherlands (The Hague)—H. A. McClure-Smith, C.V.O.
    The Philippines (Manila)-K. C. O. Shann.
    Thailand (Bangkok)-J. K. Waller, O.B.E.
    United States of America (Washington, D.C.)—The Hon. Howard Beale, Q.C.
```

Her Majesty's Australian Envoy Extraordinary and Minister Plenipotentiary to-Brazil (Rio de Janeiro)—D. Mackinnon, C.B.E.

Cambodia (Phnom Penh)-F. H. Stuart.

Israel (Tel Aviv)—B. C. Ballard. Laos (Vientiane)—F. J. Blakeney.

Viet Nam (Saigon)-F. J. Blakeney.

#### High Commissioners for Australia in-

Canada (Ottawa)—(Vacant); F. T. Homer (Acting High Commissioner).

Ceylon (Colombo)—A. J. Eastman. Ghana (Accra)—S. Jamieson.

India (New Delhi)-W. R. Crocker, C.B.E.

Malaya, Federation of (Kuala Lumpur)-T. K. Critchley.

New Zealand (Wellington)-Vice-Admiral Sir John Collins, K.B.E., C.B.

Pakistan (Karachi)-Major-General Sir Walter Cawthorn, C.B., C.I.E., C.B.E. Union of South Africa (Pretoria)-(Vacant): H. Gilchrist (Acting High Commis-

sioner). United Kingdom of Great Britain and Northern Ireland (London)-The Rt. Hon. Sir Eric Harrison, K.C.V.O.

# Australian Military Mission-

Germany, Federal Republic of (Berlin)-Head, P. Shaw.

United Nations (New York)—Ambassador, Dr. E. R. Walker, C.B.E. United Nations (Geneva)—Permanent Representative, G. A. Jockel.

# Australian Commissioner in-

Singapore, Brunei, Sarawak and North Borneo (Singapore)-D. McNicol.

# Consuls-General-

Greece (Athens)-J. J. B. Cliffe.

Switzerland (Geneva)—G. A. Jockel.

United States of America (New York)—The Hon. Sir Josiah Francis.

United States of America (San Francisco)-M. H. Marshall.

#### Consuls-

Denmark (Copenhagen)-G. A. Cole.

New Caledonia (Noumea)-R. B. Hodgson.

Portugese Timor (Dili)-F. J. A. Whittaker.

United States of America (New York)-J. E. Ryan.

# Trade Commissioner Service of the Commonwealth of Australia-

Canada—G. W. Temby (Acting) (Montreal); C. A. Allen, M.V.O. (Vancouver).

Ceylon—M. F. Roberts (Colombo).

France—A. R. Taysom, Commercial Counsellor and Trade Commissioner (Paris). Germany, Federal Republic of-R. R. Ellen, Commercial Counsellor and Trade

Commissioner (Bonn).

Hong Kong-K. T. Ridley (Victoria).

India-F. R. Gullick (New Delhi); J. L. Chapman (Calcutta); D. R. McPhee, O.B.E., E.D., (Bombay).

Indonesia-T. W. Collis, Commercial Counsellor and Trade Commissioner (Djakarta).

Italy-H. K. H. Cook, Commercial Counsellor and Trade Commissioner (Rome). Japan-N. F. Stuart, Commercial Counsellor and Trade Commissioner (Tokyo).

Malaya, Federation of-W. Cairns, Commercial Counsellor and Trade Commissioner (Kuala Lumpur).

New Zealand-H. C. Menzies (Wellington); B. G. Dawson (Auckland); H. Sullivan (Christchurch).

Pakistan-R. B. Hines, Commercial Counsellor and Trade Commissioner (Karachi). Philippines, The-E. E. Jarvis, Commercial Counsellor and Trade Commissioner (Manila).

Rhodesia and Nyasaland, Federation of-H. M. LeMarchand (Salisbury).

Singapore-R. W. Holberton (Acting) Commercial Counsellor and Trade Commissioner (Singapore).

Thailand-L. C. Holmes, Commercial Councellor and Trade Commissioner (Bangkok).

Union of South Africa-S. D. Shubart, Commercial Counsellor and Trade Commissioner (Johannesburg).

United Kingdom of Great Britain and Northern Ireland-G. R. B. Patterson, Senior Trade Commissioner; E. B. Gilbert (London).

United States of America—A. C. B. Maiden, Commercial Counsellor and Trade Commissioner; J. B. Todd, Commercial Counsellor (Washington); A. J. Day (New York); K. F. McKernan (San Francisco).

West Indies, Federation of-B. T. Connolly (Port of Spain).

3. Oversea Representation in Australia.—Consular representatives are not included in the following statement. Particulars of these are contained in a publication Consular Representatives and Trade Commissioners in Australia, issued by the Department of External Affairs, Canberra. There are more than 180 such representatives in Australia, and 53 countries are represented.

# DIPLOMATIC REPRESENTATIVES IN AUSTRALIA.

# Ambassador Extraordinary and Plenipotentiary of-

Burma—(Vacant); U Myat Tun (Chargé d'Affaires ad interim) (Canberra U 1451). China-(Vacant); Dr. Chen Tai Chu (Chargé d'Affaires ad interim) (Canberra U 2368).

France—His Excellency Monsieur R. Sivan (Canberra X 2925).

Germany, Federal Republic of-His Excellency Dr. Hans Mühlenfeld (Ambassador designate) (Canberra U 1553).

Indonesia-His Excellency Dr. A. Y. Helmi (Canberra U 1221).

Ireland—(Vacant); Mr. William B. Butler (Chargé d'Affaires ad interim) (Canberra J 3251).

Italy-His Excellency Signor Silvio Daneo (Canberra J 3263).

Japan-His Excellency Mr. Tadakatsu Suzuki (Canberra U 1251).

The Netherlands—His Excellency Mr. A. H. J. Lovink (Canberra U 1256), The Philippines—His Excellency Dr. J. F. Imperial (Sydney FL 4168).

Thailand—His Excellency Nai Konthi Suphamongkhon (Canberra, U 8101).

United States of America—His Excellency Mr. William J. Sebald (Canberra U 1351).

# Envoy Extraordinary and Minister Plenipotentiary of-

Austria—Dr. J. Manz (Chargé d'Affaires) (Canberra U 8167).

Belgium—His Excellency Monsieur Willy Stevens (Sydney FB 1325). Brazil-His Excellency Senhor L. A. Borges da Fonseca (Canberra X 2680). Denmark-Mr. F. Henning Hergel, O.B.E. (Chargé d'Affaires) (Sydney BW 3547). Finland-Mr. P. I. Simelius (Chargé d'Affaires) (Sydney FM 3116). Greece-His Excellency Monsieur G. K. A. Christodulo (Canberra X 1553). Israel—His Excellency Mr. M. Yuval (Minister designate) (Sydney BW 2082). Sweden—His Excellency Monsieur Carl Bergensträhle (Canberra U 1421). Uruguay-Mr. Washington Rios (Chargé d'Affaires) (Canberra J 2647).

Canada-His Excellency Mr. T. W. L. MacDermot (Canberra U 1304). Ceylon-His Excellency Mr. B. F. Perera, C.M.G., O.B.E. (Canberra X 1021). India-His Excellency Shri Parakat Achutha Menon (Canberra J 3209). Malaya, Federation of-His Excellency Mr. Gunn Lay Teik, O.B.E. (Canberra X 1277).

New Zealand-His Excellency the Hon. F. Jones (Canberra U 1030).

Pakistan-His Excellency Lieutenant-General Mohammed Yousuf (Sydney BL 3394).

Union of South Africa-His Excellency Mr. A. M. Hamilton (Canberra U 2370). United Kingdom of Great Britain and Northern Ireland—His Excellency the Right Honourable the Lord Carrington, K.C.M.G., M.C. (Canberra U 2211).

#### Commissioner for—

Malta-Captain George F. L. Stivala, O.B.E. (Melbourne MU 1291).

# TRADE COMMISSIONERS OF OVERSEA GOVERNMENTS IN AUSTRALIA.

Canada—Canadian Government Trade Commissioners—Mr. J. C. Britton (Sydney BW 5696-7) and Mr. T. G. Major (Melbourne MU 4716).

Cuba—Cuban Trade Commissioner—Mr. Armando Machado (Sydney)
India—Indian Trade Commissioner—Mr. H. A. Sujan (Sydney BW 9518).

New Zealand-Senior New Zealand Government Trade Commissioner-Mr. R. V. Jackson (Sydney BL 3941).

New Zealand Government Trade Commissioners-Mr. R. J. Inglis (Melbourne MU 8111); Messrs. E. J. Sutch and T. A. Foley (Sydney BL 3941).

United Kingdom of Great Britain and Northern Ireland-United Kingdom Senior Trade Commissioner-Mr. H. J. Gray, C.M.G. (Canberra U 2211).

United Kingdom Trade Commissioners—Messrs. N. L. Hibbs and W. C. Hodgkins (Canberra U 2211); Messrs. A. R. Bruce, O.B.E., A. Hartland, O.B.E., and L. F. Hope (Sydney BW 8086); Messrs. G. J. Husted and H. F. Stevens (Melbourne MU 5556); Mr. R. Fell (Brisbane B2307); Mr. J. D. Leithead (Perth BA 2042).

# § 17. Retail Trade.

1. General.—The statistics in this section relate to the number of retail establishments throughout Australia and the turnover of these establishments.

Information of this nature was first collected in respect of the year ended 30th June, 1948, by a full census of all retail establishments. As this was the first census of its type in Australia, its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods and a simple commodity dissection together with a record of the value of certain services provided. This census was followed by a second census of all retail establishments trading during the year ended 30th June, 1949.

A third census was taken for the year ended 30th June, 1953, in which retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups and questions were asked about stocks of goods on hand, the number of persons engaged in the business and credit sales.

A further census was taken in respect of the year ended 30th June, 1957, and tabulation of the results is proceeding.

1 4.

In general terms, the censuses covered those establishments which normally sell goods by retail in shops, rooms, kiosks and yards. Certain types of establishments which sell services by retail (including repairs and materials therein) were also included, e.g., boot repairers, hairdressers, motor garages and service stations and cafés. The censuses included the retail sales of those factories or wholesalers who conducted a regular retail business, but excluded those who only occasionally sold goods by retail. Both new and second-hand goods were included in sales recorded by relevant retail establishments.

During the period between censuses, variations in the value of retail sales have been measured by means of quarterly sample surveys. Annual totals derived from these surveys and some of the results of the 1952-53 census are contained in this section.

2. Value of Retail Sales in Each Commodity Group, 1948-49 and 1952-53 to 1956-57, Australia.—The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1948-49 and 1952-53 to 1956-57 on a comparable basis throughout. The figures for the years 1948-49 and 1952-53 were obtained from censuses taken in respect of those years, whereas figures for the other years shown are estimates based on sample surveys.

VALUE OF RETAIL SALES: COMMODITY GROUPS, AUSTRALIA. (£ million.)

Commodity Grou	Year ended 30th June—							
Commonly Grou	μ.	1949.(a)	1953.(a)	1954.(b)	1955.(c)	1956.(c)·	1957.(b)	
Groceries Butchers' Meat Other Food(d)	::	143.4 65.3 116.6	261.5 127.8 206.8	275.1 133.9 223.7	306.0 146.4 246.6	335.9 158.6 268.7	352.1 170.6 280.3	
Total Foodstuffs		325.3	— <u>596.1</u>	632.7	699.0	763.2	803.0	
Beer, Wine and Spirits Clothing, Drapery, Piec	e-goods	95.3	173.0	186.7	202.7	219.9	235.1	
and Footwear		237.8	355.1	387.6	422.0	437.3	442.2	
Hardware( $\epsilon$ ) Electrical Goods( $f$ )	• •	55.7 33.8	113.8 75.8	124.7 91.2	142.7 100.5	153.4 106.2	153.9 113.7	
Furniture	• •	46.4	72.8	81.0	86.9	92.3	92.5	
Other Goods(g)	• • •	167.9	315.5	336.9	365.8	394.2	414.2	
Total (excluding Vehicles, etc.)	Motor	962.2	1,702.1	1,840.8	2,019.6	2,166.5	2,254.6	
Motor Vehicles, Parts, etc.(h)	Petrol,	166.1	417.3	(c) 491.7	583.7	633.3	640.6	

(a) Census figures
(b) Survey figures.
(c) Survey figures revised since previous issue.
(d) Includes fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc., but excludes some delivered milk and bread.
(e) Excludes basic building materials (e.g., timber, roofing tiles, bricks, etc.)
(f) Includes radio, television and accessories, musical instruments, domestic refrigerators, etc.
(g) Includes tobacco, cigarettes, etc., newspapers, books and stationery, chemists' goods, grain and produce, jewellery, office equipment, etc.
(h) Excludes farm machinery and implements, earth-moving equipment, etc.

In the foregoing table, figures for the year ended 30th June, 1949, relate to establishments with total retail sales of £50 or more; for the years ended 30th June, 1953 to 1957, they relate to establishments with total retail sales of £500 or more. The total amount of retail sales of establishments so excluded in 1952-53 was not significant (less than 0.1 per cent. of total), and their omission does not affect the validity of the comparisons shown.

3. Retail Census, Australia, 1952-53.—Tables showing statistics of the Retail Census of 1952-53 appear in Official Year Book No. 43, pages 1074-8. Details are given for:—
(a) Number of establishments in each State which sold goods in each commodity group;
(b) Value of retail sales of goods in each commodity group, by States; (c) Number of retail establishments and value of retail sales in each State classified according to main type of business; and (d) Takings for certain services (repair work, meals, etc., and hairdressing).

