#### PREFACE.

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to........Census and statistics." In the exercise of the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The first Official Year Book was published early in 1908. The publication here presented is the forty-fourth Official Year Book issued under the authority of the Commonwealth Government.

The Synopsis on pp. xi to xxxi following shows the general arrangement of the work. The special index (preceding the General Index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, owing to limitations of space, have been omitted or abbreviated in the present volume. Where, in the General Index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

Every endeavour has been made to meet the demand occasioned by the current economic and financial conditions for new information, or information expressed in new terms, concerning many branches of statistics, while a Diary of Principal Economic Events of the years 1954 to 1957 is inserted after the last chapter.

It is not proposed to refer to the whole of the new matter or to the new treatment of existing matter incorporated in the present volume, but attention may be drawn to the following:—

Chapter VI.—Labour, Wages and Prices.—Basic Wage Inquiry, 1956-57. Précis of judgment (p. 178).

Chapter XI.—Transport and Communication.—New matter dealing with Registration of Motor Vehicles (p. 407), and Census of Motor Vehicles, 1955 (p. 415). Expanded sections dealing with Television and Radio and Television Licences (pp. 442-4).

Chapter XIII.—Public Justice (p. 487).—Revised and expanded chapter.

Chapter XIV.—Public Health.—New section dealing with Mental Hospital Benefits (p. 522).

Chapter XX.—Private Finance.—Expanded and revised section dealing with Savings Banks (p. 744). New sections relating to Hire Purchase Business, and Capital Raisings by Australian Companies (p. 769), and Survey of Private Superannuation Schemes, 1955-56 (p. 776).

Chapter XXII.—Agricultural Production.—New sections dealing with Aerial Agriculture (p. 909), and classification of Rural Holdings (p. 912).

Chapter XXV.—Forestry.—Special article on Softwood Plantations (p. 975).

Chapter XXIX.—Repatriation.—New section dealing with Seamen's War Pensions and Allowances (p. 1077).

Appendix.—Basic Wage Inquiry, 1958.—Précis of judgment (p. 1,158).

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

In a publication of this size, a considerable time must necessarily elapse between the handling, both by author and printer, of the earlier and later parts of the work. In order to offset, to some extent, the consequent delay in presentation, the contents of this issue have already been published in separate Parts as the successive chapters or groups of chapters were printed. Particulars of these Parts, numbering eleven in all, are shown in the Price List of Printed Publications at the end of this volume. In a statistical publication, however, the time element does result in an unevenness in the periods to which the statistics relate. To overcome this difficulty, in part at least, an Appendix is provided in which so far as space permits, later particulars, where available, of many statistical series appearing in preceding chapters have been inserted. The insertions have been restricted mainly to figures, as the inclusion of current textual matter is not generally practicable.

In a number of chapters the figures in this issue have been brought forward two years from those in the previous issue. The Appendix to this issue contains information for various periods up to 1957-58.

vi Preface.

It should be pointed out that for the most recent statistics the reader should refer to other publications issued by this Bureau, notably the Monthly Review of Business Statistics and the Quarterly Summary of Australian Statistics. There are also numerous mimeographed statements issued from time to time on a wide range of subjects. Particulars of these are shown in Chapter XXXI.—Statistical Organization and Sources of Information.

My thanks are tendered to the State Statisticians, who have collected and compiled the data on which a great part of the information given in the Official Year Book is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments, and to others who have kindly, and often at considerable trouble, supplied information.

I also desire to express my keen appreciation of the valuable work performed by Mr. A. E. Callander, Editor of Publications, Mr. E. H. Harry, B.A., B.Com., and Mr. G. I. Neville, B.Com., Assistant Editors, and the other officers of the Publications Division, and of the services rendered by the officers in charge of the several Branches of the Commonwealth Bureau of Census and Statistics upon whom has devolved the duty of revising the chapters relative to their respective Branches.

S. R. CARVER, Commonwealth Statistician.

Commonwealth Bureau of Census and Statistics, Canberra, A.C.T., August, 1958.

#### COMMONWEALTH OF AUSTRALIA.

#### CHAPTER I.

# DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA.

#### § 1. Early Knowledge and Discovery of Australia.

- 1. Introduction:—The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A more detailed summary of these facts may be found in Official Year Book No. 39 (see page 1) and earlier issues:
- 2. Terra Australis.—There was, apparently, an early Chaldean tradition as to the existence of an Austral land to the south of India and rumours to that effect found their way in the course of time to Europe. References to this *Terra Australis* are found in the works of Elianus (A.D. 205-234), Manilius (probably a contemporary of Augustus of Tiberius Caesar), and Prolemy (A.D. 107-161). Evidence pointing to knowledge of such a land appeared in maps and manuscripts of the Middle Ages and the fourteenth and fifteenth centuries, but there is no definite evidence connecting this so-called *Terra Australis* with Australia.

Reference by Marco Polo (1254-1324) to a land called Locac, and several indications on maps and globes in the fifteenth and sixteenth centuries have been assumed to relate to Australia, but little weight can now be attached to these suppositions. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, although the off-quoted passage in his Descriptionis: Ptolemaicae. Augmentum describing the Australia Terra has been considered to have had its origin in the voyages through the Straits of Magellan and the discovery of Tierra del Fuego rather than that of Australia.

3. Discovery of Australia.—(i) The Spaniards. Disregarding the suggestion, for which there is no evidence, that the Arabs had come to Australia long before the Portuguese, the Spaniards or the Dutch, and apart from the possibility that the Portuguese may have discovered part of the Australian coast before 1542, the coastal exploration of Australia may be taken as having begun with the Spaniards and the Dutch.

In 1606; the Spaniard Quiros; on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group La Australia del Espiritu Santo. After leaving the New Hebrides, Quiros sailed eastward, but Torres, his second-in-command, took a westerly course and passed through the strait that now bears his name. In all probability he sighted the Australian continent; but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas:

(ii) The Dutch. The Dutch discovered Australia when the Dutch East India Companysent the Duyfken from Bantam, Java, to explore the islands of New Guinea. During March, 1606, the Duyfken coasted along the southern shores of New Guinea and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years, there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

6875/57.

In 1642, Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage in 1644, Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

4. Discoveries by the English.—In the meantime, the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the Cygnet, a trading vessel whose crew had turned buccaneers. In 1699, he again visited Australia, in command of H.M.S. Roebuck, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century, it was uncertain whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it, but themselves formed part of a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Tahiti, had also the objective of ascertaining whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. Endeavour, a barque of 370 tons burden, carrying about 85 persons, and accompanied by Sir Joseph Banks the botanist, Dr. Solander the naturalist, Green the astronomer, draughtsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned towards New Zealand, sighting that land on 7th October, 1769, in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20th April, 1770, at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on 29th April, 1770. The Endeavour dropped anchor and Cook landed on the same day. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11th June, 1770, when the Endeavour was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months and the Endeavour then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13th July, 1771. In 1772, Cook was put in command of the ships Resolution and Adventure, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance was the existence of a channel between Tasmania and Australia. This was made by Bass and Flinders in 1798.

#### § 2. The Annexation of Australia.

1. Annexation of Eastern Part of Australia, 1770.—Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23rd August, 1770, that the history of Australia was brought into definite political connexion with Western civilization. It was on that date that Captain Cook took possession "of the whole eastern coast, from latitude 38° to this place, latitude 10½° S., in right of His Majesty King George the Third." Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on 12th October, 1786, and amplified on 2nd April, 1787, was read to the people whom he had brought with him in the "First Filert"

A full historical account of the period referred to may be found in the Historical Records of New South Wales Vol. 1., parts 1 and 2.

2. Original Extent of New South Wales.—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south, and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south."

Although in November, 1769, Captain Cook had taken possession of the North Island of New Zealand, and in January, 1770, also of the South Island, it is doubtful whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean." The fact that under the Supreme Court Act (Imperial) of 1823 British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have become British territory unequivocally until 1840. In that year, on 29th January, Captain Hobson arrived at the Bay of Islands. On the following day, he read the commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5th February, the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21st May, British sovereignty over the islands of New Zealand was explicitly proclaimed.

- 3. Extension of New South Wales Westward, 1825.—On 17th February, 1824, Earl Bathurst notified Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. Tamar, who was selected for the purpose, took possession on 20th September, 1824, of the coast from the 135th to the 129th degree of east longitude. On 16th July, 1825, the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.
- 4. Annexation of Western Australia, 1827.—An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George Sound, sailed from Sydney on 9th November, 1826, landed at the Sound on 26th December following, and on 21st January, 1827, hoisted the British flag. Captain Stirling, in command of H.M.S. Success, arrived at Sydney a few weeks after the departure of the expedition to King George Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17th January, 1827, and on his return in the following April submitted a glowing report on what he described as a "rich and romantic country," urging its occupation for the purpose of settlement. He left for England in July, 1827, continuing his advocacy—notwithstanding much discouragement—with unabated enthusiasm. He was at last successful, the result being mainly due to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship Parmelia in June, 1829. On the 2nd of the preceding month, Captain Fremantle, in command of H.M.S. Challenge, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of "all that part of New Holland, which is not included within the territory of New South Wales." Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

#### § 3. The Exploration of Australia.

A summary of the more important facts relating to the exploration of Australia was embodied in this Chapter in issues of the Official Year Book up to and including No. 22.

#### § 4. The Creation of the Several Colonies.

1. New South Wales.—In Governor Phillip's commission of 1786, the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present-State of Tasmania was actually joined to the mainland, and it was not till 1798 that the contrary was known. In that year, Bass and Flinders proved that it was an island by sailing through Bass. Strait. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840; consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles.

Lord Howe Island, which is a dependency of New South Wales and for political purposes is included in one of the electorates of Sydney, is situated in latitude 31° 30′ south, longitude 159° 5′ east, about 436 miles north-east of Sydney, and has an area of 3;220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formation of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia palm seed. The land belongs to the Crown and is occupied rent-free on sufferance.

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 278 at the Census of 30th June, 1954.

2. Tasmania.—In 1825, Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on 14th June of that year. The area of the colony was 26,215 square miles.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December, 1911, five members of the Australian National Antarctic Expedition landed on the island and remained there until 1915. On 3rd March, 1948, another party was landed to man a new base and this has since been maintained as a scientific base. The island is about 21 miles long and 2 miles wide.

- 3. Western Australia.—The territory westward of the 129th meridian, comprising 975,920 square miles, was constituted a colony under the name of Western Australia in June, 1829. It was always distinct and independent of New South Wales, though until 1831 the settlement on King George Sound remained under that jurisdiction.
- 4. South Australia.—On 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province," and towards the end of the year 1836 settlement took place. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28th December, 1836, and on the same day-the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude, and between the 141st and 132nd meridians of east longitude. On 10th December, 1861, by the authority of the Imperial Act 24 and 25 Vict., cap. 44, the western boundary of South Australia was extended to coincide with the eastern boundary of Western Australia, namely, the 129th meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6th July, 1863, the Northern Territory, comprising 523,620 square miles, was, by letters patent, brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles.
- 5. New Zealand.—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales, was, by letters patent of 16th November of that year, constituted a separate colony under the powers of the Act 3 and 4 Vict., cap. 62, of 7th August, 1840. Proclamation of the separation was made on 3rd May, 1841. The area of the colony was 103,862 square miles.
- 6. Victoria.—In 1851, what was known as the "Port Phillip District" of New South Wales was constituted the colony of Victoria, "bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia." The area of the new colony was:87;884 square miles, and its separate existence took effect from 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council.
- 7. Queensland.—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony

under the name of Queensland by letters patent dated 6th June, 1859, although separation from New South Wales was not completed until 10th December of the same year, upon the assumption of office of the first Governor. The territory comprised in the new colony was "so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean". The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." With this addition the area of Queensland became 670,500 square miles.

#### § 5. The Establishment of the Commonwealth of Australia.

- 1. General.—On 1st January, 1901, the colonies mentioned, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies"—except in the case of the Northern Territory, to which the designation "Territory" is applied—being at the same time changed into that of "States".
- 2. Transfer of the Northern Territory to the Commonwealth.—On 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under The Northern Territory Surrender Act 1907 (assented to on 14th May, 1908), and by the Commonwealth Parliament under the Northern Territory Acceptance Act 1910 (assented to on 16th November, 1910). The Territory was formally transferred to the Commonwealth on 1st January, 1911, and became the Northern Territory of Australia.
- 3. Transfer of the Australian Capital Territory to the Commonwealth.—On 18th October, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the Seat of Government of the Commonwealth. In December, 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5th December, 1910, a proclamation was issued vesting the Territory in the Commonwealth on and from 1st January, 1911. By the Jervis Bay Territory Acceptance Act 1915, an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4th September, 1915.
- 4. Present Composition of the Commonwealth.—The total area of the Commonwealth of Australia is 2,974,581 square miles. The dates of creation and the areas of its component States and Territories, as determined on the final adjustment of their boundaries, are shown below:—

THE COMMONWEALTH OF AUSTRALIA: AREA, ETC., OF COMPONENT STATES AND TERRITORIES.

State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.	State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.
New South Wales	1786	309,433	Northern Territory	1863	523,620
Victoria Queensland	1851 1859	87,884 670,500	Australian Capital Territory	1911	939
South Australia Western Australia Tasmania	1834 1829 1825	380,070 975,920 26,215	Commonwealth of Australia		2,974,581

#### § 6. The Constitutions of the States and of the Commonwealth.

- 1. General.—Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the Federal movement in Australia, was embodied in this Chapter in issues of the Official Year Book up to No. 22.
- 2. Commonwealth Constitution Act.—The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely: "An Act to constitute the Commonwealth of Australia," as amended by the Constitution Alteration (Senate Elections) 1906, the Constitution Alteration (State Debts) 1909, the Constitution Alteration (State Debts) 1928, and the Constitution Alteration (Social Services) 1946, is given in extenso hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31st December, 1956.

# THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT, 63 & 64 VICT., CHAPTER 12.

An Act to constitute the Commonwealth of Australia. [9th July, 1900.]

WHEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australian Colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

- 1. This Act may be cited as the Commonwealth of Australia Constitution Act.
- 2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
- 3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
- 4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
- 5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.
- 6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.
- "The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."
- "Original States" shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act. 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

- 8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.
  - 9. The Constitution of the Commonwealth shall be as follows:-

#### THE CONSTITUTION.

This Constitution is divided as follows:--

I.—The Parliament: Chapter

Part I.—General:

Part II.—The Senate:

Part III.—The House of Representatives:

Part IV.—Both Houses of the Parliament:
Part V.—Powers of the Parliament:
er II.—The Executive Government:

Chapter III.—The Judicature: Chapter

Chapter IV .- Finance and Trade:

Chapter V.—The States:

VI.-New States: Chapter

Chapter VII.-Miscellaneous:

Chapter VIII.—Alteration of the Constitution.

The Schedule.

#### CHAPTER L-THE PARLIAMENT.

## PART I.—GENERAL.

- 1. The legislative power of the Commonwealth shall be vested in a Federal Parliament. which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament," or "The Parliament of the Commonwealth."
- 2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.
- 3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

- 4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.
- 5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

## PART II .- THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division. and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State.\* The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified! by the Governor to the Governor-General.

- 8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only
- 9. The Parliament of the Commonwealth may make; laws prescribing; the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

- 10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.
- 11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate..
- 12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.
- 13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] three: years, † and the places of those of the second class at the expiration of [the sixth year] six years,† from the beginning of their term of service; and afterwards the places of senators; shall become vacant at the expiration of six years from the beginning of their term of

The election to fill vacant places shall be made fin the year at the expiration of which] within one year beforet the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] July following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate; when it shall be taken to begin on the first day of [January] July preceding the day of his election.

- 14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places: of senators for the State as it deems necessary to maintain regularity in the rotation.
- 15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified,

<sup>\*</sup> The Parliament has otherwise provided, by means of the Representation Act 1948, that the number of senators shall be ten for each State, from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18th May, 1948):

† As amended by Section 2 of the Constitution Alteration (Senate Elections) 1906. The words in square brackets have been repealed; amendments are shown in italics.

the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

- 16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.
- 17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President:shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

- 18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.
- 19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.
- 20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.
- 21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.
- 22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.
- 23. Questions arising in the Senate-shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

#### PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales Victoria Queensland	23 20 8	South Australia Tasmania	6 5
Provided that if Western Aus	tralia is an Origi	nal State, the numbers shall	be as follows:-
New South Wales Victoria	26	South Australia Western Australia	7
Queensland	9	Tasmania	5

- 27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.
- 28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.
- 29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

- 30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.\*
- 31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.
- 32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.
- After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.
- 33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.
- 34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—
  - (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
  - (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.
- 35. The House of Representatives shall, before proceeding to the despatch of any other business; choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

† The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918-1949, Section 69. For present qualifications see Chapter III.—General Government.

<sup>•</sup> The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918–1949, Section 39 (repealing an earlier provision made by the Commonwealth Franchise Act 1902). For present qualifications see Chapter III.—General Government.

- 37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.
- 38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House,
- 39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.
- 40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

#### PART IV.—BOTH HOUSES OF THE PARLIAMENT.

- 41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.
- 42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.
- 43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

## 44. Any person who--

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or
- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

- 45. If a senator or member of the House of Representatives-
  - (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
  - (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
  - (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

- 47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.
- 48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.\*
- 49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom; and of its members and committees, at the establishment of the Commonwealth.
  - 50. Each House of the Parliament may make rules and orders with respect to-
    - (i) The mode in which its powers, privileges, and immunities may be exercised and upheld:
    - (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

## PART V .- POWERS OF THE PARLIAMENT. †

- 51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to:—
  - (i) Trade and commerce with other countries, and among the States:
  - (ii) Taxation; but so as not to discriminate between States or parts of States:
  - (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth:
  - (iv) Borrowing money on the public credit of the Commonwealth:
  - (v) Postal, telegraphic, telephonic, and other like services:
  - (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth:
  - (vii) Lighthouses, lightships, beacons and buoys:
  - (viii) Astronomical and meteorological observations:
    - (ix) Quarantine:
  - (x) Fisheries in Australian waters beyond territorial limits:
  - (xi) Census and statistics:
  - (xii) Currency, coinage, and legal tender:
  - (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money:
  - (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned:
  - (xv) Weights and measures:
  - (xvi) Bills of exchange and promissory notes:
  - (xvii) Bankruptcy and insolvency:
  - (xviii) Copyrights, patents of inventions and designs, and trade marks:
  - (xix) Naturalization and aliens:
  - (xx). Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth:
  - (xxi) Marriage:

† Particulars of proposed laws which were submitted to referenda are referred to in Chapter III.—General Government.

The Parliamentary allowance was increased to £600 a year in 1907 (except in the cases of Ministers, the Presiding Officers of the two Houses, and the Chairman of Committees, whose allowances remained at £400 in addition to the emoluments of office), and to £1,000 a year in 1920 (Ministers, etc., £800). Under financial emergency legislation, Parliamentary salaries and allowances were reduced generally, the lowest level reached in respect of the Parliamentary allowance being £750 a year in 1932. Subsequently there was a gradual restoration to former levels; the allowance reaching £1,000 a year again in 1938, when, also, the proviso for the reduced allowance to Ministers, etc. was removed. In 1947, the Parliamentary allowance was increased to £1,500 a year, and in 1952 to £1,750. In 1920, additional allowances of £200 and £400 a year, respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, and in 1947 they were increased to £300, and £600 respectively. In 1947, also, an additional allowance of £400 a year was granted to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party-which has not less than ten members in the House of Representatives, and of which no member is a Minister.

(xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:

(xxiii) Invalid and old-age pensions:

- (xxiiiA) \*The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:
  - (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States:
  - (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
  - (xxvi) The people of any race, other than the aboriginal race in any State, for whom, it is deemed necessary to make special laws:

(xxvii) Immigration and emigration:

(xxviii) The influx of criminals:

(xxix) External affairs:

- (xxx) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv) Railway construction and extension in any State with the consent of that State:
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:
- (xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment: of this Constitution be exercised only by the Parliament: of the United Kingdom: or by the Federal Council of Australasia:
- (xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.
- 52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace; order, and good government of the Commonwealth with respect to—
  - (i) The seat of Government of the Commonwealth, and all places acquired by the, Commonwealth for public purposes:
  - (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the, Commonwealth:
  - (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.
- 53. Proposed laws appropriating revenue or moneys; or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties; or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

<sup>\*</sup> Under Section 2 of the Constitution Alteration (Social Services) 1946, the Constitution was amended by the insertion of this paragraph.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

- 54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.
- 55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

- 56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.
- 57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

- 59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.
- 60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

## CHAPTER II.—THE EXECUTIVE GOVERNMENT.

- 61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.
- 62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.
- 63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.
- 64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

- 65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.\*
- 66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.\*
- 67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.
- 68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.
- 69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones: Lighthouses, lightships, beacons, and buoys: Naval and military defence: Quarantine.

But the Departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

<sup>\*</sup> The Ministers of State were increased to eight in 1915, to nine in 1917, to ten in 1935, to eleven in 1938, and to nineteen in 1941, a special war-time provision during the continuance in operation of the National Security Act which was extended in 1946 on the expiry of that Act. The number was increased to twenty in 1951 and to twenty-two in 1956. The annual appropriation for Ministers' salaries received in addition to their allowances as Members (see page 12) was increased to £13,650 in 1915 and to £15,300 in 1917. Under financial emergency legislation, in addition to the reductions in Members' allowances the appropriation for Ministers was also reduced, in 1932 reaching the level of £10,710. The reductions were removed gradually, and finally in 1938 when the appropriation was £16,950. At the same time, an additional allowance of £1,500 a year was granted to the Prime Minister, and the proviso for the reduced Parliamentary allowance to Ministers was removed. In 1941, the annual appropriation for Ministers was increased, as a war-time provision, to £21,250. This was extended in 1946. In 1947, the appropriation was increased to £27,650, in 1951 to £29,000, in 1952 to £41,000, and in 1956 to £46,500.

#### CHAPTER III.—THE JUDICATURE.

- 71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High-Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.\*
- 72. The Justices of the High Court and of the other Courts created by the Parliament—

(i) Shall be appointed by the Governor-General in Council:

- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during their continuance in office.\*
- 73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—
  - (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
  - (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
- (iii) Of the Inter-State Commission, but as to questions of law only: and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits inter se of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits inter se of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

## 75. In all matters-

(i) Arising under any treaty:

(ii) Affecting consuls or other representatives of other countries:

(iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:

(iv) Between States, or between residents of different States, or between a State and a resident of another State:

(v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth.

the High Court shall have original jurisdiction.

<sup>\*</sup> The Judiciary Act 1903 provided for a Chief Justice and two other Justices. Subsequent amendments to the Act increased the number-of other Justices to four and later six, and then reduced it to five. In 1946, the number was again increased to six. The Judiciary Act 1903 also provided for the payment of a salary of £3,500 a year to the Chief Justice and of £3,000 a year to each other Justice. In 1947, these salaries were increased respectively to £4,500 and £4,000 a year, in 1950 to £5,000 and £4,500 a year, and in 1955 to £8,000 and £6,500 a year.

- .76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—
  - (i) Arising under this Constitution, or involving its interpretation:
  - (ii) Arising under any laws made by the Parliament:
  - (iii) Of Admiralty and maritime jurisdiction:
  - (iv) Relating to the same subject-matter claimed under the laws of different States.
- 77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—
  - (i) Defining the jurisdiction of any federal court other than the High Court:
  - (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
  - (iii) Investing any court of a State with federal jurisdiction.
- 78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.
- 79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.
- 80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

## CHAPTER IV.-FINANCE AND TRADE.

- 81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.
- 82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.
- 83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if the had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

- 85. When any department of the public service of a State is transferred to the Commonwealth—
  - (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary:
  - (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth:
  - (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament;
  - (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.
- 86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.
- 87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

- 88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.
  - 89. Until the imposition of uniform duties of customs-
    - (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
    - (ii) The Commonwealth shall debit to each State-
      - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;
      - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
    - (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.
- 90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

- 91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.
- 92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two

years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

- 93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—
  - (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State.
  - (ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.
- 94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.
- 95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

- 96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.
- 97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.
- 98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.
- 99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.
- 100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.
- 101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.
- 102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

- 103. The members of the Inter-State Commission-
  - (i) Shall be appointed by the Governor-General in Council:
  - (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity:
  - (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.
- 104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State; and if the rate applies equally to goods within the State and to goods passing into the State from other States.
- 105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],\* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.
- 105A.† (1.) The Commonwealth may make agreements with the States with respect to the public debts of the States, including—
  - (a) the taking over of such debts by the Commonwealth;
  - (b) the management of such debts;
  - (c) the payment of interest and the provision and management of sinking funds in respect of such debts;
  - (d) the consolidation, renewal, conversion, and redemption of such debts;
  - (e) the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and
  - (f) the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.
- (2.) The Parliament may make laws for validating any such agreement made before the commencment of this section.
- (3.) The Parliament may make laws for the carrying out by the parties thereto of any such agreement;
  - (4.) Any such agreement may be varied or rescinded by the parties thereto:
- (5.) Every such agreement and any such variation thereof, shall be, binding upon the Commonwealth and the States parties thereto notwithstanding anything; contained, in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.
- (6.) The powers conferred by this section shall not be construed as being limited in any way to the provisions of section one hundred and five of this Constitution.

## CHAPTER V.-THE STATES.

- 106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.
- 107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth; or as at the admission or establishment of the State, as the case may be.

†. Under Section 2 of the Constitution Alteration (State Debts) 1928, the Constitution was amended by the insertion of this section.

<sup>\*</sup> Under Section 2 of the Constitution Alteration (State Debts) 1909, the words in square brackets are omitted.

- 108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.
- 109. When a law of a Statesis inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.
- 110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.
- 111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.
- 112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth:
- 113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.
- 114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.
- 115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.
- 116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.
- 117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.
- 118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.
- 119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.
- 120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

### CHAPTER VI.—NEW STATES:

- 121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.
- 122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.
- 123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

## CHAPTER VII.-MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the Seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

## CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner:-

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

## SCHEDULE.

#### OATH.

I, A.B., do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. So HELP ME GOD!

#### AFFIRMATION

- I, A.B., do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. (Note.—The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.)
- 3. The Royal Proclamation.—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901; it read as follows:—

# BY THE QUEEN. A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of Australia," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

And whereas We are satisfied that the people of Western Australia have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of January One thousand nine hundred and one, the people of New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

Given at Our Court at Balmoral this Seventeenth day of September, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

## § 7. The External Territories of Australia.

- 1. Transfer of Norfolk Island.—In 1856, Norfolk Island was created a distinct and separate settlement under the jurisdiction of New South Wales. Later, in 1896, it was made a dependency under the Governor of that colony and finally by the passage of the Norfolk Island Act 1913 it was accepted as a Territory of the Commonwealth of Australia. The island is situated in latitude 29° 3′ 3″ S., longitude 167° 57′ 5″ E., and comprises an area of 8,528 acres.
- 2. Transfer of British New Guinea or Papua.—Under the administration of the Commonwealth, but not included in it, is British New Guinea or Papua, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles.
- 3. Territory of New Guinea.—In 1919, it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on Australia for the government of the former German territories and islands situated in latitude between the Equator and 8° S., and in longitude between 141° E. and 159° 25′ E. The mandate was issued

by the League of Nations on 17th December, 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the New Guinea Act 1920, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 93,000 square miles, and the administration under the mandate dated from 9th May, 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved 13th December, 1946.

- 4. Nauru.—In 1919, the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude 0° 32′ south of the Equator and longitude 166° 55′ east of Greenwich, and comprises about 5,263 acres. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and a supplementary agreement of 30th May, 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. The administration under the mandate operated from 17th December, 1920, until 1st November, 1947, and so far the administrators have been appointed by the Commonwealth Government. As with the Territory of New Guinea, Nauru is now administered under a Trusteeship Agreement with the United Nations.
- 5. Territory of Ashmore and Cartier Islands.—By Imperial Order in Council, dated 23rd July, 1931, Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth in the Ashmore and Cartier Islands Acceptance Act 1933 under the name of the Territory of Ashmore and Cartier Islands on 10th May, 1934. The Act authorized the Governor of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July, 1938, annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.
- 6. Australian Antarctic Territory.—An Imperial Order in Council of 7th February, 1933, placed under Australian authority "all the islands and territories other than Adélie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude."

The Order came into force with a proclamation issued by the Governor-General on 24th August, 1936, after the Commonwealth Parliament had passed the Australian Antarctic Territory Acceptance Act on 13th June, 1933. The boundaries of Adélie Land were definitely fixed by a decree of 1st April, 1938, as latitude 60° S., longitude 136° E. and longitude 142° E.

- 7. Territory of Heard and McDonald Islands.—Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26th December, 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard and McDonald Islands by the Heard and McDonald Islands Act 1953.
- 8. Territory of Cocos (Keeling) Islands.—The Cocos (Keeling) Islands Act 1955 provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts Her Majesty, by Order in Council, specified 23rd November, 1955, as the date of transfer. From that date the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands.

## CHAPTER: IL.

## PHYSIOGRAPHY.

## § 1. General: Description of Australia.

- 1. Geographical Position.—(i) General. The Australian Commonwealth; which includes the island continent of Australian proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9′ E. and 153° 39′ E., while its northern and southern limits are the parallels of latitude 10° 41′ S. and 43° 39′ S., or, excluding Tasmania, 39° 8′ S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean. The extreme points are Steep Point on the west, Cape Byron on the east, Cape York on the north, and South-East Cape or, if Tasmania be excluded, Wilson's Promontory, on the south.
- (ii) Tropical and Temperate Regions. Of the total area of Australia, nearly 39 per cent. lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is 23° 30′ S., the areas within the tropical and temperate zones are approximately as follows:—

AUSTRALIA: AREAS OF TROPICAL AND TEMPERATE REGIONS: (Square miles.)

Area.	N.S.W.	Vic.,	Qld.	S. Aust.	W. Aust.	Tas.	N. Terr.	Total.
Within Tropical Zone Temperate Zone	310,372.	87,884.	359,000 311,500	380,070	364,000 611,920	26,215	426,320 97,300	1,149,320 1,825,261
Total Area	310,372	87,884	670,500	380,070	975,920	26,215	523,620	2,974,581

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent. of Queensland lies within the tropical zone and 46 per cent. in the temperate zone; 37 per cent. of Western Australia is tropical and 63 per cent. temperate; while 81 per cent. of the Northern Territory is tropical and 19 per cent. temperate. All of the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent. of the whole of the continent, and about 53 per cent. of the three territories which have areas within the tropical zone.

2. Area of Australia compared with Areas of other Countries.—The area of Australia is almost as great as that of the United States of America, four-fifths of that of Canada, nearly three-quarters of the whole area of Europe, and about 25 times as large as Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the following page.

# AREA OF AUSTRALIA AND OF OTHER COUNTRIES, circa 1955.

# ('000 square miles.)

<sup>(</sup>a) Excludes U.S.S.R., shown below. (b) Includes British Cameroons. (c) Australian Trust Territory.

The areas shown in the table are obtained from the *Demographic Yearbook*, 1956 published by the Statistical Office of the United Nations and the countries have been arranged in accordance with the continental groups used therein.

3. Areas of States and Territories, Coastal Configuration and Standard Times.—As already stated, Australia consists of six States and the Northern and Australian Capital Territories. Particulars of areas, coastline and standard times are shown in the following table:—

AUSTRALIA: AREAS OF	STATES AND	TERRITORIES,	COASTLINE	AND
	STANDARD	TIMES.		

State or Territory.		Area.	Proportion of Total Area.		Area per	Standard Times.

Australia		2,974,581	100.00	12,210	244		

(a) Includes Australian Capital Territory.

There are few striking features in the configuration of the coast; the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The Cape York Peninsula on the extreme north is the only other remarkable feature in the outline. In Official Year Book No. 1 an enumeration was given of the features of the coastline of Australia (see pp. 60-68).

Prior to 1895, the official time adopted in the several colonies was for most purposes the mean solar time of the capital city of each. In 1894 and 1895, after several conferences had been held, legislation was enacted by each of the colonies whereby the mean solar times of the meridians of east longitude 120° (Western Australia), 135° (South Australia and Northern Territory) and 150° (Queensland, New South Wales, Victoria and Tasmania) were adopted. In 1898, however, the South Australian legislature amended its earlier provision and adopted the mean solar time of the meridian 142° 30′ E. longitude as the standard time for that colony. For further information on this subject, see Official Year Book No. 39, p. 65.

- 4. Geographical Features of Australia.—(i) General. The following description is only a broad summarization of the main physical characteristics of the Australian continent. For greater detail of particular geographical elements, earlier issues of the Official Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.
- (ii) Orography of Australia. (a) General Description of the Surface. Owing to the absence of any very high mountain chains, and to the great depression in the centre of Australia, the average elevation of the Australian continent above the level of the surrounding oceans is less than that of any of the other continents. Three-quarters of the land-mass lies between the 600 and 1,500 feet contours in the form of a huge plateau.

A section through the continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. It is of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, the average being roughly about forty to fifty miles. From this plain, the Great Dividing Range, extending from the north of Queensland to the south of New South Wales, and thence sweeping westward through Victoria, rises, often abruptly, and frequently presents bold escarpments on its eastern face. The descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level and occasionally even below it. Thence there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these lies another coastal plain.

The great central plain or plateau is the most distinctive feature of the Australian

continent and its climatic peculiarities can probably be largely ascribed thereto.

(b) Mountain Systems. The main mountain feature of Australia is the Great Dividing Range, which runs along the whole eastern coast of the continent and can be traced over the islands of Torres Strait to New Guinea, while in the south one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other, the main branch, terminates in Tasmania.

This mountain system is at no place more than 250 miles from the eastern coastline and it approaches to less than 30 miles. On the whole, it is much closer to the coast in both New South Wales and Victoria than it is in Queensland, the corresponding average distances being about 70, 65 and 130 miles respectively. There is no connexion between the mountains of the eastern and other States of Australia.

the mountains of the eastern and other States of Australia.

The mountains of Australia are relatively low. Thus, in Queensland, the Great Dividing Range reaches a height above sea-level of less than 5,500 feet, the highest peak being Mount Bartle Frere. Mount Kosciusko, in New South Wales, is only about 7,300 feet, and Mount Bogong, in Victoria, about 6,500 feet high. In South Australia and Western Australia, heights of three and four thousand feet are attained. In Tasmania the greatest height is only a little more than 5,000 feet. This fact, that there are no high mountains in Australia, is also of considerable importance in considering the climate of Australia.

It may be of interest to observe that at one time Tasmania was probably connected with the mainland. As the Great Dividing Range can, in the north, be traced from Cape York across Torres-Strait to New Guinea, so its main axis can be similarly followed across the shallow waters of Bass Strait and its islands from Wilson's Promontory to Tasmania, which may be said to be completely occupied by ramifications of the chain. The central part of the island is occupied by an elevated plateau, roughly triangular in shape, and presenting bold fronts to the east, west and north. This does not extend in any direction more than about 60 miles. The plateau rests upon a more extensive tableland, the contour of which closely follows the coastline, and occasionally broadens out into low-lying tracts not much above sea-level. The extreme south of the island is rugged in character.

- (iii) Hydrology of Australia. (a) Rainfall. On the whole, Australia is a country with a limited rainfall. This is immediately evident on studying its river systems, its lakes, and its artesian areas. Its one large river system is that of the Murray and Darling Rivers, of which the former stream is the larger and more important. Many of the rivers of the interior run only after heavy rains. Depending almost entirely on rainfall, a consequence of the absence of high mountains, they drain large areas with widely varying relation as between rainfall and flow. Thus it has been estimated that not more than 10 per cent. of the rainfall on the catchment area of the Darling River above Bourke (New South Wales) discharges itself past that town. The rate of fall is often very slight.
- (b) Rivers. The rivers of Australia may be divided into two major classes, those of the coastal plains with moderate rates of fall; and those of the central plains with very slight fall. Of the former not many are navigable for any distance from their mouths, and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the eastern coast are the Burdekin, discharging into Upstart Bay, with a catchment area of 53,500 square miles, and the Fitzroy, which reaches the sea at Keppel Bay and drains about 55,600 square miles.

The Hunter is the largest coastal river of New South Wales, draining about 11,000 square miles before it reaches the sea at Newcastle. The Murray River, with its great tributary the Darling, drains a considerable part of Queensland, the major part of New South Wales and a large part of Victoria. It debouches into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australia coast. The total length of the Murray is about 1,500 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Darling-Murray from the source of the Darling to the mouth of the Murray is about 2,300 miles. In good seasons the river is navigable for a considerable proportion of its length.

The rivers of the north-west coast of Australia (Western Australia) are of considerable size, e.g., the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord. So also are those in the Northern Territory, e.g., the Victoria and Daly. The former of these, estimated to drain 90,000 square miles, is said to be mavigable for 50 miles.

The crivers on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell, are also of considerable size.

Owing to the small amount of fall of many of the interior rivers, they may flood hundreds of miles of country in wet seasons, while in dry seasons they form a mere succession of waterholes or are entirely dry. It is this fact that explains the apparently conflicting reports of the early explorers, one regarding the interior as an inland sea, and another as a desert.

The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the territory.

(c) Lakes. The "lakes" of Australia may be divided into three classes, true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally-present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse.

The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lake Torrens, Gairdner, Eyre and Frome, are of considerable extent.

(d) Artesian Areas. A considerable tract of the plain country of New South Wales and Queensland carries a water-bearing stratum, usually at a great depth. A large number of artesian bores have been put down, from which there is a considerable flow. These are of great value and render usable large areas which otherwise would be difficult to occupy even for pastoral purposes.

-For further information on this subject, see Chapter IX.—Water Conservation and Irrigation.

5. Fauna, Flora, Geology and Seismology of Australia.—Special articles dealing with these features have appeared in previous issues of the Official Year Book, but limits of space preclude their repetition in each volume. The nature and location of these articles can be readily ascertained from the special index preceding the general index at the end of this issue.

## § 2. Climate and Meteorology of Australia.

Note.—This Section has been prepared by the Director, Commonwealth Meteorological Bureau, and the various States and Territories have been arranged in the standard order adopted by that Bureau.

1. Introductory.—Previous issues of the Official Year Book, notably No. 3, pp. 79-83, and No. 4, pp. 84 and 87, contained outlines of the history of Australian meteorology and the creation and organization of the Commonwealth Bureau of Meteorology. Official Year Book No. 38, pp. 30-32, contained paragraphs devoted to (i) Organization of the Meteorological Service; (ii) Meteorological Publications; (iii) Equipment; and (iv) Meteorological Divisions.

By reason of its insular geographical position and the absence of striking physical features, whether in marine gulfs or in important mountains, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe, and latitude for latitude Australia is generally more temperate.

The average elevation of the surface of the land is low, probably close to 900 feet above the sea. The altitudes range up to a little more than 7,300 feet, hence the Australian climate displays a great many features, from the charactistically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the Great Dividing Range.

On the coast, the rainfall is often abundant and the atmosphere moist, but in some portions of the interior it is very limited, and the atmosphere dry. The distribution of forest, therefore, with its climatic influence, is very uneven. In the interior, in places, there are fine belts of trees, but there are also large areas which are treeless, and here the air is hot and parching in summer. Again, on the coast, even so far south as latitude 35°, the vegetation is tropical in its luxuriance, and to some extent also in character.

2. Temperature.—(i) Effective Temperature. When a meteorologist speaks of temperature, he means the temperature of the air indicated by a thermometer sheltered from precipitation, from direct rays of the sun and from radiation of heat from the ground

and neighbouring objects, yet freely exposed to the circulation of the air. In other words, he means temperature measured under conditions standardized as near as possible in a Stevenson Screen, which is the standard housing for meteorological thermometers.

This shade temperature as measured by a "dry bulb" thermometer shows only the actual temperature experienced by dry inorganic substances, not the sensible temperatures felt by organic bodies. In the case of human beings, sensible temperature is affected by the rate of conduction of heat to or from the body by moving air and also by the rate of cooling due to evaporation from the skin and respiratory passages. The wind and humidity therefore determine the sensible temperature.

The humidity (relative humidity) is determined from the readings of the dry and wet bulb thermometers. Of late years, however, with increasing interest in human comfort in tropical climates, another term, effective temperature, has come into use. It may be defined as "the temperature of a still, saturated atmosphere which would on the average produce the same feeling of warmth or cold as the atmosphere in question".\*

The 80° F. isotherm is confined to a very narrow tract of country on the north-west coast of Western Australia. The 75° F. isotherm extends, broadly, from Onslow on the north-west coast of Western Australia to Daly Waters to Camooweal to Moreton in Cape York Peninsula following in a general way the coastline of Northern Australia but from 100 to 300 miles inland.

Later investigations have established "comfort zones" bounded by limits of effective temperature within which people will feel comfortable. American research workers have determined the following figures :—

#### Fifty per cent. of subjects feel No subjects feel No subjects feel Season. comfortable belowcomfortable comfortable above between-60° F. 63° and 71° F. 74° F. Winter... 64° F. 66° and 75° F. 79° F. Summer

## COMFORT ZONES: EFFECTIVE TEMPERATURES.

Queensland investigators in recent years have divided some towns of Queensland into three classes on the basis of deviation from comfort:—

Class 1 (Sub-tropics).—Quite suitable for Caucasian habitation—Rockhampton, Bundaberg, Brisbane, Longreach, Charleville.

Class 2 (Marginal tropics).—Suitable for Caucasian habitation, but requires adaptation in summer—Mackay, Townsville.

Class 3 (Tropics).—(a) Permissible for Caucasian habitation but requires selection and marked adaptation—Cardwell, Cairns. Cloncurry. (b) Not suitable for continuous Caucasian habitation—Cape York Burketown.

These results of recent years bear out investigations made previously in Australia in which the atmospheric vapour pressure was used as a measure of comfort, its value for this purpose being that it has equal effect in both indoor and outdoor climates. The limits of comfort range from .2 to .5 inch of vapour pressure. After drawing isopleths for effective temperature (not corrected for altitude), mean vapour pressure reduced to a logarithmic scale, and mean wet bulb temperature, it is found that there is close agreement in defining zones of relative discomfort.

(ii) Seasons. The Australian seasons are:—Summer, December to February; autumn, March to May; winter, June to August; spring, September to November. In most parts of Australia, January is the hottest month, but in Tasmania and southern Victoria, February is the hottest; in the tropical north, probably because the cooling "monsoon" rains occur in late summer, December is the hottest month, and at Darwin, November.

On a rainfall basis, in the tropical north the year is divisible into "wet" and "dry" seasons, but on the basis of temperatures and physical comfort the "dry" season can be further sub-divided into two parts—"cool dry" and "warm dusty".¶

(a) "Cool dry" Season. From May to August. The average maximum temperature ranges from 80° to 85° F., the relative humidity is low and in inland areas cold nights are experienced when the temperature drops to 40° F. The skies generally are cloudless, but in about one year in three during June or July one to two inches of rain fall.

<sup>\*</sup> Houghton, F. C., Teague, W. W. and Miller, W. E. (1926) Amer. Soc. Heat. Vent. Engns, † Yaglou, C. P. (1926) J. Industr. Hyg. ‡ Yaglou, C. P. (1927) Ibid. § Lee, D. H. K. Trans. Roy. Soc. Trop. Med. and Hyg. (1940) Vol. XXXII. | Barkley, H. Zones of Relative Physical Comfort in Australia, Met. Bull. 20, 1934. ¶ Maze, W. H. Austn. Geog. June, 1945. Settlement in E. Kimberleys.

- (b) "Warm dusty" Season. From the end of August, temperatures rise and reach a maximum in October or the beginning of November. Temperatures of over 120° F. have been recorded.
- (c) "Wet" Season. After the first of the heavy storms, the maximum temperatures fall but still remain high with high relative humidity. At Wyndham during January, 1944, the minimum temperature did not drop below 75° F. for fourteen consecutive days. A maximum of over 100° F. was recorded on each rainless day.

In Central and Northern Australia, during the hottest months, the average temperatures range from 80° to 85° F., whereas in Southern Australia they vary from 65° to 70° (see maps pp. 33, 34).

Throughout Australia, the coldest month is July, when only a very narrow strip of the northern sea-board has an average temperature as high as 75°. Over the southern half of the continent, July temperatures range from 55° to 45° at elevations below 1,500 feet and fall as low as 35° on the Australian Alps (see maps pp. 35, 36). Here the temperature seldom, if ever, reaches 100° even in the hottest of seasons. Hotham Heights (6,100 feet above Mean Sea Level) recorded the highest maximum of 82.0° on 20th January, 1935. In winter, readings slightly below zero are occasionally recorded on the extreme heights.

Tasmania, as a whole, enjoys a moderate and equable range of temperature throughout the year, although occasionally hot winds may cause the temperature to rise to 100° in the eastern part of the State.

(iii) Comparisons with other Countries. In respect of Australian temperatures generally, it may be pointed out that the mean annual isotherm for 70° F. extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus showing that, on the whole, Australia has, latitude for latitude, a more temperate climate than other places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included, for in the United States of America the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe, the same isotherm reaches almost to the southern shores of Spain, passing afterwards, however, along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia, nearly the whole of the land area south of latitude 40° N. has a mean annual temperature higher than 70°.

The extreme range of temperature is less than 100° over practically the whole of Australia, that figure being only slightly exceeded at a very few places; it is mostly 70° to 90° over inland areas, and somewhat less on the coast. In parts of Asia and North America, the extreme range exceeds 130° and 150° in some localities.

Along the northern shores of Australia, the temperatures are very equable. At Darwin, for example, the difference in the means for the hottest and coldest month is only 8.4°, and the extreme readings, or the highest maximum on record and the lowest minimum, show a difference of under 50°.

The highest temperature recorded in Australia was 127.5° F. at Cloncurry on 16th January, 1889. The world's highest (136° F.) was recorded at Azizia (Tripoli) on 13th August, 1922. The lowest temperature ever recorded in Australia was -8° F. at Charlotte Pass on 14th June, 1945, and again on 22nd July, 1947, as contrasted with the world's lowest recorded temperature of -90° F. at Verkhoyansk (Siberia) on 5th and 7th February, 1892.

A comparison of the mean temperatures and the range from the extreme maximum to the extreme minimum temperatures (in whole degrees) of the capital cities of Australia with those of the main cities of some other countries was presented in tabular form in Official Year Book No. 38, p. 42.

(iv) Hottest and Coldest Parts. A comparison of the temperatures recorded at coast and inland stations shows that, in Australia, as in other continents, the range increases, within certain limits, with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds 120° in the shade. The hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds 100° continuously for days and weeks. The longest recorded period was 160 days from 31st October, 1923 to 7th April, 1924.

The area affected and the period of duration of the longest heat waves in Australia are shown in the map and diagram on page 37.

(v) Tabulated Data for Selected Climatological Stations in Australia. Tables showing normal mean temperature, extreme temperatures and normal rainfall for each month for

selected climatological stations in each State and the Northern Territory appeared in Official Year Book No. 40, pp. 16-23, and similar data for other selected stations in the Commonwealth in Official Year Book No. 39, pp. 41-48. Pages 53-60 of this issue contain this information in respect of Canberra, Darwin and the six State capitals.

(vi) Frosts:\* The Observer's Handbook of the Meteorological Office; London, gives the following definition:—"Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water (32° F.) and a 'ground frost' is regarded as having occurred when the thermometer on the grass has fallen to 30.4° F. or below".

In Australia, this definition is adopted for stations equipped with terrestrial minimum thermometers. However, these are few in number, so although many rainfall observers record "hoar frost" when seen, for statistical purposes a screen temperature of 36° F. is taken as indicating light frosts at ground level. For heavy frosts, a screen temperature of 32° F. is taken.

In America, a "killing," frost is defined as a frost: "that is generally destructive of vegetation.". A "black frost" is the phenomenon arising out of a combination of low temperature and low-humidity causing rupturing of planticells by expansion, when freezing takes place, of the water which they contain, though frost crystals are not formed on the ground.

The parts of Australia most subject to low temperature are the eastern highlands from about Omeo in Victoria northward to Cambooya and Bybera in Queensland. Most stations in this region experience more than ten nights per month with readings of 32° F. or under for three to five months of the year. In Tasmania, districts on the Central Plateau are subject to such conditions for three to six months of the year. Minimum temperatures of 32° F. are comparatively infrequent in Western Australia except in parts of the south and south-west. In South Australia, the Yongala district is much more subject to such temperatures than other parts of the State. Much of the south-east of Queensland has a higher frequency of such readings than South Australia. Generally speaking, the frequency is controlled mainly by altitude, latitude and, to a lesser degree, by proximity to the sea.

Frosts may occur within a few miles of the coastline over the whole continent, exceptin, the Northern Territory and a considerable area of Northern Queensland. Regions subject to frost in all months of the year comprise portions of the tablelands of New South Wales, the Eastern, Highlands, and, parts of the Central Divide, and, Western district in Victoria, practically the whole of Tasmania and a small area in the south-west of Western Australia.

A map showing the average annual number of frost-free days (i.e., days on which the temperature does not fall below 36° F.) appears on page 39..

Over most of the interior of the continent; and on the Highlands in Queensland ast far north as the Atherton Plateau frosts appear in April and end in September, but they are infrequent in these months. Minimum temperatures of 32° F. are experienced in most of the sub-tropical interior in June and July.

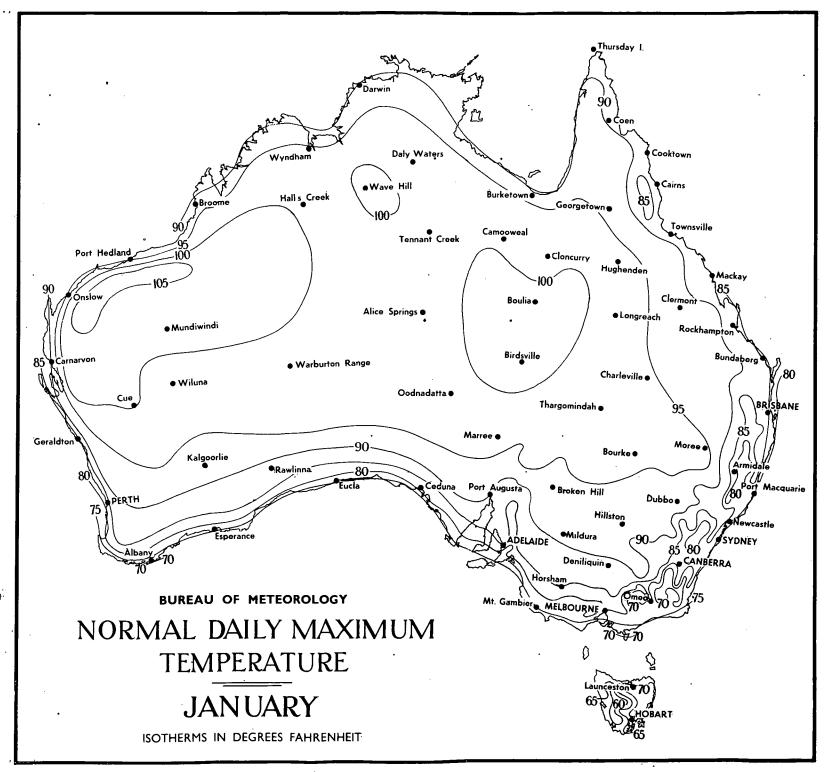

3. Humidity:—After temperature, humidity is the most important element of climate, particularly as regards its effects on human comfort, rainfall supply and conservation and related problems.

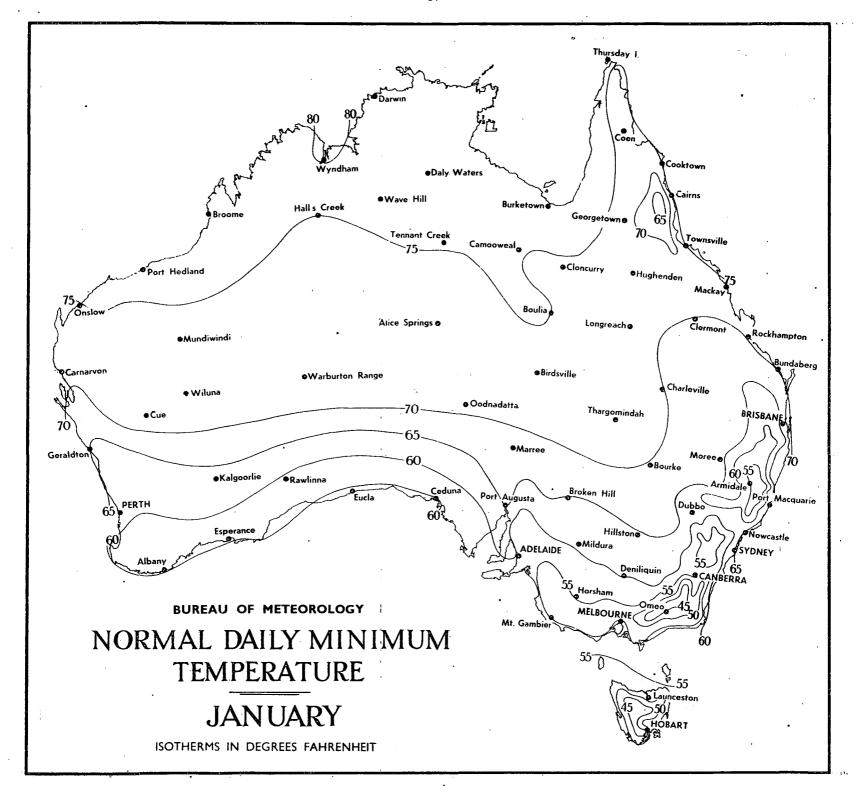

"Vapour pressure" is the pressure exerted by the water vapour in the atmosphere... At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the atmosphere. When this limit is reached, the air is said to be saturated and the pressure of the water vapour is equal to the "saturation vapour pressure".

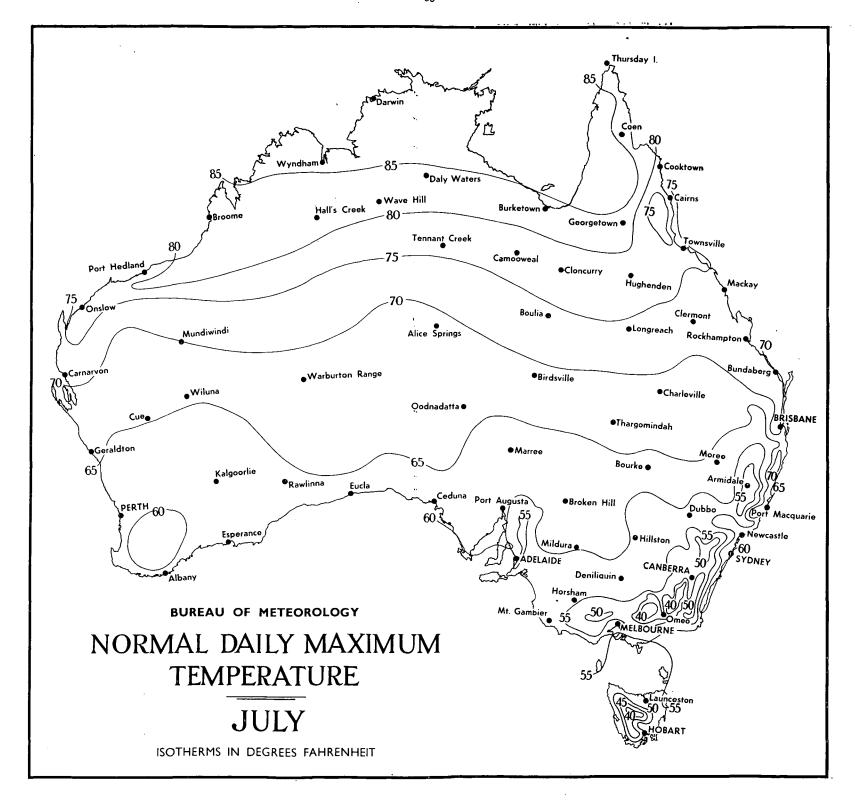

In this publication, the humidity of the air has been expressed by the relative humidity; which is the quotient of the vapour pressure divided by the saturation vapour pressure and multiplied by one hundred. The mean 9 a.m. relative humidity, as well as its highest and lowest recorded mean values at 9 a.m., are shown in the tables of climatological data for the capital cities (see pp. 53-60). The mean monthly vapour pressure has also been added to these tables.

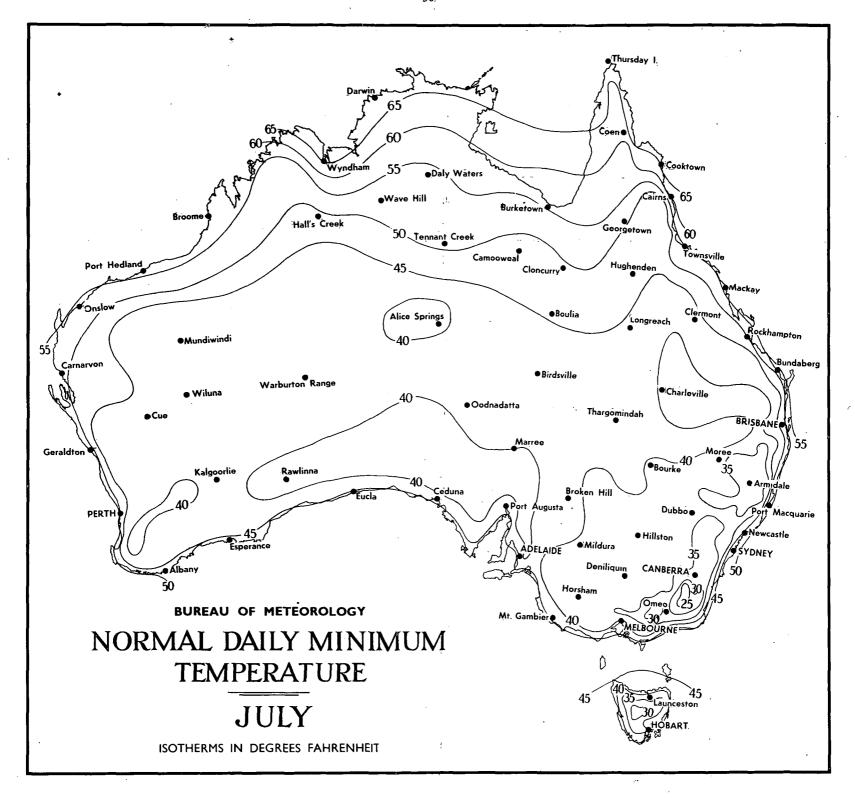

The annual curve of vapour pressure derived from the normal monthly values for this element is comparable with the maximum and minimum temperature curves, but the relative humidities; consisting as they do of the extremes for each month, do not show the normal annual fluctuation which would be approximately midway between the extremes.

The order of stations in descending values of 9 a.m. vapour pressure is Darwin, Brisbane Sydney, Perth, Melbourne, Adelaide, Canberra, Hobart and Alice Springs, while the relative humidity at 9 a.m. diminishes in the order, Melbourne, Sydney, Darwin, Brisbane, Canberra, Hobart, Perth, Adelaide and Alice Springs.

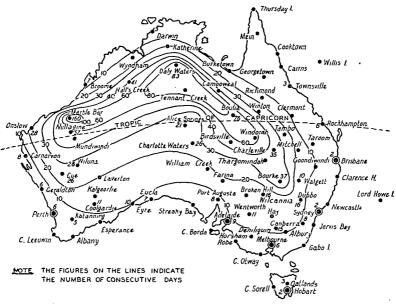

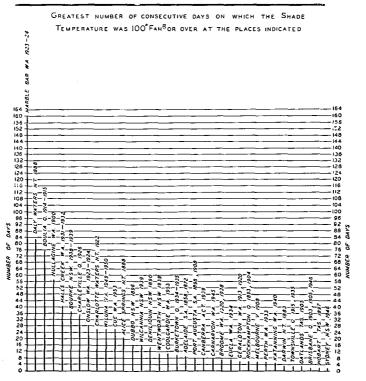

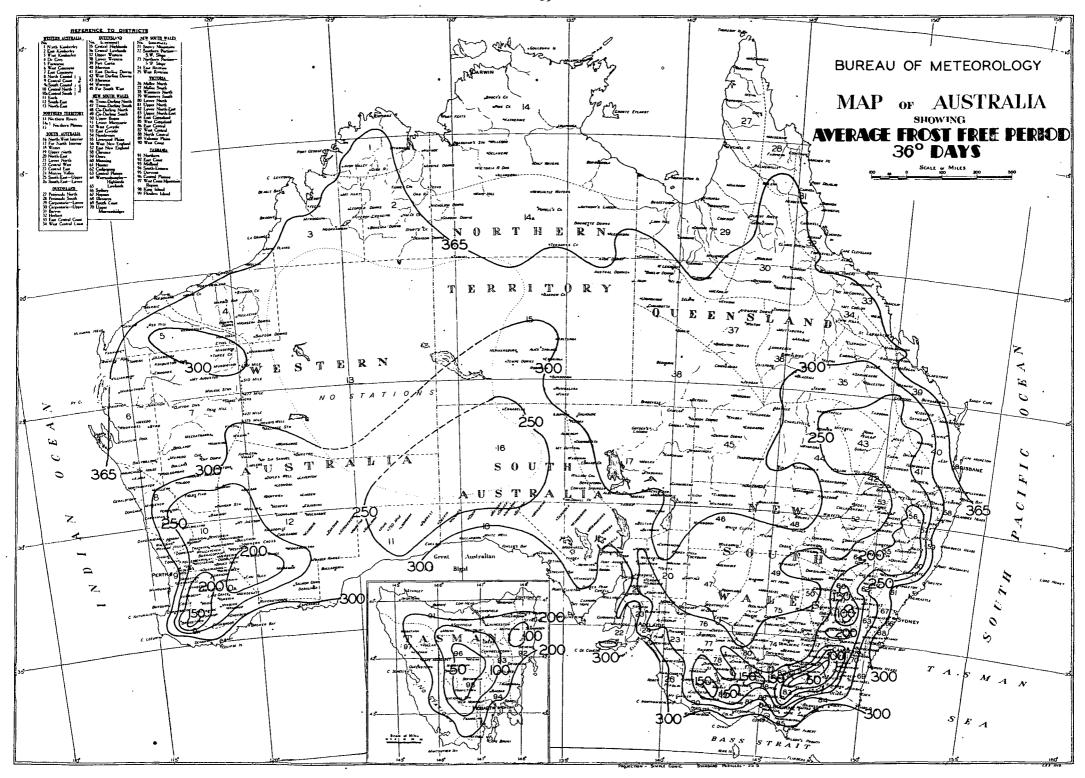

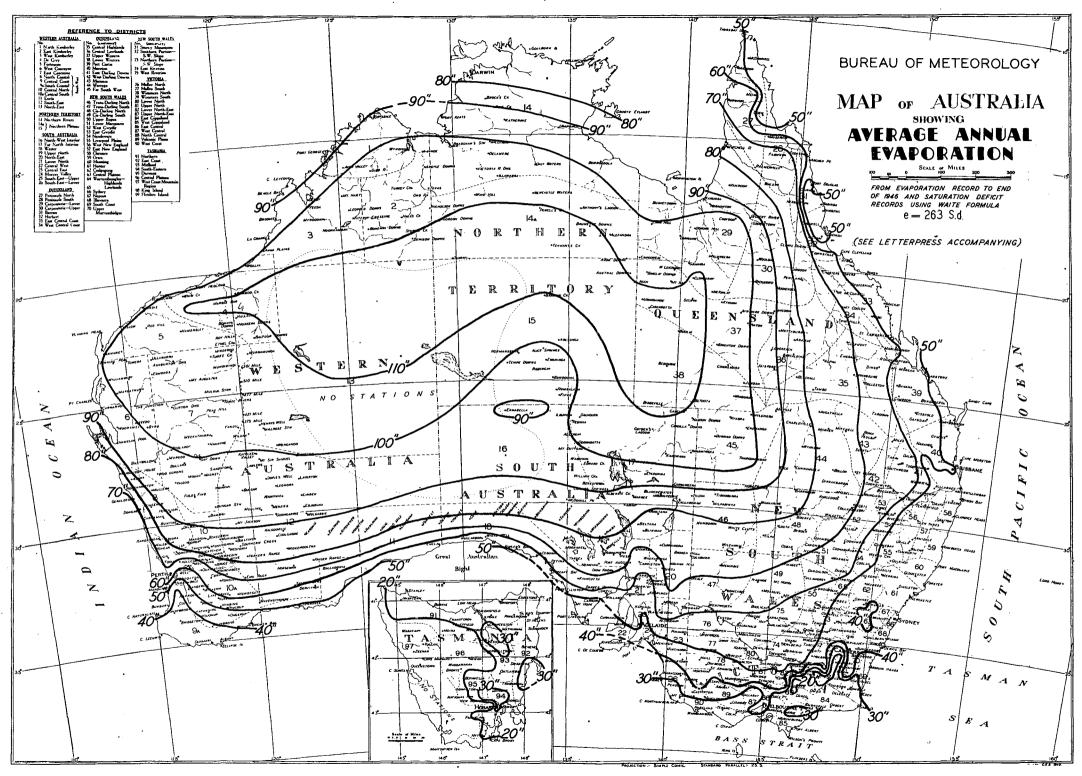

AREA AFFECTED AND PERIOD OF DURATION OF THE LONGEST HEAT WAVES WHEN THE MAXIMUM TEMPERATURE FOR CONSECUTIVE 24 HOURS REACHED OR EXCEEDED 100°F.

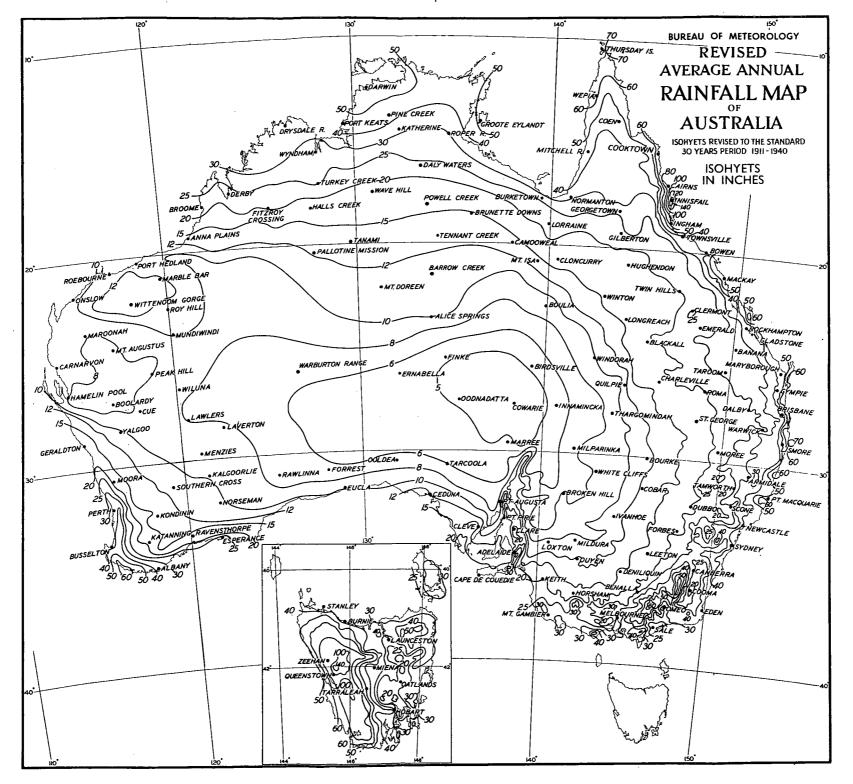

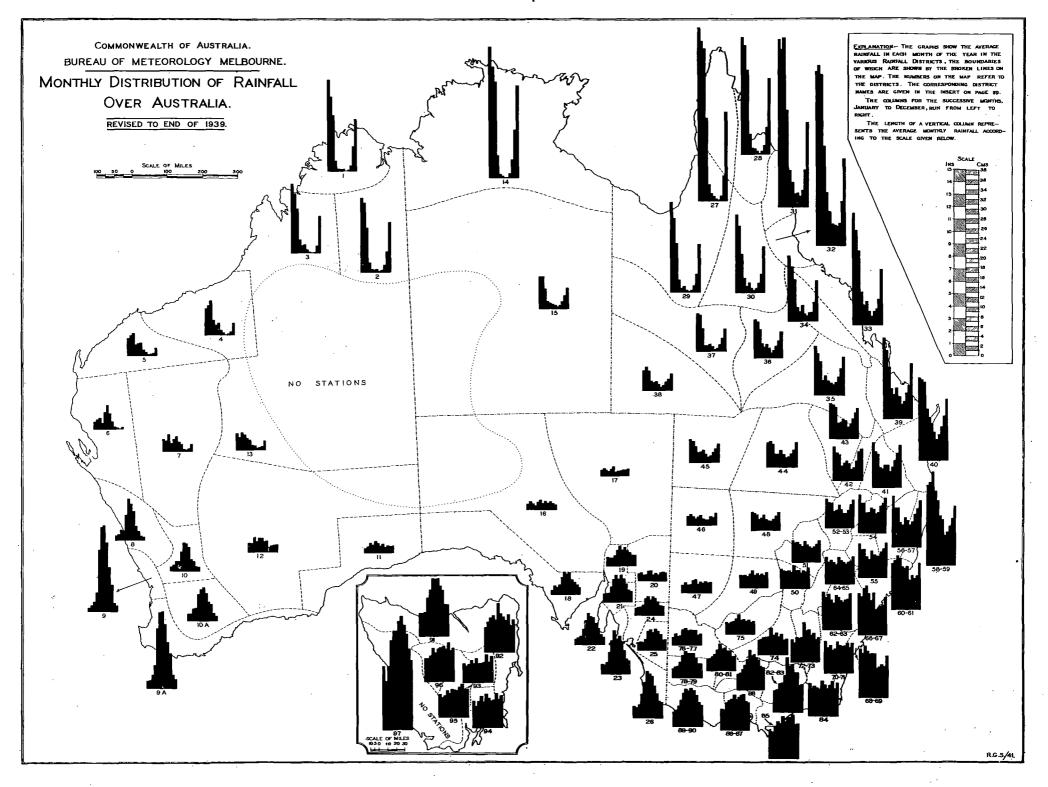

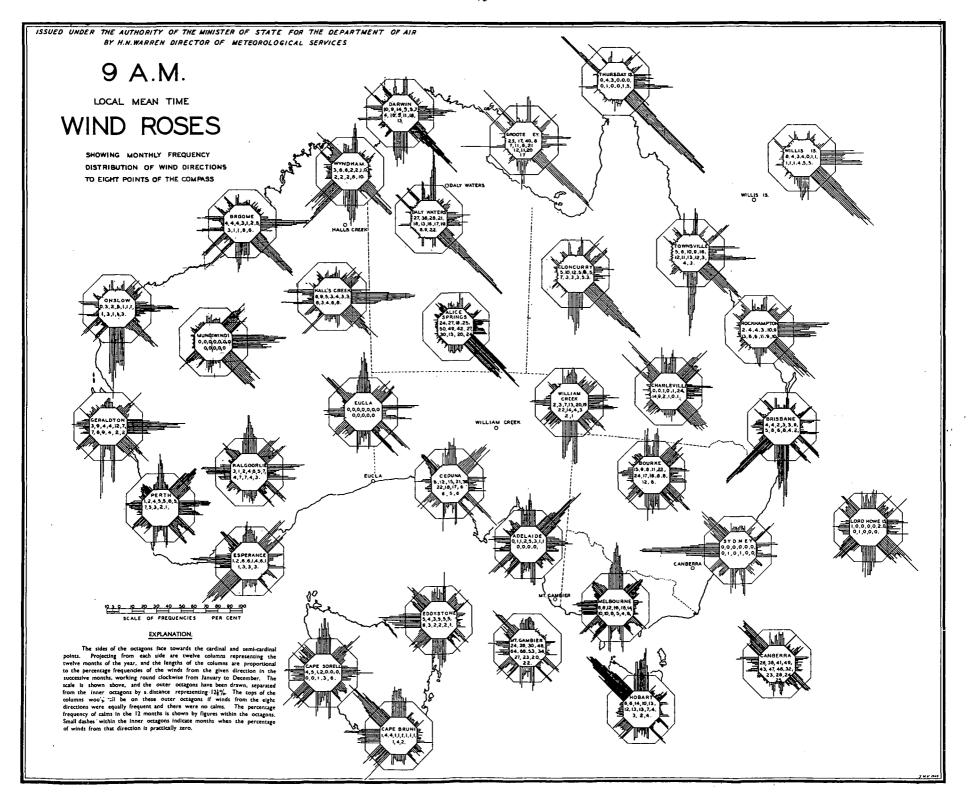

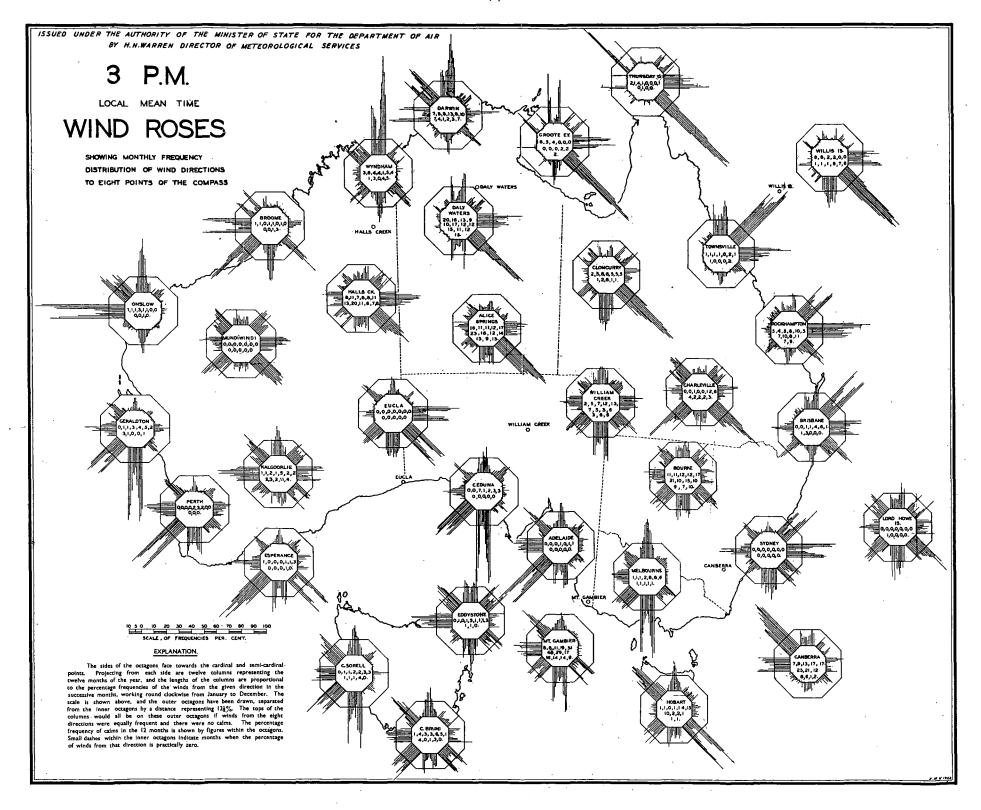

Further reference to humidity will be found in the section on effective temperature (see page 29).