# CHAPTER XXXI.

# STATISTICAL ORGANIZATION AND SOURCES OF INFORMATION.

# § 1. Statistical Organization in Australia.

- 1. Early Development of Australian Statistics.—(i) Crown Colony "Blue Books". Statistical organization in Australia was founded in the "Blue Books" which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although primarily intended for administrative purposes, these documents have been important sources of statistical data, even though some important matters are not covered, and others only partially so. These "Blue Books" form the basis from which later statistical publications were developed. This led to an element of uniformity in statistical compilation within the British Empire.
- (ii) Statistical Registers. Following the advent of Responsible Government, which was granted during the period 1851–1860 to all Australian States except Western Australia—and to that State in 1890—the "Blue Book" was succeeded in all States by "Statistical Registers". These were in many respects the old "Blue Books" in a new form, and were largely confined to summaries of the "by-product" statistics of Government administrative departments.

The first example of extensive Governmental organization for purely statistical purposes was the taking of periodic population censuses, which were initiated in all States under the Crown Colony régime. The growing need for quantitative data concerning the progress of the several young communities of Australia eventually led to the appointment of official Statisticians commissioned to prepare and publish such data.

- (iii) Statistical Conferences. To enable the interchange of ideas between States and to obtain uniform State statistics which could be aggregated to Australian totals, conferences were held in the several States from as early as 1861. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906. These were held in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences has been continued since the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928.
- 2. Creation of the Commonwealth Bureau of Census and Statistics.—Under the provisions of section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament "to make laws for the peace, order and good government of the Commonwealth with respect to—" (inter alia) "(XI.) Census and statistics". In compliance with this provision, the Census and Statistics Act 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State has its own "Statistics Act", and although these are not identical in all States, they embody common principles. The Commonwealth Bureau did not attempt to duplicate the existing statistical organization, but endeavoured to use the services of the State statistical offices whenever possible, and to undertake the initial collection of statistics only in fields not already occupied by the States, or in which efficiency demanded complete centralization.
- 3. Integration of Statistical Services.—The creation and development of the Commonwealth Bureau of Census and Statistics, the frequent conferences of Commonwealth and State Statisticians, and the close and increasing liaison between officers dealing with the same subjects in the State and Commonwealth fields, did much to promote uniformity in the official statistical collections and methods employed throughout Australia. The complete realization of this aim could not, however, be achieved, even with the utmost co-operation of those concerned, while seven distinct statistical systems operated.

This became apparent after the 1914-18 War, when the economic problems that then arose drew attention to deficiencies in the Australian statistical data. With a view to overcoming these weaknesses the Prime Minister of the day proposed to the Premiers' Conference that State statistical offices be transferred to the Commonwealth. Tasmania alone agreed to this, and the transfer was effected in 1924. Since then, an amalgamated office has functioned satisfactorily in that State as a Commonwealth office which also serves State statistical needs.

The boom of the 1920's, the depression of the 1930's, the 1939-45 War, and the post-war boom, each with its special economic problems, imposed a severe strain on the Commonwealth and State statistical systems. Moreover, the development during and since the 1939-45 War of a very considerable volume of new statistics added greatly to the complexities of the several administrations in their efforts to secure, and maintain, uniformity in statistical collections. The establishment of Commonwealth statistical offices in some State capitals ameliorated the situation to some extent—indeed, without their establishment the new and expanded statistical collections could not have been carried out at all. However, this did not solve the problem, and constituted only one of a number of improvisations devised to obtain uniform data essential for national purposes, and to satisfy urgent demands for new types of statistics. Furthermore, the excessive amount of time and effort entailed in such improvisations made it impossible to devote the necessary time to the major question of supplying growing statistical needs promptly.

The emergence of the problem of providing uniform statistical services throughout Australia, adequate to meet present-day demands, was foreseen during the 1939-45 War, and in 1949 discussions were initiated with the Premiers by the Prime Minister, with the object of integrating the statistical services of the Commonwealth and the States by agreement. These negotiations were continued by correspondence, and subsequently all State Governments accepted the terms of draft agreements to integrate their respective statistical offices with that of the Commonwealth.

The Statistics (Arrangements with States) Bill was introduced into the Commonwealth Parliament on 17th April, 1956, its purpose being to seek parliamentary approval of the making of arrangements with individual States for, and the setting up of, integrated statistical services. The legislation is permissive in nature, designed to enable the Commonwealth to enter into an agreement with any State to effect an amalgamation of Commonwealth and State statistical offices and services. The objective of such an agreement is that, in each State accepting it, there will be an integrated statistical service operated by Commonwealth statistical officers under the immediate direction of a statistician in the State who would hold office under both the Commonwealth and State governments. Both Commonwealth and State will be adequately served with statistics, and no State will be required to surrender its existing powers in the field of statistics. The rights of officers transferred under any agreement entered into are provided for. After passing through the usual stages of Parliament, the bill became law on 12th May, 1956.

4. Scope of the Commonwealth Bureau of Census and Statistics.—The scope of the Commonwealth Bureau of Census and Statistics has constantly been widened, more particularly during the 1939-45 War, when the Bureau responded to the urgent demands of administration for immediate and accurate statistical information in various fields. Since the war, requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All the activities of the Bureau are covered by the Census and Statistics Act, which confers authority to collect information and contains stringent provisions to ensure that the information obtained is treated in strictest secrecy.

For administrative purposes, the Commonwealth Bureau is divided into a number of Divisions. These are:—Census, Compiling, Development, Methodology and Sampling, Publications, Social Accounting, Mechanical Tabulation and Administrative.

- (a) Census Division. This Division of the Bureau is responsible for the taking of periodic population censuses and the tabulation, summarization and preparation for publication of the results obtained.
- (b) Compiling Division. The Compiling Division is divided into the following Branches which compile statistics dealing with specific fields of activity:—
  - Trade and Transport Branch—Responsible for the original compilation, tabulation and analysis of statistics relating to imports and exports, and for the compilation of statistics relating to road and rail transport, aviation, shipping, posts, telegraphs and telephones and broadcasting and television.
  - Employment and Labour Branch—Compiles all employment estimates, wage and labour statistics.
  - Primary Production Branch—Deals with statistics relating to agricultural and pastoral activities, mining, forestry and fishing. Original data are supplied largely by State Statisticians.
  - Secondary Production Branch—Compiles all factory statistics both annual and monthly. Collates on a Commonwealth basis original annual data supplied by State Statisticians.

- Finance and Taxation Branch—Compiles statistics of private finance (banking, insurance, exchange rates, etc.), public finance (Commonwealth, State and Local and Semi-Governmental authorities), and statistics relating to all aspects of Commonwealth taxation.
- Demography Branch—Concerned with statistics of births, deaths, marriages and migration, and the making of periodic estimates of population.
- (c) Development Division. This Division was created in order to develop new statistical collections to meet post-war demands for more adequate and up-to-date statistics, and also to examine current collections in the light of such requirements. It is divided into three Branches, namely:—
  - Development Branch—Develops new statistical collections and examines current collections in the light of present-day requirements. Included in the latter are Social Statistics.
  - Prices Branch—Deals with the collection of retail and wholesale prices and the compilation of retail and wholesale price index numbers. A staff of trained field officers is maintained in the several States to facilitate the collection of accurate information.
  - Business Statistics Branch—Conducts censuses and surveys and analyses statistics relating to internal trade (retail), business and hire purchase activities, and company investments and profits.
- (d) Methodology and Sampling Division. Undertakes the development and application of sampling procedures to statistical collections and, in addition to furnishing technical advice to other Branches, undertakes projects relating to operations research in other Departments.
- (e) Publications Division. This Division is responsible for the scrutiny, editing and graphical illustration of all Bureau publications, and, in collaboration with other Divisions, for the initiation, development and co-ordination of statistical publications. It also maintains a regular flow of statistical series to certain international organizations, and revises statistical material in certain oversea and local publications.
- (f) Social Accounting Division. This Division undertakes research into the theoretical and practical problems of social accounting. It is divided into three branches as follows:—
  - Balance of Payments Branch—collects and analyses statistics of Australia's balance of international payments.
  - National Income and Expenditure Branch—prepare's estimates of national income and expenditure.
  - Quantum Indexes Branch-undertakes research into quantum of production.
- (g) Mechanical Tabulation Division. This Division is equipped with modern tabulating equipment including one electronic unit and is responsible for all machine tabulating work required by other Divisions of the Bureau with the exception of the Census Division.
- (h) Administrative Division. The Administrative Division is responsible for all aspects of staff recruitment and direction, supplies, payment of accounts, etc. The Reproduction Section of the Division is equipped with multilith and duplicating machines for processing statistical statements for more immediate requirements. In addition, a special section of this Division is responsible for the examination of statistical methods and systems and the co-ordination of all statistics in Commonwealth Departments (see para. 5 below). The specialized library of official and unofficial publications on statistics and economics is controlled by the Administrative Division.
- 5. Relation of the Bureau to other Commonwealth Departments.—In October, 1950, the Commonwealth Public Service Board issued a circular relative to the compilation of statistics in other Commonwealth Departments, in which it stated that the Commonwealth Statistician should be the co-ordinating authority on all statistics in Commonwealth Departments, and that, as a general principle, where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician should be consulted to ensure that they are necessary and that they are based on sound statistical methods; furthermore, that the Commonwealth Statistician should make a regular inspection, at least once every twelve months, of all statistical work done by Departments to ensure that their needs are met by the most economical means and without duplication of effort.

This project of co-ordination is being implemented as time and circumstances permit.

# § 2. Statistical Publications of Australia.

- 1. General.—The official statistical publications of Australia may be divided bibliographically into two main divisions, namely:—(i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only.
- 2. Commonwealth Publications.—Commonwealth publications may be grouped under two heads, namely:--(i) Publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers.

(i) Publications issued by the Commonwealth Statistician. The following is a list of the principal statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration to July, 1958:-

Australian Balance of Payments.—Statements Nos. 1 to 3, 1928-29 to 1951-52.

Australian Life Tables, 1901-1910. Australian Joint Life Tables, 1901-1910.

Australian Life Tables, 1920-1922.

Australian Life Tables, 1932-1934. Australian Joint Life Tables, 1932-1934.

Australian Life Tables, 1946-1948.

Australian Mineral Industry Statistics (formerly Minerals and Metals Bulletin) .-Part 2 of Quarterly Bulletin issued jointly with the Bureau of Mineral Resources.

Australian Primary Industries.—Report prepared for the Empire Producers Conference, Sydney, March, 1938.

Census (1911) Results.-Bulletins. Vols. I. (Statistician's Report), II., and III., with Appendix Mathematical Theory of Population.

Census (1921) Results.-Bulletins, Nos. 1 to 26. Parts I. to XVI., forming Vol. I., and Parts XVII. to XXIX., forming, with the Statistician's Report, Vol. II. Note.—Part XXVII., Life Tables.

Census (1933) Results.—Bulletins, Nos. 1 to 25. Parts I. to XIV., forming Vol. I., Parts XV. to XXVIII., forming Vol. II., and Parts XXIX. to XXXVII., forming, with the Statistician's Report and Australian Life Tables, 1932-1934,

Census (1947) Results.-Bulletins, Nos. 1 to 25. Parts I. to XVI., forming Vol. I., Parts XVII. to XIX., forming Vol. II., and Parts XX. to XXVIII., forming, with the Statistician's Report and Australian Life Tables, 1946-1948, Vol. III.

Census (1954) Results.—See Price List at end of this volume.

Census of Motor Vehicles, 1947-48 (see Survey of Motor Vehicles, 1947-48).

Census of Motor Vehicles, 31st December, 1955.—Bulletins, Nos. 1 to 8. \*Census of Retail Establishments (1947-48) Results.—Bulletins, Nos. 1 to 7.

\*Census of Retail Establishments (1948-49) Results.—Bulletins, Nos. 1 to 7. \*Census of Retail Establishments (1952-53) Results.—Bulletins, Nos. 1 to 14.

\* Dairying Industry (formerly Summary of Dairying Industry).—Statistical Bulletin. monthly; first issue, September, 1937.

Demography.-Bulletin, annually, 1911 to 1956.

\*Factories, Principal Statistics, Summary.—Annually, 1948-49 to 1955-56.

Finance.—Bulletin, 1907 to 1916-17 annually; 1917-18 and 1918-19 (one vol.); 1919-20 and 1920-21 (one vol); 1922-23 to 1955-56 annually. From 1955-56 issued in two parts; Part I., Public and Private Finance; Part II., Commonwealth Taxation.

\*Food Production and the Consumption of Foodstuffs and Nutrients in Australia, Statistical Bulletin. Half-yearly, 1946-47 to 1947-48; annually, 1948-49 to

\*Fruit Growing Industry Summary.—Annually, 1944-45 to 1956-57.

Labour and Industrial Statistics.-Memoranda and Reports, various, to 1913, Labour Report.-Annually, 1913 to 1957.

\*Livestock Numbers (formerly Summary of Livestock Statistics).—Statistical Bulletin, annually, 1943 to 1957.

Local Government in Australia.-July, 1919.

\*Manufacturing Industries.—Bulletins on Individual Industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete), and 1944-45 to 1955-56.

\*Monthly Review of Business Statistics.—First issue, October, 1937.

\*Occupation Survey (1945) Results.—Detailed tables.

Official Year Book of the Commonwealth of Australia. - Annually, 1907 to present issue (No. 44). Issues Nos. 40 to 43 also published in parts.

Obtainable from the Commonwealth Statistician—for methods of obtaining other publications still in print see back page of this volume.

- Oversea Trade.—Bulletin, annually, 1906 to 1956-57.
- \*Oversea Trade.—Preliminary Bulletin. Annually, 1952-53 to 1956-57.
- \*Oversea Trade Statistics: Imports Cleared for Home Consumption classified according to Individual Items of the Customs Tariff, 1950-51 to 1956-57.
- Pocket Compendium of Australian Statistics (formerly Statistical Digest).—1913, 1914, 1916, and 1918 to 1958 annually.
- Population and Vital Statistics.—Bulletins and Reports, various, 1906-1910. Primary Industries.—Bulletin, annually, 1950-51 to 1955-56, in two parts—Part I. Rural Industries: Part II. Non-Rural Industries and Value of Production.
- Production.—Bulletin, annually, 1906 to 1949-50. From 1936-37 to 1949-50 issued in two parts—Part I. Secondary Industries; Part II. Primary Industries (including Total Recorded Production); thereafter separate Bulletins (see Primary Industries and Secondary Industries).
- Professional Papers.—Various. A full list appears in Official Year Book No. 13. p. 3.
- Ouarterly Summary of Australian Statistics.—First issue, No. 70, December, 1917, replacing Monthly Summary of Australian Statistics (Bulletins Nos. 1 to 69).
- \*Registrations of New Motor Vehicles.—Statistical Bulletin, monthly and annually. \* Report of Proceedings of the Conference of British Commonwealth Statisticians.
- 1951.
- \*Rural Land Use and Crop Statistics (formerly Summary of Crop Statistics).— Statistical Bulletin, annually, 1943-44 to 1956-57.
- Secondary Industries.—Bulletin, annually, 1950-51 to 1955-56. \*Size Classification of Rural Holdings, 1955-56, Bulletins Nos. 1 to 7.
- Social Insurance.—Report to the Hon. the Minister for Trade and Customs, 1910. Social Statistics.—Bulletin, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service.—Report to the Hon. the Minister for Home Affairs, 1910.
- \*Survey of Motor Vehicles (1947-48) Results.—Bulletins Nos. 1 to 7.
- \*Survey of Private Pensions and Retiring Allowance Schemes, 1955-56 (reprinted in Finance, Part I., Bulletin No. 47).
- \*Survey of Private Superannuation Schemes 1951-52 (reprinted in Finance Bulletin No. 44).
- Transport and Communication.—Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually, and 1932 to 1955-56 annually.
- \*Vegetables Grown on Farms for Human Consumption.—Statistical Bulletin, annually, 1942-43 to 1956-57.
- Wealth .- The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- \*Wheat Industry (formerly Summary of the Wheat Situation).-Statistical Bulletin, periodically; first issue, July, 1936.
- \*Wool Supplies and Utilization.—Bulletin, annually, 1952-53 to 1956-57.

The foregoing list includes all the printed publications issued from the Bureau, and certain more important mimeographed publications issued for the most part annually. Other mimeographed statements, obtainable on application to the Commonwealth Statistician and dealing with a wide variety of subjects, are issued as follows:-

Annually-Bee Farming; Bulletin of Oversea Investments; Commonwealth, State and Territory Taxation Collections; Factory Products (Principal); Fire, Marine and General Insurance; Fishing and Whaling; Milking Machines on Rural Holdings; Mining and Quarrying; Oversea Trade between Australia and Eastern Countries; Rural Statistics of the Australian Capital Territory; Tractors on Rural Holdings; University Statistics; Value of Production; Wheat Forecast and Estimate; Wine and Brandy Statistics; Wool Production.

Half-yearly-Australian Balance of Payments; Capital and Maintenance Expenditure; Labour Turnover; Meat Production and Utilization: Trade of Australia with the United Kingdom.

Quarterly-Building; Interim Retail Price Index; New Capital Raisings; Retail Sales of Goods; "C" Series Retail Price Index; Road Traffic Accidents; Tractor Statistics; Trade of Australia with Monetary Areas.

Monthly-Banking; Demographic Review; Employment; Exports of Wool from Australia; Export Prices Index; Gold Mining Industry; Life Assurance; Oversea Trade; Production Statistics; Retail Hire Purchase Operations of Finance Businesses; Savings Bank Statistics; Wholesale Price (Basic Materials and Foodstuffs) Index.

Obtainable from the Commonwealth Statistician—for methods of obtaining other publications still in print see back page of this volume.

- (ii) Commonwealth Parliamentary and Departmental Reports and Papers. Lists of the principal official reports and other documents containing statistical information issued from the inauguration of the Commonwealth appear in the Official Year Books up to No. 13, but it is not now practicable to undertake the preparation of such lists.
- 3. State Publications.—The chief statistical publications of each State are set out hereunder. As with the Commonwealth Parliamentary and Departmental Reports and Papers, it is not practicable to enumerate the various Departmental Reports, statements of accounts, etc., issued by officials, boards, local and semi-governmental authorities, etc., in each State.
  - (a) New South Wales—Statistical Register (annually); Official Year Book of New South Wales (annually); Pocket Year Book (annually); Statistical Bulletin (monthly to December, 1919, quarterly to June, 1943, then discontinued to September, 1948); Monthly Summary of Business Statistics.
  - (b) Victoria—Statistical Register (annually to 1916, then discontinued); Victorian Year-Book (annually); Statistical Abstract (quarterly to 1917, then discontinued to December, 1946).
  - (c) Queensland—Statistical Register (annually); Official Year Book, 1901; A.B.C. of Queensland Statistics (annually to 1936, then discontinued); Queensland Year Book (annually 1937 to 1941, then discontinued to 1945); Queensland Pocket Year Book (annually).
  - (d) South Australia—Statistical Register (annually); Official Year Book, 1912 and 1913; Statesman's Pocket Year Book of South Australia (annually); Quarterly Summary of Statistics.
  - (e) Western Australia—Statistical Register (annually); Statistical Abstracts (quarterly, previously issued monthly to July, 1917); Pocket Year Book of Western Australia (annually).
  - (f) Tasmania—Statistical Register (annually); Pocket Year Book of Tasmania (annually); Monthly Review of Business Statistics.

# § 3. The Third Conference of British Commonwealth Statisticians, Canberra, 1951.

Conferences of the Government Statisticians of the British Commonwealth were held first in London in 1920 and then in Ottawa in 1935. The Third Conference was held in Canberra from 12th to 23rd November, 1951. Delegates were present from Australia, Canada, Ceylon, India, New Zealand and the United Kingdom (including a representative of the Colonial Office). Ireland, the Commonwealth Economic Committee and the United Nations were represented by observers, and the Australian State Government Statisticians were also present. A summary of the activities of the conference may be found in Official Year Book No. 39, p. 1320.

# § 4. Select List of Works about, or published in, Australia.

(Compiled by the Librarian of the Commonwealth National Library.)

This list aims to meet the growing need, in Australia as publishing develops, and overseas as interest in Australia widens, for an authoritative current reference and reading list of books dealing with Australia or of Australian authorship, wherever published.

Australians will find these books in the National Library and in their State Libraries as well as in leading bookshops. Oversea readers may have access to them in the collections which the National Library maintains at 44 Australian posts abroad. They will be found also, increasingly, in leading libraries and bookshops in many countries. In the United States, for example, Australian books are included in the Farmington Plan in which 62 libraries and research institutions co-operate to ensure that at least one copy of all material published in any part of the world and likely to be required for a serious purpose will be available promptly somewhere in the country. Under a similar arrangement, Australian books are supplied to the National Library of Canada.

The list is classified broadly by subject and under each heading there is first a list of the principal standard books still in print, then a list of selected books and official publications (excluding annual reports) published in the last few years. To ensure that, so far as is

possible, an evenness of standard is maintained in the compilation of the list, the advice of a representative range of experts in the various subject fields has been sought. Where known the retail price in the country of publication is given, but this is subject to fluctuation.

The Library also issues a series of select lists which include:—Australian Public Affairs Information Service (monthly and, since 1955, cumulated annually); a subject index of material in new books, pamphlets, current periodicals and government publications from Englishspeaking countries, with an important bearing on investigations into Australian political. economic, cultural and social affairs; and the following full bibliographies.

Australian Government Publications, a monthly list covering both the Commonwealth and the States;

Books published in Australia, a monthly list of books supplied to the National Library under copyright.

The two last-mentioned publications are cumulated annually as the Annual Catalogue of Australian Publications which includes also a list of books published overseas of Australian interest or by authors resident in Australia. a select list of the more important Australian periodical and serial publications and a directory of publishers.

# DIARY OF PRINCIPAL ECONOMIC EVENTS, 1954 to 1957.

The principal economic events for the years 1931 to 1938 were shown on pp. 968 to 977 of Official Year Book No. 33, those for the years 1939 to 1944 on pp. 1129 to 1141 of Official Year Book No. 36, those for the years 1945 to 1948 on pp. 1235 to 1245 of Official Year Book No. 37, while those for the years 1949 to 1953 were covered by Official Year Books Nos. 38 to 40. For reasons of space some of the items originally shown for the years 1954 and 1955 have been omitted from this issue. Previous issues should be consulted for additional information for these years.

#### 1954.

Net migration increased in 1954, but was still well below the level of the preceding four years. Total employment (excluding rural and household domestic employment and the defence forces) rose to 2,701,000 in December, 1954. Numbers on unemployment benefit fell to 2,975 in November, 1954. Production of pig-iron and steel was practically the same as in 1953, but there were rises in the production of coal, gas and electricity, and many basic materials. Production of domestic electrical appliances and of many textile and clothing lines also increased. More new houses were commenced in 1954 than in 1953, but the number completed was slightly below the 1953 figure. Meat production increased slightly in 1954. The wheat acreage for 1954-55 was about the same as in 1952-53, but both the total crop and the average yield were below the levels of the previous two seasons. The 1954-55 wool clip was practically the same as the record 1952-53 clip. In April, there was a further relaxation of import restrictions on trade with countries other than dollar area and Japan, and imports were substantially higher than in 1953. A fall in wool and wheat prices and a lower volume of wheat exports contributed to a decline in exports. In the second half of 1954, there was a debit balance of £108 million in the balance of payments on current account. Quotas were re-imposed on some imports in October. Average earnings per employee rose by 4 per cent. Retail and wholesale prices, however, showed practically no change. Bank interest rates were not altered during the year. The three Commonwealth loans were issued at 4½ per cent. for long dated bonds and most local and semi-governmental loans at 4½ per cent.

7th January.—Reciprocal agreement with the United Kingdom on Social Services became operative.

8th-15th January.—Conference of British Finance Ministers held in Sydney.

19th January.—It was announced that Australia would sign the declaration extending until 30th June, 1955, the schedule of tariff concessions under the General Agreement on Tariffs and Trade.

25th February.—Interim decision by Full Arbitration Court on claim by Metal Trades employees for increased margins left rates of pay unchanged (see 5th November, 1954).

4th March.—Loan of \$54 million from the International Bank, to be used to import capital goods and equipment.

1st April.—United Kingdom Free and Assisted Passages Migration Agreement with Australia renewed for another year.

9th April.—Contract for £25 million let for the construction of the Eucumbene-Tumut tunnel and other works in the Snowy Mountains Scheme.

16th April.—Revision of the 15 year marketing agreement for Australian meat sold in the United Kingdom, occasioned by the change over from bulk purchasing to private trading.

27th April.—£3.9 million contract let for building the Upper Tumut power station of the Snowy Mountains Scheme.

4th June.—Queensland Industrial Court increased margins to workers.

28th June.—Australia signed International Tin Agreement as a consuming country.

30th June.—Loan Council approved borrowing programme of £290 million for 1954-55 comprising Government loans, £200 million, Semi-Governmental loans, £75 million, and Local Government loans, £15 million. Tax reimbursement Grants to States to be £150 million for 1954-55. Australian population census taken.

1st July.—Forecast that by 31st July stocks of wheat carried over by the four major producing countries will total 1,601 million bushels compared with 1,061 million in 1953.

13th July.—Heavy rain and gales caused damage to 200 miles of coastal area from Queensland to Northern New South Wales with floods in river districts of S.E. Queensland and Northern New South Wales.

4th August.—£1,800,000 hydro-electric project approved for Warragamba Dam (New South Wales).

13th August.—Wool sold in Australia in 1953-54 season realized £390.7 million.

18th August.—Commonwealth Budget for 1954-55 introduced into the House of Representatives. (For details see Official Year Book No. 42, p. 1156.)

31st August.—New South Wales Government granted £125,000 to New South Wales University of Technology for research in nuclear engineering (previously £50,000 was granted to the University of Sydney for research into nuclear physics).

20th September.—Mechanical extraction of pillar coal commenced in some New South Wales mines.

30th September.—New import restrictions announced on imported materials and equipment (goods on which quota restrictions were abandoned in April, 1954), on the basis of 100 per cent. of imports in the base year, 1950-51.

5th October.—National Joint Production Council formed representing management and workers.

29th October.—Tariff changes increased tariffs on certain imports and increased protection to eight Australian industries. Government bounties on rayon yarn in Australia and scutched flax fibre produced from flax grown in Australia were announced.

3rd November.-Bounty paid on sulphuric acid as from 1st July, 1954.

5th November.—Commonwealth Arbitration Court granted higher margins for skilled workers in a judgment intended to be a guide to other wage fixing authorities.

19th November.—Privy Council ruled New South Wales State Transport (Co-ordination) Act invalid insofar as it applied to interstate transport.

14th December.—£13 million lag in cash section of Commonwealth Government £125 million cash and conversion loan.

15th December.—Increased margins for coal industry employees, applying in New South Wales, Queensland, Victoria and Tasmania, announced by Coal Industry Tribunal.

31st December.—Governor of Commonwealth Bank announced an increase of 5s. per. £100 in rates of interest on bank fixed deposits and savings bank deposits.