4. Evaporation.—(i) General. The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and wind movement. In Australia, the question is, perhaps, of more than ordinary importance, since in its drier regions water has often to be conserved in tanks and dams. The magnitude of the economic loss by evaporation will be appreciated from the map reproduced herein (see page 40) which shows that the yearly amount varies from about 20 inches over western Tasmania to more than 100 inches over the central and north-western parts of Australia. Over an area of 70 per cent. of the continent, comprising most inland districts and extending to the coast in the North-West and Eucla divisions of Western Australia, the rainfall does not exceed the evaporation during any month of the year. The central and north-western portions of the continent, comprising 46 per cent. of the total land mass, experience evaporation more than twice as great as their rainfall; it is noteworthy that the vegetation over most of this region is characterized by acacia, semi-desert, shrub steppe and porcupine grass. Since the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Further, the more they are protected from the direct rays of the sun and from winds by means of suitable tree planting, the less will be the loss by evaporation. The Mansfield Process for treatment of tanks, dams and ponds by hexadecanol film, materially reducing effective evaporation, is a recent development which is already having beneficial results. These matters are naturally of more than ordinary concern in the drier districts of Australia.

(ii) Comments on Map of Average Annual Evaporation. The map of average annual evaporation in Australia (see page 40) has been compiled on the basis of records obtained from a number of evaporimeters supplemented by estimates derived from records of saturation deficit by applying the Waite Institute factor of 263.\* Some modification of the latter values was found to be necessary in comparison with recordings of evaporimeters.

The standard evaporation tank used in Australia is cylindrical in form and is 36 inches in diameter and 36 inches deep. It is surrounded by a 6-inch water jacket and the whole is sunk into the ground so that the water surface is approximately at ground level.

Saturation deficit is obtained from readings of dry and wet bulb thermometers exposed in a standard Stevenson thermometer shelter. Saturation deficit is the difference between the vapour pressure indicated by the dry and wet bulb readings, and the saturation vapour pressure corresponding to the dry bulb temperature.

The Waite formula, e = 263 s.d., is not an exact relationship, but it takes account of one of the major factors in evaporation, i.e., the difference between saturation vapour pressures at the mean dew point and at the mean air temperature. Errors in the formula are found to be fairly consistent in considerable areas of Australia and corrections have been applied accordingly. No evaporation records are available north of latitude 20°, and corrections have been extrapolated for these areas. The evaporation stations on which estimates for the tropics have been based are Alice Springs (Northern Territory): and Winton (Queensland), and to a lesser degree Blackall (Queensland) and Marble Bar (Western Australia).

The map thus presents an estimate of evaporation for which allowance should be made for a certain margin of error (perhaps 10 per cent. or so) on the conservative side. In the absence of definite information, such a map should serve a useful purpose as a basis for many climatic studies.

For graphs and tables of mean monthly evaporation and rainfall at certain selected stations, see Official Year Book No. 37, pp. 34-35.

5. Rainfall.—(i) General. The rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by its physiographical features.

Australia lies within the zones of the south-east trades and "prevailing" westerly winds. The southern limit of the south-east trades strikes the eastern shores at about 30° south latitude, and, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains from the New South Wales northern border to Thursday Island, upon which the rain-laden winds blow. The converse effect is exemplified on the northwest coast of Western Australia, where the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly winds, which skirt the southern shores, are responsible for the reliable, generally light to moderate rains enjoyed by the south-western portion of Western Australia, the agricultural areas of South Australia, a great part of Victoria, and the whole of Tasmania.

Prescott, J. A. "Atmospheric Saturation Deficit in Australia" (Trans. Royal Society, S.A. Vol. LV., 1931).

- (ii) Distribution of Rainfall. The average annual rainfall map of Australia (see page 41) shows that the heaviest yearly falls occur on the north coast of Queensland (up to more than 160 inches) and in western Tasmania (up to 140 inches), while from 50 to over 60 inches are received on parts of the eastern seaboard from Jervis Bay to the northern part of Cape York Peninsula, also around Darwin, on the West Kimberley coast, near Cape Leeuwin, about the Australian Alps in eastern Victoria and New South Wales, and on the north-eastern highlands in Tasmania. A great part of the interior of the continent, stretching from the far west of New South Wales and the south-west of Queensland to the vicinity of Shark Bay in Western Australia, has a very low average rainfall of less than 10 inches a year. Between these two regions of heavy and very low rainfall are the extensive areas which experience useful to good rains, and in the southern and eastern parts of which are found the best country and most of the population and primary production.
- (iii) Factors Determining Occurrence, Intensity and Seasonal Distribution of Rainfall. Reference has already been made to the frequent rains occurring in the north-eastern coastal districts of Queensland with the prevailing south-east trade winds and to similar rains in the west of Tasmania with the prevailing westerly winds. Other rains in Australia are associated mainly with tropical and southern depressions.

The former chiefly affect the northern, eastern, and to some extent the central parts of the continent and operate in an irregular manner during the warmer half of the year, but principally from December to March. They vary considerably in activity and scope from year to year, occasionally developing into severe storms off the east and north-west coasts. Tropical rainstorms sometimes cover an extensive area, half of the continent on occasions receiving moderate to very heavy falls during a period of a few days. Rain is also experienced, with some regularity, with thunderstorms in tropical areas, especially near the coast. All these tropical rains, however, favour mostly the northern and eastern parts of the area referred to; the other parts further inland receive lighter, less frequent and less reliable rainfall. With the exception of districts near the east coast, where some rain falls in all seasons, the tropical parts of the continent receive useful rains only on rare occasions from May to September.

The southern depressions are most active in the winter—June to August—and early spring months. The rains associated with them are fairly reliable and frequent over southern Australia and Tasmania, and provide during that period the principal factor in the successful growing of wheat. These depressions also operate with varying activity during the remainder of the year, but the accompanying rains are usually lighter. The southern rains favour chiefly the south-west of Western Australia, the agricultural districts of South Australia, Victoria, Tasmania, and the southern parts of New South Wales. They sometimes extend into the drier regions of the interior, but only infrequently and irregularly.

The map showing mean monthly distribution of rainfall over Australia (see page 42) gives, in graphic form, information on the amount and occurrence of rain.

(iv) Wettest and Driest Regions. The wettest known part of Australia is on the north-east coast of Queensland, between Port Douglas and Cardwell, where Deeral on the northern coast-line has an average annual rainfall of 172.26 inches and Tully on the Tully River 179.26 inches. In addition, three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 144 and 169 inches. The maximum and minimum annual amounts there, in inches, are:—Deeral, 287.18 in 1945 and 94.65 in 1951, a range of 192.53 inches; Tully, 310.92 in 1950 and 104.98 in 1943, a range of 205.94 inches; Goondi, 241.53 in 1894 and 67.88 in 1915, a range of 173.65 inches; Innisfail, 232.06 in 1950 and 69.87 in 1902, a range of 162.19 inches; Harvey Creek, 254.77 in 1921 and 80.47 in 1902, a range of 174.30 inches.

On five occasions, more than 200 inches have been recorded at Goondi, the last of these being in 1950, when 204.97 inches were registered. The records at this station cover a period of 70 years.

In 30 years of record, Tully has exceeded 200 inches on eleven occasions, and in 28 complete years of record Harvey Creek has exceeded this figure four times.

In Tasmania, the wettest part is in the West Coast region, the average annual rainfall at Lake Margaret being 146.51 inches, with a maximum of 177.30 inches in 1948.

The driest known part of the continent is in an area of approximately 180,000 square miles surrounding Lake Eyre in South Australia, where the annual average is between 4 and 6 inches and where the fall rarely exceeds 10 inches in twelve months.

Records at stations have at times been interrupted, but of the 23 stations in this region which have an annual average of less than 5 inches, six have complete records extending from 30 to 55 years. Of these, Mulka has the lowest average of 4.05 inches (34 years), followed by Troudaninna with an average of 4.15 inches in 42 years. Troudaninna in the period 1893 to 1936 had only one year in which the total exceeded 9 inches (11.07 inches in 1894). There have been protracted periods when the average has even been less

than 3 inches. From 1895 to 1903, Troudaninna received the following annual totals:—2.78, 0.99, 5.71, 3.04, 3.18, 2.83, 1.80, 1.11, 4.87, an average of 2.91 inches. From 1918 to 1929 the average was only 2.65 inches, and in this period from December, 1924, to November, 1929, the average was only 1.70 inches.

Mulka since 1918 has only twice exceeded 10 inches for the annual total (11.72 inches in 1920 and 13.56 in 1955) and on 16 occasions in 34 years the annual total has been less than 3 inches. In one particular period from October, 1926 to September, 1930, the average was only 1.26 inches (505 points in 48 months). However, at Kanowana, an even lower four-year average of 1.12 inches was recorded between 1896 and 1899 with yearly totals of 43,225, 87 and 94 points. An even smaller yearly total was recorded at Mungeranie in 1889 when only 39 points were recorded on five days.

The average number of days of rain per month in this region is only 1 to 2 and the annual number ranges between 10 and 20. Oodnadatta (standard 30 years' average rainfall equal to 4.44 inches) has an average of 20 days of rain per year, while Cordillo Downs in the extreme north-east corner of the State of South Australia receives 5.16 inches on twelve days per year, averaging about one day of rain each month in the 30 year period 1911-1940.

No part of the earth, so far as is known, is absolutely rainless, and although at Arica, in northern Chile, the rainfall over a period of 15 years was nil, a further two years in which there were three measurable showers made the "average" for 17 years 0.02 inches.

(v) Quantities and Distribution of Rainfall. The general distribution is best seen from the rainfall map (see page 41) which shows the areas subject to average annual rainfalls lying between certain limits. The proportions of the total area of each State and of Australia as a whole enjoying varying quantities of rainfall determined from the latest available information are shown in the following table:—

### AVERAGE ANNUAL RAINFALL DISTRIBUTION. (Per Cent.)

Average Annual Rainfall.	W. Aust.	N. Terr.	S. Aust.	Q'land.	N.S.W.	Vic.	Tas.	Total.
Under 10 inches	58.0	24.7	82.8	13.0	19.7	Nil	Nil	37.6
10 and under 15 ins.	22.4	32.4	9.4	14.4	23.5	22.4	Nil	19.9
15 and under 20 ,	6.8	9.7	4.5	19.7	17.5	15.2	0.7	10.9
20 and under 25 ,,	3.7	6.6	2.2	18.8	14.2	17.9	11.0	9.1
25 and under 30 ,,	3.7	9.3	0.8	11.6	9.1	18.0	11.4	7.3
30 and under 40 ,,	3.3	4.7	0.3	11.1	9.9	16.1	20.4	6.6
40 inches and over	2.1	12.6	Nil	11.4	6.1	10.4	56.5	8.6
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

<sup>(</sup>a) Includes Australian Capital Territory, are available.

Referring first to the capital cities, the records of which are given in the next table, it will be seen that Sydney, with an average rainfall of 44.80 inches, occupies the chief place; Brisbane, Perth, Melbourne, Hcbart and Canberra follow in that order, Adelaide with 21.09 inches being the driest. The extreme range from the wettest to the driest year is greatest at Brisbane (72.09 inches) and least at Adelaide (19.46 inches).

In order to show how the rainfall is distributed throughout the year in various parts of the continent, average figures for the various climatological districts have been selected (see map on page 42). The figures for Northern Rivers (District 14), show that nearly the whole of the rainfall occurs there in the summer months, while little or none falls in the middle of the year. The figures for the Central Coast, south-west of Western Australia (District 9), are the reverse, for while the summer months are dry, the winter months are very wet. In the districts containing Melbourne and Hobart, the rain is fairly well distributed throughout the twelve months, with a maximum in October for both districts. In Queensland, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons in eastern parts.

On the coast of New South Wales, the first half of the year is the wettest, with heaviest falls in the autumn; the averages during the last six months are fair, and moderately uniform. Generally, it may be said that approximately one-third of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches or more, the remaining two-thirds averaging from 5 to 20 inches.

(vi) Tables of Rainfall. The following table of rainfall for a fairly long period of years for each of the Australian capitals affords information as to the variability of the fall in successive years, and the list which follows in the next paragraph of the more remarkable falls furnishes information as to what may be expected on particular occasions.

<sup>(</sup>b) Over an area of 2,777 square miles no records

- 7. Snowfall.—Light snow has been known to fall occasionally as far north as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons, it has fallen simultaneously over two-thirds of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter, for several months, snow covers the ground to a great extent on the Australian Alps, where the temperature falls below zero Fahrenheit during the night. In the ravines around Mt. Kosciusko and similar localities the snow never entirely disappears after a severe winter.
- 8. Hail.—Hail falls most frequently along the southern shores of the continent in the winter, and over eastern Australia during the summer months. The size of the hailstones generally increases with distance from the coast. A summer rarely passes without some station experiencing a fall of stones exceeding in size an ordinary hen egg and many riddled sheets of light-gauge galvanized iron bear evidence of the weight and penetrating power of the stones.

The hailstones occur most frequently when the barometric readings indicate a flat and unstable condition of pressure. Tornadoes or tornadic tendencies are almost invariably accompanied by hail, and on the east coast the clouds from which the stones fall are frequently of a remarkable sepia-coloured tint.

- 9. Barometric Pressures.—The mean annual barometric pressure (corrected to sea level and standard gravity) in Australia varies from 29.80 inches on the north coast to 29.92 inches over the central and 30.03 inches in the southern parts of the continent. In January, the mean pressure ranges from 29.70 inches in the northern and central areas to 29.95 inches in the southern. The July mean pressure ranges from 29.90 inches at Darwin to 30.12 inches at Alice Springs. Barometer readings corrected to mean sea level and standard gravity have, under anticyclonic conditions, ranged as high as 30.935 inches (at Hobart on 13th July, 1846) and have fallen as low as 27.55 inches. This record low was registered at Mackay during a tropical hurricane on 21st January, 1918. An almost equally abnormal reading of 27.88 inches was recorded at Innisfail during a similar storm on 10th March, 1918. For graphs of Mean Barometric Pressure at Capital Cities, see Official Year Book No. 37, p. 35.
- 10. Wind.—(i) Trade Winds. The two distinctive wind currents in Australia are, as previously stated, the south-east trade and the "prevailing" westerly winds. As the belt of the earth's atmosphere in which they blow apparently follows the sun's ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months, the anticyclonic belt travels in high latitudes, thereby bringing the south-east trade winds as far south

as 30° south latitude. The "prevailing" westerly winds retreat a considerable distance to the south of Australia, and are less in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds come into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from Cape Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong, and occasionally penetrate to almost tropical latitudes.

(ii) North-west Monsoon. As the belt of south-east trade winds retreats southward during the summer, it is replaced in the north and north-west of Australia first by a sequence of light variable winds and then by the north-west monsoon. In Australia, the north-west monsoon has not the persistence nor regularity of the Indian south-west monsoon but is sufficiently characteristic for the summer in the north of Australia to be called the "North-west Season". In central and eastern Queensland, the north-west monsoon in the summer has comparatively little effect and the trade winds, albeit weakened, are still dominant winds. With the migration of the sun northward in the autumn, the northwest monsoon is replaced first by light variable winds and then by the trade winds.

Further particulars of Australian wind conditions and meteorology will be found in Official Year Book No. 38, pp. 58-61.

(iii) Cyclones and Storms. The "elements" in Australia are ordinarily peaceful, and while destructive cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months, the southern shores of the continent are subject to deep depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Strait, including the coastline of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these disturbances are experienced in their northern half, or in that part of them which has a north-westerly to a south-westerly circulation.

The north-east coast of Queensland is occasionally visited by hurricanes from the north-east tropics. During the first four months of the year, these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve first to the south-west and finally towards the south-east.

Very severe cyclones. locally known as "willy willies," are peculiar to the north-west coast of Western Australia from the months of November to April, inclusive. They usually originate over the ocean to the north or north-west of Australia, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course, their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded in 24 hours at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the northern interior of Western Australia from similar storms.

Some further notes on severe cyclones and on "southerly bursters", a characteristic feature of the eastern part of Australia, appeared in early issues of the Official Year Book (see No. 6, pp. 84-86), and a special article dealing with "Australian Hurricanes and Related Storms" appeared in Official Year Book No. 16, pp. 80-84.

Depressions vary considerably in their isobaric forms, intensity and other characteristics. Some bring rain in variable quantities, some heat and others mainly wind. A common type in southern Australia is the "A" shaped trough with an abrupt "backing" of the wind or "line squall" as it passes. The cold front is most frequently found through the centre of the "trough" because it is along this line, and extending into the upper levels of the atmosphere, that the demarcation of different air masses is so well defined. The best rains in inland Australia occur when extensive masses of warm moist tropical air move into the interior and are forced to rise by convergence of flow or by impact with a cold air stream.

The speed of low pressure systems is very variable, but in general in southern latitude the movement is of the order of 500 to 700 miles per day.

- 11. Influences affecting Australian Climate.—(i) General. Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes have, however, taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, low-lying lands on the north coast of New South Wales, which originally were seldom subject to frosts, have, with the deforestation of the surrounding hills, experienced annual visitations, the probable explanation being that through the absence of trees the cold air of the highlands now flows unchecked and untempered down the sides of the hills to the valleys and lower lands.
- (ii) Influence of Forests on Climate: As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalizing one; thus, especially in equatorial regions, and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of shade temperatures by altering the extent of radiating surface by evaporation, and by checking the movement of air, and while decreasing evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain and the washing away of surface soil, and when a region is protected by trees a steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall, the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies," watercourses supplied mainly by melting, snow would be subject to alternate periods of flooding and dryness. This is borne out in the case of the inland rivers, the River Murray, for example, which has never been known to become dry, deriving its steadiness of flow mainly through the causes indicated.
- (iii) Direct Influence of Forests on Rainfall. Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others take the opposite view.

Sufficient evidence exists, however, to prove that, even if the rainfall is not increased, the beneficial climatic effect of forest lands more than warrants their protection and extension. Rapid rate of evaporation, induced by both hot and cold winds, injures crops, and makes life uncomfortable on the plains, and, while it may be doubted that the forest aids in increasing precipitation, it must be admitted that it does check winds and the rapid evaporation due to them. Trees as wind-breaks have been successfully planted in central parts of the United States of America, and there is no reason why similar experiments should not be successful in many parts of the treeless interior of Australia. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.

- 12. Rainfall and Temperatures, Various Cities.—Official Year Book No. 34, p. 28, shows rainfall and temperature and No. 38, p. 42, temperature, for various importanticities throughout the world and for the Australian capitals.
- 13. Climatological Tables.—The averages and extremes for a number of climatological elements, which have been determined from long series of observations at the Australian capitals up to and including the year 1956, are given on the following eight pages.

Note.—The following points apply throughout:—

- (i) Where records are available, mean or average values have been calculated on a standard period of 30 years from 1911 to 1940.
- (ii) Extreme values have been extracted from all available years of actual record, but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

#### CHAPTER III.

#### GENERAL GOVERNMENT.

#### § 1. Scheme of Parliamentary Government.

- 1. General.—The legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State, there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office and by the instructions which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State was bi-cameral until 1922, in which year the Queensland Parliament became uni-cameral. In the bi-cameral States, it consists of (a) a Legislative Council and (b) a Legislative Assembly or House of Assembly. In Queensland, the Legislative Assembly constitutes the legislature. The Upper House is known as the Senate in the Commonwealth Parliament, and as the Legislative Council in the State Parliaments. The Lower House in the bi-cameral Parliaments is known as the House of Representatives in the Commonwealth Parliament, as the Legislative Assembly in the State Parliaments of New South Wales, Victoria and Western Australia, and as the House of Assembly in the State Parliaments of South Australia and Tasmania. The legislative powers of these Parliaments are delimited by the Commonwealth and the State Constitutions. The Assembly, which is the the larger House, (Queensland as pointed out above is uni-cameral) is, in all cases, elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of the State concerned, the constituencies being differently arranged and, in general, some property or special qualification for the electorate being required. In Victoria, however, under the Legislative Council Reform Act passed in October, 1950, adult suffrage was adopted for Legislative Council elections. In the case of New South Wales, the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament, the qualifications for the franchise are identical for both Houses.
- 2. The Sovereign.—(i) Accession of Queen Elizabeth II. On 7th February, 1952, the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2nd June, 1953.
- (ii) Royal Style and Titles Act 1953. At a conference of Prime Ministers and other representatives of the British Commonwealth in London in December, 1952, it was agreed that the Royal Style and Titles then in use were not in accord with current relationships within the British Commonwealth and that there was need of a new form which would, in particular, "reflect the special position of the Sovereign as Head of the Commonwealth".

It was therefore decided that each member of the British Commonwealth should use a form of the Royal Style and Titles suited for its own circumstances, while retaining as a common element the description "Queen of Her other Realms and Territories and Head of the Commonwealth"; and that consultation between all countries of the Commonwealth should take place on any future proposal to change the form of the Royal Style and Titles used in any country.

To give effect to these decisions in Australia, the Royal Style and Titles Act was passed on 3rd April, 1953, giving Parliament's assent to the adoption by the Queen, for use in relation to the Commonwealth of Australia and its Territories, of the following Royal Style and Titles:—" Elizabeth the Second, by the Grace of God of the United Kingdom,

Australia and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith." The Act also approves the adoption by the Queen of a Royal Style and Titles for use in relation to other countries of the British Commonwealth in accordance with the principles formulated at the London conference.

- (iii) Authorization of a Royal Great Seal. By warrant published in the Commonwealth Gazette of 17th November, 1955, Her Majesty authorized the Great Seal of the Commonwealth to be used as a Royal Great Seal in sealing all things whatsoever (other than things that pass the said Great Seal) that bear Her Majesty's Sign Manual and the countersignature of one of Her Ministers of State for the Commonwealth.
- 3. Powers and Functions of the Governor-General and of the State Governors.—
  (i) Governor-General of the Commonwealth. Section 2 of the Commonwealth Constitution provides as follows:—
  - "A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him."

As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen—either by Letters Patent (see Letters Patent dated 29th October, 1900, and 15th December, 1920), by Instructions under the Royal Sign Manual and Signet, by Commission issued to him under the Royal Sign Manual and Signet, or by any instrument of delegation under section 2 of the Constitution. Powers which have been so assigned include, amongst others, the power to appoint a Deputy or Deputies of the Governor-General, to administer or authorize any other person to administer the Oath of Allegiance, to grant pardons and to remit fines for offences against the laws of the Commonwealth and to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth.

Other powers and functions are conferred on the Governor-General by the Constitution. For example, under section 5 of the Constitution he may appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives. Under section 32, the Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives. Under section 58, he assents in the Queen's name to a proposed law passed by both Houses of the Parliament or withholds assent, or reserves the law for the Queen's pleasure; or he may return the proposed law to the House in which it originated and may transmit therewith any amendments which he may recommend. Under section 61, he exercises the executive power of the Commonwealth, under section 62, he chooses and summons Executive Councillors, who hold office during his pleasure, and under section 64, he may appoint Ministers of State for the Commonwealth. By section 68, the command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General, as the Queen's representative. Under the conventions of responsible government obtaining in Commonwealth countries, the Governor-General's executive functions generally are exercised on the advice of Ministers of State. In this regard, the Governor-General's position has become assimilated to that of the Queen in relation to her Ministers of State for the United Kingdom.

In addition, many powers and functions are exercised by the Governor-General under Acts of the Commonwealth Parliament. Most Acts, for example, provide that the Governor-General may make regulations, not inconsistent with the Act, either generally to give effect to the Act or to cover certain matters specified in the power. The Governor-General may be authorized by statute to issue prociamations—for example, to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. The Governor-General has been given power by statute to legislate for certain Territories of the Commonwealth. Other statutory powers include the power to appoint and dismiss certain office holders. A reference to the Governor-General, in Acts of the Commonwealth Parliament, means, unless the contrary intention appears, the Governor-General acting with the advice of the Executive Council (Acts Interpretation Act 1901–1950, section 17 (f)).

(ii) Governors of the States. The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates.

The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the "Governor's Instructions" given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills, which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown.

In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

- (iii) Holders of Office. For the names of the Governors-General since the inception of the Commonwealth and of the present State Governors, see § 3., page 73.
- 4. The Cabinet and Executive Government.—(i) General. Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as "Cabinet" or "responsible" government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform Governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates chiefly by means of constitutional conventions, customs or understandings, and of institutions that do not form part of the legal structure of the government at all. The constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall either be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case, he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained below. The whole policy of a Ministry is, in practice, determined by some or all of the Ministers of State, meeting, without the Governor-General or Governor, under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

- (ii) The Cabinet. This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, until January, 1956, all Ministers were members of the Cabinet. Since then, however, although in the States all Ministers are members of the Cabinet, the Commonwealth ministry is made up of twelve senior Ministers, who constitute the Cabinet, and ten Ministers of non-Cabinet rank who attend meetings of the Cabinet only when required, as, for example, when the business of the Cabinet concerns their department. As Ministers are the leaders of the party or parties commanding a majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact that all Ministers are members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.
- (iii) The Executive Council. This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State are ex officio members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings, for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The meetings of the Executive Council are formal and official in character, and a record of

proceedings is kept by the Secretary or Clerk. At Executive Council meetings, the decisions of the Cabinet are (where necessary) given legal form, appointments made, resignations accepted, proclamations issued, and regulations and the like approved.

(iv) The Appointment of Ministers. Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. Australian practice follows, broadly, that of the United Kingdom. When a Ministry resigns, the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to "form a Ministry"—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

The customary procedure in connexion with the resignation or acceptance of office by a Ministry is described fully in previous issues of the Official Year Book (see No. 6, p. 942). It may be added, however, that legislation now exists in all States, the effect of which is to obviate the necessity of responsible Ministers vacating their seats in Parliament on appointment to office.

(v) Ministers in Upper and Lower Houses. The following table shows the number of Ministers with seats in the Upper or Lower Houses of each Parliament in December, 1957:—

### AUSTRALIAN PARLIAMENTS: MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER, 1957.

Ministers with Seats in-	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
The Upper House The Lower House	5 16	2 14	4 10	(a) 11	3 5	2 8	· 9	16 73
Total	21	16	14	11	8	10	9	89

(a) Abolished in 1922.

For the names of the occupants of ministerial office in each of the Parliaments of Australia in December, 1957, see § 3. of this chapter (page 73). Subsequent changes of importance in Ministries will be found in the Appendix to this volume.

(vi) Numbers and Salaries of Commonwealth Ministers. Under sections 65 and 66, respectively, of the Constitution of the Commonwealth, the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, "until the Parliament otherwise provides."

Subsequently, number and salaries were increased to 8-£13,650 (1915) and to 9-£15,300 (1917). During the period of financial emergency in the early thirties the ministerial salary appropriation was reduced to as low as £10,710 a year, and was not restored to its former level until 1938. During the period of restoration of salary the number of Ministers was increased to 10 (1935). Later increases were as follows: —to 11-£18,600 (1938); 19-£21,250 (1941)—these increases were war-time provisions, extended into peacetime in 1946; £27,650 (1947—number unaltered): 20-£29,000 (1951); £41,000 (1952—number unaltered); 22-£46,500 (1956). In 1938, an additional ministerial allowance of £1,500 a year was granted to the Prime Minister; this was increased to £3,500 a year (exempt from income tax) in 1952 and at the same time an additional ministerial allowance of £1,000 a year (exempt from income tax) was granted to each other Minister.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (see paras. 5 and 6 following).

5. Number and Salary of Members of the Legislatures, Australian Parliaments, December, 1957.—The following table shows the number and annual salary of members in each of the legislative chambers in December, 1957.

### AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES, 31st DECEMBER, 1957.

- (a) Abolished in 1922. (b) Plus expense allowances—Senators, £700; Members of the House of Representatives, city electorates, £600, country electorates, £800. See also para. 6 following. (c) Plus allowance varying from £500 to £800 according to remoteness of electorate, (d) Plus allowance of £400 for metropolitan, £600 for urban, £700 for inner country and £800 for outer country electorates. (e) Plus allowance according to distance of electorate from Adelaide; £50 if more than 50 miles, £75 if more than 200 miles. (f) Plus an adjustment in accordance with variations of the State basic wage which at 31st December, 1956 was £40. Plus £50 where any part of electorate is more than 50 miles from Perth. (g) Plus cost of living adjustment, pegged at £382. Plus allowance according to area of electorate and distance from the capital varying from £250 to £500 in the case of the Legislative Council, and from £500 to £800 in the case of the House of Assembly. (h) Plus marging from £175 to £400 for other non-metropolitan electorates and ranging from £175 to £400 for other non-metropolitan electorates.
- 6. Commonwealth Parliamentary Allowances. Section 48 of the Commonwealth Constitution granted to each senator and member of the House of Representatives an allowance of £400 a year until Parliament should decide to alter it. This general allowance has been altered on several occasions (see Official Year Book No. 42, pp. 69 and 70) and in 1956 was raised to £2,350 a year. Certain additional allowances are also provided for holders of Parliamentary Offices, etc., details of which are also given in the issue referred to above.
- 7. Enactments of the Parliament.—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States, other than South Australia and Tasmania, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania, laws are expressed to be enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. The Governor-General or the State Governor acts on behalf of, and in the name of, the Sovereign, in assenting to Bills passed by the Legislatures, but he may reserve them for the special consideration of the Sovereign. Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former is, to the extent of the inconsistency, invalid.

#### § 2. Parliaments and Elections.

1. Commonwealth.—(i) Qualifications for Membership and for Franchise—Commonwealth Parliament. Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age

or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any British subject, not under twenty-one years of age and not disentitled on racial or other grounds, who has lived in Australia for six months continuously. Residence in a sub-division for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory. A member of the Defence Forces on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections whether enrolled or not.

The principal reasons for disqualification of persons otherwise eligible as members of either Commonwealth House are:—Membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown (with certain exceptions), or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or of certain non-European races are excluded from the franchise. In the main these or similar grounds for disqualification apply also to State Parliament membership and franchise.

(ii) Commonwealth Parliaments and Elections. From the establishment of the Commonwealth until 1949, the Senate consisted of 36 members six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament and, as the population of the Commonwealth had more than doubled since its inception, the Parliament enacted legislation in 1948 enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation. Thus, the Representation Act 1948 provided that there shall be ten Senators from each State instead of six, increasing the total to 60 Senators. To effect this transition in the Senate, seven Senators were elected from each State at the elections of 1949, four taking office immediately the Senate sat after the election, the remaining three commencing their term on the usual date—1st July, 1950. Members of this Chamber are normally elected for a term of six years, but half the members retire at the end of every third year, although they are eligible for re-election. Accordingly, at each normal election of Senators, five Senators are now elected in each State, making 30 to be elected at each such election.

In accordance with the constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Consequently, in terms of the Constitution and the Representation Act 1905–1938, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows:—New South Wales—from 28 to 47; Victoria—from 20 to 33; Queensland—from 10 to 18; South Australia—from 6 to 10; and Western Australia—from 5 to 8. Tasmania's representation remained at 5 and the total was increased from 74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and sub-divisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30th June, 1954, necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia, and Western Australia. Representation as from the General Election for the House of Representatives on 12th December, 1955, is New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9, Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 121 to 122. A redistribution of electoral boundaries was effected by Distribution Commissioners appointed in each State.

Since the general elections of 1922, the Northern Territory has been represented by one member in the House of Representatives. The Australian Capital Territory Representation Act 1948 gave similar representation to the Australian Capital Territory as from the elections of 1949. The members for the Territories may join in the debates but are

not entitled to vote, except on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators, the whole State constitutes the electorate. For the purposes of elections for the House of Representatives, the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Official Year Book.

There have been twenty-one complete Parliaments since the inauguration of Federation. Until 1927 the Parliament met in Melbourne; it now meets at Canberra, the first meeting at Parliament House, Canberra, being opened by the late King George VI., then Duke of York, on 9th May. 1927.

The fifth Parliament, which was opened on 9th July, 1913, was dissolved on 30th July, 1914 in somewhat unusual circumstances, when for the first time in the history of the Commonwealth, a deadlock occurred between the Senate and the House of Representatives, and, in accordance with section 57 of the Constitution which provides for such an eventuality. both Houses were dissolved by the Governor-General. The nineteenth Parliament was similarly dissolved. It opened on 22nd February, 1950, but on 19th March, 1951, in its first session, a double dissolution was proclaimed for the second time since the inception of the Commonwealth.

The system of voting for the House of Representatives is preferential and for the Senate, until 1948, voting was also preferential. The Commonwealth Electoral Act 1948, however, introduced with the Representation Act 1948 to enlarge the Commonwealth Parliament (see page 66), changed the system of scrutiny and counting of votes in Senate elections from preferential to that of proportional representation. For a description of the system, see Official Year Book No. 38, pp. 82-3.

For particulars of electors enrolled and of electors who voted at the various Commonwealth elections, see earlier Year Books. Elections for the Senate have usually been held at the same time as those for the House of Representatives. The double dissolution of the nineteenth Parliament, however, referred to above, led to the holding of Senate elections on separate dates. An election for the Senate was held on 9th May, 1953, and a further election was due within one year of 30th June, 1956, i.e. the date of the completion of the term of office of half the elected Senators.

Following the House of Representatives election on 29th May, 1954, the twenty-first Parliament opened on 4th August, 1954 and was dissolved on 4th November, 1955, which enabled the elections for the Senate and House of Representatives again to be held simultaneously.

The elections for both Houses were held on 10th December, 1955, and particulars of electors and voting in the several States are as follows:—

(a) Contested Electorates only.

(b) Uncontested.

The twenty-second Parliament opened on 15th February, 1956.

- (iii) Commonwealth Referenda. According to Section 128 of the Constitution, any proposed law for the alteration of the Constitution must, in addition to being passed by an absolute majority of each House of Parliament, be submitted to a referendum of the electors in each State, and must further be approved by a majority of the States and of the electors who voted, before it can be presented for Royal Assent. So far, 24 proposals have been submitted to referenda and the consent of the electors has been received in four cases only, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referenda and the voting thereon were given in previous issues of the Official Year Book (see No. 18, p. 87, No. 31, p. 67, No. 35, p. 60, No. 36, p. 61, No. 37, pp. 64–5, No. 38, p. 84 and No. 40, p. 56), and a brief résumé was given in Official Year Book No. 41 (see page 67).
- 2. State Elections.—(i) Latest in each State. (a) Upper Houses. The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia and Western Australia. In New South Wales, members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

- (ii) Elections in Earlier Years. Official Year Book No. 38 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above, and some general information is given in the following paragraphs.
- 3. The Parliament of New South Wales.—The Parliament of New South Wales consists of two Chambers, the Legislative Assembly and the Legislative Council. By legislation assented to in July, 1949, the Assembly was enlarged from 90 to 94 members, elected in single-seat electoral districts, who hold their seats during the existence of the Parliament to which they are elected. The duration of Parliament is limited to three years and by legislation enacted in 1950 cannot be extended beyond that period except with the approval of electors by referendum. Until 1934, the Council was a nominee Chamber, consisting of a variable number of members appointed for life without remuneration, but as from 23rd April, 1934 it was reconstituted and became a House of 60 members to serve without remuneration for a term of twelve years, with one-quarter of the members retiring every third year. As from 1st September, 1948, however, members of the Council have been paid an allowance, now £500 a year. Vacancies are filled by members of both Chambers, who vote as a single electoral body at simultaneous sittings of both Chambers.

Any person who is an elector entitled to vote at a Legislative Assembly election, or a person entitled to become such elector, and who has been for at least three years resident in Australia, and who is a natural-born or naturalized subject of the Queen, is eligible for election to the Legislative Council. For the Council franchise, an elector must be a sitting member of either the Legislative Council or the Legislative Assembly. Any person qualified to vote at a Legislative Assembly election for any electoral district in New South Wales is qualified to be elected as a Member for that or any other district. Any person not under twenty-one years of age, who is a natural born or naturalized subject of the Queen, and who has lived in Australia for at least six months continuously, and in New South Wales for at least three months, and in any sub-division for at least one month immediately preceding the date of claim for enrolment, is entitled to enrolment as an elector for the Legislative Assembly. Persons are disqualified either as members or voters for reasons generally the same as those outlined on page 66.

Since the introduction of responsible government in New South Wales there have been 37 complete Parliaments, the first of which opened on 22nd May, 1856, and was dissolved on 19th December, 1857, while the thirty-seventh was dissolved on 6th February, 1956. The thirty-eighth Parliament opened on 10th April, 1956.

The elections of 1920, 1922, and 1925 were contested on the principle of proportional representation, but a reversion to the system of single seats and preferential voting was made at all later appeals to the people. The principle of one elector one vote was adopted in 1894, and that of compulsory enrolment in 1921. Compulsory voting was introduced at the 1930 election. The franchise was extended to women (Women's Franchise Act) in 1902, and was exercised by them for the first time in 1904.

4. The Parliament of Victoria.—Both of the Victorian legislative Chambers are elective bodies, but there is a considerable difference in the number of members of each House, and there was also, until the Legislative Council Reform Act 1950, a difference in the qualifications

necessary for members and electors. The number of members in the Upper House is 34, and in the Lower House, 66. In the Legislative Council, the tenure of the seat is for six years, except that one-half of the members who are elected for provinces at any general election for the Council are entitled to hold their seats for a period of only three years, one member for each of the seventeen provinces retiring every third year. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years.

Prior to the passing of the Act just referred to, which operated from November, 1951, property qualifications were required for membership of, and franchise for, the Legislative Council. As alternatives to the property qualifications for the Council franchise, certain professional and academic qualifications were also allowed. As amended, however, the qualifications for membership of the Council are possessed by any adult natural-born subject of the Queen, or by any adult alien naturalized for five years and resident in Victoria for two years. Entitlement for enrolment as an elector is extended to every adult natural-born or naturalized subject who has resided in Australia for at least six months continuously and in Victoria for at least three months and in any subdivision for at least one month immediately preceding the date of claim for enrolment. These qualifications for membership and electors apply also in respect of the Legislative Assembly. Reasons for disqualification follow the general pattern for Australia (see page 66)

Since the introduction of responsible government in Victoria, there have been 39 complete Parliaments, the first of which opened on 21st November, 1856, and closed on 9th August, 1859, while the thirty-ninth was dissolved on 22nd April, 1955. The fortieth Parliament was opened on 15th June, 1955.

Single voting is observed in elections held for either House, plural voting having been abolished for the Legislative Assembly in 1899 and for the Legislative Council in 1937. A preferential system of voting (see Official Year Book No. 6, p. 1182) was adopted for the first time in Victoria at the election held in November, 1911. The franchise was extended to women by the Adult Suffrage Act 1908, while voting at elections was made compulsory for the Legislative Assembly in 1926 and for the Legislative Council in 1935.

5. The Parliament of Queensland.—As stated previously, the Legislative Council in Queensland was abolished in 1922, the date of Royal Assent to the Act being 23rd March, 1922. The Legislative Assembly is composed of 75 members, each elected for a period of three years and each representing an electoral district.

Any person qualified to be enrolled for any electoral district is qualified for election to the Legislative Assembly. Any person of the age of twenty-one years, who is a natural-born or naturalized British subject with continuous residence within Australia for six months, in Queensland for three months, and in an electoral district for one month prior to making a claim for enrolment, is qualified to enrol as an elector. The classes of persons not qualified to be elected are similar to those for other Australian Parliaments (see page 66).

Under the Electoral Districts Act of 1949, the number of members and the number of electorates were increased from 62 to 75, and the increase became effective from the beginning of the thirty-second Parliament, elected in 1950. The Act divided the State into four zones, and a commission of three appointed by the Governor-in-Council completely distributed the prescribed zones into the number of electoral districts, taking into account community or diversity of interest, means of communication, physical features, boundaries of Petty Sessions Districts and of areas of Local Authorities.

Since the establishment of responsible government in Queensland, there have been 34 complete Parliaments, the last of which was dissolved on 13th June, 1957. Opinions differ regarding the opening date of the first Queensland Parliament. According to the Votes and Proceedings of the Legislative Assembly, the House met for the first time on 22nd May, 1860, when the members were sworn and the Speaker elected. The Governor, however, was unable to be present on that date, but he duly attended on 29th May, 1860, and delivered the Opening Address. The thirty-fifth Parliament was opened on 27th August, 1957.

At the elections held in May, 1915, the principle of compulsory voting was introduced for the first time in Australia. The election of 1907 was the first State election in Queensland at which women voted, the right being conferred under the Elections Acts Amendment Act 1905. In 1942, the system of preferential voting was abolished and that of election of the candidate obtaining the highest number of votes in the electorate now operates.

6. The Parliament of South Australia.—In this State, there is a Legislative Council composed of twenty members and a House of Assembly with 39 members, both Chambers

being elective. For the Legislative Council, the State is divided into five districts each returning four members, two of whom retire alternately, the term of office being six years. Thirty-nine districts return one member each to the House of Assembly; prior to 1938 there were 46 members representing nineteen districts. The duration of the House of Assembly is three years.

Any person who is at least thirty years of age, is a British subject or legally made a denizen of the State and who has resided in the State for at least three years is qualified for membership in the Legislative Council. Qualifications for the Council franchise are that a person is at least twenty-one years of age, a British subject, an inhabitant of the State with residence for at least six months prior to the registration of the electoral claim, and that he or she has had certain war service, or possesses property qualifications relating to ownership, leaseholding, or inhabitant occupancy. Any person qualified and entitled to be registered as an elector for the House of Assembly is qualified and entitled for election as a member of that House. Qualifications for enrolment as an elector for the House of Assembly are that a person is at least twenty-one years of age, is a British subject, and has lived continuously in Australia for at least six months, in the State for three months and in an Assembly subdivision for one month immediately preceding the date of claim for enrolment. Provisions in the Constitution for disqualification from membership or from the franchise in respect of either House follow the usual pattern for Australia (see page 66).

Since the inauguration of responsible government in South Australia, there have been 34 complete Parliaments, the first of which was opened on 22nd April, 1857. The thirty-fourth Parliament closed on 29th February, 1956 and the thirty-fifth was opened on 22nd May, 1956. The duration of the twenty-eighth Parliament was extended from three to five years by the provisions of the Constitution (Quinquennial Parliament) Act 1933, but this Act was repealed by the Constitution Act Amendment Act (No. 2) 1939, and the three-year term was reverted to.

South Australia was the first of the States to grant women's suffrage (under the Constitution Amendment Act 1894), the franchise being exercised by women for the first time at the Legislative Assembly election on 25th April, 1896. Compulsory voting for the House of Assembly was first observed at the 1944 election. A system of preferential voting is in operation.

7. The Parliament of Western Australia.—In this State, both Chambers are elective. For the Legislative Council, there are 30 members, each of the ten provinces returning three members, one of whom retires biennially. At each biennial election, the member elected holds office for a term of six years, and automatically retires at the end of that period. The Legislative Assembly is composed of 50 members, one member being returned by each electoral district. Members of the Legislative Assembly are elected for three years.

Qualifications required for membership of the Legislative Council are the age of thirty years, residence in Western Australia for two years, being a natural-born British subject or naturalized for five years prior to election and resident in the State for that period, and freedom from legal incapacity. Qualifications required for Council franchise are the age of twenty-one years, residence in Western Australia for six months, being a natural-born British subject or naturalized for twelve months, freedom from legal incapacity, and certain property qualifications relating to freehold, leasehold, or householder occupancy. Qualifications required for membership of the Legislative Assembly are the age of twenty-one years, residence in Western Australia for twelve months, being a natural-born British subject or naturalized for five years and resident in the State for two years prior to election, and freedom from legal incapacity. Qualifications required for the franchise are the age of twenty-one years, residence in Western Australia for six months and in an electoral district continuously for three months, and being a natural-born or naturalized British subject. Persons may be disqualified as members or voters for reasons similar to those for other Australian Parliaments (see page 66).

Since the establishment of responsible government in Western Australia, there have been twenty-one complete Parliaments, the first of which was opened on 30th December, 1890. The twenty-first Parliament closed on 6th April, 1956 and the twenty-second was opened on 2nd August, 1956. The preferential system of voting in use in Western Australia is described in Official Year Book No. 6, p. 1184.

Women's suffrage was granted by the Electoral Act of 1899. The first woman member to be elected to an Australian Parliament was returned at the 1921 election in this State. Voting for the Legislative Assembly was made compulsory in December, 1936, the first elections for which the provision was in force being those held on 18th March, 1939.

8. The Parliament of Tasmania.—In Tasmania there are two legislative Chambers, the Legislative Council and the House of Assembly, both bodies being elective. In accordance with the Constitution Act 1946, the Council now consists of nineteen members, elected for six years and returned from nineteen divisions. Three members retire annually (except in the 1953 elections and in each sixth successive year thereafter, when four retire) and the Council cannot be dissolved as a whole. There are five House of Assembly divisions, corresponding to the Commonwealth electoral divisions, each returning six members elected under a system of proportional representation which first came into force at the 1909 elections (see Official Year Book No. 6, p. 1185). By the Constitution Act 1936, the life of the Assembly was extended from three to five years except where, after a general election, all the Members elected are members of either of two opposing parties, and, of these, fifteen are member of one of those parties and fifteen are members of the other of those parties, when the Governor shall by Proclamation, invoke the Constitution Act (No. 2) 1954 which limits the life of the Assembly to three years.

Persons qualified for election to the Legislative Council must be 25 years of age and qualified to vote as Council electors, have been resident in Tasmania for a period of five years at any one time or at least two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for at least five years. An elector for the Council must be twenty-one years of age, a natural-born or naturalized subject and resident in Tasmania for a period of twelve months, with certain freehold or occupancy property qualifications, or the spouse of a person qualified to vote as the owner or occupier of property, or with certain academic, professional, defence force, or war service qualifications. For the House of Assembly, members must be twenty-one years of age, have been resident in Tasmania for a period of five years at any one time or for a period of two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for a period of five years. Electors must be twenty-one years of age, natural-born or naturalized subjects and resident in Tasmania for a period of six months continuously. Reasons for disqualification of members or voters are similar to those for other Australian Parliaments (see page 66).

The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been 31 complete Parliaments since the inauguration of responsible government, the thirty-first having been dissolved on 20th September, 1956. The thirty-second Parliament was opened on 4th December, 1956.

The suffrage was granted to women under the Constitution Amendment Act 1903 and compulsory voting for both Houses came into force on the passing of the Electoral Act in 1928. The system of voting is proportional representation by single transferable vote.

- 9. Superannuation Funds of the Parliament of the Commonwealth and of the Australian States .- (i) General. In Official Year Book No. 38, there is a conspectus of Superannuation Funds of the Parliaments of the Commonwealth and of the five States (New South Wales, Victoria, Queensland, South Australia and Western Australia) in which such schemes operate (see pp. 91-9). This conspectus summarized the main features of each fund as at 30th June, 1949. Although the schemes are still essentially as described in the conspectus, there have subsequently been several amending Acts providing for extensions or increases in benefits, increased contributions, etc., in some of the schemes. In December, 1955, the Tasmanian Parliament passed an Act, the Parliamentary Retiring Allowances Act, No. 59 of 1955, which set up a trust to administer a Parliamentary Retiring Allowances Contributions to this fund are to be made by every member at the rate of £156 a year and subject to specified conditions persons aged 45 years or over ceasing to be members, other than by voluntary retirement, are entitled to a pension after a period of service of not less than eight years. Other provisions are, in general, on much the same lines as for other parliamentary superannuation funds. The Commonwealth Retiring Allowances Act 1952 provided inter alia for additional benefit of £1,200 a year, subject to certain conditions, to a retired Prime Minister, and in case of his death, additional benefit of £750 a year to his widow.
- (ii) Finances. For particulars of the financial operations of these schemes see Chapter XX.—Private Finance of this volume.

#### § 3. Administration and Legislation.

1. The Commonwealth Parliaments.—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9th May, 1901, by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since Federation:-

#### COMMONWEALTH PARLIAMENTS.

Number of Parliament.			Date of Opening.	Date of Dissolution.	
First	•••		9th May, 1901		23rd November, 1903
Second			2nd March, 1904		5th November, 1906
Third		•	20th February, 1907		19th February, 1910

Twenty-first	• •		4th August, 1954		28th October, 1955
Twenty-second			15th February, 1956		

<sup>(</sup>a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Ministry, and under section 57 of the Constitution.

2. Governors-General and Commonwealth Ministries .- (i) Governors-General. The following statement shows the names of the Governors-General since the inception of the Commonwealth :-

#### GOVERNORS-GENERAL.

- Rt. Hon. John Adrian Louis, Earl of Hopetoun (afterwards Marquis of Linlithgow), K.T. G.C.M.G., G.C.V.O. From 1st January, 1901 to 9th January, 1903.
   Rt. Hon. Hallam, Baron Tennyson, G.C.M.G. From 17th July, 1902 to 9th January, 1903,
- (Acting).
- Rt. Hon. Hallam, Baron Tennyson, G.C.M.G. From 9th January, 1903 to 21st January, 1904. Rt. Hon. Henry Stafford, Baron Northcote, G.C.M.G., G.C.I.E., C.B. From 21st January,
- 1904 to 9th September, 1908.

  Rt. Hon. William Humble, Earl of Dudley, G.C.B., G.C.M.G., G.C.V.O. From 9th September, 1908 to 31st July, 1911.

  Rt. Hon. Thomas, Baron Denman, G.C.M.G., K.C.V.O. From 31st July, 1911 to 18th May,
- Rt. Hon. Sir Ronald Craufurd Munro Ferguson (afterwards Viscount Novar of Raith), G.C.M.G. From 18th May, 1914 to 6th October, 1920.

  Rt. Hon. Henry William, Baron Forster of Lepe, G.C.M.G. From 6th October, 1920 to
- 8th October, 1925.

  Rt. Hon. John Lawrence, Baron Stonehaven, G.C.M.G., D.S.O. From 8th October, 1925 to 22nd January, 1931.

  G.C.B. G.C.M.G. From 22nd January, 1931 to 23rd January,
- Rt. Hon. Srr Isaac Alfred Isaacs, G.C.B., G.C.M.G. From 22nd January, 1931 to 23rd January, 1936.
- General the Rt. Hon. ALEXANDER GORE ARKWRIGHT, BARON GOWRIE, V.C., G.C.M.G., C.B., D.S.O., K.G.St.J. From 23rd January, 1936 to 30th January, 1945.

His Royal Highness Prince Henry William Frederick Albert, Duke of Gloucester, Earl of Ulster and Baron Culloden, K.G., K.T., K.P., P.C., G.C.B., G.C.M.G., G.C.V.O., General in the Army, Air Chief Marshal in the Royal Air Force, One of His Majesty's Personal Aides-de-Camp. From 30th January, 1945 to 11th March, 1947.

Rt. Hon. Sir William John McKell, G.C.M.G. From 11th March, 1947 to 8th May, 1953.

Field-Marshal Sir William Joseph Slim, G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C., K.St.J. From 8th May, 1953.

(ii) Administrators. In addition to the holders of the office of Governor-General listed above, certain persons have, from time to time, been appointed as Administrator of the Government of the Commonwealth during the absence from Australia or illness of the Governor-General. The following is a list of such appointments.

#### Term of Office.

Rt. Hon. Frederic John Napier, Baron Chelmsford, K.C.M.G.	21st December, 1909 to 27th January, 1910
Lieut-Colonel the Rt. Hon. Arthur Herbert Tennyson, Baron Somers, K.C.M.G., D.S.O., M.C.	3rd October, 1930 to 22nd January, 1931
Captain the Rt. Hon. William Charles Arcedeckne Vanneck, Baron Huntingfield, K.C.M.G., K.St.J.	29th March, 1938 to 24th September, 1938
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	5th September, 1944 to 30th January, 1945
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	18th January, 1947 to 11th March, 1947
General* Sir John Northcott, K.C.M.G., C.B., M.V.O.†	19th July, 1951 to 14th December, 1951
General* Sir John Northcott, K.C.M.G., K.C.V.O., C.B.	30th July, 1956 to 22nd October, 1956

(iii) Commonwealth Ministeries. (a) Names and Tenure of Office, 1901 to 1956. The following list shows the name of each Commonwealth Ministry to hold office since 1st January, 1901, and the limits of its term of office.

#### COMMONWEALTH MINISTRIES.

- (i) Barton Ministry, 1st January, 1901 to 24th September, 1903. (ii) DEAKIN MINISTRY, 24th September, 1903 to 27th April, 1904.
- (iii) Watson Ministry, 27th April, 1904 to 17th August, 1904.
- (iv) Reid-McLean Ministry, 18th August, 1904 to 5th July, 1905.
- (v) DEAKIN MINISTRY, 5th July, 1905 to 13th November, 1908.
- (vi) FISHER MINISTRY, 13th November, 1908 to 1st June, 1909.
- (vii) DEAKIN MINISTRY, 2nd June, 1909 to 29th April, 1910.
- (viii) FISHER MINISTRY, 29th April, 1910 to 24th June, 1913.
- (ix) Cook Ministry, 24th June, 1913 to 17th September, 1914.
- (x) FISHER MINISTRY, 17th September, 1914 to 27th October, 1915.
- (xi) Hughes Ministry, 27th October, 1915 to 14th November, 1916
- (xii) Hughes Ministry, 14th November, 1916 to 17th February, 1917. (xiii) Hughes Ministry, 17th February, 1917 to 10th January, 1918. (xiv) Hughes Ministry, 10th January, 1918 to 9th February, 1923.
- (xv) BRUCE-PAGE MINISTRY, 9th February, 1923 to 22nd October, 1929.
- (xvi) Scullin Ministry, 22nd October, 1929 to 6th January, 1932.
- (xvii) Lyons Ministry, 6th January, 1932 to 7th November, 1938.
- (xviii) Lyons Ministry, 7th November, 1938 to 7th April, 1939.

  (xix) Page Ministry, 7th April, 1939 to 26th April, 1939.

  - (xx) MENZIES MINISTRY, 26th April, 1939 to 14th March, 1940.
  - (xxi) Menzies Ministry, 14th March, 1940 to 28th October, 1940.
- (xxii) Menzies Ministry, 28th October, 1940 to 29th August, 1941.
- (xxiii) FADDEN MINISTRY, 29th August, 1941 to 7th October, 1941.

Lieutenant-General Sir John Northcott was granted honorary rank of General whilst administering Government of the Commonwealth.
 † K.C.V.O., 1954. the Government of the Commonwealth.

#### COMMONWEALTH MINISTRIES-continued.

(xxiv) Curtin Ministry, 7th October, 1941 to 21st September, 1943. (xxv) Curtin Ministry, 21st September, 1943 to 6th July, 1945. (xxvi) Forde Ministry, 6th July, 1945 to 13th July, 1945.

(xxvii) CHIFLEY MINISTRY, 13th July, 1945 to 1st November, 1946.

(xxviii) CHIFLEY MINISTRY, 1st November, 1946 to 19th December, 1949.

(xxix) Menzies Ministry, 19th December, 1949 to 11th May, 1951.

(xxx) Menzies Ministry, 11th May, 1951 to 11th January, 1956.

(xxxi) Menzies Ministry, 11th January, 1956.

(b) Names of Successive Holders of Ministerial Office, 9th February, 1923 to 31st December, 1957. In Official Year Book No. 17, 1924, there appeared the names of each Ministry up to the Bruce-Page Ministry (9th February, 1923 to 22nd October, 1929), together with the names of the successive holders of portfolios therein, and issue No. 39 contained a list, commencing with the Bruce-Page Ministry, which covered the period between the date on which it assumed power, 9th February, 1923, and 31st July, 1951, showing the names of all persons who held office in each Ministry during that period.

This issue shows only particulars of the latest Menzies Ministry, but includes any changes therein during its term of office up to and including the reconstruction of 24th October, 1956. For any subsequent changes see Appendix to this volume.

4. Leaders of the Opposition, Commonwealth and State Parliaments,-The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in December, 1957.

Leader of the Opposition, Commonwealth and State Parliaments— Commonwealth-The Rt. Hon. H. V. Evatt, Q.C. New South Wales-P. H. Morton. Victoria—The Hon. A. E. Shepherd. Queensland—L. A. Wood. South Australia-M. R. O'Halloran. Western Australia-The Hon. D. Brand. Tasmania-The Hon. W. Jackson.

- 5. The Course of Legislation.—The actual legislation by the Commonwealth Parliament up to the end of 1955 is indicated in alphabetical order in "The Acts of the Parliament of The Commonwealth of Australia passed during the year 1955, in portion of the First Session of the Twenty-first Parliament of the Commonwealth, with Tables, Appendix and Index."
- A "Chronological Table of Acts passed from 1901 to 1955, showing how they are affected by subsequent legislation or lapse of time" is also given, and, further, "A table of Commonwealth Legislation passed from 1901 to 1955 in relation to the several provisions of the Constitution", is furnished. Reference should be made to these for complete information.
- 6. Legislation during 1956.—The following paragraphs present a selection from the legislative enactments of the Commonwealth Parliament during the year 1956. The acts included have been selected as the more important new measures and amending measures enacted during the year. The selection is somewhat arbitrary, however, because of the task of determining, in view of the limitations on space that might reasonably be allotted, the relative importance of the acts passed. Certain principles regulating the choice of acts have nevertheless been generally observed. Ordinary appropriation and loan acts are excluded, as are also acts relating to less important changes in existing forms of taxation, in superannuation and pension schemes, and in workers' compensation. Acts providing for minor amendments to existing statutes and continuance acts are similarly excluded.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. About 17 acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939 and 113 in 1956.

In Official Year Book No. 40 (see pp. 66-70), and previous Year Books, similar information was published for the principal legislative enactments of State Parliaments.

Commonwealth Legislation Passed in 1956.—Australian Coastal Shipping Agreement Act 1956 (No. 42 of 1956). Approves the Agreement (a copy of which appears in the Schedule to the Act) made on 18th June, 1956, between the Commonwealth and major shipping companies operating shipping services on the Australian coast. The Agreement makes provision for the purpose of ensuring the continued operation by the companies, as well as the Australian Coastal Shipping Commission, of ships in the Australian coastal trade; the maintenance of competition between the respective companies and between the companies and the Commission; the efficient and economical operation of shipping services in the Australian coastal trade; and the maintenance of the Australian shipbuilding industry. The Act requires the Commission to do all such things as the agreement provides it will do and to refrain from doing anything which would be contrary to the provisions of the agreement.

Australian Coastal Shipping Commission Act 1956 (No. 41 of 1956). Repeals the Shipping Act 1949 and provides for the establishment of the Australian Coastal Shipping Commission. It defines the functions, powers and duties of the Commission for the purpose of establishing, maintaining and operating interstate, overseas and territorial shipping services and provides for the winding up of the affairs of the Australian Shipping Board.

Australian Security Intelligence Organization Act 1956 (No. 113 of 1956). Provides that the Australian Security Intelligence Organization, being the Organization established in pursuance of a directive given by the Prime Minister on 16th March, 1949, shall continue in existence; defines the functions of the Organization in relation to the protection of the Commonwealth and its Territories from acts of espionage, sabotage and subversion; and provides for the employment of officers and employees of the Organization.

Broadcasting and Television Act 1956 (No. 33 of 1956). Repeals the Television Act 1953 and the Commercial Broadcasting Stations Licence Fees Act 1942, amends the Broadcasting Act 1942–1954, and alters the citation of that Act as so amended to the Broadcasting and Television Act 1942–1956. It defines the functions and powers of the Australian Broadcasting Control Board in relation to broadcasting and television, the national broadcasting service and the national television service. It makes provision for the licensing of commercial broadcasting stations and commercial television stations and imposes limitations on the ownership or control of commercial television stations.

Broadcasting and Television Stations Licence Fees Act 1956 (No. 34 of 1956). Provides for fees to be paid for the issue and renewal of licences for commercial broadcasting and television stations.

Cellulose Acetate Flake Bounty Act 1956 (No. 38 of 1956). Provides, subject to the conditions set out in the Act, for the payment from Consolidated Revenue of bounty at the rate of tenpence a pound to producers of good quality cellulose acetate flake sold for use in the manufacture in Australia of cellulose acetate flake rayon yarn.

Commonwealth Aid Roads Act 1956 (No. 31 of 1956). Amends the Commonwealth Aid Roads Act 1954–1955 by providing for the payment of additional amounts into the Commonwealth Aid Roads Trust Account.

Commonwealth Employees' Compensation Act 1956 (No. 93 of 1956). Amends the Commonwealth Employees' Compensation Act 1930-1954 by providing that that Act shall not apply in respect of service of a member of the Defence Force in respect of which the Repatriation (Far East Strategic Reserve) Act 1956 makes provision for payment of a pension.

Conciliation and Arbitration Act 1956 (No. 44 of 1956). Amends the Conciliation and Arbitration Act 1904–1955. It specifies that the chief objects of the Act are to promote goodwill in industry, to encourage conciliation with a view to amicable settlement of threatened industrial disputes, to provide means of preventing and settling disputes and to encourage the organization of representative bodies of employers and employees and the registration of those bodies.

It establishes the Commonwealth Conciliation and Arbitration Commission and, as a Superior Court of Record, a federal court to be known as the Commonwealth Industrial Court

Conciliation and Arbitration Act (No. 2) 1956 (No. 103 of 1956). Amends the Conciliation and Arbitration Act 1904–1955 as amended by the Conciliation and Arbitration Act 1956. It empowers the Commission to prevent or settle, by conciliation or arbitration, disputes as to industrial matters in relation to employment in connexion with Commonwealth projects (as defined by the Act) and to hear and determine industrial matters submitted to it. It also makes provision for the persons by whom parties may be represented in proceedings before the Commonwealth Industrial Court.

Customs Tariff (Federation of Rhodesia and Nyasaland Preference) 1956 (No. 61 of 1956). Repeals the Customs Tariff (Southern Rhodesian Preference) 1941 and the Customs Tariff (Southern Rhodesian Preference) 1948, and imposes duties of customs on goods produced or manufactured in the Federation of Rhodesia and Nyasaland, which have been shipped in the Federation for export to Australia.

Customs Tariff (Industries Preservation) Act 1956 (No. 111 of 1956). Amends the Customs Tariff (Industries Preservation) Act 1921-1936 and provides for the imposition of an emergency duty on imported goods where the Minister is satisfied that the importation of those goods is likely to cause injury to producers in Australia, or, in certain cases, to producers in a third country, of like or directly competitive goods.

Export Payments Insurance Corporation Act 1956 (No. 32 of 1956). Provides for the establishment of the Export Payments Insurance Corporation and specifies the functions, duties and powers of the Corporation. The Corporation is, subject to the Act, required to carry on the business of insurance under contracts of insurance—not being contracts against risks that are normally insured with commercial insurers—against risk of monetary loss arising out of acts in the course of, or for the purpose of, trade with countries outside Australia.

Fishing Industry Act 1956 (No. 22 of 1956). Provides for-

- (a) the establishment of the Fisheries Development Trust Account into which shall be paid the moneys referred to in section 5 of the Act; and
- (b) the application of moneys in the Account for the purposes of research in connexion with or for the promotion of the fishing industry; financial assistance to persons engaged in the industry; the training of persons, the dissemination of information and advice, and the publication of scientific, technical and commercial reports in connexion with the industry.

Home Nursing Subsidy Act 1956 (No. 84 of 1956). Provides for the payment by the Commonwealth from the National Welfare Fund of subsidies to organizations which conduct a home nursing service and are carried on otherwise than for the purpose of profit or gain to individual members. An organization conducted or controlled by a State Government, not being an organization administering a public hospital or an organization conducted or controlled by such an organization, is not eligible for a subsidy.

Housing Agreement Act 1956 (No. 43 of 1956). Authorizes the execution by or on behalf of the Commonwealth of an agreement substantially in accordance with the form contained in the Schedule to the Act between the Commonwealth and a State or States. The agreement provides for the Commonwealth to grant financial assistance to the States for the purposes of housing.

Income Tax and Social Services Contribution Assessment Act 1956 (No. 25 of 1956). Amends the Income Tax and Social Services Contribution Assessment Act 1936-1955. It extends to 30th June, 1955, the period during which income derived from mining and treating uranium shall be exempt from tax, and extends to 30th June, 1959, the special depreciation allowance to primary producers.

Income Tax and Social Services Contribution Assessment Act (No. 2) 1956 (No. 30 of 1956). Makes consequential amendments following on the amendments made by the Ministers of State Act 1956 and the Parliamentary Allowances Act 1956.

Income Tax and Social Services Contribution Assessment Act (No. 3) 1956 (No. 101 of 1956). Provides for deduction of capital expenditure in timber operations and in respect of industrial property. It increases the maximum deductible amount of education expenses, life insurance premiums, etc.; exempts the income of certain hospital and medical benefits funds; discontinues the exemption of pay and allowances of members of the Defence Force allotted for duty in Malaya; increases the amount of special deduction for residents of isolated areas; and allows deductions of gifts to certain authorities and institutions in Australia.

Income Tax and Social Services Contribution (Companies) Act 1956 (No. 28 of 1956). Sets out the rates of income tax and social services contribution payable for the financial year which commenced on 1st July, 1956, by a company, other than a company in the capacity of a trustee.

International Wheat Agreement Act 1956 (No. 80 of 1956). Approves the acceptance by Australia of the International Wheat Agreement, 1956, signed on behalf of Australia at Washington in the United States of America on 17th May, 1956.

Loans Securities Act 1956 (No. 82 of 1956). Amends the Loans Securities Act 1919. It empowers the Governor-General, notwithstanding the provisions of the Commonwealth Inscribed Stock Act 1911–1946 or of an Act authorizing the issue of Treasury Bills, to authorize the Treasurer to borrow moneys in such amounts and in such manner and to issue securities in such form as the Governor-General determines, and empowers the Governor-General to authorize the Treasurer to determine those matters. It also authorizes the Treasurer to borrow the moneys in currency other than Australian currency.

Meat Export (Additional Charge) Act 1956 (No. 2 of 1956). Repeals the Meat Export (Additional Charge) Act 1955, and, for the purpose of making good the amount by which the deficiency payments made by the Australian Meat Board under the Meat Agreement (Deficiency Payments) Act 1955 exceed the payments made to the Commonwealth of Australia by the Government of the United Kingdom, imposes a charge in addition to the charge payable under the Meat Export Charge Act 1935–1954 on meat, other than canned meat, exported to the United Kingdom. The rate of charge is to be fixed by the Minister by notice in the Commonwealth Gazette.

Ministers of State Act 1956 (No. 1 of 1956). Amends the Ministers of State Act 1952 by providing for the number of Ministers to be increased to twenty-two, and for the annual sum payable for the salaries of Ministers to be increased to Forty-six thousand five hundred pounds.

Mount Stromlo Observatory Act 1956 (No. 79 of 1956). Authorizes the making of an arrangement between the Commonwealth and the Australian National University for and in relation to the transfer to the University of the administration of the Commonwealth Observatory situated at Mount Stromlo. It repeals the Commonwealth Observatory Trust Fund Act 1953, and provides for the payment to the University of moneys standing to the credit of the Trust Fund established under that Act.

Northern Territory (Administration) Act (No. 2) 1956 (No. 110 of 1956). Amends the Northern Territory (Administration) Act 1901-1955 as amended by the Northern Territory (Administration) Act 1956. It provides that the Supreme Court of the Territory shall be deemed to be a Court of Disputed Returns; that writs for elections of the Legislative Council shall be issued by the Administrator; that public servants are ineligible to nominate for or continue as elected members; that an elected member who is a party to or has an interest in a contract made by the Commonwealth under which goods or services are to be supplied to the Commonwealth shall not take part in a discussion or vote on a matter which relates to that contract; and that the provisions of the Commonwealth Electoral Act as applied by the Principal Act may be substituted by regulations to suit the requirements of the Territory.

Parliamentary Allowances Act 1956 (No. 29 of 1956). Increases, as from 1st July, 1956, the allowances payable to members of each house of the Parliament, and provides for an allowance to be paid as from that date to the Deputy Leader of the Opposition in the Senate. It also increases the allowances payable to members of the House of Representatives during the period 10th December, 1955 to 30th June, 1956.