#### 1955.

When the Treasurer presented the budget in August he said that there were "unmistakable signs of active inflation". A boom had been getting under way in consumer spending and private investment, and labour shortages had become general. No concessions in taxation were made in the budget. During the year, several measures were introduced to check inflation. In July, the Commonwealth Bank directed the trading banks to restrict new loans which would increase the scale of hire purchase. Towards the end of the year, the Prime Minister held a series of conferences with representatives of financial and industrial institutions to enlist their co-operation in checking inflation. Hire purchase and finance companies agreed to restrict the increase in their loans to 10 per cent, above the level at September, 1955. The value of exports was slightly higher than in 1954 but the value of imports was much greater than in 1954 and the balance of payments deficit was therefore greater in 1955. Import restrictions were made more severe in April and again in September. Margins for skill were adjusted upwards in many occupations. Nominal wages rose throughout the year, and by December, 1955, were  $3\frac{1}{2}$  per cent. higher than in December, 1954. Over the same period, average earnings rose by 7 per cent. and retail prices by  $4\frac{1}{2}$  per cent. Employment rose steadily during the year, and the number of persons receiving unemployment benefit fell to the lowest level since 1951. Investment by private businesses in 1955 was well above the level of 1954. There were 78,000 new houses completed in 1955, a

higher number than in any post-war year except 1952. Secondary production was generally maintained at the high level of the previous year, and output of primary products increased. The wheat acreage in 1955-56 was slightly less than in any other post-war year, but the average yield was the highest on record. The total crop was therefore nearly as high as in 1953-54. The production of wool in 1955-56 was a record at 1,410 million pounds. Net immigration during 1955 was 95,000 compared with 68,000 in 1954 and 43,000 in 1953.

1st January.—Price control in Victoria ended after 14 years. Increased Bank Deposit interest rates.

12th January.—Harbour at Cockburn Sound, Western Australia, opened to provide shipping facilities for Kwinana.

1st February.—Kwinana £40 million oil refinery began operations.

4th February.—Arrangements completed for issue of £6 million public loan in Switzerland to Commonwealth Government.

7th February.—Australia's first aluminium plant, at Bell Bay, Tasmania, began production.

22nd February.—Guthega power station in operation, first power generated from Snowy Mountains Hydro-electric scheme being fed into New South Wales electricity system.

24th February.—Disastrous floods cover large areas of central west New South Wales and Hunter Valley.

18th March.—Government plan announced for sale to tenants of houses built under Commonwealth and State Housing Agreement. Maximum advance to be £2,750 repayable over 45 years at 4½ per cent. interest, minimum deposit 5 per cent. of first £2,000 of sale price, repayments of principal included in rent previously paid to be credited as part of deposit.

19th March.—Details announced of new 15 year, 54½ million dollar loan from International Bank of Reconstruction to Australia.

21st March.—New import restrictions imposed, cutting Australia's rate of imports by about 20 per cent.

23rd March.—First commercial shipment of Australian uranium oxide, worth about £200,000, dispatched to United States.

15th April.—All price control ended in New South Wales.

20th April.—Broken Hill Pty. Company announced plans for spending £67 million on plant in next five years at Newcastle and Port Kembla.

12th May.—Increase of interest rates for home purchase and building finance from 5 per cent. to 5½ per cent. announced by most of major life assurance companies in Australia.

16th May.—Commonwealth Government to build ammunition filling and assembly factory at St. Marys, near Sydney. (Opened 17th December, 1957.)

5th June.—Australia's 1955-56 immigration programme to be increased to basic intake of 125,000 migrants (including 70,000 under assisted-passages scheme).

10th June.—Full High Court in reserved judgment declared invalid recent New South Wales legislation imposing a road tax on interstate road hauliers.

19th June.—Commonwealth abandons control of tea.

21st-23rd June.—At annual Loan Council meeting, the Council, by majority vote, approved borrowing programme of £193,500,000 for public works in 1955-56. Prime Minister announced that Commonwealth Government would grant States £157 million taxation reimbursements for 1955-56.

19th July.—Decision by Federal Cabinet to cut subsidy on local consumption of butter and cheese, followed by increase in butter and cheese prices. General Motors-Holden's announced £21.6 million expansion programme for plants throughout Australia.

26th-28th July.—Price control re-imposed in New South Wales and South Australia.

22nd August.—First International Wool Textile Research Conference to be held in Australia opened in Sydney.

23rd August.—Contract system of shipping Australian wool exports to Europe and United Kingdom broke down as British and European shipowners refused to renew contracts at less than 10 per cent. increase in freight rates.

24th August.—Commonwealth Budget for 1955-56 introduced into the House of Representatives. (For details see Official Year Book, No. 43, page 1105.)

26th August.—Overall prices of Australian iron and steel raised by 5 per cent.

30th August.—New £30 million hot-strip steel mill of Australian Iron and Steel Ltd. at Port Kembla (N.S.W.) opened by the Prime Minister.

12th-21st September.—Prime Minister called series of conferences with representatives of trading banks, hire purchase companies, and trade-union leaders to discuss financial aspects of Australian economic problems and suggested remedies. Fresh tightening of bank credit.

1st October.—Increase of  $7\frac{1}{2}$  per cent. in shipping freights for Australian exports to most oversea countries became effective.

6th October.—15 million dollars (£A6.8 million) loan successfully negotiated in Canada by Australian Government.

4th November.—Automatic quarterly basic wage adjustments reintroduced in New South Wales.

18th November.—Queensland and New South Wales coal producers combined to form Australian Coal Association with main object of trying to find new and improved ways of producing, preparing and marketing coal.

22nd November.—For the first time in history, brown coal coke was successfully used at a Richmond (Vic.) foundry to smelt iron commercially.

26th November.—Reduction of about 10 per cent. in Queensland shearing rates under the State Shearing industry award ordered in Industrial Court judgment of 25th November.

17th December.—Commonwealth £30 million cash loan undersubscribed by £2 million.

### 1956.

In order to arrest inflationary tendencies and the decline in international reserves additional measures were found necessary early in 1956. Despite import restrictions, oversea balances had fallen by £55 million in the six months ended December, 1955. New taxation measures passed to provide a brake on consumption and investment spending. Taxation increased on motor vehicles and petrol, higher customs and excise duties on beer, spirits, tobacco, cigars and cigarettes, increased company taxation and increased sales tax on less essential goods. Banks agreed to raise interest rates on fixed deposits by 1 per cent. and overdraft rate from 5 per cent. to an average of 5½ per cent. In June, new import cuts estimated at £40 million a year were imposed on motor vehicles and chassis. Oversea reserves had fallen by a further £18 million in the six months ended June, 1956. Imports fell from £863 million in 1955 to £765 million in 1956 and exports rose from £778 million to £840 million. Exports of wool were £23 million higher at £377 million and exports of wheat and flour £19 million higher at £84 million. Oversea reserves at December, 1956 stood at £425 million, £70 million higher than in June, 1956.

Production of wool in 1955-56 was 1,410 million pounds. Wheat production in 1955-56 was 195 million bushels. Preliminary estimates of the total value of production of primary industries suggested an increase of 8 or 9 per cent. in 1956-57.

Secondary production generally was at the same high level as in 1955.

Although total civil employment (excluding rural and household domestic employees) was somewhat higher in the year, the number of persons receiving unemployment benefits was over 13,000 at the end of 1956, compared with 3,245 at the end of 1955. Nominal wages were nearly 5 per cent. higher, the main increase occurring in June, when an increase of 10s. per week in the Commonwealth basic wage was granted by the Full Arbitration Court.

Although there was little change in gross private investment on fixed capital equipment during 1956, significant changes occurred in some of the components of investment. Private dwelling construction was about £10 million lower, the value of motor cars purchased was about £15 million lower, investment in commercial vehicles and other capital equipment was at much the same level and other new building and construction was about £20 million higher than in 1955.

5th January.—Rent control lifted in Tasmania.

18th January.—Federal Executive Council empowered all trading banks to operate Savings Banks on conditions broadly the same as those governing State Savings Banks. (Bank of New South Wales Savings Bank Limited and Australia and New Zealand Savings Bank Limited opened 19th January, C.B.C. Savings Bank Limited opened 16th July, 1956.)

23rd January.—General Australian waterside strike over pay rates and working conditions for waterside workers. Queensland floods destroyed tobacco crops in South-West, floodwaters created widespread havoc, heavy losses of sheep.

31st January.—Commonwealth Treasury commenced publication of Quarterly Economic Review. Eight Australian University economists urged interest and tax increases "to avoid crisis".

1st February.—Loan Council meeting in Canberra decided not to alter the £190 million programme for State public works in this financial year. It agreed also to increase the interest rate on public loans by semi-governmental authorities from  $4\frac{3}{4}$  to  $4\frac{7}{8}$  per cent. but decided against making any change in the Commonwealth bond rate.

14th February,—Australian Council of Trades Unions began presentation of a case to Arbitration Court for review of the basic wage.

15th February.—Waterside workers resumed work in all Australian ports after 23 days strike (see 23rd January).

17th February.—Conciliation Commissioner reduced award wages for shearers in all States except Queensland by 5 per cent. from 5th March (see also 26th November, 1955).

20th February.—Commonwealth Government set up Advisory Panel of experts to advise Economic Committee of Commonwealth Ministry on economic problems.

24th February.—Federal Council of Australian Workers' Union called on shearers and other pastoral workers not to work under new rates fixed by Conciliation Commissioner (see 17th February).

1st March.—British Atomic Energy Commission contracted to buy more than £40 million worth of uranium oxide from Mary Kathleen leases near Mt. Isa.

2nd March.—Majority decision of Full High Court ruled that Arbitration Court had no power to impose penalties on those disobeying its orders.

5th March.—Improvements to working of the arbitration system discussed at roundtable conference by Ministry of Labour Advisory Council which included leading tradeunionists, employer's organizations and Government experts.

14th March.—Australia's first electric main railway line, 98 mile section from Melbourne to Traralgon, Gippsland, opened.

The Prime Minister, in a statement to the House of Representatives, announced a number of new economic measures proposed by the Government to achieve economic stability. These included increases in sales tax on motor vehicles, jewellery and other goods of a less essential character, increases in customs and excise duties on petrol, beer, spirits, tobacco, cigarettes and cigars and increased income tax on companies. In addition, bank overdraft rates would be permitted to rise from 5 per cent. to an average of 5½ per cent. with a maximum of 6 per cent, and bank fixed deposit rates would be increased by 1 per cent.

21st March.—Australian Loan Council approved Commonwealth proposal that interest rate on new semi-governmental loans be raised. Three new loans issued at rates of 5½ per cent. and 5½ per cent.

27th March.—Announced that banks would be free to fix their own rates for individual loans within the limits announced by the Prime Minister on 14th March (see above).

30th March.—Agreement completed between Australia and Netherlands under which 75,000 Dutch settlers would come to Australia in next five years.

4th April.—Rural and Industries Bank of Western Australia opened savings bank department.

7th April.—Commonwealth Bank increased rates of interest payable on savings bank accounts by one-quarter per cent. Other savings banks followed suit.

19th April.—Bill introduced in Commonwealth Parliament to set up Export Payments Insurance Corporation. (Act assented to 19th June.)

21st April.—Extensive deposits of iron ore discovered near Nowa Nowa, 215 miles east of Melbourne.

27th April.—New agreement finalized by United Nations Wheat Conference; to come into force on 1st August, for a period of three years.

24th May.—Prime Minister in first of series of economic surveys said that the Australian economy faced long-term problems.

25th May.—Full Arbitration Court announced 10s. increase in Commonwealth basic wage and restated decision not to make automatic quarterly adjustments.

29th May.—Bill introduced in Commonwealth Parliament to replace Stevedoring Industry Board by Australian Stevedoring Industry Authority. (Act assented to 30th June.)

Announced that, as part of Commonwealth Government's world-wide trade promotion drive, Australian trade missions would visit New Zealand, India, Ceylon, Japan, Pakistan, the Middle East and, possibly, the Philippines to try to boost Australian exports.

19th June.—Announcement made of successful conclusion of negotiations for an Australian loan of \$25 million to be raised in New York.

21st June.—Executive of Australian Council of Trades Unions, at special congress in Melbourne, empowered to take nation-wide strike action against Stevedoring Industry Act (see 29th May).

24th June.—Biggest floods for 70 years on Darling and Murrumbidgee Rivers cover vast areas of country in south-west New South Wales and also affect northern Victoria.

26th-28th June.—At the meeting of the Loan Council, the Commonwealth rejected proposals by the States for a substantially increased loan programme to finance State works during 1956-57. With the Commonwealth dissenting, the Loan Council approved a governmental borrowing programme of £210,000,000 for 1956-57. This included £35,532,000 for the Commonwealth-State Housing Agreement. However, the Commonwealth indicated that it was prepared to vote for a programme of £190,000,000 and would review the position after the first six months of the financial year to determine whether further assistance could be provided towards financing the Loan Council programme. In addition the Council approved a borrowing programme of £80,250,000 for semi-governmental and local authorities.

28th June.—At the Premiers Conference, the Acting Prime Minister and Treasurer, Sir Arthur Fadden, announced that the Commonwealth Government would make a supplementary grant to the States of £19,400,000. This would bring the total of the tax reimbursement grant and the supplementary grant to £173,000,000 or £16,000,000 more than similar grants in 1955-56.

Acting Prime Minister announced new £40 million a year import cuts to reduce imports of fully assembled motor vehicles by 50 per cent. and unassembled chassis by 30 per cent. Dollar licences for import of motor vehicles from North America reduced by 30 per cent.

30th June.—Commonwealth budget results for 1955-56 showed surplus of £61.6 million.

10th July.—By decision of Privy Council, New South Wales Government held liable for repayment of £1 million to interstate road hauliers in respect of licence fees and mileage charges paid since July, 1952.

12th July.—Every road between Melbourne and Sydney blocked by floods, mud, or snow.

13th July.—Tasmanian wages board decided to suspend quarterly adjustments of State basic wage after 16s. adjustment made for June quarter.

1st August.—New International Wheat Agreement commenced to operate. Australian quota 30 million bushels out of total of 303 million bushels (see Chapter XXII., p. 867).

14th August.—New Conciliation and Arbitration Act became effective. (See Chapter VI. page 158.)

16th August.—Special Premiers' Conference. Commonwealth asked States to freeze basic wage but failed to reach agreement.

22nd August.—Large deposit of bauxite discovered on west coast of Cape York Peninsula.

29th August.—The 1956-57 Budget was introduced into the New South Wales Legislative Assembly. During 1955-56, the transactions of the Consolidated Revenue Fund, Railways, Tram and Omnibus Service and Sydney Harbour Services resulted in an overall deficit of £6,800,000. After providing for debt charges, there were deficits of £7,600,000 on the Railways and £4,100,000 on Transport Services. The 1956-57 Budget provided for total expenditure of £223,078,000. Estimated revenue was £223,115,000. This would leave a small overall surplus of £37,000. After providing for debt charges, it was estimated that there would be deficits of £3,900,000 on the Railways and £1,800,000 on Tram and Omnibus services. New taxation proposals were the introduction of a land tax, a tax on poker machines and increased stamp duty on hire purchase agreements.

30th August.—Commonwealth Budget for 1956-57 introduced into the House of Representatives providing for an estimated expenditure of £1,121,400,000, revenue of

£1,230,200,000 and an estimated surplus of £108,800,000 to be paid to the Loan Consolidation and Investment Reserve. The more important items of expenditure were—Defence Services, £190,000,000; War and Repatriation Services, £123,100,000; National Welfare Fund, £226,600,000; Payments to the States, £243,800,000 and Capital Works and Services, £109,700,000.

Revenue expected from the main sources was Income Taxes £611,700,000; Excise Duties £212,200,000; Sales Tax, £130,000,000 and Customs Duties, £50,000,000.

The budget proposals provided for increases in some widows and invalid pensions, some minor concessions in income taxes, the imposition of customs and excise duties on cathode ray tubes used in television sets, and increases in broadcast listeners' fees and some postal, telegraph and telephone charges.

11th September.—The 1956-57 Budget was introduced into the Victorian Legislative Assembly. During 1955-56, there was a deficit of £3,200,000. Revenue during the year totalled £123,200,000 and expenditure was £126,400,000. The Budget provided for expenditure of £135,788,000 in 1956-57. Estimated revenue was £133,343,000. This would result in a deficit of £2,445,000. This included an estimated Railways deficit of £5,600,000, an increase of £1,400,000 over the deficit in the previous year. Additional revenue was to be obtained by increasing entertainments tax, motor registration fees and stamp duty on cheques and receipts and by imposing a stamp duty on hire purchase agreements.

16th September.—Public première of television in Sydney, first regular television transmissions began.

18th September.—The 1956-57 Budget was introduced into the South Australian Legislative Assembly. In 1955-56, the transactions of the Consolidated Revenue Fund resulted in a deficit of £1,400,000. Revenue was £59,400,000 and expenditure was £60,800,000. The 1956-57 Budget proposals provided for expenditure of £65,982,000 and estimated revenue of £65,129,000. This would result in a deficit of £853,000. The additional revenue would be obtained from increased collections from land tax due to the reassessment of the values of all land, an increase in the rate of stamp duty on cheques, increases of the liquor licence fees and some other statutory fees and increased railway freights.

20th September.—The 1956-57 Budget was introduced into the Queensland Parliament. In 1955-56, Consolidated Revenue Fund receipts were £75,700,000 and expenditure, £77,400,000. This resulted in a deficit of £1,700,000. The 1956-57 Budget provided for an expenditure of £84,760,000 from the Consolidated Revenue Fund. Estimated revenue was £84,775,000. This would leave a small surplus of £15,000. Most of the increased revenue will be provided by increased railway charges which operated from 1st August 1956.

28th September.- All price controls suspended in New South Wales.

4th October.—Minister for Trade stated that United Kingdom asked Government for its reactions to suggestion that United Kingdom should join in partial free trade area in Western Europe.

10th October. Victorian Legislative Assembly passed legislation to abolish cost of living adjustments for State employees.

11th October. Prime Minister announced signing of new five-year Sugar Agreement between Commonwealth and Queensland governments.

12th October.—Queensland State Industrial Court granted an interim shearing award for payment of £7 11s. per 100 sheep shorn. This was accepted by shearers and 10 months old industrial dispute ended.

19th October.—Rise in "C" series index resulted in 11s. increase in New South Wales basic wage.

26th October.—Eight metal trades unions, backed by A.C.T.U., apply to newly formed Commonwealth Industrial Commission for basic wage increases and restoration of quarterly cost-of-living adjustments.

Details released of plan for development of 1½ million acres of land near Esperance, Western Australia, by the American Chase Syndicate.

31st October.—The Tasmanian Budget for 1956-57 was tabled in the House of Assembly. During 1955-57, revenue was £18,000,000 and expenditure £17,900,000. This resulted in a surplus of £100,000. The 1956-57 Budget provided for expenditure of £20,283,000. It was estimated that receipts will be £19,233,000. This would result in a deficit of £1,050,000. Provision was made in the budget proposals for an increase in stamp duty on cheques and a stamp duty on hire purchase agreements.

8th November.—The West Australian Budget for 1956-57 was introduced. In 1955-56, there was a deficit of £1,800,000. Revenue during the year was £49,600,000 and expenditure £51,400,000. The Budget proposals provided for an expenditure of £54,900,000. Estimated revenue was £53,500,000. This would result in a deficit of £1,400,000. Increased land tax and probate duties were announced.

12th November.—Australia and United Kingdom agreed on comprehensive trade pact to replace 24-year-old Ottawa Agreement.

22nd November.—Commonwealth Treasurer announced that Minister for External Affairs had signed loan agreements on behalf of Commonwealth for a total of \$27 million (£A12.1 million).

29th November.—First gas from brown-coal gasification plant at Morwell (Victoria) reached Melbourne through 103 mile high-pressure pipeline.

4th December.—World Bank announced \$50 million loan to Australia for development of agriculture, transport, industry and mining.

#### 1957.

Throughout 1957, exports of merchandise continued at the high level established in the later months of 1956, and for 1956-57 reached a total of £973 million (£203 million more than in 1955-56). Although exports during the second half of 1957, £453 million, were above those for the same period in 1956, there was, during the last three months, a tendency for the level to fall off in comparison with 1956. Imports during the early months of the year continued at the low level established following the restrictions imposed in 1956; but, in the later months of the year, rose considerably following an easing of restrictions in the second quarter. Imports of merchandise during the year 1956-57 totalled £717 million, £102 million less than the total for 1955-56. For the second half of the year imports were £393 million compared with £358 million in each of the previous two six monthly periods. Australia's international reserves rose by £142 million to £567 million during the first six months of the year and by a further £23 million to £590 million during the remainder of the year.

year and by a further £23 million to £590 million during the remainder of the year.

Internal trade was at a higher level than in 1956. The value of retail sales of goods, other than motor vehicles, petrol, etc., increased by approximately 5 per cent over the 1956 level. Sales of motor vehicles, parts, petrol, etc. which received a set back in 1956 as a result of the increased taxes imposed in March, 1956 recovered and sales of these commodities were approximately 7½ per cent above the 1956 level. Sales under hire purchase agreements were also higher than in 1956 and, as a result, balances outstanding increased by £32.2 million compared with an increase of £19.1 million in 1956.

Drought conditions in the Eastern States during 1957 considerably reduced the production of many primary products and preliminary estimates indicate that the total gross value of primary production in 1957-58 will be about 10 per cent. below the 1956-57 level. The wheat crop in 1956-57 134.5 million bushels, was the lowest since 1946-47 but, as a result of the drought conditions in the Eastern States in 1957, it is estimated that the total wheat crop in 1957-58 would be lower still at 96 million bushels. Wool production in 1956-57 was 1,564 million lbs. and with prices about 25 per cent. above those for the previous year was the main factor contributing to the high value of exports. Production of wool in 1957-58 is estimated to be about 1,426 million lbs. with prices about 15 to 20 per cent. below the 1956-57 level.

During the year secondary industries continued to expand. Employment in factories rose during the year and there were increases in output of most commodities for which information is available. There was, however, a fall in the production of some building materials during the early part of the year, but in the second half of the year, this position improved.

Employment in the building and construction, mining and quarrying and transport industries fell during the year by 13,000, 3,700 and 2,600 respectively. These falls, however, were offset to some extent by increases in employment in factories and in the commercial and professional fields. Overall there was a small increase of 9,000 in the number of civil employees (excluding rural and household domestic employees). This increase, however, was less than the increase in the number of persons available for employment and the numbers receiving unemployment benefit increased from 13,000 at the end of 1956 to 26,000 at the end of 1957.

Average nominal wage rates for adult males rose approximately 2 per cent. The main increase occurred in the second quarter following an increase of 10s. per week in the Commonwealth basic wage. Average earnings for employees (male units) rose by about 3 per cent. over the year.

1st February.—Shipping freights to the United Kingdom and European countries rose by 14 per cent.

7th February.—Consolidated Zinc Corporation Ltd. announced £8 million construction programme for a zinc smelter and the production of sulphuric acid and superphosphate at Cockle Creek (New South Wales).

1st March.—Commonwealth Savings Bank increased its maximum housing loan from £1,750 to £2,500.

20th March.—Privy Council decided that the Victorian Act providing for long service leave—Labour and Industry (Long Service Leave), 13th December, 1955,—applied to workers employed under a Commonwealth award. Legal opinion was that it would also apply to such workers in New South Wales, Queensland and Tasmania.

2nd April.—Details of easing of import restrictions released. The ceiling for imports in 1957-58 was raised to £775 million but the modified restrictions will operate from 1st April, the start of the quota year.

16th April.—First regular generation began of electricity from new hydro-power station at Hume Dam on River Murray.

29th April.—Commonwealth Conciliation and Arbitration Commission announced 10s. increase in Commonwealth Basic Wage to operate from 15th May.

New South Wales government declared eight districts of the State drought areas.

9th May.—Commonwealth Treasurer tabled Annual Economic Survey in House of Representatives. It indicated a period of continuing prosperity and progress for Australia but no easing of the present restrictions on bank lending.

23rd May.—Duties reduced on over 800 items imported from foreign countries.

24th May.—Australian Loan Council approved a government borrowing programme of £200 million for financial year 1957-58. This included £166,840,000 for State Works and £33,160,000 for housing under the agreement between the Commonwealth and States. In addition borrowing programmes of £89,000,000 were approved for semi-governmental and local authorities.

30th May.—Commonwealth Government passed legislation imposing a levy on wheat-growers to finance more wheat research.

4th June.—Consolidated Zinc Corporation announced a major undertaking in the development of Weipa Bauxite on Cape York peninsula.

22nd June.—Acting Prime Minister officially closed Adaminaby Dam outlet gates and water started filling the Adaminaby Reservoir.

26th June.—Commonwealth Government decided to grant United States additional air traffic rights from Australia to Antarctica, South Africa, and South-east Asia for reciprocal rights across the United States for Australian Airlines flying to Europe.

2nd July.—High Court ruled that interstate vehicles could not be compelled to register in New South Wales.

6th July.—Agreement on Commerce between Japan and Australia signed in Tokyo by Japanese Prime Minister and Minister for Foreign Affairs and Australian Minister for Trade, on "most favoured nation" basis.

5th August.—First plant in Australia to produce tinplate, built for flat products division of B.H.P. Co. Ltd. at Port Kembla, was officially opened.

15th August.—British migrants enabled to claim pensions as soon as they arrive in Australia. Previously they had waiting period of 5 years for invalid pensions and 20 years for age pensions.

23rd August.—Full High Court upheld validity of Uniform Taxation Legislation but declared invalid the section giving priority to the Commonwealth.

24th August.—Ansett Transport Industries Ltd. purchased A.N.A. as a going concern for £3.3 million.

25th August.—Of growers who exercised their rights to vote, four out of five voted in favour of the Commonwealth Government's stabilization offer for currants and sultanas.

31st August.—The full High Court upheld the validity of a Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads.

3rd September.—Commonwealth Budget for 1957-58 introduced into House of Representatives. In 1956-57, receipts of the Consolidated Revenue Fund (excluding self balancing items and balances transferred from Trust Accounts) were £1,234,400,000 or £105,700,000 more than in 1955-56. The main items of revenue were (1955-56 receipts shown in parentheses) Income Taxes £620,300,000 (£574,000,000); Excise Duties £217,400,000 (£168,300,000); Customs Duties £68,600,000 (£87,500,000) and Sales Tax £125,800,000 (£110,000,000), Expenditure from the Consolidated Revenue Fund (excluding self balancing items and the amount transferred to the Loan Consolidation and Investment Reserve) amounted to £1,122,800,000. The main items were (1955-56 expenditure shown in parentheses)—Payments to or for the States, £244,100,000 (£220,500,000); Social and Health Services, £223,900,000 (£214,900,000); Defence Services, £188,500,000 (£190,700,000); War and Repatriation Services, £125,700,000 (£124,500,000) and Capital Works and Services, £107,800,000 (£101,900,000). In addition £194,800,000 (£61,600,000 in 1955-56) was provided for the Loan Consolidation and Investment Reserve. Of this amount £111,600,000 was provided from current revenue and £83,200,000 from trust account balances not required.