Post and Telegraph Rates Act 1956 (No. 66 of 1956). Amends the Post and Telegraph Rates Act 1902–1951 and provides for increased rates for the postage of postal articles and for telegrams.

Public Service Arbitration Act 1956 (No. 51 of 1956). Amends the Public Service Arbitration Act 1920-1955 consequent on the amendments made to the Conciliation and Arbitration Act 1904-1955. It provides that the Public Service Arbitrator may in the public interest refer matters of importance to the Commonwealth Conciliation and Arbitration Commission constituted by at least two presidential members and the Arbitrator; for appeals to the Commission constituted by at least three presidential members against a determination of the Arbitrator in cases where the Commission considers the matter is of importance in the public interest; for representation of parties before the Commission by counsel or solicitor; and for the continuance before the Commonwealth Court of Conciliation and Arbitration, constituted as provided by the Principal Act, of matters begun before that Court but not completed at the date of commencement of this Act.

Public Service Arbitration Act (No. 2) 1956 (No. 104 of 1956). Provides that, except as provided by the Act, an organization of employees is not entitled to submit claims to the Commonwealth Court of Conciliation and Arbitration; that the Public Service Arbitrator shall determine matters submitted to him relating to conditions of employment in the Public Service and may refrain from hearing and determining other claims if he considers it unnecessary or undesirable in the public interest; that he may make a determination which is not in accord with an award or order of the Commonwealth Court of Conciliation or of the Commission, that he may make a determination which is not in accord with a law of the Commonwealth except the Commonwealth Employees' Compensation Act 1930–1954, the Commonwealth Employees' Furlough Act 1943–1953 and the Superannuation Act 1922–1956 or any other prescribed Act or the prescribed provisions of an Act.

Rayon Yarn Bounty Act 1956 (No. 39 of 1956). Amends the Rayon Yarn Bounty Act 1954, and extends to 30th June, 1959, the period during which bounty under that Act will be paid in respect of the sale of rayon yarn.

Repatriation (Far East Strategic Reserve) Act 1956 (No. 91 of 1956). Provides a scheme of pensions and other repatriation benefits in respect of members (and dependants of members) of the Defence Force of the Commonwealth as part of or in connexion with the British Commonwealth Far East Strategic Reserve who suffer an incapacity or die during or as a result of service in Malaya.

States Grants (Universities) Act 1956 (No. 37 of 1956). Provides for the payment by the Commonwealth to the States, subject to the conditions set out in the Act, of specified sums of money by way of financial assistance during 1956 in connexion with Universities and university purposes, payment to be made by the Treasurer out of Consolidated Revenue.

Statistics (Arrangements with States) Act 1956 (No. 17 of 1956). Provides that the Commonwealth may enter into an arrangement with a State with respect to the collection and publication of statistics, and the supply of statistical information, for the purposes of both the Commonwealth and the State. It provides also for the transfer of State employees

to the Public Service of the Commonwealth in pursuance of that arrangement, and for the rates of remuneration, the preservation of rights in relation to leave, furlough, gratuities and superannuation of those employees.

Stevedoring Industry Act 1956 (No. 53 of 1956). Repeals the Stevedoring Act 1949 and Part II. of the Stevedoring Act 1954. It provides for the establishment of the Australian Stevedoring Industry Authority which shall consist of a Chairman and two members, and for the appointment of officers to constitute the Service of the Authority to assist the Authority in the exercise of its powers and the performance of its functions. It specifies the functions of the Authority and provides that the Authority may, for the purpose of the performance of its functions, make orders, and, where an emergency is declared to exist, give directions either orally or in writing, and that those orders or directions shall not be challenged in any way in a court. It provides for the appointment of Inspectors and specifies their duties. It provides that the Authority may define the limits of a port and shall determine, from time to time, the quota of waterside workers for a port and establish and maintain a register of employers and of waterside workers at that port. It provides that a rule of a Union which discriminates against a registered waterside worker is void and of no effect and that a person shall not, by boycott or discriminatory action, hinder or dissuade a person from applying for registration or engaging in employment as a waterside worker. It provides that the stevedoring industry charge shall be paid to the Authority out of the Consolidated Revenue Fund, that the Authority may borrow moneys, shall keep accounts and furnish monthly and annual reports of its activities and annual financial statements and shall not be subject to taxation under any law of a State to which the Commonwealth is not subject.

Stevedoring Industry Charge Act 1956 (No. 83 of 1956). Amends the Stevedoring Industry Charge Act 1947–1954 by increasing the rate of charge in respect of the employment of waterside workers from sixpence to one shilling and sevenpence per man-hour.

Sugar Agreement Act 1956 (No. 109 of 1956). Approves the Agreement, a copy of which is set out in the Schedule to the Act, made on 11th October, 1956, between the Commonwealth and the State of Queensland, and prohibits the importation of sugar into the Commonwealth except with the written consent of the Minister.

Tractor Bounty Act 1956 (No. 40 of 1956). Amends the Tractor Bounty Act 1939-1954, and extends to 23rd October, 1958, the period during which bounty under that Act is to be paid in respect of tractors. It provides that bounty is not payable on crawler tractors.

### § 4. Commonwealth Government Departments.

Official Year Book No. 37 contains, on pp. 76-86, a list of the Commonwealth Government Departments as at 31st March, 1947, showing details of the matters dealt with by each Department, and the Acts administered by the Minister of each Department, and Year Book No. 39 contains, on pp. 100-1, a description of major changes in Departmental structure from 1947 to 1951. Apart from the structural changes and transfers of functions described therein, there are several Departments which, in the interval between 1947 and 1956, were developed to cope with changing circumstances affecting the particular Department. The Prime Minister's Department, the Department of Immigration, and the Department of Social Services are among those whose organizations were thus altered, On page 81 of Official Year Book No. 43, details were shown of a major re-organization, in January 1956, of the functions of the Departments of Commerce and Agriculture and Trade and Customs, resulting in the creation of the Departments of Trade, Customs and Excise, and Primary Industry.

### § 5. Cost of Parliamentary Government.

The tables in this section are intended to represent the expenditure incurred in the operation of the Parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities: they do not attempt to cover the expenditure on Commonwealth and State administration generally.

Comparison between individual items should be made with caution because of differences in accounting and presentation.

The following statement shows this expenditure for the Commonwealth and for each State, as well as the cost per head of population, for the year ended 30th June, 1956. In order to avoid incorrect conclusions as to the cost of the Governor-General's or Governor's establishment, it may be pointed out that a very large part of the expenditure (with the exception of the item "Governor's salary") under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, and carried out at the request of the Government.

### COST OF PARLIAMENTARY GOVERNMENT, 1955-56.

# § 6. Government Employees.

Information concerning the number of employees of Australian Government Authorities may be found in Chapter VI.—Labour, Wages and Prices.

### CHAPTER IV.

### LAND TENURE AND SETTLEMENT.

### § 1. Introduction.

For descriptions of the land tenure systems of the several States and the internal Territories see Official Year Book No. 4 (pp. 235-333) and subsequent issues, in particular No. 22 (pp. 133-195). Conspectuses of land legislation in force and of the systems of land tenure in the several States have appeared in issues up to and including No. 38, but only a brief summary is given below.

The land legislation in force in the several States may be classified broadly under five major types of land enactments, i.e., Crown Lands Acts, Closer Settlement Acts, Mining Acts, Returned Service Personnel Settlement Acts, and Advances to Settlers Acts, but within the groupings there is, of course, a wide variety of individual Acts. In the two internal Territories, the legislation relating to lands is embodied in various ordinances.

In each of the States, there is a Lands Department under the direction of a Minister who is charged generally with the administration of the Acts relating to the alienation, occupation and management of Crown Lands. In the Northern Territory, the Administrator, under the control of the Minister for Territories, is charged with the general administration of the Lands Ordinance and of Crown lands in the Northern Territory. In the Australian Capital Territory, the administration of the Leases Ordinances is in the hands of the Department of the Interior.

In each of the States, there is also a Mines Department which is empowered under the several Acts relating to mining to grant leases and licences of Crown lands for mining and allied purposes. In the Northern Territory, there are several ordinances relative to mining.

As with land legislation, land tenures may be classified under broad headings; these indicate the nature of the tenure and comprise:—Free Grants and Reservations, Unconditional Purchases of Freehold, Conditional Purchases of Freehold, Leases and Licences under Land Acts, Closer Settlement, Leases and Licences under Mining Acts, and Settlement of Returned Service Personnel. For details of the various particular forms of land tenure within these seven groups in each State see Official Year Book No. 38 (pp. 114–116) and earlier issues. Descriptions of the systems operating in the two internal Territories may be found on pp. 329–30 and 338 of Official Year Book No. 39.

The following sections contain figures showing the extent of the different tenures in the several States and Territories, together with some general descriptive matter.

### § 2. Free Grants and Reservations.

- 1. New South Wales.—(i) Free Grants. Crown lands may, by notification in the Gazette, be dedicated for public purposes and be granted therefor in fee simple. Such lands may be placed under the care and management of trustees, not less than three nor more than seven in number, appointed by the Minister.
- (ii) Reservations. Temporary reservations of Crown lands from sale or lease may be made by the Minister.
- (iii) Areas Granted and Reserved. During 1955-56, 12,331 acres were permanently reserved or dedicated for miscellaneous recreation reserves and similar purposes. The areas reserved at 30th June, 1956 were as follows:—For travelling stock, 5,304,318 acres; pending classification and survey, 4,501,183 acres; forest reserves, 2,300,456 acres; water and camping reserves, 864,275 acres; mining reserves, 1,114,750 acres; for recreation and parks, 467,898 acres; other reserves, 6,708,721 acres; total, 21,261,601 acres.
- Victoria.—(i) Free Grants. The Governor may grant, convey or otherwise dispose of Crown lands for public purposes.
- (ii) Reservations. The Governor may temporarily or permanently reserve from sale, .ease or licence any Crown lands required for public purposes.

- (iii) Areas Granted and Reserved. During 1956, 70 acres were granted without purchase. The areas both temporarily and permanently reserved at the end of 1956 were as follows:—For roads, 1,666,768 acres; water reserves, 317,724 acres; agricultural colleges, etc., 8,434 acres; forest and timber reserves, 5,677,117 acres; reserves in the mallee, 410,000 acres; other reserves, 554,098 acres; total, 8,634,141 acres.
- (iv) Revoking of Agricultural Reservations. Under the Agricultural Colleges Act 1944, the land on which the agricultural colleges and experimental farms at Longerenong (2,386 acres) and Dookie (6,048 acres) are established is permanently reserved as sites for the purposes of State Agricultural Colleges and the remainder of the lands previously reserved has become unalienated for treatment as such under the Lands Acts.
- 3. Queensland.—(i) Free Grants. The Governor may grant in trust any Crown land which is or may be required for public purposes. Under the Irrigation Acts, land to be used for the purpose of any undertaking under the Acts may be vested in fee simple in the Commissioner of Irrigation and Water Supply.
- (ii) Reservations. The Governor may reserve from sale or lease, either temporarily or permanently, any Crown land which is or may be required for public purposes. Reserved lands may be placed under the control of trustees who are empowered to lease them for not more than 21 years with the approval of the Minister.

Under the State Forests and National Parks Acts, the Governor may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

- (iii) Areas Granted and Reserved. During 1956, no areas were granted in fee simple without payment, 337,091 acres were set apart as reserves and reserves cancelled totalled 223,520 acres. The areas reserved, including roads, at the end of 1956 were as follows:—Timber reserves, 3,082,917 acres; for State forests and national parks, 5,764,065 acres; aboriginal reserves, 7,848,825 acres; for streets, surveyed roads and stock routes, 3,688,413 acres; general reserves, 5,682,420 acres; total, 26,066,640 acres.
- 4. South Australia.—(i) Free Grants. The Governor may dedicate Crown lands for any public purpose and grant the fee simple of such lands, with the exception of foreshores and lands for quays, wharves or landing-places, which are inalienable in fee simple from the Crown.
- (ii) Reservations. The Governor may reserve Crown lands for the use and benefit of aboriginals, military defence, forest reserves, railway stations, park lands or any other purpose that he may think fit.
- (iii) Areas Granted and Reserved. During 1955-56, free grants were issued for an area of 110 acres and reserves comprising 503 acres were proclaimed. At 30th June, 1956, the total area of surveyed roads, railways and other reserves was 21,867,221 acres, including 18,787,900 acres set apart as aboriginal reserves.
- 5. Western Australia.—(i) Free Grants. The Governor may dispose of, in such manner as for the public interest may seem best, any lands vested in the Crown for public purposes, and may grant the fee simple of any reserve to secure the use thereof for the purpose for which such reserve was made.
- (ii) Reservations. The Governor may reserve any lands vested in the Crown for public purposes. Areas not immediately required may be leased by the Governor for periods up to 10 years. Reserves may be placed under the control of a local authority or trustees, with power to lease them for a period not exceeding 21 years, or may be leased for 99 years. Temporary reserves may also be proclaimed.
- (iii) Areas Granted or Reserved. During the year ended 30th June, 1956, approximately 404,530 acres were reserved for various purposes. At 30th June, 1956 the total area reserved was 55,628,760 acres, comprising State forests, 3,891,687 acres, timber reserves, 1,821,271 acres and other reserves 49,915,802 acres.
- 6. Tasmania.—(i) Free Grants. No mention is made in the Crown Lands Act respecting free grants of land, and it is expressly stated that no lands may be disposed of as sites for religious purposes except by way of sale under the Act. Under the Returned Soldiers' Settlement Act 1916, returned soldiers who applied prior to 31st March, 1922 were eligible to receive free grants of Crown land not exceeding £100 each in value, but these grants were conditional on the land being adequately improved.
- (ii) Reservations. The Governor in Council may except from sale or lease, and reserve to Her Majesty any Crown land for public purposes, and vest for such term as he thinks fit any land so reserved in any person or corporate body. Any breach or non-fulfilment of the conditions upon which such land is reserved renders it liable to forfeiture. A school allotment, not exceeding 5 acres in area, may also be reserved.

- (iii) Areas Granted or Reserved. The total area reserved at 30th June, 1956 was 4,129,666 acres, excluding 21,485 acres of land occupied by Commonwealth and State Departments.
- 7. Northern Territory.—(i) Reservations. The Governor-General may resume for public purposes any Crown lands not subject to any right of, or contract for, purchase, and may reserve, for the purpose for which they are resumed, the whole or any portion of the lands so resumed
  - (ii) Areas Reserved. The total area of reserves at 30th June, 1956 was 47,927,661 acres.
- 8. Summary.—The following table shows the total areas reserved in each State, and the grand totals, for the years 1951 to 1955:—

# AREAS RESERVED. ('000 Acres.)

	N.S.W.	Victoria.	Q'ld. (b)	S. Aust.	W. Aust.	Tas. (a)	Nor. Terr. (a)	Total.
1952	 20,158	8,429	25,538	21,252	52,014	4,068	46,159	177,618
1953	 20,319	8,429	25,797	21,265	52,238	4,069	47,001	179,118
1954	 20,344	8,451	25,873	21,336	52,613	4,070	47,032	179,719

1956	 21,261	8,634	26,067	21.867	55,629	4.130	47.928	185,516

(a) At 30th June.

(b) At 31st December.

#### § 3. Unconditional Purchases of Freehold.

- 1. New South Wales.—(i) Auction Purchases, Crown lands, not exceeding in the aggregate 200,000 acres in any one year, may be sold by public auction in areas not exceeding half-an-acre for town lands, 20 acres for suburban lands, and 640 acres for country lands, at the minimum upset price of £8, £2 10s., and 15s. per acre respectively. At least 10 per cent. of the purchase-money must be paid at the time of sale, and the balance within three months, or the Minister may allow the payment of such balance to be deferred for a period not exceeding ten years, 4 per cent. interest being charged. Town blocks in irrigation areas may also be sold by auction.
- (ii) After-auction Purchases. In certain cases, land offered at auction and not sold may be purchased at the upset price. A deposit in accordance with the terms and conditions under which the land was previously offered must be lodged, and, if the application be approved by the Minister, the balance of purchase money is payable as required by the specified terms and conditions.
- (iii) Special Purchases. Under certain circumstances, land may be sold in fee simple, the purchaser paying the cost of survey and of reports thereon, in addition to the purchasemoney as determined by the local Land Board.
- (iv) Improvement Purchases. The owner of improvements in land in authorized occupation by residence under any Mining Act or the Western Lands Act of land within a gold-field or mineral field may purchase such land without competition at a price determined by the local Land Board, but at not less than £8 per acre for town lands or £2 10s. per acre for other lands. The area must not exceed ‡ acre within a town or village, or two acres elsewhere, and no person may purchase more than one such area within three miles of a similar prior purchase by him.
- (v) Road Purchases. Land from roads that are closed may, with certain exceptions, be sold to the owners of adjoining lands at a value determined by the local Land Board.
- (vi) Areas Sold. During the year ended 30th June, 1956, the total area sold was 2,004 acres. of which two acres were sold by auction and two acres as after auction purchases, while 29 acres were sold as improvement purchases, 1927 acres as road purchases and 44 acres as special purchases.

- 2. Victoria.—(i) General. Lands, not exceeding 100,000 acres in any one year, specially classed for sale by auction, may be sold by auction in fee simple at an upset price of not. less than £1 per acre. The purchaser must pay the survey fee at the time of the sale, together with a deposit of 12½ per cent. of the whole price; the residue is payable in equal halfyearly instalments with interest. Any unsold land in a city, town or borough area, areas specially classed for sale, isolated pieces of land not exceeding 150 acres in area, and sites for churches or charitable purposes, if not more than three acres in extent, may be sold by auction on the same terms. Swamp or reclaimed lands may also be sold by auction, subject to the condition that the owner keeps open all drains, etc., thereon.
- (ii) Areas Sold at Auction and by Special Sales. During 1956, a total of 2,653 acres was disposed of under this tenure, 2,412 acres being country lands and 241 acres town and suburban lands.
- 3. Queensland.—(i) General. From 1917 to 1929, the law precluded land being made available for any class of selection which gave the selector the right to acquire the freehold title. Amending legislation giving power to make land available under freehold tenures was passed in 1929, but this provision was repealed by the Act of 1932.
  - (ii) Areas Sold, etc. One unconditional selection was made freehold during 1956.
- 4. South Australia.—(i) Sales by Auction. The following lands may be sold by auction for cash:—(a) special blocks; (b) Crown lands which have been offered for lease and not taken up within two years; (c) town lands; and (d) suburban lands which the Governor excepts from the operations of the Land Board. A purchaser must pay 20 per cent. of the purchase money in cash, and the balance within one month or within such extended time as the Commissioner of Crown Lands may allow. Town lands may be sold subject to the condition that they cannot be transferred or mortgaged within six years without the consent of the Commissioner. If the Commissioner of Crown Lands so determines, town lands may also be offered at auction on terms that the buyer may at his option purchase the lands for cash or on agreement for sale and purchase.
- (ii) Areas Sold, etc. During the year ended 30th June, 1956, the area of town lands and special blocks sold by auction was 19 acres. In addition, 72,591 acres were sold at fixed prices, and purchases on credit of 22,273 acres were completed, making a total of 94,883 acres.
- 5. Western Australia.—(i) Sales by Auction. Town, suburban and village lands may be sold by auction after being surveyed into lots and notified in the Gazette. Ten per cent. of the purchase-money must be paid in cash, together with the value of any improvements, and the balance in four equal quarterly instalments. Suburban land must be fenced within two years, and no Crown grant may be issued until the land is fenced.
- (ii) Areas Sold. During the year ended 30th June, 1956, the area of town and suburban allotments sold by auction was 540 acres in 445 allotments.
- 6. Tasmania.—(i) Sales by Auction. Town lands may be sold by auction.
  (ii) After-auction Sales. Town lands, not within five miles of any city, which, after having been offered at auction, have not been sold, may be sold at the upset price by private contract.
- (iii) Sales of Land in Mining Towns. Any person being the holder of a residence licence or business licence who shall be in lawful occupation of any residence area or business area, and who shall be the owner of buildings and permanent improvements upon such land of a value equal to or greater than the upset price of such area, shall be entitled to purchase such area at the upset price at any time prior to the day on which such area is to be offered for sale as advertised. The upset price for such area shall not be less than £10, excluding the value of improvements, cost of survey, and of grant deed. The area which may be so purchased may, with the consent of the Commissioner, exceed one-quarter of an acre, but shall not in any case exceed one-half of an acre.

### § 4. Conditional Purchases of Freehold.

- 1. General.—The various methods of obtaining Crown lands by conditional purchase in the several States are given in some detail in preceding issues of the Official Year Book (see No. 22, pp. 141-9).
- 2. New South Wales.—At 30th June, 1956, the total number of incomplete conditional purchases in existence was 35,161 covering an area of 11,565,508 acres. During 1955-56, applications received for conditional purchases numbered eleven, of which six, with an

area of 1,074 acres, were confirmed; during the year, deeds were issued for 486,948 acres, bringing the total acreage for which deeds had been issued to 35,051,189 at the end of the year. These figures exclude conversions from other tenures—609 comprising 218,792 acres.

- 3. Victoria.—The total area purchased conditionally in 1956 was 4,901 acres, all with residence. The number of selectors was 25. There were no selections in the Mallee in 1956.
- 4. Queensland.—The following selections were made freehold during 1956:—Agricultural farms, 79,340 acres, prickly pear selections, 154,332 acres, prickly pear development selections, 20,543 acres, and unconditional selections, 634 acres.
- 5. South Australia.—During 1955-56, 1,792 acres were allotted under agreements to purchase, comprising surplus lands, 1,458 acres, Pinnaroo Railway lands, 10 acres, Eyre Peninsula Land Purchase Act lands, one acre, and other Crown lands, 323 acres.
- 6. Western Australia.—During the year ended 30th June, 1956, the number of holdings conditionally alienated was 592, the total area involved being 876,405 acres, comprising conditional purchases by deferred payments, 875,921 acres and free homestead farms, 484 acres. Under the heading "deferred payments", are included conditional purchases of grazing lands.
- In addition, Crown grants were issued during 1955-56 for the following selections, the prescribed conditions having been complied with:—Free homestead farms, 10,679 acres and conditional purchases, 487,205 acres.
- 7. Tasmania.—During 1955-56, Crown grants were issued for 22,655 acres. The total area sold conditionally was 2,356 acres, comprising selections for purchase, 2,096 acres, and town and suburban allotments, 260 acres. The numbers of applications confirmed were 45 for country selections and 93 for town and suburban allotments.

### § 5. Leases and Licences under Land Acts.

- 1. General.—Information regarding the methods of obtaining leases and licences of Crown lands in the several States and Territories was given in earlier issues of the Official Year Book (see No. 22, pp. 149-63).
- New South Wales.—The following table shows the areas held under various descriptions of leases and licences under the control of the Department of Lands, the Water Conservation and Irrigation Commission and the Western Lands Commission at 30th June, 1956.

AREAS OCCUPIED UNDER LEASE OR LICENCE AT 30th JUNE, 1956, NEW SOUTH WALES.(a)

(Acres.)

Particulars.	Area.	Particulars.	Area.
Crown Lands or Closer Settlement Acts	' <del></del>	Crown Lands or Closer Settlement	
Occupation licences	551,189	Suburban holdings	53,045
Conditional leases	10.827.340	Group purchase leases	222,434
Conditional purchase leases	124,870	Irrigation areas	174,131
Settlement leases	2,596,739	Other leases(b)	165.543
Improvement leases	27,898	1	1
Annual leases	399,521	Western Lands Act.	1
Scrub and Snow leases	614,623	Conditional leases	121,596
Special leases	1,359,772	Perpetual leases	66,748,018
Permissive occupancies	1,870,760	Other long-term leases	10,313,634
Prickly pear leases	92,083	Permissive occupancies	290,968
Crown leases	7,063,561	Leases being issued—occupation	,
Homestead farms		licences	110,285
Homestead selections and grants	1,691,768	Preferential occupation licences	147,127
Closer settlement leases			
Settlement purchase leases	1,044,547	Total	114,230,94

<sup>(</sup>a) Excludes mining leases and permits; forest leases and occupation permits. (b) Includes leases outside irrigation areas, controlled by the Water Conservation and Irrigation Commission—146,446 acres.

<sup>3.</sup> Victoria.—The area of Crown lands occupied under leases and licences in the year 1956 was as follows:—Grazing licences—other than Mallee, 4,105,738 acres; Mallee, 1,956,122 acres; auriferous lands licences, 15,866 acres; perpetual leases—other than Mallee, 17,819 acres; Mallee, 41,852 acres; swamp lands leases, 3,978 acres; agricultural college lands, 33,917 acres; total, 6,175,292 acres.

- 4. Queensland.—The area occupied under lease or licence, excluding mining leases, at the end of 1956 was as follows:—Pastoral leases, 249,710,360 acres; occupation licences, 12,739,640 acres; grazing selections and settlement farm leases, 90,340,359 acres; special purpose leases—Crown land, 478,229 acres; reserves, 1,767,964 acres; perpetual lease (including prickly pear) selections, 6,813,955 acres; auction perpetual leases, 38,983 acres; forest grazing leases (reserves), 1,203,760 acres; total, 363,093,250 acres.
- 5. South Australia.—The total area, including repurchased lands held under lease or licence except mining lease and licence, at 30th June, 1956 was 139,639,677 acres of which pastoral leases, 117,084,712 acres, constituted the major proportion.
- 6. Western Australia.—At 30th June, 1956, the total area held under lease or licence issued by the Lands Department amounted to 212,379,595 acres, of which 208,003,368 acres were under pastoral lease.
- 7. Tasmania.—Crown lands leased at 30th June, 1956, for other than mining purposes amounted to 2,465,835 acres of which 2,019,762 acres were leased for pastoral purposes.
- 8. Northern Territory.—At 30th June, 1956, the total area under lease, etc., was 177,020,718 acres of which pastoral leases accounted for 139,289,161 acres and other leases, licences and mission stations, 37,731,557 acres.
- 9. Australian Capital Territory.—Under the terms of the City Area Leases Ordinance 1936–1951, each block is leased for a period of 99 years at a rental of five per cent. per annum of the unimproved capital value as assessed by the Commonwealth. The number of leases granted under this Ordinance to 30th June, 1956 (excluding leases surrendered and determined) was 3,164 representing an unimproved value of £1,188,845. Auction sales of city leaseholds are described in Official Year Book No. 22, p. 599. During the year ended 30th June, 1956, 478 leases were granted for residential purposes and 67 for business purposes.

Thirteen leases under the Church Lands Leases Ordinance 1924–1932, which require the lesses to submit a definite building programme within a specified period, and one lease under the Church of England Lands Ordinance 1926, have been granted for church purposes. A further 30 leases have been granted for either church or scholastic purposes under the various Ordinances.

The total area held under lease and licence for grazing, agricultural, dairying and other purposes (including the Jervis Bay area) amounted to 314,189 acres in 1956.

10. Summary.—The following table shows particulars of the land held in each State under lease or licence for purposes other than mining and forestry, the total leased or licensed land in the Territories, and the grand totals, for the years 1952 to 1956.

AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY.

#### ('000 Acres.)

Year.	N.S.W. (a)	Vic.	Q'land.	S. Aust.	W. Aust.	Tas. (a)	N.T. ( <u>a) (c)</u>	A.C.T. (a)(c)(d)	Total.

(a) At 30th June. (d) Includes Jervis Bay area.

(b) At 31st December.

(c) Leases and licences for all purposes.

### § 6. Leases and Licences under Mining Acts.

- 1. General.—Information regarding the various forms of leases and licences under Mining Acts in the several States and the Northern Territory is given in preceding issues of the Official Year Book (see No. 22, pp. 170-7). The following paragraphs contain particulars of operations during the year 1955-56 or 1956 and of areas occupied at the end of the year, under the various forms of lease, licence, etc., issued for mining purposes.
- 2. New South Wales.—At 30th June, 1956, total areas occupied under Mining Acts were as follows:—Gold-mining, 2,642 acres; mining for other minerals, 202,089 acres; authorities to prospect, 16,684,834 acres; other purposes, 7,842 acres; total, 16,897,407 acres.

- 3. Victoria.—During 1956, there were 113 leases and licences granted under Mining Acts, including 16 for gold-mining. Areas occupied at the end of 1956 were as follows:—Gold-mining, 13,958 acres; petroleum prospecting, 3,860,794 acres; coal, 12,297 acres; uranium and radio active minerals, 5,858 acres; other purposes, 5,610 acres; total, 3,898,517 acres.
- 4. Queensland.—During 1956, there were 3,258 miners' rights and three business licences issued. Areas taken up during 1956 totalled 39,180 acres, of which 25,332 acres were for mining for minerals other than gold. Total areas occupied at the end of 1956 were as follows:—Gold-mining, 2,507 acres; mining for other minerals, 135,698 acres; miners' homesteads, 425,699 acres; petroleum prospecting, 192,000 acres; coal prospecting, 6,480 acres; total, 762,384 acres. The area of land held under lease only was 563,904 acres.
- 5. South Australia.—Areas taken up under Mining Acts during 1955-56 totalled 6,481,039 acres, including claims, 10,644 acres, mineral and miscellaneous leases, 6,260 acres, gold leases 135 acres, and oil licences, 6,464,000 acres. Total areas occupied at 30th June, 1956 were as follows:—Gold-mining 670 acres; other mineral and miscellaneous leases, 755,648 acres; claims, 14,276 acres; oil licences, 141,944,000 acres; other purposes, 24 acres; total, 142,714,618 acres.
- 6. Western Australia.—Areas taken up during 1956 under Mining Acts totalled 21,639 acres, including gold-mining, 10,482 acres, and mining for other minerals, 10,911 acres. Total areas occupied at the end of 1956 were as follows:—Gold-mining, 28,766 acres; mining for other minerals, 85,441 acres; other purposes, 37,709 acres; total, 151,916 acres.
- 7. Tasmania.—During 1956, the number of leases issued covered 3,781 acres, including coal-mining, 1,833 acres and tin-mining, 206 acres. Total areas occupied at the end of 1956 were as follows:—Gold-mining, 617 acres; coal-mining, 8,947 acres; mining for other minerals, 18,655 acres; other purposes, 4,959 acres; total, 33,178 acres.
- 8. Northern Territory.—At 30th June, 1956, the number and acreage of holdings under mining leases and tenements were as follows:—Gold-mining leases, 313 (5,359 acres); other minerals leases, 433 (11,134 acres); gold and tin dredging areas, 3 (760 acres); gold and other mineral prospecting areas, 15 (280 acres); business and residence areas, 189 (118 acres); other purposes, 156 (8,975 acres); total, 1,109 (26,626 acres). In addition, 38 authorities to prospect aggregating 18,780 square miles were held at 30th June, 1956.
- 9. Summary.—(a) Mining Leases etc., (other than oil prospecting licences). The following table shows the total areas occupied under Mining Acts in each State at the end of the years 1952 to 1956:—

### AREAS OCCUPIED UNDER MINING ACTS.

(Acres.)

Ye	аг.	N S.W.	Victoria.	Q'land. (b)	S. Aust. (a) (b)	W. Aust. (c)	Tasmania.	Total. (d)
1952		477,873	40,869	520,344	100,094	151,376	32,150	1,322,70
1953	٠.	355,868	39,917	528,821	44,742	148,932	31,398	1,149,678
1954		13,053,930	97,041	545,469	775,650	166,378	30,059	14,668,52
1955		8,151,778	55,544	555,996	773,816	159,891	30,408	9,727,433
1956		13,924,407	37,723	570,384	770,618	151,916	33,178	15,488,220

(a) Year ended 30th June. (b) Excludes lands held under miners' rights and dredging claims (c) Excludes holdings under miners' rights. (d) Excludes Northern Territory.

(b) Oil Prospecting Licences. The following table shows for each year from 1952 to 1956 the areas occupied in each State under authorities to prospect or explore for petroleum or other oils.

AREAS OCCUPIED UNDER AUTHORITIES TO PROSPECT FOR PETROLEUM. ('000 Acres,)

	ear.	N.S.W. (a)	Victoria.	Q'land.	S. Aust. (a)	W. Aust.	Tasmania.	Total.
1952		293	800,	320	640	251,808		253,861
1953		2,016	918	512		78,472		81,918
1954		1,024	2,881	1,212	155,968	292,958		454,043
1955		13,984	3,851	576	136,480	107,654		262,545
1956		32,237	3,861	192	141,944	384		178,618

### § 7. Closer Settlement.

- 1. General.—Particulars regarding the methods of acquisition and disposal of land for closer settlement in the several States are given in issues of the Official Year Book up to No. 22 (see No. 22, pp. 163-9) and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. In more recent years, however, the amalgamation, in some States, of closer settlement records with those of other authorities has made it impossible to obtain up-to-date figures for those States and for Australia as a whole, although aggregations of State totals as at the latest dates available have been published as rough approximations intended to convey some idea of the extent of the schemes throughout Australia. Particulars in this issue are restricted to a summary only of the position in each State at the latest date available.
- 2. New South Wales.—From the inception of closer settlement in 1905 to 30th June, 1956, 2,567 estates totalling 6,907,264 acres had been purchased by the Crown at a cost of £32,321,769 for purposes of closer settlement of civilians and returned service personnel.

Closer settlement is now being effected entirely under perpetual leasehold tenure (closer settlement leases).

- 3. Victoria.—The Closer Settlement Commission was abolished as from 31st December, 1938, and land settlement was placed under the control of the Department of Lands and Survey. On 31st March, 1939, all Closer Settlement and Discharged Soldiers' accounts were amalgamated, the settlers' accounts adjusted and the new debt made payable over an extended period. Particulars of the operations under the provisions of the Closer Settlement Acts to 30th June, 1938, the latest date for which separate details are available, were given in earlier issues of the Official Year Book, (see No. 42, p. 98).
- 4. Queensland.—Separate records relating to the closer settlement of re-purchased land are no longer kept by the Land Administration Board, and the operations under this heading are now included with "Leases and Licences under Land Acts." Details of the position at 31st December, 1934, the latest date for which the information is available, were given in earlier issues of the Official Year Book, (see No. 42, page 98).
- 5. South Australia.—The total area re-purchased for closer settlement at 30th June, 1956 was 948,885 acres, at a cost of £2,865,200. Included in these figures are 51,872 acres purchased for £185,285, and afterwards set apart for returned service personnel, 3,214 acres reserved for forest and waterworks purposes the purchase-money being £16,185, and also 26,563 acres of swamp and other lands, which were purchased for £111,850, in connexion with reclamation of swamp-lands on the River Murray. Of the total area, 818,252 acres have been allotted to 2,795 persons.
- 6. Western Australia.—The total area acquired for closer settlement up to 30th June, 1956 was 3,059,205 acres, costing £4,390,872. Particulars of operations under the Act for the year ended 30th June, 1956 are as follows:—Area selected during the year, 98,258 acres; number of farms, etc., allotted to date, 2,481; total area occupied to date, 2,072,974 acres; area set aside for roads, reserves, etc., 20,972 acres; balance available for selection, 965,259 acres.
- 7. Tasmania.—Up to 30th June, 1956, 38 areas had been opened up for closer settlement, the total purchase-money paid by the Government being £371,548 and the total area acquired amounting to 104,554 acres, including 12,149 acres of Crown lands. The number of farms occupied at 30th June, 1956 was 81.

#### § 8. Settlement of Returned Service Personnel.

1. War Service Land Settlement Scheme.—(i) General. The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939–45 War and the Korea-Malaya operations. Finance for the scheme in South Australia, Western Australia and Tasmania and for certain aspects of the Scheme in other States is provided through annual States Grants (War Service Land Settlement) Acts. The States Grants (War Service Land Settlement) Acts. The States Grants (War Service Land Settlement) Act 1952 provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the Scheme, to find their own finance for the acquisition and development of properties. In 1954, Queensland abandoned the Scheme and made available for general settlement all unallotted lands held under it.

In an effort to hasten the settlement of qualified applicants in New South Wales and Victoria, the Commonwealth has made available to those States repayable loans on the basis of £1 for each £2 spent by the State on War Service Land Settlement, with a maximum of £2 million in any one year.

This offer is available for a period of three years from 1st July, 1955.

For more detailed information about the agreements and the methods of operation and administration of the Scheme, *see* Official Year Book No. 37, pp. 113-8. Issue No. 39 contains a brief general description of the Scheme.

(ii) Summary of Operations to 30th June, 1957. The tables hereunder show the operations of the War Service Land Settlement Scheme in each State up to 30th June, 1956 and 30th June, 1957.

# WAR SERVICE LAND SETTLEMENT.

Total	13,794,465	8;049	12,174,488	1,307	1,619,977	

<sup>(</sup>a) In New South Wales, properties are regarded by the State as being allotted at the date of acquisition. (b) Not available. (c) War Service Land Settlement was discontinued in 1954; unallotted lands were made available for general settlement. (d) Estimated. (e) To 31st May, 1957; during the period 1st June to 31st July, 1957, 43 acres of land were acquired and 25 farms totalling 5,523 acres were allotted.

(iii) Expenditure. The following tables show a dissection of the Commonwealth expenditure on War Service Land Settlement to 30th June, 1956 and 30th June, 1957 respectively:—

WAR SERVICE LAND SETTLEMENT (1939-45 WAR AND KOREA/MALAYA OPERATIONS): COMMONWEALTH EXPENDITURE TO 30th JUNE, 1956.

# § 9. Advances to Settlers.

1. General.—A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Official Year Book (see No. 22, pp. 179-186).

The summaries of loans and advances in the following paragraphs are compiled from returns supplied by the various State government lending agencies in the several States. They include the transactions in lands acquired under closer and soldier settlement schemes, but exclude the balances owing on former Crown lands sold on the conditional purchase, etc., system.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of reappraisements of land values and the writing down of debts. In general, they include both principal and interest outstanding.

A summary for Western Australia is not included, as practically the only Governmental funds being made available are Commonwealth (see § 8 above).

In New South Wales and Victoria, expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland, no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States, this expenditure is provided for by the Commonwealth and particulars are included in § 8

Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

2. New South Wales.—The following table shows particulars respecting advances, etc., under State Authorities to 30th June, 1956:—

ADVANCES TO SETTLERS, ETC.: NEW SOUTH WALES.

6. Western Australia.—The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1st October, 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate similarly to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown in § 8 above.

7. Tasmania.—The following table shows particulars of advances under State Authorities to 30th June, 1956. Although not regarded as outstanding advances by the Department of Agriculture the figures in connexion with closer and soldier land settlement have been included in the table for comparative purposes; the areas so purchased have been leased on 99-year terms having an option of purchase which the leaseholder may exercise at any time.

- (a) Excludes £3,261 forfeited properties. (b) Excludes £204,813 advances capitalized, £79,166 advances written off to bad debts, and £40,789 written off to revaluation. (c) Not regarded as outstanding advances by the Department. (d) Number of leaseholders, including those to whom advances have been made.
- 8. Northern Territory.—During the year 1955-56, 31 advances totalling £37,859 were made. The total amount advanced to 30th June, 1956, was approximately £74,763. At 30th June, 1956, the balance outstanding from 41 settlers, including interest, was £41,558.
- 9. Summary of Advances.—The following table is a summary for each State (except Western Australia) and the Northern Territory to the 30th June, 1956. The particulars so far as they are available, represent the total sums advanced to settlers, including amounts spent by the various Governments in the purchase and improvement of estates disposed of by closer and soldier land settlement, while the amounts outstanding reveal the present indebtedness of settlers to the Governments, including arrears of principal and interest but excluding amounts written off debts and adjustments for land revaluations. Particulars of Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and of certain advances for wire-netting and other purposes provided from Commonwealth funds are included.

<sup>(</sup>a) Includes expenditure on acquisition, development and improvement of land for war service land settlement (see p. 97). (b) Incomplete. (c) Number of accounts.

### § 11. Alienation and Occupation of Crown Lands.

- 1. General.—The figures shown in the previous parts of this chapter show separately the areas alienated, in process of alienation, or occupied under various tenures. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory during the latest year for which information is available—1956 in all cases. A summary for each State and Territory and for Australia as a whole is also supplied. Particulars for each year from 1945 to 1955 appear in *Primary Industries Bulletin* No. 49, Part 1.—Rural Industries, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases, lands which are permanently reserved from alienation are occupied under leases and licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.
- 2. New South Wales.—The total area of New South Wales is 198,037,120 acres, of which 26.5 per cent. had been alienated at 30th June, 1956; 6.7 per cent. was in process of alienation; 58.7 per cent. was held under leases and licences; and the remaining 8.1 per cent. was unoccupied, or held by the Crown.

The following table shows particulars as at 30th June, 1956:-

# ALIENATION AND OCCUPATION OF CROWN LANDS: NEW SOUTH WALES, 30th JUNE, 1956.

(Acres.)

Particulars.	Area.	Particulars.	Area.

Land Leased for Timber.	562,989	occupied(a)	7,455,290
Closer Settlement	19,899	5. Total Area of State	16,778.000

<sup>(</sup>a) Includes reservations for roads and various other public purposes, 4,129,666 acres, lands occupied by Commonwealth or State Departments, 21,485 acres and land acquired for Soldier and Closer Settlement but not leased, 200 acres.

8. Northern Territory.—The area of the Northern Territory is 335,116,800 acres, of which, at 30th June, 1956, only 0.1 per cent. was alienated; 52.8 per cent, was held under leases and licences; 14.3 per cent. was reserved for aboriginal, defence and public requirements; and the remaining 32.8 per cent. was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30th June, 1956:—Alienated, 455,322 acres; leased—pastoral leases, 139,289,161 acres, other leases, licences and mission stations, 37,731,557 acres, total leased, 177,020,718 acres; reserved for aboriginal, defence and public requirements, 47,927,661 acres; unoccupied and unreserved, 109,713,099 acres; total, 335,116,800 acres.

9. Australian Capital Territory.—Alienated land of the Territory (excluding the Jervis Bay area) at the end of 1956 comprised 11.3 per cent. of the total area; land in process of alienation 7.1 per cent; land held under lease and licence 52.7 per cent; land otherwise occupied, including city tenures, 6.8 per cent.; and unoccupied 22.1 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1956:—Alienated, 65,857 acres; in process of alienation, 41,224 acres; leased—grazing, agricultural, etc., leases, 300,749 acres; grazing licences, 7,174 acres; total leased, 307,923 acres; otherwise occupied, 38,360 acres; unoccupied, 129,436 acres; total. 582,800 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,800 acres.

10. Summary.—The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1956:—

ALIENATION AND OCCUPATION OF CROWN LANDS, 1956.

State or Territory.		Private	Lands.		Crown Lands.				
	Alienated.		In Process of Alienation.		Leased or Licensed.		Other.		Total Area.
	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	'000 Acres.

<sup>(</sup>a) At 30th June.

A diagram showing in graphical form the areas alienated from the State, those in process of alienation under the various systems of deferred payments, the areas held under leases or licences and the areas left unoccupied was included in earlier issues of the Official Year Book (see No. 41, page 73), but is not reprinted in this issue.

<sup>(</sup>b) At 31st December.

<sup>(</sup>c) Includes Jervis Bay area.

#### CHAPTER V.

### THE TERRITORIES OF AUSTRALIA.

Note.—The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are:—Norfolk Island; Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); Nauru (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Ashmore and Cartier Islands; and the Territory of Cocos (Keeling) Islands. Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pp. 5, 23 and 24 of Chapter I.

#### THE NORTHERN TERRITORY.

### § 1. Area and Population.

- 1. Area. —Upon the extension of New South Wales westward to the 129th meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863, it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911. The total area is 523,620 square miles.
- 2. Population.—(i) Population excluding Full-blood Aboriginals. At the Census of 30th June, 1954, the population of the Northern Territory, excluding full-blood aboriginals, was 10,288 males, 6,181 females, 16,469 persons. Corresponding figures at the Census of 30th June, 1947, were 7,378, 3,490 and 10,868 respectively. The estimated population, excluding full-blood aboriginals, at 30th June, 1956, was 18,297 persons.

The European population of the Northern Territory increased slowly from 670 at the Census of 1881 to 3,767 in 1918. By 1921, it had decreased to 2,458, and in 1933 was still only 3,306. At the Census of 1947, it had risen to 9,116, an increase of 176 per cent. on the 1933 figures, while at the Census of 1954 it had risen a further 54 per cent. to 14,028.

Although at one time there were more than 4,000 Chinese in the Territory, at 30th June, 1954, there were only 325, and these comprised the major proportion of the 486 full-blood non-European inhabitants, excluding Australian aboriginals, at that date.

The half-caste population recorded at the Census of 1954 numbered 1,955, of whom 1,659 were half-caste Australian aboriginals. Corresponding figures at the 1947 Census were 1,364 and 1,247 respectively.

(ii) The Aboriginals. The total number of full-blood aboriginals at 30th June, 1956, was estimated at 15,971, of whom approximately 3,761 were in regular employment. By virtue of the Aboriginals Ordinance No. 2 of 1953, part aboriginals are not now deemed to be aboriginals within the meaning of the Aboriginals Ordinance 1918-1953, except children who were committed to institutions prior to the commencement of the ordinance and those who have requested the Director of Native Affairs to declare them aboriginals within the meaning of the ordinance.\* Aboriginal reserves comprise an area of approximately 67,000 square miles. (See also Chapter XVI.—Population.)

## § 2. Legislation and Administration.

On 1st January, 1911, the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Official Year Book No. 15, p. 940. For particulars of the administration up to the Northern Territory (Administration) Act 1931, by which it was for the second time placed in the hands of an Administrator, see Official Year Book No. 38 and earlier issues.

<sup>\*</sup> The Aboriginals Ordinance was replaced by the Welfare Ordinance which came into operation on 11th May, 1957. Under the Aboriginals Ordinance all aboriginals were, as a race, deprived of citizenship rights and could only attain them by individual exemption from the legislation. The Welfare Ordinance recognizes that, from birth, they are Australian citizens, and temporarily deprives of full citizen rights only those who are committed by name as wards of the State under processes laid down by law. Their committal is subject to the right of individual appeal. This is the same basic idea that is expressed in social legislation applying to those members of the white community who are not able to look after themselves or who have to be protected (e.g., neglected children).

The Northern Territory (Administration) Act 1947 enabled the Northern Territory to set up a Legislative Council. The Council consists of the Administrator as President, seven official and six elected members who make ordinances for the Territory, which must be submitted to the Administrator for assent. The Administrator may, or may not, assent to them, or he may reserve them for the Governor-General. The Governor-General may disallow any ordinance assented to by the Administrator within six months from the date of assent, and the operation of ordinances relating to certain matters including Crown Lands and aboriginal affairs is dependent on his approval. Money votes may be proposed in the Council only by the Administrator himself, or by his permission or direction.

The Territory elects a member to the House of Representatives, who has the right

to take part in debates but not to vote.

### § 3. Physiography.

- 1. Tropical Nature of the Country.—The Territory is within the torrid zone, with the exception of a strip 2½ degrees wide which lies south of the Tropic of Capricorn.
- 2. Contour and Physical Characteristics.—The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland, the country generally is destitute of conspicuous landmarks. From the coast, there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply of the interior systems. Towards the centre of the continent, the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

## § 4. Climate, Fauna and Flora.

- 1. The Seasons.—There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer mouths. Further particulars appear in Official Year Book No. 6, p. 1116.
- 2. Fauna.—The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous) and frogs abound. There are many varieties of fresh-water fish and littoral mollusca. Butterflies and beetles are strongly represented. The white ant is a pest which is capable of serious destruction to wooden buildings unless special preventative measures are taken. Another species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Native fauna are in some cases protected. Buffalo formerly existed in large herds, but their number has been greatly reduced by indiscriminate shooting. Buffalo shooting is now controlled by Ordinance.
- 3. Flora.—The vegetation is North Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's edge. In the north, cypress pine, bloodwood and paperbark timbers are now cut and milled for local building purposes. These three timbers are resistant to termites. On the wide expanses of plain country in the interior there is little vegetation, the principal orders represented being:—Euphorbiaceae, Compositae, Convolvulaceae, Rubiaceae, Goodenoviaceae, Leguminosae, Utricaceae.

### § 5. Production.

1. Agriculture.—Up to the present, agriculture has made little progress in the Territory, although rice, peanuts, tobacco, grain sorghum, bananas, pineapples, citrus, mangoes, papaws, vegetables, fodder plants and improved pastures can be grown in certain areas. At the present time, commercial agricultural production is practically confined to peanuts, which have been an export crop for some time, and vegetables and small-scale fruit production (mainly pineapple and citrus) for local consumption.

In 1946, the Commonwealth Scientific and Industrial Research Organization commenced scientific surveys to define more accurately the potentialities of the Territory. Surveys

have been completed of the Katherine-Darwin, Barkly Tablelands and Victoria River Regions. The survey of the Katherine-Darwin Region indicated that further investigations into agricultural possibilities were warranted. As a result, the Commonwealth Scientific and Industrial Research Organization established an agricultural research station at Katherine to investigate the possibilities of dry farming in a land system covering an area of about 7,000 square miles in the Katherine-Daly River basin. The research work at this station was sufficiently encouraging in respect of the production of peanuts, grain sorghum, and pastures to warrant investigations into the application of the findings on a commercial scale. To further the investigations, the Commonwealth Government approved of the establishment by the Northern Territory Administration in 1952 of an experimental farm at Katherine for the purpose of carrying out trials with these crops to determine the requirements for farming them on a commercial scale. The trials are in progress but it is too early to make any pronouncements. In 1956, the Administration established an experimental farm at Berrimah, near Darwin. Investigation into fruit and vegetable growing and pasture production are being carried out under both dryland and irrigated conditions.

The survey of the Katherine-Darwin Region also indicated various soil types in other parts of the Region on which agricultural production tests would be worthwhile. In order to carry out these tests economically and quickly, the Administration, in 1952, organized a mobile unit for the purpose of conducting trials on five soil types with pineapples, peanuts,

sorghum, tobacco and other crops.

Prospects for rice growing were indicated by the survey and, in 1952, the Administration established rice research stations at Humpty Doo and at a location known as Sixty Mile, on the Stuart Highway, 60 miles from Darwin. Because of flooding difficulties in the wet season, rice quarantine for the Northern Territory is carried out by the C.S.I.R.O. at the Kimberley Research Station, Western Australia. At the rice research stations, it has been demonstrated that rice can be grown but that the main problems of rice growing in the Territory are adequate water control and drainage, determination of cultivation techniques in the soil conditions which obtain in the Territory and the production of suitable rice varieties for the rainfall, temperature and soil conditions of the area. Since the 1954–55 season, Territory Rice Limited, a firm with Australian and American capital, has been conducting large-scale trials near Humpty Doo to prove its theory that commercial production of rice is possible on the sub-coastal plains of the Territory.

2. Pastoral Industry.—The pastoral possibilities of certain parts of the Northern Territory were recognized at an early date, and in 1866 stock were brought into the Macdonnell Range country from South Australia. Six years later, cattle were moved from Queensland to the northern parts of the Territory, and in 1879 Giles reached the Katherine River with 2,000 head of cattle and 12,000 sheep from South Australia. For various reasons sheep-raising did not succeed. The cattle industry, however, progressed steadily and the expansion of the industry is continuing.

Cattle exported during 1956-57 numbered 135,988—76,528 to Queensland, 55,808 to South Australia and 3,652 to Western Australia—170 horses were also exported. Importations of livestock were—Bulls, 874; other cattle, 18,456; stallions, three; other horses, 151;

rams, 26; other sheep, 1,825; and pigs, 10.

The estimated number of livestock in the Territory at the end of the years 1939 and 1952 to 1956 is given in the table hereunder:—

### NORTHERN TERRITORY: LIVESTOCK.

31st December—		Horses.	Cattle.	Sheep.	Pigs.	Goats.	Camels.	Donkeys.	Mules.	
1939			32,721	922,581	38,587	483	20,335	331	1,443	366
1952			34,645	935,602	33,773	799	11.861	100	873	546
1953			36,985	966,033	31,232	1,132	12,502	53	1,475	626
1954			33,035	968,755	28,644	911	11,152	50	661	364
1955			37,306	1,027,819	33,249	1,076	12,273	59	755	363
1957 (	2)		38,180	1,175,997	30,466	755	11,189	51	450	286

(a) 30th June. No figures available for 31st December, 1956.

<sup>3.</sup> Hides and Skins.—The number of hides and skins exported from the Northern Territory during 1956-57 was as follows:—buffalo, 1,482; sheep, 1,408; crocodile, 229; and cattle, 4,063. Kangaroo skins also were exported, but details are not available.

1955-56.

4. Mining.—Alluvial gold digging in the Northern Territory commenced in 1869 and in 1881 the yearly return was valued at £111,945. The value of minerals produced in the Territory in 1956 reached an all-time peak of £2,789,000 compared with £1,691,000 in the previous year, mainly because of an increase in the value of copper production. Gold, which in the past has always returned the highest value of mineral production, was surpassed by copper in 1956. The total value of copper production in 1956 was £1,579,000, most of which was won at Tennant Creek, where production is concentrated on copper with gold as a by-product.

The value of gold production increased, most of the ore also being obtained from Tennant Creek. The ore is treated by plant at the mine. The value of wolfram production increased slightly. The Harts Range Mica Field continues to produce the bulk of Australian high grade mica. The production of tin concentrates continued to decline.

Uranium minerals were first discovered at Rum Jungle in September, 1949, and other deposits have been found since. Continued interest in uranium mining is being shown by Australian and oversea mining companies. The first full-scale uranium treatment plant was opened at Rum Jungle in 1954, and continuous production of uranium oxide is now being achieved. The production of manganese was first reported during 1955, and is being mined for use at the Rum Jungle treatment plant.

The following table shows the value of mineral production for the years 1952 to 1956:— NORTHERN TERRITORY: VALUE OF MINERAL PRODUCTION. (£2000.)

-				(**					
	Year.		Gold.	Gold. Tin Concentrates. Copper Ore.		Mica.	. Wolfram.	Total All Minerals.	
1952	• • •		681	10	53	125	413.	1,282	
1953			820	15	· 18·	102	267	1,221	
1954		[	839	13	114	124	54	1,145	
1955			866	3	611	65°	118	1,691	
1956			996-	1	1,579	42	141	2,789	
		1	j	l					

(a) Excludes uranium. Includes small quantities of other minerals produced.

5. Pearl and Other Fisheries.-In 1884, mother-of-pearl-shell was discovered in the harbour of Port Darwin. Since that time, the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast. Figures for production and value of shell for the seasons 1951-52 to 1955-56 are shown in the following table:-NORTHERN TERRITORY: PEARL FISHING.

					Pearl-shell Taken.		
Season;				Quantity. ('000 lb.)	Value. (£'000.).		
1951–52		••		5	188	51	
1952-53				7	260	59	
1953-54				10	371	95	
1954–55				9	343	89	
1955-56				10	311	74	

The price of shell remains high, £600 a ton for good grade shell being the average for

### § 6. Land Tenure.

1. General.—A description of the system of land tenure in force in the Territory in 1928 is given in Official Year Book No. 22, Chapter V.—Land Tenure and Settlement. It was revised in Official Year Book No. 39, pp. 329-30, and Chapter IV.—Land Tenure and Settlement of this issue contains up-to-date statistical information on the subject.

Almost half the land in the Northern Territory is reserved, or unoccupied and unreserved, the remainder, apart from a very small proportion alienated; being held under various forms of lease and licence, which are described briefly below and in more detail in Official Year Book No. 39, pp. 329-30.

2. Pastoral, Agricultural, etc., Leases.—Pastoral Leases—granted for periods not exceeding 50 years.

Pastoral Homestead Leases—granted in perpetuity but available only to persons who intend to reside bona fide on the leased land. Companies are not eligible to hold this type of lease.

Agricultural Leases—granted in perpetuity, with area for any one lease limited according to type of farm (Cultivation Farms, Class 1, 1,280 acres, Class 2, 2,560 acres; Mixed Farming and Grazing, Class 1, 12,800 acres, Class 2, 38,400 acres).

Leases of Town Lands—except in Darwin, granted in perpetuity (in Darwin granted for periods up to 99 years).

Special Purpose Leases—granted for periods up to 99 years, for purposes other than pastoral, agricultural or mining, or private residential purposes within a town.

Agricultural Development Leases—granted for periods up to 30 years for the purpose of large scale agricultural development.

Church Lands Leases—granted for church purposes at a nominal rental in perpetuity, Leases to Aboriginals—granted for areas not exceeding 160 acres each for any period of years upon such terms and conditions as thought fit.

Leases to Mission Organizations-granted for periods up to 21 years.

Miscellaneous Leases—granted for any prescribed or approved purpose, for periods not exceeding 21 years.

Grazing Licences—granted to graze stock on Crown lands for periods not exceeding one year.

Occupation Licences—granted for manufacturing, industrial or any prescribed purposes, for periods not exceeding 5 years.

Miscellaneous Licences—granted for periods not exceeding 12 months.

The foregoing leases and licences are granted at specified rentals or rentals fixed by the Administrator and subject to re-appraisement, and under various prescribed or specified conditions.

3. Mining Leases, etc.—Holdings under Miners' Rights—entitling holder, for a fee of 5s. for 12 months from date of issue, to take possession of and occupy Crown lands for mining purposes.

Gold-mining Leases—granted for a period of 21 years, renewable for further periods of 21 years, for areas not exceeding 20 acres each, at an annual rent of 2s. an acre and with payment of a royalty of 3d. in the £1 on the value of gold won, or 6d. in the £1 if on Aboriginal Reserves.

Mineral Leases—granted in blocks not exceeding 40 acres each, at an annual rent of 1s. an acre, with term, renewal, and royalty conditions as for gold-mining leases.

Dredging Claims—granted for gold or minerals claims, the area not exceeding 300 acres each, at an annual rent of 2s. an acre and with payment of a royalty of 6d. in the £1 if on Aboriginal Reserves.

Petroleum Prospecting Permits—granted to search for oil over one, two or three areas not exceeding in the aggregate 10,000 square miles for an initial term not exceeding 12 months with provision for extensions in three-year periods up to a maximum of 10 years. The permittee must lodge a fee of £100 and enter into a bond for at least £1,000 to comply with the conditions of the permit and the provisions of the Petroleum (Prospecting and Mining) Ordinances 1954 and the regulations thereunder.

Petroleum Licences—confer an exclusive right to carry out the detailed surveys and other operations necessary to test the land for petroleum. A licence is granted only to a permittee for a fee of £20 over an area not exceeding 2,500 square miles upon the permittee entering into a bond of at least £5,000 to comply with the provisions of the licence and the Ordinance and Regulations.

Petroleum Leases—granted only to a licensee for a period of 21 years, and renewable for further periods of 21 years, in respect of an area not exceeding 500 square miles. The lessee is required to pay a royalty of 10 per cent. upon the gross value of all crude oil produced.

Coal Licences—granted to search for coal over an area not exceeding 1,000 square miles for a period of five years, at an annual fee of £10.

Coal Leases—granted for a period of 21 years, renewable for 21 years at an annual rental of 1s. per acre and a royalty fixed by regulation.

Business and Residence Areas—granted at the prescribed fee, authorizing the holder to occupy on a gold or mineral field an area not exceeding one acre for residence and carrying on business (one-quarter of an acre if for residence only).

Garden Areas—granted under prescribed conditions, on a gold or mineral field for growing fruit or other garden produce, the area of each garden not exceeding 5 acres.

6875/57.-4

There are various conditions regarding working, employment and value of machinery used, which apply to the foregoing leases and licences.

### § 7. Trade, Transport and Communication.

- 1. Trade.—No record is kept of the trade between the States and the Territory. In the post-war years 1945-46 to 1948-49, direct oversea imports averaged about £200,000 a year, but in the four years 1950-51 to 1953-54, the average was about £625,000 a year. In 1955-56, imports totalled £1,154,810. Direct oversea exports amounted to £558,879 in 1955-56.
- 2. Shipping.—Shipping services to Darwin are provided at intervals of about six weeks by ships of the Australian Shipping Board from the eastern States and a twice monthly service from Western Australia by ships of the Western Australian State Shipping Service. Oversea tankers visit Darwin approximately six times annually with supplies of aircraft fuel and other petroleum products. Other oversea vessels call at irregular intervals. During 1955-56, 54 calls were made by vessels at Darwin, landing approximately 52,235 tons of merchandise and 47,515 tons of petroleum products.
- 3. Air Services.—At 30th June, 1956, there were 33 government aerodromes and 103 licenced aerodromes in the Territory. Darwin, a first class international airport, is the first port of arrival in Australia for virtually all aircraft from Europe and Asia. Qantas Empire Airways Ltd. and British Overseas Airways Corporation operate, through Darwin, a Sydney-Singapore-London passenger and freight service, and Qantas also operates a Sydney-Japan service and a Sydney-Johannesburg service. The Air France service from Paris to New Zealand via Saigon and the K.L.M. London-Singapore-Sydney services also call at Darwin. Regular inland services calling at Darwin are Trans-Australia Airlines (from Perth and Wyndham). MacRobertson-Miller Airways Ltd. (from Perth and Wyndham). MacRobertson-Miller Airways Ltd. and Connellan Airways Ltd. operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Aerial Medical Service operates aircraft, and charter services can be secured at Darwin and Alice Springs.
- 4. Railways.—The Commonwealth Railways Commissioner, under the Commonwealth Railways Act 1917–1955, operates the Central Australia Railway from Port Augusta to Alice Springs over a distance of 771 miles, of which about 200 are in the Northern Territory. The Commissioner also operates the North Australian Railway between Darwin and Birdum on a 3 ft. 6 in. gauge over a distance of 316 miles. The two inland terminals, Alice Springs and Birdum, are over 600 miles apart and are connected by road transport along the Stuart Highway. A road-rail passenger and freight service operates between Adelaide and Darwin.

The Clapp plan for the standardization of Australian railways recommended, inter alia, the construction of a standard gauge (4 ft.  $8\frac{1}{2}$  in.) strategic and developmental railway between Dajarra (Queensland) and Birdum, and the conversion to standard gauge of the Birdum-Darwin line, but not the conversion of the Port Augusta-Alice Springs line nor the construction of a 4 ft.  $8\frac{1}{2}$  in. line between Alice Springs and Birdum. Provision for both of the last two projects, however, was included in an agreement with South Australia enacted in 1949.

The Governments of the Commonwealth and South Australia agreed in 1950 that a standard gauge railway from Stirling North to Leigh Creek coalfields (157 miles) should be constructed. A further agreement, in 1954, provided for an extension to Maree, 56 miles north of Leigh Creek. This line was officially opened by the Acting Prime Minister, Sir Arthur Fadden, on 27th July, 1957.

5. Roads.—During the war, roads were built connecting Alice Springs with Darwin, and Mount Isa (Queensland) with Tennant Creek. The first of these roads, known as the North-South Road or Stuart Highway, is 954 miles long, and runs via Larrimah and Tennant Creek. The Mount Isa-Tennant Creek Road (Barkly Highway) is 403 miles long and joins the Stuart Highway some 14 miles north of Tennant Creek. Both were used extensively during the war, the Stuart Highway, in particular, experiencing very heavy and continuous traffic. Since the war, the Stuart Highway has been used continually as a means of transporting foodstuffs and other supplies to Darwin and northern centres. The route is used also for overland tourists and travellers from the southern States to

Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 12,000 miles of road in the Territory of which 1,287 miles are sealed.

6. Posts, Telegraphs, Telephones and Wireless.—Postal communication is maintained by road and rail transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service give a regular service between Fremantle and Darwin. Mail is also carried between the capital cities of Australia and Darwin by the airway companies operating in each State. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The transcontinental telegraph line, covering a length of 2,230 miles, runs in a northerly direction from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world.

Long-distance telephone communication is established between Darwin and the capital cities of Australia, and oversea telephone communication through Sydney is also available.

Regional national broadcasting stations are situated at Darwin and Alice Springs. The majority of homesteads on pastoral leases are equipped with pedal wireless sets operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor Bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia) and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

### § 8. Education.

1. European.—Schools for European and part-European children in the Northern Territory are conducted for the Commonwealth on an agreed basis of reimbursement by the South Australian Department of Education which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools.

At the beginning of the 1957 school year, there were 10 Government schools for European children in the Northern Territory, with 2,298 pupils, providing instruction according to the South Australian curriculum. Classes up to the Leaving Certificate are provided at Alice Springs and at Darwin there is a separate High School with classes up to the Leaving Certificate.

Children of primary and pre-Intermediate secondary standard who live more than 10 miles from an established school receive an allowance of £80 per annum plus fare concessions if they board away from home in order to attend school. Nine exhibitions are available annually on the results of the Intermediate Certificate, the maximum benefits being £110 per annum and annual return fares if the recipients are required to board away from home in order to attend school.

Approximately 100 children receive correspondence education under the South Australian Correspondence School system. The "School of the Air" supplements normal correspondence instruction for certain children. Some of these live as much as 500 miles distant from Alice Springs, from which point the "School of the Air" is conducted. Three half-hourly sessions are given each day and the unique feature of the "School of the Air" is the "Question and Answer" section which forms a part of every session. Children with access to radio transceivers are able to ask questions of their teacher and all other pupils listen to the answers.

Six pre-school centres have been established in the Territory. Of these, four reach the required standards for subsidy by the Administration of the amount of the salary of a trained pre-school teacher. Two centres occupy buildings specially erected for the purpose at the expense of the Administration, and a third centre occupies a building purchased by the Administration. Two scholarships are offered each year for Territory girls to qualify as pre-school teachers.

2. Native.—The social, cultural and educational background of the aboriginals has made necessary the establishment of special schools for them. It is envisaged that this necessity will ultimately pass. As from the beginning of the 1956 school year, control of these schools passed from the Commonwealth Office of Education to the Welfare Branch of the Administration. Twelve have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk

and school clothes are supplied to the pupils. In addition to the 12 Administration schools, 13 schools for aboriginal children are conducted by Missions with the aid of Government subsidies. Three schools, also aided by Government subsidies, have been established on pastoral properties and the establishment of others along similar lines is planned.

3. Theoretical Training of Apprentices.—The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

## § 9. Native Welfare.

The Welfare Ordinance, which came into operation on 13th May, 1957, established the principle that native people would be committed to the care of the State only on the grounds of their need for special care and assistance and not on the grounds of race or colour, and it laid on the Director of Welfare a positive responsibility for the advancement of wards in his care. The Employment Ordinance provides for the training of wards and assistance in establishing them in occupations, either on their own account or as employees. The Ordinance envisages, amongst other forms of training, apprenticeships for the better-educated wards and training on the job for those wards not yet capable of entering into apprenticeships. It also envisages financial aid to natives or groups of natives who may, under the guidance of the Director, be able to engage on activities (for example in agriculture, cattle raising, hunting or fishing) on their own behalf. The Director of Welfare is responsible for supervising employment for the wards in his care, and protective legislation for those in employment is retained. The legislation does not, of course, apply to any persons who are not wards and native people who have ceased to be wards will come within the normal industrial customs of the country.

# § 10. Finance.

Details of revenue and expenditure of the Territory for the years 1951-52 to 1955-56 are shown below. The information given covers the transactions of the Commonwealth Consolidated Revenue Fund relating to the Northern Territory and the transactions of the North Australia Railway.

### THE AUSTRALIAN CAPITAL TERRITORY.

1. Introductory.—Information regarding the selection and establishment of Canberra as the Australian capital city, the physiography of the Territory and its early history will be found in earlier issues of the Official Year Book—See List of Special Articles, etc., at the end of this volume under "Canberra" and "Federal Capital City".

On 12th March, 1913, the official ceremony to mark the start of operations in connexion with the establishment of the Seat of Government was carried out. At this ceremony, the selection of "Canberra" as the name of the capital city was announced.

On 9th May, 1927, Parliament House at Canberra was officially opened by His Royal Highness Albert, Duke of York—afterwards His Majesty King George VI.—the occasion being the 26th anniversary of the opening of the first Parliament of the Commonwealth at Melbourne by His Royal Highness George, Duke of Cornwall and York—afterwards His Majesty King George V.—on 9th May, 1901. (For particulars of the opening ceremony see Official Year Book No. 21, p. 604.)

The development of the Territory administration prior to the taking over of control by the Federal Capital Commission on 1st January, 1925, is described in summarized form in Official Year Book No. 18, and in Official Year Book No. 22 a summary is given of the administrative activities of the Federal Capital Commission. The administration of the Territory by this authority was continued until 30th April, 1930, when the Seat of Government (Administration) Act 1924–1929 was repealed, and the powers and functions of the Commission reverted to the Government.

Since April, 1932, the general control of the Territory has been exercised by the Minister for the Interior, certain specific services, however, being undertaken by the Department of Health, the Department of Works and the Attorney-General's Department.

An amendment to the Seat of Government Acceptance Act in 1938 provides that the Territory shall be known as the Australian Capital Territory.

2. Progress of Work.—(i) General. Further progress in providing housing and allied community facilities was shown in the works programme in the Australian Capital Territory for the financial year 1954-55 and engineering services were kept abreast of developmental requirements. Planning was begun for the increase in population which will result from transferring other Departments to Canberra as the various sections of the new Administrative Building are completed.

The total expenditure on capital and maintenance works in the works programme amounted to £6,592,149 in 1955-56 and £6,378,707 in 1956-57.

The combined labour force of the Department of Works and contractors working for the Department totalled 2,194 men, at 30th June 1956, and 2,445 at 30th June, 1957.

- (ii) Works Programme. (a) Housing. During 1956-57, 654 dwelling units were completed (621 built by contract and 33 by day labour) as compared with 454 (430 by contract and 24 by day labour) in 1955-56. The number of houses of each type completed in 1956-57 (1955-56 figures in parentheses) was as follows:—Brick 60 (55), brick veneer 84 (107), brick flats 236 (eight), timber 98 (181), monocrete 157 (102), and masonry veneer 19 (one). Of the total units built, in 1956-57 and 1955-56, 45 and 77 respectively were built in the suburb of Ainslie, 114 and nil in Braddon, 43 and 85 in Deakin, 87 and 160 in Narrabundah, 20 and 72 in O'Connor, 114 and nil in Reid, and 212 and 26 in Yarralumla. More than 90 per cent. of the units built were for the Department of the Interior. At 30th June, 1957, there were 310 houses and 460 flats under construction.
- (b) Other Building. Major projects completed during the year 1955-56 included an infants' school at Yarralumla, the Olympic Swimming Pool at Parkes, additional nurse's quarters for the Canberra Community Hospital, a pre-school centre at North Ainslie and a Mothercraft Centre at Throsby Crescent, Griffith. In 1956-57 major projects completed

were alterations and additions to the Canberra High School, an air-conditioned brick insectory for the C.S.I.R.O. at Black Mountain, and new recreational buildings at the Royal Military College, Duntroon, and H.M.A.S. Harman.

Further progress was made on the permanent Administrative Building at Parkes and at 30th June, 1957, its erection was well advanced. The concrete structure has been completed, and "A" block has been occupied.

Further progress was made on the construction of a 20-chamber Hoffman brick kiln at Westridge and work was begun on the construction of a bitumen hot mix plant for the Department of Works.

At 30th June, 1957, work was well advanced on new primary schools at Turner, Griffith, Yarralumla, and North Ainslie, while the new North Ainslie Infants school was 46 per cent. complete.

Other major building works under construction at 30th June, 1957, were the erection of a plant industry laboratory for the C.S.I.R.O., new Sergeants' mess and quarters at the R.M.C., Duntroon, Airmen's Quarters at the R.A.A.F. station, Fairbairn, and alterations and additions to chilling halls at the Canberra abattoirs.