The amount of loan money required was £192,000,000 for the approved Loan Council programme for State works and housing and £8,000,000 for War Service Land Settlement, a total of £200,000,000. This was obtained from the following sources—Public loans in Australia £97,700,000; State domestic raisings £1,100,000; New York Loan, £1,300,000; Commonwealth sources, £99,000,000 and amount brought forward, £900,000. External Treasury Bills outstanding were reduced by £15,000,000 during the year.

The Budget for 1957-58 provided for an estimated expenditure from the Consolidated Revenue Fund of £1,321,700,000 (excluding self balancing items). This was £87,300,000 more than in 1956-57. The more important items of expenditure proposed were (1956-57 actual expenditure shown in parentheses)—Payments to or for the States £266,700,000 (£244,100,000); Social and Health Services, £243,600,000 (£223,900,000), Defence Services, £190,000,000 (£188,500,000); War and Repatriation services £129,100,000 (£125,700,000); Capital works and services, £122,400,000 (£107,800,000) and Loan Consolidation and Investment Reserve, £119,400,000 (£111,600,000).

Revenue from the main taxes was estimated to be (1956-57 revenue shown in parentheses) —Income taxes, £675,100,000 (£620,300,000); Excise Duties, £231,100,000 (£217,400,000); Sales Tax, £129,500,000 (£125,800,000) and Customs Duties, £74,200,000 (£68,600,000).

The budget proposals provided for increases in the rates of social service pensions and allowances, war and service pensions and hospital benefits, additional expenditure on homes for the aged, an increase in the subsidy to gold producers and increases in payments to the States and expenditure on Capital works and services.

Proposals relating to taxation included—Income Taxes—deduction for dependants increased by £13 for all classes, allowances for depreciation calculated on diminishing value increased by 50 per cent. and rate of tax on companies reduced by 6d. in £1.-Sales tax—rates for household furniture and equipment reduced from 10 per cent to 8½ per cent and for handbags, baskets travelling bags, etc. reduced from 25 per cent to 12½ per cent. Customs and Excise Duties—duties of 1s. per gallon on automotive diesel oil and 6½d. per gallon on aviation kerosene were imposed.—Payroll Tax—exemption raised from £6,240 to £10,400 per annum. In addition it was proposed to increase the Air Navigation charges by 10 per cent.

4th September.—1957-58 Budget introduced into the South Australian House of Assembly. In 1956-57 receipts of the Consolidated Revenue Fund were £65,761,000 (£6,359,000 more than in 1955-56). Expenditure was £65,810,000 (£4,977,000 more than in 1955-56). There was thus a deficit of £49,000 for the year. The Budget for 1957-58 provided for expenditure of £71,615,000 (an increase of £5,805,000). Estimated revenue was £71,095,000 (£5,334,000 more than the previous year). This would leave a deficit of £520,000.

5th September.—1957-58 Budget presented to the Tasmanian House of Assembly. In 1956-57 total revenue was £18,959,000 (£948,000 more than in 1955-56). Expenditure amounted to £19,772,000 (£1,876,000 more than in 1955-56) and there was a deficit of £813,000. The Budget for 1957-58 provided for a total expenditure of £21,887,000 (an increase of £2,115,000). Estimated revenue was £20,797,000 (an increase of £1,838,000). This would result in a deficit of £1,090,000. Budget proposals provided for increases in totalizator taxes, registration fees for bookmakers and clerks and in motor drivers licences and motor vehicle fees. Amendments to the Land Tax Act which would extend exemption to a wider range of charitable, educational religious and non-profit organisations, raise the exemption limit for pensioners and reduce the tax payable by certain sporting clubs would be

introduced. The Government also proposed to introduce legislation to permit a licence to be granted to a suitable organisation to conduct football pools and to limit the rates of interest charged by hire purchase companies.

11th September.—1957-58 Budget introduced into the New South Wales Legislative Assembly. During 1956-57, the transactions of the Consolidated Revenue Fund, Railways, Metropolitan and Newcastle transport and Sydney Harbour services resulted in an overall surplus of £129,000. After providing for debt charges, there were deficits of £5,800,000 on the Railways and £1,200,000 on the Metropolitan and Newcastle transport services. The 1957-58 Budget provided for a total expenditure of £232,300,000 (an increase of £8,600,000 over 1956-57).—Estimated revenue was £232,400,000 (£8,600,000 more than 1956-57).

This would leave a small overall surplus of £100,000. After providing for debt charges it was estimated that there would be deficits of £4,800,000 on the railways and £1,600,000 on the Metropolitan and Newcastle transport services.

1957-58 Budget introduced into the Victorian Legislative Assembly. In 1956-57, Revenue was £133,300,000 expenditure £137,600,000 and the overall deficit £4,300,000. The deficit included a deficit on Railways of £5,200,000 and State Coal Mines of £300,000. The Budget for 1957-58 provides for an expenditure of £145 million (£7,400,000 more than in 1956-57). Revenue for the year was expected to be £141,500,000. This will result in a deficit of £3,500,000. It was expected that the deficit on Railways would be £5 million and on State Coal Mines, £300,000.

12th September.—1957-58 Budget presented to the West Australian Legislative Assembly. In 1956-57, total revenue was £54,300,000 (£4,700,000 more than in 1955-56). Expenditure amounted to £56,200,000 (£4,800,000 more than in 1955-56), and there was a deficit of £1,900,000. The 1957-58 Budget provided for an expenditure of £58,600,000 (an increase of £2,300,000). Receipts were estimated at £55,900,000 (£1,600,000 more than in 1956-57). There would thus be a deficit of £2,700,000.

14th September.—New South Wales Government gazetted maximum interest rates and minimum deposits applicable under hire purchase and credit sales agreements prescribed in the Hire Purchase (Amendment) Act.

26th September.—1957-58 Budget introduced into the Queensland Legislative Assembly. In 1956-57, receipts of the Consolidated Revenue Fund amounted to £85,158,000 which was £9,489,000 more than in 1955-56. Total expenditure was £85,143,000 or £7,751,000 more than in 1955-56. There was thus a surplus of £15,000. The 1957-58 Budget provided for an expenditure of £89,958,000 (£4,815,000 more than in 1956-57). This includes a provision of £655,000 to meet accumulated losses on several State business undertakings. Receipts were estimated at £88,455,000 (or £3,297,000 more than in 1956-57). There would thus be a deficit of £1,503,000.

30th September.—Conference of British Commonwealth Finance ministers opened at Mount Tremblant, Canada.

1st October.—Australia entered into double-tax agreement with Canada similar to those existing between Australia and the United Kingdom, and Australia and the United States of America.

17th October.—Applications invited for the grant of licences for commercial television stations in the Brisbane, Adelaide, Perth and Hobart areas.

24th October.—Treasurer introduced new banking legislation in House of Representatives. Bills later defeated in Senate (November, 27th).

4th November.—First shipment of drought-relief wheat left Western Australia for New South Wales and Queensland.

19th November.—Full High Court ruled that all employees on Federal awards were entitled to long service leave. (See also 20th March).

20th November.—Wheat Industry Research Council and Wheat Industry Research Committees appointed.

10th December.—Commonwealth Bank advises trading banks to increase advances.

12th December.—Bill introduced in Victoria to allow cheque facilities to depositors with State Savings Bank of Victoria.

13th December.—Minister for Trade announced that Commonwealth Government had decided to import 1½ million bushels of wheat from Canada into New South Wales.

## CHRONOLOGICAL TABLE.

# CHRONOLOGICAL TABLE OF CHIEF EVENTS SINCE THE ESTABLISHMENT OF SETTLEMENT IN AUSTRALIA.

Notes.—For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

The Government was centralized in Sydney, New South Wales, up to 1825, when Tasmania (Van Diemen's Land) was made a separate colony. In the Table the names now borne by the States serve to

indicate the localities.

- 1788 N.S.W.—Arrival of "First Fleet", under Captain Arthur Phillip, at Botany Bay.

  Land in vicinity being found unsuitable for settlement, the expedition moved to Sydney Cove, and formal possession of the colony was taken on 26th January.

  Formal proclamation of colony and establishment of regular government on 7th February. Branch Settlement established at Norfolk Island. French navigator La Perouse visited Botany Bay. First cultivation of wheat and barley. First grape vines planted.
- 1789 N.S.W.—First wheat harvested at Parramatta, near Sydney. Discovery of Hawkesbury River.
- 1790 N.S.W.—Scarcity of provisions, "Second Fleet" reached Port Jackson. Landing of the New South Wales Corps.
- 1791 N.S.W.—Arrival of "Third Fleet". Territorial seal brought by Governor King.
- 1792 N.S.W.—Visit of Philadelphia, first foreign trading vessel.
- 1793 N.S.W.—First free immigrants arrived in *Bellona*. First Australian church opened at Sydney. Tas.—D'Entrecasteaux discovered the Derwent River.
- 1794 N.S.W.—Establishment of settlement at Hawkesbury River.
- 1795 N.S.W.—Erection of the first printing press at Sydney. Descendants of strayed cattle discovered at Cowpastures, Nepean River.
- 1796 N.S.W.—First Australian theatre opened at Sydney. Coal discovered by fishermen at Newcastle.
- 1797 N.S.W.—Introduction of merino sheep from Cape of Good Hope.
- 1798 Tas.—Insularity of Tasmania proved by voyage of Bass and Flinders.
- 1800 N.S.W.—Hunter River coal-mines worked. First Customs House in Australia established at Sydney. Flinders' charts published.
- 1801 N.S.W.-First colonial manufacture of blankets and linen.
- 1802 Vic.—Discovery of Port Phillip by Lieut. Murray. Q'land.—Discovery of Port Curtis and Port Bowen by Flinders. S.A.—Discovery of Spencer and St. Vincent Gulfs by Flinders.
- 1803 N.S.W.—First Australian wool taken to England by Capt. Macarthur. Issue of The Sydney Gazette, first Australian newspaper. Vic.—Attempted settlement at Port Phillip by Collins. Discovery of Yarra by Grimes. Tas.—First settlement formed at Risdon by Lieut. Bowen.
- 1804 Vic.—Abandonment of settlement at Port Phillip. Tas.—Foundation of settlement at Hobart by Collins.
- 1805 N.S.W.—First extensive sheep farm established at Camden by Capt. Macarthur.
- 1806 N.S.W.—"The great flood" on the Hawkesbury. Shortage of provisions. Tas.—Settlement at Launceston.
- 1807 N.S.W.—First shipment of merchantable wool (245 lb.) to England.
- 1808 N.S.W.—Deposition of Governor Bligh.
- 1809 N.S.W.—Free school established.
- 1810 N.S.W.—Post Office officially established at Sydney.
- 1813 N.S.W.—Passage across Blue Mountains discovered by Wentworth, Lawson and Blaxland. Macquarie River discovered by Evans.

- 1814 N.S.W.—Flinders suggested the name "Australia", instead of "New Holland".

  Creation of Civil Courts.
- 1815 N.S.W.—First steam engine in Australia erected at Sydney. Lachlan River discovered by Evans. Tas.—Arrival of first immigrant ship with free settlers. First export of wheat to Sydney.
- 1816 N.S.W.—Sydney Hospital opened.
- 1817 N.S.W.—Oxley's first exploration inland. Discovery of Lakes George and Bathurst and the Goulburn Plains by Meehan and Hume. First bank in Australia—Bank of New South Wales—opened at Sydney.
- 1818 N.S.W.—Liverpool Plains, and the Peel, Hastings and Manning Rivers discovered by Oxley, and Port Essington (N.T.) by Captain King.
- 1819 N.S.W.—First Savings Bank in Australia opened at Sydney.
- 1820 Tas.—First importation of pure merino sheep from Camden Park (N.S.W.) flocks.
- 1821 Tas.—Establishment of penal settlement at Macquarie Harbour.
- 1822 N.S.W.—Formation of Agricultural Society of New South Wales.
- 1823 N.S.W.—New South Wales Judicature Act passed. Discovery of gold at Fish
  River by Assistant-Surveyor McBrien. Qld.—Brisbane River discovered by
  Oxley.
- 1824 N.S.W.—Constituted a Crown Colony. Executive Council formed. Establishment of Supreme Court at Sydney, and introduction of trial by jury. First Australian Enactment (Currency Bill) passed by the Legislative Council. Proclamation of freedom of the press. First manufacture of sugar. Vic.—Hume and Hovell, journeying overland from Sydney, arrived at Corio Bay. Qld.—Penal settlement founded at Moreton Bay (Brisbane). Fort Dundas Settlement formed at Melville Island, N.T.
- 1825 Tas.—Van Diemen's Land (Tasmania) proclaimed a separate colony. Qld.—Major Lockyer explored Brisbane River to its source and discovered coal.
- 1826 N.S.W.—Settlement in Illawarra District. Vic.—Settlement at Corinella, Western Port, formed by Captain Wright.
- 1827 Qld.—Darling Downs and the Condamine River discovered by Allan Cunningham. W.A.—Military settlement founded at King George's Sound by Major Lockyer. First official claim of British Sovereignty over all Australia.
- 1828 N.S.W.—Second constitution. First Census. Sturt's expedition down Darling River. Gas first used at Sydney. Richmond and Clarence Rivers discovered by Captain Rous. Vic.—Abandonment of settlement at Western Port. Qld.—Cunningham discovered a route from Brisbane to the Darling Downs, and explored Brisbane River.
- 1829 N.S.W.—Sturt's expedition down Murrumbidgee River. W.A.—Foundation of settlement at Swan River. Foundation of Perth.
- 1830 N.S.W.—Sturt, voyaging down Murrumbidgee and Murray Rivers, arrived at Lake Alexandrina. Tas.—Black line organized to force aborigines into Tasman's Peninsula, but failed. Small remnant subsequently (1830 to 1835) persuaded to settle on Flinders Island.