(c) Engineering Works and Services. During 1955-56, five miles of sub-divisional roads were constructed to serve newly built areas and a further 15 miles were constructed in 1956-57, bringing the length of city roads at 30th June, 1957, to 237 miles, comprising 3 miles of concrete, 139 miles of bitumen paved and 95 miles of gravel. At the same date, the length of city footpaths was 141 miles. During 1956-57, about 15 miles of city roads were sealed and road maintenance works included the resealing of 38 miles of city roads. Major projects were the completion of three concrete bridges over Sullivan's Creek and of Woden's Creek bridge on the Cooma road, reconstruction of Cooma road and sealing to Tharwa turn off, sub-divisional roads in Yarralumla, Narrabundah, Ainslie, Duntroon, Griffith, Parkes and the Molonglo industrial area. Other projects carried out were the widening of a section of London Circuit, the construction of roads, parking area, etc., at the Olympic pool, realignment of Kambah lane, and the construction of a parking area in Mort Street, City. Considerable maintenance work was carried out on all city and country roads particularly in 1955-56 after excessive rainfall and storm damage.

During 1955-56, 47,348 feet of water mains were laid to reticulate water services to new buildings. A further 39,560 feet were laid in 1956-57. At 30th June, 1957, 8,081 houses were connected to the water supply system and of this number 6,926 were metered. The consumption for 1956-57 was 2,333 million gallons with an average daily consumption of about 176 gallons per head.

Construction of the 24" main from Lower Red Hill to London Circuit and a 36" suction main at the Cotter was completed.

Investigational work is being carried out at the site of the proposed new dam on the Upper Cotter River.

During 1955-56 and 1956-57, 61,811 feet and 61,104 feet respectively of sewer mains were laid to connect newly built houses to the sewerage system and 7,784 houses and buildings had been connected to the sewerage system by 30th June, 1957.

The main outfall sewer from Condamine Street to the Motel site was completed and the augmentation of the sewage treatment plant at Western Creek was nearly complete.

3. Forestry.—A considerable amount of reafforestation work has been undertaken and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills and Kowen. Experimental plots have been established in the Brindabella mountains and soil conservation areas at various locations throughout the Territory.

The total area of softwood plantations at 30th June, 1956, was 18,300 acres, of which 15,500 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus ponderosa* and *Pinus laricio*.

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly on decorative lines, but since then a much wider programme has been undertaken. Sawmill timber is now being obtained from the logs resulting from thinning operations and clear felling of mature plantations. The yearly output of pine timber has increased

from 30,000 super. feet in 1930-31 to approximately 12 million super. feet at the present time, the total amount cut to date being about 113 million super. feet. The present output consists of approximately 50 per cent. saw log timber producing building material, and 50 per cent. case-making materials,

In 1926, a comprehensive review was undertaken of the Territory's potentialities for forest development. A system of forest management was instituted in the existing forest area, and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection, to 100,000 acres of hardwood forests in the Cotter catchment area. Hardwood produced during 1955-56 amounted to 2,000,000 super. feet log measure all of which was used in building operations in Canberra. The total amount of hardwood cut from Australian Capital Territory forests to date is about 33,000,000 super. feet.

4. Lands.—(i) General. Reference has been made in previous issues of the Official Year Book to the general conditions of land tenure in the Australian Capital Territory and to the area of alienated and leased land, and Chapter IV.—Land Tenure and Settlement; of this issue contains statistical information on the subject.

Under the Seat of Government: (Administration) Act 1910; Crown lands in the Territory may not be sold on disposed of for any estate: in freehold except in pursuance; of some contract: entered into before the commencement of that. Act. Leases: of land in the city area are: granted under the: City. Area Leases: Ordinance 1936–1951, and leases: of other lands: under the Leases: Ordinance 1918–1955. Land, is: also: leased for various, purposes in the city area, under the Church Lands. Leases: Ordinance: 1924–1932; and, the Leases (Special Rurposes). Ordinance: 1925–1943; while one: lease under the Church of England Lands: Ordinance: 1926 has; been granted; for church purposess.

Under the City Area Leases Ordinance 1936-1951, the Government may grant leases in the city area of any Crown land for business or residential purposes. Such leases may be issued for a period not exceeding 99 years at a rental equal to five percent, of the unimproved value of the land, which value is subject to re-appraisement at the expiration of 20 years, and thereafter every 20 years. A suitable building must be commenced within six months and completed within 12 months unless an extension of time is allowed.

As considerable portions of the Territory lands are not required in connexion with the establishment of the city, large areas have been leased for agricultural or grazing purposes. Leases may be granted for grazing, dairying, fruitgrowing, horticulture, agriculture or other purposes for periods not exceeding 50 years. The annual rental is 5 per cent. of the assessed value of the land inclusive of rates, the value being subject to re-appraisement every 10 years.

- (ii) Jervis Bay Territory. The Commonwealth acquired from the State of New South Wales sovereign rights over the area comprising about 28 square miles of land and water at Jervis Bay for possible use as a port in connexion with the Australian Capital Territory. The Royal Australian Naval College was established in this area on a site known as Capitain's Point, but was removed in 1930 to Flinders Naval Base, Victoria. It was, however, re-established at the original site as from the beginning of 1958. Some 13,000 acres of land in the Jervis Bay area, mostly of little value agriculturally, have been leased for short terms from time to time, chiefly for grazing purposes.
- 5. Transport and Communication.—Canberra is connected with the railway system of New South Wales at Queanbeyan by a line 42 miles long. This line was opened for goods traffic on 25th May, 1914, and for passenger traffic on 15th October, 1923. The railway terminus is situated in the suburb of Kingston. A daily passenger service operates between Canberra and Sydney and Canberra and Melbourne.

Two airlines provide several services daily each way, on the Sydney,—Canberra-Melbourne route,

Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia.

There are three radio broadcasting stations in the Australian Capital Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station.

6. Population.—From 1911 until 1921, the population of the Australian Capital Territory remained at about 2,000 persons. In 1922, it commenced to rise, and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, it passed 8,000.

The population at the Census of 30th June, 1947, was 16,905 persons—15,156 in the city area, 1,389 in the rural districts and 360 in the Jervis Bay area—and at the Census of 30th June, 1954, it was 30,315 persons, 28,277 being in the Canberra city area and 517 in the Jervis Bay area. At 30th June, 1957, when a special count of Canberra City area was made, the population was 35,827 persons, The estimated population of the Territory at the same date was 37,865 persons.

- 7. Production.—During 1955-56, the production of the more important items of the agricultural and pastoral industry was—Wheat, 18,867 bushels; wool, 2,333,000 lb.; whole milk, 913,000 gallons; meat (bone-in weight, fresh), 3,332 tons. The numbers of livestock depastured at 31st March, 1956, were—Horses, 794; cattle, 9,489; sheep, 257,901; and pigs, 120.
- 8. Education.—The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. The New South Wales Education Department, however, provides teachers and the curriculum for schools in the Territory and is reimbursed annually for expenses incurred.

There are two public secondary schools in Canberra providing courses to the Leaving Certificate standard, Canberra High School, Acton, and Telopea Park High School, Barton.

Twelve schools provide courses for children in infants and primary classes, including two in the Jervis Bay area and three in rural districts. A school for mentally handicapped children was opened early in 1955.

There are eight private schools in Canberra. Of these, St. Edmund's Christian Brothers College, St. Christopher's Convent, Canberra Grammar School (Boys) and Canberra Church of England Girls' Grammar School provide courses leading to the Leaving Certificate Examination.

The Australian Capital Territory Education Ordinance provides for the compulsory attendance at school of children between the ages of six and fifteen years.

Fifteen pre-school centres, including two sub-centres, an occasional care centre and a mobile unit which visits outlying areas provide pre-school facilities for approximately 1,250 children between the ages of three and five years.

The Canberra Technical College, which follows the curriculum set by the New South Wales Technical Education Department, provides trades courses for apprentices, vocational (non-trades) courses including accountancy, women's handicrafts, and sheep and wool courses, hobbies courses including ceramics, dressmaking, art, woodwork, and motor maintenance, and courses for Commonwealth authorities, including workshop practice for Royal Military College cadets, motor maintenance for Australian Forestry School cadets and shorthand and typing courses for the Public Service Board. In addition, the Technical College undertakes the trade testing of migrants seeking to enter skilled trades.

Education at university level is provided by the Canberra University College, details of which will be found in Chapter XII.—Education.

An area of about 250 acres has been set aside at Acton, for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research, and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Further reference to this University appears in § 8 of Chapter XIL—Education.

9. Finance.—Details of revenue and expenditure for the years 1951-52 to 1955-56 are given in the following table:—

AUSTRALIAN CAPITAL TERRITORY: REVENUE AND EXPENDITURE.

(a) Transactions in Australian Capital Territory Electricity Supply Trust Account. (b) Other than Capital Works and Services. (c) Not available. (d) Payment to Australian Capital Territory Transport Trust Account (loss on omnibus service) (e) Includes loss on operations, 1951-52, £54,900 1952-53, £12,700; 1953-54, £24,000; 1954-55, £7,500; and 1955-56, £7,500. (f) Excludes repairs and maintenance. (g) Expenditure on plant and equipment by Department of Interior only. (h) Includes restoration of bushfire damage, 1951-52, £54,441; 1952-53, £72,783; 1953-54, £53,701; 1954-55, £3,582; and 1955-56, £1,391.

The following table, which was prepared by the Department of the Interior, shows the total receipts and expenditure of the Australian Capital Territory from 1901-2 to 30th June, 1956:—

AUSTRALIAN CAPITAL TERRITORY: RECEIPTS AND EXPENDITURE TO 30th JUNE, 1956.

Receipts.	£	Expenditure.	£
Commonwealth Treasury— Parliamentary Appropriations— Revenue	51,177,605 5,695,967		932,595 13;938,051 20,016,766 5;913,786
		Seat of Government Establishment Account, being maintenance and administration less revenue; ex- penditure of a capital nature for which assets no longer exist; profit and loss accounts of trading activities, etc.	a 16;072,374
Total Receipts	56,873,572	Net Expenditure	56,873,572

(a) Excludes interest £5,991,920.

The foregoing figures exclude part cost of national buildings (Parliament House, the Secretariats, etc.), federal highways within the Territory, the Queanbeyan-Canberra Railway, the housing loan, etc.

### NORFOLK ISLAND.

- 1. Area, Location, etc.—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29° 3′ 30″ South, longitude 167° 57′ 5″ East. Its total area is 8,528 acres, the island being about 5 miles long and 3 miles wide. From Sydney, it is distant 930 miles, and from Auckland, 660 miles. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 49° and 85° F. with a mean of 68° F. The average annual rainfall is 53 inches. It has been said that the healthy climate together with the beauty of its landscapes and seascapes, should make Norfolk Island "the Madeira of the Pacific". The island, both pre-war and post-war, has been popular as a tourist resort. Pre-war the only means of transport to the island was by ship. However, with the inauguration of direct air services from Australia and New Zealand the majority of tourists now take advantage of these services.
- 2. Settlement and Population.—The first colonization, in 1788, was by Lieutenant King, who in H.M.S. Supply established a small penal station as a branch settlement of that at Port Jackson. The settlement was abandoned in 1813, and for 13 years thereafter its chief use was as a whaling station and place of call for British warships.

From 1826 to 1855, it was again a penal station. In 1844, it was annexed to Van Diemen's Land (Tasmania).

The descendants of the Bounty mutineers, having become too numerous to subsist on Pitcairn Island, were removed to Norfolk Island in 1856. The new community, numbering 94 males and 100 females, were the descendants of British sailors and Tahitian women. The last of those transferred died at Norfolk Island on 1st March, 1943. The population of the island as disclosed by the Census of 30th June, 1954, was 942, consisting of 478 males and 464 females. The estimated population at 30th June, 1956, was 1,039 persons.

- 3. Administration.—In 1856, the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896, it was made a dependency under the Governor of that Colony, and finally by the passage of the Norfolk Island Act 1913 it was accepted by the Federal Parliament as a territory of Australia. From July, 1914, until 1st January, 1929, Norfolk Island was administered by the Department of Home and Territories, and then, until 25th June, 1941, by the Territories Branch of the Prime Minister's Department, but it is now controlled by the Minister for Territories through an Administrator. An amending measure, the Norfolk Island Act 1935, provided for the establishment of air Advisory Council of eight elected members which may advise the Administrator on matters affecting Norfolk Island.
- 4. Economic Activity—The major economic activities of the island are primary production, whaling, the tourist trade and employment by Government instrumentalities.
- (i) Primary Industries. The soil on the island is particularly fertile, the climate equable, and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation and trading difficulties with New Zealand have hampered production in the past. A relaxation of some restrictions enabled out-of-season fruit and vegetables up to a limit of 3,000 lb. per week to be sent by air freight to Auckland, but the air service was reduced to fortnightly from August, 1956.

Prior to 1939, the principal primary product was passion fruit pulp. However, the introduction of disease together with the high cost of trellising and land reclamation has led to the curtailment of this industry. The production of bean seed has now become the main export industry. The island's isolation from many plant diseases found on the mainland, plus the fairly reliable dry period (which is conducive to the setting and maturing of seed), together with improved prices, induced a rapid expansion of production. In 1955-56, 1,084 bushels were exported and prices ranged from £6 f0s. to £8 10s. per bushel. (This yield is lower than normal as adverse harvesting weather occurred resulting in considerable loss of bean seed.) The conditions on Norfolk Island also favour the production of other types of seed. Some cut flowers are exported to New Zealand at suitable periods.

Island conditions are also conducive to good pasture growth but for a number of reasons meat production is insufficient to satisfy the demands of both the fourists and the local inhabitants. However, as a joint product to pastoral pursuits, quantities of hides and wool are exported.

Fish and, in certain months, whales abound off the island. In the past, a number of ventures have been formed to exploit these resources. They have been short-lived owing, for the most part, to the lack of a sheltered harbour. However, a modern whaling station was started on the island in 1955 and production commenced during the second half of 1956, the quota of 150 humpback whales being taken before the close of the season.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

- (ii) Tourists. The unique history and unusual beauty of the island had always attracted a number of tourists in pre-war days. The building of the airstrip during the war has made the island far more accessible and a considerable tourist industry has developed, particularly with visitors from New Zealand. The industry is at present limited only by the accommodation available. Approximately 120 can now be catered for and accommodation is being continually expanded.
- (iii) Government Instrumentalities. A large proportion of the population is employed by Commonwealth Government instrumentalities, namely:—Department of Civil Aviation, Norfolk Island Administration, Overseas Telecommunications Commission and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.
- 5. Trade, Transport and Communication.—Imports to Norfolk Island in 1938-39 amounted to £27,590, mainly from Australia. Since the 1939-45 War, they have risen from £32,402 in 1945-46 to £264,023 in 1955-56. In 1955-56 the major proportion (£248,633 or 94 per cent.) still came from Australia, while New Zealand supplied six per cent. Exports were valued at £16,970 in 1938-39, and have risen from £9,024 in 1945-46 to £38,330 in 1955-56. Australia was again the principal country concerned, exports thereto amounting to £31,214.

No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are (a) the produce or manufacture of Norfolk Island; (b) shipped direct to Australia; and (c) not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the Territory is maintained at approximately seven-week intervals by Burns Philp & Co. Ltd., Sydney. The route is from Sydney via Norfolk Island to the New Hebrides, Solomon Islands and other island groups and thence back to Sydney. Shipping between Norfolk Island and New Zealand is infrequent.

The construction of the aerodrome on the island was completed during 1943. A fortnightly passenger and air freight service between Sydney and Norfolk Island maintained by Qantas Empire Airways Ltd. extends to New Zealand under charter to Tasman Empire Airways Ltd.

There are approximately 50 miles of usable road on Norfolk Island. As a substantial section of the population possesses private motor cars, and taxi-cab services are available, transport is almost exclusively by motor vehicle.

The cable from Great Britain via Vancouver, Fanning Island, and Fiji bifurcates at Norfolk Island, one line connecting with New Zealand, the other with Brisbane. Until 10th June, 1947, the post office at Norfolk Island was part of the Commonwealth postal system, but as from that date Norfolk Island was established as a separate postal administration with its own issue of stamps.

6. Social Condition.—Education is free and compulsory up to the age of fifteen years. The school conforms to the Australian standard of public education, ranging from kindergarten to the intermediate certificate, with a two years' super-primary course of instruction in cultural subjects and in woodwork, needlework, leatherwork, basketry and hat-making. The headmaster and assistant teachers are lent by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30th June, 1956, was 148, including 43 in kindergarten. Dental examination and free dental service are provided for school children.

The Court of Norfolk Island is a court of record with dual jurisdiction. Sitting in its Limited Jurisdiction, the Court has power to hear and determine actions of claims not

exceeding £30 and to punish summarily all crimes and offences involving a pecuniary penalty or a sentence of imprisonment not exceeding six months. In its Full Jurisdiction, the Court can hear and determine all actions, punish all crimes and offences, grant probate and letters of administration, hear and determine appeals from any conviction of the Court sitting in its Limited Jurisdiction, and exercise authority in all other matters. An appeal lies to the High Court of Australia from any judgment, order, decree or sentence of the Court sitting in its Full Jurisdiction when constituted by a Judge or the Chief Magistrate.

7. Finance.—The revenue of the Territory, together with an annual grant from the Commonwealth Government in aid of administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal sources of revenue in 1955-56 were:—Sale of liquor, £26,552; Commonwealth subsidy, £26,600; customs duties, £10,711. The total revenue was £119,655. Major items of expenditure in 1955-56 were:—administrative, £21,493; miscellaneous services, £23,412; repairs and maintenance, £14,545; capital works and services, £3,214; business undertakings, £29,895. Total expenditure amounted to £109,438.

### PAPUA AND NEW GUINEA.

## § 1. Administration.

Following the outbreak of the Pacific War, civil administration in Papua and New Guinea was suspended on 11th February, 1942, and military control commenced. The Territory of New Guinea came under Japanese occupation in 1942, but the greater part had already been recaptured by Australian and Allied Forces when the Japanese surrendered in August, 1945. Information relating to the transfer back from military to civil control under the Papua-New Guinea Provisional Administration Act 1945–1946 may be found in Official Year Book No. 39 and earlier issues.

The Papua-New Guinea Provisional Administration Act 1945-1946 was repealed by the Papua and New Guinea Act 1949 which came into force on 1st July, 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provides for an Administrative Union, one Administrator, one Supreme Court and one Public Service.

Provision is made for an Executive Council of not less than nine officers of the Territory, who shall be appointed by the Governor-General, and a Legislative Council consisting of twenty-nine members, namely:—(a) the Administrator; (b) sixteen officers of the Territory (who shall be known as official members); (c) three non-official members possessing such qualifications as are provided by Ordinance and elected, as provided by Ordinance, by electors of the Territory; (d) three non-official members representing the interests of the Christian missions in the Territory; (e) three non-official native members; and (f) three other non-official members.

The Legislative Council was inaugurated on 26th November, 1951, by His Excellency Sir John Northcott, while Administrator of Australia.

Subject to the Act, provision may be made by Ordinance for the establishment of Advisory Councils for Native Matters and Native Village Councils.

The Act also makes provision for the continuance of the existing laws of the Territory of Papua and the Territory of New Guinea.

## § 2. Finance.

The following table shows particulars of the financial operations of the Papua and New Guinea Administration for the years 1951-52 to 1955-56. Further information on each Territory will be found on pages 132 and 139.

## § 3. Agriculture and Animal Industry.

1. Soils.—Although a large proportion of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all parts where fertile soils occur, suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far, these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the Delta plains and other parts of the Gulf of Papua, and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the Central Plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas),

Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramu and Markham Rivers.

2. Climate.—The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking, the climate is moist and tropical, except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and thus no great variation in day-length over the year. The two seasons which are experienced are generally described as the "south-east" and the "north-west", corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, between the end of December and about March. During the periods between these seasons, November and early December, and about March to April, there are two short spells of calm weather.

Rainfall varies considerably, from an average annual rainfall of 245 in. at Gasmata in New Britain and 231 in. at Kikori in Papua, to about 88 in. at Wewak in New Guinea and 40 in. at Port Moresby.

Although the Territory has no summer and winter, it has a wide temperature range, due to differences in altitude, varying from an absolute highest temperature of about 100° F. along the coast, to freezing point on its highest peak, Mt. Wilhelm (15,400 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent. are rare at coastal stations, average figures Ferying from 80 per cent. at 9 a.m. to 65 per cent. at noon and 75 per cent. at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

- 3. Suitable Crops.—The crops which can be grown in Papua and New Guinea include coconuts, rubber, tea, coffee, cocoa, jute, kenaf, manila hemp, sisal, rice, pepper, tobacco, peanuts, kapok, cassava, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago and tung oil, but of these, the only crops of any commercial importance are copra, coffee, cocoa and rubber.
- 4. Plantation Agriculture.—The principal plantation crops cultivated are coconuts, rubber, cocoa and coffee.

Coconuts. Territory coconut plantations suffered severely from damage and neglect during the 1939-45 War, but rehabilitation has been rapid and, in 1955-56, about 500 plantations together with native coconut stands produced 80,185 tons of copra for export valued at £6,186,055. The area (excluding native stands) planted with coconut palms in March, 1956, was 242,004 acres. In addition, 10,331 tons of coconut oil valued at £1,326,806 and about 6,127 tons of coconut meal and cake valued at £131,467 were exported in 1955-56. A copra crushing mill was established at Rabaul in 1952. Native stands produce about 20 per cent. of the copra exported.

A contract with the United Kingdom commenced on 1st March, 1949, for a period of nine years, for the sale of Territory copra in excess of Territory and Australian requirements. The price of copra sold for the first contract year, 1949, was £60 per ton f.o.b. Territory ports, and the contract provides that the price for each subsequent year is to be not more than 10 per cent. higher or lower than that for the preceding year and is to be negotiated before the end of the preceding year. Early in 1952, the termination date of the contract was varied to 31st December, 1957, and prices are now negotiated on the basis of calendar years. The price for the calendar year 1957 was £67 10s. per ton f.o.b. Territory ports for fair merchantable sun-dried copra with small price differentials for other grades.

Rubber. Rubber exports have more than doubled since before the Japanese invasion, increasing from an average of 1,352 tons per year during the three years 1937-38 to 1939-40 to 3,793 tons in 1955-56, valued at £1,386,787. A total area of 28,118 acres had been planted with rubber trees up to March, 1956.

Cocoa. Exports of cocoa beans increased from 207 tons in 1949-50 to 1,290 tons in 1955-56, valued at £360,864. The area (excluding native stands) planted with cocoa trees in March, 1956, was 39,310 acres, native stands comprised 7,450 acres.

Coffee. Exports of coffee beans increased from 21 tons in 1949-50 to 171 tons in 1955-56, valued at £93,829. The area (excluding native stands) planted with coffee trees in March, 1956, was 39,310 acres, native stands comprising 7,450 acres.

5. Native Agriculture.—Most of the native inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas, it is usually cut largely from naturally occurring stands. In other parts of the country, small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years, the natives have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. In coconut areas, large quantities of copra are produced. In 1955-56, native copra production was estimated at about 20,000 tons.

In many localities, the natives follow a farming system known as "Bush Fallowing Rotation". The inhabitants of each village have, at any one time, a number of distinct and separate cleared garden areas in the land surrounding the village. The garden clearings may be located some miles from the village and are not usually contiguous. Each garden area may be made up of a number of distinct plots owned by individual natives or families. Communal ownership of gardens is rare. The number of garden clearings (and their area) attached to each village depends on the size of the village and the fertility of the land.

The method of cultivation followed is for the jungle trees to be felled and undergrowth cleared with axes and knives, the larger trees being usually left standing. The timber and foliage is allowed to dry out and then terms. In some localities, there is a little cultivation before the crops are planted, and root vegetables are placed in holes dug with a stick. In other places, however, there is careful preparation of the soil. Some weeding is done while the crops are growing. After harvesting, a second crop is rarely planted immediately in that garden area, but a new area of land is selected, cleared, burnt and planted. The natives return to the first area to harvest fruit from trees, such as papaw and banana, that may have been planted in the garden, but these are soon submerged in the new growth which quickly appears. The plot is allowed to lie fallow for a number of years, the period varying from 7 to 10 years or even longer, depending upon the local population pressure. During this time, high secondary jungle has probably grown. Ultimately the natives return to the original plot, and clear, burn and plant again. The cycle continues year by year throughout the agricultural land belonging to the village. The foregoing is a broad generalization of the method followed. There are, however, many variations.

The business of growing food is done by both the men and women. The division of work is usually clearly defined within the village itself but this division is not necessarily the same in all areas. Generally it is found that felling the forests is always done by the men, and carrying the harvested food home to the village is nearly always done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply and improved land use in village gardens, as well as for economic production of crops for sale, has a high priority in Government policy for the Territory.

6. Animal Industry.—At 31st March, 1956, the livestock in the Territory consisted of 10,435 cattie, 1,714 sheep, 4,640 goats and 5,687 pigs, besides horses, mules and poultry. These figures exclude native-owned livestock. The introduction of rabbits, foxes, hares and monkeys is prohibited.

A number of British breeds of cattle are represented in Territory herds. For dairying, Jersey and Australian Illawarra Shorthorns are most popular; Black Polled, Polled and Horned Shorthorns, and Red Polled cattle are raised for meat production. Under good management these breeds have done well in the Territory.

Most of the sheep now in the Territory are Romney Marsh breed located at Nondugl in the highlands of New Guinea. This breed has been tried in various parts of the Territory. It produces a good carcass, and in drier parts a useful sheep. There are also some Asiatic sheep and crossed with Romney Marsh they produce good carcasses and are hardy. Current investigations on sheep raising which include tests and observations to determine the most suitable breeds and areas for grazing for both mutton and wool are based on the Hallstrom Livestock Station in New Guinea.

7. Co-operative Societies.—There has been a rapid increase in organized co-operative societies in recent years. Societies now total 224, membership 61,385 and turnover £1,002,965, representing increases of 26, 7,135 and £40,362 respectively, for the year ended 31st March, 1956.

PAPUA. 127

The following table sets out details of the number of societies, members, etc., for the year ended 31st March, 1956:—

CO-OPERATIVE SOCIETIES: YEAR ENDED 31st MARCH, 1956.

Type of Society.	Number of Societies.	Number of Members.	Turnover.	Rebates to Members.	Total Capital.	Total Fixed Assets.

### PAPUA.

## § 1. General Description.

- 1. Early Administration.—Particulars of the early administration of Papua are given in Official Year Book No. 19, p. 576.
- 2. Administration by the Commonwealth of Australia.—The Territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of 18th March, 1902, and was accepted by the Commonwealth by the Papua Act, 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is now under the control of the Commonwealth, but not included within it, and is divided into six magisterial districts, Southern Highlands, Western, Gulf, Central, Milne Bay and Northern.
- 3. Area, etc.—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 920 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland, and 1,936 on the islands. The total area is about 90,600 square miles, of which 87,806 are on the mainland, and 2,794 on the islands. A reference to the physical characteristics of the Territory appears in previous issues of the Official Year Book (see No. 18, p. 633).

## § 2. Population.

1. Non-indigenous Population.—At the Census of 30th June, 1954, the non-indigenous population of Papua was 3,867 males, 2,446 females, 6,313 persons. Corresponding figures at the Census of 30th June, 1947, were, respectively, 2,057, 1,182 and 3,239.

The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. It numbered only 1,148 at the 1933 Census, but at the 1954 Census amounted to 5,295 (3,372 males and 1,923 females).

The non-European section of the non-indigenous population at 30th June, 1954 was 1,018, of whom 34 were full-bloods and 984 were half-castes with one of the parents a European. Comparable figures as at the 1947 and 1933 Censuses, respectively, were:—full-bloods—194 and 786; half-castes—503 and 227.

The estimated non-indigenous population at 30th June, 1957 (30th June, 1956 in parentheses) was—Males, 4,897 (4,708); females, 3,225 (3,003); Europeans, 7,071 (6,683); Asians, seven (nine); and Others (mainly half-caste), 1,044 (1,019); Total, 8,122 (7,711).

2. Native Population.—It is not possible to give exact data regarding the number of natives, because part of the interior is not as yet under complete Government control. However, the enumerated and estimated population of the Territory of Papua at 30th June, 1956 numbered 444,448 persons. This comprised 299,018 enumerated persons (158,092 males and 140,926 females) and 145,430 estimated. The total number was distributed through districts as follows:—Southern Highlands, 116,037; Western, 48,357; Gulf (including the former Delta district), 64,086; Central, 86,181; Milne Bay, 83,318; and Northern, 46,469.

## § 3. Native Labour, Taxation and Health.

1. Native Labour.—The laws relating to the employment of natives are uniform in Papua and New Guinea, and are contained in the Native Labour Ordinance 1950-53. They provide for the engagement of natives under a permit. Permits are issued by a District Officer, and authorize the holder to engage natives for employment on his own behalf, or on behalf of a registered employer who has authorized him to act on his behalf. Under this Ordinance, a native may be issued with a Native Assistant's Permit, which authorizes him to solicit natives to work for his employer, or for other employers who have authorized him to act on their behalf.

Natives are employed under written agreements which have been sanctioned and attested by a District Officer. The period of the agreement must not exceed two years, but one further agreement, for a period not exceeding one year, may be drawn up, if both parties desire it. The period, in both cases, begins on the day on which the agreement is sanctioned and attested. Both parties may, by mutual consent, and with the approval of a District Officer, cancel an agreement. On the termination of an agreement, employers are required to repatriate workers to their own villages.

Natives under the age of sixteen years may not be employed. Employers must provide native employees with housing, medical attention, food and clothing free of charge. A minimum monthly wage of twenty-five shillings and a working week of 44 hours are prescribed by Ordinance. Provision is also made for compensation in the case of injury or death.

- 2. Native Taxes.—No direct taxes have been levied on natives since the war. Native Village Councils (which are formed voluntarily by the natives) are, however, empowered to levy rates on villagers for the purpose of providing for local services carried out by the Councils.
- 3. Health.—The Department of Health has the general oversight of all medical and dental services. It maintains a large number of hospitals, which are staffed by fully-trained European medical personnel and trained native assistants, for both European and native patients. The Department has adequate facilities for research in tropical medicine.

At 30th June, 1956, there were in the Territory three European hospitals (one privately controlled); 36 native hospitals (one private and 15 mission); one mental hospital; 245 village aid posts (76 mission); 148 welfare clinics (49 mission); and three Hansenide colonies. The Missions employ their own doctors and nurses in their medical establishments. A training school has been established for the purpose of training natives in first aid, elementary physics, chemistry, anatomy, physiology and pathology in preparation for their employment as Native Medical Assistants. Natives are also attending the Central Medical School at Suva, Fiji, to be trained as Native Medical Practitioners and for other medical occupations. The chief complaints treated in hospital are malaria, yaws, tropical ulcers, respiratory infections, hookworm, venereal and skin diseases.

## § 4. Land Tenure.

The basic principle of the land laws of Papua is that all land not specifically alienated by due process from the natives, or established to be vacant and ownerless, is native land. At 30th June, 1956, of the total estimated area of Papua, approximately 58,000,000 acres, only 1,901,543 acres had been alienated. The distribution of alienated land at 30th June, 1956, according to tenure, was as follows:—Held by private non-indigenous inhabitants—freehold, 24,280 acres, leasehold, 304,751 acres; held by administration, 1,505,185 acres; native reserves, 67,327 acres; total, 1,901,543 acres.

Although, as the figures above show, a small amount of freehold land exists in Papua, no further estates in freehold can be granted under the provisions of the Land Ordinance 1911–1953 of Papua. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal and, in general, leases may be granted for periods of up to 99 years. Rent is based on the unimproved value of the land. For agricultural leases, the rental rate per annum is 5 per cent. of the unimproved value and for pastoral leases the rate is 2½ per cent. Concessions regarding freedom from, or reduction of, rents apply during the early developmental periods of agricultural and pastoral leases. All leases are subject to improvement conditions which may be varied or relaxed under certain circumstances. The following classes of leases were in force in Papua at 30th June, 1956:—Agricultural, 659—259,492 acres; pastoral, 28—42,373 acres; residence, 160—226 acres; special, 189—1,108 acres; mission, 343—969 acres; business, 114—224 acres; town allotment, 591—254 acres; agricultural leases granted to missions, four—165 acres; total, 2,088—304,751 acres.

PAPUA. 1:29:

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the Real Property Ordinance 1913–1955 modelled on the Torrens system of land registration. A start has been made on the recording of native land ownership under the Native Land Registration Ordinance 1952.

## § 5. Production.

1. General.—The products of the Territory are obtained from its agricultural, forest, mining and fishing industries. A factory for the extraction of cutch from mangrove bark has been established at Kikori in the Gulf District. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, bananas and pawpaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Natives however, do produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g., cocoa and coffee, is being encouraged. The principal agricultural products of Papua for the export trade are copra and rubber. Practically all the timber milled during 1955–56 was absorbed by local building requirements. The main products of fisheries exported from Papua are trochus and green snail shell. Gold and manganese, zinc-lead and copper ores have been mined in commercial quantities.

Agricultural and pastoral conditions in Papua and New Guinea have, for the sake of convenience, been dealt with as a whole, and reference should be made to pp. 124-127 for information on the soils, climate, crops, methods of cultivation, etc., throughout both Territories. The following paragraphs relate to forestry, mining, fisheries and water-power resources in Papua.

- 2. Forestry:—(i) General. A general description of the forest policy which applies in Papua as well as in the Trust Territory of New Guinea is given under the heading "Timber" on page 135.
- (ii) Timbers. Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Kwila, the most important hardwood found in millable quantities in Papua and New Guinea occurs in important stands east of Port Moresby. Mangroves occur in large areas fringing the Gulf of Papua and are cut for the preparation of cutch from the bark.
- (iii) Survey Work. Forestry field work is being carried out in Papua with a view to assessing the forest resources available and to survey areas that will be thrown open for cutting. In the middle of 1956, tenders were called for approximately 50 million super, feet of logs on the Brown River area near Port Moresby, and the contract was subsequently let to a Port Moresby sawmiller.
- (iv) *Permits*. At 30th June, 1956, 15 permits and two licences were current. The total areas of forest involved were 71,234 acres and 11,123 acres respectively. The total number of mills was 17, and the total sawn-timber produced for the year was 3..6 million super feet, most of which was used locally. There were also 250,000 acres of mangrove swamp being utilized for cutch production.
- 3. Mining.—(i) Variety of Minerals. Although a large number of minerals have been found in Papua including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum and lignite, most deposits are not of economic importance.

Gold was discovered in 1888 and has been found in many parts of Papua. Before the 1939-45 War, gold was an important item in the Territory's production and it was the major export in 1938-39 (valued at more than £150,000), but has dwindled to insignificance since the war. Gold production in 1955-56 was 491 fine oz. and in 1954-55 1,065 fine oz. compared with an average of almost 28,000 fine oz., for the last three pre-war years. During 1955-56, the production of gold realized £7,675, bringing the total value of gold won up to 30th June, 1956, to £3,323,043.

Manganese ore valued at £540 was exported from Papua during the year ended 30th June, 1956. Large quantities of copper ore were mined and exported, up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

- (ii) Oil Search. Since the search for oil began in Papua in 1911, nearly £22 million has been spent. The existence of petroleum has been traced at scattered intervals over a large area, but commercial quantities have not been discovered. At 30th June, 1956, three companies held petroleum prospecting permits under the provisions of the Petroleum (Prospecting and Mining) Ordinance 1951-1955. Oil prospecting is, at present, confined mainly to the Gulf and Western Divisions.
- 4. Fisheries.—Surveys have been carried out of the resources of swimming fish. They have been demonstrated to be considerable and efforts are being made to increase the small degree of utilization. Shell fishing, particularly trochus, provides the main cash return, exports being valued at £138,000 in 1955-56.
- 5. Water Power.—Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that there is at least 10 million horse-power available for this purpose.

## § 6. Trade, Transport and Communication.

1. Customs Tariff.—The present customs tariff provides high revenue rates on ale, spirits, wines, timepieces, cigarette papers, fancy goods and jewellery but allows duty-free treatment of most necessities. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant and machinery to be used mainly for developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule. Export duties are imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) 1936 for the free entry into Australia of certain goods produced in and imported direct from Papua (see Chapter X.-Trade), and a proclamation of 25th September, 1935, exempted from primage duty goods produced or manufactured in the Territory.

2. Imports and Exports.—(i) Total Values. The table below summarizes and compares the values of imports and exports for the pre-war year 1938-39 and the post-war years 1953-54 to 1955-56.

TERRITORY OF PAPUA: IMPORTS AND EXPORTS.

(£. f.o.b.) Particulars. 1938-39. 1953\_54 1954-55. 1955-56. 514.808 5,201,969 7,471,221 8.975.834 **Imports** Exports-410,666 1,683,188 2,965,559 Domestic Exports 2,517,526 . . Non-Domestic Exports 79,492 304,376 308,170 398,976 1,987,564 Total Exports 490,158 2,825,696 3,364,535

<sup>(</sup>ii) Imports. The following table summarizes the countries of origin of imports. In the post-war years Australia has supplied a far greater proportion of the imports than was the case pre-war and this proportion has continued to increase in each successive postwar year. The increase in total imports in 1955-56 was due partly to increased purchasing power arising from the higher Commonwealth Government grant and from increased exports.

## TERRITORY OF PAPUA: COUNTRY OF ORIGIN OF IMPORTS.

(£.)

	Count	try of Origi	n.		1938–39.	1953–54.	1954-55.	1955–56.

<sup>(</sup>a) Not available, included in "Other countries".

(iii) Exports. (a) Countries of Destination. The countries of destination of Papuan exports are shown below. The increase during 1955-56 in the value of total exports, and of exports to Australia in particular, was due mainly to the higher price of rubber. Australia imports practically the whole of the Territory's production of this crop.

## TERRITORY OF PAPUA: COUNTRY OF DESTINATION OF EXPORTS.

7	otal D	omestic E	kports		410,666	1,683,188	2,517,526	2,965,559

3. Shipping.—In 1954-55, 154 British vessels and four of other nationality called at Territory ports and discharged 88,602 tons of cargo and loaded 29,106 tons. Corresponding figures for 1955-56 were 131, nine, 98,522 and 29,617 respectively.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are occasional ships to the United Kingdom. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

4. Other Forms of Transport and Communication.—Air services link Papua with Australia, New Guinea and the British Solomon Islands. There were 41 aerodromes and seaplane alighting areas in Papua at 30th June, 1956, and of these, 16 were the responsibility of the Department of Civil Aviation, 15 were operated and maintained by the Administration, and 10 owned and maintained by Missions, plantations and mining interests. Much of the internal traffic and freight is carried on a charter basis. Regular air services operate from Port Moresby to Daru and Lake Kutubu in the West, Samarai in the East, and to various centres in New Guinea.

There are nearly 1,332 miles of road in Papua, of which about 578 miles are suitable for medium and heavy traffic, the greater proportion being located in the Central and Northern Districts, which are north-east of Port Moresby.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is jointly shared by the Overseas Telecommunications Commission and the Administration. The former provides a service between Papua, Australia and the Territory of New Guinea, while the latter operates radio telephone and radio telegraph services from Port Moresby and Samarai to outstations.

Medium and short-wave programmes are broadcast from the Australian Broadcasting. Commission stations 9PA and VLT located at Port Moresby.

### § 7. Finance.

The principal source of revenue for the Territory of Papua is the annual grant received from the Commonwealth Government, which in 1955-56 amounted to £3,532,086. Customs duties, £910,752 in 1955-56, are next in importance. The total revenue during 1955-56 was £4,983,550 compared with £3,875,385 in 1954-55. Of a total expenditure of £4,833,194 in 1955-56, £2,279,599 was spent on public works, £647,975 on medical services, £315,574 on native affairs and £1,590,046 on ordinary votes. Expenditure amounted to £3,844,169 in 1954-55.

For particulars of the finances of the combined Territory administration, see p. 123.

### TRUST TERRITORY OF NEW GUINEA.

## § 1. General Description.

The land area of the Territory of New Guinea is about 93,000 square miles and the area, including the sea, within the lines drawn through its extreme outer points is more than one million square miles. As the coast of the Territory has not been completely surveyed, the areas of the various islands are known only approximately.

The approximate areas of the principal islands, together with the small islands adjacent thereto, are as follows:—North-East New Guinea, also called the mainland, 70,200 sq. miles; Bismarck Archipelago—New Britain, 14,100 sq. miles, New Ireland, 3,340 sq. miles, Lavongai, 460 sq. miles, Admiralty Islands, 800 sq. miles, total Bismarck Archipelago, 18,700 sq. miles; Solomon Islands—Bougainville, 3,880 sq. miles, Buka, 220 sq. miles, total Solomon Islands, 4,100 sq. miles; grand total, 93,000 sq. miles.

Information regarding physiography and climate will be found in Official Year Book No. 22, p. 613, and in the Official Handbook of the Territory of New Guinea.

### § 2. Government.

1. The Military Occupation (1914-18 War).—On 17th September, 1914, the Acting Governor of German New Guinea signed terms of capitulation with the officer commanding a Naval and Military Expedition sent from Australia, and thereafter the Territory was under military administration until the establishment of Civil Government on 9th May, 1921.

2. Mandate (1920).—In 1919, it was decided by the Principal Allied and Associated Powers that the Territory of New Guinea, which Germany gave up as one of the terms of peace, should be entrusted under Mandate from the League of Nations to the Government of the Commonwealth. The issuing of the Mandate was, however, delayed, and it was not until 17th December, 1920, that its terms were settled, and the Mandate itself did not reach Australia until April, 1921.

The terms of the Mandate are given in Official Year Book No. 33 (see p. 264).

- 3. 1939-45 War.—For the events following the outbreak of the Pacific War and the formation of the Papua-New Guinea Provisional Administration in 1945, see p. 123 of this chapter and earlier issues of the Official Year Book.
- 4. Trusteeship (1946).—The Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13th December, 1946. The terms of the Agreement are shown in Official Year Book No. 39, pp. 355-7.
- 5. Administration.—For particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration see Official Year Book No. 36 and earlier issues.

For administrative purposes, the Territory is divided into the following nine districts:—New Britain, comprising New Britain and adjacent islands; Morobe, Madang, Eastern Highlands, Western Highlands, and Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

## § 3. Population.

1. Non-indigenous Population.—At the Census of 30th June, 1954, the non-indigenous population of the Territory of New Guinea was 7,201 males, 4,241 females, 11,442 persons. The total non-indigenous population at the Censuses of 1921, 1933 and 1947 was, respectively, 3,173, 5,216 and 6,200 persons.

The European population of the Territory increased from 64 in 1885 to 3,191 at the Census of 1933, and it reached its pre-war peak of 4,608 in 1939. At the 1954 Census, the European population numbered 8,020 (5,185 males and 2,835 females).

Malays seem to have been the first Asians brought by the Germans to German New Guinea; 37 of them were recorded on the mainland in 1885. About 1889, the New Guinea Company began to bring Chinese, Malays and Javanese in growing numbers from Singapore and Java to work on the plantations; in the year 1892, there were about 1,800 Asians on the mainland. By 1898, the number had decreased to 300 or 400, but it had risen to 1,830 at the time of the 1933 Census, and at 30th June, 1941, numbered 2,228, mostly Chinese. At the Census of 30th June, 1954, non-Europeans numbered 2,404, of whom Chinese (2,192) constituted the major proportion, whilst half-castes with one of the parents a European numbered 1,018.

2. Native Population.—The enumerated and estimated native population of the Territory of New Guinea as at 30th June, 1956 numbered 1,273,837 persons, comprising enumerated, 1,154,360 (610,110 males and 544,250 females), and estimated, 119,477. The total population was distributed throughout the several districts as follows:—Eastern Highlands, 305,859 persons; Western Highlands, 242,097; Sepik, 215,887; Madang, 119,435; Morobe, 192,691; New Britain, 96,822; New Ireland, 36,102; Bougainville, 49,071; Manus, 15,873.

## § 4. The Natives.

1. General.—The natives are divided into two main groups—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands, and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (See Official Year Book No. 16, p. 670, and Official Handbook of the Territory of New Guinea, Pt. V.)

- 2. Land Tenure.—There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. In some cases, local government councils are discussing changes in land inheritance systems, and the Administration is also giving attention to the problem.
- 3. Research Work.—Research work among the native peoples of New Guinea was initiated under the German Administration and this work has been continued since on a wider scale.
- 4. Education.—Education in the Territory is provided by the Administration and various mission organizations. Schools for natives have also been established by Native Village Councils. The Education Ordinance 1952 enables the Administrator to establish an education advisory board, district education committees, European and native schools and to grant financial aid for educational purposes. European teachers are recruited from Australia, and native teachers are trained in the Territory by the Administration and the Missions. During the year ended 30th June, 1956, 132 schools were maintained by the Administration for 7,239 children, of whom 614 were Europeans, 364 Asians, 22 of mixed race and 6,239 natives. The total number of pupils in the various grades of mission schools was 110,672, of whom there were 107 Europeans, 244 Asians and 178 of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment and text-books. In addition, the sum of £60,638 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1956.
- 5. Health of Natives.—The main diseases affecting the native people are malaria, yaws, respiratory diseases, dysentery, tropical ulcers, hookworm and filariasis. The Department of Health is engaged in combating these diseases with a staff of fully-trained medical officers, medical assistants and orderlies in native hospitals. Its staff also supervises hospitals on plantations. It has adequate facilities for research in tropical medicine, and a training scheme for natives as medical orderlies. The Department also provides the Missions with much of their medical stores and supplies, and maintains two Hansenide colonies for the treatment of natives suffering from Hansen's Disease. The Department also undertakes the general oversight of sanitary conditions in the Territory.
- 6. Missions.—A number of mission societies operate in the Territory. The Society of the Sacred Heart of Jesus works in the Bismark Archipelago, the Society of the Holy Ghost, the Franciscan Order and the Society of the Divine Word along the coast of northeast New Guinea from Sepik to the Dutch border and in the Central Highlands, and the Marists in Buka and Bougainville. These are Roman Catholic Missions. The Protestant Missions include the Methodist Overseas Mission in New Britain and New Ireland, the New Zealand Methodist Mission in Bougainville, the Lutheran Mission (supported and staffed by the Lutheran Churches in Australia and America) which works in Morobe, Madang, the Eastern and Western Highlands, New Britain and Manus, the New Guinea Anglican Mission in New Britain, the Seventh Day Adventist Mission in Bougainville, New Britain and the Mainland of New Guinea, the East and West Indies Bible Mission and the Baptist Mission in the Central Highlands. The South Seas Evangelical Mission (Undenominational) and the Assemblies of God Mission are also working in the Sepik area. All these societies include teaching with their missionary work.

## § 5. Land Tenure.

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua and, although, under the Land Ordinance 1922-1951, grants of freehold estates may be made, as a matter of policy all grants are now restricted to leaseholds. In New Guinea, however, the amount of freehold land of earlier origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,520,000 acres, of which at 30th June, 1956, 1.9 per cent. was alienated. The following was the distribution of alienated land according to tenure at 30th June, 1956:—held by private non-indigenous inhabitants—freehold, 518,490 acres, leasehold, 261,876 acres; held by Administration, 356,645 acres; native reserves, 26,926 acres; total, 1,163,937 acres.

Leases in force at 30th June, 1956 were as follows:—Agricultural, 715—201,723 acres; dairying, 6—1,300 acres; pastoral, 13—47,245 acres; residential and business, 1,350—1,257 acres; special, 157—3,425 acres; mission, 623—2,249 acres; leases granted to Chinese in towns, 526—162 acres; long period leases from German regime, 104—4,515 acres: total, 3,494—261,876 acres.

Under German law there was a system of registration of titles in a "Ground Book", but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in an Ordinance entitled the Lands Registration Ordinance 1924-1955. The land registers were lost during the 1939-45 War, and provision for restoration of the lost titles is made in the New Guinea Land Titles Restoration Ordinance 1951-55. A start has been made on the recording of native land interests under the Native Land Registration Ordinance 1952.

## § 6. Production.

1. General.—The products of the Territory are obtained from its agricultural, mining, fishing and forestry industries. A joint government-private enterprise copra crushing mill at Toboi, near Rabaul, is producing coconut oil at the rate of about 8,000-10,000 tons a year. At Bulolo, a company (Commonwealth-New Guinea Timbers Ltd.), in which the Commonwealth Government has a controlling interest, is producing high quality waterproof plywood and veneers in a factory whose capacity is over 40 million square feet, on a 36-in. basis, per annum. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Natives, however, produce copra for export and, in recent years, have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. The principal agricultural products of New Guinea for the export trade are copra and cocoa. While most of the timber milled during 1955-56 was absorbed by the local market, exports (especially of sawn timber) increased over 1954-55 figures (see para. 2 below). The main products of fisheries exported from New Guinea are trochus and green snail shell, including that collected by natives. Gold is the principal mineral mined.

For information on the agricultural and pastoral industries, which, for the sake of convenience covers the Territory of Papua and New Guinea as a whole, see pp. 124-127. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea.

2.—Timber.—Various species of timber are found in the Territory, but the only accessible pure stand is the valuable pine forests of the Bulolo Valley. The main use of this timber is for the production of plywood and veneer by Commonwealth-New Guinea Timbers Ltd., which is consuming a little over 10 million super. feet of logs per annum to produce the equivalent of approximately 30 million square feet of plywood on a  $\frac{1}{16}$  inch basis (26 million in 1955–56). Exports of plywood in 1955–56 were 21 million square feet, valued at £750,000, while veneer exports of 920,000 square feet were valued at £9,000 on a  $\frac{1}{16}$  inch basis. During the year 2.6 million super. feet of logs (some suitable for plywood manufacture) to the value of £62,000, and 3.8 million super. feet of sawn timber valued at £230,000 were also exported. The Territory forests also provided flitches, battery veneer and egg-case parts for export.

The Administration sawmill previously operated at Yalu has been moved to Lae. It and the Administration mill at Keravat in New Britain, provide a considerable amount of sawn timber for local consumption, and serve as a training centre for operatives in the sawmilling industry. The Administration also operates a training centre for forestry workers, nurseries and a herbarium.

The Forestry Ordinance 1936-1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation; the grant

of emergency timber permits for limited quantities to assist in providing timber for Territory requirements; the disposal by public tender of timber areas designated by forest officials of the Territory; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. Timber growing on native lands cannot be acquired by private purchasers direct from the natives but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Re-afforestation on areas dedicated for forestry in perpetuity is carried out by the Administration.

At 30th June, 1956, 21 permits and eight licences were current, the total area of forest involved being 255,078 acres and 1,061 acres respectively. Forty-two sawmills and also some benches on private property were operating.

- 3. Fisheries.—The wealth of the waters of the Territory has been little exploited, but as the result of surveys and the development of the Administration fisheries service, action is being taken to promote increased use of the resources. Fish are caught at many places along the coast to supply the small local demand of the natives and of Europeans. Trochus shell to the value of £230,000 and green snail shell to the value of £73,000 were exported during 1955-56.
- 4. Mining.—The production of gold and associated silver is the most important mining activity in New Guinea. Gold has been discovered on the Waria, the Ramu, the Francisco, and the Markham Rivers, and in tributaries of the Sepik River. Rich gold deposits were discovered in the Morobe District in 1926; the field is situated about 80 miles (40 by air) inland from Lae, the nearest coastal port. Communication is established with the coast by regular air service and by road transport. Silver is found, usually associated with the gold in these deposits. Osmiridium is reported to have been found on the upper tributaries of the Ramu, and platinum on the Kabenau River. Copper has been discovered in the form of chalcopyrite and malachite in the Baining District. Iron occurs as magnetite and haematite in the Baining District, apparently in large quantities. Sulphur occurs in several localities in the volcanic regions of the Territory. Brown coal has been found on the mainland in the vicinity of Astrolabe Bay, and in the southern portion of New Ireland. The commercial production of minerals other than gold and silver has not been undertaken to date.

The granting of rights, leases and claims for mining purposes is provided for in the Mining Ordinance 1928-1947 and Regulations thereunder.

The production of gold in New Guinea during the last three pre-war years averaged about 228,000 fine oz. a year, valued at £2,000,000. In 1940-41, it amounted to 263,113 fine oz., valued at £2,808,835. Although the market price of gold has been fixed at a much higher level than in 1938-39, mining costs have risen to a much greater extent and consequently production since the war has been on a much smaller scale, averaging 91,000 fine oz., at a value of £1,200,000 a year over the five years ended 1951-52. Production in 1955-56 amounted to 71,519 fine oz., valued at £1,117,483 and in 1954-55 to 85,726 fine oz., valued at £1,339,474.

The Petroleum Ordinance 1936 has been superseded by the Petroleum (Prospecting and Mining) Ordinance 1951-1955, which has facilitated the carrying out of geological surveys and prospecting activities generally. At present one company has a permit to search for petroleum in the Sepik River area.

## § 7. Trade, Transport and Communication.

1. Customs Tariff.—The present customs tariff provides high revenue rates on ale, spirits, wines, timepieces, cigarette papers, fancy goods and jewellery but allows duty-free treatment of most necessities. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant and machinery to be used mainly for developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule.

Export duties are imposed on cocoa, copra, trepang, tortoise shell, mother-of-pearl and trochus shell, cassowary, crown pigeon and heron feathers, rubber, sulphur and sulphur-bearing substances.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) 1936 for the free entry into Australia of certain goods produced in and imported direct from the Territory of New Guinea (see Chapter X.—Trade), and a proclamation of 25th September, 1935 exempted from primage duty goods produced or manufactured in the Territory.

2. Imports and Exports.—(i) Total Values. The table below summarizes and compares the values of imports and exports for the pre-war year 1938-39 and the post-war years 1953-54 to 1955-56.

TERRITORY OF NEW GUINEA: IMPORTS AND EXPORTS.

		(X.)			
		1938-39.	1953–54.	1954–55.	1955–56.

3. Shipping.—Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between Australia and the East also call at Territory ports and there are some ships to the United Kingdom and North America. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the Shipping. Ordinances 1951 and the Coastal Shipping, Ports and Harbours Regulations.

Main ports of call for oversea vessels are Lae, Madang and Wewak (mainland), Rabaul (New Britain), Kavieng (New Ireland), Lorengau (Manus), and Kieta (Bougainville). Ports proclaimed under the Coastal Shipping, Ports and Harbours Regulations for the service of local vessels are, in addition to the main ports above-mentioned, Salamaua, Aitape and Wanimo (mainland), Gasmata and Talasea (New Britain), Namatanai (New Ireland), and Buka Passage (Bougainville).

There are no prepared inland waterways. The natural river system is not generally suitable for vessels except those of small tonnage.

In 1954-55, 96 British vessels and 36 vessels of other nationalities called at Territory ports and discharged 114,433 tons of cargo and loaded 114,923 tons. Corresponding figures for 1955-56 were 94, 26, 104,720 and 113,121 respectively.

4. Other Forms of Transport and Communication.—There are no railways, but an extensive road construction programme is progressively being undertaken to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mt. Hagen. The total mileage of roads in the Territory of New Guinea at 30th June, 1956, was 3,879, of which 1,104 were suitable for heavy and medium traffic.

Air services link the Territory with Papua, Australia, Netherlands New Guinea and the British Solomon Islands. There are 105 aerodromes and seaplane alighting areas in New Guinea, and of these 27 are controlled by the Department of Civil Aviation, 38 by the Administration, 39 by private interests and one by the Royal Australian Air Force.

Nauru. 139

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang and service is available from subscribers telephones in Port Moresby, Lae and Rabaul, and from the Post Office at Madang. Six zone or group centres for radio telephone communication with outstations have been established at Lae, Madang, Rabaul, Kavieng, Wewak and Lorengau. From these centres radio telegraph services are also available to 111 outstations.

## § 8. Finance.

The principal sources of revenue for the Territory of New Guinea are the grant by the Commonwealth Government and customs duties. Total revenue in 1955-56 amounted to £7,313,598, towards which the grant contributed £4,901,737 and customs duties, £1,601,820. The major groupings into which expenditure during 1955-56 may be classed were as follows:—Health, £1,503,501; district services and native affairs, £714,233; education, £439,039; justice, £400,172; agriculture, etc., £383,320; customs and marine, £124,073; forestry, £216,268; capital works and services, £1,658,328; maintenance, £713,346. Total expenditure in 1955-56 was £7,313,598 as compared with £6,404.654 in 1954-55.

For information on the finances of the combined Territory administration see Papua and New Guinea, § 2, p. 123.

#### TRUST TERRITORY OF NAURU.

- 1. General.—Nauru is an oval-shaped atoll about 12 miles in circumference, having an area of about 5,263 acres, of which approximately two-thirds is phosphate-bearing. It is situated in latitude 0° 32′ south and longitude 166° 55′ east. Portion of the island between the sandy beach and the coral cliffs is fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British Phosphate Commissioners and the Missions, the whole of the island is owned by individual natives. The temperature range is from 76° F. at night to 94° F. during the day and the average humidity about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the average for twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.
- 2. History.—The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea.

In November, 1914, Nauru was occupied by a detachment from the Australian Naval and Military Expedition at Rabaul, and it was included in the cession of colonies made by Germany in 1919 to the Allied and Associated Powers, whose representatives agreed that a mandate for its administration should be conferred upon His Britannic Majesty. The mandate was confirmed by the Council of the League of Nations on 17th December, 1920. On 2nd July, 1919, the British, Australian and New Zealand Governments agreed that the administration (which, since 1915, had been in charge of an official appointed by the British Colonial Office) should be vested in an Administrator, who took up duty in June, 1921. The agreement between the three Governments was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and is shown in the Schedule to that Act. A supplementary agreement concerning Nauru was drafted in May, 1923, and ratified by the Commonwealth Parliament by the Nauru Island Agreement Act 1932.

On 25th August, 1942, nine months after the outbreak of the war in the Pacific, communications with Nauru ceased, and the island was occupied by Japanese forces. It was re-occupied by a joint Australian Naval and Military Force on 14th September 1945, and civil administration was re-established on 1st November, 1945.

3. Trusteeship Agreement.—On 1st November, 1947, the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand and the United Kingdom in substitution

for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Official Year Book No. 39, pp. 370-1.

- 4. Administration.—The administration of the island is vested in an Administrator, who is obliged to conform to instructions issued by the Government which appointed him. Until the Government of Australia ceases to exercise full powers of legislation, administration and jurisdiction in and over the Territory on behalf of the Administering Authority in pursuance of Article 4 of the Trusteeship Agreement, all ordinances made by the Administrator are subject to confirmation or disallowance by the Governor-General of Australia acting on the advice of the Federal Executive Council. All administration expenses are met from local revenue and phosphate royalties. Native industries such as canoe-building, fishing, mat-making, etc., are encouraged by the provision of prizes at annual competitions. An agency of the Commonwealth Savings Bank has been established. There is a co-operative store managed to a large extent by Nauruans. The store books, however, are audited by Government officers. Natives are not allowed to carry or be in possession of firearms, and the use by them of intoxicating liquors and deleterious drugs is prohibited.
- 5. Population.—The Nauruan component of the population numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August, 1942. In 1946, it numbered less than 1,400 but by 30th June, 1955, had risen again to 1,935. Chinese have for many years formed a considerable part of the population of Nauru; their numbers increased, with some reversals of trend, from about 600 in 1921 to more than 1,500 before the 1939-45 War. After the war, they increased from about 800 in 1946 to 1,491 in 1950, but at 30th June, 1956, numbered only 696. The number of other Pacific islanders in the early 1920's was almost 300, but they subsequently declined to less than 40. In recent years, the numbers have increased, and at 30th June, 1956, there were 935 persons. The European population after 1921 fluctuated, but with a generally upward trend, between one and two hundred persons, and in 1940 numbered 192. In 1948, it numbered 247 and in 1956 it was 286. The total non-indigenous population of Nauru at 30th June, 1956, was 1,917 persons, while the total population was 3,893.
- 6. Health.—Cases of the usual diseases known in the Pacific occur. Venereal disease is rare, but elephantiasis is occasionally met with. An area has been set apart for the segregation of sufferers from Hansen's disease, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30th June, 1956, was 42 of whom, however, only 3 were in segregation at the Hansenide colony. Two hospitals are maintained on the island, one by the Administration for Nauruans, and one by the British Phosphate Commissioners for their employees. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo a medical examination at intervals of three months. Baby clinics have been established to give help and advice to Nauruan mothers in respect of infant nurture.
- 7. Education.—The Administration assumed full responsibility for education on 1st October, 1923. Prior to that date, the education of native children was undertaken by the Missions, which were subsidized by the Administration. There are three primary schools, one each for European, Nauruan and Gilbertese students, one Nauruan secondary school and one mission school providing primary and secondary classes. Primary education only is provided for European children, allowances being provided to those who proceed to secondary schools in Australia. At 30th June, 1956, 419 Nauruans, 74 other Pacific Islanders, 25 Chinese and 51 Europeans were enrolled in the primary schools, and 83 at the two secondary schools. A teacher, who is on loan from the Victorian Education Department, is in charge of the European school, but education generally is controlled by a Director of Education.

The curriculum is based generally on that used in Australian schools, and the teaching is generally in English. Education is compulsory for Nauruan children from six to sixteen years of age. At 30th June, 1956, 40 Nauruans were attending secondary schools in Australia, or undertaking post-secondary training, nineteen as scholarship holders and the balance sponsored by their families. In addition to these, there were two students at the Central Medical School, Suva, and one private student in New Zealand.

Nauru. 141

- 8. Judiciary.—The judicial power is vested in the Administrator, in a Central Court and a District Court. The right of appeal is provided.
- 9. Religion.—The London Missionary Society (Protestant) and the Sacred Heart of Jesus Mission (Roman Catholic) operate in Nauru.
- 10. Phosphate Deposits.—(i) General. From 1906 to 1919, the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administeted by the Colonial Office). The quantity remaining on Nauru has been estimated at about 70 million tons, and the exports average 85 per cent. to 88 per cent. of tricalcium phosphate.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments in 1919 for £3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent. respectively. The Agreement of 2nd July, 1919, provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government, and the three countries are entitled to receive the output in the same proportions of 42, 42, and 16 per cent.

- (ii) Royalty on Phosphate. Under an agreement between the British Phosphate Commissioners and the Nauruan landowners, an increased royalty of 1s. 6d. per ton of phosphate exported was payable from 1st July, 1953, as follows:—
  - (a) 3d. to the Nauru Royalty Trust Fund to be used for the benefit of Nauruans;
  - (b) 10d. to the landowner, being an immediate payment of 8d. per ton, and 2d. per ton to be invested on his account;
  - (c) 5d. to the Nauruan Community Long Term Investment Fund.

From 1st July, 1947, the lump sums payable to landowners from whom phosphate-bearing lands are leased were also increased to £45 per acre, with a minimum payment of £7 10s. for areas less than an acre.

(iii) Nauru and Ocean Island Phosphate Industry. Exports of phosphate from Nauru and Ocean Island in 1939-40 amounted to 1,243,428 tons, of which Australia received 54 per cent. and New Zealand 32 per cent. Following the interruption to production by the war in the Pacific, this figure was not exceeded until 1949-50 when 1,285,998 tons were exported (76 per cent. to Australia, 24 per cent. to New Zealand). Figures for 1955-56 were:—1,771,353 tons exported, 61 per cent. to Australia, 34 per cent. to New Zealand and five per cent. to the United Kingdom.

Receipts from the sale of phosphate in 1939-40 amounted to £1,041,418, and the f.o.b. cost, including interest on capital, sinking fund, etc., amounted to £1,037,208. In 1946-47, sales and costs each amounted to about £500,000, but they have since increased to more than £3,000,000. In 1955-56, receipts from sales, etc., amounted to £3,405,077, and costs, etc., to £3,386,564.

During the period of the Japanese occupation from August, 1942, to September, 1945, while waiting to resume activities at Nauru and Ocean Island, the Commissioners were engaged in meeting the phosphate requirements of Australia and New Zealand from other available sources. A programme of improvements and additions to equipment has been commenced.

The amount due by the British Phosphate Commissioners to the partner Governments for purchase-money and other capital sums was £3,666,457 on 30th June, 1921, and at 30th June, 1942, this had been reduced to £3,024,373. The partner Governments agreed to a suspension of interest and sinking fund payments from 1st July, 1942, while operations at Nauru and Ocean Island were curtailed. Modified payments were resumed in 1946-47, pending a review of the position.

The review was carried out in 1950, and as a result the revised capital indebtedness of the Commissioners to the partner Governments at 30th June, 1950, was determined at £3,881,711. Interest and sinking fund payments were resumed with effect from 1st July, 1950, on the basis of repayment of the revised capital indebtedness in 35 years.

(iv) Employees. Apart from a limited number of Europeans, the employees are Chinese and Pacific Islanders engaged under a one year contract. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

(v) Christmas Island Phosphates. It may be appropriate to refer here to the phosphate deposits on Christmas Island in which the Australian Government is interested. The concession to work phosphate at Christmas Island, situated in the Indian Ocean near Java, was held from 1897 by the Christmas Island Phosphate Company Limited, a private company incorporated in England.

The Australian and New Zealand Governments, jointly, acquired the Company's

interests and assets at Christmas Island as at 31st December, 1948.

The undertaking is controlled by a Board of Commissioners appointed by the Australian and New Zealand Governments. Phosphate is distributed by the British Phosphate Commissioners who have been appointed by the Board as its managing agents.

11. Transport.—There is no regular air service to Nauru, but when the need arises

charter flights are made to the island. The airstrip is to be improved.

There is relatively frequent sea communication with the island. During 1955-56, 179 vessels called there. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required.

12. Trade.—The Customs Tariff of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider and perry, and cylinder blocks for motor cycle engines. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. Imports into Nauru were valued at £192,749 in 1940 and exports, 808,400 tons of phosphate, at £541,168. In 1955-56, imports were valued at £877,264 and exports, 1,467,794 tons of phosphate, at £2,568,640. Of the total imports in 1955-56, Australia supplied 69 per cent. valued at £603,180; the balance came mainly from the United Kingdom, New Zealand, Hong Kong and the United States in that order.

In 1955-56, 882,025 tons of phosphate were exported to Australia, 483,619 tons to New

Zealand and 102,150 tons to the United Kingdom.

13. Revenue and Expenditure.—The revenue of the Administration has risen from £33,084 in 1939 to £261,164 in 1955-56, and expenditure from £29,391 to £257,274.

Of the revenue for the year ended 30th June, 1956, payments by the British Phosphate Commissioners amounted to £244,763, post office and radio receipts, £7,497, and customs duties, £3,527. Main items of expenditure were salaries and general expenses, £143,406, miscellaneous services (health, education, etc.), £63,153 and capital works and services, £50,715.

### TERRITORY OF HEARD AND McDONALD ISLANDS.

On 26th December, 1947, by an exchange of notes with the United Kingdom Government, the United Kingdom sovereignty over the Heard and McDonald Islands was transferred to the Commonwealth of Australia. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard and McDonald Islands by the Heard and McDonald Islands Act passed 18th March, 1953.

At the end of 1947, an Australian scientific post was established on Heard Island and maintained as a scientific base. Following the establishment of a base at Mawson, on MacRobertson Land in the Australian Antarctic Territory, the Heard Island base has been discontinued. Heard Island lies 2,500 miles south-west of Fremantle in the South Indian Ocean, and is about 27 miles long and 13 miles wide. The McDonald Islands are 26 miles to the west of Heard Island. They are small, rocky and precipitous.

### AUSTRALIAN ANTARCTIC TERRITORY.

On 13th February, 1954, the Australian National Antarctic Research Expedition established a base on MacRobertson Land at latitude 67° 36′ S. and longitude 62° 53′ E. The base was named Mawson in honour of Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13th January, 1957 at latitude 68° 34.6′ S. and longitude 77° 58.6′ E. The station was named Davis in honour of Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships.

## TERRITORY OF COCOS (KEELING) ISLANDS.

1. General.—The Cocos (Keeling) Islands, two separate atolls comprising some 27 small coral islands with a total area of about five square miles, are situated in the Indian Ocean in latitude 12° 5′ S. and longitude 96° 53′ E. They lie some 1,720 miles north of Perth and 2,290 miles almost due west of Darwin, whilst Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about 6 miles from north to south, on which is the aerodrome and most of the European community; Home Island, the head-quarters of the Clunies Ross Estate; Direction Island on which is situated the Cable and Wireless Station, the Admiralty Wireless Station and the Department of Civil Aviation's Marine Base; and Horsburgh. North Keeling Island, which forms part of the Territory, lies about 15 miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., the rainfall is moderate and there are occasional violent storms. The worst cyclone in their recorded history struck the islands in 1909, when about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

2. History.—The islands were discovered in 1609 by Captain William Keeling of the East India Company. They were uninhabited and remained so until 1826 when the first settlement was established on the main atoll by an Englishman, Alexander Hare, who quitted the islands in about 1831. In the meantime, a second settlement was formed on the main atoll by John Clunies Ross, a Scottish seaman and adventurer, who landed with several boat-loads of Malay seamen. In 1857, the islands were annexed to the Crown and formally declared part of the British Dominions, and in 1878 responsibility for their supervision was transferred from the Colonial Office to the Government of Ceylon, and subsequently, in 1882, to the Government of the Straits Settlements. By indenture in 1886, Queen Victoria granted the land comprised in the islands to John Clunies Ross in perpetuity, and until 1946, the patriarchal rule of the head of the Clunies Ross family was recognized. The head of the family had semi-official status as resident magistrate and representative of the Government. However, in 1946, when the islands became a dependency of the Colony of Singapore, a Resident Administrator, responsible to the Governor of Singapore, was appointed.

Other items of significance in the islands' history are:—1901—small cable relay station was established at Direction Island; 1903—islands were incorporated in the Settlement of Singapore; 1909—worst cyclone in the history of the islands struck; 1914—German cruiser *Emden* raided Direction Island but was destroyed by H.M.A.S. *Sydney*; 1944—Islands were under military administration with allied troops stationed there (a military Administrator was appointed during the minority of the Clunies Ross heir who came of age in 1949): 1945—a R.A.F. air-strip was constructed on West Island; 1946—Civil administration was re-established.

- 3. Transfer to the Commonwealth of Australia.—On 23rd November, 1955 the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955, and by the Cocos (Keeling) Islands Act 1955 of the Commonwealth, whereby the islands are declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth, to be known as the Territory of Cocos (Keeling) Islands.
- 4. Administration.—Responsibility for the administration of the Territory, in terms of the Cocos (Keeling) Islands Act 1955, rests with the Minister for Territories. An Official Representative was appointed on 23rd November, 1955, to take charge of the local administration of the Territory under delegation from the Minister. The laws of the

Colony of Singapore which were in force in the islands immediately before the date of the transfer have, with certain exceptions, been continued in force by the Cocos (Keeling) Islands Act 1955. Those laws may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

- 5. Population.—The population of the Territory in June, 1956, was estimated to be 649, comprising 137 Europeans, 464 Cocos Islanders and 48 Asians. The Cocos Islanders reside on Home Island.
- 6. Transport.—An airport is established on West Island under the control of the Department of Civil Aviation. This is a re-fuelling point for aircraft of the oversea air-service between Australia and South Africa operated by Qantas Empire Airways Ltd. at fortnightly intervals. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals.

#### CHAPTER VI.

## LABOUR, WAGES AND PRICES.

Note.—Reference is made in this chapter to retail and wholesale price indexes. For particulars of the Export Price Index, see Chapter X., § 15, and of the Farm Production Price Index, see Chapter XXX., § 2.

## A. RETAIL PRICES AND PRICE INDEXES.

## § 1. General.

The information on retail prices and price indexes presented in this chapter is extracted from the annual Labour Report. For a full explanation of methods adopted and an analysis of problems involved see the detailed reference in Chapter I. of Labour Report No. 44, 1955 and 1956.