- 1831 N.S.W.—Crown lands first disposed of at auction. Mitchell's explorations north of Liverpool Plains. SS. Surprise, first steamship built in Australia, launched at Sydney. First coal shipped from Australian Agricultural Company's workings at Newcastle, N.S.W. First assisted immigration to N.S.W. S.A.—Wakefield's first colonization committee. W.A.—Appointment of Executive and Legislative Councils.
- 1832 N.S.W.-State Savings Bank established.
- 1833 N.S.W.—First School of Arts established at Sydney.
- 1834 N.S.W.—First settlement at Twofold Bay. Vic.—Settlement formed at Portland Bay by Henty Brothers. S.A.—Formation of the South Australian Association. W.A.—Severe reprisals against Murray River natives at Pinjarrah for continued attacks on settlers.
- 1835 Vic.—John Batman arrived at Port Phillip; foundation of Melbourne.

- 1836 N.S.W.—Mitchell's overland journey from Sydney to Cape Northumberland (S.A.).

  Vic.—Proclamation of Port Phillip district as open for settlement. S.A.—

  Settlement founded at Adelaide under Governor Hindmarsh.
- 1837 N.S.W.—Appointment in London of Select Committee on Transportation. Vic.— First overlanders from Sydney arrived at Port Phillip.
- 1838 N.S.W.—Discontinuance of assignment of convicts. Qld.—Settlement of German missionaries at Brisbane—first free colonists. S.A.—"Overlanding" of cattle from Sydney to Adelaide along the Murray route by Hawden and Bonney. Settlement at Port Essington, Northern Territory, formed by Captain Bremer.
- 1839 N.S.W.—Gold found at Vale of Clwydd by Count Strzelecki. S.A.—Lake Torrens discovered by Eyre. Port Darwin discovered by Captain Stokes. W.A.—Murchison River discovered by Captain Grey.
- 1840 N.S.W.—Abolition of transportation to New South Wales. Land regulations—proceeds of sales to be applied to payments for public works and expenditure on immigration. Vic.—Determination of northern boundary. Qld.—Penal settlement broken up and Moreton Bay district thrown open. S.A.—Eyre began his overland journey from Adelaide to King George's Sound.
- 1841 N.S.W.—Gold found near Hartley. W.A.—Completion of Eyre's overland journey from Adelaide to King George's Sound. New Zealand proclaimed a separate colony.
- 1842 N.S.W.—Incorporation of Sydney. Vic.—Incorporation of Melbourne. S.A.—Discovery of copper at Kapunda.
- 1843 N.S.W.—First Representative Constitution (under Act of 1842). Qld.—Moreton Bay granted legislative representation as a distinct electoral division.
- 1844 Qld.—Leichhardt's expedition to Port Essington (N.T.). S.A.—Sturt's last expedition inland.
- 1845 N.S.W.—Mitchell's explorations on the Barcoo. Qld.—Explorations by Mitchell and Kennedy. S.A.—Discovery of the Burra copper deposits. Sturt discovered Cooper's Creek.
- 1846 N.S.W.—Initiation of meat-preserving. Qld.—Foundation of settlement at Port Curtis. S.A.—Proclamation of North Australia.
- 1847 N.S.W.—Iron-smelting commenced near Berrima. Overland mail established between Sydney and Adelaide. Qld.—Explorations by Leichhardt, Burnett and Kennedy.
- 1848 N.S.W.—National and Denominational School Boards established. Qld.— Leichhardt's last journey. Kennedy speared by the blacks at York Peninsula. Chinese brought in as shepherds.
- 1849 N.S.W.—Indignation of colonists at arrival of convict ship Hashemy. Exodus of population to gold-fields of California. Vic.—Randolph prevented from landing convicts. Qld.—Assignment of Hashemy convicts to squatters on Darling Downs. W.A.—Commencement of transportation to Western Australia.
- 1850 N.S.W.—Final abolition of transportion. Sydney University founded. Vic.—Gold discovered at Clunes. Representative government granted. S.A.—Representative government granted. W.A.—Pearl oysters found by Lieut. Helpman at Saturday Island Shoal. Tas.—Representative government granted.

## APPENDIX.

(Some recent information which has come to hand since the various chapters were sent to press is given hereunder in summarized form. For further or more detailed information, and for the latest available statistics, reference should be made to other publications issued by this Bureau (see pp. 1110-2), notably the Monthly Review of Business Statistics and the Quarterly Summary of Australian Statistics.)

## CHAPTER II.—PHYSIOGRAPHY.

## § 2. Climate and Meteorology of Australia.

Rainfall: Australian Capital Cities, p. 48.—Rainfall recorded in Australian capital cities during 1957 was as follows:—Canberra, 14.41 ins.; Perth, 35.07 ins.; Adelaide, 16.71 ins.; Brisbane, 20.58 ins.; Sydney, 27.13 ins.; Melbourne, 20.86 ins.; Hobart, 28.65 ins.

## CHAPTER III.—GENERAL GOVERNMENT.

## § 2. Parliaments and Elections.

State Parliaments, pp. 69-72.—The fortieth Victorian Parliament was dissolved on 18th April, 1958. The forty-first Parliament was opened on 8th July, 1958. There were no changes in the Ministry.

## § 3. Administration and Legislation.

Governors and State Ministers, pp. 76-78.—(i) South Australia. The Hon. Sir Malcolm McIntosh, K.B.E. resigned as Minister of Works and Minister of Marine on 14th May, 1958. The Hon. G. G. Pearson took over these portfolios, and the Hon. D. N. Brookman succeeded Mr. Pearson as Minister of Agriculture and Minister of Forests.

(ii) Tasmania. The Hon. R. J. D. Turnbull resigned as Treasurer and Minister for Health on 11th June, 1958, and the Hon. R. F. Fagan resigned as Attorney-General on 18th July, 1958. The vacancies were filled by the taking over of the Treasury portfolio by the Premier, the Hon. R. Cosgrove, and the appointment of the Hon. W. A. Neilson as Attorney-General. The Hon. A. C. Atkins was appointed to the portfolio of Minister for Tourist and Immigration and Forests vacated by Mr. Neilson. On 25th August, 1958, the Premier, Mr. Cosgrove resigned and the Deputy Premier the Hon. E. Reece succeeded him.

Leaders of the Opposition, Commonwealth and State Parliaments, p. 78.—Queensland: Mr. J. Donald was elected on the death of Mr. L. A. Wood, but on 18th August, 1958, resigned in favour of the Hon. J. E. Duggan.

## § 5. Cost of Parliamentary Government, p. 82.

The cost of Parliamentary Government, Commonwealth and individual States, for the year 1956-57 was as follows:—

Commonwealth, £2,445,194 (5s. 2d. per head); New South Wales, £769,125 (4s. 3d.); Victoria, £599,355 (4s. 6d.); Queensland, £417,613 (6s. 1d.); South Australia, £324,848 (7s. 7d.); Western Australia, £425,524 (12s. 5d.); Tasmania, £238,824 (14s. 8d.); and total, £5,230,483 (11s. 0d.).

The amounts expended under the major headings for all Governments during 1956-57 were:—Governor-General or Governor, £418,592; Ministry, £309,954, Parliament, £3,754,431; Electoral, £716,547.

## CHAPTER VI.-LABOUR, WAGES AND PRICES.

## A. RETAIL PRICES AND PRICE INDEXES.

## § 4. Tabular Statements of Retail Price Index Numbers.

The Interim Retail Price Index, pp. 150-1.—The following table shows the interim retail price index numbers for the March and June quarters, 1958, for each capital city and for the six capital cities combined, showing separate series for each of the four main groups of items:—

## § 4. Basic Wages in Australia.

Basic Wage Inquiry, 1958.—The inquiry was originated by summons on behalf of several organizations of employees for the undermentioned variations of the current Metal Trades Award of this Commission; namely, by increasing the amounts of basic wage prescribed therein for respective cities, towns and localities to the figure each would have reached had the quarterly adjustment system based on the "C" Series retail price index numbers been retained, plus an addition of 10s. to each basic wage, and by making provision for future adjustment of each of the new amounts at quarterly intervals by the application thereto of the same index numbers.

The inquiry opened on 18th February, 1958, before Kirby C.J., Wright and Gallagher JJ., and the judgment was delivered on 12th May, 1958.

The following is an extract from the transcript of proceedings before the Commonwealth Conciliation and Arbitration Commission on 12th May, 1958.

"The Commission publishes its judgment and reasons for judgment.

In view of its particular importance and the public interest therein, it is appropriate to read now from the judgment this extract in relation to the decision to increase the basic wage.

'The Commission is unanimously of the opinion that the position of the economy regarded as a whole is such as to justify an increase in the basic wage, but a difference of opinion exists as to what the amount of the increase should be.

A majority of the members, namely, the President and Mr. Justice Gallagher, take the view that the serious losses through drought conditions and falls in wool and other exports (which it is at least possible may be due to a world slump of indefinite duration), the necessity of not making labour so costly that there will be an impairment of industry with a consequent increase of unemployment, the necessity of providing for rural industries a respite from significant rises in costs and of so enabling further investment improvement and development, the need for maintaining economic stability, for protecting international reserves from untimely depletion and for not increasing unduly the demand for greater imports, are all factors which combine to make it unsafe and therefore undesirable in the interests of all to grant an increase higher than 5s. at the present time to a basic wage which was increased by the Court in 1956 and the Commission in 1957 to levels which they consider were the highest the economy could then sustain.

Appendix. 1159

Mr. Justice Wright is of the opinion that the conclusions drawn from the material in the appendix [of the judgment] justify a basic wage level substantially higher than that proposed by the majority. That view is influenced to some extent, but by no means entirely, by the fact that unlike the majority he is convinced that the rates of basic wage resulting from the 1956 and 1957 increases might have been higher without unduly straining the capacity of the economy to sustain them.'

The Act provides that the majority opinion prevails.

The decisions of the Commission are:-

- 1. The claim for restoration of automatic quarterly adjustments is refused.
- 2. The claim of the South Australian Government for special treatment is refused.
- 3. The basic wages of adult male employees covered by federal awards will be increased by a uniform amount of 5s. per week.

4. The new rates will come into effect from the beginning of the first pay-period commencing on or after 21st May instant subject to special cases.

In the Metal Trades Award and in awards generally, the basic wage for adult females is prescribed at 75 per cent. of the basic wage for adult males. The result of the increase of the basic wage for adult males by 5s. per week will be to increase the basic wage for adult females in these awards to 75 per cent. of the new basic wage for adult males.

In those awards which do not contain such a provision, but which prescribe basic wages for adult females of a stated amount equal to 75 per cent. of that for adult males, the rate will be re-calculated to give effect to this decision.

In the Metal Trades and in many other awards, the rates for juniors and apprentices of both sexes are prescribed at a percentage of the basic wage for adults, in which cases the existing provisions of the awards will cover proportionate increases for such juniors and apprentices. In awards which do not contain such provisions, applications may be made to the Commission and will be dealt with by the appropriate member of the Commission."

The new basic wage rates of the Commonwealth Conciliation and Arbitration Commission for adult males payable in the capital city of each State from the beginning of the first pay-period commencing on or after 21st May, 1958, are as follows:—Sydney, £13 8s., Melbourne, £13, Brisbane, £12 3s., Adelaide, £12 16s., Perth, £13 1s., Hobart, £13 7s., Six Capital Cities (weighted average), £13 1s.

State Basic Wage Rates, p. 186.—The table below shows the "basic" weekly wage rates of State industrial tribunals, operative in May and August, 1958.

<sup>(</sup>a) Silver, copper, tin, zinc, lead. (b) Beef, lamb, mutton, pork. Guaranteed minimum prices are used when operative. (c) Sultanas, raisins, currants. (d) Cattle hides, calfskins. (e) Where Australian gold has been sold on the oversea premium markets such price has been used in the index. (f) Subject to revision.

### § 20. The Australian Balance of Payments.

The tables in this section show revised balance of payments estimates for the years 1954-55, 1955-56 and 1956-57 and preliminary estimates for 1957-58. In some cases the form of presentation is slightly different from that in Chapter X.—Trade. Further details of balance of payments estimates will be found in *The Australian Balance of Payments*, 1928-29 to 1951-52 and in the mimeographed publication *The Australian Balance of Payments*, 1953-54 to 1957-58.

Current Account, p. 368.—Revised estimates of the balance of payments on current account for the years 1954-55 to 1956-57 and preliminary estimates for 1957-58 are shown in the following table.

# BALANCE OF PAYMENTS ON CURRENT ACCOUNT: AUSTRALIA.

# (£A. million.)

<sup>(</sup>a) Excludes Defence Service vehicles, trailers, road tractors, etc., and dealer's plates. (b) Includes taxis and hire cars. (c) Includes utilities, panel vans, lorries, omnibuses and station wagons. (d) Registration in Victoria is according to purpose of use and not type of vehicle; consequently, motor car registrations are overstated by the inclusion of commercial vehicles registered for private use.

### PART II.—COMMUNICATION.

# A. POSTS; TELEGRAPHS; TELEPHONES; CABLE AND RADIO COMMUNICATION.

### § 5. Cable and Radio Communication.

Radio-communication Stations Authorized, p. 436.—The following radio-communication stations were authorized in Australia and the External Territories at 30th June, 1958:—Transmitting and receiving stations—Fixed—aeronautical, 103 (19); services with other countries, 87 (12); outpost, 1,428 (347); other, 612 (38); Land—aeronautical, 101 (16); land mobile services, 1,736 (nil); harbour mobile services, 68 (nil); coast, 80 (13); special experimental, 128 (nil); Mobile—aeronautical, 389 (nil); land mobile services, 16,455 (84); harbour mobile services, 284 (15); outpost, 715 (nil); ship, 1,833 (139); Amateur, 3,611 (77). In addition, there were 374 fixed and 61 mobile stations for the purpose of receiving only. The figures in parentheses refer to the External Territories and are included in the totals preceding them.