Retail prices of food and groceries and average rentals of houses for years extending back to 1901 were collected by the Commonwealth Statistician, and in some cases have been recorded by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923 for each of the six capital cities and for 27 of the more important towns of Australia. Comparable information is available for the month of November in each year from 1914 to 1922 for each of the six capital cities. The list of items priced for index purposes is published in Labour Report No. 44.

## § 2. Previous Retail Price Indexes.

- 1. General.—Four series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1954. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were:—
  - (i) The "A" Series Index (covering food, groceries and house tents) was first compiled in 1912 with the year 1911 as base = 1,000. It was discontinued in June, 1938.
  - (ii) The "B" Series Index (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until the December Quarter, 1953. It was the food and rent constituent of the "C" Series Index and was designed to replace the "A" Series Index for general statistical purposes.
  - (tii) The "C" Series Index (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921 and published at quarterly intervals from the June Quarter, 1922. It was used by the Commonwealth Court of Conciliation and Arbitration for purposes of quarterly wage adjustments from May, 1934. to August, 1953. Some State tribunals use or consider it in their proceedings. Its publication in mimeograph each quarter will be continued for the present in the customary form and on its customary basis. For general statistical purposes it has been replaced by the Interim Retail Price Index (1952-53 base year) described at length in a Statistical Bulletin published on 24th
  - March, 1954, and briefly in the following section of this chapter.

    (iv) The "D" Series Index, derived by combining the "A" and "C" Series Indexes, was used by the Commonwealth Court of Conciliation and Arbitration from May, 1933 to May, 1934, and then discontinued.

Of the four retail price indexes described above, only the "C" Series is now compiled. The new Interim Index will continue in its present form until the components of certain groups are finalized.

2. The "Court" Index.—In 1937 the Commonwealth Court of Conciliation and Arbitration introduced a "Court" Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court the "Court" Index ceased to be issued by the Industrial Registrar as at the December Quarter, 1953. "Court" index numbers were an arithmetical conversion of the "C" Series Index.

## § 3. The Interim Retail Price Index (1952-53 Base Year).

1. Origin of the Interim Retail Price Index (1952-53 Base Year).—The list of component items and the weighting pattern of the "C" Series Retail Price Index were first adopted in 1921 but were reviewed by Conference of Statisticians in 1936. (See Labour Report No. 41, 1952, page 33.)

From the outbreak of war in 1939 to late in 1948 periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and the pattern of expenditure. This rendered it impracticable either to produce a new index or to revise the old one on any basis that would render the index more representative, than it already was, of the changing pattern.

When commodity rationing had virtually ceased in the latter part of 1948, action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. By the middle of 1949 a considerable number of new price series were coming into being and the body of data available as to expenditure and consumption (in the post-rationing period) was beginning to indicate something of the new weighting pattern likely to be appropriate for post-war review of the components and construction of the "C" Series Index.

There supervened in the next two years conditions which caused wide price dispersion, a very rapid rise in prices and a new sequence of changes in consumption and the pattern of wage earner expenditure. Under these conditions it was not possible to devise any new weighting pattern for the years 1949-50, 1950-51 and 1951-52 likely to be better suited to the index or more continuously representative of conditions then current than was the existing "C" Series Index on the 1936 revision. Conference of Statisticians therefore deferred revision of the weighting system and component items of the "C" Series Index until it was advised by the Acting Commonwealth Statistician in June, 1953 (a) that although the aggregate "C" Series Index (as verified by supplementary indexes) was still reasonably reliable for current use, some of the component groups (more particularly food and miscellaneous) were not satisfactory individually; and (b) that the time had arrived either to produce a new index or to reconstruct the "C" Series Index extensively.

The Interim Retail Price Index has been compiled pursuant to Resolution 13 of Conference of Statisticians in June, 1953, reading:—

#### "13. Retail Price Indexes-

(a) That in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the "C" Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes.

b) That an Interim Retail Price Index be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern

of consumer usage and expenditure.

(c) That, having regard to the complexities of the problem and the limit of staff resources available, such interim index relate only to each capital city and to the six capital cities combined.

(d) That attention be drawn again to the statement already published that the "C" Series Retail Price Index cannot measure changes in relative retail price levels as between capital cities consistently with its main purpose of measuring periodic changes in retail price levels or each city.

(e) That the problem of measuring comparative retail price levels as between cities at any point of time differs in principle from the problem of measuring

periodic variations in price level in an individual city".

The Interim Retail Price Index (1952-53 base year) is used as the current retail price index in statistical publications of the Commonwealth Statistician for general statistical purposes. It relates only to six capital cities of Australia because it is not practicable with existing staff resources to collect price data for the greatly enlarged list of items for 28 other cities and towns. These continue to be covered as to the less extensive list of items used for the "C" Series Index.

At times appreciable disparities appear in the movement of the respective indexes for individual cities from quarter to quarter. The Interim Index, being based on recent weights and an extended list of items, is the more representative measure of current quarterly retail price variations.

- 2. Definition of the Interim Retail Price Index.—This index provides the interim results of researches designed to measure retail price variations (with 1952-53 = 100 as base year) on the basis of:—
  - (a) a current pattern of wage earner expenditure using recent consumption weights for foods and recent expenditure weights for combining groups of items into the aggregate index:
  - (b) a wider range of commodities and services than that covered by any existing price index in order to provide greater representativeness: and
  - (c) individual city weights for such items as electricity, gas and fares.

The components and weighting of the Interim Retail Price Index are being reviewed in the light of data derived from the Census of Retail Sales as to consumer expenditure on various kinds of goods, estimates of consumer expenditure on services relevant to construction of a retail price index of this type and data as to rents and housing derived from the Census of 30th June, 1954 and additional special surveys. It is proposed to cast the index into final form as soon as possible and this may entail some revision in the index.

3. Differences between the Structure of the Interim Retail Price Index and the "C" Series Retail Price Index.—The main differences between the structure of the Interim Retail Price Index and that of the "C" Series Retail Price Index are (a) the group weights and item weights of the Interim Index relate broadly to the consumption pattern 1950-53, while those of the "C" Series Index relate to pre-war years; and (b) the Interim Index includes a large number of items not included in the "C" Series Index.

A full list of the items used in the Interim Index was shown in Appendix III. of the Statistical Bulletin of 24th March, 1954, and on pages 10-13 of Labour Report No. 44. The changes in structure of each group of items as adopted for the Interim Retail Price Index are summarized below.

- (i) Food Group.—The weights of some of the main items (e.g., milk, eggs, meat, potatoes and flour) in the Interim Index are substantially different from those of the "C" Series Index. Twenty-four new items extend the group coverage over a wider field. The total number of items in the Food Group of the Interim Index is 60 as compared with 38 in the "C" Series Index. The principal new items are lamb, packaged breakfast foods, biscuits, ice cream, packet cheese, honey, sandwich spreads, coffee, cocoa, soft drinks and certain types of confectionery.
- (ii) Clothing and Drapery Group.—In the Interim Index, 17 new items have been added to the Clothing and Drapery Group, and 25 items each formerly represented by one type of article are now each represented by two or more types. Consequential adjustments have been made in weights of individual items. The principal new items added to this group are:—sports coat, sports trousers, cardigan (and other types of knitted wear), overalls, piece-goods (rayon, cotton and woollen) and knitting wool.
- (iii) Rent Group.—Only minor changes have been made in the Rent Group. Available data indicate (a) that, in general, very few new houses have been built by private owners for renting in the post-war years; (b) that in some cities considerable numbers of new government houses have been built for renting or occupancy on a quasi-rental basis; and (c) that there has been a substantial increase in the numbers of owner-occupied houses, including new instalment-purchase or quasi-instalment-purchase houses under governmental and private housing schemes. In recent years the difficulty of obtaining data suitable for the housing component of a price index has therefore intensified. The Census of 1954 showed that a very rapid diminution had occurred since 1947 in both the numbers and proportions of privately rented houses. Supplementary surveys in 1956 and 1957 indicated a continuation of this trend in the six capital cities. Further study is therefore being given to the hitherto intractable problems associated with measuring at quarterly intervals "housing price" variations in a form suitable for use in a retail price index in respect of owner-occupied houses, instalment-purchase houses, and houses occupied under the various types of governmental housing schemes.
- (iv) Other Groups.—Six new sub-groups are included in the Interim Index, comprising 75 items as compared with 32 in the "C" Series Index. The principal new items are garden tools, floor coverings, shaving cream, toilet soap, etc., patent medicines, baby foods, haircuts, dry cleaning, shoe repairs, postage, etc. Necessary adjustments have been made to bring the group weight into conformity with recent expenditure and consumption patterns. The weight of this group is much greater than it was in the "C" Series Index.
- (v) Group Weights.—The group weights in the new Interim Index have been brought into general conformity with the estimated group distribution of wage earner household expenditure in recent years over the field covered. In some cases the weights are putative weights assessed on available data and are subject to some revision.

In the year 1952-53 the ratio of the individual group "aggregate expenditure" to the "aggregate expenditure" of the whole index for the six capital cities combined was as follows:—

Group.		"C" Series Retail Price Index.	Interim Retail Price Index.				
Food Clothing and Drapery Rent Other Groups	••	Per cent. 41.0 33.0 11.3 14.7  5.3  2.8 2.1	Per cent. 37.1 26.8 9.0  4.6 Fuel and Light 4.6 Household Sundries 2.5 Certain Repairs and Services 3.0 Cinema, Radio, Newspapers 6.6 Rail, Tram and Bus Fares 5.8 Tobacco and Cigarettes				

In the Interim Index common weights are adopted for all groups and items in the index for each city except in respect of fares, gas, electricity and some minor items. The resultant indexes measure price movement from period to period for each city separately. While they indicate degree of price movement from time to time for respective cities, they do not indicate the relative level of prices (or level of living costs) in each city. For that reason the Interim Index for each city in the base year 1952-53 is 100.

4. Comparison of Trends of the Interim Retail Price Index with Trends of the "C" Series Retail Price Index.—The following table shows for each of the years 1952-53 to 1956-57 and for each quarter from the December Quarter, 1954 to the December Quarter, 1957 the Interim Index for the six capital cities combined, with the year 1952-53 as base = 100, in comparison with the "C" Series Index arithmetically converted to the same base:—

Period.	Si	Six Capital Cities: Weighted Average. (Base: Year 1952-53 = 100.)						
	" C " Seri	es Index.	Interim Index.

Danamban	. 114.0	113.5	115.1	114.9				

Note.—Indexes in columns "A" exclude, and those in columns "B" include, potatoes and onions. (See para. 5 below).

The figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted merely to avoid the distortion that would occur in rounding off the figures to the nearest whole number. Price indexes cannot measure aggregate price variations with an accuracy of the order of one-tenth of 1 per cent.

With changing conditions significant divergencies may occur between the movements shown by a retail price index (such as the "C" Series Index) constructed on pre-war weights and a comparatively limited range of major items and a retail price index (such as the Interim Index) constructed on 1950-53 weights and a broader list of items,

Due regard should be paid to the fact that a composite price index is necessarily an approximate summary which combines into one aggregate price variations of many items. Any more rigid use of the index for specific purposes is the responsibility of the bodies or persons using the indexes.

5. Compilation of Indexes Including and Excluding Price Movement of Potatoes and Onions.—Abnormally large seasonal fluctuations in prices of potatoes and onions had a major effect (first upwards and then downwards) on the movement of the price indexes in most cities from the September Quarter, 1956 to the March Quarter, 1957. The fluctuations also caused highly disparate movements in the aggregate indexes as between cities. In order to provide an indication of the recent trend of the indexes apart from these abnormally large seasonal fluctuations, index numbers excluding the effects of price movements of potatoes and onions are calculated for comparison with those which include those items.

The Interim Retail Price Index is calculated both inclusive and exclusive of potatoes and onions as from the base period 1952-53. For the "C" Series Retail Price Index, index numbers excluding the price movement of potatoes and onions have been calculated as from (and including) the September Quarter, 1955.

## § 4. Tabular Statements of Retail Price Index Numbers.

- 1. General.—Information on retail price movements is published as follows:-
- (i) Monthly. The Monthly Review of Business Statistics contains annual and quarterly index numbers to the latest available date.
- (ii) Quarterly. Statements are issued about three weeks after the end of each quarter relating to the Interim and the "C" Series Retail Price Indexes respectively for that quarter and immediately preceding quarters. The Quarterly Summary of Australian Statistics contains annual and quarterly index numbers to the latest available date. This publication also contains certain average prices of items of food and groceries for the latest available quarter.
- (iii) Annual. The Labour Report contains index numbers for past years, and the quarterly results for recent years. Certain average prices for the latest year of items of food and groceries are also published in this report.
- 2. The "C" Series Retail Price Index.—A table of "C" Series index numbers for the weighted average of the six capital cities combined together with index numbers for each of the four main groups of items in the "C" Series Index for each year from 1914 to 1957 is shown on page 153. Detailed tables were last published in *Labour Report* No. 41, 1952, pp. 19-31.
  - 3. The Interim Retail Price Index .- On the following pages are published:-
- (i) the Interim Retail Price index numbers for each of the years ended June from 1953 to 1957, and for each quarter during the period December Quarter, 1956 to December Quarter, 1957, for each capital city and for the six capital cities combined, together with separate indexes for each of the four groups of items (pages 150-1).
- (ii) the Interim Retail Price index numbers for each of the years ended June from 1953 to 1957, and for each quarter during the period December Quarter, 1954 to December Quarter, 1957, for the weighted average of the six capital cities combined, together with separate indexes for each of the four groups of items (page 151).

## INTERIM RETAIL PRICE INDEX NUMBERS.

(Base of each Index: Year 1952-53=100.)

Note.—The index numbers hereunder are designed to measure aggregate variations in retail prices of specified groups of items for specified cities individually. They measure variations from time to time and not differences in price level as between cities nor comparative costs of groups of items.

(a) See para, 5 on page 149. (b) Weighted average. (c) Rent.—The rent index numbers shown in the table above and elsewhere in this publication measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. They are "price" indexes in the strict sense, i.e., they are designed to measure only the "price" element in rent fluctuations. Rentals of new tenanted houses completed since the end of the war are not taken into account. (d) A group of items under the following headings—Electricity, Gas and Firewood; Household Sundries; Services; Cinema Admission, Radio Licence, and Newspapers; Fares; and Tobacco and Cigarettes.

### § 5. The "C" Series Retail Price Index: 1914-1957.

- 1. Construction.—Full particulars relating to the construction, items, weights and method of tabulation of the "C" Series Retail Price Index were last published in Labour Report No. 41, 1952, pp. 10-18. Tabular statements of index numbers were shown on pp. 19-27 and historical particulars of the index, and its relation to automatic basic wage variations prior to 12th September, 1953, on pp. 32-40.
- 2. Significant Dates.—The following table furnishes index numbers for the six capital cities as a whole for certain significant dates since November, 1914—the earliest date for which this index is available.

#### "C" SERIES RETAIL PRICE INDEX NUMBERS.

WEIGHTED AVERAGE OF SIX CAPITAL CITIES.

(Base: Weighted Average of Six Capital Cities, 1923-27 = 1,000.)

1914, November	• •	 	687	(Beginning of 1914–18 War)
1918, November		 	905	(End of 1914-18 War)
1920, November		 	1,166	(Post-War peak)
1922, November		 	975	(Post-War trough)
1929, Year		 	1,033	(Pre-Depression peak)
1933, Year		 	804	(Depression trough)
1939, September Quarter		 	916	(Pre-1939-45 War)
1943, March Quarter		 	1,123	(Pre-Price Stabilization)
1943, June Quarter		 	1,143	(1939-45 War peak)
1945, September Quarter		 	1,126	(End of 1939-45 War)
1948, September Quarter		 	1,311	
1950, September Quarter		 	1,572	
1952, September Quarter		 	2,238	
1953, September Quarter		 	2,321	
1954, September Quarter		 	2,321	
1957, September Quarter		 (a	)2,578	
-				

<sup>(</sup>a) Excludes price movement of potatoes and onions. See para. 5 on page 149.

The index rose by approximately 32 per cent. during the 1914-18 War, and by a further 29 per cent. in the two post-war years (November, 1918 to November, 1920). From November, 1920 to November, 1922, there was a fall of 16 per cent. and the index remained relatively stable until the onset of the depression in 1929. During the four years of the depression 1929 to 1933 the index fell by 22 per cent., rising thereafter steadily until 1939 when it was nearly 14 per cent. above the level of 1933, and approximately at the level it had occupied at the date of the Armistice of 1918. Between the outbreak of war (September, 1939) and March, 1943 (pre-price stabilization) the index rose by approximately 23 per cent. to a level slightly below that reached at the height of the post-war boom in 1920. Compared with that for the March Quarter, 1943, the index number at the close of the war was practically unchanged.

Immediately after the outbreak of the war, price control was established by the Government under Regulations dated 28th September, 1939, and a national policy of price stabilization was applied as from 12th April, 1943, backed by more stringent price control and price subsidies. The retail price level, as measured by the index, remained relatively steady throughout 1944 and 1945 at the level of March, 1943. This stabilized level was approximately 23 per cent. above that of 1939 and 63 per cent. above the level prevailing at the beginning of the 1914–18 War. After the June Quarter, 1946, war-time controls, subsidies, etc., were progressively modified and by early 1949 had been virtually eliminated. In the latter part of 1950, export prices (especially for wool) rose very substantially and have remained relatively very high. In December, 1950, the Commonwealth Court of Conciliation and Arbitration raised the basic wage by approximately 14 per cent. Concurrently, public works expenditure and private investment rose to very high levels.

This retail price index rose by 16 per cent. in the three years following the end of the 1939-45 War (i.e., to the September Quarter, 1948) and by 77 per cent. in the next five years

to September Quarter, 1953, and remained relatively stable at that level until the December Quarter, 1954. Since then the index (excluding recent price movement of potatoes and onions—see para. 5 on page 149) has risen each year and by the September Quarter, 1957 was 11.1 per cent. higher than at the September Quarter, 1954. The index including potatoes and onions showed an increase of 10.9 per cent. over the same period. This level was approximately 181 per cent. above that of 1939.

3. "C" Series Retail Price Index, Six Capital Cities, 1914 to 1957.—The movement in the various groups of the index and in the index as a whole for each year for which it has been compiled is shown in the following table for the six capital cities combined:—

### "C" SERIES RETAIL PRICE INDEX AND ITS "GROUP" INDEX NUMBERS(a) FOR THE SIX CAPITAL CITIES COMBINED.

<sup>(</sup>a) "Group" index numbers in the above table cannot be compared with each other in order to show the relative cost of Food and Groceries, Rent, Clothing or Miscellaneous requirements, since each "Group" has its own base = 1,000, namely, the weighted average cost for the six capital cities as a whole during the five-year period 1923-27. (b) Indexes in columns "A" exclude, and those in columns "B" include, the price movement of potatoes and onions. See para. 5 on page 149. (c) See note (c) on page 151.

### § 6. International Comparisons.

The following table shows the increases in retail prices in recent years in Australia and certain other countries.

## RETAIL PRICE INDEX NUMBERS. (Food, Rent, Clothing, Miscellaneous Household Expenditure.)

(Base: September Quarter, 1939 = 100.)

<sup>(</sup>a) Index in column "A" excludes, and that in column "B" includes, the price movement of potatoes and onions. See para. 5 on page 149. (b) Food, Rent and Miscellaneous Expenditure. (c) New series (Base: 17th June, 1947 = 100); cannot be linked to former series. (d) New series linked to former series. (e) Consumers' Retail Price Index from March Quarter, 1949 onwards. Index numbers for earlier periods (shown for purposes of comparison) are obtained by linking the movement in the Retail Price Index (base 1926-30) to the new index. (f) Not available.

### B. WHOLESALE PRICES AND PRICE INDEXES.

#### § 1. General.

Two indexes of wholesale prices have been compiled by the Commonwealth Bureau of Census and Statistics. These are:—

- (i) The Melbourne Wholesale Price Index;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index.

Particulars of the Melbourne Wholesale Price Index, which is now obsolescent, are given in § 3 commencing on page 156.

After reviewing the list of items and weighting of this index, the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index—the Wholesale Price (Basic Materials and Foodstuffs) Index—which extends back to the year 1928 and is compiled monthly, is a special purpose index and one of a series of wholesale price indexes designed for special purposes.

### § 2. Wholesale Price (Basic Materials and Foodstuffs) Index.

1. Price Quotations.—The prices used in the index have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and in respect of imported materials as nearly as may be at the point where they first make effective impact on the local price structure. Thus the price of imported goods is not taken at the time of import, but rather on an ex-bond (or into factory) basis.

Broadly, where home-consumption prices exist for local products, they have been used in this index. During the year 1950-51 wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 156.

2. Commodities and Grouping.—For purposes of this index "basic" materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The list of items is divided into seven main groups, each of which is sub-divided into goods which are mainly imported, and goods which are mainly home-produced. The percentage of the total aggregate in 1956 contributed by each group was as follows:—Metals and coal, 18.37; oils, fats and waxes, 8.95; textiles, 3.69; chemicals, 3.95; rubber and hides, 1.88; building materials, 11.14; foodstuffs and tobacco, 52.02. Goods principally imported comprised 26.29 per cent. of the total aggregate in 1956, and goods principally home-produced, 73.71 per cent.

A full list of the commodities and the quantity-multipliers (weights) will be found in Labour Report No. 44, p. 26.

3. Method of Construction.—The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928-29 to 1934-35 inclusive. Changes in usage, changes of category as between "imported" and "home-produced" for some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

During 1956, supplies and prices of potatoes and onions fluctuated violently upwards and downwards between abnormally wide limits. These fluctuations were so great as to dominate the movement of the sections of the index in which these items were included, namely, "Foodstuffs and Tobacco", "Goods Principally Home-produced" and "Total All Groups". In the circumstances of the case, neither seasonal adjustment nor conversion of the index to a "changing weights" formula could be applied to eliminate these transient fluctuations. Accordingly, in order to provide a representative measure of general trend in wholesale prices, the index was reconstructed as from the base period (average, three years ended June 1939 = 100) by omitting potatoes and onions.

Consideration is being given to the enlargement of the index to cover additional groups and to revision of the weighting pattern of the index.

4. Index Numbers.—Index numbers for each group of commodities and for all groups combined for the index of wholesale prices of basic materials and foodstuffs are given in the following table. Current index numbers, on the base: Average of three years ended June, 1939 = 100, are published in the Monthly Review of Business Statistics, and a table showing index numbers computed to the base 1928 = 100 will be found in the Labour Report. A graph showing wholesale price index numbers for the period 1911 to 1957 appears on page 173.

<sup>(</sup>a) During 1956 these indexes were reconstructed from the base period (average, three years ended June 1939=100) by excluding potatoes and onions. See para. 3 on p. 155. (b) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure changes in the price of all imports.

Note.—The figures given in this table are comparable in the vertical columns, but are not directly comparable horizontally.

### § 3. Melbourne Wholesale Price Index.

1. General.—An index of Melbourne wholesale prices was first computed in 1912. It relates chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the components of the list of items nor the weighting have been varied, except as indicated in footnote (a) to the following table. Consequently, the index is outmoded for current use but it has some historical significance as a measure of changes in the prices of its component items combined in the proportions in which they were in common use about the year 1910. It is used mainly as an approximate indication of long-term trends since the year 1861, for which it was first compiled. It is now published only on an annual basis and consideration is

at present being given to the form of its future publication. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pp. 43-45.

2. Index Numbers.—Index numbers for each group of commodities as well as for all groups combined are shown in the following table:—

### MELBOURNE WHOLESALE PRICE INDEX NUMBERS. (Base of each Group: Year 1911 = 1,000.)

Year.	Metals and Coal.	Wool, Cotton, Leather, etc.	Agri- cultural Produce, etc.	Dairy Produce.	Gro- ceries.	Meat.	Ruilding Ma- terials.	Chemi- cals.	All Groups.
1861	1,438	1,381	1,583	1,008	1,963		1,070	2,030	1,538
1871	1,096	1,257	1,236	864	1,586		1,044	1,409	1,229
1881	1,178	1,115	1,012	935	1,421		1,091	1.587	1,121
1891	895	847	1,024	995	1,032	888	780	1,194	945
1901	1,061	774	928	1.029	1,048	1,345	841	917	974
1911	1,000	1,000	1,000	1.000	1,000	1,000	1.000	1,000	1.000
1921	2,173	1,361	1,767	2,000	1,977	2,158	2,733	2,303	1,903
1021	1,826	1,040	1,121	1,398	1,794	1,512	2,025	2,166	1,429
1941	1,960	1,402	1,721	1,554	1,883	1,776	3,138	2,527	1,796
4040	2 502	2000						2 221	
1949	3,502	3,966	2,876	2,309	2,558	3,356	4,611	3,221	3,191
1950	3,902	5,464	3,155	2,459	2,829	4,616	(a)5,567	3,263	3,816
1951	5,080	7,943	4,512	2,930	2,850	6,438	(a)7,074	3,294	5,098
1952	6,481	7,365	5,038	4.024	3,455	6,289	(a)9,338	3,723	5,647
1953	6,615	6,950	4,958	4,533	3,767	6,303	(a)8,519	4,691	(b)5,631

(a) The list of items and weighting of the original Building Materials group of this index are outmoded in respect of recent years. The movement shown here for this group between 1949 and 1953 has been calculated in accordance with the movement occurring in the Building Materials group of the Basic Materials and Foodstuffs Index. (b) The "All Groups" index numbers for the years 1954, 1955 and 1956 were 5,384, 5,548 and 5,916 respectively.

Note.—The figures given in this table are comparable in the vertical columns but are not directly comparable horizontally.

#### C. CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR.

- 1. General.—An account of the measures taken by the Commonwealth Government to control prices from September, 1939 (immediately after the outbreak of war), until 29th May, 1948 (the date of the Prices Referendum), was given in Official Year Book No. 37, pp. 458-464.
- 2. Transfer of Price Control to the States.—Consequent upon the rejection of the proposal embodied in the Prices Referendum held on 29th May, 1948, that permanent power to control rents and prices (including charges) be conferred on the Commonwealth Government, responsibility for price fixation was assumed by the State Governments and steps were taken to pass State Prices Acts. These acts were proclaimed to operate simultaneously on 20th September, 1948. Except in the case of Queensland, each Act was to remain in force for a specific period, but the period varied from State to State.

On 20th September, 1948, each State Government issued declarations covering uniform lists of goods and services, which were brought under price control. Existing Commonwealth Prices Regulation Orders continued to apply to these goods and services until specially varied in accordance with the terms of the State legislation. At the same time, the Commonwealth Government issued an identical list of declared items to operate in the Australian Capital Territory and other Territories of the Commonwealth.

In the operation of State price control, the State Prices Commissioners collaborated closely. Conferences of Commissioners were held at intervals of approximately two months. Thus a large degree of uniformity was attained in controlling and decontrolling items and in the fixation of margins and prices of major items.

Since 1952 price control has been progressively modified in most States. Price control ceased in Western Australia on 31st December, 1953; in Tasmania on 31st October, 1954; in Victoria on 31st December, 1954; and in the Australian Capital Territory on 10th February, 1955. In New South Wales general control of prices was suspended on 15th April, 1955 but was temporarily restored on some items from July, 1955 to September, 1956.

3. Price Stabilization.—Expenditure by the Commonwealth Government on price stabilization subsidies reached a peak in 1947–48 and since then the Commonwealth Government has progressively reduced the range of commodities eligible for subsidy.

In addition to those subsidies which had been an integral part of the Price Stabilization Plan, the Commonwealth Government paid bounties and subsidies for assistance to primary production, and these payments also had a stabilizing influence on prices.

For particulars of expenditure by the Commonwealth Government on price stabilization and other subsidies and bounties, see Chapter XXI.—Public Finance.

### D. WAGES.

### § 1. Arbitration and Wages Boards Acts and Associated Legislation.

- 1. General.—Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and conditions of labour were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Official Year Book prior to No. 38.
- 2. Commonwealth.—Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to "conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State". The Parliament has made such a law, namely, the Conciliation and Arbitration Act.

This Act defines an "industrial dispute" as "(a) A dispute (including a threatened, impending or probable dispute) as to industrial matters which extends beyond the limits of any one State; and (b) a situation which is likely to give rise to a dispute as to industrial matters which so extends; and includes—(c) such a dispute in relation to employment in an industry carried on by, or under the control of, a State or an authority of a State; (d) a dispute in relation to employment in an industry carried on by, or under the control of, the Commonwealth or an authority of the Commonwealth, whether or not the dispute extends beyond the limits of any one State; and (e) a claim which an organization is entitled to submit to the Commission under section eleven A of the Public Service Arbitration Act 1920–1956 or an application or matter which the Public Service Arbitrator has refrained from hearing, or from further hearing, or from determining under section fourteen A of that Act, whether or not there exists in relation to the claim, application or matter a dispute as to industrial matters which extends beyond the limits of any one State."

The Conciliation and Arbitration Act was extensively amended by an Act assented to on 30th June, 1956. This amendment altered the structure of the arbitration machinery by separating the judicial and arbitral functions. The Commonwealth Industrial Court was set up to deal with judicial matters under the Act and the Commonwealth Conciliation and Arbitration Commission to handle the function of conciliation and arbitration.

This amending legislation was introduced in an endeavour to expedite the arbitration process and was prompted to some extent by the implications of the High Court judgment in the Boilermakers' Case delivered on 2nd March, 1956. In this case, the High Court upheld a challenge by the Boilermakers' Union to the validity of sections 29 (1.) (b) and (c) and 29A of the Conciliation and Arbitration Act 1904–1952, the sections under which the Boilermakers' Union was required to observe a provision in an award which prohibits bans, limitations or restrictions on the performance of work in accordance with the award, and was found guilty of contempt of the Arbitration Court by wilfully disobeying this order and fined £500. An appeal against the decision of the High Court was upheld by the Privy Council, in its decision of 19th March, 1957.

The Commonwealth Industrial Court is composed of a Chief Judge and two other Judges. The Commonwealth Conciliation and Arbitration Commission comprises a President, not less than two Deputy Presidents, a Senior Commissioner, not less than five Commissioners and a number of Conciliators. Judges of the Commonwealth Court of Conciliation and Arbitration were made either members of the Commonwealth Industrial Court or presidential members of the Commonwealth Conciliation and Arbitration Commission. Conciliation Commissioners became non-presidential members of the Commission.

The jurisdiction of the Commonwealth Industrial Court shall be exercised by not less than two Judges except in the following circumstances. A single Judge may exercise the jurisdiction of the Court with respect to the dismissal or injury of an employee on account of industrial action, interpretation of awards, appeals to the Court from an act or decision of the Registrar, questions concerning eligibility of membership of an organization, the adoption, alteration or enforcement of rules of an organization, disputes between an organization and its members and a prescribed matter of practice or procedure. A single Judge may refer a question of law for the opinion of the Court constituted by not less than two Judges. The Court is a Superior Court of Record with the same power to punish contempts of its power and authority as is possessed by the High Court. In general, decisions of the Industrial Court are final; however, an appeal lies to the High Court but only when the latter grants leave to appeal.

The Commonwealth Conciliation and Arbitration Commission is empowered to prevent or settle industrial disputes by (a) effecting a reconciliation between parties to industrial disputes; (b) preventing and settling industrial disputes by amicable agreement; and (c) preventing and settling, by conciliation or arbitration, industrial disputes not prevented or settled by amicable agreement. The Commission may exercise its powers on its own motion or on the application of a party.

The President may assign a Commissioner to deal with industrial disputes relating to particular industries, or members of the Commission to deal with a particular industrial dispute. However, subject to the approval of the President, it is the duty of the Senior Commissioner to organize and allocate the work of the Commissioners and Conciliators.

When an industrial dispute occurs or is likely to occur, a Commissioner shall take steps for the prompt prevention or settlement of that dispute by conciliation or, if in his opinion conciliation is unlikely to succeed or has failed, by arbitration. A Commissioner may arrange with the Senior Commissioner for a Conciliator to assist the parties to reach an amicable agreement. If an agreement is reached, a memorandum of its terms shall be made in writing, and may be certified by a Commissioner. A certified memorandum shall have the same effect as an award.

The Commission in Presidential Session, that is, the Commission constituted by at least three presidential members, and not otherwise, is empowered to deal with the making of awards, or certifying agreements, in so far as they concern standard hours, basic wages and long service leave.

Upon application by a party to an industrial dispute, a Commissioner shall decide, in consultation with the President, whether in the public interest the dispute should be dealt with by a Commission constituted of not less than three members nominated by the President. The President may direct this Commission to hear the dispute; however, after consideration the Commission may refer the dispute back for determination to the Commissioner originally dealing with the dispute.

An appeal against the decision of a Commissioner shall be heard by not less than three members nominated by the President, of whom at least two are presidential members of the Commission, thereby allowing for the first time a lay member of the Commission to participate in the hearing of an appeal. However, an appeal will not be heard unless the Commission considers it is a matter of public interest.

The Act also provides for the registration of associations of employees and employers and for inquiries to be held concerning disputed elections in organizations, and certain powers in connexion therewith are, by the Act, given to the Industrial Court.

Provision is also made in the Act for a presidential member of the Commission to handle industrial matters in connexion with the Maritime Industries, Snowy Mountains Area and Stevedoring Industry, except in those matters where the Act requires that the Commission shall be constituted by more than one member.

Before the 1956 amendment of the Act outlined above, industrial disputes were dealt with, in part, by an Arbitration Court constituted under the Act and otherwise by Conciliation Commissioners appointed under the Act. However, the division of work between the Court and Conciliation Commissioners has varied with successive amendments to the Act. Prior to 1947 a dispute was dealt with by either one or other part of the tribunal, except that questions about basic wages and standard hours could be dealt with only by the Court constituted by at least three Judges. Decisions of Conciliation Commissioners were subject to appeal to the Court. An amending Act of 1947 gave Conciliation Commissioners the same power as the Court, except in the matter of standard hours, basic wages and annual leave, and made decisions of Conciliation Commissioners final. However, a further amending Act in 1952 provided a right of appeal to the Arbitration Court against decisions of Conciliation Commissioners.

A further amendment to the Conciliation and Arbitration Act, No. 103 of 1956 (assented to on 15th November, 1956), empowered the Commonwealth Conciliation and Arbitration Commission to deal with disputes and industrial matters, interstate or intra-state, associated with undertakings or projects of the Commonwealth Government which have been declared by the Minister to be Commonwealth projects for the purposes of this Act. In effect, this placed employees of Commonwealth projects, so declared, under the jurisdiction of the Commonwealth Conciliation and Arbitration Commission, whereas formerly some employees on the projects may have been working under conditions prescribed by other Industrial Tribunals. The Minister has the power to exempt certain persons or classes of persons working on the projects from the jurisdiction of the Commonwealth Conciliation and Arbitration Commission.

Special provision was also made concerning the right of audience before the Commonwealth Industrial Court. Briefly, except in proceedings which, in general, involve questions of law or offences against the Act, parties are able to elect whether to appear personally or to be represented by lawyers or officials. Even in proceedings involving questions of law, except appeals from other Courts to the Industrial Court, the parties may, if they wish and the Court grants leave, be represented by officials.

Section 54 of the Principal Act which provided that "The Commission shall not include in an award a provision requiring a person claiming a benefit of an award to notify his employer that he is a member of an organization bound by the award" was repealed.

The amending Act enabled the Commission to make an award in relation to an industrial dispute concerning employees of a "Commonwealth Project" or when the Public Service Arbitrator refrains from dealing with claims made by a Public Service employee organization or consents to the claims being presented to the Commission, though such an award may be inconsistent with a law of the Commonwealth relating to salaries, wages, rates of pay or terms or conditions of service of employees in the Public Service as defined by section 3 of the Public Service Arbitration Act 1920–1956, not being the Commonwealth Employees' Compensation Act 1930–1954, the Commonwealth Employees' Furlough Act 1943–1953, the Superannuation Act 1922–1956 or any other prescribed Act.

The Public Service Arbitration Act was amended by Act No. 104 of 1956 (assented to on 15th November, 1956), which provided that an organization of employees in the Public Service may submit a claim to the Commonwealth Conciliation and Arbitration Commission with the consent of the Public Service Arbitrator or where the Arbitrator has, otherwise than on the ground of triviality, refrained from hearing or determining the claim.

The Australian National Airlines Act, No. 105 of 1956, and the Aluminium Industry Act, No. 106 of 1956, transferred employees of the Australian National Airlines Commission and the Aluminium Production Commission from the jurisdiction of the Public Service Arbitrator to that of the Commonwealth Conciliation and Arbitration Commission.

3. States.—In each State, Industrial Tribunals have been established to regulate and arbitrate in industrial matters. The chief of these are the Industrial Commission of New South Wales, the Industrial Courts of Queensland and South Australia, and the Western Australian Court of Arbitration, together with Wages Boards for specific industries or occupations which operate in Victoria, South Australia and Tasmania. Further details concerning the functions and powers of these authorities may be found in Labour Report No. 44.

### § 2. Rates of Wage and Hours of Labour.

1. General.—The collection of information respecting the current rates of wage payable in different callings and in occupations in various industries was first undertaken by this Bureau in the early part of 1913. The particulars are obtained primarily from awards, determinations and agreements under Commonwealth and State Industrial Acts and are therefore the minimum rates prescribed. They refer generally to the capital city in each State, but in industries which are not carried on in the capital cities, e.g., mining, agriculture, etc., the rates in the more important centres are taken. In those cases where no award, determination or agreement is in force, particulars are taken of the ruling union or predominant rate. During recent years the number of predominant rates of wage included in the tabulations has been reduced considerably, as most of the industries and occupations are now covered by awards, determinations or industrial agreements. The statistics of nominal wages and hours of labour are in course of revision to meet changes in industrial structure. The amounts should not be regarded as actual current averages, but as an index of changes expressed in money and hour terms.

The index numbers for male adult workers are computed with the weighted average wage in 1911 as base (= 1,000). In the case of females, however, it has not been possible to secure information for the years prior to 1914, and the index numbers are therefore computed with the weighted average rate of wage payable to adult female workers in Australia at 30th April, 1914 as base (= 1,000).

An extensive tabular presentation of the minimum rates of wage for adult male and female workers in the main occupations in the capital city of each State is given in the Appendix to the Labour Report.

2. Weekly Wage Rates.—(i) General. The average rate of wage for each industrial group is computed by taking the arithmetic average of the rates of wage payable for all classified occupations within that group. These averages are weighted to give the averages for the States and for Australia.

(ii) Adult Males—States. The following table gives the weighted average nominal weekly rates of wage payable to adult male workers at the dates specified:—

#### WEEKLY WAGE RATES: ADULT MALES.

<sup>(</sup>a) See note (a) to table on page 161.

<sup>(</sup>iv) Adult Females—States. The following table shows, for each State and Australia, the weighted average nominal weekly rates of wage payable to adult female workers for a full week's work at the dates specified.

It should be noted that because there was no tabulation for adult female rates prior to 1914 the base of these index numbers is 1914 and not 1911 as in the foregoing tables for adult males.

(v) Adult Females—Industrial Groups. The following table shows for Australia (a) the weighted average weekly rate of wage in each of the industrial groups in which the number of females employed is important, and (b) the weighted average for all groups combined, at the dates specified.

<sup>(</sup>b) Includes the value of keep, where supplied.

<sup>3.</sup> Hourly Wage Rates.—(i) General. The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. The number of hours constituting a full week's work differs, however, in some instances between various trades and occupations in each State, and between the same trades and occupations in the several States. To secure what may be for some purposes a better comparison, the results in the preceding paragraphs have been reduced to a common basis, namely, the rate of wage per hour. The particulars of weighted average nominal hourly rates of wage given in the following tables relate to all industrial groups except Groups XI. (Shipping, etc.) and XII. (Pastoral, Agricultural, etc.). These groups are excluded because for earlier years the hours of labour for some of the occupations included were not regulated either by awards or determinations of industrial tribunals or by legislation. As a result, the necessary particulars for the computation of average working hours and hourly rates of wage are not available.

<sup>(</sup>ii) Adult Males—States. The following table shows the weighted average nominal hourly rates of wage payable to adult male workers in each State at the dates specified.

HOURLY WAGE RATES(a): ADULT MALES.

- 4. Weekly Hours of Labour.—(i) General. The number of hours constituting a full week's work (excluding overtime) differs in some instances between various trades and occupations in each State and between the same trades and occupations in the several States. The particulars of weekly hours of labour given in the following tables relate to all industrial groups except Groups XI. (Shipping, etc.) and XII. (Pastoral, Agricultural, etc.). These groups are excluded because for earlier years the hours of labour for some of the occupations included were not regulated either by awards or determinations of industrial tribunals or by legislation. As a result, the necessary particulars for the computation of average working hours for these groups are not available.
- (ii) Adult Males—States. The following table shows the weighted average nominal hours of labour (excluding overtime) prescribed in awards for a full working week in respect of adult male workers in each State and Australia at 31st December, 1939 and 1957, together with the corresponding index numbers.

There has been no change in the weighted average nominal hours of labour for adult males since 1951.

(a) See note (a) to table on page 161.

<sup>5.</sup> Nominal and "Real" Wage Rates.—(i) General. Index numbers of wage rates are said to be nominal when they represent changes in the wage rates themselves but are described as real when they represent changes in equivalent purchasing power, that is, the purchasing power of the corresponding wages in terms of some definite composite unit or list of items the cost of which can be ascertained at different times.

Prior to 1936 it was the practice of this Bureau to compute real wage rate index numbers by dividing the nominal wage rate index numbers by the corresponding retail price index numbers for food, groceries and rent of all houses ("A" Series). While wage rates were generally varied on the basis of the "A" Series index numbers there was a good deal to be said for this procedure. When the Commonwealth Court of Conciliation and Arbitration abandoned the "A" Series, the merits of the "C" Series for "deflating" nominal wage rates were strengthened and real wages to the end of 1937 were measured in terms of their purchasing power over both the "A" and "C" Series. Since 1938, when computation of the "A" Series was discontinued, real wages have been measured in terms of their purchasing power over the "C" Series only. The "C" Series covers food, groceries, rent of four and five roomed houses, clothing and miscellaneous household requirements.

A graph showing nominal and real wage rate index numbers for the period 1911 to

1957 appears on page 173.

(ii) Nominal Weekly Wage Rate Index Numbers. The following table shows, for the period 1911 to 1957, index numbers of the weighted average nominal weekly rates of wage payable for adult males in each State, the weighted average rate for Australia in 1911 being taken as the base (= 1,000). These results are based generally upon rates of wage prevailing in the capital city of each State, but in certain industries, such as mining, rates are necessarily taken for places other than the capital cities. The index numbers for 1911 are based on rates current at the end of December, 1911, annual averages not being available. For 1914 and subsequent years, however, the index numbers are based on the average of the rates operative at the end of each of the four quarters.

NOMINAL WEEKLY WAGE RATE(a) INDEX NUMBERS: ADULT MALES.

(Base: Weighted Average Nominal Wage Rate(a) for Australia, 1911 = 1,000.)

	<u> </u>

(a) For a full week's work (excluding overtime).

(b) Partly estimated.

(iii) Real Wage Rate Index Numbers. In obtaining the real wage rate index numbers in the following table, the nominal wage rate index numbers shown above have been divided by the corresponding retail price index numbers for the capital city and multiplied by 1,000. Since the "C" Series index numbers were not compiled for periods prior to November, 1914, it has been assumed that fluctuations between 1911 (the base of the table) and 1914 in the "C" Series would have been similar to the fluctuations observed in the "A" Series. A table showing real wage rate index numbers from 1901 to 1937 measured in terms of purchasing power over the "A" Series regimen appeared in earlier issues of the Official Year Book (see No. 37, page 473).

REAL WEEKLY WAGE RATE(a) INDEX NUMBERS: ADULT MALES. Measured in terms of purchasing power over the "C" series list of items.

(Base: Weighted Average Real Wage Rate (a) for Australia, 1911 = 1,000.)

(a) For a full week's work (excluding overtime). (b) Based on the "C" Series retail price index. column A excluding and column B including, the price movement of potatoes and onions. See para. 5 on p. 149.

In earlier issues of the Official Year Book (see No. 39, page 410) a table was included showing similar index numbers for Australia as a whole under the "A" Series at intervals from 1901 to 1937 and under the "C" Series from 1901 to 1950.

### § 3. Average Weekly Wage Earnings.

1. Average Weekly Total Wages Paid and Average Earnings, All Industries.—The following figures are derived from employment and wages recorded on Pay-roll Tax returns (which cover approximately 75 per cent. of the estimated number of civilian wage and salary earners in employment) and from estimates of the unrecorded balance. Pay of members of the armed forces is not included. The figures are not seasonally adjusted, but a seasonally adjusted quarterly index of average weekly wage earnings is shown in para. 2 below. Corresponding figures for each quarter are published in the Monthly Review of Business Statistics and the Monthly Bulletin of Employment Statistics.

<sup>(</sup>a) Includes the Australian Capital Territory. (b) Includes the Northern Territory. (c) Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. The same ratio has been used in each State, and because the average ratio of female to male earnings may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures above.

2. Average Weekly Wage Earnings Index Numbers.—The following table shows, for "All Industries" and for "Manufacturing", the movement in average weekly wage earnings from 1945-46 to the December Quarter, 1957. The "All Industries" index is based on Pay-roll Tax returns and other data. The index for manufacturing industries for the years 1945-46 to 1955-56 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory returns (see Chapter VII.—Manufacturing Industry, § 8, para. 2 (iii)); figures subsequent to June, 1956 are preliminary estimates based on Pay-roll Tax returns.

The index numbers show for "All Industries" and "Manufacturing" the movement in average earnings over a period of time. However, they do not give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1945-46 = 1,000 and both series have been seasonally adjusted.

<sup>(</sup>a) Includes salaries. (b) Average earnings per male unit employed. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. (c) Average earnings of male wage and salary earners in factories. (d) Not available.

### § 4. Basic Wages in Australia.

1. General.—The concept of a "basic" or "living" wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the "minimum" or "basic" wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted "that the dominant factor in fixing the basic wage . . . . is the economic or productivity factor and that the basic wage must be the highest that industry as a whole can pay".\*

Under the Commonwealth Conciliation and Arbitration Act, as amended in June, 1956 (see page 158), the Commonwealth Conciliation and Arbitration Commission (previously the Commonwealth Court of Conciliation and Arbitration) may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award "altering the basic wage (that is to say, that wage or that part of the wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which he [she] is employed) or the principles upon which it is computed ".

In the past, the Commonwealth Court of Conciliation and Arbitration held general basic wage inquiries from time to time and its findings applied to industrial awards within its jurisdiction. Prior to the decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, discontinuing the automatic adjustment of basic wages in Commonwealth awards in accordance with variations occurring in retail price index numbers, the relevant basic wage of the Commonwealth Court of Conciliation and Arbitration was adopted to a considerable extent by State Industrial Tribunals. In New South Wales and South Australia, the State industrial authorities adopted the relevant Commonwealth basic wage. In Victoria and Tasmania, where the Wages Boards systems operate, no provision was included in the industrial Acts for the declaration of a basic wage, although, in the past, Wages Boards generally adopted basic wages based on those of the Commonwealth Court. In Queensland and Western Australia, the determination of a basic wage is a function of the respective State Industrial or Arbitration Courts and (subject to State law) they have regard to rates determined by the Commonwealth Court. Following the decision of the Commonwealth Court of Conciliation and Arbitration to discontinue automatic quarterly adjustments to the basic wage, the various State industrial authorities determined State basic wages in accordance with the provisions of their respective State industrial legislation. Details of the action taken in each State and subsequent variations in State basic wages are set out in para. 5 (see pp. 181-6).

In addition to the basic wage, "secondary" wage payments, including margins for skill, loadings and other special considerations peculiar to the occupations or industry, are determined by these authorities. The basic wage, and the "secondary" wage, where prescribed, make up the "minimum" wage for a particular occupation. The term "minimum wage" as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry.

2. The Commonwealth Basic Wage.—(i) Early Judgments. The principle of a living or basic wage was propounded as far back as 1890 but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by way of an order in terms of section 2 (d) of the Excise Tariff 1906 in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was "fair and reasonable". Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of "a fair and reasonable" minimum wage for unskilled labourers as that standard appropriate to "the normal needs of the average employee, regarded as a human being living in a civilized community".† The rate declared was 7s. a day or £2 2s. a week for Melbourne, the amount considered reasonable for "a family of about five".

The "Harvester" standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses ("A" Series) for the 30 more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. The basic wage rates for towns were thereafter varied in accordance with the respective retail price index numbers. Court practice was to equate the retail price index number 875 for Melbourne for the year 1907 to the "Harvester" rate of 42s. a week (or the base of the index (1,000) to 48s. a week). At intervals thereafter as awards came before it for review, the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index. In some country towns certain "loadings" were added by the Court to wage rates so derived to

offset the effect of lower housing standards, and consequently of house rents, on the index numbers for these towns.

Over the period of its operation, the adequacy or otherwise of the "Harvester" standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War strong criticism developed that this system did not adequately maintain the "Harvester" equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's Report was presented in 1920. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court because they were considerably in advance of existing rates and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in Labour Report No. 40, p. 106.

The system of making automatic quarterly adjustments of the basic wage in direct ratio to variations in the retail price index ("A" Series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. Previously, adjustments had been made sporadically in relation to retail price indexes for the previous calendar year or the year ended with the preceding quarter. The practice adopted by the Commonwealth Court in 1921 of making automatic quarterly adjustments continued until the Court's judgment of 12th September, 1953 (see page 171).

In 1922 an amount known as the "Powers' 3s." was added by the Court as a general "loading" to the weekly basic wage for the purpose of maintaining during a period of rising prices the full equivalent of the "Harvester" standard. This loading continued until 1934.

(ii) Basic Wage Inquiries, 1930-31, 1932, 1933. No change was made in the method of fixation and adjustment of the basic wage until the onset of depression, which began to be felt severely during 1930. Applications were then made to the Court for some greater measure of reduction of wages than that which resulted from the automatic adjustments due to falling retail prices. The Court held a general inquiry, and, while declining to make any change in the existing method of calculating the basic wage, reduced all wage rates under its jurisdiction by 10 per cent. from 1st February, 1931. In June, 1932 the Court refused applications by employee organizations for the cancellation of the 10 per cent. reduction of wage rates. In May, 1933 the Court again refused to cancel the 10 per cent. reduction in wage rates, but decided that the existing method of adjustment of the basic wage in accordance with the "A" Series retail price index number had resulted in some instances in a reduction of more than 10 per cent. In order to rectify this the Court adopted the "D" Series of retail price index numbers for future quarterly adjustments of the basic wage.

Particulars of the 1930-31 and the 1932 Inquiries may be found in Labour Report No. 22, pp. 45-48 and of the 1933 Inquiry in Labour Report No. 23, pp. 45-46.

(iii) Basic Wage Inquiry, 1934. A summary of the judgment delivered on 17th April 1934, was given in Official Year Book No. 29, page 545. Until this judgment the "Harvester" standard, adjusted by variations in retail price index numbers, continued to be the theoretical basis of the wage of the Commonwealth Court. The new rate for the six capital cities was in effect the same as that previously paid under the "A" Series, without the "Powers' 3s." and without the 10 per cent. reduction which then ceased to operate.

Automatic quarterly adjustment of the basic wage was transferred from the "A" and the "D" Series to the "C" Series Retail Price Index. The base of the index (1,000) was taken by the Court as equal to 81s. a week. This gave rates as declared on this occasion for the capital cities on the basis of their respective index numbers ranging from 61s. for Brisbane to 67s. for Sydney and Hobart, the average wage for the six capital cities being 65s.

- (iv) Basic Wage Inquiry, 1937. In May, 1937, the Commonwealth Court heard an application by the combined unions for an increase in the basic wage. The unions asked that the equivalent of the base (1,000) of the "C" Series Index be increased from 81s. to 93s., which on index numbers then current would have represented an average increase of about 10s. a week. The chief features of the judgment delivered on 23rd June were:—
- (a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as "loadings" additional to the rates payable under the 1934 judgment, which were referred to in the judgment as the "needs" portion of the total resultant basic wages. These loadings, commonly referred to as "Prosperity" loadings, ranged, for capital cities, from 4s. to 6s., that for the six capitals being 5s.

- (b) The basis of the adjustment of the "needs" portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the "C" Series to a special "Court" Series based upon the "C" Series (see page 145).
- (c) Female and junior rates were left for adjustment by individual Judges when dealing with specific awards.

The main parts of the judgment were reprinted in Official Year Book No. 30, pp. 564-75 and in *Labour Report* No. 28, pp. 77-87.

(v) Basic Wage Inquiry, 1940. On 5th August, 1940 the Full Court commenced the hearing of an application by the combined unions for an increase in the existing basic wage by raising the value of 1,000 (the base of the "C" Series Index upon which the "Court" Series was based) from 81s. to 100s. a week, and the incorporation of the existing "Prosperity" loadings in the new rate mentioned. In its judgment of 7th February, 1941, the Court unanimously refused to grant any increase, owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. (See (vi) following.)

The Chief Judge stated: "The Court has always conceded that the 'needs' of an average family should be kept in mind in fixing a basic wage. But it has never, as the result of its own inquiry, specifically declared what is an average family, or what is the cost of a regimen of food, clothing, shelter and miscellaneous items necessary to maintain it in frugal comfort, or that a basic wage should give effect to any such finding. In the end economic possibilities have always been the determining factor . . . . what should be sought is the independent ascertainment and prescription of the highest basic wage that can be sustained by the total of industry in all its primary, secondary and ancillary forms ".\*

The Chief Judge also suggested that the more logical system would be to grade the basic wage according to family responsibilities by means of a comprehensive system of child endowment, and that if a scheme of this nature were established, future fixations of the basic wage would be greatly simplified.†

- (vi) "Interim" Basic Wage Inquiry, 1946. As the result of (a) an application made by the Commonwealth Attorney-General for the restoration to the Full Court List of certain adjourned 1940 basic wage applications (see (v) above), (b) a number of fresh cases which had come to the Court since 1941, and (c) an application by the combined unions for an "interim" basic wage declaration, the Court commenced the hearing of this case on 25th November, 1946. Judgment was delivered on 13th December, 1946 whereby an increase of 7s. a week was granted in the "needs" portion of the basic wage then current, the rate for the six capital cities as a whole being increased from 93s. to 100s. a week. For automatic quarterly adjustments a new "Court" Index (Second Series) (Base 1923-27 = 87.0) was adopted. All "loadings" on the basic wage were retained. Further particulars of this judgment may be obtained from Labour Report No. 38, page 79.
- (vii) Basic Wage Inquiry, 1949-50. This finalized the case begun in 1940 and continued in 1946 (see above). Evidence was completed on 22nd August, 1950, and the three judges (Kelly C.J., Foster and Dunphy JJ.) delivered separate judgments on 12th October, 1950. In these judgments, which were in the nature of general declarations, a majority of the Court (Foster and Dunphy JJ.) was of the opinion that the basic wage for adult males should be increased by £1 a week, and that for adult females should be 75 per cent. of the adult male rate. Kelly C.J., dissenting, considered that no increase in either the male or the female wage was justified.

On 24th October, 1950 and 23rd November, 1950 the Court made further declarations regarding the "Prosperity" loading of 1937 (see page 169), which was being paid at rates between 3s. and 6s. a week according to localities, etc., and the future basis of quarterly adjustments. The "Prosperity" loading was standardized at a uniform rate of 5s. a week for all localities and was declared to be an adjustable part of the basic wage. The Court also declared that the "war" loadings were not part of the basic wage.

With regard to other "loadings" the Court, on 17th November, 1950, proceeded to examine the individual awards in the claims before it, for the purpose of determining to what extent such "loadings" formed part of the basic wage. Any "loading" declared to be part of the basic wage ceased to be paid as a separate entity, but apart from the special case of the Australian Capital Territory there were very few "loadings" which fell within this category.

<sup>\*</sup> Commonwealth Arbitration Reports, Vol. 44, pp. 47-8, † Legislation covering a scheme to become operative on 1st July, 1941 was passed by the Commonwealth Parliament on 3rd April, 1941. For details see Chapter XV.—Welfare Services.

The new rates operated from the beginning of the first pay-period in December, 1950, in all cases being the "needs" rate (Second Series) on the indexes of the September quarter 1950, plus a flat-rate addition of £1, together with the standardized "Prosperity" loading of 5s. (see above).

The basic wage rate for the six capital cities (weighted average) arrived at by the Court after applying the foregoing declarations was £8 2s., comprising £6 17s. "needs" (Second Series) plus 5s. uniform "Prosperity" loading plus the £1 addition. The declaration provided that the whole of this basic wage would be subject to automatic quarterly adjustments as from the beginning of the first pay-period commencing in February, 1951, on the basis of the index numbers for the December quarter, 1950. For this purpose the new rate of £8 2s. was equated to the "C" Series retail price index number 1572 for the six capital cities (weighted average) for the September quarter, 1950. From this equation was derived a new "Court" Index (Third Series) with 103.0 equated to 1,000 in the "C" Series Index.

The basic wage rates operative from the beginning of the first pay-period commencing in December, 1950 compared with those operative in November, 1950 were as follows (November rates in parentheses):—Sydney, £8 5s. (£7 6s.); Melbourne, £8 2s. (£7 3s.); Brisbane, £7 14s. (£6 15s.); Adelaide, £7 18s. (£6 17s.); Perth, £8 (£6 19s.); Hobart, £8 (£6 19s.); Six Capitals, £8 2s. (£7 2s.).

Further details of this judgment were given in Labour Report No. 40, page 81.

- (viii) Basic Wage and Standard Hours Inquiry, 1952-53. On 5th August, 1952, the Commonwealth Court of Conciliation and Arbitration began hearing claims by—
  - (1) The Metal Trades Employers' Association and other employers' organizations-
    - (a) that the basic wage for adult males be reduced;
    - (b) that the basic wage for adult females be reduced;
    - (c) that the standard hours of work be increased;
    - (d) that the system of adjusting the basic wages in accordance with variations occurring in retail price index numbers be abandoned.
  - (2) The Metal Trades Federation, an association of employees' organizations, that the basic wage for adult males be increased, which would also have resulted in increasing the amount, though not the proportion it bore to the basic wage for adult males, of the basic wage for adult females.

A number of Governments, organizations and other bodies obtained leave to intervene and in this role the Australian Council of Trade Unions supported the claims of the Metal Trades Federation.

The Court consisted of Kelly C.J., Foster, Kirby, Dunphy, Wright, McIntyre and Morgan, J.J., but before the hearing of evidence commenced Wright J. withdrew and during the hearing of the case Foster J. withdrew from the bench. The Court gave its decision on 12th September, 1953 and stated that reasons for its decision would be delivered later. McIntyre J. died before the reasons for the judgment could be delivered.

In the early stages of the case the employers applied for an immediate and separate hearing of the question of suspension of the basic wage adjustment provisions in awards. However, after hearing argument, the Court indicated that it was not satisfied that a sufficient case had been made out for such a separate hearing.

Evidence in the employers' case began on 16th September, 1952. On completion of the employers' case the counsel for employee organizations submitted that there was no case to answer and asked for the dismissal of the case. The Court rejected this claim and the hearing of evidence for the employee organizations was concluded on 11th September, 1953.

The decision of the Court, announced on 12th September, 1953, was expressed in the following terms:—

- "1. The employers' applications for reduction of the current basic wages for adult males and for reduction of the current basic wages for adult females are refused.
- 2. The employers' applications for an increase of the standard hours of work in the industries covered thereby are refused.
- 3. The employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages are granted.

4. The Unions' applications for increases of basic wages are refused.

The Court makes orders accordingly, to operate as from to-day. The reasons for the above decisions will be delivered at a later date. The form of the appropriate orders will be settled by the Industrial Registrar." \*

The reasons for the above decisions were delivered on 27th October, 1953.

The Court in the course of its judgment said that in the present case nothing had been put before it in support of a departure from its now well established principle that the basic wage should be the highest that the capacity of the community as a whole could sustain. If the Court is at any time asked to fix a basic wage on a true needs basis, the question of whether such a method is correct in principle and all questions as to the size of the family unit remain open.

No evidence was submitted in the inquiry to suggest that the basic wage in its character of a "foundational wage" of providing, or helping to provide, a just and reasonable standard of living to employees whose income is based or dependent upon it, was inadequate, and the arguments of both the employers and employees were directed towards a basic wage based on the capacity of industry to pay.

The Court, in reviewing the claims of the respondents, in the light of the existing economic situation, indicated that although aware of the difficulties besetting industry and of the dependence of Australia's prosperity upon that large part of her productive effort whose rewards are conditioned by good seasons and whose prices are largely beyond her control, the Court was not satisfied that the employers had discharged the onus of proving that the existing situation called for a reduction of general standards either in the matter of the basic wage or in the ordinary working week. The Court was satisfied that there could be, in the existing situation, no increase in the basic wage, as was claimed by the Metal Trades Federation.

The Court decided to discontinue the principle of automatically adjusting the basic wage in accordance with variations in retail price index numbers while the basic wage was assessed on the capacity of industry. It was considered that "the further the Court has withdrawn from relating the basic wage to the fulfilment of any particular standard of needs, the less has become the justification for keeping the nominal wage automatically adjusted during the currency of an award".† Moreover, there was no ground for assuming that the capacity of industry to pay will be maintained at the same level or that it will rise or fall coincidentally with the purchasing power of money. The Court found that the system of automatic adjustments had undoubtedly been an accelerating factor in the rapid increase in prices in Australia, particularly in the years 1951 and 1952, and this factor supported the Court's decision to abolish the system.

In regard to the basic wage for female employees the Court decided that no basis for a review of the existing ratio of the female to the male basic wage existed on the material presented to it, the Court being satisfied that industry had the capacity to maintain the existing female basic wage rates.

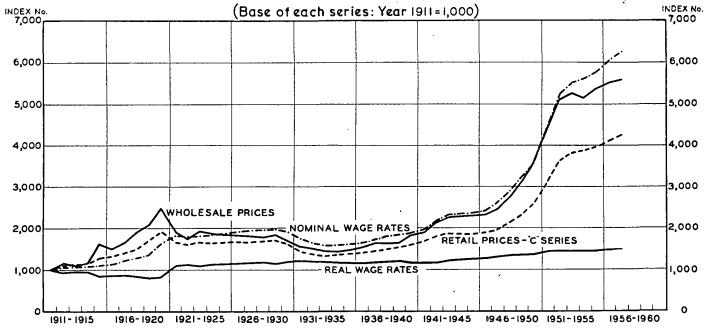

In rejecting the claim for an increase in the standard hours of work, the Court considered that the industry of the country was healthy and prosperous enough at present to sustain the existing standard (i.e., 40 hours a week).

The Court intimated that time would be saved in future inquiries if the parties to the disputes, in discussing the principle of the "capacity to pay", directed their attention to the broader aspects of the economy, such as indicated by a study of employment, investment, production and productivity, oversea trade, oversea balances, competitive position of secondary industry and retail trade.

In order to remove certain misconceptions about the function of the Court, it was stated during the course of the judgment that "the Arbitration Court is neither a social nor an economic legislature. Its function under section 25 of the Act is to prevent or settle specific industrial disputes". However, this function "must be exercised in the social and economic setting of the time at which it makes its decision. It must settle industrial disputes upon terms which seem to it to be just, having regard to conditions which exist at the time of its decision." In addition, the Court stressed that "the primary rule that a claimant is required to substantiate his claim should always be observed".

### 7.3

# WHOLESALE AND RETAIL PRICES; NOMINAL AND REAL WAGE RATES INDEX NUMBERS, AUSTRALIA, 1911 to 1957

Note.—Index numbers in this graph are for the six capital cities as a whole, except for those for wholesale prices up to December quarter, 1927, which are for Melbourne. The wholesale prices graph shows the trend of prices according to the "old" Melbourne Index up to December quarter, 1927, but thereafter, this index having been "spliced" with the Basic Materials and Foodstuffs Index, the curve moves in accordance with the variations of the latter.

The price quotations for this index are, in the main, obtained from Melbourne sources, but their movements may be taken as representative of fluctuations in most Australian markets.

For the period 1911–1914 the "C" Series index numbers are taken back from the true base (November, 1914 = 1,000) by means of the "A" Series Index (Food and Rent of All Houses).

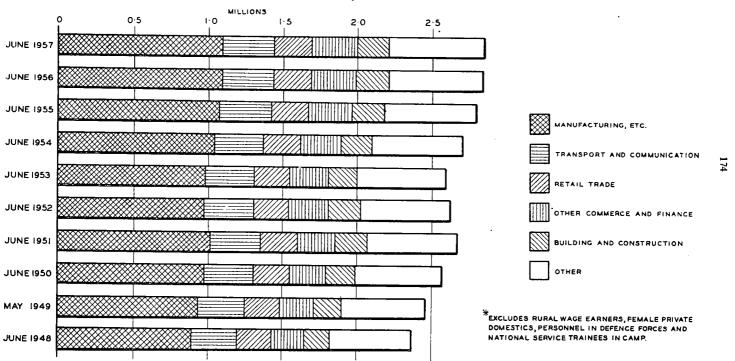

From September quarter, 1955 these "C" Series index numbers exclude the price movement of potatoes and onions.

See para. 5, p. 149.

Real wage rates are computed on the basis of the "C" Series Retail Price Index.

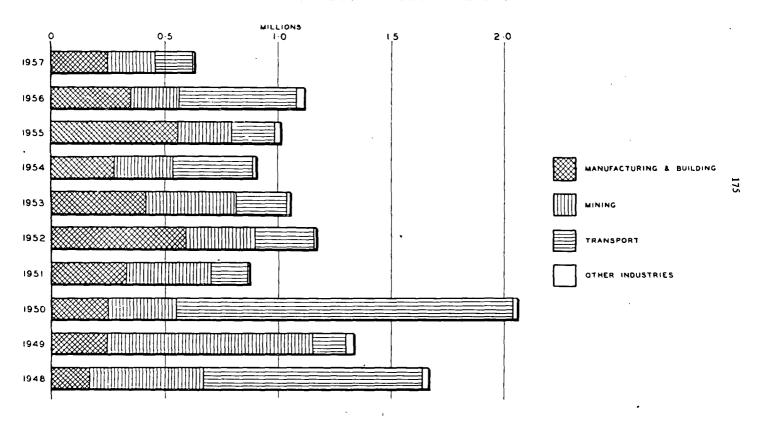

### WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT\*

AUSTRALIA, 1948 TO 1957

### INDUSTRIAL DISPUTES, AUSTRALIA, 1948 TO 1957

WORKING DAYS LOST - INDUSTRIAL GROUPS

In accordance with its decision to abolish the automatic adjustment clause from its awards, the Court began, on 21st October, 1953, to deal with awards which were not actually affected by the original order. During this process the Court announced that it had no other method in mind in substitution of the automatic adjustment clauses. In fact the only issue before the Court was the abolition or retention of the adjustment principle and that issue had been determined. The basic wage as fixed by the Court in the new or amended clauses in awards was that which had become operative in August, 1953, and no provision was made for its automatic quarterly adjustment. The last such adjustment had been made on the "Court" Series Index for the June quarter, 1953.

After the Court had amended all the awards listed before it as a result of applications by one of the parties to the awards, the Court, on its own motion under section 49 of the Commonwealth Conciliation and Arbitration Act, listed those awards not the subject of an application by one of the parties and then proceeded to delete the clauses providing for the automatic adjustment of the basic wage.

The power of the Commonwealth Court of Conciliation and Arbitration to vary awards not the subject of an application by one of the parties was unsuccessfully challenged in the High Court of Australia.

(ix) Basic Wage Inquiry, 1956. On 14th February, 1956 the Commonwealth Court of Conciliation and Arbitration, consisting of Kirby, Dunphy, Wright and Morgan JJ., commenced hearing an application by the Amalgamated Engineering Union and others made by summons for alteration of the basic wage prescribed in the Metal Trades Award in the following respects:—namely, for an increase in the basic wage to the amount it would have reached if automatic quarterly adjustments deleted by the Court in September, 1953 had remained in force; an increase of a further £1 in the basic wage; the re-introduction of automatic quarterly adjustments; and the abolition of what is known as the 3s. country differential. This application was regarded as a general application for variation of the basic wage in all awards of the Commonwealth Court of Conciliation and Arbitration.

All the claims made by the unions were opposed by the respondent employers. The Attorney-General of the Commonwealth intervened in the public interest under section 26 (1.) of the Commonwealth Conciliation and Arbitration Act, and in the course of proceedings all six States were represented by counsel or a State official.

Counsel for the Commonwealth stressed that the Commonwealth appeared not as a party but in the public interest and supplied much factual and statistical material in a review of the economy from 1953. He submitted that the Australian economy "is to all appearances a prosperous economy", with two inherent weaknesses "in the state of our overseas trade and reserves" and "the rising tendency of costs and prices". The Commonwealth made no submission as to the amount of the basic wage; however, it submitted that the Court had been correct in its decision of 1953 to abolish the system of automatic quarterly adjustments and that its grounds for doing so were valid.

The States of New South Wales, Queensland, Western Australia and Tasmania supported the union claims for the re-establishment of the system of automatic adjustments and the raising of the basic wage to the levels indicated by current "C" Series index numbers, but made no submission at all regarding the union claims for a further increase of £1 a week for adult males. The State of South Australia opposed the re-introduction of automatic adjustments, but conceded that "in making a review of the basic wage a substantial factor to be taken into account is the changed cost of living". However, as regards the union claim for an increase in the basic wage to the amount it would have reached if automatic quarterly adjustments deleted by the Court in September, 1953 had remained in force, together with a £1 increase in the basic wage, amounting in total to 35s. a week at that time, the State submitted without elaboration "that there are grave doubts as to whether the increased basic wage to the extent asked by the applicant could be granted without serious damage to the economy". The State of Victoria neither supported nor opposed the union claims, either as an employer or as "representing all interests in the Community", but supplied to the Court comprehensive statements relating to activities of the State Departments and instrumentalities and estimates of the amount and effects of the claims before the Court

In delivering its judgment on 26th May, 1956, the Court rejected each claim made by the unions, but decided to increase the adult male basic wage by 10s. a week payable from the beginning of the first pay-period in June. As a result of this decision, the basic wage for adult females was increased by 7s. 6d. a week with proportionate increases for juniors of both sexes and for apprentices.

The Court took the view that its decision in 1953 to abandon the system of quarterly adjustments was clearly right and that "so long as the assessment of the basic wage is made as the highest which the capacity of the economy can sustain, the automatic adjustment of that basic wage upon price index numbers cannot be justified, since movements in the index

have no relation to the movements in the capacity of the economy". The Court was satisfied "that a basic wage assessed at the highest amount which the economy can afford to pay cannot in any way be arrived at on the current price of listed commodities. There is simply no relationship between the two methods of assessment".

"The Court's examination of the economy and of its indicators—employment, investment, production and productivity, overseas trade, overseas balances, the competitive position of secondary industry and retail trade and its consideration of inflation and its possible disastrous extension has led to the Court's conclusion that the nation now has not the capacity to pay a basic wage of the amount to which automatic quarterly adjustments would have brought it."

As far as the application for the abolition of the 3s. country differential was concerned, the Court stated, "The onus lies on a party seeking a change of present prescription to establish its case. The Court holds that the present claim for abolition of the country differential of 3s. has not been made out of the evidence and submissions presented to the Court and the claim is rejected.".

In the course of setting out the reasons for its decision the Court considered the period over which the capacity of the economy should be assessed, and concluded: "A year has been found almost universally to be a sensible and practicable period for such a purpose in the case of trading institutions the world over. The Court considers—fortified by the Judges' experience of considering from time to time Australia's capacity—that a yearly assessment of the capacity of Australia for the purpose of fixing a basic wage would be most appropriate. We would encourage any steps to have the Court fulfil such a task each year."

- (x) Basic Wage Inquiry, 1956-57. Following a summons filed on 26th October, 1956 by the Amalgamated Engineering Union and others, the Commonwealth Conciliation and Arbitration Commission in Presidential Session (consisting of Kirby C.J., Wright and Ashburner JJ.) on 13th November, 1956 commenced to hear claims for alteration of the basic wage prescribed in the Metal Trades Award. The claims made were as follows:—
- 1. "For the increase of the basic wage in all its manifestations to the amount it would have reached if there had remained in the award provisions for automatic quarterly adjustments which had been deleted in September, 1953 ..........".
- 2. "For the re-insertion in the award of the provisions for the automatic quarterly adjustment of the basic wage.....".

In accordance with past practice this application in respect of the Metal Trades Award was treated by the Commission as a general application for alteration of the basic wage in all Federal awards.

By leave of the Commission the Australian Council of Salaried and Professional Associations intervened in support of the applicant unions.

The claims of the unions were opposed by the respondent employers. Victoria and South Australia were the only States to appear before the Commission and the Attorney-General of the Commonwealth intervened in the public interest under section 36 (1.) of the Conciliation and Arbitration Act.

The State of South Australia opposed the unions' claims and suggested that if, contrary to that State's opposition, an increase in the basic wage were prescribed, the Commission should first decide upon the increase to be added to the six capitals basic wage and then apportion that increase amongst the six capital cities on a basis accurately reflecting the differences in cost of living in the different cities.

The State of Victoria neither supported nor opposed the application by the unions and during the hearing, at the request of the counsel for the employers, submitted statistics relating to Victorian State Government Departments and Instrumentalities.

The Attorney-General of the Commonwealth intervened in the public interest but the only issue on which his counsel made a positive submission was the application for the restoration of the automatic adjustment system. The Commonwealth opposed such a system whatever index were used. The Commonwealth did not make any submission in regard to the amount of the basic wage. However, counsel for the Commonwealth, after supplying information on all aspects of the national economy, made this general statement:—
"It is submitted that it remains true that any steps that would lead to a general increase in the level of demand and of the level of costs and prices would run counter to the best interests of the Australian economy at the present time". The Commonwealth also proposed that the Commission should, in the absence of an adjustment system, undertake an annual review of the basic wage.

The Commission decided that before it could reach a decision it would have to examine, in detail, three main issues, namely, (i) should the system of automatic adjustments be restored? (ii) should there be an increase in the basic wage and, if so, of what amount? and, (iii) should the increase, if there be one, be of a uniform amount or should it be variable as between capital cities?

(i) Should the System of Automatic Adjustments be Restored? The Commission set out the reasons why the Court in 1953 repealed the provisions for automatic quarterly adjustment of the basic wage then contained in awards and orders of the Court. "The Court's decision was primarily based on the view that there is no justification for automatically adjusting in accordance with a price index a wage assessed as the highest that the capacity of the community as a whole can sustain".

Counsel for the unions argued that the Court in 1956 had misdirected itself in holding that in its judgments given before 1953 it had been considering the capacity of the economy to bear the monetary wage at the time of making the decisions. He argued from judgments delivered in the period 1931 to 1950 that the Court was dealing with "the capacity of the economy to pay a real wage". The Commission stated that "even if, contrary to the opinion of the Court in 1956, during that period [1931–1950] the Court had been considering the capacity to pay a real wage ..................... the fact is that in 1953 and 1956, the issue on those occasions having been expressly raised and fought, the Court held that capacity to pay cannot be measured by a price index".

The argument of the unions' counsel continued "that it is a 'plain and inevitable principle' that the capacity of the community to pay wages alters with the general level of prices and that the "C" Series index approximately measures the general level of prices and therefore approximately measures the capacity of the economy to pay".

The Commission rejected both sections of the unions' argument and the claim for restoration of automatic quarterly adjustments was refused.

(ii) Should there be an increase in the Basic Wage and, if so, of what Amount? The Commission reaffirmed the principles used to determine the basic wage in the 1953 and 1956 judgments of the Court and accepted as correct the decision of the Court in 1956 to increase the then existing basic wages by 10s. This led the Commission to a comparison of the state of the national economy at the time of the 1956 and 1957 basic wage inquiries.

The Commission stated that "in assessing the highest basic wage that the community could afford to pay to employees covered by Federal Awards, account has been taken of the fact that somewhere about half the wage earners in Australia are entitled under State Awards to a basic wage, not fixed in relation to the capacity of the community to pay.....".

The Commission considered all aspects of the economy and in particular the indicators of oversea reserves, oversea balances, rural industries, production and productivity other than rural, investment including company profits, competitive position of secondary industry, employment, retail trade, the relaxed policy of import restrictions and the reasons of the government for such relaxation, and above all the change for the better in Australia's trading position and her strengthened reserves and decided that the basic wages in federal awards should be increased.

The Commission decided that the increase to the six capital cities basic wage should be 10s. a week for adult males.

(iii) Should the increase be of a Uniform Amount? The historical background of differential rates of basic wage for respective cities and towns was examined by the Commission and it acknowledged that the federal basic wage had two components. The first and greater component differs for each capital city and is based on the "C" Series retail price index numbers for the June quarter, 1953, and the second component, common to all places, is the 10s, awarded by the Court in 1956.

On the question of whether the increase should be of a uniform amount the alternatives open to the Commission appeared to be "either to follow what the Court did in 1956, or to recalculate the inter-capital-city differentials of the newly-fixed standard basic wage according to the latest "C" Series index numbers". The Commission decided to grant

an increase of a uniform amount, and stated, "The immediate reason impelling the Commission to its decision is the evidence given in these proceedings by the Acting Commonwealth Statistician, in the course of which he expressed emphatically the opinion that the relative levels of living costs in Australian capital cities are not, and cannot be, measured by retail price index numbers in current circumstances; also that changes in relative living costs in this sense are a matter for consideration quite apart from retail price index numbers, at the same time conceding that some of the price index data could assist materially in measuring relative levels of living costs in Australian capital cities".

In the judgment delivered on 29th April, 1957 the Commission rejected the claims made by the unions and granted a uniform increase of 10s. a week in the basic wage for adult males to come into effect from the first pay-period to commence on or after 15th May, 1957. As a result of this decision the basic wage for adult females was increased by 7s. 6d., with proportionate increases for juniors of both sexes and for apprentices. The Commission also advised that it approved an annual review of the basic wage and would be available for this purpose in February, 1958. However, although favouring an annual review of the basic wage, the Commission did not consider that "it would be proper for it, nor would it wish, to curtail the existing right of disputants to make an application at whatever time they think it necessary to do so."

(xi) Rates Operative, Principal Towns. The basic wage rates of the Commonwealth Conciliation and Arbitration Commission for adult males and females, operative as from the beginning of the first pay-period commencing on or after 15th May, 1957, were as shown in the following table:—

COMMONWEALTH	BASIC	WAGE:	WEEKLY	RATES (a).	MAY.	1957.
--------------	-------	-------	--------	------------	------	-------

City or Town.		Rate of Wage.				a: =	Rate of Wage.

(a) Rates include prosperity loadings where applicable. (b) Prior to 30th June, 1956, Commonwealth Court of Conciliation and Arbitration. (c) Rates operative from the beginning of the first pay-period in the month indicated, unless otherwise stated. (d) Automatic adjustment discontinued (see p. 171). (e) Operative from the beginning of the first pay-period commencing on or after 15th May, 1957.

3. Australian Territories.—In the Australian Capital Territory the rates payable as from the beginning of the first pay-period commencing on or after 15th May, 1957, were £12 18s. for adult males and £9 13s. 6d. for adult females.

In the Northern Territory there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the "Darwin" rate and the other in respect of areas south of that parallel and extending down to the 26th parallel (the "Port Augusta" rate).

The basic wage rates payable as from the beginning of the first pay-period commencing on or after 15th May, 1957, were:—"Darwin" rate, adult males, £13 15s., adult females, £10 6s.; "Port Augusta" rate, adult males, £13 2s., adult females, £9 16s. 6d.

In addition to the above rates special loadings were prescribed in Northern Territory awards following the fixation of the new basic wage rates operative from November, 1951.

- 4. Basic Wage Rates for Females.—Reference should be made to Labour Report No. 44, (pp. 72-78) for an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949-50 Basic Wage Inquiry the Commonwealth Court of Conciliation and Arbitration, by a majority decision, fixed a new basic weekly wage for adult females at 75 per cent. of the corresponding male rate from the beginning of the first pay-period commencing in December, 1950.
- 5. State Basic Wages.—(i) New South Wales. The first determination under the New South Wales Industrial Arbitration Act of a standard "living" wage for adult male employees was made on 16th February, 1914, by the Court of Industrial Arbitration. A Board of Trade established in 1918, with power to determine the "living" wage for adult male and female employees in the State, made numerous declarations from 1918 to 1925, but ceased to function after the Industrial Arbitration (Amendment) Act 1926 transferred its powers to the Industrial Commission of New South Wales as from 15th April, 1926.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. With the adoption in 1937 of the Commonwealth basic wage, however, the identification of a specified family unit with the basic wage disappeared.

A table showing the variations in the living wages determined by the industrial tribunals of New South Wales up to 27th April, 1937 was published in earlier issues of the Official Year Book (see No. 37, page 481). From that date until November, 1955 the rates adopted followed the Commonwealth basic wage (see below).

Shortly after the Commonwealth Court of Conciliation and Arbitration announced its judgment in the 1937 Basic Wage Inquiry, the Government of New South Wales amended the Industrial Arbitration Act to make the State basic wage agree with the Commonwealth rate ruling in New South Wales, and to adopt, as far as practicable, the general principles of operation laid down by the Commonwealth Court.

The principle of supplementing wages by a payment in respect of dependent children under fourteen years of age was operative in New South Wales from July, 1927 until superseded by the Commonwealth Government Scheme operative from 1st July, 1941. A brief account of the main features of the system was given in Official Year Book No. 37, pp. 485-6.

Further amendments to the Industrial Arbitration Act were made in 1950 to give effect to the new rates declared by the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry.

Differential basic wage rates for country areas (except Broken Hill) and for employees under Crown awards were eliminated by an amendment of the Industrial Arbitration Act in 1951.

The decision of the Commonwealth Court of Conciliation and Arbitration in September, 1953, to discontinue the system of automatic adjustment of the basic wage consequent on changes in the "Court" series retail price index numbers was considered by the New South Wales Industrial Commission. On 23rd October, 1953, it certified that there had been an alteration in the principles of fixation of the basic wage, and instructed that the automatic adjustment clause be deleted from awards, etc., within its jurisdiction.

As a result, the basic wages applicable for the State (excluding Broken Hill) and operative from the beginning of the first pay-period commencing in August, 1953, remained unchanged at £12 3s. a week for adult males and £9 2s. for adult females until November, 1955.

In October, 1955, the Industrial Arbitration Act 1940-1955 was amended to provide for the automatic adjustment of the existing basic wage each quarter, in accordance with the movements in the Commonwealth Statistician's retail price index numbers. The first adjustment, based on the index number for the September quarter, 1955, represented the amount which would have been added to the basic wage if quarterly adjustments had not been suspended, and was made payable from the beginning of the first pay-period in November, 1955. The rates then payable were £12 13s. for adult males and £9 9s. 6d. for adult females.

Automatic quarterly adjustments were made for each subsequent quarter and the State basic wage payable in New South Wales (except Broken Hill) from the first pay-period in November, 1957 was £13 10s. for adult males and £10 2s. 6d. for adult females.

(ii) Victoria. There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted from representatives of employers, employees and an independent chairman, for each industry group or calling, determine the minimum rate of wage to be paid in that industry or calling. In general, these Boards have adopted a basic wage in determining the rate of wage to be paid.

By an amendment to the Factories and Shops Act in 1934, Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards. A further amendment to this Act in 1937 made it compulsory for Wages Boards to adopt such provisions of Commonwealth Awards. The 1937 Act, as amended, also gave Wages Boards power to adjust wage rates, "with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate". The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September, 1953, a number of Wages Boards met in November, 1953, and deleted references to these adjustments.

However, an amendment to the Factories and Shops Act in November, 1953 required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers. From 1st July, 1954 the Factories and Shops Acts 1928–1953 were replaced by the Labour and Industry Act 1953, which was, in general, a consolidation of the previous Acts and retained the requirement providing for the automatic adjustment of wages in accordance with variations in retail price index numbers.

An amendment to the Labour and Industry Act proclaimed on 17th October, 1956 deleted the automatic adjustment provision and directed Wages Boards in determining wage rates to take into consideration relevant awards of, or agreements certified by, the Commonwealth Conciliation and Arbitration Commission. As a result of this legislation the last automatic quarterly adjustment of the basic wage made was based on the variation in retail price index numbers for the June quarter, 1956, when rates of £13 3s. for adult males and £9 17s. for adult females became payable from the beginning of the first pay-period in August, 1956.

(iii) Queensland. The first formal declaration of a basic wage (£4 5s. for adult males) by the Queensland Court of Industrial Arbitration was gazetted on 24th February, 1921. Prior to this declaration the rate of £3 17s. a week for adult males had been generally recognized by the Court in its awards as the basic or living wage. The Queensland Industrial Conciliation and Arbitration Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

The rates declared by the Queensland Court at various dates were shown in the table on page 89 of Labour Report No. 44.

From 21st April, 1942, the Queensland Industrial Court adopted the practice of making quarterly declarations of the basic wage on the basis of variations in the "C" Series retail price index number for Brisbane.

The Queensland Industrial Court granted increases of 7s. and 5s. to the basic wages for adult males and adult females respectively, payable from 23rd December, 1946, following the "interim" basic wage judgment of the Commonwealth Court of Conciliation and Arbitration announced earlier in December, 1946.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to increase the male and female basic wages from December, 1950, the Queensland Industrial Court conducted an inquiry as to what change, if any, should be made to the State basic wage for Queensland. The Industrial Court granted an increase of 15s. weekly to both adult males and adult females, operative from 7th December, 1950. The new male rate was identical with the Commonwealth basic wage for the Brisbane metropolitan area. The basic wage payable to adult females was approximately 66 per cent. of the male rate.

In January, 1953, the Queensland Industrial Court departed from the practice established in 1942 of varying the basic wage in accordance with quarterly variations in the "C" Series of retail price index numbers. If the practice had been continued, a reduction of one shilling would have been made in the basic wage for adult males from January, 1953. The Court was not satisfied, however, that the movement in the "C" Series index for Brisbane for the December quarter, 1952 was a true representation or reflex of the economic position for Queensland as a whole and so declined to make any alteration to the then existing basic wage. Quarterly adjustments were made for the next four quarters and the basic wage became £11 5s. for adult males from 1st February, 1954.

Commencing in March, 1954, a Basic Wage Inquiry was conducted by the Court and in its judgment of 11th June, 1954 the Court stated that there would be no change in the basic wage rates declared for February, 1954.

At subsequent hearings consequent on the movement in the "C" Series of retail price index numbers for Brisbane in respect of the quarters ended 30th June, 30th September and 31st December, 1954 and 31st March, 1955, the Court again decided not to vary the existing basic wage rates. However, after considering the "C" Series index number for the quarter ended 30th June, 1955 and its relation to the index number for the March quarter, 1955, the Court announced that as these figures showed a continued upward trend of cost of living in 1955 the basic wage for adult males should be increased from £11 5s. the £11 7s. from 1st August, 1955. In this judgment the Court emphasized that it holds itself free whether or not to adjust the basic wage upwards or downwards in accordance with movements in the "C" Series of retail price index numbers.

The Court examined the movement in the "C" Series of retail price index numbers for each subsequent quarter and announced increases in the basic wage. The rates payable in the Southern Division (Eastern District) from 29th July, 1957, were £12 1s. for adult males and £8 2s. 6d. for adult females.

The rates shown above are applicable throughout the Southern Division (Eastern District), which includes the metropolitan area; allowances are added for the following divisions—Northern (Eastern District) 10s., Northern (Western District) 17s. 4d., Mackay 5s. 6d., and Southern (Western District) 7s. 4d. Half of these allowances are granted to females.

(iv) South Australia. The Industrial Code, 1920-1955 provides that the Board of Industry shall after public inquiry declare the "living wages" to be paid to adult male and female employees. The Board has power also to fix different rates to be paid in defined areas.

The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage is to be declared is a man with a wife and three children.

The first declaration by the Board of Industry was made on 15th July, 1921, when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. a week. A table showing the living wages declared from time to time was published on page 92 of Labour Report No. 44.

Following the "interim" increase in the "needs" basic wage of the Commonwealth Court of Conciliation and Arbitration announced on 13th December, 1946, the South Australian Government made a provision in the Economic Stability Act, 1946 for the declaration by the Governor of a living wage based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination on 5th September, 1946 and under the Industrial Code was not able to make a further determination for six months.

The Industrial Code Amendment Act, 1949 made provision for the quarterly adjustment of the living wage in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect this made the State living wage and the Commonwealth basic wage equal from the beginning of the first pay-period commencing in February, 1950. The prescribed adjustment to the female living wage was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the living wage but any new living wage was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry; the South Australian Industrial Code was amended to provide for declarations of the living wage by proclamation to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30th November, 1950, the South Australian living wage in the metropolitan area was made identical with the December, 1950, rates fixed by the Commonwealth Court of Conciliation and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 54 per cent. of the male basic wage, was increased to 75 per cent. of the corresponding male rate.

When the Commonwealth Court of Conciliation and Arbitration discontinued quarterly adjustments to Commonwealth basic wages in September, 1953, the South Australian living wage also ceased to be varied quarterly and since that time has remained the same as the Commonwealth basic wage for Adelaide. Following the basic wage inquiries conducted by the Commonwealth Court of Conciliation and Arbitration in 1955–56 and by the Commonwealth Conciliation and Arbitration Commission in 1956–57, Commonwealth basic wages were increased on each occasion by 10s. a week for adult males and 7s. 6d. a week for adult females. Similar increases were made to the South Australian living wage by proclamation of the Governor to make the rates payable identical with the Commonwealth basic wage for Adelaide. The rates operative from 20th May, 1957, were £12 11s. for adult males and £9 8s. for adult females.

(v) Western Australia. The Industrial Arbitration Act 1912–1952 provides that the Court of Arbitration may determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determination shall be made within twelve months of the previous inquiry.

The term "basic wage" is defined in the Act as "a wage which the Court considers to be just and reasonable for the average worker to whom it applies". In determining what is just and reasonable, the Court must take into account not only the "needs of an average worker" but also the "economic capacity of industry" and any other matters the Court deems relevant.

The Act provides that the Court of Arbitration may make adjustments to the basic wage each quarter if the statement supplied by the State Government Statistician showing the "C" Series retail price index numbers and monetary equivalents in terms of the State basic wages indicates that there has been a variation of 1s. or more a week compared with the previous quarter. These adjustments apply from the dates of declaration by the Court.

The first declaration of the basic wage by the Court of Arbitration, after the authority to fix one was vested in the Court in 1925, was made on 11th June, 1926. The family unit is not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. Since that date the principal inquiries have been those of 1938, 1947, 1950 and 1951. A table showing annual and special declarations of the basic wage by the Court of Arbitration will be found in Labour Report No. 44, p. 95.

Following the judgment of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry, the Western Australian Court of Arbitration resumed an inquiry which had been adjourned, to ascertain what change should be made in the State basic wage rates. In its judgment of 7th December, 1950, the Court decided that the basic wage should be increased by £1 a week for adult males and by 15s. a week for adult females. As the result of a subsequent inquiry, the basic wage for adult females was increased from 1st December, 1951 to 65 per cent. of the corresponding male rate. This was subject to the condition that the increase in the basic wage should be offset by the reduction in or deletion of existing margins between the basic wage and the total wage as specified by the appropriate award or determination.

Following the decision of the Commonwealth Court of Conciliation and Arbitration, in September, 1953, to discontinue quarterly adjustments to Commonwealth basic wages, the Western Australian Court of Arbitration exercised its discretionary power and declined to make any adjustments to the basic wage from November, 1953 to the June quarter, 1955.

However, from 9th August, 1955, the Western Australian Court decided to increase the adult male basic wage by 5s. 11d. a week for Perth and to make corresponding increases for other areas. No further change was announced in the basic wage until January, 1956, and for each subsequent quarter the Court has varied the State basic wages after considering the official statement supplied by the State Government Statistician.

The rates payable in the metropolitan area in November, 1957 were £13 12s. 9d. for adult males and £8 17s. 3d. for adult females.

(vi) Tasmania. A State basic wage is not declared in Tasmania. Wages Boards are constituted for a number of industries, from representatives of employers and employees and an independent chairman, and determine the minimum rate of wage payable in each industry. In general these Boards have adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rate of wage to be paid.

The Wages Board Act gives Wages Boards power to adjust their wage rates in accordance with variations in cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September, 1953, the Chairman of the Wages Boards stated he was of the opinion that automatic adjustment clauses should be deleted from all Wages Boards determinations. Before Wages Boards met to consider this matter, the wage rates for all determinations were automatically adjusted upwards from the beginning of the first pay-period commencing in November. By early December, 1953, all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November.

Automatic quarterly adjustments in accordance with movements in retail price index numbers were reintroduced by Wages Boards in February, 1956 and the rate payable from the first pay-period in February restored the basic wage to the level it would have reached if quarterly adjustments had not been discontinued in 1953. Following a rise in the retail price index number for the March quarter, 1956, a further basic wage increase was payable from the first pay-period in May, 1956.

The Employers' Federation of Tasmania sought a conference under section 77 of the Wages Boards Act 1920 to consider an application to adopt the basic wage promulgated by the Commonwealth Court of Conciliation and Arbitration on 25th May, 1956 and for the deletion of automatic quarterly adjustment of the basic wage from determinations of Wages Boards. As a result of this application, a conference of organized bodies of employers and employees was convened by the Chief Secretary on 22nd June, 1956, to enable a discussion to take place on the advisability or otherwise of adopting the request of the Employers' Federation, so that the Chairman of Wages Boards could be fully informed at a representative gathering prior to the meeting of individual Wages Boards.

At the conclusion of the conference the Chairman of the Wages Boards stated he was of the opinion that the adjustments should be suspended for a period in an endeavour to achieve some measure of stability. He also indicated that any Wages Board was competent by agreement between the representatives of employers and employees or majority decision to adopt the Commonwealth Court's basic wage or any other method of fixing the basic wage.

The majority of Wages Boards decided to suspend automatic quarterly adjustment after adopting the increase based on retail price index numbers for the June quarter, 1956 and payable from the first pay-period in August, 1956. The basic wage prescribed for Hobart by most Wages Boards was still unchanged in November, 1957, the rate being £13 12s. for adult males and £10 4s. for adult females.

(vii) State Basic Wage Rates. The "basic" wage rates of State industrial tribunals, operative in November, 1956 and November, 1957, are summarized in the following table:—

STATE BASIC WAGES-WEEKLY RATES.

Aug., 1956

Aug., 1956

### § 5. Wage Margins.

On 5th November, 1954 the Commonwealth Court of Conciliation and Arbitration delivered a judgment\* which in effect became a general determination of the basis upon which all relevant wage and salary margins should be assessed. This became known as the Metal Trades Case, 1954.

General principles of marginal rate fixation had previously been enunciated by the Court in the Engineers' Case of 1924, the Merchant Service Guild Case of 1942 and the Printing Trades Case of 1947, and the Court adopted these insofar as they were applicable to current circumstances.

" Margins" were defined as-

Goldfields and other areas

Tasmania(b)

<sup>(</sup>a) Where dates are not quoted wage rates operate from the beginning of the first pay-period commencing in the month shown. (b) No basic wage declared. Rates shown are those adopted by most Wages Boards. (c) The 'living wage' declared for the metropolitan area is also adopted for country areas, except at Whyalla where a loading of 5s. a week is generally payable.

<sup>&</sup>quot;minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance."

<sup>\*</sup> Commonwealth Arbitration Reports, Vol. 80, p. 3

A brief account of the Metal Trades Case is as follows:-

The Amalgamated Engineering Union, the Electrical Trades Union and other employee organizations which were parties to the Metal Trades Award, 1952 filed applications during 1953 for increased margins for all workers covered by this award.

The applications came on for hearing before Mr. Conciliation Commissioner Galvin, who decided that they raised matters of such importance that, in the public interest, they should be dealt with by the Commonwealth Court of Conciliation and Arbitration. On 16th September and 6th October, 1953, the Conciliation Commissioner, pursuant to section 14A of the Conciliation and Arbitration Act, referred these applications to the Court.

The actual claims of the trade unions were that the marginal rate of 52s, a week payable to a fitter in the metal trades should be increased to 80s, a week (86s, for certain electrical trades) with proportionate increases for other award occupations. The margins then current, with a few exceptions, had been in existence since 1947. The employees\* claims were in the nature of a test case to determine the attitude of the Court to applications for increased margins.

The Metal Trades Employers' Association and other respondents to the Metal Trades Award had counter-claimed that existing margins for skilled tradesmen should remain unaltered, while those paid to partly skilled or unskilled workers should be reduced.

The Court decided to take the Commissioner's two references together, and the matter came on for hearing before the Full Arbitration Court (Kelly C.J., Kirby, Dunphy and Morgan JJ.) in Melbourne on 13th October, 1953.

In a judgment delivered on 25th February, 1954 the Court held that a prima facie case had been made for a re-assessment of margins but that the economic situation at that time, particularly in regard to the level of costs, did not permit of such a comprehensive review. The Court decided that to avoid the creation of new disputes, to save expense and to obviate procedural difficulties, it would not reject the claims but adjourn them until 9th November, 1954.

On 25th and 26th August, 1954, summonses were filed by the employees' organizations for orders that proceedings in this case be brought forward and the hearing was resumed on 5th October, 1954.

In a judgment delivered on 5th November, 1954 the Court made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin, the existing margin was to remain unaltered. In effect, this decision increased the margin of a fitter from 52s. a week to 75s. a week, increased similarly margins of other skilled occupations, and made no increase in margins of what may generally be described as the unskilled or only slightly skilled employees under the Metal Trades Award.

At the end of its judgment the Court stated that, while its decision in this case related immediately to one particular industry, it was expected to afford general guidance to all authorities operating under the Conciliation and Arbitration Act or under other legislation which provided for tribunals having power to make reference, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals "which may regard decisions of this Court as of persuasive authority".

Extracts from the judgment were set out in some detail in Labour Report No. 44.

#### E. EMPLOYMENT AND UNEMPLOYMENT.

#### § 1. Employment.

1. Total Occupied Persons.—(i) General. The total number of occupied persons in Australia is obtained from the results of each population Census. Figures obtained from the 1933, 1947 and 1954 Censuses are shown below.

(ii) Australia. The figures in the table below are divided into three categories:—
(a) defence forces; (b) all persons fully occupied as employers, or as self-employed in businesses or on farms; and (c) wage and salary earners employed, or occupied as casual, part-time, intermittent or seasonal workers. Unemployed wage earners are excluded.

All unpaid "helpers" in non-rural industry have been included with wage and salary earners. Male unpaid "helpers" in rural industry have been included with employers and self-employed persons, as it is considered that the majority of these are sons or other close relatives of farmers working in de facto partnership, or as learners with the farm owner. Unpaid female "helpers" on farms are fairly numerous. Generally they are occupied mainly in home duties, and, with all other women occupied in unpaid home duties, have been excluded from the category of occupied persons.

TOTAL OCCUPIED PERSONS: AUSTRALIA, CENSUSES, 1933, 1947 AND 1954.

<sup>(</sup>a) Includes those serving outside Australia. (b) Excludes approximately 10,300 males undergoing full-time National Service Training at the time of the Census. With the exception of full-time students these persons have been included in the figures of occupied civilians. (c) Includes females in private domestic service:—106,700 in 1933, 40,200 in 1947 and 29,600 in 1954. (d) Includes an estimate of 40,400 part-time workers considered to be under-enumerated at the Census.

The numbers of males in the defence forces shown in the foregoing table include personnel serving outside Australia, namely, 13,843 in 1947 and 5,903 in 1954, who were not recorded in the Censuses taken in those years.

During the fourteen years from 1933 to 1947 the number of persons actually occupied at work increased by 905,400, or by an average of 64,700 persons per annum, whilst during the seven years from 1947 to 1954 the increase amounted to 483,300 or 69,000 per annum. Practically all of the increase in the number of occupied persons during the years 1947 to 1954 was due to the growth of the total available work force. During the previous intercensal period (1933 to 1947) the increase in the number of persons occupied comprised approximately 400,000 persons who had been unemployed in 1933 and approximately 500,000 growth in the total available work force.

The total numbers of employers, self-employed and wage and salary earners of both sexes classified at the Census as engaged in agricultural, pastoral and dairying industries declined from 512,000 in 1933 to 460,600 in 1954. There was very little movement in the figures between 1947 and 1954.

The proportion of male employers and self-employed in industries other than rural declined from 20.1 per cent. of occupied civilian males in these industries in 1933 to 14.7 per cent. in 1947, and to 13.6 per cent. in 1954. The corresponding proportion of female employers and self-employed declined from 11.2 per cent. of all occupied females in non-rural industries in 1933 to 7.8 per cent. in 1947, and remained constant at 7.8 per cent. in 1954. The increase in the number of male employers and self-employed in non-rural industries during the years 1947 to 1954 averaged only 4,300 per annum. The average increase during the same period in the number of male wage and salary earners in these industries was 51,600 per annum.

(iii) States. The following table shows the total numbers of occupied males and females in each State and Territory at the Censuses of 1947 and 1954, classified as defence forces, employers and self-employed persons, and wage and salary earners.

TOTAL OCCUPIED PERSONS: STATES AND TERRITORIES, CENSUSES, 1947 AND 1954.

Employers and Self-employed:   Wage and Salary Earners.   Occupie including Forc			

full-time National Service Training at the time of the Census. See also footnotes to previous table.

The occupied population of Australia (including defence forces but excluding unemployed, pensioners, retired, persons of independent means and dependants) increased from 1947 to 1954 by 15.3 per cent. The percentage increase in each State and Territory was as follows:—New South Wales, 11.2; Victoria, 16.0; Queensland, 15.7; South Australia, 20.0; Western Australia, 25.8; Tasmania, 17.5; Northern Territory, 37.9; and Australian Capital Territory, 60.7.

2. Wage and Salary Earners in Civilian Employment.—(i) Australia and States. Estimates are made monthly of wage and salary earners in employment (excluding employees in rural industry and female private domestics), based on Pay-roll Tax returns and supplementary returns of government employment. Pay-roll Tax returns cover only a small proportion of wage earners on rural holdings, and practically no private domestic servants. As a result, monthly estimates are not prepared for wage and salary earners in these industries. The following table shows for each State and for Australia as a whole the trend in that section of wage and salary earning employment which it is possible to estimate monthly. Figures are shown as at June, 1933 (Census) and July, 1939 (based on the National Register). From July, 1941 (commencement of Pay-roll Tax returns) the estimates are available for each month, and the table shows the level in June in each of the years 1953 to 1957. Estimates for recent months are published in the Monthly Review of Business Statistics and the Monthly Bulletin of Employment Statistics.

(a) Figures for June, 1953 to June, 1957 are subject to revision.

(b) The manufacturing employment figures published in this table comprise (i) the series showing actual monthly employment in factories as recorded at successive annual Censuses of Factories (see Chapter VII) and (ii) persons who are outside the scope of the factory employment figures as defined and published in (ii) persons who are outside the scope of the factory employment figures as defined and published in Chapter VII, including those persons engaged in selling and distribution. The series referred to in (i) above replaces the Pay-roll Tax series of estimated employment included in the "manufacturing" figures shown in previous issues of the Official Year Book. Adoption of this new series entails adopting also new series for "Total Private Employment" and "Total Employment" for males, females and persons. (c) Includes road transport; shipping and stevedoring; rail and air transport. (d) Includes forestry, fishing and trapping; law and order; religion and social welfare; other professional; entertainment, sport and receation. (e) Includes employees of Commonwealth, State, Semi-Government and Local Government authorities. See para. 3 (i) below.

Estimates for recent months are published in the Monthly Bulletin of Employment Statistics.

A graph showing wage and salary earners in civilian employment in the main industrial groups appears on p. 174.

(iii) Factories. Actual mid-monthly factory employment derived from the results of annual factory censuses is published in the Bulletin Secondary Industries, issued by this Bureau.

Additional tables regarding employment in factories may be found in Chapter VII.—Manufacturing Industry.

An index of factory employment in Australia, published in the *Monthly Review of Business Statistics*, shows that employment in factories reached a new post-war peak in March, 1957. For the year 1956-57, the index showed the level of employment in factories to be 94 per cent. higher than the average factory employment for the three years ended June, 1939.

3. Government Employees.—(i) States and Territories. The numbers of civilian employees of Commonwealth Government, State and Semi-Government and Local Government authorities in each State and Territory at June, 1957 are shown in the following table. These include all employees of government authorities on services such as railways, tramways, banks, post office, air transport, education, broadcasting, police, public works, factories and munitions establishments, migrant hostels, etc., as well as administrative employees, within Australia.

#### CIVILIAN EMPLOYEES OF GOVERNMENT AUTHORITIES(a): JUNE, 1957.

(a) See explanation above.

(b) July.

### § 2. Unemployment.

The total number of persons unemployed has been recorded only at the dates of the various Censuses. The following table sets out the number of unemployed at each Census from 1933 to 1954. The percentage of unemployed at each date to all wage and salary earners, comprising those estimated to be in employment and those unemployed, is also shown.

### UNEMPLOYMENT (ALL CAUSES): AUSTRALIA, CENSUSES, 1933, 1947 AND 1954.

Date.			and Salary E Unemployed. ('000.)		Proportion of Wage and Salary Earners Unemployed. (Per Cent.)				
	  -  -	Males.	Females.	Persons.	Males.	Females.	Persons.		
June, 1933(a)		405.4	75.8	481.2	25.4	14.5	22.7		
June, 1947(b)		66.6	16.9	83.5	3.5	2.5	3.2		
June, 1954(b)	1	41.0	14.0	55.0	1.8	1.9	1.8		

<sup>(</sup>a) As recorded at the Census. In addition there was a considerable number of youths and young women of working ages who had never been employed.

(b) Persons in the work force who were not at work at the time of the Census.

In the following table males and females "not at work" are classified according to cause for the Census years 1933, 1947 and 1954. In 1947 there was a change in the form of the questionnaire which probably resulted in some variation in response. Prior to 1947, persons who were "unemployed" were requested to furnish particulars of the cause and duration of unemployment, but from 1947 onwards the enquiry was broadened to include all persons (usually engaged in industry, business, trade, profession or service) who were out of a job and "not at work" at the time of the Census for whatever reason, including any not normally associated with unemployment.

CAUSES OF UNEMPLOYMENT: AUSTRALIA, CENSUSES, 1933, 1947 AND 1954.

	Year.	Unable to Secure Em- ployment.	Tempo- rarily Laid Off.	Illness.	Accident.	Industrial Dispute.	Other and Not Stated.	Total.

<sup>(</sup>a) Not available.

Details of the number of persons receiving unemployment and sickness benefits and the payments made may be found in Chapter XV.—Welfare Services.

#### § 3. Commonwealth Employment Service.

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the Re-establishment and Employment Act 1945 (sections 47 and 48). In brief, the main function of the Service is to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications; and to assist employers seeking labour to obtain employees best suited to the demands of the employers' particular class of work.

The organization and functions of the C.E.S. accord with the Employment Service Convention 1948 and Recommendation 1948 of the International Labour Organization, which were respectively ratified and adopted by Australia in December, 1949.

The C.F.S. functions within the Employment Division of the Department of Labour and National Service, on a four-tiered decentralized basis. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State, with 121 District Offices in suburban and the larger provincial centres and 340 agents in the smaller country centres. The District Offices are distributed as follows: New South Wales, 46; Victoria, 30; Queensland, 19; South Australia, 8; Western Australia, 12; Tasmania, 4; Northern Territory, 1; Australian Capital Territory, 1.

The C.E.S. includes specialized facilities for young people, persons with physical and mental handicaps, ex-service personnel, migrants and certain types of highly skilled tradesmen, rural workers and persons with professional and managerial qualifications.

Vocational guidance is provided, free of charge, in each State, other than New South Wales, by a staff of qualified psychologists. In New South Wales a similar service is provided by officers of the New South Wales Department of Labour and Industry. Vocational guidance is available to any person, but is provided particularly for young people, ex-servicemen and the physically handicapped.

<sup>(</sup>b) The majority of these persons were resting between jobs or changing jobs.

The C.E.S. has responsibilities in the administration of unemployment and sickness benefits provided under the Social Services Act 1947–1957, and of re-employment allowances provided under the Re-establishment and Employment Act 1945–1956 for certain classes of discharged members of the forces. All applicants for benefits or allowances must register at a District Employment Office, which is responsible for certifying whether or not suitable employment can be offered them. Moreover, as agents for the Department of Social Services, the C.E.S. offices handle the claims for unemployment and sickness benefits to various stages.

The Service is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance to obtain employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of July, 1957, more than 170,000 British and European migrant workers had been placed in employment by the C.E.S.

Since 1951, the Service has been responsible for recruiting experts for the Colombo Plan, the United Nations Expanded Programme of Technical Assistance and other international technical assistance assignments. The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health and economic and scientific research and development.

In association with its placement activities, the Service carries out regular surveys of the labour market in all areas and industries and supplies detailed information to interested Commonwealth and State Government Departments and instrumentalities and to the public. It also advises employers, employees and others on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The C.E.S. is responsible for the medical examination and interview of young men for training under the National Service Act 1951-1957, which is administered by the Department of Labour and National Service. The Department also administers the provisions of the Act relating to the protection of the rights of National Service trainees in relation to their civil employment.

The Service completed its eleventh year of operation in May, 1957. During the year ended June, 1957 there were 648,433 new registrations of applicants for employment, of whom 408,121 were referred to employers and 290,396 placed in employment. In the same period 381,076 new vacancies were notified. Vacancies unfilled at the end of June, 1957 numbered 18,447.

Prior to the setting up of the Commonwealth Employment Service, State Labour Exchange Organizations existed in several States but they have been superseded. Details of the organization and administration of the State Exchanges were given in *Labour Report* No. 30, p. 133.

### § 4. Industrial Disputes.

1. General.—Information with regard to the collection of particulars and the methods of tabulation of industrial disputes involving stoppage of work is given in the *Labour Report*.

Particulars of all disputes in progress during the year are included in the annual figures whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of "the number of disputes" and "workers involved" in disputes which commenced in the previous year and were still in progress during the current year will be duplicated in the figures for both years. The number affected is given in a footnote so that allowance can be made in comparing annual figures.

2. Industrial Groups.—(i) Year 1956. The following table gives, for Australia as a whole, particulars of industrial disputes which were in progress during 1956, classified according to industrial groups.

0

## INDUSTRIAL DISPUTES (INVOLVING STOPPAGE OF WORK) (a): INDUSTRIAL GROUPS, AUSTRALIA, 1956.(b)

<sup>(</sup>a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Two disputes, one in New South Wales and the other in Western Australia, commenced in 1956 and were still in progress at the beginning of 1957. Particulars of these disputes have been included in statistics of disputes for both 1956 and 1957. (c) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

<sup>(</sup>ii) Year 1957. The following table gives for Australia as a whole particulars of industrial disputes which were in progress during 1957, classified according to industrial groups.

A graph showing, for the years 1948 to 1957, the working days lost as a result of industrial disputes in the main industrial groups will be found on p. 175.

3. States and Territories.—The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved, and the losses in working days and wages caused by disputes which were current during each of the years 1939 and 1955 to 1957.

INDUSTRIAL DISPUTES (INVOLVING STOPPAGE OF WORK)(a): STATES AND TERRITORIES.

<sup>(</sup>a) Refers only to disputes involving a stoppage of work of 10 man-days or more.

5. Causes.—(i) General. In issues of the Official Year Book prior to No. 40 the causes of industrial disputes were classified in some detail for all industries combined. As from 1950 a new classification was introduced and stoppages are now analysed in three separate groups, "Coal-mining", "Stevedoring" and "Other Industries". This dissection has been made because the pattern of the disputes in coal-mining and stevedoring differs significantly from that in other industries.

Under this classification, causes are grouped under four main headings:—(1) Wages, Hours and Leave; (2) Physical Working Conditions and Managerial Policy; (3) Trade Unionism; (4) Other Causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, which term covers those arising from disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff and disputes arising from the computation of wages, leave, etc., in individual cases. The third group includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g., political matters, and cases (mainly occurring in the coalmining industry) where the cause of the stoppage is not officially made known to the management.

As the items included under these headings differ somewhat from those included under the similar headings used for classifying causes of disputes in years prior to 1950, figures for 1950 and subsequent years are not strictly comparable with those for earlier years.

(ii) Industry Groups, 1956. The following table shows particulars of industrial disputes for 1956 and 1957 classified according to cause in three industry groups:—

## CAUSES OF INDUSTRIAL DISPUTES (INVOLVING STOPPAGE OF WORK) (a): AUSTRALIA.

Total	1	459,154	1,050,830	901,639	1,010,884	1,121,383	630,213

<sup>(</sup>a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Owing to the use of a new classification, figures for 1953 to 1957 are not strictly comparable with those for 1939.

<sup>6.</sup> Results.—In issues of the Official Year Book prior to No. 40, tables were included showing analyses of the results of industrial disputes over a period of years. This tabulation was discontinued because of the difficulty of obtaining the details necessary to make a classification in precise terms of the results of industrial disputes.

7. Methods of Settlement.—(i) Year 1956. The following table shows particulars of industrial disputes for 1956 classified according to method of settlement, in three industry groups:—

### F. WORKERS' COMPENSATION LEGISLATION.

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 30th June, 1957 will be found in Labour Report No. 44, pp. 142-149.

#### G. LABOUR ORGANIZATIONS.

#### § 1. Labour Organizations in Australia.

- 1. Registration.—(i) Under Trade Union Acts. In earlier issues of the Official Year Book (see No. 39, p. 448) reference was made to the registration of trade unions under the Trade Union Acts. In general the available information is inadequate for statistical purposes.
- (ii) Under State Industrial Legislation. Information with regard to registrations of employers' associations and trade unions under the various State Industrial Arbitration Acts will be found in earlier issues of the Official Year Book (see No. 39, p. 448).
- (iii) Under the (Commonwealth) Conciliation and Arbitration Act. Under Part VIII. of the Conciliation and Arbitration Act 1904–1956 any association of employers in any industry who have, or any employer who has, employed, on an average taken per month, not less than 100 employees during the six months preceding application for registration, or any association of not less than 100 employees in any industry, may be registered.\* Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1956 the number of employers' organizations registered under the provisions of the Conciliation and Arbitration Act was 58. The number of unions of employees registered at the end of 1956 was 154, with a membership of 1,470,112, representing 81 per cent. of the total membership of all trade unions in Australia.
- 2. Particulars regarding Trade Unions.—(i) Types. The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations:—(i) the local independent; (ii) the State; (iii) the interstate; and (iv) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions the State organizations are bound together under a system of unification with centralized control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes.
- (ii) Number and Membership. Returns showing membership by States as at 31st December each year are obtained for all trade unions and employee organizations. The affairs of single organizations are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information. The following table shows the position at the end of 1939, 1955 and 1956.

TRADE UNIONS: NUMBER AND MEMBERSHIP.

(b) Without interstate duplication. See letterpress below.

Note.—Minus sign (-) denotes decrease.

<sup>•</sup> Under the Public Service Arbitration Act an association of less than 100 employees may be registered as an organization, provided that its members comprise at least three-fishs of all persons engaged in that industry in the Service. Such organizations are included in the figures shown below.

In the preceding table, under the heading "Number of Separate Unions", a union reporting members in a State is counted as one union within that State. The figures by States do not add to the Australian total (shown in the last line) because a union represented in more than one State is included in the figure for each State in which it is represented, but is counted only once in the Australian total.

Because of the difficulties involved, the collection of statistics relating to the number of branches of trade unions appearing in issues of the Official Year Book prior to No. 39

was discontinued.

(iii) Classification in Industrial Groups. The following table shows the number of unions and members thereof in Australia at the end of each of the years 1939, 1955 and 1956. Compared with that in 1939, membership in 1956 had increased by 98 per cent.

TRADE UNIONS: INDUSTRIAL GROUPS, AUSTRALIA.

	19	39.	19	55.	19	56.

<sup>(</sup>a) Without interstate duplication. See letterpress above.

(iv) Number of Members and Proportion of Wage and Salary Earners. The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As current estimates of wage and salary earners in employment do not include employees engaged in rural industry or females in private domestic service the percentages have been calculated on figures obtained by adding to the end of year estimates the number of employees in rural industry and females in private domestic service recorded at the 1947 and 1954 Censuses. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

TRADE UNIONS: NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA.

	Year.		Nun	ber of Meml	bers.	Proportion of Total Wage and Salary Earners. (Per cent.)				
			Males.	Females.	Persons.	Males.	Females.	Persons.		
1939			778,336	137,134	915,470	52	24	44		
1952			1,354,248	283,294	1,637,542	67	40	60		
1953			1,381,103	298,655	1,679,758	67	40	60		
1954			1,448,223	339,281	1,787,504	68	44	62		
1955			1,464,016	337,846	1,801,862	68	43	61		
1956			1,470,606	340,802	1.811.408	67	43	61		

(v) Interstate or Federated Trade Unions. The following table gives particulars of the number and membership of interstate or federated unions in 1956:—

INTERSTATE OR FEDERATED TRADE UN	NIONS(a):	AUSTRALIA.	1956.
----------------------------------	-----------	------------	-------

		Union	s Operatin	g in—		Total.
Particulars.	2 States.	3 States.	4 States.	5 States.	6 States.	10tar.
Number of Unions , , , Members	14 33,864	8 61,257	22 142,799	33 425,861	66 928,870	143 1,592,651

<sup>(</sup>a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory and in the Australian Capital Territory.

The number of organizations operating in two or more States increased from 72 in 1912 to 143 in 1956, and the ratio of the membership of such organizations to the total membership of all organizations rose from 65 to 88 per cent. during the same period.

3. Central Labour Organizations.—In each of the capital cities and in a number of industrial centres elsewhere, delegate organizations, consisting of representatives from a group of trade unions, have been established. Their revenue is raised by means of a per capita tax on the members of each affiliated union. In most of the towns where such central organizations exist, the majority of the local unions are affiliated with the central organization, which is usually known as the Labour or the Trades Hall Council. In Western Australia a unified system of organization extends over the industrial centres throughout the State. In this State there is a provincial branch of the Australian Labour Party, having a central council and executive, and metropolitan and branch district councils, with which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other five States, however, the organization is not so close, and, while provision usually exists in the rules of the central council at the capital city of each State for the organization of district councils or for the representation of the central council on the local councils in the smaller industrial centres of the State, the councils in each State are generally independent bodies.

The table below shows the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith in each State at the end of the year 1956:—

CENTRAL LABOUR ORGANIZATIONS: NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED, 1956.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W.A.	Tas.	N.T.	A.C.T.	Total.
Number of Councils Number of Unions and	-11	9	13	6	10	5		1	55
Branch Unions affiliated	290	262	161	141	399	103	••	22	1,378

The figures given in the preceding table concerning the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

A Central Labour Organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in Melbourne in May, 1927. The Australian Council of Trade Unions consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the Australian Council of Trade Unions and has the right to appoint one representative to act on the executive of the Council. In addition to the representatives of the State Branches of

the A.C.T.U., six delegates are elected by and from Congress, one from each of the following industry groups of unions:—Building, Food and Distributive Services, Manufacturing, Metal, Services, Transport. To this Executive is added the four officers, namely, President, two Vice-Presidents, and Secretary, who are elected by and from the Australian Congress of Trade Unions.

The objectives of the Australian Council of Trade Unions are the socialization of industry, i.e., production, distribution and exchange, and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all.

The methods to be adopted are:—the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the amalgamation of unions with a view to the establishment of one union in each industry; the consolidation of the Australian Labour Movement, with the object of unified control, administration and action; the centralized control of industrial disputes; educational propaganda among unions; political action to secure satisfactory working-class legislation.

The Australian Council of Trade Unions is the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference.

Between the trade union and the central organization of unions may be classed certain State or district councils organized on trade lines, and composed of delegates from separate unions whose members' interests are closely connected because of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel, or brass trades, or with the building trades, may be so classed.

#### § 2. International Labour Organization.

The International Labour Organization (I.L.O.) was established on 11th April, 1919 as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939-45 War, the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal, Canada. In 1946 the Organization became the first of the specialized agencies of the United Nations. Under the terms of agreement, the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organization, social security and other aspects of social policy. The Organization has three basic parts. These are the International Labour Conference, its highest authority, which as a rule meets annually; the Governing Body, its executive council, which usually meets four times each year; and the International Labour Office, which provides the secretariat of the Organization. The Conference is composed of delegations from the Member States of the Organization. In October, 1957, there were 79 Member States, each of which is entitled to be represented by four delegates—two Government, one representing employers and one representing workers, together with their advisers. The Governing Body consists of the representatives of twenty governments and ten employers' and ten workers' representatives. Of the twenty government representatives, half are from the ten countries of major industrial importance and ten are elected by the remaining governments. Particulars are given in Labour Report No. 44 of the proceedings of International Labour Conferences up to the 39th Session, held in Geneva in June, 1956.

#### H. COMPARATIVE INDEX NUMBERS.

In order to show the relative movements of certain price and related data, the following table of annual and quarterly index numbers for the six capital cities combined has been compiled with a common base 1911 = 1,000.

### COMPARATIVE INDEX NUMBERS FOR THE SIX CAPITAL CITIES COMBINED.

(Base of each Group: Weighted Average of Six Capital Cities, 1911 = 1,000 (a).)

<sup>(</sup>a) The index numbers given in the separate columns of the table cannot be compared with each other in order to show, for example, the relative cost of food and groceries and rent, since the cost in 1911 in each group or combination of groups is made equal to 1,000. (b) Indexes in columns "A" exclude, and those in columns "B" include, the price movement of potatoes and onions. See para. 5 on p. 149. (c) See footnote (c) on p. 151. (d) Index of nominal weekly wage rates for adult males divided by the "C" Series retail price index number. (e) Taken back from true base (November, 1914 = 1,000) by means of the Food and Rent (All Houses) Index.

#### CHAPTER VII.

#### MANUFACTURING INDUSTRY.

#### § 1. General.

1. Introduction.—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given owing to the fact that prior to 1906 the necessary statistics were not collected by the several States on a definite and uniform basis. A standard classification of manufacturing industries was formulated at a conference of Australian Statisticians in 1902 and adopted by all States in 1906. Figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was primarily engaged in the production of goods for local use, mainly of food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914–18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia.

A check was made to this expansion by the world-wide economic depression of 1929-33, but in 1933 returning general prosperity and the opportunities opened to local manufacturers by import restrictions, together with depreciation of Australian currency, gave renewed stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez and in meeting these demands, as well as those arising locally because of interruption of oversea importations, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibilities for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945-46 onward there was renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

2. Decentralization of Manufacturing Industries.—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945, to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy

affecting the development and location of industry, to investigate in association with the States the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth has assisted decentralization by allocating to private industry munitions and other defence buildings in decentralized areas and accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

- 3. Commonwealth Division of Industrial Development.—The functions of the Division of Industrial Development include the encouragement of industrial development, the exercising of Commonwealth responsibilities for the decentralization of industry, the promotion of industrial efficiency (especially the study of technical, production and managerial problems and the dissemination and application of new knowledge and methods), the encouragement of the development of technological institutes and the publication of studies of the structure and operation of Australian manufacturing industries. The Division was attached to the Ministry of National Development when formed in March, 1950, to plan the development of national resources and to promote decentralization and regional development in conjunction with the States, but was transferred to the Department of Trade in January, 1956.
- 4. Customs and Excise Tariffs and Bounties on Manufactures.—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter X.—Trade.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

- 5. Scientific Research and Standardization.—(i) The Commonwealth Scientific and Industrial Research Organization. The function of this Organization, reference to which also appears in Chapter XXX., is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research student-ships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research.
- (ii) The Standards Association of Australia. This Association, which is referred to also in Chapter XXX., acts as the national standardizing organization of Australia and issues standard specifications for materials and codes of practice. Specifications and codes are prepared and revised periodically in accordance with the needs of industry, and standards are evolved and accepted by general consent.
- (iii) The National Association of Testing Authorities. The National Association of Testing Authorities organizes national testing facilities throughout Australia to serve private and governmental needs. Laboratories may register voluntarily in respect of tests within their competence and the Association ensures the maintenance of their standards of testing. It is expected that there will be general acceptance of certificates of tests issued in the name of the Association by the registered laboratories.

General. 209

6. Definitions in Factory Statistics.—The statistics relating to factories have been compiled from tabulations made by the several State Statisticians from returns supplied to them annually by manufacturers in accordance with the Statistical Acts of the States. A return must be supplied in respect of every factory, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries) but does not cover smallgoods makers, laundries, farriers, photography studios, florists and seedsmen, or most abattoirs. It should be noted that details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials and fuel used, and quantities and values of principal materials and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income or expenditure of factories nor to show the profits or losses of factories collectively or individually.

The average number of persons employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the saw-mills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of Government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

6875/57.—7

7. Classification of Factories.—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian Statisticians in 1902 and revised from time to time, was used until the year 1929-30. A new classification was introduced in 1930-31, and this in turn was revised and extended (principally in respect of the placement and composition of sub-classes) in accordance with decisions of the Statisticians' Conference, 1945.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Particulars of certain of the sub-classes shown below are published in the latter portion of this chapter and full details for all sub-classes may be found in the Bulletin Secondary Industries, published annually.

The principal classes and sub-classes in the current classification of factories are as follows:—

#### CLASSIFICATION OF FACTORIES.

CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS.

Coke Works.
Briquetting and Pulverized Coal.
Carbide.
Lime, Plaster of Paris, Asphalt.
Fibrous Plaster and Products.
Marble, Slate, etc.
Cement, Portland.
Asbestos Cement Sheets and Mouldings.
Other Cement Goods.
Other.

CLASS II.—BRICKS, POTTERY, GLASS, ETC. Bricks and Tiles. Earthenware, China, Porcelain and Terracotta. Glass (other than Bottles). Glass Bottles. Other.

CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE.

Industrial and Heavy Chemicals and Acids. Pharmaceutical and Toilet Preparations. Explosives (including Fireworks). White Lead, Paints and Varnish. Oils, Wegetable. Oils, Mineral. Oils, Animal. Boiling-down, Tallow-refining. Soap and Candles. Chemical Pertilizers. Inks, Polishes, etc. Matches. Other.

### CLASS IV.—Industrial Metals, Machines, Conveyances.

Smelting, Converting, Refining, Rolling of Iron and Steel.
Foundries (Ferrous).
Flant, Equipment and Machinery, etc.
Other Engineering.
Extracting and Refining of other Metals; Alloys.
Electrical Machinery, Cables and Apparatus.
Construction and Repair of Vehicles (10 groups).
Ship and Boat Building and Repairing, Marine Engineering (Government and Other).
Cuttery and Small Hand Tools.
Agricultural Machines and Implements.
Non-Ferrous Metals—
Rolling and Extrusion.
Founding, Casting, etc.
Iron and Steel Sheets.
Sheet Metal Working, Pressing, and Stamping.
Pipes, Tubes and Fittings—Ferrous.
Wire and Wire Nettings—Ferrous.

Stoves, Ovens and Ranges. Gas Fittings and Meters.

Lead Mills.

CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—continued. Sewing Machines.

Arms, Ammunition (excluding Explosives).
Wireless and Amplifying Apparatus.
Other Metal Works.

CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE. Jewellery. Watches and Clocks (including Repairs). Electroplating (Gold, Silver, Chromium, etc.).

### CLASS VI.—Textiles and Textile Goods (NOT Dress).

Cotton Ginning.
Cotton Spinning and Weaving.
Wool—Carding, Spinning, Weaving.
Hosiery and Other Knitted Goods.
Silk, Natural.
Rayon, Nylon and Other Synthetic Fibres.
Flax Mills.
Rope and Cordage.
Canvas Goods, Tents, Tarpaulins, etc.
Bags and Sacks.
Other.

### CLASS VII.—Skins and Leather (not Clothing or Footwear).

Furriers and Fur-dressing.
Woolscouring and Fellmongery.
Tanning, Currying and Leather-dressing.
Saddlery, Harness and Whips.
Machine Belting (Leather or other).
Bags, Trunks, etc.

#### CLASS VIII .- CLOTHING (EXCEPT KNITTED).

Tailoring and Ready-made Clothing.
Waterproof and Oilskin Clothing.
Dressmaking, Hemstitching.
Milinery.
Shirts, Collars, Underclothing.
Foundation Garments.
Handkerchiefs, Ties and Scarves.
Hats and Caps.
Gioves.
Boots and Shoes (not Rubber).
Boot and Shoe Repairing.
Boot and Shoe Accessories.
Umbrellas and Walking Sticks.
Dyeworks and Cleaning, etc.
Other.

#### CLASS IX .- FOOD, DRINK AND TOBACCO.

Flour-milling.
Cereal Foods and Starch.
Animal and Bird Foods.
Chaffcutting and Corn-crushing.
Bakeries (including Cakes and Pastry).
Biscuits.
Sugar-mills.

CLASS IX.-FOOD, DRINK AND TOBACCO-

Sugar-refining. ougar-renning. Confectionery (including Chocolate and Icing Sugar). Jam, Fruit and Vegetable Canning. Pickles, Sauces, Vinegar. Bacon Curing. Butter Factories.

Cheese Factories

Condensed and Dried Milk Factories.

Margarine. Meat and Fish Preserving. Condiments, Coffee, Spices. Ice and Refrigerating.

Salt. Aerated Waters, Cordials, etc.

Breweries Distilleries. Wine-making Cider and Perry. Malting. Bottling.

Tobacco, Cigars, Cigarettes, Snuff. Dehydrated Fruit and Vegetables.

Ice Čream. Sausage Casings. Arrowroot. Other.

CLASS X.—SAWMILLS, JOINERY, BOXES, ETC., WOOD TURNING AND CARVING.

Sawmills.
Plywood Mills (including Veneers).
Bark Mills. Joinery. Cooperage

Boxes and Cases.

Basketware and Wickerware (including Sea-grass Basketware and Wicketware (including Sea-grass and Bamboo Furniture).

Perambulators (including Pushers and Strollers).

Wall and Ceiling Boards (not Plaster or Cement).

Other. CLASS XI.-FURNITURE OF WOOD, BEDDING, etc.

Cabinet and Furniture Making including Billiard Tables and Upholstery.

Bedding and Mattresses (not Wire).

Furnishing Drapery.

CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.continued.

Picture Frames

CLASS XII.—PAPER, STATIONERY, PRINTING, BOOKBINDING, ETC.

Newspapers and Periodicals. Printing-Government. General, including Bookbinding. Manufactured Stationery. Stereotyping, Electrotyping.
Process and Photo Engraving.
Cardboard Boxes, Cartons and Containers. Paper Bags. Paper-making Pencils, Penholders, Chalks, Crayons. Other.

CLASS XIII.—RUBBER. Rubber Goods (including Tyres Made.)
Tyre Retreading and Repairing.

CLASS XIV.-MUSICAL INSTRUMENTS.

Gramophones and Gramophone Records. Pianos, Piano-Players, Organs. Other.

CLASS XV .- MISCELLANEOUS PRODUCTS. Linoleum, Leather-cloth, Oil-cloth, etc. Bone, Horn, Ivory and Shell. Plastic Moulding and Products. Brooms and Brushes. Optical Instruments and Appliances.
Surgical and Other Scientific Instruments and Appliances Photographic Materials, (including Developing and Printing). Toys, Games and Sports Requisites. Artificial Flowers.

CLASS XVI .-- HEAT, LIGHT, AND POWER. Electric Light and Power. Gas Works.

8. Factory Development since 1901-Australia.-The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table:-

Other.

1955-56			21,602	16.053	5,378	3,908	3,871	1.594	52,406

2. Number of Factories in Industrial Classes.—(i) Australia. The next table shows the number of factories in Australia during 1938-39 and 1951-52 to 1955-56 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. Details of some of the principal industries included in the table will be found in § 11, page 243.

FACTORIES: NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938–39.	1951–52.	1952-53.	1953-54.	1954-55.	1955-56.

Grand Total	26,941	45,844	47,740	49,576	51,056	52,406

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. Except for the two war years 1941-42 and 1942-43, when there were decreases, the number of factories increased each year from 1931-32 to 1955-56. In the latter year the number of factories in Australia reached the record total of 52,406 or nearly 95 per cent. more than in 1938-39.

(ii) States, 1955-56. The following table shows the number of factories in each State classified according to the nature of the industry:—

FACTORIES: NUMBER IN INDUSTRIAL CLASSES, 1955-56.

### § 3. Classification of Factories according to Number of Persons Employed.

- 1. General.—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors). Prior to 1945–46 there was no dissection of the "over 100 employees" group, but for that and subsequent years this group was subdivided into the seven size groups shown in the table below.
- 2. States, 1955-56.—The following table shows, for each State, the number of factories classified according to the average number of persons employed:—

FACTORIES: CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1955-56.

Size of (Persons			N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

### § 4. Power Equipment in Factories.

1. General.—Since 1936-37, statistics of power equipment in factories relate to the "rated horse-power" of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication, it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables, Central Electric Stations have been treated separately from other factories.

In para. 2 below, 428 factories are shown in 1955-56 as using no power other than manual, the distribution of these factories among the various industries being as follows:—Fibrous Plaster and Products, 24; Galvanized Ironworking, Tinsmithing, 14; Tailoring and Ready-made Clothing, 103; Dressmaking, 10; Millinery, 7; Bakeries, 38; Cabinet and Furniture Making, 8; all other industries, 224.

2. Rated Horse-power of Engines in Factories other than Central Electric Stations.— The following table shows the number of factories using power-driven machinery, those using manual labour only, and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1955-56:—

FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1955-56.

		Numbe	r of Establishm	ents.	Rated Ho of Engines	rse-power and Motors.

#### § 5. Employment in Factories.

1. Number Employed.—(i) General. All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and "outworkers" (see para. 4 (ii), page 221), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen, are excluded. Prior to 1945–46, the occupational grouping collected was (i) working proprietors; (ii) managers and overseers; (iii) accountants and clerks; (iv) enginedrivers and firemen; (v) workers in factory, skilled and unskilled; (vi) carters and messengers; and (vii) persons working regularly at home for the establishment. This grouping did not record separate details for technical staff (e.g., chemists, draftsmen, etc.) and supervisory staff and in 1945–46 the set-up on the collection form was amended to obtain the following groupings:—(i) Working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home.

Prior to the year 1928-29, average employment in factories was computed by dividing the sum of the number employed each week by the number of weeks worked. The figures therefore represented the average number employed over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928-29, the figures represent the equivalent average number employed over a full year of fifty-two weeks. The classification of factories according to the number of persons employed (see § 3, p. 213), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) Australia. Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for years 1938-39 and 1951-52 to 1955-56 in the following table:—

FACTORIES: EM	IPLOYMENT,	AUSTRALIA.

Note.-Minus sign (-) indicates decrease.

(iii) States. The following table shows, for the same years, (a) the average number of persons employed in manufacturing industries in each State; (b) for each State, the percentage of the total number employed in factories in Australia; and (c) the number so employed per ten thousand of mean population in each State and Australia.

4. Persons Employed According to Occupational Grouping.—(i) General. In the following table, the average number of persons employed in each State during 1955-56 are classified according to their occupational grouping. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945-46. The nature of this change is indicated in para. 1 of this section (see p. 217).

FACTORIES: PERSONS EMPLOYED—OCCUPATIONAL GROUPING, 1955-56.

<sup>(</sup>a) Includes salaried managers and working directors.

<sup>(</sup>b) Includes persons working regularly

- (ii) Outworkers. The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and embraces only persons to whom work is given out by factories to be done at home. Owing to the amended employment groupings adopted in 1945-46, persons working regularly at home for factories are now included with carters, messengers and others and separate details are no longer available. The number of "outworkers" employed by factories in 1944-45 was 1,049.
- 5. Monthly Employment, 1938-39 and 1951-52 to 1955-56.—(i) Australia. The following table shows the number of persons (excluding working proprietors) employed in factories on the pay-day nearest to the 15th of each month for the year 1938-39 and on the last pay-day of the month in the later years.

FACTORIES: MONTHLY EMPLOYMENT, AUSTRALIA. (Excluding Working Proprietors.)

6. Distribution of Employees According to Age.—The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945-46 onwards, instead of three as in previous years. The particulars are collected as at June. The numbers employed in each age-group on the last pay-day in June, 1955 and 1956, are given below:—

FACTORIES: DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1955 AND 1956.

Note.—Minus sign (-) indicates decrease.

3. Masculinity of Persons Employed in Factories.—The extent to which females are employed in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons employed in each State. The following table shows particulars for the years 1938-39 and 1951-52 to 1955-56:—

FACTORIES:	MASCULINITY(a)	OF PERSONS	EMPLOYED.
------------	----------------	------------	-----------

	Үеаг.		N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938–39			271	208	432	445	415	420	271
1951-52			301	258	466	429	519	487	315
1952-53			330	279	501	502	587	506	345
1953-54			313	266	488	476	576	467	328
1954-55			307	265	490	465	602	478	325
1955-56		!	309	265	491	463	640	448	327

(a) Number of males per 100 females.

For a number of years prior to 1926-27, there were on the average 300 males employed in factories for every 100 females, but by 1932-33, as a result of the particularly severe effect of the depression on the heavier industries where males predominate in number, there were only 239 males employed to every 100 females. With the subsequent recovery of employment in the heavier industries, the proportion of males per 100 females increased to 271 in 1937-38 and 1938-39. The enlistment of men in the armed services and the expansion of industry and the consequential absorption of women brought about by the 1939-45 War caused a decrease in masculinity from 1938-39 to 1943-44. However, following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased. In 1955-56 there were 327 males to every 100 females employed in factories.

4. Employment of Females in Particular Industries.—(i) General. The majority of females in manufacturing industries are employed in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1955-56, these industries accounted for 78.45 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 136 females to every 100 males and in Class VIII., Clothing, with 237 females per 100 males. The following tables show the average number of males and females employed in each of these classes in 1955-56:—

MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1955-56.

Class.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of females per 100 males.

### § 7. Child Labour in Factories.

- 1. Conditions of Child Labour.—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.
- 2. Number of Children Employed, 1939, 1955 and 1956.—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940, to 15,618 in June, 1956, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years mentioned.

FACTORIES: CHILDREN(a) EMPLOYED, JUNE.

		1939.			1955.		1956.

<sup>(</sup>a) Under sixteen years of age.

4. Apprenticeship.—In all the States, Acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

### § 8. Salaries and Wages Paid and Value of Production.

Note.—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

- 1. General.—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of their output for 1955-56 was £3,763,710,000, of which £2,125,819,000 was the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £139,127,000 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of output, namely, £1,498,764,000, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e., "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production." The total amount of salaries and wages paid in factories in 1955-56 was £853,469,000. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £71,829,000 or 9.19 per cent. on that for the previous year.
- 2. Salaries and Wages Paid.—(i) In Classes of Industry, 1955-56. The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table.

<sup>(</sup>b) Excludes working proprietors.

FACTORIES: SALARIES AND WAGES PAID, 1955-56. (£'000.)

<sup>(</sup>ii) Totals and Averages, 1938-39 and 1951-52 to 1955-56.—The following table shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The figures exclude working proprietors and the amounts drawn by them:—

FACTORIES: TOTAL AND AVERAGE SALARIES AND WAGES PAID.

	Year.		N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	Aust.

1955-56			860.91	841.16	740.93	848.43	785.23	828.65	837.3

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands is employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1955-56 were paid in New South Wales, South Australia and Victoria, in that order.

The average earnings per employee rose annually from 1938-39 to 1943-44 when a level of £291 was attained as a result of war-time conditions. In 1944-45, the average dropped to £285 and remained at this level in 1945-46. From 1945-46, average earnings rose each year and in 1955-56 reached a record level of over £837.

<sup>(</sup>iii) Total and Average Earnings of Males and Females, 1938-39 and 1951-52 to 1955-56. Particulars for these years are given in the table on the following page.

FACTORIES: TOTAL AND AVERAGE SALARIES AND WAGES—MALES AND FEMALES.

(iv) Managers, Clerical Staff and Other Employees. A further analysis of salaries and wages paid is given in the following table for 1955-56 and shows the amounts paid to managerial and clerical staff including salaried managers and working directors, chemists, draftsmen and other laboratory and research staff, and those paid to other employees. As previously mentioned, amounts drawn by working proprietors are excluded in all cases:—

FACTORIES: SALARIES AND WAGES PAID TO MANAGERS, CLERICAL STAFF, ETC., AND OTHER EMPLOYEES, AUSTRALIA, 1955-56.

3. Power, Fuel and Light Used.—(i) In Classes of Industry, 1955-56. The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1955-56 it amounted to a new high level of £139,127,000, an increase of £10,745,000 as compared with the previous year and over nine times the corresponding value in 1938-39. The following table shows the value of power, fuel and light, etc., used in the different classes of industry:—

FACTORIES: VALUE OF POWER, FUEL AND LIGHT USED(a), 1955-56. (£'000.)

(a) Includes value of lubricants and water.

4. Value of Materials Used.—(i) In Classes of Industry, 1955-56. The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1955-56 reached £2,125,819,000, representing 56.5 per cent. of the value of the final output (see para. 5). The following table shows the value of the materials used in various classes of industry in each State:—

FACTORIES: VALUE OF MATERIALS USED, 1955-56. (£'000.)

5. Value of Output.—(i) In Classes of Industry, 1955-56. The value of the output of factories in the various classes in each State in 1955-56 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (see para. 6).

6. Value of Production.—(i) In Classes of Industry, 1955-56. The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production."

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was agreed that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained therefore, by deducting "value of materials used" and "value of fuel used" from the "value of output".

The figure thus calculated is, however, not the net value of production. The amount of depreciation, particulars of which are shown in § 9, para. 4, was recorded as £67,939,000 for 1955-56. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges, have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the "surplus" is available for interest and profit.

The value of factory production, therefore, approximates "net value added" in the manufacturing process. It amounted in 1955-56 to £1,499 million to which Class IV., Industrial Metals, etc., with £595 million made the greatest contribution. The total value of production in 1955-56 showed an increase of £133 million (9.74 per cent.) over the figure for 1954-55 and £1,295 million over the value of production recorded in 1938-39.

The following table shows the value of production in 1955-56 in each State for the various classes of industry.

## FACTORIES: VALUE OF PRODUCTION, 1955-56. ('000.)

(ii) Total and Averages, 1938-39 and 1951-52 to 1955-56. The value of production and the amount per person employed and per head of population are shown in the following table. For Australia as a whole, the value of production per head of population increased from £29.34 per head in 1938-39 to £160.89 per head in 1955-56. For value per person employed, the increase was not quite so pronounced (from £360 per head in 1938-39 to £1,413 in 1955-56).

7. Value of Output and Cost of Production.—As the total value of the output for Australia for 1955-56 was recorded as £3,763,710,000, there remained, after payment of £2,125,819,000 for the value of the materials used, £853,469,000 for salaries and wages and £139,127,000 for power, fuel and light, a balance of £645,295,000 to provide for all other costs and overhead expenses such as rent, interest, insurance, pay-roll tax, income tax, depreciation, etc., as well as drawings by working proprietors and profit. The following table gives corresponding particulars for each State for the year 1955-56:—

FACTORIES: VALUE OF OUTPUT AND COST OF PRODUCTION, 1955-56.