### B. BROADCASTING AND TELEVISION.

#### 8 2. Broadcasting.

Broadcasting Stations, p. 439.—The following table shows the number of broadcasting stations in operation at 30th June, 1958:—

# BROADCASTING STATIONS, 30th JUNE, 1958.

Type of Station.	N.S.W.	Vic.	Q1d.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Papua and New Guinea.	Total.

# CHAPTER XVI.-POPULATION.

# § 7. General Characteristics.

Race.—The term "Race" as used for Census purposes is not synonymous with ethnic group, but is based on geographical rather than ethnological descriptions. The form of inquiry at the 1954 Census was:—" For persons of European Race, wherever born, write 'European'. For non-Europeans, state the race to which they belong, for example, 'Aboriginal', 'Chinese', 'Negro', 'Afghan', etc. If the person is half-caste with one parent of European race, write also 'H.C.', for example 'H.C. Aboriginal', 'H.C. Chinese', etc." The complementary instruction was:—" In the case of a person both of whose parents are non-European but of different races, state the race of that person's father (and do not add 'H.C.')." This form of inquiry and the instruction are identical with those used at the 1947 Census. It follows that, as the essential distinction is between European and non-European races only, those having European blood to the extent of one half have been classed as half-castes of the non-European race.

A summary for the 1947 and 1954 Censuses is shown in the following table.

POPULATION: RACE, AUSTRALIA, 1947 AND 1954. (Excluding Full-blood Aboriginals.)

# CHAPTER XVII.--VITAL STATISTICS.

# § 2. Marriages.

Age and Conjugal Condition at Marriage, p. 611.—A summary of the previous conjugal condition of bridegrooms and brides in 1957 in relation to age at marriage is as follows.

AGE AND CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES: AUSTRALIA, 1957.

Age at Marriage		Brideg	rooms.		Brides.						
(Years).	Bachelors.	Widowers.	Divorced.	Total.	Spinsters.	Widows.	Divorced.	Total.			
Under 20 20-24	3,073 30,630 20,056 7,288 2,578 1,170 696 386 203 83 105	13 64 148 178 319 315 406 450 416 835	50 435 893 852 734 591 357 218 84 70	3,073 30,693 20,555 8,329 3,608 2,223 1,602 1,149 871 583 1,010	18,084 32,849 8,582 3,003 1,300 684 407 270 145 87	4 99 217 309 379 456 486 404 337 307 307	5 240 963 1,128 989 692 472 210 81 54	18,093 33,188 9,762 4,440 2,668 1,832 1,365 884 563 448 448			
Total	66,268	3,144	4,284	73,696	65,471	3,359	4,866	73,696			

In 1957 the proportional distribution (per cent.) of bridegrooms and brides according to previous conjugal condition was:—

Bridegrooms: Bachelors, 89.92; Widowers, 4.27; Divorced, 5.81.

Brides: Spinsters, 88.84; Widows, 4.56; Divorced, 6.60.

In 1957 the average age of bridegrooms was 28.54 years and of brides 25.18 years.

Celebration of Marriages, p. 613.—The number of marriages in 1957 celebrated by ministers of religion in the various denominations or by civil officers was as follows:—

<sup>(</sup>a) Excludes figures for the Northern Territory, which are not available for publication.

Value of New Buildings, p. 662.—The values of all new buildings commenced, completed and under construction in each State and Territory are shown in the following table for the year 1957-58:—

# NEW BUILDINGS: VALUE, 1957-58. (Including Estimated Value of Owner-built Houses.) (£'000.)

Particulars.	N.S.W.	Vic.	QId.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Commenced Completed Under construc-	137,189 169,240	122,133 131,756	37,128 37,694	35,659 38,047	25,065 27,262	12,735 12,840	2,259 2,110	8,588 5,841	380,756 424,790
tion at 30th June, 1958	113,548	122,750	30,968	35,337	24,587	11,946	1,745	14,589	355,470

The value of new buildings completed in Australia during 1957–58, according to kind of building, was as follows:—Houses—Brick, brick veneer, concrete and stone, £97,782,000; wood (weatherboard, etc.), £79,631,000; fibro-cement, £43,836,000; other, £1,662,000; Total, £222,911,000; Other Buildings—Flats, £8,238,000; hotels, guest-houses, etc., £6,768,000; shops, £13,588,000; factories, £59,883,000; business premises—office, £33,678,000; other, £17,302,000; educational, £19,630,000; religious, £4,825,000; health, £19,889,000; entertainment and recreation, £8,815,000; miscellaneous, £9,263,000; Total, £201,879,000; Grand Total, New Buildings, £424,790,000.

Persons Engaged in New Building, p. 663.—The number of tradesmen engaged on jobs carried out by builders of new buildings in Australia at 30th June, 1958 was as follows:—Carpenters, 43,062; bricklayers, 10,273; painters, 9,803; electricians, 5,524; plumbers, 8,949; builders' labourers, 17,628; other, 14,377; total, 109,616. Contractors actually working on jobs numbered 9,329, sub-contractors actually working on jobs 14,562 and wage earners 85,725.

### CHAPTER XX.—PRIVATE FINANCE.

#### A. CURRENCY.

### § 2. Coinage.

Issues of Australian Coins, p. 721.—The net issues of Australian coins to 30th June, 1958, were:—silver, £36,686,000; bronze, £3,001,000; total, £39,687,000.

### § 3. Notes.

The Australian Note Issue, p. 723.—The average value of notes in circulation for the year 1957-58 was £391,965,000. This amount was distributed in denominations as follows:—10s., £11,170,000, £1, £69,704,000; £5, £174,430,000; £10, £135,967,000; £20, £4,000; £50, £42,000; £100, £47,000; and £1,000, £601,000. The amount held by the banks was £45,490,000 and by the public, £346.475,000.

#### B. BANKING.

### § 1. Cheque-Paying Banks.

Commonwealth Bank, p. 733.—The average liabilities of the Central Banking Business (including Note Issue Department) of the Commonwealth Bank for the year ended June, 1958, amounted to £983,494,000. Capital and Reserve Funds amounted to £21,618,000; Notes on Issue to £389,544,000; Special Accounts of Trading Banks to £328,337,000; Other Deposits of Trading Banks to £25,602,000; Other Liabilities to £218,393,000.

Particulars of the average assets were as follows:—Gold and Balances held abroad; £461,721,000; Australian Coin, £2,026,000; Cheques and Bills of other Banks, £4,177,000; Government and Other Securities (including Treasury Bills), £478,603,000; Bills Receivable and Remittances in Transit, £4,488,000; and Other Assets, £32,479,000.

Commonwealth Trading Bank, p. 735.—The average liabilities in Australia of the Commonwealth Trading Bank for the year ended June, 1958, were £225,002,000. Of this amount, Deposits not bearing interest amounted to £150,220,000; Deposits bearing interest to £54,837,000; Balances due to other Banks to £422,000; Other Liabilities to £19,523,000.

The average assets in Australia, £223,316,000, included Cash and Cash Balances £10,829,000; Special Deposit Account with Central Bank, £40,193,000; Balances with other Banks, £1,596,000; Treasury Bills, £5,500,000; Other Commonwealth and State Government Securities, £46,476,000; Other Securities, £3,313,000; Loans, Advances and Bills Discounted, £107,815,000; Other Assets, £7,594,000.

Private Trading Banks, p. 736.—Average liabilities in Australia of the Private Trading Banks for the year ended June, 1958, were £1,415,525,000. Interminable Deposits or Deposit Stock amounted to £6,000; Deposits not bearing interest to £1,045,881,000; Deposits bearing interest to £345,415,000; Notes in Circulation to £157,000; Balances due to other Banks to £5,561,000; Other Liabilities to £18,505,000.

Average assets in Australia amounted to £1,431,017,000. These comprised Cash and Cash Balances, £59,805,000; Special Accounts with Commonwealth Bank, £287,399,000; Balances with other Banks, £18,254,000; Treasury Bills, £39,027,000; Other Commonwealth and State Government Securities, £176,152,000; Other Securities, £13,284,000; Loans, Advances and Bills Discounted, £774,302,000; All Other Assets, £62,794,000.

Appendix, 1179

Classification of Advances within Australia—Commonwealth Trading Bank and Private Trading Banks, p. 739.—Advances within Australia at the end of December, 1957, dissected by industries were:—Resident Borrowers: Business Advances—Agriculture, Grazing and Dairying, £200,411,000; Manufacturing, £170,535,000; Transport, Storage and Communication, £13,224,000; Finance, £55,848,000; Commerce, £181,295,000; Building and Construction, £21,169,000; Other Business and Services, £51,690,000; Unclassified, £3,621,000; Total Business advances, £697,793,000; Advances to Public Authorities, £19,768,000; Personal advances, £133,655,000; Advances to Non-Profit Organizations, £13,890,000; Total Resident Borrowers, £865,106,000; Total Non-Resident Borrowers, £241,000; Total advances, £865,347,000.

Clearing House Returns, p. 742.—The average weekly bank clearings in each capital city for the year ended June, 1958, were as follows:—Sydney, £124,172,000; Melbourne, £114,854,000; Brisbane, £25,835,000; Adelaide, £24,099,000; Perth, £15,598,000; Hobart, £4,427,000; Total, £308,985,000.

Debits to Customers' Accounts—All Cheque-paying Banks, p. 742.—The average weekly debits to customers' accounts in each State for the year 1957-58 for all cheque-paying banks (excluding debits to accounts of Australian Governments in capital cities) were as follows:—New South Wales, £230,335,000; Victoria, £207,059,000; Queensland, £65,655,000; South Australia, £44,276,000; Western Australia, £30,215,000; Tasmania, £12,930,000; Australian Capital Territory, £1,533,000; Total, £592,003,000.

#### § 2. Savings Banks.

All Savings Banks, pp. 745-6.—The numbers of operative accounts in the several States at 30th June, 1958, were:—New South Wales, 2,740,000; Victoria, 2,437,000; Queensland, 1,014,000; South Australia, 863,000; Western Australia, 498,000; Tasmania, 295,000; Northern Territory, 13,000 and Australian Capital Territory, 26,000; Total, 7,886,000. The amounts on deposit in the several States at 30th June, 1958, were:—New South Wales, £449,018,000; Victoria, £433,631,000; Queensland, £153,244,000; South Australia, £148,858,000; Western Australia, £65,948,000; Tasmania, £40,241,000; Northern Territory, £2,098,000 and Australian Capital Territory, £3,805,000; Total, £1,296,843,000. Total excess of deposits over withdrawals during 1957-58 was £38,223,000 and interest added was £31,210,000.

## D. INSURANCE.

### § 2. Life Assurance.

Life Assurance, p. 757.—The following is a summary of the life assurance business transacted in Australia during 1957 (figures for 1956 in parentheses) compiled from monthly returns collected from the 24 (21) companies registered under the Life Insurance Act 1945–1953, and excluding the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office which operate only within their respective States. Particulars shown are therefore not entirely comparable with those in Chapter XX., which are derived from annual returns and include business of the State Government Offices.

Ordinary Department and Industrial Department, respectively:—New Policies issued: in Australia—Number, 303,355 (289,359), 209,153 (211,146); Sum Assured, £436,053,000 (£359,238,000), £33,383,000 (£32,975,000); Policies Matured or Otherwise Discontinued in Australia—Number, 182,173 (173,086), 290,851 (270,407); Sum Assured, £130,386,000 (£115,365,000), £26,272,000 (£24,699,000). Particulars of annuities are excluded.

Premium receipts of Ordinary and Industrial Departments in Australia in 1957 amounted, respectively, to £82,912,000 (£72,868,000) and £15,120,000 (£14,898,000). Claims, etc., paid amounted to £31,846,000 (£28,325,000) and £10,781,000 (£9,813,000) respectively. Particulars of annuities are included.

### CHAPTER XXI.—PUBLIC FINANCE.

### A. COMMONWEALTH FINANCE.

Consolidated Revenue Fund, pp. 784 and 792.—The table below shows details of revenue and expenditure for the year 1957-58:—

<sup>(</sup>a) Represents the combined transactions of the Consolidated Revenue Fund and the Business Undertakings—Railways, Tramways and Omnibuses and Sydney Harbour Section of the Maritime Services Board—included in the annual Budget Papers. Adjustments have been made to exclude duplications. (b) To avoid duplication in aggregating particulars for the Commonwealth and States, the grand totals have been adjusted to exclude State payments to the Commonwealth in respect of pay-roll tax and Commonwealth payments to the States included in State Consolidated Revenue Funds in respect of interest on State debts, special grants, uniform taxation, special financial assistance, grants to universities, tuberculosis, capital expenditure and National Welfare payments. There are other relatively minor payments for which adjustments have not been made and the adjusted figures are therefore still slightly overstated. (c) Preliminary.

### D. COMMONWEALTH AND STATE PUBLIC DEBT.

### § 3. Commonwealth and State Public Debt Outstanding.

Public Debt and Annual Interest Payable, pp. 827-8.—The following table shows details of the public debt of the Commonwealth and States and the annual interest payable thereon at 30th June, 1957 and 1958.

# LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES.

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Official Year Book, but which are not included, or are included in abbreviated form only, in the present issue. The list is, in the main, restricted to articles, etc., to which references are not given in the various chapters of this issue.

The figures below indicate, respectively, the number and page of the Official Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

# **GENERAL INDEX.\***

Note.—This index is preceded by a list of special articles, etc., in previous issues of the Official Year Book. A list of maps and graphs contained in this issue will be found on pp. ix and x. Area, population, etc., of particular localities are indexed under the locality concerned. Subject matter extending continuously over more than one page is indexed according to the first page only. Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject as indicated signify major, and approximately equal, importance.