State.		Materials Used. (a)	S Power, Fuel Salaries and Light.		Balance. (Output less Materials, Fuel and Wages.)(c)	Total Value of Output.

### § 9. Value of Land, Buildings, Plant and Machinery.

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1955-56:—

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1955-56.  $(\mathfrak{L}'000.)$ 

							<del></del>
Value of—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Land and buildings	260,268	214,921	52,602	48,353	32,859	46,579	655,582
Plant and machinery	298,913	258,295	85,777	63,596	56,534	40,425	803,540
Total	559,181	473,216	138,379	111,949	89,393	87,004	1,459,122

<sup>(</sup>a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) Total for Australia. The following table shows for Australia as a whole, the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938-39, and 1951-52 to 1955-56.

(a) Includes estimated value of rented premises.

Prior to 1929-30, the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929-30, a growth of £95 million in 27 years. During the three years ended 1932-33, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and it stood at £655.6 million in 1955-56.

3. Value of Plant and Machinery.—(i) Total for Australia, 1938-39 and 1951-52 to 1955-56. The following table shows for Australia the approximate value of plant and machinery used in factories.

FACTORIES: VALUE OF PLANT AND MACHINERY(a), AUSTRALIA. (£'000.)

Grand Total	143,662	410,144	493,534	580,715	698,292	803,540

(a) Includes estimated value of rented plant and machinery.

Except for the years 1930-31 to 1933-34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in factories in Australia. The increase in 1955-56 of £105.2 million over 1954-55 extended over all industrial classes. The greatest increase occurred in Class IV., Industrial Metals, Machines, Conveyances.

(ii) Totals in each State. The following table shows the value of plant and machinery in each State during the years 1938-39 and 1951-52 to 1955-56. During 1955-56 increases occurred in all States, New South Wales showing the largest increase, £40.3 million.

### § 10. Principal Factory Products.

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau and in the bulletin Secondary Industries.

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1954 to 1956. A more complete list, together with values, where available, is published in the bulletin Secondary Industries.

(a) Production commenced late in 1955-56. Number produced in 1956-57 was 126,498.
(b) Excludes Wheatmeal for Baking included with Flour.
(c) Includes Television Cabinets.
(d) Including mixtures predominantly of the fibre mentioned.

### § 11. Individual Industries.

1. General.—Particulars in pp. 212-239, §§ 2-9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

The statistics in the following tables should be read in the light of the following definitions.

Factory. A factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power, other than manual, is used.

Average Number of Persons Employed. All persons employed in the manufacturing activities of a factory are counted as factory employees, including working proprietors and "out-workers". The average number of persons employed means, in general, the average number over the whole year and not the average over the period worked.

Value of Materials Used. This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

Value of Fuel, etc., Used. This item includes also the cost of power and light used, of lubricants and of water.

Value of Output. The amounts given under this heading represent the selling value, at the factory, of goods made or processed during the year, including by-products, also the value of other work done.

Value of Production. The value of production is obtained by deducting "Value of materials used" and "Value of fuel used", as defined above, from the "Value of output". This method of valuing factory production has been adopted by the Statistical offices throughout Australia.

Rated Horse-power of Engines Used. Statistics of power used in factories other than Central Electric Stations relate to the "rated horse-power" of engines ordinarily in use.

For more detailed definitions see § 1, par. 6 of this chapter, page 209.

Details of some of the principal articles produced in factories in Australia during the years 1953-54 to 1955-56 are shown in the table in the preceding pages (§ 10).

2. Portland Cement and Cement Goods.—The manufacture of Portland Cement and Cement goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1955-56 and for a series of years in the following table.

## PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS.

3. Chemicals, Drugs and Medicines.—In 1945-46, the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations, which previously had been combined. Details for each of these industries are given in the next two tables for 1955-56 with comparative figures for previous years. However, it should be noted that in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

- (a) Not available for publication; figures are included in the total for Australia.
- 7. Iron and Steel Works and Engineering.—(i) General. In 1945-46, the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel, and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers, not elsewhere included. Detailed statistics for the four groups mentioned are shown in the following tables.
- (ii) Smelting, Converting, Refining and Rolling of Iron and Steel. In the following table particulars are shown for each State for 1955-56 and for Australia in selected years for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL. 1955-56.

8. Extracting and Refining of Non-ferrous Metals: Alloys.—The following table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore, for each State during 1955-56 and for Australia for a series of years. It should be noted that as "Ore Beneficiation and Concentration", formerly included as part of this section of Manufacturing Industry, was transferred to the Mining Industry in 1952-53 details for that and later years are not comparable with those for 1951-52 and earlier years.

EXTRACTING AND REFINING OF NON-FERROUS METALS: ALLOYS. 1955-56.

10. Railway and Tramway Workshops (Government and Local Authority).—The railway and tramway workshops, which form an important part of Class IV., are chiefly owned by State Governments and Local Authorities. Workshops (fourteen in 1955-56) controlled by non-public bodies are not included in the figures below:—

TRAMCARS AND RAILWAY ROLLING STOCK.(a) 1955-56.

<sup>(</sup>a) Government and Local Authority only.

A railway workshop in the Northern Territory is chiefly engaged in making repairs to rolling stock, etc., no new goods being manufactured. Particulars of this establishment are not included in any of the tables in this chapter.

11. Motor Vehicles.—The industries catering for the motor trade are included in Class IV., Industrial Metals, Machines and Conveyances. In the table below a summary is given of the principal statistics for 1955-56 for each branch of industry associated with the motor trade of Australia.

### MOTOR VEHICLES: CONSTRUCTION, ASSEMBLY, REPAIRS, ETC., AUSTRALIA. 1955-56.

Items.			Construc- tion and Assembly.	Repairs.	Motor Bodies. (a)	Motor Acces- sories.	Total.
Number of factories			70	8.075	1,344	218	9,707
Number of persons employed			18,148	52,751	25,822	9,238	105,959
Salaries and wages paid		£'000	17,931	35,667	22,368	8,016	83,982
Value of power, fuel, etc., used		£'000	804	1,098	766	521	3,189
Value of materials used		£'000	30,091	36,928	50,263	9,651	126,933
Value of production		£'000	25,750	54,669	32,755	13,285	126,459
Total value of output		£'000	56,645	92,695	83,784	23,457	256,581
Value of land and buildings		£'000	10,043	39,772	11,365	5,055	66,235
Value of plant and machinery		£'000	7,704	10,909	8,119	5,658	32,390
Horse-power of engines ordinari	y in i	ise h.p.	45,844	56,876	69,409	30,834	202,963

(a) Includes motor body repairing, panel beating, duco spraying, etc.

In the next table similar details are shown on a State basis for 1955-56 and for Australia for selected years for these industries combined.

The table below shows the production and imports of motor bodies for 1938-39 and 1951-52 to 1956-57:—

### PRODUCTION AND IMPORTS OF MOTOR BODIES(a): AUSTRALIA.

	1938–39.	1951–52.	1952-53.	1953–54.	1954–55.	1955–56.	1956–57. (b)
Motor Bodies(a)— Made No. Assembled from Panels imported	79,436	98,470	90,822	114,878	127,709	139,098	125,548
or made elsewhere No. Imported (d) No.	(c) 532	29,205 101,628	21,566 7,568	43,077 26,874	62,408 37,924	94,953 19,041	74,329 7,062

(a) Excludes sidecars. (b) Preliminary—subject to revision. (c) Not available. (d) Includes bodies on complete vehicles imported.

12. Agricultural Machines and Implements.—Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment, the manufacture of agricultural implements constitutes an important branch of Australian

industry. The articles manufactured include a wide range of implements for tillage, seeding and planting, and the harvesting of crops. Other farm machinery made includes windmills, chaff-cutters and machinery used in the dairying industry.

The following table shows details of establishments classified as agricultural implement works in each State for 1955-56 and for Australia for a series of years.

13. Wireless and Amplifying Apparatus.—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930-31, a new classification of factories was adopted and "Wireless Apparatus" was shown as a separate industry. The industry is confined mainly to New South Wales and Victoria, but is becoming increasingly important in South Australia. The number of broadcast listeners' licences increased from a third of a million in 1930-31 to over 2,100,000 at 30th June, 1957 and this increase reflects the advancement of the industry during that period. At the 30th June, 1957, 74,000 television viewers' licences had been issued. During the 1939-45 War, considerable expansion took place in the industry to meet the requirements of the fighting services and apart from a slight drop in output in 1945-46, and in 1952-53 this expansion has continued.

Note.—There were 368,500 wireless receiving sets (including radiograms) and 126,600 television receiving sets made in 1956-57.

- 14. Cotton.—(i) General. Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938-39 was 18 million lb. and slightly over 3.5 million lb. in the five years ended 1955-56. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop. The downward trend which commenced with the war in the Pacific persisted until recent years but production has recently risen and in 1954-55 amounted to 3,597,000 lb. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XXII.—Agricultural Production.
- (ii) Ginning. The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (in 1956-57) from India, Pakistan, Brazil, Mexico, Peru and the United States of America.
- (iii) Spinning and Weaving. The post war expansion in the spinning and weaving section of the cotton industry marks an important stage in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1938-39, and 1951-52 to 1955-56.

15. Wool Carding, Spinning and Weaving.—The importance of this industry is emphasised by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability.

The following quantities of yarn were used in these establishments during 1955-56:—Worsted or woollen, 8,210,946 lb.; wool or worsted and cotton, 175,841 lb.; wool or worsted and rayon, 672,393 lb.; wool or worsted and nylon, 62,980 lb.; other wool or worsted mixtures, 171,147 lb.; cotton, 10,067,639 lb.; mercerised cotton, 451,797 lb.; cotton and rayon, 19,429 lb.; rayon, spun, 1,202,420 lb.; rayon filament, 4,390,778 lb.; silk, 31,808 lb.; nylon, spun, 553,929 lb.; nylon filament, 2,454,549 lb.; other yarns, 770,794 lb. Production of garments and stockings is shown in § 10 (see p. 240).

17. Tanning, Currying and Leather Dressing.—(i) Details of Industry. In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. Boots and Shoes.—(i) Details of Industry. The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following tables refer to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand shoes, goloshes and gum, etc., boots of rubber are not included here, being classified under Rubber Goods, see para. 38, page 268.

<sup>(</sup>a) Includes wheatmeal for baking and sharps.

In addition, 610,000 tons (2,000 lb. per ton) of bran and pollard were produced in 1955-56 and 631,000 tons in 1956-57. The total quantity of wheat ground in flour mills was 72,329,000 bushels in 1955-56 and 76,844,000 bushels in 1956-57.

<sup>(</sup>b) Preliminary, subject to revision.

23. Bakeries.—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory as explained at the beginning of this section. For that reason, the tables do not give complete details of the industry, as a large number of bakeries, etc. not coming within the definition are excluded. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

#### BAKERIES (INCLUDING CAKES AND PASTRY).

<sup>(</sup>a) Includes confectionery in Tasmania.

24. Sugar-mills.—(i) General. Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XXII.—Agricultural Production.

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following table refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XXII.—Agricultural Production, which relate to harvest years.

(ii) Details for States. The following table shows details of the operations of sugar mills in New South Wales and Queensland for the years 1938-39 and 1951-52 to 1955-56:—

	SU	UGAR-MI	LLS.

- 25. Sugar-refining.—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1955-56, there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia. The total quantity of raw sugar treated amounted to 503,268 tons for a yield of 482,660 tons of refined sugar.
- 26. Confectionery.—The figures for 1955-56 for each State and for Australia for a series of years are shown hereunder:—

<sup>(</sup>ii) Production. During the 1939-45 War, production of jams increased greatly and an output of 171 million lb. was attained in 1943-44. Production afterwards decreased, but attained a new record of 198.5 million lb. in 1947-48. It dropped to 84.1 million lb. in 1955-56. Preliminary figures for 1956-57 show production as being 91.2 million lb.

The peak output of preserved fruit occurred in 1953-54 with 338.6 million lb. compared with the previous highest level of 256.1 million lb. attained in 1951-52. Production in 1955-56 was 304.3 million lb. and preliminary figures for 1956-57 show production as being 297.6 million lb.

There has also been a marked development in the production of canned vegetables. In 1938-39, output totalled 10.3 million lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119.1 million lb. in 1944-45. However, it has since declined and in 1955-56 amounted to 77.8 million lb. Preliminary figures for 1956-57 show production as being 97.2 million lb.

The following table shows the total quantity and value of jams, pickles, sauces and other items manufactured in each State in 1955-56:—

JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES: 1955-56.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXIV.—Farmyard, Dairy and Bee Products.

30. Meat and Fish Preserving.—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported is referred to in Chapter XXIII.—Pastoral Production. In recent years, there has been considerable expansion in the canning of meat and fish.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XXIII.—Pastoral Production.

31. Breweries.—(i) Details of Industry. The following table gives particulars of breweries in each State for the year 1955-56 and for Australia for a series of years. It should be noted, however, that the data shown are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

(a) Excludes Excise Duty.

(ii) Production, Consumption, Materials Used. The quantity of ale, beer and stout brewed fell from 73.7 million gallons in 1928-29 to 49.8 million gallons in 1931-32, but thereafter increased each year to 109.2 million gallons in 1941-42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently annual output remained static at about 100 million gallons from 1942-43 to 1944-45. Thereafter production increased, and in 1956-57 amounted to over 220 million gallons.

The average annual consumption of ale, beer and stout prior to the economic depression of the early thirties exceeded 11 gallons per head of the population: it dropped to 7.32 gallons in 1931-32, increased to 13.76 gallons in 1941-42 and declined again to about 13 gallons during the period of control. The consumption per head had increased to 22.88 gallons by 1956-57.

The table below shows the quantities of materials used and the quantity and value of ale, beer (excluding waste beer) and stout brewed in each State during 1955-56:—

BREWERIES: MATERIALS USED AND PRODUCTION, 1955-56.

<sup>(</sup>a) Not available for publication; figures are included in the total for Australia. (b) Excludes Excise Duty.

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw materials. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929–30 to over 3 million lb. in 1930–31. During the 1939–45 War, about 4.7 million lb. of Australian-grown leaf was used annually, and the 1955–56 usage was 5.2 million lb. For further information see Chapter XXII.—Agricultural Production.

Imports of tobacco during 1955-56 comprised—manufactured tobacco, 276,374 lb.; cigars, 54,414 lb.; cigarettes, 971,436 lb.; unmanufactured tobacco, 45,814,570 lb. and in 1956-57 were 236,314 lb., 256,170 lb., 464,076 lb. and 40,765,547 lb. respectively.

34. Sawmills, etc.—The most important industry in Class X. is sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the following table, together with plywood and veneer mills.

#### SAWMILLS AND PLYWOOD AND VENEER MILLS.

The sawmill output of native timber, which declined from 740 million super. feet in 1925–26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938–39 and by 1956–57 had risen to 1,434 million super. feet. Further reference is made to the sawmilling industry in Chapter XXV.—Forestry.

35. Cabinet and Furniture Making and Upholstery.—These industries constitute the principal manufactures in Class XI. The following table shows particulars for each State in 1955-56:—

#### CABINET AND FURNITURE MAKING AND UPHOLSTERY, 1955-56.

36. Printing Works.—Printing and bookbinding rank high in importance among the industries of Australia, and in 1955-56 afforded employment for 38,899 employees, and paid £32,694,000 in salaries and wages, while the value of output amounted to £105,857,000. The first table below gives particulars of establishments engaged in general printing in each

State for 1955-56. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow:—

37. Paper Making.—Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania, whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938–39 to 88,000 tons in 1946–47. It remained at about this level until 1949–50 but has since increased steadily to a total of 186,000 tons in 1955–56.

The number of factories operating in 1955-56 comprised four in New South Wales, seven in Victoria, one in Queensland, South Australia, and Western Australia and three in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States wrappings, other papers and boards. Particulars for this industry are shown in the following table.

PAPER MAKING, INCLUDING PULP MILLS: AUSTRALIA.

39. Electric Light and Power Works.—(i) Details of Industry. The increased demand for electrical energy has been responsible for considerable development in electric light and power works during recent years. For further information on this subject see Chapter VIII.—Electric Power Generation and Distribution. Particulars of the industry for each State during the year 1955-56 and for Australia for a series of years are shown below:—

	482	344	84	(a)	22	(a)	1,031

(a) Not available for publication; figures are included in the total for Australia. (b) In addition, 2,058,426 tons of metallurgical coke were made in Coke Works in 1955-56.

Since 1938-39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached nearly 47 thousand million cubic feet in 1956-57.

#### CHAPTER VIII.

#### ELECTRIC POWER GENERATION AND DISTRIBUTION.

This chapter is divided into three major parts. A.—Introduction, which deals briefly with the resources, generation and distribution and future developments, of electric power in Australia; B.—The Snowy Mountains Hydro-electric Scheme; and C.—The origins, development, present situation and new projects of electrical systems in each Australian State and Territory. A Statistical Summary is appended.

It should be noted that the information contained in the chapter relates to situations existing and projects contemplated in 1957 and that it may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

#### A. INTRODUCTION.

1. Distribution of Population and Location of Power Resources.—The geographical pattern of electric power generation and distribution in Australia has been affected by two main influences—the distribution of population, with a resulting distribution of industry, and the location of fuel and water resources.

The Australian population increased between 1939 and 1957 by approximately 2,675,000 to reach a total of 9,643,000. The two principal centres of population and industry, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of the Commonwealth, materially influences the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1956, thermal power equipment represented 78 per cent., hydro plant 16 per cent. and internal combustion equipment 6 per cent. of the total installed generating capacity.

Most of Australia is poorly supplied with water, only 15.2 per cent. receiving an annual rainfall of 30 inches or over. This is confined largely to Tasmania and to the narrow coastal strip on the east coast. The possibility of establishing large hydro or steam stations in inland areas is, therefore, strictly limited by the lack of sufficient water for feed and condensing purposes.

The only region on the mainland of Australia where land is high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales through to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW within the next 25 years. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is only a small proportion of the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. Whereas on the mainland the chief source of energy is coal, water occupies this position in Tasmania.

2. Electric Power Generation and Distribution.—(i) Ownership of Undertakings. At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but some measure of governmental control was exercised through various electric light and power Acts. This legislation was designed to provide standards of safety, and to define the scope and obligations of the private organizations engaged in producing electric power for sale. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1957, all major generating stations supplying the public were, in varying degrees, under the control of State statutory organizations, constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies within the various States. There are, however, still a large number of small private and municipal enterprises generating power

for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas, however, it has been and remains the practice for central authorities to sell power in bulk to local distributing organizations who undertake local reticulation.

In addition to the private, local government and statutory organizations who generate and/or distribute electricity for sale, there are numerous firms generating power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, and the power regularly produced for such internal consumption is, in any case, a relatively small proportion of total power produced.

(ii) Power Production and Generating Capacity. In the period between 1938-39 and 1956-57, production of electric power in Australia increased by almost 300 per cent. from 4,688 to 18,377 million kilowatt hours.

Since the 1939-45 War, industry and commerce have expanded rapidly, many new houses have been built and the population has increased by approximately 20 per cent. These factors, together with extension of electricity supplies to rural areas and the increased use of domestic electric appliances, have all contributed to bring about a position where the greatly increased demand for power cannot be satisfied by the existing installed capacity of central generating stations.

At 30th June, 1956, installed generating capacity in Australia totalled approximately 4.14 million kW compared with 1.62 million kW in 1939, an increase of about 156 per cent. In 1955-56, each kW of installed capacity produced an average of 4,027 kWh compared with an average of 3,000 kWh in 1938-39. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed.

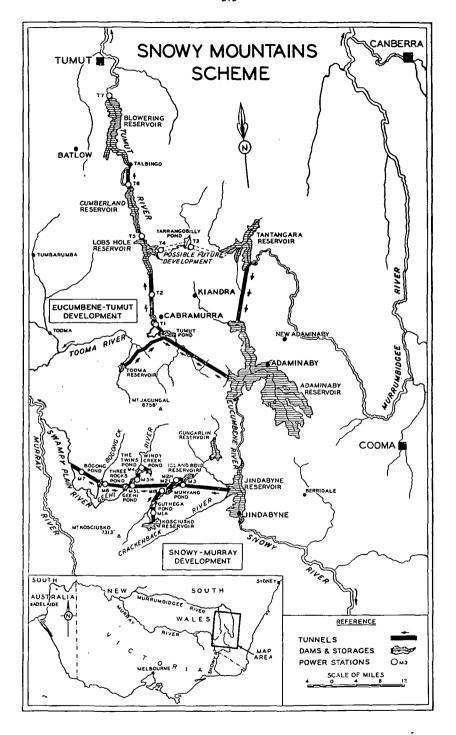

3. Future Developments.—Each central authority has embarked upon constructional programmes to overcome the lag between supply and demand. Industrial and commercial expansion, however, has continued on a high level, and several projects have been commenced or planned in various parts of the Commonwealth for suburban and main railway line electrification. Other fields directly connected with the demand for power, such as house building, must also be taken into account.

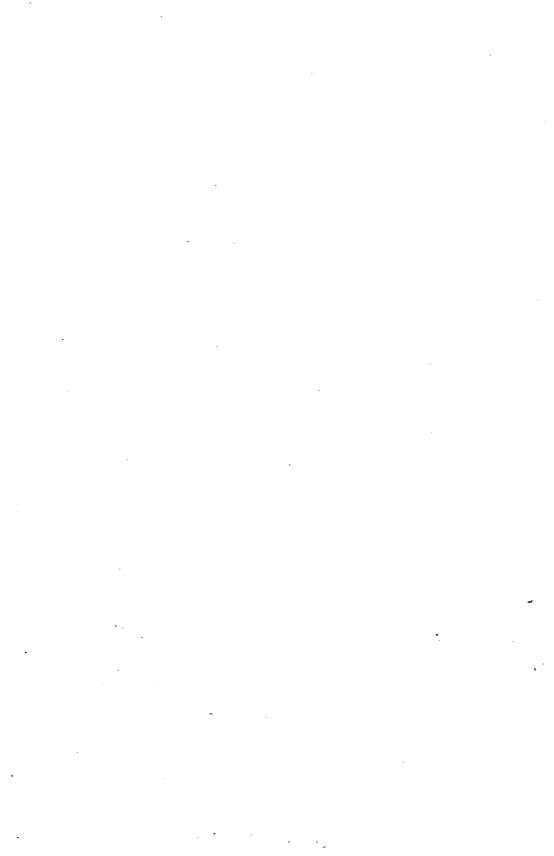

An important factor to be considered in respect of future development is the increasing relative importance of the generation of electric power from water resources.

#### B. SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME.\*

- 1. Geography of Area.—The Snowy country in south-eastern New South Wales is the only part of the continent in which any altitudes exceed 7,000 feet, and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 120 inches a year in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy, which flows southwards to Bass Strait.
- 2. Description of Scheme.—(i) General. The proposals at present being implemented by the Snowy Mountains Hydro-electric Authority fall into two groups, Tumut Development and Snowy-Murray Development, each having its associated plans for hydro-electric power production. The features described hereunder may be identified by reference to the map on page 273. It should be remembered that, as the final designs for practically every element of the Scheme have not yet been completed, and in many cases will not be completed for some years, any figures which are now quoted in respect of those elements will undoubtedly be subject to modification in the future.
- (ii) Tumut Development. The central feature of this part of the Scheme is diversion to, and regulation of, the waters of the Tumut River, a stream which is at present completely unregulated but contributes approximately half of the flow of the Murrumbidgee River at Gundagai below the existing main storage on the Murrumbidgee at Burrinjuck. To the Tumut will be diverted the waters of the Eucumbene, a major tributary of the Snowy, and the headwaters of the Tooma, a tributary of the Upper Murray. The headwaters of the Murrumbidgee itself will also be diverted to the Tumut, principally to secure desirable electric power.

<sup>•</sup> See also Chapter IX.—Water Conservation and Irrigation, Division A, §3, para. 4 of this issue and special detailed article in Official Year Book No. 42, pp. '1103-1130.

A major dam is being constructed on the Eucumbene River at Adaminaby, creating an ultimate usable storage of 3.5 million acre feet, and from here, water will be conveyed by a 14-mile tunnel to Tumut Pond, on the upper reaches of the Tumut River, where it will be joined by the waters from the Tooma, diverted by aqueducts and tunnels. From Tumut Pond, the water will be conveyed by another tunnel to power station T1 with an installed capacity of 320,000 kW and by a further tunnel to power station T2 with a capacity of 280,000 kW thence discharging into a smaller storage at Lob's Hole also on the Tumut River.

Between the foot of the Lob's Hole storage and the top of the Blowering storage will be power stations T5 and T6. The total capacity of these stations will be 410,000 kW.

The Blowering storage with its capacity of about 800,000 acre feet, is an adjunct to the Snowy Mountains Hydro-electric Scheme and will be required for the regulation both of the Tumut waters and of the waters diverted into the Tumut. This regulation is essential if the waters impounded are to be fully utilized for irrigation purposes. At the foot of the Blowering Dam will be the last of the Tumut Power stations, T7, with a capacity of some 60,000 kW, but this station will operate only when water is released for irrigation. The State of New South Wales will be responsible for the construction of the Blowering works.

The waters of the Upper Murrumbidgee will be brought from a major storage at Tantangara holding 200,000 acre feet, through 9 miles of tunnel, to the Adaminaby storage and will augment the flow through power stations T1, T2, T5, T6, and T7 on the Tumut River.

The total extra new water which will reach the Murrumbidgee is expected to average 528,000 acre feet per annum.

(iii) Snowy-Murray Development. Investigation of this section of the Scheme is not as far advanced as that for the Tumut Development and considerable modifications may be made to the lay-out proposed by the Commonwealth and States Snowy River Committee. In the original lay-out the central feature of this part of the Scheme is the diversion of the waters of the Upper Snowy itself from a major dam to be constructed at Jindabyne on that river, a little below its junction with the Eucumbene and the Crackenback Rivers. This reservoir will have a storage capacity of approximately 1,100,000 acre feet and from it a tunnel approximately 28 miles in length will run right through the Great Dividing Range finally discharging into Swampy Plains River, not far above its junction with the Murray proper.

Into this tunnel will be collected a considerable quantity of water from the very high altitude country of the Kosciusko area and from a number of smaller tributaries of the Murray. The collection from the Kosciusko area commences at the Kosciusko Reservoir at an altitude of 5,765 feet, not many miles below the source of the Snowy. A tunnel will convey water from this reservoir to power station M.1.A. with an installed capacity of 60,000 kW and thence to a pond on the Snowy River, at its junction with the Guthega River.

From the Guthega Pond, a further tunnel and penstock lead to station M.1.B. with a capacity of 60,000 kW (ultimate capacity 90,000 kW), which discharges into a pond at the junction of the Munyang and Snowy Rivers. Construction of this part of the scheme has been completed. Munyang Pond will discharge into a tunnel leading to station M.2.L., with installed capacity of 60,000 kW. This station also receives the flow of a tributary of the Snowy River via station M.2.H. From station M.2.L., the water discharges into a reservoir at Island Bend on the main stream of the Snowy.

From the Island Bend reservoir, a vertical shaft, 1,100 feet deep, will lead to the main tunnel from Jindabyne reservoir previously referred to, passing on its way through power station M3 with installed capacity of 265,000 kW. Into this main tunnel will also be collected waters from the Upper Murray tributary streams previously mentioned.

Of these, the most important is the Windy Creek-Geehi River series. A pond on Windy Creek, a small tributary of the Geehi, situated at an altitude of over 5,000 feet, will provide water through a tunnel to station M4 with an installed capacity of 75,000 kW thence by aqueducts and tunnel to station M5.H. with an installed capacity of 40,000 kW discharging into the M5.L. Intake Pond on the Geehi River.

A vertical shaft will lead this water into the main tunnel, passing through station M5.L. with an installed capacity of 20,000 kW. The combined waters thus collected into the main tunnel will pass through station M6 with an installed capacity of 540,000 kW and then discharge into a pond on Bogong Creek, another of the Upper Murray tributaries. At this point, the water is still at an altitude of nearly 2,000 feet, and the main tunnel will thence continue to station M7 with a capacity of 540,000 kW.

From M7 the total collected waters will flow into the Swampy Plains River at a point some seven miles, in a direct line, above its confluence with the Murray. It will be necessary, however, to provide a further storage on the Murray for the proper regulation of these waters for irrigation purposes.

The total water flowing to the Murray from these works will amount on the average to 722,000 acre feet per annum, but since 280,000 acre feet which now reach the Murray from the Tooma will be, as indicated previously, diverted to the Tumut, the total extra water actually reaching the Murray will be, on the average, 442,000 acre feet per annum.

An integral part of each development is the construction of hundreds of miles of aqueducts to collect and divert water from the many streams in the area into storages and tunnels.

3. Utilization of Power.—The total capacity of all stations in the Scheme will be of the order of 3,000,000 kW. By comparison, the present total installed capacity of all the generating stations in the Commonwealth is over 4,000,000 kW.

If, however, the demand for power continues to increase as expected, the major source of power must still be thermal stations. The operation of the whole Scheme is dependent on the appropriate development and integration of these stations, as otherwise there would be a serious loss in ultimate economy; all economic estimates therefore postulate that thermal capacity will be expanded so as to preserve an appropriate ratio.

It has been estimated with a reasonable degree of probability that the power available from the Scheme will save coal to the order of five million tons annually.

The first call on the power generated under the Snowy Scheme will be by the Commonwealth Government for supply to the Australian Capital Territory of power which it needs in that area, particularly for certain projects with defence significance, and no indication can be given at present as to how great that call will be. It is not likely, however, to amount to more than a relatively small fraction of the total power available, and it has been agreed that the balance will be divided between the States of New South Wales and Victoria in a proportion of two-thirds to New South Wales and one-third to Victoria.

The first power station in the scheme, M.1.B., the Guthega Project, is now producing power. A 132,000 volt transmission line extends from the power station via Cooma to the Australian Capital Territory where it feeds into the main New South Wales transmission network. The construction of the Eucumbene-Tumut diversion tunnel, Tumut Pond Dam, and Power Station T1 is in progress. The construction of the Adaminaby Dam is being supervised by the Public Works Department of New South Wales on behalf of the Snowy Mountains Authority and a contract for this work was let in May, 1956, to a group of American engineering contractors who were already engaged on the construction of the Eucumbene-Tumut tunnel and Tumut Pond Dam for the Authority. Construction of the embankment has been sufficiently advanced to permit closure of the diversion tunnel gates, and storage of water in the reservoir commenced during June, 1957. Power Station T1 will enter the New South Wales network via a 330,000 volt transmission line early in 1959.

#### C. STATES AND TERRITORIES.

#### § 1. New South Wales.

- 1. General.—In Official Year Book No. 39, an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales, describing in particular the growth of the systems of the Sydney County Council, the Department of Railways, the Electric Light and Power Supply Corporation Ltd., the Southern Electricity Supply and the Clarence River County Council (now the Northern Rivers County Council). A description was also given of the legislation which constituted The Electricity Authority of New South Wales and The Electricity Commission of New South Wales as well as legislation existing prior to their constitution. At present, the three main Acts governing electricity supply in New South Wales are:—
  - (i) The Local Government Act 1919 which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.
  - (ii) The Electricity Development Act 1945-1957 which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

- (iii) The Electricity Commission Act 1950-1954 which constituted The Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.
- 2. Organization.—(i) The Electricity Commission of New South Wales.—The Commission, which was constituted under the Electricity Commission Act 1950, consists of five members of whom one is a full-time Chairman. In its administration, the Commission is directly responsible to the Minister for Local Government.

When the Commission was established, 93 per cent. of the State's power requirements were generated by four bodies—the Sydney County Council, the Department of Railways, Southern Electricity Supply (a division of the Department of Public Works) and the privately-owned Electric Light and Power Supply Corporation Ltd. The Electricity Commission Act 1950 and the Electricity Commission (Balmain Electric Light Company Purchase) Act 1950 provided for the acquisition of the power stations and main transmission lines of those bodies. The transfer of the power stations and transmission lines of all these undertakings has now been effected. On 1st July, 1956, the Commission acquired the power station and bulk supply system of the Tamworth City Council, which supplied in bulk to a number of distributing bodies in the north of the State.

The main function of the Commission is the generation and transmission of electricity which it sells in bulk to distribution authorities (mainly local government bodies) throughout a large part of the State, to the government railways and tramways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources. An important exception is the hydro-electric potential of the Snowy Mountains region which is being developed by the Snowy Mountains Hydro-electric Authority, a Commonwealth Government body.

(ii) Other Electricity Supply Authorities. The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of a grouping of shire and/or municipal councils) or private franchise holders. At 1st September, 1957, there were 96 of these supply authorities throughout the State of which 31 also generated part or whole of their power requirements. The majority of country power stations are small oil engine plants which are becoming increasingly costly to operate. Consequently, they are gradually being closed down as the main transmission network is extended further afield.

Over the past few years, there has been a distinct trend towards the consolidation of supply areas, many of which have been regarded as being too weak individually to form satisfactory areas for distribution. Generally these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped for electricity supply purposes only and administered by a county council of representatives elected by the constituent shire and municipal councils.

It is interesting to note that of the 230 shires and municipalities in New South Wales, 179 are included in one or other of the 35 electricity county districts. Twenty-eight of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council which at 30th June, 1957, was supplying 386,976 consumers in the Sydney Metropolitan Area. Unlike the other county councils, which are constituted under the provisions of the Local Government Act 1919, the Sydney County Council was specially constituted under the Gas and Electricity Act 1935.

(iii) The Electricity Authority of New South Wales.—The Electricity Authority was constituted under the Electricity Development Act 1945-1957, for the stated purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. The Authority, which is a regulatory body only, consists of seven members of whom one is a full time Chairman. Like the Commission, it is responsible to the Minister for Local Government.

The main functions of the Authority are as follows :--

(a) Distribution. Under the Act the approval of the Authority is required, inter alia, for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.

In exercising these powers, the Authority is mainly concerned to see that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts. Many of the new county districts referred to earlier have been formed largely as a result of the Authority's advice.

(b) Rural Electrification. The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing

very rapidly (see para, 4, page 280).

(c) Safety. The Electricity Development Act 1945-1957 contains provisions for the making of regulations relating to most aspects of safety and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumer's installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.

(d) Generation and Transmission. The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission). The Authority may, for example, refuse approval for the establishment of a new power station if it is more economical and in the general interest for the supply authority concerned to purchase in bulk from another body.

3. Generation and Transmission.—(i) General. Except in the Snowy Mountains district and in one or two other areas, New South Wales is lacking in major water power potential and for the generation of electricity the State is, therefore, mainly dependent on steam power stations. During the year ended 30th June, 1956, coal-fired stations generated 93 per cent. of the State's energy requirements, hydro-electric stations 5 per cent. and internal combustion plants 2 per cent.

The proportion of power generated in hydro-electric stations will increase considerably in the future with the development of the Snowy Mountains Scheme by the Commonwealth Government. Nevertheless, coal-fired steam power stations will continue to supply the

greater part of requirements for the foreseeable future.

(ii) Major Generating Stations. In New South Wales, the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through inter-connected transmission networks. The greater part of the coal-fired generating plant is now concentrated within the bounds of the major coal-fields, where the big industrial centres and most of the population are also located.

As at 1st July, 1957, the major power stations within the main inter-connected system and their installed capacities were as follows:—Steam—Bunnerong "A" and "B" (Sydney), 375,000 kW; Pyrmont "A" and "B" (Sydney), 220,000 kW; White Bay (Sydney), 122,000 kW; Ultimo (Sydney), 80,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 64,500 kW; Zarra-street (Newcastle), 65,500 kW; Tallawarra (Lake Illawarra), 120,000 kW; Lake Macquarie, 100,000 kW; Wallerawang (near Lithgow), 30,000 kW; Lithgow, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW. Hydro—Hume (near Albury), 25,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 46,150 kW. The total installed capacity of the main inter-connected system was 1,462,150 kW.

It will be seen, therefore, that the greater part of the State's generating plant is concentrated within a hundred mile radius of Sydney—that is, at Sydney itself (five stations), Port Kembla, Newcastle, Mailand, Penrith and Lithgow. The largest single station

outside this area is located at Tamworth, capacity 27,000 kW.

(iii) Interconnected Network. Over 90 per cent. of electricity consumers in New South Wales are now supplied through the main inter-connected systems. In this network, transmission lines operating mainly at 132,000, 66,000 or 33,000 volts interconnect the various power stations and distribute power to load centres throughout most of the south-eastern portion of the State and the north coast region. At 30th June, 1957, there were in service 915 circuit miles of 132 kV lines (including 65 built for future 330 kV operation) and about 1,600 circuit miles of 66 kV lines. The total installed capacity of the interconnected systems, which includes an aggregated capacity of 62,555 kW for various stations, including the Northern Rivers and Bega Valley County Districts linked with the main system was 1,524,705 kW (as at 1st July, 1957).

(iv) Separate Systems and Total State Installed Capacity. There are a number of separate systems and isolated plants which have not yet been interconnected with the main network and which at 1st July, 1957, had an aggregate installed capacity of 107,000 kW. The most notable are the Tamworth and Muswellbrook Coal Company systems. The Tamworth system (27,000 kW), now taken over by the Commission, supplies power to an extensive district in the north of the State through 66,000 volt and 33,000 volt transmission lines. Both the Tamworth and Muswellbrook systems are to be interconnected with the main system in the near future. Some councils along the Victorian border receive bulk supplies from Victorian authorities.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 1,631,705 kW (as as 1st July, 1957).

(v) Future Development. Construction is proceeding on new major power stations on the coalfields at Lake Macquarie, near Newcastle (330,000 kW), Tallawarra, near Port Kembla (320,000 kW), and Wallerawang, near Lithgow (240,000kW). These stations are linked with Sydney by 132,000 volt transmission lines, and extensive additions are also planned to the 132,000 volt system to supply increasing loads at various metropolitan and country centres. Sections of a superimposed 330,000 volt system, which will eventually extend from the Snowy Mountains area to Armidale in the north west, are also under construction. A hydro-electric power station on the Hume Reservoir of 50,000 kW capacity, connected to the New South Wales network through a 132,000 volt transmission line between Hume and Wagga Wagga is in part operation and is almost complete. Plans provide for the construction of a hydro-electric power station on the Warragamba Dam of 50,000 kW capacity to be connected to the 132 kV Sydney metropolitan network.

In addition to the power stations mentioned above, which are under construction or planned for the system controlled by the Electricity Commission, a number of local government bodies have plans in hand for the development of independent power stations. Of these the more important are as follows:—The Northern Rivers County Council is extending a steam power station at Koolkhan (near Grafton). Plans provide for an installed capacity of 25,000 kW. The first three units, totalling 17,500 kW, were in operation at 30th June, 1956. The North-West County Council is proceeding with the establishment of a 12,000 kW steam power station on the Ashford coal-field. The New England County Council and the Bega Valley County Council are extending small hydro-electric power stations on the Oakey River (near Armidale), and Georges Creek (near Bega) respectively.

(vi) Hydro-electricity. The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains Area (see Snowy Mountains Hydro-electric Scheme, p. 272). Apart from this area, there are in operation the first of two 25,000 kW units to be installed at the new hydro-electric station at the Hume Dam, the 20,000 kW station at the Burrinjuck Dam, and the 7,500 kW station at the Wyangala Dam. The output of all these stations is dependent on the release of water for irrigation.

Of the remaining hydro installations, the largest is that of the Northern Rivers County Council on the Nymboida River, a tributary of the Clarence. This station has a capacity of 4,600 kW.

The New England County Council has constructed a 2,500 kW hydro scheme near Armidale on the Oakey River, a tributary of the Macleay River, and plans to increase the capacity to 5,000 kW.

The Mullumbimby Municipal Council has in operation two 150 kW hydro units on Wilson's Creek, a tributary of the Richmond River.

The Bega Valley County Council operates a hydro-electric scheme at Brown Mountain, utilizing the headwaters of the Bemboka River. This installation now has a capacity of 1,900 kW and work is in progress on extensions to provide for two further 1,000 kW units.

The Clarence Gorge Scheme is a proposal for combined flood mitigation and hydroelectric generation on the Clarence River about 40 miles from Grafton and 240 miles from Newcastle. In February, 1955, the Clarence Advisory Committee which was set up by the New South Wales Government to report on the scheme recommended, because of economic reasons, against the construction of a dam at the Clarence Gorge either solely for flood mitigation or for the dual purpose of hydro-electric power generation and flood mitigation.

There are also possibilities of relatively large scale developments on the Shoalhaven and Macleay Rivers. Investigations have been made by the New South Wales Government but no concrete proposals have as yet been adopted.

Generally, apart from the Snowy Mountains area, hydro-electric developments are not favourable in New South Wales when compared with coal-fired steam power stations.

4. Rural Electrification.—When The Electricity Authority of New South Wales was constituted in 1946, one of its first tasks was the devising of a scheme for subsidizing the cost of rural electrification. At that time only 16,000 New South Wales farms were being served with electricity—less than one-third of those within reasonable reach of public electricity supply systems. In August, 1946, a subsidy scheme was approved by the Government and put into immediate operation. Under this scheme, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of a proposed extension and the number of consumers able to be served by the new lines. In order that the funds available for subsidy purposes might be used to the best possible advantage, the scheme is designed to encourage local electricity supply authorities to construct the more economic extensions first. This has been achieved by fixing a limit to the cost eligible for subsidy. Originally this limit was £250 per consumer when averaged over the cost of the whole extension but the limit was raised to £400 in December, 1953. Some subsidy is paid on higher cost extensions but the excess over an average of £400 is not subsidized.

Between August, 1946, and June, 1957, about 23,800 miles of new distribution lines in rural areas were erected at a cost of over £15,700,000. These lines served 33,700 farms and 23,000 other rural consumers. At 30th June, 1957, the Electricity Authority was committed to the payment of almost £7,165,000 in subsidies of which nearly £2,933,000 had actually been paid. At that time the percentage of farms connected had been raised from 22 per cent. (in 1946) to 69 per cent.

#### § 2. Victoria.

- 1. General.—In Official Year Book No. 39, a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballaarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.
- 2. State Electricity Commission of Victoria.—(i) Power and Fuel Authority. Since it began operating in 1919, the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves about 97 per cent. of the population through a supply net-work covering more than three-quarters of the populated area of the State.

Development of Victoria's State electricity system is based on the development of Victoria's extensive brown coal resources for both power and fuel in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Sixty-five per cent. of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. Ninety-six per cent. of the brown coal and all the briquette fuel are supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1956-57 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 9,859,549 tons, of which 6,682,629 tons were used in the Commission's own power stations, and 2,418,843 tons were manufactured into 617,989 tons of brown coal briquettes, 29 per cent. of the briquette output being then used for electricity production in metropolitan and provincial steam power stations.

The two functions—generation of electricity and production of fuel—are closely integrated. Apart from the large proportion of brown coal and briquette fuel directly consumed in the power stations, the actual process of briquette manufacture results also in large-scale generation of electricity, since the steam needed for processing the raw coal in the briquette factory is first used to operate turbo-generators in associated power plant which functions as part of the briquette works.

(ii) Status and Powers. Constituted by Act of the Victorian Parliament, the State Electricity Commission is a semi-government authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is

Victoria. 281

to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose, it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballaarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn and owns large housing settlements in the surrounding area. In the Kiewa hydro-electric works area, it owns the two townships of Mount Beauty and Bogong.

(iii) Electricity Supply. At 30th June, 1957, consumers in Victoria served by the State system totalled 761,806. Outside the State system, there were 23,052 other consumers served by local country undertakings. The system supplies all the Melbourne metropolitan area and nearly 1,300 other centres of population.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. Rural electrification is now more than four-fifths completed, the over-all plan to extend the State system to all populated regions of Victoria having made rapid progress during recent years. Consumers served by the State system outside the Melbourne metropolitan area (306,426) have more than doubled, and the number of farms connected to supply (35,852) has more than trebled in the past 10 years. More than two-thirds of the new consumers annually connected to supply are outside the metropolitan area. New farm connexions average about 2,500-3,000 a year.

The Commission's retail consumers totalled 590,906 at 30th June, 1957. Retail supply is administered through the metropolitan branch, seven extra-metropolitan branches (namely Ballaarat, Eastern Metropolitan, Geelong, Gippsland, Midland, North Eastern and South Western) and the North Western Region, which comprises Bendigo branch and the two sub-branches based on Mildura and Horsham (Wimmera) respectively. At 30th June, 1957, there were branch and district supply offices in 75 towns in Victoria.

(iv) Electricity Production. Electricity generated in the State system totalled 4,763 million kWh in 1956-57 or 99 per cent. of all the electricity generated in Victoria. The system comprises 22 steam, hydro and diesel power stations with a total installed generator capacity at 30th June, 1957, of 1,136,599 kW. Eighteen of these power stations, totalling 1,109,195 kW, are interconnected, and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates 44 per cent. of Victoria's electricity. Other power stations in the interconnected system comprise steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong (two stations) and Ballaarat (two stations); hydroelectric stations at Kiewa (two stations) and Eildon, and on the Rubicon and Royston Rivers (four stations), near Eildon; and three diesel stations at Shepparton, Warrnambool and Hamilton. All are Commission owned, except Spencer Street power station, which remains the property of the Melbourne City Council, although operated as a unit in the inter-connected system. Also linked with the Victorian interconnected system is the hydro station completed in 1957 at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared equally by Victoria and New South Wales.

In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system, whether steam, hydro or diesel, is assigned a predetermined function dependent upon the availability of power from each group and the over-all economics of generation. The various stations are utilized in a combination that will most economically meet the system load at a given time. This procedure results in an arrangement of the system on the following general times:—

(a) Yallourn power station, owing to the low cost of extraction and ample supply of raw brown coal, is a base load station, and is operated continuously at its maximum economic capacity.

- (b) Metropolitan and provincial steam stations and provincial diesel stations situated close to load centres are designed to operate as peak load stations to assist in meeting the heavy, short period load. Pending the completion of extensions to Yallourn power station, a substantial proportion of the base load on the system is carried by Newport power station.
- (c) Hydro stations are operated in accordance with the availability of water.

  They are designed to effect, where possible, a saving of the more expensive fuels used in the metropolitan and provincial thermal stations.

Commission power stations not yet connected with the rest of the State system comprise the two steam stations (Redcliffs and Mildura) serving the Mildura region, and two local diesel stations at Horsham and Murtoa which have been acquired as the first step in a large-scale plan to extend the State electricity system to the Wimmera. The stations at Horsham and Murtoa are being connected to the State system in 1958.

- (v) Transmission and Distribution. The electrical transmission and distribution system n the State supply network at 30th June, 1957, comprised 24,871 miles of transmission and distribution power lines, 11 terminal receiving stations and over 15,000 distribution substations. Main transmission is by 220 kV, 132 kV and 66 kV power lines which supply the principal distribution centres and also provide inter-connexion between the power stations. The 220 kV system connects Yallourn and Kiewa with metropolitan terminal stations. From Yallourn also, there are four 132 kV transmission lines to Melbourne. The 66 kV lines radiate from Melbourne to Geelong and Warrnambool, Ballaarat and Bendigo, and also to Benalla and other main centres in the North East. Further 66 kV lines radiate from Yallourn to main centres in Gippsland.
- (vi) Future Development. In conformity with its dual responsibility for producing and supplying Victoria's electricity and producing a large proportion of the State's solid fuel, the Commission's developmental programme is in two parts, which are, however, closely dependent one upon the other. The major part of this programme is for the development of the brown coal undertakings at Yallourn and Morwell in the Latrobe Valley and the erection of a large new brown coal burning power station at Hazelwood near Morwell; and the second and lesser part for the development of the hydro undertaking at Kiewa and construction of a high voltage transmission line for the supply of power to be purchased from the Snowy Mountains Hydro-electric Authority. At the same time, the commission will continue its programme of rural electrification, extension of the State system (particularly in western and north western Victoria) and reinforcement of supply by the establishment of a 220 kV power transmission grid designed ultimately to eneircle central Victoria, linking all principal power stations and all major centres of distribution.

Yallourn power station is being greatly enlarged. One 100,000 kW extension was completed late in 1956. A second 100,000 kW extension is being built. One of its two 50,000 kW generators came into service in 1957 and the extension is due for completion in 1958. A third extension of 240,000 kW capacity is due for completion in 1962. Enlargement of the power station will require a corresponding expansion in production of brown coal at Yallourn. New dredger plant will increase annual output at the Yallourn open cut to over 12 million tons. in 1963. This will complete the Yallourn power generation development, except for the eventual replacement of 175,000 kW of old plant with one generating unit of about 200,000 kW capacity.

At Morwell, six miles from Yallourn, the Commission is developing a second brown coal power and fuel project. The new project will comprise a large brown coal open cut and a major new power station which will operate in association with a large new briquetting plant. Some of the electricity generated at Morwell will be needed to operate the briquette works, but most of the output of the power station will be transmitted through Yallourn to metropolitan terminal stations; for general supply through the State network. The power station and two units of the briquetting works are now being built, and the power station will start generating electricity in 1959. In 1961, electricity output for general supply will be 91,000 kW, and briquette production will be over 1,500,000 tons per annum. Annual output of brown coal at the Morwell open cut will increase progressively to about six million tons in 1962.

In order to make the best possible use of the new brown coal open cut already in the initial stages of production at Morwell the Commission is now planning to build at Hazelwood, south of Morwell, a large new brown coal burning power station of 800,000 to 1,000,000 kW capacity in units of 200,000 kW each or larger, the first to be in service not later than 1964.

(vii) Hydro electricity. The new hydro station built to operate on the waters of the greatly enlarged Eildon Reservoir was completed in 1957. The electrical installation consists of two large generating sets, each of 60,000 kW capacity, and two small generating sets, totalling 16,000 kW transferred from Sugarloaf power station, the original power station which was demolished when the new Eildon Dam was built. As the primary purpose of Eildon Reservoir is to provide water for irrigation, generation of electricity will be mainly governed by irrigation requirements, but provision has been made for limited operation of the power station in winter when electricity requirements are at their heaviest and there is no irrigation demand for water. Similar considerations apply to the newly completed Hume hydro station. Since it also operates on water released for irrigation, no regular output of electricity can be expected during the non-irrigation months in the winter. At the Kiewa hydro-electric undertaking, where two stations, totalling 87,600 kW capacity, are now in service, work is in progress on a third power station of 96,000 kW capacity. which is due to have the first of its six generators operating in 1960 and the remainder in service by the beginning of 1962. Work is also in progress on the construction of Rocky Valley Reservoir, which is designed to provide the main high level storage for the operation of the Kiewa power stations.

Connexion with the Snowy Mountains undertaking will be made by a new high voltage transmission line which will feed into the Victorian system via Dederang, near Kiewa. It will operate at 330 kV. Two sections of the 220 kV transmission grid (Yallourn-Melbourne and Kiewa-Eildon-Melbourne) are in service and interconnected. Extensions of this new grid are due for completion as follows:—Geelong to Colac (1957); Geelong to Melbourne (1958); Kiewa to Shepparton (1958); Shepparton to Bendigo (1959). Temporarily the Melbourne-Colac line and the Shepparton-Bendigo line will operate at 66kV. They will be activated at 220 kV at a later date. Eventually the 220 kV grid will be continued from Bendigo via Ballaarat to connect with the Melbourne-Geelong-Colac section at Geelong, and will also extend along the Murray Valley to Redcliffs, near Mildura.

3. Local Country Electricity Undertakings.—At 30th June, 1957, there were 41 independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. Most of these undertakings were in the far south west, west and north west of the State. Under the State Electricity Commission's rural electrification programme, almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1956-57, the total production of the independent undertakings was 43 million kWh. The number of consumers at 30th June, 1957, was 23,052. The operation of the independent undertakings is governed by the Electric Light and Power Act, 1928, which the State Electricity Commission administers.

#### § 3. Queensland.

1. General. In Official Year Book No. 39, an account is given of the growth of electricity generation in Queensland, with particular reference to the City Electric Light Co. Ltd. of Brisbane (now the Southern Electric Authority of Queensland), the Brisbane City Council and the Toowoomba Electric Light and Power Co. Ltd.

The first of these organizations supplies a large part of Brisbane's electric power requirements and a considerable rural area in the south-east corner of the State from a modern power station at Bulimba, a suburb of Brisbane. Capacity is 95,000 kW at Bulimba "A" plus 10,000 kW, "packaged plant" at Abermain (near Ipswich) and 90,000 kW at a new generating station known as "Bulimba B". The output from a 3,200 kW hydroelectric unit installed at Somerset Dam near Brisbane is fed into the Southern Electric Authority system. With these plants 613 million kWh were generated in 1955-56 while the total number of the Authority's consumers at 30th June, 1956 was 104,025.

The Brisbane City Council's electrical undertaking and power production in 1955-56 had an installed capacity of 135,000 kW plus a 10,000 kW "packaged" plant erected at Tennyson, units purchased and generated amounted to 548 million kWh, and there were 121,090 consumers connected. Since 30th June, 1955, 30,000 kW of plant at a new power station at Tennyson has been commissioned by the Council.

The Toowoomba Electric Light and Power Co. Ltd., which commenced operations in 1905, has now been absorbed by the Southern Electric Authority of Queensland.

The generation and distribution of electric power in Queensland had, until the last decade, tended to lag behind developments in this field in other States of Australia. The comparatively slow growth in the production and consumption of electricity can be attributed to some extent to the absence, prior to 1938, of a central statutory authority constituted to undertake the functions of co-ordinating, unifying and controlling the production and transmission of electric power. In addition, Queensland's vast area, coupled

with a low population density, made large-scale rural electrification, elsewhere than in the south-eastern portion of the State, which surrounds the major centres of industry and population, an uneconomic proposition.

Before establishment of the Regional Electricity Boards in 1945, no attempts had been made to unify or co-ordinate electricity supplies outside of South Eastern Queensland, and rural electrification, apart from reticulation within certain townships, was practically unknown.

- 2. Royal Commission on Generation and Distribution of Electric Power in Queensland, 1936.—On 5th December, 1935, the Queensland Government appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. An account of the results of its investigations and of the alternative proposals put before it will be found on p. 1182 of Official Year Book No. 39.
- 3. The State Electricity Commission of Queensland.—In 1937, the State Government legislated to constitute a State Electricity Commission (legislation administering the generation and distribution of electricity in Queensland prior to the establishment of the Commission is referred to on p. 1181 of Year Book No. 39), which commenced to function during January, 1938, and to it was passed administration of the Electric Light and Power Acts 1896–1938. The Commission's main powers were to secure a proper and efficient supply of electric power, review tariffs, grant licences to supply electricity, secure the safety of the public, and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. In addition, the Commission was empowered to co-ordinate the industry's development throughout Queensland. Between 1938 and 1956, the number of private companies was reduced by absorption and acquisition from 21 to two, while publicly owned undertakings, after amalgamation into Regional Authorities, and the development of 24 new schemes for small Western Queensland towns, totalled 53.

By agreement with the Commission in 1939, the City Electric Light Co. Ltd. became the co-ordinating authority for the provision of electricity in an area of some 10,062 square miles, extending from the New South Wales-Queensland border to Gympie, north of Brisbane. The Company acquired the undertakings at Boonah, Beaudesert, Gympie, Coolangatta, Ipswich, Nambour, Southport, Redcliffe and the Somerset Dam supply and transmission line to Brisbane. Certain restrictions were placed on the Company's dividend rate, namely limitation to the rate on Commonwealth bonds plus 2 per cent. During 1940, a similar agreement was made with the Toowoomba Electric Light and Power Co. Ltd. for the supply of electricity in the Toowoomba, Warwick, Killarney and Allora districts, subsequently being extended to cover a comprehensive area of 9,324 square miles, including Stanthorpe and other districts. Transmission line extensions since that year have made supply available to a number of adjacent districts on the Darling Downs. The City Electric Light Co. Ltd. was converted to a public authority as from 1st February, 1953 by the Southern Electric Authority of Queensland Act of 1952 (see para. 5, page 285).

Amending legislation, passed by the Queensland Parliament in March, 1948, changed the constitution of the State Electricity Commission from a body corporate to a corporation sole. On 1st July, 1948, a Commissioner for Electricity Supply was appointed in lieu of the previous Commission of four Commissioners. Since its inception in 1938, the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favourably with other States in the Commonwealth.

4. Regional Electricity Boards.—With a view to facilitating the control and development of electricity supply in areas of low population density or those having a predominantly primary producing economy, the Government, in 1945, passed the Regional Electric Authorities Act. This legislation, as later amended, provides for the creation of regions of electricity supply and the constitution of Regional Electricity Boards. The Act provided for transfer to the Boards of local authority electricity undertakings in their regions, and for acquisition by the Boards of privately owned undertakings when purchasing rights fell due. Each Board comprises representatives of local authorities in the region and a representative of the Commission. Financial operations of the Boards are under the control of the Commission.

Soon after passage of the Regional Electric Authorities Act, four regions were defined and four Regional Boards constituted, namely, Wide Bay, Capricornia, Townsville and Cairns. A fifth Board, entitled South Burnett, became an operating authority in October,

1947, but on 1st July, 1951 was absorbed in the Wide Bay Regional Board and the organization is now known as the Wide Bay-Burnett Regional Electricity Board. As power was to be obtained from the Wide Bay Regional Board's station at Howard, the Commission decided that development of the two regions could be planned more effectively by a single authority.

As from 1st March, 1957, a further Regional Board became operative, covering the areas of Mackay, Sarina, Proserpine and adjacent rural areas under the name of Mackay Regional Electricity Board.

Supply throughout this Region will be provided from the central generating station at Mackay and accelerated electrical development of this area is being undertaken. The Townsville Regional Electricity Board's area was extended in July 1957 to include that of the Bowen electricity undertaking. The local authority areas of Thursday Island and Cook were included in the Cairns Regional Electricity Board's area from 1st July, 1956 and 1st July, 1957 respectively.

Activities of the original four Regional Boards in 1955-56 and 1956-57 compared with operations of the stations located in regions in 1945-46, and totals for Queensland as a whole are shown in the following table:-

		QUEENSLAND: REGIONAL OPERATIONS.												
Region.		194:	5–46.	195	5–56.	1956-57.								
		Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.							
			m.kWh		m.kWh		m.kWh							
Wide Bay-Bur	nett		13.7	11,467	60.8	25,034	71.8	26,624						
Capricornia			19.5	11,196	89.5	19,038	107.6	19,718

(a) Not available.

(b) Estimated.

Generator capacity of the four existing Regional Boards installed at 30th June, 1957 was :-Wide Bay-Burnett, 37,500 kW; Capricornia, 37,500 kW; Townsville, 38,980 kW; Cairns, 18,829 kW; total, 132,809 kW.

5. Creation of Southern Electric Authority of Queensland .- A further major step in electrical progress, comparable with that taken when the agreements with the City Electric Light Co. Ltd. and Toowoomba Electric Light and Power Co. Ltd. were first entered into, was taken by the passing of the Southern Electric Authority of Queensland Act of 1952. This Act constituted the City Electric Light Co. Ltd. as a public authority to be known as the Southern Electric Authority of Oueensland.

Two Government representatives are included on the Board of the new Authority, whose establishment prepares the way for the complete amalgamation, in due course, of the electrical undertakings serving the south-eastern Queensland area of supply.

An important advantage gained by the creation of this Authority is that on 30th June. 1968, acquisition of the Authority by the State Government can be effected without the necessity of a cash payment, as the Government will have the power to convert the Authority's existing stock to inscribed stock. Furthermore, the replacement of the City Electric Light Co. Ltd. by the Southern Electric Authority as a public body relieves electricity consumers in the Authority's area of supply from the burden of taxation which has hitherto been payable by the City Electric Light Co. Ltd., but will not need to be met by the new Authority. An agreement has been signed between the State Government and the Southern Electric Authority giving effect to the principles contained in the new legislation.

As from 1st July, 1954, the Southern Electric Authority acquired the Toowoomba Electric Light and Power Co. Ltd., thus bringing this company's area of supply under its control. The Southern Electric Authority is now responsible for the electrical supply and development of a consolidated area of 19,386 square miles.

6. Hydro-electricity.—Behind the coastal plain of the Cairns-Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the old divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can in most cases be provided, is essential to control the very variable flow.

The Barron Falls scheme, 14 miles north-west of Cairns, came into operation in 1935. The installed plant operates under a head of 410 feet and comprises three 2,000 h.p. turbines each connected to a 1,320 kW generator. Average rainfall varies from 80-150 inches along the ranges to less than 35 inches in the western portion of the catchment. There is extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. Storage to regulate the flow is possible but has not yet been provided. During periods of low flow the supply of electricity is supplemented by fuel plants at Cairns, Atherton and Innisfail. Power is distributed over 22,000 volt transmission lines serving the tableland and extending southward along the coast to Tully.

A small hydro-electric scheme on the Mossman River, 5 miles from Mossman, North Queensland, comprises two 120 h.p. turbines operating under a head of 200 feet.

The development of a hydro-electric power scheme at Tully Falls has now reached an advanced stage, the initial plant installation of 36,000 kW being commissioned in September, 1957. Work is in hand on the installation of a further two 18,000 kW sets, making a total installation of 72,000 kW. Water controlled by Koombooloomba Dam at present under construction on the upper Tully River is diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to an underground power station in the gorge at the foot of the falls operating with Pelton driven generators under a head of 1,485 feet. Power is transmitted to the load centres at Cairns and Innisfail by means of 132 kV transmission lines. Future automatic power plants upstream and downstream from Tully Falls will consist of two 7,500 kW sets under 405 feet head and one 5,400 kW set under 230 feet head. The combined peak load for the three plants will be 69,000 kW. Interconnexion of the Tully scheme with the Townsville area, previously supplied by a thermal station, was completed in 1957 by the provision of a 160 mile duplicate 132 kV transmission line. On present estimates, power from the Tully scheme will be sufficient to supply the inter-connected area until 1965, when additional power will be required. A full investigation by the State Electricity Commission of the electricity supply industry in North Queensland is proceeding and the terms of reference include the survey of additional hydro-electric projects.

Other northern schemes which have been investigated include Freshwater Creek (3,900 kW); North Johnstone-Russell Rivers (32,000 kW); Beatrice-North Johnstone Rivers (9,000 kW); South Johnstone River (25,000 kW); extension of Barron Falls scheme (22,000 kW); Herbert River (90,000 kW). The total potential of the plateau region is therefore about 250,000 kW at 50 per cent. load factor.

In the vicinity of Townsville, the Commission, acting on behalf of the Burdekin River Authority, investigated the proposed hydro-electric development of the Burdekin. The Scheme envisaged a power plant immediately below the Burdekin Falls Dam which will operate under an average head of 225 feet. This scheme was linked with a plan to conserve the waters of the river for irrigation and flood mitigation, and surveys undertaken indicate that approximately 80,000 kW could be generated.

South of the Burdekin River, no appreciable hydro-electric development is practicable. A plant of 3,200 kW capacity has been installed to utilize the outflow from Somerset Dam on the Stanley River a few miles above its confluence with the Brisbane River.

7. New Capacity.—(i) Regions. To provide for development of the electric power resources in the regions, the State Electricity Commission formulated a ten-year programme divided into two five-year periods. In the first, it was planned to erect main transmission systems to connect existing power stations located within the regions and supplement generating capacity by the construction of new stations. Work on this section of the plan in the original Regional Board areas is now virtually complete. In the second, the transmission system will be extended to more sparsely settled areas, the ultimate purpose being the provision of "ring" transmission lines throughout each region and interconnexion between the regions.

A number of new generating stations have been commissioned as follows:—Wide Bay (Burnett Region), of which 15,000 kW was placed in service during September, 1951,

and 7,500 kW in 1954, while a further set of 15,000 kW was installed in 1957. Rockhampton (Capricornia Region) of which 22,500 kW was placed in service during September, 1952 and a further 15,000 kW in May, 1956, with a further 15,000 kW at present in process of installation; and Townsville (Townsville Region) of which 22,500 kW was commissioned in July, 1953, and a further 15,000 kW in January, 1956. Plans are in hand for the installation of a further 15,000 kW at Rockhampton and Townsville. Each of these stations will have an ultimate capacity of 52,500 kW and be steam-operated. In the Cairns Region, construction is well advanced on the Tully Falls hydro-electric scheme and two 18,000 kW turbo alternator sets were commissioned in September, 1957, with a further two 18,000 kW sets to follow shortly afterwards. The scheme is designed for an ultimate installed capacity of 92,400 kW. To augment existing capacity and to cover demands prior to the operation of Tully Falls, the Cairns Regional Board had installed twenty-one diesel units with a total capacity of 14,485 kW.

The Tully Falls scheme (see para 6, page 286) is planned to link with the Townsville Regional Electricity Board's system for the purpose of marginal supply, and construction of this inter-connexion was completed by the close of 1957. Investigations are being carried out into the development of a further hydro-electric scheme on the Barron River which, when constructed, would add about 30,000 kW to the available hydro-electric generation capacity in the area.

At Mackay, where supply was first given in 1924, a Regional Electricity Board has now been constructed and a 66 kV transmission line to Proserpine is under construction. The generating capacity of this Regional Board is 9,500 kW, and a further 2,750 kW unit is being installed. At Bowen, the Town Council, which established the service in 1952, has now transferred its area to the Townsville Regional Electricity Board, and transmitted supply will eventually be provided to this area. During 1935, a small (3,800 kW) power house—Australia's first underground hydro station—was placed in service at Barron Falls near Cairns. When the Cairns Regional Board was established during 1946, operation of the station passed to the Board's control and now comprises part of its generating plant, totalling 18,829 kW, supplying an area of approximately 91,000 square miles.

(ii) Western Queensland. In Western Queensland, where a number of small isolated generating stations supply power to some of the larger towns, the Commission has evolved a plan to increase and modernize existing capacity. It involves installation of small internal combustion units ranging in size from 100 kW to 600 kW according to the load likely to be experienced, and conversion from direct to alternating current supply. The Government is assisting the scheme by subsidy—a feature of electrical development in Queensland. In general, the assistance provided comprises subsidies of up to one-third of capital cost on annual loan charges, with special subsidies of up to 50 per cent. for authorities in isolated areas.

In addition to improving supplies to the larger western towns, a scheme has been devised for electricity supplies for smaller towns in the western districts, where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. will apply in those cases where the number of consumers supplied is less than 100 and 200, respectively. This plan is now being implemented and at 30th June, 1957, 27 townships in the west of Queensland had been provided with the amenities of electricity. In addition, investigations of the possibility of supply have been carried out at a number of other small centres. The power is being supplied by small oil driven generating sets with automatic controls which can be run with a minimum of operating attendance.

Coal-burning gas producers have been successfully commissioned for public electricity supply purposes in the West. They have been installed at Longreach, Clermont, Dalby, Blackall and Barcaldine and further extensions of their use in Western Queensland is predicted, as lower tariffs and more efficient production of electricity should follow their use

(iii) South-eastern Queensland. To increase the availability of electric power in the south-eastern area of the State, the two major generating authorities, in conjunction with the Commission, have power station projects under construction which are designed to place in service, by 1958, new generating units totalling 400,000 kW. The Southern Electricity Authority is developing a station known as Bulimba "B" on a site adjacent to Bulimba "A". 90,000 kW had been installed to 30th June, 1957, with a further 30,000 kW to be commissioned during 1957-58 and the ultimate capacity may reach 180,000 kW. At Tennyson in the Brisbane area, the Brisbane City Council has constructed a new power station with an initial capacity of 60,000 kW which may be ultimately increased to 180,000 kW. At 30th June,

1957, generating plant of 60,000 kW was in service at this new station. To supplement capacity pending operation of these projects, "packaged" generating units totalling 20,000 kW were obtained from overseas and commissioned early in 1953, one 10,000 kW set having been installed at Tennyson and another 10,000 kW set at Abermain near Ipswich.

The power stations of the two major generating authorities at New Farm and Bulimba are interconnected at 33,000 volts.

#### § 4. South Australia.

1. General.-An account referring to the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Official Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following upon an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the Electricity Act 1943 was passed which, inter alia, established the South Australian Electricity Commission. However, until the State assumed full responsibility for the supply of electric power, this body was not able to do much more than exercise the formal functions conferred on it by the Act.

- 2. The Electricity Trust of South Australia.—Early in 1946, a Bill was passed transferring the assets of the Adelaide Electric Supply Co. Ltd. to the newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supplies. This legislation provided that the Trust should take over the powers vested in the South Australian Electricity Commission under the 1943 Act, which, after establishment of the Trust, would cease to exist. In addition to the powers specified in the Adelaide Electric Supply Company's Acts 1897-1931, the Trust may, inter alia, supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other persons who generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other persons, and give or receive supplies of electricity in bulk.
- 3. Capacity and Production.—There are three main categories of organizations generating electric power in South Australia, namely :--(a) Governmental, which include the Electricity Trust; (b) Local Authorities, e.g., municipal and district councils, and Renmark Irrigation Trust; and (c) Other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power for their own use.

In 1955-56, total installed capacity in South Australia was 320,869 kW, a decrease of 9,409 kW on the year before. The units generated totalled 1,204 million kWh compared with 1,199 million kWh in the previous year.

Of the total installed capacity, the Electricity Trust of South Australia operated plant with a capacity of 269,660 kW. It is thus the most important authority supplying electricity in the State. There were approximately 241,300 ultimate consumers of electricity, of whom 216,424 were supplied by the Trust. Its major steam stations were Osborne "A" (79,000 kW), Osborne "B" (120,000 kW) and Port Augusta "A" (60,000 kW) while the balance of the capacity controlled consists of house sets and regional stations at Port Lincoln and Mount Gambier.

No hydro-electric potential exists in South Australia. Steam generating units comprise 95 per cent. of installed capacity and the balance, 5 per cent., is internal combustion equipment. Until recently, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

4. Leigh Creek and other New Capacity.-With a view to reducing the dependence on external sources of fuel, steps have been taken to produce local coal and to install plant to use it. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act Amendment Act 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944 and in the year ended 30th June, 1956, 436,577 tons of coal were sold. Of this amount, the Electricity Undertaking used 375,126 tons.

In order to cope with the rapidly increasing demand for power, the Electricity Trust is installing two additional 30,000 kW units at Osborne "B" Power Station. These will complete the "B" station which will then have a total capacity of 180,000 kW. Another major work under construction is the power station at Port Augusta with an ultimate capacity of 90,000 kW. This power station, which was commissioned in June, 1954, is located at Port Augusta because of its proximity to the Leigh Creek coalfield and will use Leigh Creek coal exclusively. A new standard guage railway line connecting Leigh Creek with Port Augusta was constructed by the Commonwealth Railways Department. The power station is inter-connected with the Metropolitan Area by two transmission lines which will also supply power at intermediate points. The Trust is to construct a second power station at Port Augusta to be known as Port Augusta "B". This station will have a capacity of 180,000 kW making the combined capacity at Port Augusta 270,000 kW. In addition, the Trust is building steam power stations at Port Lincoln and Mt. Gambier to replace existing diesel stations. The station at Port Lincoln will have a capacity of 5,000 kW and will burn fuel oil while the station at Mt. Gambier will have a capacity of 16,800 kW and will burn either wood waste or fuel oil.

5. The Municipal Tramways Trust.—On 30th June, 1956, the Municipal Tramways Trust power station ceased operations and all power required for traction purposes is now supplied from the Electricity Trust system through converter stations and a 5,500 kW frequency changer. The installed capacity of the power station has been reduced from 19,100 kW to 9,000 kW and will only be used in case of emergency.

#### § 5. Western Australia.

- 1. General.—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan municipal and road board supply authorities have now been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area, see Official Year Book No. 39, p. 1189.
- 2. Metropolitan Undertaking.—Statistics relating to activities of the Metropolitan undertaking are shown in the following comparative table.

WESTERN AUSTRALIA: METROPOLITAN UNDERTAKING. (Including Bunbury Power Station).

	1938-39.	1955–56.	1956				
Plant capacity		•••	· · ·	kW	57,000	179,000	$\begin{cases} a & 4 \\ b & 16 \end{cases}$
Maximum load				kW	33,000	127,000	11
Units generated			Million	ı kWh	137	517	•
Coal used per unit g	enerated			lb.	2.77	1.56	
Coal used	• •			tons	168,722	361,164	35

(a) 40 cycles. (b) 50 cycles.

As a result of a separate inquiry conducted at the same time as the early investigations into the proposed new station at South Fremantle, a recommendation was made favouring conversion of the East Perth 40 cycle system to the British and Australian Standard Frequency of 50 cycles per second. The recommendation was adopted and implemented by making the frequency of generation at South Fremantle 50 cycles and installing at East Perth a frequency changer able to convert 25,000 kW of energy from one frequency to the other. Change-over of consumers' plant is nearing completion and only the city area and some inner suburban districts remain on 40 cycles.

3. Kalgoorlie.—In Kalgoorlie, the Municipal Council supplies approximately 3,800 consumers with either direct or alternating current. A diesel station of 1,825 kW generating capacity provides direct current to the limit of its capacity. Alternating current is purchased from Kalgoorlie Power Corporation and retailed by the Council to some consumers, while portion is passed through a rectifier to convert it to direct current. Primarily established to supply power to the gold mines, the Kalgoorlie Electric Power and Lighting Corporation operates a steam station of 11,000 kW and maintains a 22kV line of 21 miles to the Celebration mine. Alternating current is also supplied to about 1,400 consumers. The Corporation's undertaking generates approximately 35 million kWh per annum and boilers are fired by Collie coal.

4. General Pattern of Electricity Supply.—The pattern of the generation and distribution of electric power in Western Australia consisted until recently of a number of isolated systems each supplying a particular area. Except in the metropolitan area and in the area embraced by the South-West Power Scheme (See para 6, below), where in both cases electricity supply is in the hands of the State Electricity Commission of Western Australia, local authorities are generally responsible for the supply of electricity for domestic and industrial purposes. In the area between the Great Southern Railway from Northam to Albany and the west coast, however, the State Electricity Commission has now constructed transmission lines to give central station supply to the towns and their surrounding rural areas. In addition, there are several mining companies which generate electricity for use in their mines. In order to cater for the expected growth in demand, capacity of the State's major generating stations is being increased.

The system in the Metropolitan area has been inter-connected with the Bunbury area by means of a 132,000 volt transmission line.

The main load centre of the State is, of course, the Perth-Fremantle area into which is concentrated the major portion of the State's population and industry. The interconnexion between the Metropolitan and Country systems is, however, expected to lead to a gradual decentralization of load.

- 5. The State Electricity Commission of Western Australia.—(i) Origin and Aims. In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government introduced a Bill in 1945 to establish the State Electricity Commission, which, together with an Electricity Bill, became law early in 1946. Under these Acts, the Commission was given power, inter alia, to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines and purchase as a going concern and carry on the undertaking of any supply authority. Under the Electricity Act, which should be read in conjunction with, and is subject to the State Electricity Commission Act, no person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and any proposals are not inconsistent with the Commission's plans.
- (ii) New Projects. Since its inception in 1946, the Commission has proceeded with the task of increasing generating capacity in an endeavour to cater for a greatly increased demand for power. Long-range plans were formulated to inter-connect the south-western portion of the State with the Perth-Fremantle system. One of its most important and immediate problems was to increase the capacity of the generating equipment serving Perth and Fremantle. During the 1939-45 War years, it became evident that the growth of demand for electric power would necessitate provision of additional generating equipment in the metropolitan area as soon as possible. Accordingly, the Government Electricity Supply authority commenced design work for a new station of 50,000 kW capacity. Contracts were let in 1945 and construction commenced on a site selected at South Fremantle, on the coast south of Fremantle proper. Responsibility for completion of this project was given to the Commission under the Act of 1946. As it was considered that an even larger station would be required, provision was made for the installation of two additional units giving an ultimate capacity of 100,000 kW. Steam is furnished by eight boilers designed to use pulverized coal from Collie, which is located about 120 miles from the station. At the end of 1954, four units had been placed in service and the output was being fed into the metropolitan

At the East Perth power station, a new 30,000 kW unit has been commissioned and an additional boiler installed. A 25,000 kW unit, commissioned in 1938 (generating 40 cycles) is also available at this station. Older plant with a total capacity of 24,000 kW is also installed, but the usefulness of this plant for standby purposes will be reduced as the 40 cycles load in the metropolitan area is converted to 50 cycles.

6. South-west Development.—At the request of the Government, the Electricity Advisory Committee in 1945 submitted a report recommending, amongst other things, that a National Power Scheme for the south-west be proceeded with. The plan provided for acquisition of the existing Collie power station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connexion of the south-west scheme with the metropolitan system. On 12th October, 1946, the State Electricity Commission acquired the Collie power station, which prior to 1946 was owned and operated by the Collie Power Company Limited. At the date of acquisition, the station's installed capacity was 5,000 kW, comprising two steam units. The capacity of the station was increased to 12,500 kW in 1952.

Since 1950, the Commission has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-

Tasmania. 291

West Power Scheme was officially opened at Collie and many of the south-west towns have now been connected by transmission line to the Collie Power Station. When completed, a system of power lines will reticulate electricity over an area of approximately 1,800 square miles. The first 30,000 kW unit and associated boilers at Bunbury Power Station have been placed in service. Work is proceeding as programmed on two similar units and tenders have been called for a fourth unit to give the Station an ultimate capacity of 120,000 kW. The first section was officially declared open on 23rd August, 1957.

Diesel stations of 4,400 kW capacity at Albany serve the towns of Albany, Denmark, and Mount Barker in the extreme south of the State.

### § 6. Tasmania.

1. General.—A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Other contributing factors to the low costs are that rainfall is distributed fairly evenly throughout the year, with comparatively small yearly variations. The cheap power has led to the establishment in Tasmania of several large electro-chemical works with high load factor, and as a consequence the system load factor is also very high and at present is 61 per cent.

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Official Year Book No. 39, pp. 1192-3.

2. The Hydro-Electric Commission.—(i) Present System. In 1929, the Government passed the Hydro-Electric Commission Act, under which was established the Hydro-Electric Commission and which vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania and authorizes it to develop and reticulate electric power for all purposes. In 1930, this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The first project undertaken by the Commission was the Shannon Power Development which utilizes 258 feet of the difference in level between the Great Lake (Miena Dam) and Waddamana forebay. A small earthen dam diverts the outflow from the Great Lake through 2½ miles of canal and then by two pipelines to the Shannon Power Station, where 10,500 kW was added to the system in 1934. After passing through Shannon Power Station the water discharges into the Waddamana canals to be used again at the Waddamana Power Stations.

In 1933, it was decided to proceed with the Tarraleah Power Development. In this scheme, the waters of the River Derwent are picked up near Butler's Gorge by a canal and conveyed 14 miles to the pipeline forebay 982 feet above the power station on the Nive River where three 15,000 kW generators were placed in service in 1938. Shortly afterwards two more 15,000 kW units were added and a sixth machine installed in 1951 brought the total installed capacity at Tarraleah Power Station to 90,000 kW. Storage is provided at Lake St. Clair and at Lake King William, an artificial lake created by the 200-ft. high Clark Dam across the Derwent at Butler's Gorge. In the Butler's Gorge Power Station at the foot of the dam, a single 12,200 kW generator was installed in 1951. To increase the security of the system and to permit variable seasonal loading of Tarraleah station, a second canal from Clark Dam to Tarraleah was completed in 1955.

Early in 1939, it was decided to make full use of the Great Lake storage by increasing the peak capacity at Waddamana. War conditions impeded progress, but by the end of the war two 12,000 kW generators had been installed in a new power station, Waddamana "B", adjacent to the original station Waddamana "A". A third unit installed in 1946 and a fourth in 1949 brought the total to 48,000 kW. To enable a full peak capacity to be maintained at both Waddamana stations a duplicate of the original Waddamana canal was constructed during 1947-48.

Between 1930 and 1948, the generating capacity of the system was increased by 121,500 kW but the demand for power continued to increase rapidly and it was obvious that a greatly accelerated construction programme would have to be undertaken. Construction of the Tungatinah Power Development was started in 1948 and the Trevallyn Power Development in 1949.

The Tungatinah scheme draws water from three separate catchment areas located on the Central Plateau between the Great Lake (Shannon-Waddamana) and Lake St. Clair (Butler's Gorge-Tarraleah) catchments and control of practically the whole run-off from the Central Plateau has now been effected.

The principal catchment utilized by the Tungatinah scheme is drained by the Nive River. A 120-ft. high dam at Pine Tier diverts the waters of the Nive through 6½ miles of canal system to the first of a chain of four artificial lakes, created by dams constructed across the outlets from natural marshes and linked by large open cuts. From the southernmost lake, a tunnel and then five steel pipelines lead to the five 25,000 kW generators in

Tungatinah Power Station, 1,005 feet below on the Nive River just upstream from Tarraleah station on the opposite bank of the river. Power was first generated at Tungatinah in mid-1953 with a capacity of 125,000 kW. Water from the smaller Clarence River catchment is brought into one of the lakes in the Tungatinah system by means of a woodstave pipeline 5½ miles in length and the third catchment area utilized is the Lake Echo-Dee River catchment. Regulation of this catchment has been achieved by construction of a dam at Lake Echo to provide the main storage reservoir for the Tungatinah scheme, construction of the Lake Echo Power Station (one 32,400 kW generator) to utilize 568 feet of the difference in level between Lake Echo and Dee Lagoon, and the diversion of water from Dee Lagoon through 2 miles of tunnel to the main Tungatinah system.

The Trevallyn Power Development, the first constructed by the Commission outside the Central Plateau region, was undertaken primarily to meet the requirements of the aluminium industry. The waters of the South Esk River are diverted through 2 miles of tunnel and pipeline to a power station on the Tamar River near Launceston. Three 20,000 kW generators were installed in mid-1955 and a fourth unit has since brought the total capacity of Trevallyn Power Station to 80,000 kW.

(ii) New Capacity. The Hydro-Electric Commission is still engaged in the most progressive construction programme in its history. Since 1948, the generating capacity of the system has been increased by 274,600 kW to a total of 447,100 kW and present construction is planned to bring this total to 575,800 kW by 1960. There will still remain very considerable resources for future development as it is considered that at least 2,400,000 kW can be economically developed.

The Wayatinah Power Development, now under construction, will comprise two power stations and headworks to utilize water which is in the main already regulated and which has been used several times. The volume of water available is much larger and the head smaller than in the case of other major stations. All the water which has passed through Tarraleah or Tungatinah stations will be diverted, by a weir across the Nive River below Tarraleah, through 4 miles of tunnel and then steel pipes to Wayatinah "A" Power Station lower down on the Nive River where 83,700 kW will be installed by 1960.

A dam across the River Derwent, just below its junction with the Nive, will create a small lake into which will flow all the water from Wayatinah "A" plus water collected by the Derwent below Clark Dam. One mile of tunnel and one mile of pipeline will lead the water to Wayatinah "B" Power Station on the Derwent three-quarters of a mile below its junction with the Florentine River. The lower station, Wayatinah "B", was constructed first and completed in 1957. Installed capacity is 32,250 kW.

There is every indication that the demand for power in Tasmania will continue to increase. The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme.

3. Power Usage by Secondary Industry.—The abundant and comparatively cheap supplies of electricity and other natural resources attracted to Tasmania a number of important secondary industries for which energy costs constitute a significant proportion of the total cost of production. Some of the more important organizations and their continuous power demands when plant is operating are as follows:—Electrolytic Zinc Company of Australasia Ltd., 73,000 kW; Australian Aluminium Production Commission, 30,000 kW; Australian Newsprint Mills Ltd., 19,000 kW; Associated Pulp and Paper Mills Ltd., 14,500 kW; Australian Commonwealth Carbide Company Ltd., 7,800 kW; and Goliath Portland Cement Company Ltd., 1,800 kW.

#### § 7. Commonwealth Territories.

- 1. Internal Territories.—(i) General. The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government.
- (ii) Australian Capital Territory. Supply was first established at Canberra during 1915. The Department of the Interior owns steam stand-by plant of 2,100 kW capacity which is operated in conjunction with the New South Wales Electricity Commission's generating equipment. The major portion of the territory's power requirements are supplied in bulk from the New South Wales inter-connected system. Total population served with electricity at 30th June, 1957 was 38,000 and the total number of ultimate consumers was 11,354. Rapidly increasing domestic, government, and commercial load will absorb appreciable amc unts of power from the Snowy Scheme.

(iii) Northern Territory. At Darwin, supply was established by the Town Council in October, 1934, but later, during April, 1937, responsibility for generation and supply was placed in the hands of the Northern Territory Administration. The power station

is equipped with diesel generating plant of 5,390 kW capacity. Two new 970 kW diesel sets were installed in 1955-56 and an additional 1,380 kW diesel set was installed during 1957, making a total capacity of 6,770 kW. At Alice Springs, the Power Station is equipped with diesel generating plant of 1,462 kW capacity, two 230 kW diesel sets being installed in 1956-57. An additional 520 kW diesel set will be installed during 1957-58, making a total capacity of 1,982 kW.

At Katherine, the power station is equipped with small diesel generating plant of 450 kW capacity and the diesel station at Tennant Creek was closed down in 1957, supply for the township being purchased in bulk from Peko Mines No Liability.

The total number of ultimate consumers served was 3,317 in 1956-57.

In 1956-57, the Department of Works selected a site on the water front of Darwin for a 15 megawatt steam driven generating set. This steam station is being designed to supply Darwin and suburbs when the present diesel station has reached its maximum economical capacity. No construction work has yet been undertaken on the project.

2. External Territories—Papua and New Guinea.—Responsibility for the operation and establishment of electrical undertakings in Papua and New Guinea is vested in the Administration of the Territory of Papua and New Guinea, whose headquarters are located at Port Moresby. The total generating capacity of the diesel engine driven generating sets amounts to 6,805 kW and of the hydro operated sets 3,132 kW. The generating capacity of the power plants at the main centres is—Port Moresby, diesel 2,504 kW, hydro, 3,000 kW; Rabaul, 1,320 kW; Lae, 660 kW; Madang, 410 kW; Samarai, 356 kW; Kavieng, 197 kW; Wewak, 70 kW; Lorengau, 50 kW; Goroka, hydro, 100 kW; Aiyura, hydro, 30 kW; and 309 kW distributed among outstations where generating capacity is between 5 kW and 60 kW. The new hydro-electric scheme at Rouna Falls, 22 miles from Port Moresby, is now completed and in full operation. The townships of Wau and Bulolo are still supplied by the Bulolo Gold Dredging Co., which operates a hydro-electric plant of 5,500 kW. This power is produced mainly to supply alluvial dredges and, in addition, now supplies power to the plywood mill at Bulolo.

The number of ultimate consumers served was 3,584 in 1955-56 and 4,258 in 1956-57. Vast hydro-electric potential exists in New Guinea and it has been estimated at 15,000,000 kW, but because of the island's location, absence of large load centres and lack of industrialization, only a small proportion could, at present, be economically developed.

In 1950, it was announced that the Commonwealth Government had joined with British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A new company was formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth holds 51 per cent. of the shares and has a controlling interest on a board of five members. The agreement for the formation and operation of the Company is administered by the Commonwealth Department of Supply, except in matters requiring compliance with the law of New Guinea, when responsibility for administration rests with the Department of Territories. Surveys and comprehensive investigations are in progress.

The following hydro-electric schemes are now in operation:—Port Moresby—at Rouna on the Laloki River, generating sets have been established with an initial capacity of 3,000 kW, with provision for expansion to 5,000 kW as stage 2, and to 9,000 kW as stage 3. The power station came into operation in January 1957. The present project utilizes only portion of the power available from the Laloki River and the economic ultimate development will be of the order of 40,000 kW. At Aiyura, a 30 kW hydro-electric station, for the Agricultural Experimental Station, was brought into operation in August, 1956.

At Goroka, one 100 kW hydroset is now in operation and a second 100 kW set is on order with provision for a further 200 kW.

Stream gauging and other preliminary investigations for hydro-electric schemes have been carried out at Lae, Rabaul, Madang, Wewak and Highlands Stations.

There are possibilities for major hydro-electric development in the following localities:—Rouna Falls (near Port Moresby), Upper Snake and Busu-Erap-Leron (near Lae), Upper Ramu (near Markham-Ramu divide—80 miles from Lae) and Hathor Gorge (on Purari River) with an estimated average power of 100,000 kW, 150,000 kW, 2 million kW, 250,000 kW, and 3 million kW respectively. These have estimated run-offs of 1,400; 6,000; 12,000; 1,000; and 75,000 cusees respectively.

In an area of 150,000 square miles of the Eastern New Guinea mainland, the power potential has been estimated at 150 kW per square mile which compares favourably with potentials of 170 kW per square mile for Switzerland and 95 kW per square mile for Norway.

#### D. STATISTICAL SUMMARY, 1950-51 AND 1955-56.

The following table shows statistics for each State separately and for the six States combined for 1950-51 and 1955-56 and relates to :—(i) the numbers and installed capacity of central electric generating stations, (ii) the values of production and output and the

average numbers of persons employed in the generating side of the electricity supply industry and (iii) the amount of electricity generated in both years and the number of ultimate consumers of electricity in 1955-56.

For further statistics of the electricity supply industry (years 1938-39 and 1951-52 to 1955-56), see Chapter VII.—Manufacturing Industry.

<sup>(</sup>a) Not available for publication; included in the total for Australia.

(b) Average employment, in generating station, over whole year including working proprietors.

(c) Value, at generating station, of electricity produced plus certain earnings.

(d) Value added to materials and fuel in the process of generation.

(e) Total generated including that generated by factories for their own use.

(f) Approximate figures supplied by the electricity authority in each State.

An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not synonymous with the number of persons served with electricity because one ultimate consumer may embrace three or four persons, e.g., in a household.

#### CHAPTER IX.

#### WATER CONSERVATION AND IRRIGATION.

# A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS. § 1. Introduction.

Official Year Book No. 37, pp. 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues, much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article (pp. 1140-41) was a bibliography of selected books, reports, papers, etc., dealing with the development of the water resources of Australia and their conservation.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II.—Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XIX.—Local Government; and on the generation of hydro-electric power to Chapter VIII.—Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States was published on pp. 1073-9 of Official Year Book No. 40.

A map showing the extent of known artesian basins throughout Australia is shown on page 307 of this Year Book.

#### § 2. Water Resources and their Utilization.

- 1. Surface Supplies.—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. At present, therefore, it is impossible to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it would probably amount to only a small figure in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).
- 2. Major Dams and Reservoirs.—The table below lists existing major dams and reservoirs together with those under construction or projected as at June, 1957.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.		Location.	Capacity (Acre feet).	Height of Wall (Feet)	Remarks.
		Existing D	AMS AND	Reservoir	s.
Eildon	••	Upper Goulburn River, Victoria	2,750,000	250	Earthen embankment 3,300 feet long. Storage for irrigation and for the generation of electricity.
Hume	••	Murray River near Albury	1,452,000	140	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. Being increased to 2,500,000 acre feet. Hydro-electric power being developed.
Miena	••	Great Lake, Tas-	(a)948,500	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck	• •	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and pro- duction of hydro-electric power.
Somerset	• •	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station.
Lake Victoria	••	Murray River near South Australian border, in New South Wales	551,700	••	Natural storage for irrigation in South Australia.
Lake St. Clair	••	Central Highlands, Tasmania	(a)412,200		Improved natural storage for Tarraleah hydro-electric power station

#### MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—continued.

Lake Echo	••	Lake Echo, Tasmania	(a)412,200	60	Storage for Lake Echo and Tur gatinah hydro-electric powe stations.
Waranga Wyangala	•••	Goulburn River, Victoria Lachlan River, New South Wales	333,400 303,900	190	Sattons.  Earthen embankment, 23,800 fe long. Irrigation storage.  Storage for domestic, stock an irrigation purposes and fo generation of hydro-electrons.
Rocklands		Glenelg River, Vic-	272,000		Part of Wimmera-Mallee dome tic and stock water supp
Clark		Derwent River, Tas-	(a)253,400	200	system. Serves Tarraleah hydro-electr
Avon	••	mania Avon River, New South Wales	173,800	232	power station. Part of Sydney water supply.
Lake Brewster	••	Lachlan River, near Hillston, New South Wales	123,900	••	Storage of rural water supplie for the lower Lachlan.
Cairn Curran	••	Loddon River, Vic-	120,600		Storage for irrigation.
Glenmaggie	••	Gippsland, Victoria	106,000	100	Storage for irrigation. Being increased to 154,300 acre fee
	AMS	AND RESERVOIRS U	INDER CON	STRUCTION	OR PROJECTED.
Burdekin Falls	• •	Burdekin River, North Queensland	6,584,000	150	Projected for generation of hydroelectric power, irrigation are
Adaminaby	••	Eucumbene River, New South Wales	3,500,000	390	flood mitigation. Under construction as part of Snowy Mountains Hydro electric Scheme. Storage
Menindee Lakes I ject	Pro-	Darling River near Menindee, New South Wales	2,000,000	••	water commenced June, 195 Part of Darling River water conservation scheme—under construction.
Warragamba	••	Warragamba River, New South Wales	1,694,900	373	Under construction for Sydne water supply. Also provid for generation of hydro-ele
Jindabyne	• •	Snowy River, New South Wales	1,100,000	274	tricity and flood mitigation. Projected as part of Snov Mountains Hydro-electr Scheme.
Burrendong	••	Macquarie River, near Wellington, New South Wales	914,000	193	Under construction for rur water supplies.
Blowering	• •	Tumut River, New South Wales	800,000	300	Projected as part of Snov diversion scheme.
Warkworth	••	Wollombi Brook (Hunter Valley).	400,000	100	Projected as a flood mitigation dam for the Hunter Valley.
Keepit	••	New South Wales Namoi River, near Gunnedah, New South Wales	345,000	176	Under construction for run water supplies.
Arthurs Lakes	••	near Great Lake,	(a) 339,000	50	Projected as part of Great Lal hydro-electric power develo
Tinaroo Falls	••	Tasmania Barron River, North Queensland	320,000	133	ment Under construction for irrigation purposes in the Marceba-Dir
Glenbawn	••	Hunter River, near Scone, New South	293,000	251	bulah area. Under construction as part Hunter Valley conservation
Tantangara	••	Wales Murrumbidgee River, New South Wales	200,000	150	work. Projected as part of Snov Mountains Hydro-electr
Wellington	••	Collie River, Western Australia	150,000	110	Scheme. Existing dam to be enlarged for supply of water to irrigation districts and to agricultur areas and towns.
Koombooloomba	••	Tully River, North Queensland	146,000	123	Under construction for hydr electric and possibly irrigation
Upper Yarra	••	Yarra River, Victoria	110,000	270	purposes. Under construction for Melbour water supply.

- 3. Irrigation.—(i) History. For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey Brothers and to the Victorian Irrigation Act in 1886 see issues of the Official Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Official Year Book No. 37, p. 1009.
- (ii) Extent and Nature of Irrigated Culture. About half of Australia's irrigated acreage is in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In those areas served by the Murray and its tributaries, irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodders, and pastures are served. Large scale irrigation schemes have not been developed in Tasmania or the Northern Territory although reference is made on page 328 to investigations at present being carried out in the Northern Territory to determine the availability of irrigation water for rice production.

The following table shows the area of land irrigated in each State during the years 1952-53 to 1956-57:—

## AREA OF LAND UNDER IRRIGATED CULTURE.

(c) Included in Other Crops.
(d) Includes Tobacco, 6,350 acres.
(e) Excludes lucerne fed off, included in "Other Crops".
(f) Includes lucerne for pasture.

(iii) Research. :Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research:Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—the influence of irrigation on plant-life (using horticultural trees as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—pastures; and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations, the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established. Research is also conducted in the field of water percolation in relation to soil structure.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

- 4. Preservation of Catchments.—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years, efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.
- 5. Sub-surface Supplies.—(i) General. While a more or less complete general; picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent of the artesian basins—particularly the Great Artesian Basin—has been fairly accurately determined, while the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed to any degree, except in a few localities.

(ii) Artesian and Sub-artesian Supplies. Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 307 of this Year Book.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 670,000 square miles, comprising about 430,000 in Queensland, 80,000 in New South Wales, 120,000 in South Australia and 40,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal:—

PRINCIPAL WATER-BEARING BASINS: AUSTRALIA.

Name.	State.	Geological Age of Chief Aquifers.	Approxi- mate Area.	Depth to Pressure Water.
			Square Miles.	Feet.
Great Artesian	Queensland, New South Wales, South Australia and Northern Territory	Pliocene-Permian	670,000	Up to 7,000
Desert and Fitzroy Murray	Western Australia Victoria, New South Wales: and South Australia	Cainozoic-Palaeozoic Miocene-Oligocene	160,000	100 to 1,500 100 to 900
Eucla	Western Australia, South Australia	Pliocene-Miocene	68,000	300 to 2,000
Barkly	Northern Terri- tory, Queensland	Cretaceous, Cambrian and Upper Pre- cambrian	57,000	150 to 1,000
North-west	Western Australia	Tertiary Permian	40,000	230 to 4,000
South-west	Western Australia	Recent, Jurassic	10,000	200 to 2,500
Pirie-Torrens	South Australia.	Recent, Pleistocene	4,000	Up to 600
East Gippsland	Victoria	Pleistocene-Oligocene	2,500	200 to 1,800
Adelaide	South Australia	Recent, Oligocene	-,	
Basins of Ord- Victoria Region	Northern Terri- tory, Western Australia	Mainly Cambrian and Permian	Unknown	Unknown

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

(iii) Ground Water. Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle and at Botany, Sydney, private industry pumps 5 million gallons a day for its own use from similar sands.

Recent exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day.

#### § 3. National and Interstate Aspects.

1. General.—As the Commonwealth Constitution makes special reference to water problems, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources resides in the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945, national aspects of water conservation and use were emphasized. The report recommended that to obviate lack of co-ordination, an all-Australian plan, having the assent of the various governments be adopted, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946, a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee first established under the authority of the Australian Agricultural Council in 1938. Its functions are:—(a) to prepare for the consideration of the Australian Agricultural Council or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. Murray River Scheme.—(i) General. The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (980 miles), the Darling (1,700 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,506,000 acre feet; Murrumbidgee River, 2,280,000 acre feet; Goulburn River (including Broken River), 2,502,000 acre feet; Darling River, 2,224,000 acre feet; and Ovens River, 1,169,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, fat lambs, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) River Murray Waters Agreement. Under the Agreement, construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Official Year Book No. 40 (p. 1065) and earlier issues.

At a Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River (see para. 4, Snowy Mountains Hydro-electric Scheme, page 303) and that a storage of not less than 1,500,000 acre feet should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury was the maximum that was economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the size of the Hume Reservoir from its previously designed capacity of 2,000,000 acre feet to 2,500,000 acre feet, but if additional storages for hydro-electric purposes become justified in the future further increases would best be provided at some other site. It subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet. A conference of Ministers considered the recommendation in July, 1954 and agreed to the enlargement. In addition, it was agreed that the Commission should be given power to construct regulators and to carry out such other work on the River Murray between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955.

The total estimated quantity of water diverted from the Murray and its tributaries (under the River Murray Agreement, in 1955-56 for irrigation and other purposes, including impounding in dams, was as follows (in acre feet):—New South Wales, 1,008,000; Victoria, 3,108,000; South Australia, 190,500; a total of 4,306,500 acre feet. Owing to the floods in the latter half of 1956 the quantity of water diverted in 1956-57 was considerably less than that for the preceding year.

(iii) River Murray Works. One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 110 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately one mile. Work is now in progress on the enlargement of the reservoir to its recently approved capacity of 2,500,000 acre feet.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. Work has recently been completed on the enlargement of the inlet channel to Lake Victoria to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 837,000 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 2,750,000 acre feet; Waranga (Goulburn), 333,400 acre feet. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia.

3. New South Wales-Queensland Border Rivers Agreement.—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on parts of those portions of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station Homestead which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. It is now intended to do exploratory drilling of the tributary sites.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. The construction of Bonshaw and Cunningham Weirs on the Dumaresq River was completed in January, 1953 and June, 1954 respectively.

Investigations are proceeding and designs are being prepared for a weir and regulator on the Barwon River at the offtake of the Boomi River and construction of a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River has been authorized. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland) and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

4. Snowy Mountains Hydro-electric Scheme.\*—(i) General. Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949 passed the Snowy Mountains Hydro-electric Power Act setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme will be constructed in two parts, the first being known as the Snowy-Murray Development where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne to the Swampy Plains River in the Murray Valley, and the second as the Tumut Development, in which water will be diverted by tunnel from a dam at Adaminaby on the Eucumbene River, a tributary of the Snowy, to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of seven major dams (with a total storage capacity of approximately 7 million acre feet), fifteen power stations, more than 80 miles of large diameter tunnels, and over 330 miles of racelines at high elevations.

Latest estimates indicate that the total cost will be approximately £419 million. The scheme is the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) Snowy Mountains Hydro-electric Power Act 1949. The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner, who is assisted by two Associate Commissioners. The functions of the Authority are defined in the Act as follows:—(a) to generate electricity by means of hydro-electric works in the Snowy Mountains area and (b) to supply electricity so generated to the Commonwealth for defence purposes and for consumption in the Australian Capital Territory. The general powers of the Authority as defined in the Act are as follows:—For the purpose of performing its functions the Authority shall have power to construct, maintain, operate, protect, manage and control works—(a) for the collection, diversion and storage of water in the Snowy Mountains Area; (b) for the generation of electricity in that area; (c) for the transmission of electricity generated by the Authority; and (d) incidental or related to the construction, maintenance, operation, protection, management or control of any of the works specified above. The Act provides that the Authority may sell to a State, or to an authority of a State, electricity generated by the Authority which is not immediately required by the Commonwealth for defence purposes or for consumption in the Australian Capital Territory.

See also Chapter VIII.—Electric Power Generation and Distribution, p. 272.
 For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX.—Miscellaneous, of Official Year Book No. 42.

(iii) The Authority's Objectives and Programme. The two basic objectives are the production of electricity and the diversion of water inland.

The first power station, at Guthega, came into service in April, 1955. Additional generating capacity is scheduled to become available progressively.

By the end of 1959, the Snowy Scheme will supply the Murrumbidgee River with approximately 300,000 acre feet per annum of additional water and by 1962 this amount will have increased to 500,000 acre feet per annum. Ultimately the scheme will provide approximately 1,818,000 acre feet per annum of additional regulated water of which 1,020,000 acre feet will go to the Murrumbidgee and 798,000 acre feet per annum to the Murray.

The New South Wales Department of Public Works, on behalf of the Authority, is supervising the construction of the Adaminaby Dam, for which a contract was let in May, 1956. Construction of the dam was sufficiently advanced to permit closure of the diversion tunnel gates on 22nd June, 1957 and the waters of the Eucumbene River are now being stored for later use through the Tumut Power Stations. The Department of Main Roads and the Snowy River Shire are reconstructing over 90 miles of existing roads. Construction is now in progress on the 14 mile Eucumbene–Tumut Tunnel, Tumut Pond Dam, the 8,000 feet pressure tunnel leading to Station T1, and on Station T1 itself. Designs for the Tooma–Tumut Diversion, the T2 Project and the Murrumbidgee–Eucumbene Diversion were sufficiently advanced to permit the calling of tenders for these works before the end of 1957.

#### B. STATES AND TERRITORIES.

#### § 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal with water conservation and irrigation in Australia generally and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

#### § 2. New South Wales.

- 1. General.—(i) Rainfall and History. In issue No. 37 of this publication (p. 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme and river improvement works.

Under the Water Act, the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 302 of this Chapter.

2. Schemes Summarized.—(i) Location and Type. The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, a tributary of the Murrumbidgee. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, Flood Control and Irrigation Districts and River Improvement Districts. There are five Irrigation Areas:—The Murrumbidgee Irrigation Areas consisting of 451,251 acres served with water through a channel system stemming from the river at Berembed Weir; the Coomealla Irrigation Area of 34,693 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,549 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; and the Tullakool Irrigation Area of 18,006 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) below.

(ii) Works. The capacities of the main storages (in acre feet) are :-

Murray:—Half share of Hume Reservoir, weirs and locks to Wentworth (835,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (837,000); Berembed Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740).

Lachlan: —Wyangala Dam (303,900); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplied the districts of Jemalong and Wylde's Plains, serving an area of 224,556 acres. Proposals for future development include provision of a head storage on the Belubula River.

The approximate total length of channels (including main canals) constructed by the Water Conservation and Irrigation Commission in New South Wales is 2,957 miles. The approximate length of drains and escape channels is 860 miles, and the total length of pipe lines is approximately 50 miles, making a grand total of 3,867 miles of channels and pipe lines, etc.

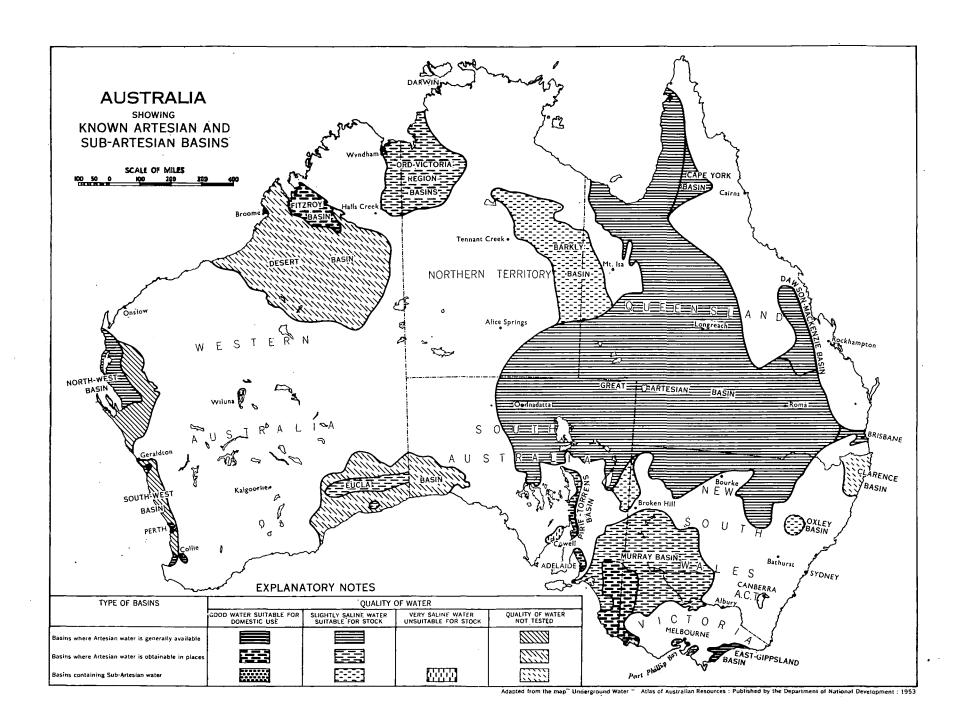

(iii) Extent of Systems and Nature of Irrigated Culture. The following table shows the areas of the various irrigation systems and particulars of the areas under irrigated culture in New South Wales during 1956-57.

## AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: NEW SOUTH WALES, 1956-57.

<sup>(</sup>a) Includes grazing and cutting. (b) Perennial and annual self-seeding. Perennial amounted to 39,183 acres. (c) Citrus and deciduous. Deciduous amounted to 6,825 acres of which 6,144 acres were in the Murrumbidgee Irrigation Area. (d) Not available. (e) Incomplete. (f) Area irrigable; details of area actually irrigated are not available. (g) Excludes domestic and stock supplies for which particulars are not available. (h) Tobacco. (f) Includes Flood Control Districts; but excludes some Irrigation Trusts for which information is not available.

3. Murrumbidgee Irrigation Areas.—(i) Description. These areas comprise about a third of the State's irrigated acreage and in 1956-57, together with lands adjacent supplied under agreement, received 318,388 acre feet of the total water allocated within the State for stock, domestic supply and irrigation (1,112,236 acre feet). They are served by the Burrinjuck Dam (capacity 837,000 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate approximately 857 miles and drainage channels 785 miles. In addition, approximately 374 miles of supply channels run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control.

The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations and was sparsely populated. Population was 12,000 in 1923, 15,000 in 1929, 20,000 at the 1947 Census and 24,000 at the 1954 Census. At the 1954 Census the population of the Yanco district (with Leeton as the centre) was 10,000 and the population of the Mirrool Area (with Griffith as the centre) was 14,000.

- (ii) Administration. The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1957, was 377,248 acres, including 38,918 held for short lease grazing, agriculture, etc.
- (iii) Production. Since the inauguration of the scheme in 1912 the volume of production from the area has greatly increased. Numbers of new crops are grown while the volume of the major products of the area prior to the scheme, such as wool and livestock for slaughtering, has expanded considerably. The principal products to-day are: wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924 and has since become the most important crop grown in the area. In 1956-57, the total area sown in the Murrumbidgee Irrigation Areas was 30,182 acres and the total quantity of water delivered for the rice crops was 154,672 acre feet.

In a normal season, the water supplied for rice represents about one-half of the total delivered on the Murrumbidgee Irrigation Areas.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle about 300,000 bushels of fruit per year (compared with 54,600 in 1927-28). The annual sales turnover of the Leeton cannery in recent years has exceeded £2,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. Other Irrigation Areas.—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for the operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,549 acres of which 7,754 acres were occupied at 30th June, 1957. Production consists of dried vine fruits, deciduous fruits and fodder crops.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 34,693 acres of which 30,948 acres were occupied at 30th June, 1957. Production consists of vine and citrus fruits. An extension of the Coomealla Irrigation Area has been completed in recent years to provide irrigation farms for ex-servicemen and 100 ex-servicemen have been placed on the new farms.

Tullakool Area, formerly part of the Wakool Irrigation District, comprises 18,006 acres of which 14,396 acres are occupied. Production consists of fat lambs, wheat and rice.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which, 6,240 acres are occupied. Production comprises dairy products, fat lambs, sheep, wool and fodders.

5. Irrigation Districts.—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—Murray River—Wakool District (completed) 493,730 acres, Berriquin Provisional District (completed) 779,564 acres, Deniboota Provisional District (first section completed) 306,907 acres, Denimein Provisional District (completed) 147,005 acres, Jernargo Provisional District (certain portions of which have been included in Berriquin District) 4,505 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; Murrumbidgee River (completed)—Benerembah District 112,818 acres, Tabbita District 10,745 acres, Wah Wah Provisional District 571,358 acres, Gumly Provisional District 345 acres; Lachlan River (completed)—Jemalong and Wylde's Plains District 224,556 acres.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1957, the total length of completed canal and channels in Berriquin District was 870 miles, including Mulwala Canal 75 miles, Berrigan channel 22 miles, subsidiary channels 729 miles, escape channels 33 miles and cross drainage channels 11 miles. Off-take capacity of the Mulwala Canal is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be completed.

Wakool, with 384 miles of channel, contains 292 holdings and the area developed by irrigation comprises about one acre in 9 of the total area. The total area irrigated in 1956-57 was 58,010 acres and water supplied was 103,554 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Total irrigated acreage was 158,126 at 30th June, 1957. Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1956-57 season for irrigation, etc. was 94,184 acre feet, and the area irrigated was 35,811 acres, including rice and other cereals, pastures, and fodder crops.

For the same season, 23,260 acre feet of water were supplied from the Lachlan River to irrigate a total area of 16,022 acres within the Jemalong and Wylde's Plains Districts.

6. Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.—
The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer.

The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district is shown in parentheses)—Murray River—Tuppal Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,980), Minnie Bend Flood Prevention (2,190); Murrumbidgee River—Yanco, Colombo and Billabong Creeks (1,001,210); Lachlan River—Torriganny, Muggabah and Merrimajeel Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (292,640), Ulonga (71,655), Micabil Weir (11,500); Miscellaneous—Algudgerie Creek (9,760), Nidgery Weir (46,880), Great Ana Branch of Darling River (967,339), Collarenebri town water supply (117)—making in all a total area of 2,914,831 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—Hunter River—Blairmore (315); Murray River—Bama (3,446), Goodnight (1,167), Bungunyak-Koraleigh (1,810), Glenview (661), Bringan (4,933); Darling River—Pomona (1,580)—making in all a total area of 13,912 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres), the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 50 holdings. Another district, Medgun (272,800 acres) near Moree in the North-West is also in operation. There are 20 holdings in the district and the area benefited by controlled floodings is approximately 61,800 acres.

7. River and Lake, and Farm Water Supplies.—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. Underground Water.—Extensive use is made of artesian, sub-artesian, and shallow underground water. Fractured Palaeozoic rocks in the South-east corner of the State provide useful supplies of ground water usually at depths of 50-250 feet. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5 million acres and water is distributed through approximately 7,400 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1957, was 1,036 and the estimated total daily flow from 581 flowing bores was 59 million gallons. The estimated flow in 1914-15 was 99 million gallons a day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely 1,115,000 gallons a day. Of the total number of bores sunk, 238 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Since 1912, the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1957, the total constructed by the Commission's plants was 4,714 and their average depth was 304 feet.

9. Future Programme.—The programme of post-war development already in hand includes the provision of eighteen dams and storages, eight diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie, while legislation has been passed authorizing the construction of a flood control dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. In the case of Burrendong Dam, work has been temporarily suspended in order to enable the Water Conservation and Irrigation Com-

mission to concentrate its available resources on the speedy completion of works having higher priority. The Menindee Lakes storage project—part of the scheme for conserving the waters of the Darling River—has been recommenced, while Glenbawn Dam on the Hunter River is substantially complete. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. The total estimated capacity of all proposed new storages is 5,500,000 acre feet. At 30th June, 1957 work was in hand to begin construction of a diversion weir at Gogeldrie on the Murrumbidgee River from which water will be supplied to a new irrigation area (Coleambally) on the south side of the river containing not less than 800 new irrigation farms. Later, development will extend to a new area on the north side of the river.

10. Hydro-electricity.—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (see page 279).

#### § 3. Victoria.

- 1. General.—(i) Rainfall. Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. The passing of the Irrigation Act of 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. In 1905, the Water Act established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted Waterworks Trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and local governing bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. Systems Summarized.—(i) Works. Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 4,962,550 acre feet (including Victoria's share of the Hume Reservoir). By means of channels, bores, etc., one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 105,000 acres in 1906 to 855,200 acres in 1956–57 and irrigation channels supply 2,150,000 acres.

The Commission controls 38 large reservoirs and 240 subsidiary storages. The capacities of the principal storages in acre feet within the various systems at 30th June, 1957 were as follows:—

Goulburn System:—Eildon Reservoir, 2,750,000; Goulburn Weir, 20,700; Waranga Basin, 333,400; Total, 3,104,100; Murray-Loddon System:—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 835,420; Cairn Curran, 120,600; Kow Swamp, Laanecoorie, Kerang-North-West Lakes, Lake Boga and Lake Cullulleraine, 148,210; Total, 1,071,230; Wimmera-Mallee:—Rocklands, 272,000; Total, 538,900; Maffra-Sale:—Glenmaggie, 106,040; Coliban:—62,730; Werribee:—34,900; Mornington Peninsula:—5,800; Otway:—1,080; Miscellaneous:—4,770; Total:—4,962,550.

Irrigation channels extend 5,000 miles, domestic and stock channels 9,500 miles and

Irrigation channels extend 5,000 miles, domestic and stock channels 9,500 miles and drainage and flood protection channels 2,000 miles, a total of 16,500 miles. In addition, the Commission controls 1,200 miles of piping, comprising 250 miles of mains and 950 miles of reticulation. Farm holdings served with water total 37,500 and another 7,000 holdings are in drainage or flood protection districts. Urban districts with a reticulated water supply number 282, of which 131 are served by the Commission's channels and pipelines and 151 are supplied by Trusts under the supervision of the Commission. The total number of persons served by a reticulated water supply is approximately 675,000 or 70 per cent. of the State's population outside Greater Melbourne.

To 30th June, 1957, the net capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £93,979,000, two-thirds of which was in respect of irrigation.

Of this net capital liability, at 30th June, 1957, £81,649,000 was borne by the State and £12,330,000 was borne by the water users. Waterworks Trusts and local governing bodies had a net capital liability of £9,130,000 at 30th June, 1957, of which £3,978,000 was borne by the State and £5,152,000 by the Authorities.

(ii) Extent of Systems and Nature of Irrigated Culture. Although the area irrigated is less than 2 per cent. of the State, it yields approximately 15 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1956-57.

### AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: VICTORIA, 1956-57.

(Acres.)

						Area u	ınder Irr	igated C	ulture.

- (a) Includes lucerne for both hay and pasture.

  Mildura Irrigation Trust only.
- (b) Area of Campaspe District only.
- (c) Area of First
- (iii) Production. The influence of irrigation on Victorian production has been considerable, the value of production from irrigation districts as estimated by the Commission having risen from £500,000 in 1905-6 to about £42 million in 1955-56. The major products of irrigated farms are: dairy products, livestock for slaughtering, wool, vine fruits, fresh and canning orchard fruits and vegetables.
- 3. Goulburn System.—This comprises the Eildon and Waranga Reservoirs, the Goulburn Weir and over 2,570 miles of distributary channels. The total capacity of these storages was 3,104,100 acre feet at 30th June, 1957. The Eildon Reservoir (capacity 2,750,000 acre feet) which was completed in June, 1955, is the largest dam in Australia and the largest earthen dam in the Southern Hemisphere. The enlargement of Eildon means that when the necessary distributary works are completed, the area at present irrigated from the Goulburn River can be practically doubled to 600,000 acres.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, and where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District. Following completion of Eildon Reservoir, the latter channel was duplicated to Waranga Basin.

Two main outlet channels issue from the Waranga Reservoir; one serves the Western part of the Rodney district, while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 196,000 acres east of the Goulburn; 602,000 acres between the Goulburn and Campaspe; 380,000 acres between the Campaspe and Loddon; and 80,000 acres west of the Loddon—a total of 1,258,000 acres.

The main products of the Goulburn districts are dairy products, fruit, wool and fat lambs. The development of the fruit canning industries is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—normally represents about two-thirds of Australia's total production of canned peaches, pears and apricots.

4. Murray River System.—The waters of the River Murray are used to supply an area of more than 700,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, except Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, which is served from Yarrawonga Weir, comprises 267,000 acres with 550 miles of distributary channels. This district lies west of Yarrawonga between the River Murray and Broken Creek, its main products being dairying, fat lambs and deciduous fruit. A major post-war development has been a Soldier Settlement Scheme involving 60,000 acres. With the exception of the necessary drainage works, which are under construction, this project is complete.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 377,600 acres through 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Robinvale Irrigation District, between Swan Hill and Mildura is a soldier settlement project established after the 1939–45 War. Set up on modern lines, the 3,000 acres irrigated annually are showing good yields of fruit. About ninety per cent. of the area is devoted to dried vine fruits, and the remainder to orchards.

Red Cliffs Irrigation District comprising 13,600 acres, of which, at present, 11,650 acres are irrigated, ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels supplies every holding in the district. The district, originally set aside for soldier settlement, has been subdivided into 700 blocks. The area is planted mainly with vines and citrus. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 9,200 acres and contains over 300 holdings averaging about 30 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply 51,200 acres forming part of the Millewa Waterworks District,

Nyah Irrigation District is supplied with water diverted from the Murray by a highlift pumping plant, serving 3,840 acres in about 200 holdings devoted mainly to vineyards.

- 5. First Mildura Trust District.—The First Mildura Irrigation Trust—the only Irrigation Trust operating in Victoria—controls an area of 45,000 acres, of which 15,000 acres are irrigated. Of this area, some 80 per cent, is used for the production of vine fruit and the bulk of the remainder for citrus and other fruit. The Trust area produces approximately 15,000 tons of raisins, currants and sultanas each year. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels.
- 6. Wimmera-Mallee System.—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Grampians storages with a capacity of 538,900 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 72,000 acre feet of water is distributed through 6,500 miles of open channels and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. About 10,000 farmers' tanks are served. In addition

315

forty-seven towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storage, 3,500 acres are irrigated for soft fruits and pastures. With the completion of the Rocklands Reservoir, this irrigation area is being extended to 7,000 acres.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditure to remove this sand drift before the annual water distribution can be made. This expenditure can be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn, and the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country have resulted in marked savings in maintenance costs.

7. Private Water Supplies.—The Rural Finance Corporation Act 1949 gave farmers assistance in establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

The control of private diversions from the streams is an important function of the State Rivers and Water Supply Commission. About 10 per cent. of irrigation production in the State comes from private diverters, mainly around the River Murray. In recent years, there have been substantial increases in the areas licensed, the total increase over the past ten years being approximately 50 per cent. At present 4,500 private diverters are licensed annually.

A Farm Water Supplies Branch set up by the State Rivers and Water Supply Commission advises farmers on farm water supply matters even if finance is not required. Comprehensive booklets prepared by this Branch have been widely circulated to landholders.

8. River Improvement, Flood Protection and Drainage.—The largest drainage work undertaken by the State Rivers and Water Supply Commission is Koo-wee-rup-Cardinia Flood Protection District embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth £3 million per year.

The Rivers and Streams Fund, established in 1931 from the rentals on river frontage reserves, gave an impetus to river improvement, but development accelerated rapidly after the 1948 River Improvement Act.

Under this Act, the formation of River Improvement Trusts is facilitated, assistance being granted by the State Government to supplement funds raised locally, and the importance of river improvement work is expected to continue to grow.

9. Underground Resources.—Due to inadequate information as to their extent, the underground waters of Victoria have not as yet been greatly utilized. The first stage of a comprehensive survey of these resources by the Victorian State Rivers and Water Supply Commission, which is responsible for the location, investigation and development of subterranean waters, has been completed and published recently. It provides records of bores in the Mallee, Wimmera and Glenelg regions, and a description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and elsewhere.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies from suitable for domestic purposes in much of the South-western part of the basin to saline and suitable for stock in the rest of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

10. Future Programme.—With the completion of the Eildon and Cairn Curran Reservoirs, storage capacity in Victoria has risen from 172,000 acre feet in 1902 to nearly 5,000,000 acre feet in 1957. In the near future, as a result of the enlargement of the Glenmaggie and Hume Reservoirs, a further increase of 600,000 acre feet of storage capacity will become available.

The most important work at present facing the Commission is the enlargement of the Goulburn Channel System to enable full advantage to be taken of the additional water now available from Eildon Reservoir. A new channel of 1,500 cubic feet capacity from the Goulburn Weir to Waranga Reservoir, duplicating the channel already there was completed in 1956-57 at a cost of £2,000,000. Approximately half the work was done on other contracts worth £2,750,000 and the channel construction programme generally is being completed as funds become available.

It will be possible to develop the present districts progressively before the whole operation is completed and in the meantime, the water already stored in the Eildon Reservoir will provide a valuable safeguard against any possible drought.

11. Hydro-electricity.—Details of hydro-electricity potential and utilization in Victoria may be found in the previous chapter (see page 283).

#### § 4. Queensland.

- 1. General.—(i) Rainfall. Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122. (See also Chapter II.—Physiography, page 45 of this Year Book).
- (ii) Administration. The administration of irrigation and water supply in Queensland is under the control of a Commissioner of Irrigation and Water Supply. For a description of the development of the present administration see Official Year Book No. 42 and earlier issues.
- (iii) Water Utilization in Queensland. Queensland's predominant interest in the field of water conservation is the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half of the Commonwealth's cattle and a seventh of the sheep. But in addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has received much attention in later years.

The State's agricultural crops differ from those of other States in that a large proportion are tropical. Sugar-cane is the greatest individual crop, representing in value approximately 50 per cent. of total agricultural production. Approximately 16 per cent. of the sugar-cane acreage is irrigated and represents some 50 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation. The area of tobacco irrigated during 1955-56 represented 88 per cent. of the total plantings of this crop in the State.

2. Great Artesian Basin.—(i) General. Western Qucensland beyond the 20 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 430,000 square miles or about two-thirds of the total State area of 670,500 square miles. Statistics of bores and flow as at 30th June, 1957, are:—Artesian bores drilled, 2,525; artesian bores still flowing, 1,627; total depth drilled, 3,596,000 feet; deepest bore, 7,009 feet; total estimated flow, 211 million gallons a day. The average depth of artesian bores is 1,425 feet. Some 9,000 sub-artesian bores, within the Great Artesian Basin, have been registered in Queensland. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1-2 feet/head, total flow, 1\frac{1}{2}-2 per cent. per annum.

The greater part of the artesian discharge is distributed by open earth channels totalling some 16,000 miles in length. Most of the water flowing along these channels is lost by soakage and evaporation and less than 10 per cent. is actually used by stock. The amount of soakage depends largely on the permeability of the earth and the rate of evaporation varies from season to season, but the shape and maintenance of the drains constitute further factors. The effective utilization of this water could be increased by the use of piping to overcome the loss by soakage and evaporation occurring in open earth channels.

Although artesian beds underlie such a large area of the State, only 80,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Though the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons per day was recorded in 1914. By 1938, the flow was only 230 million gallons per day. The decline gave rise to the fear that supplies were giving out and that the basin was seriously threatened. In 1939, the Queensland Government appointed a committee to ascertain the nature and structure of the Great Artesian Basin with particular reference to the problem of diminishing supply. In its final report, presented in 1954, the majority of the Committee found that the output will continue to decline during the next sixty years when the flow from the remaining flowing bores will be of the order of 110 million gallons per day. At this stage the discharge from windmills, springs and other leakages and the underflow past the Queensland borders will be of the order of 20 million gallons per day. The total discharge of the order of 130 million gallons per day will be in equilibrium with the recharge of the basin. Numbers of bores on higher ground will cease to flow during the next sixty years and the area served by flowing bores will contract by perhaps 20 per cent.

A programme of strict conservation, involving the restriction of bore flows and improved bore drains, would result in smaller shrinkage of the area served by flowing bores and would actually cost less than the installation and maintenance of pumps or other watering facilities which would be required to provide alternative water supply as additional bores ceased to flow because of a policy of non-restriction. On the other hand, strict conservation would not increase the amount of water ultimately available as perennial flowing supply and would in fact decrease the amount of water passed from intake beds to aquifers within the basin, by flattening the hydraulic gradient. The benefit from strict conservation was not considered sufficiently great, nor sufficiently concrete to warrant implementation.

The quality of artesian water from the greater part of the basin is such that it is not suited for prolonged use for irrigation on most soils. Moreover, artesian supplies are not sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

- (ii) Bore Water Areas. The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1956-57 are:—Areas constituted, 63; administered by Commissioner, 56; administered by Local Boards, 7; area benefited, 4,232,671 acres; average rate per acre, 0.95d.; number of flowing bores, 55; total flow, 25,524,000 gallons per day; drains served, 2,822 miles.
- 3. Other Basins.—Two major areas marginal to the Great Artesian Basin in Queensland carry artesian water. One occurs on the western slopes of Cape York Peninsula and the other in the Dawson-Mackenzie River Basin. A small area in which flowing wells occur (the Gatton Basin) extends from Gatton to the coast.

Sub-artesian water supply from the Barkly Basin which extends into western Queensland from the Northern Territory, is referred to in the section dealing with the Northern Territory.

4. Stock Route Watering.—During 1935; a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944, a: co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent; whose duty was, inter alia, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes through-

out the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1957, 409 facilities had been completed and at 30th June, 1957, 77 facilities were under construction or investigation.

5. Irrigation.—(i) General. Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. In addition to the Theodore Irrigation Area on the Dawson River, orthodox projects served by a channel system are being developed at Clare, Millaroo and Dalbeg, all on the Burdekin River, Gibber Gunyah on the Dawson River and St. George on the Balonne River. Construction of the Clare, Millaroo and Dalbeg irrigation works was completed during the year ended 30th June, 1957, but a small amount of drainage work requires to be completed. Works were virtually completed in the Gibber Gunyah Area and construction of the St. George Area was advanced sufficiently to permit opening of 10 farms. A start has been made on construction of part of the main channel system within the Mareeba-Dimbulah Irrigation Area. Because of the large variations in-both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1957.

AREA OF LAND UNDER IRRIGATED CULTURE: QUEENSLAND, 1956-57.(a	AREA	OF LAND	UNDER	IRRIGATED	CULTURE:	QUEENSLAND,	1956-57.(a

Total	:	6,078	25,096	3,660	57,158	6,350	407	23,440	5,561	121,672

(a) Year ended 31st March, 1957.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land:—1906, 9,922 acres; 1916, 10,886 acres; 1926, 24,250 acres; 1935-36, 44,283 acres; 1945-46, 68,347 acres; 1955-56, 136,019 acres.

The pattern of irrigation in Queensland is unlike that in southern States; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

(ii) Lockyer Valley. West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30

inches the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area, only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 600 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems, an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) Burdekin River. The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile Delta Area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr, water for domestic supply is raised by a windmill on each property.

In 1940, the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested Government Departments under the general supervision of the Burdekin River Authority. The development envisaged includes a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobaccogrowing, dairying and cattle-fattening, with sorghum, sunflowers, peanuts, cotton and sugarcane as other possible forms of production. The projected scheme, together with the high-level railway bridge at present under construction, will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production.

The Clare Irrigation Area, constituted in 1949, the Millaroo Irrigation Area, constituted in 1952, and the Dalbeg Irrigation Area, constituted in 1953, are at present being developed for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 12,000 acres and obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin. To 30th June, 1957, 73 farms had been opened for selection in the Clare Area, 60 in the Millaroo Area and 45 in the Dalbeg Area.

(iv) Dawson Valley. The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of 70,000 acres. Storage for the scheme was to be provided by a dam of 2,000,000 acre feet capacity at Nathan Gorge. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central

pumping station. Two additional weirs have since been built, giving a total storage of 9,000 acre feet. Pasture, vegetables, cotton, fruit and dairy products are the principal produce. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development. Construction of works to serve some 2,400 acres at Gibber Gunyah, adjacent to the existing Theodore Area, was virtually completed at 30th June, 1957, and allotment of farms had commenced.

(v) Mareeba-Dimbulah Area. The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. In 1955-56, some 3,026 acres of high-grade tobacco were grown. Seven weirs of combined capacity of 2,600 acre feet have been completed on a number of streams to store water for irrigation.

During 1952, a report on the utilization of waters of the Barron and Walsh Rivers was prepared and the establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. In each case, construction has commenced. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

- (vi) Border Rivers Project. The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 302.
- (vii) Balonne River. The St. George Irrigation Area has been constituted and construction of works to serve some 11,000 acres is in progress. Water supply for the area will be obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.
- 6. Bureau of Investigation.—Under the Land and Water Resources Development Act of 1943, a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture, under the chairmanship of the Co-ordinator-General of Public Works. Among notable works carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State and the detailed investigation of the agricultural and pastoral potentialities of many regions.

7. Channel Country.—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage.

At 30th June, 1952, 41 watering facilities, at an estimated cost of £277,000, had been proposed under a Commonwealth-State agreement for stock routes through, and in the approaches to, the Channel Country. By 30th June, 1957, 28 had been completed, while two sub-artesian bores and one excavated tank were under construction.

8. Hydro-electricity.—An outline of Hydro-electricity Schemes operating in Queensland is given in the previous chapter (see page 286).

#### § 5. South Australia.

- 1. General.—(i) Rainfall. Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district".
- (iii) Methods of Catchment and Conservation. Early steps were taken to vest all running streams, springs and "soaks" in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and "rainsheds" have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,751,269. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.
- 2. Irrigation.—In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers in the Murray Valley an area of 32,729 acres of irrigable high land together with 9,434 acres of reclaimed swamp and 167,223 acres of non-irrigable land in the irrigation areas and 29,731 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 239,117 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which more than 9,500 are irrigated. Water used for irrigation purposes in 1956-57 in the high land irrigation areas controlled by the Department of Lands, excluding War Service Land Settlement areas in course of development, was approximately 100,000 acre feet. No water was applied to the reclaimed areas during the 1956-57 season because of inundation by the floodwaters of the River Murray The swamps were de-watered however, by 30th June, 1957. In the Renmark area, 28,200 acre feet of water were used for irrigation in 1956-57. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of channel for reticulation to 9,550 acres.

The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

# AREA OF LAND UNDER IRRIGATED CULTURE, 1956-57. IRRIGATION AREAS ADMINISTERED BY THE DEPARTMENT OF LANDS AND THE RENMARK IRRIGATION TRUST. (Acres.)

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges. Further developments currently being undertaken include the construction of a main pipeline and pumping stations for

<sup>(</sup>a) No water was applied to these lands during 1956-57. See text.

<sup>3.</sup> Water Supply Schemes.—(i) Summary. Water conservation and distribution works in South Australia have cost £51,264,226 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1956-57 is as follows:—Length of water mains, 5,934 miles; capacity of storages, 35,092 acre feet; approximate population served, 300,000; area served, approximately 5,000,000 acres; total capital cost, £27,237,093.

pumping water from the River Murray to Adelaide and, by means of a branch pipeline, to Warren Reservoir. Another reservoir (South Para Reservoir), to supplement the Warren and Barossa Reservoirs, is also being constructed on the South Para River. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

- (ii) Morgan-Whyalla Water Supply Scheme. For particulars of the construction and works of the main 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf see Official Year Book No. 37, page 1132. A 19-mile branch-line has also been constructed to Jamestown. The Morgan-Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.
- 4. Underground Water.—The occupied portion of South Australia is, on the whole, well endowed with underground water and the extent of the several artesian basins is reasonably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. However, deep boreholes have been drilled by the government to provide watering places along stock routes, and pastoralists rely largely on supplies from non-pressure aquifers at shallower depths. Marree township is supplied from this source, its deepest bore being 575 feet.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms, but also for township supplies to Mount Gambier, Naracoorte, Bordertown, Pinnaroo, Penola, Lamaroo, Coonalpyn, Nangwarry, Mount Burr, Kingston (S.E.), Parilla and Karoonda. The deepest bore in this Basin is 415 feet. Towns elsewhere which are supplied from bores include Mount Barker, Port Lincoln, St. Kilda, Peterborough, Warooka and Willunga.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 30 drills. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and considerable tracts of previously undeveloped country in the Upper South-east, Kangaroo Island and Yorke Peninsula have been found to have usable water and are now being opened up.

Ground water resources surveys are undertaken continuously by Departmental geologists, the results being published in various bulletins, reports and investigations issued from time to time.

- 5. Farm Water Schemes.—While the Department of Mines and Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs on the Murray River.
- 6. South-Eastern Drainage.—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia see Official Year Book No. 37, page 1133.

#### § 6. Western Australia.

- 1. General.—(i) Rainfall. Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)
- (ii) Administration. Irrigation districts are administered by the Minister for Water Supply, Sewerage and Drainage under the Rights in Water and Irrigation Act 1914–1951, and he is advised by an Irrigation Commission representing the local irrigationists and governmental technical and financial branches. Water supplies in country areas in Western Australia coming under the provisions of the Water Boards Act 1904–1954 and the Country Areas Water Supply Act 1947–1954 (which are administered by the Minister for Water Supply, Sewerage and Drainage) are controlled either by the local authority or by the Water Supply, Sewerage and Drainage Department. Those controlled by the Water Supply, Sewerage and Drainage Department (except for some water supplies to country towns still under the provisions of the Water Boards Act) form the Country Areas Water Supply, consisting of the Goldfields and Agricultural Water Supply (formerly the Goldfields Water

Supply) the Great Southern Towns Water Supply and water supplies to country towns. Also controlled by the Water Supply, Sewerage and Drainage Department are individual water supplies serving isolated mines, stock routes, and agricultural areas: these works are done under the provisions of the Public Works Act 1902–1956. The Water Supply, Sewerage and Drainage Department is divided into metropolitan and country parts. The country part is combined with the Public Works Department. The Minister for Works is also the Minister for Water Supply, Sewerage and Drainage. Water rights over water flowing in streams and watercourses are vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. Irrigation.—(i) South-West. The main irrigation areas are situated along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth).

The Water Supply, Sewerage and Drainage Department controls three irrigation districts—Waroona, Harvey and Collie—the total area irrigated in these districts during 1956-57 being 24,724 acres and the total water used approximately 75,000 acre feet. The total of acre waterings (that is, the number of acres watered multiplied by the average number of waterings) was 141,714. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie Irrigation District.

The Waroona Irrigation District (10,302 acres) is supplied from Drakes Brook Dam (1,854 acre feet capacity) and Samson Brook Dam (6,624 acre feet), the Harvey Irrigation District (36,823 acres) from the Harvey Weir (8,370 acre feet) and Stirling Dam (44,160 acre feet), and the Collie Irrigation District (36,020 acres) from the Wellington Dam (29,440 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1952-53 to 1956-57 illustrates the growth of these irrigation schemes.

IRRIGATION,	WESTERN	AUSTRALIA	:	ACRE	WATERINGS(a).
-------------	---------	-----------	---	------	---------------

Year.		Pasture.	Fodder.	Potatoes.	Vege- tables.	Orchard.	Flax, Broom Millet, and Preparation of Ground.	
1952–53		95,491	2,235	4,185	2,588	1,070	536	106,105
1953-54		98,645	3,435	4,405	3,003	1,072	115	110,675
1954–55		112,659	3,268	2,363	3,294	845	121	122,550
1955-56		108,468	3,599	1,834	3,452	946	127	118,426
1956–57	••	129,502	3,757	3,995	3,317	1,024	119	141,714

<sup>(</sup>a) Number of acres watered multiplied by average number of waterings.

(ii) General. In 1956-57 the total area irrigated in Western Australia was 38,567 acres made up of vegetables (7,990 acres) fruit (5,137 acres) vineyards (493 acres) pastures (23,320 acres) and other crops (1,627 acres).

An area of approximately 500 acres of Gascoyne River flats adjacent to Carnarvon has been under irrigated cultivation for a considerable period. The principal crop has been bananas but others such as beans and tomatoes, are also grown. For this agriculture a total of over 220 acre feet of water per week is drawn from river underflow.

Following successful experimental work, commercial production of rice is currently being developed, requiring irrigation water to be diverted from the Fitzroy River. The first stage of this work involving the deepening and grading of an anabranch of the Fitzroy River 25 miles to the rice growing area where a natural storage of 2,000 acre feet existed, was carried out by the Public Works Department in 1956.

The Ord River in the Kimberley Division of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 inches in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 3,000,000 acre feet of water, equipped with a hydro-electric plant, which might supply irrigation water for an area of 100,000 acres, if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. The economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

Tasmania. 325

3. Water Supply Schemes.—(i) Goldfields and Agricultural Water Supply. Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of Official Year Book No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 55,767 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main, mostly steel and 30 inches in diameter, aided by seven pumping stations and one booster pumping station.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring Weir is nominally 15.9 million gallons per day. The total capacity of all receiving, regulating, standby and service tanks along the main pipe line is 154 million gallons which includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipe lines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 101 miles. The system serves some 72 towns and water is reticulated to about 2,000,000 acres of mixed farming lands. The total length of pipe lines is 2,578 miles and the number of services is 20,647. The total quantity of water pumped from Mundaring in 1956-57 was 3,076 million gallons. The total cost of the scheme to the end of 1956-57 was £11,410,906.

District water supply schemes established for the purpose of supplying certain country towns and mixed farming lands have been absorbed into the Goldfields and Agricultural Water Supply Scheme. For further particulars see Official Year Book No. 37, page 1135.

- (ii) Comprehensive Water Supply Scheme. A comprehensive water supply scheme to supplement water supplies to the goldfields, agricultural areas, and country towns, authorized in 1947 as a joint work between the Commonwealth and State and estimated to cost £10,000,000 is at present (1957) under construction in two main parts. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply Scheme. The southern section is the Great Southern Towns Water Supply Scheme. Linked with Wellington Dam (initially an irrigation work on the Collie River) by 80 miles of 30-inch diameter pipe through two pumping stations to Narrogin, it will eventually supplement the existing water supplies to country towns along the Great Southern Railway, north to Brookton and south to Katanning. The raising of the impounding wall of Wellington Dam to increase its storage to about 150,000 acre feet is also in progress.
- (iii) Country Towns Water Supplies. Country towns supplied by schemes otherwise than above comprise those in the remaining agricultural and mining areas, including the North-West and Kimberley Divisions. Sixty separate reticulated water supplies serve country towns. Of these, 50 are controlled by the Public Works Department and the remainder by the Local Authority.
- (iv) Catchments. The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores. Three types of catchment peculiar to this State deserves special mention, namely, rock catchments, which consist of mostly clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.
- 4. Underground Water.—Individual farmers, orchardists, market gardeners and others pump ground water from wells and bores, using windmills, engines or electric power. Water is also obtained from artesian and sub-artesian bores. The Public Works Department hires out to local authorities boring plants which are then hired out to farmers to assist their boring operations. In addition the Public Works Department operates its own boring plants and contracts with private firms in connexion with water supply works.

#### § 7. Tasmania.

- 1. General.—(i) Rainfall. Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.
- (ii) Main Purposes of Conservation and Utilization. Owing to Tasmania's fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for

domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality, but a small quantity which has been exploited to a limited extent only by bores and windmills exists over an area in the Midlands. Geological conditions do not appear to favour the utilization of underground water except on a minor scale.

- (iii) Administration. The State does not own all natural waters, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. Under the provisions of an Act passed in 1944, the Water, Sewerage and Drainage Board was constituted to consider the financial and technical practicability of all water supply schemes constructed by local authorities, other than the cities of Hobart and Launceston. Legislation was also enacted during 1952 empowering Local Authorities to take water from specific sources of supply and to construct waterworks. The Act does not cover irrigation, which is practised to a limited extent only by private interests. Provision has been made in the Act for the protection of riparian rights, but there is no general legislation for the control of water courses.
- 2. Hydro-electricity. \*—Tasmania depends entirely on water for power development. The Hydro Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration.

Most of the water potential is located on the Central Plateau with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo, each more than 12 square miles, and others of smaller area. Parliamentary approval has recently been given for the Commission to proceed with the development of the waters of the Great Lake through a 300,000 kW underground power station at the foot of the Western Tiers some 10 miles from Cressy. The power station will operate under a head of 2,750 feet and will utilize the existing Great Lake storage which is to be supplemented by water pumped from an additional storage which will be created at Arthurs Lakes some four miles to the east of the southern end of the Great Lake.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred in favour of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the South Esk River in the north and the Huon River in the south. A power station at Trevallyn, near Launceston, utilizes water from the South Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on this river at a reasonable cost and, because of its proximity to Hobart, a future power station would have considerable value for peak load development.

3. Industrial.—Three principal industrial schemes have been installed privately. Australian Newsprint Mills Ltd. pump approximately 6 million gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills Ltd. pump several million gallons a day from the Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Heybridge. In addition the State has constructed a regional water scheme to serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar and to supply several Municipalities with bulk water for domestic and industrial purposes.

<sup>\*</sup> See also Chapter VIII.—Electric Power Generation and Distribution, p 291.

A second regional water scheme draws water from the River Derwent at Lawitta to provide domestic and industrial supplies in five southern Municipalities. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State which is largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. Irrigation.—There are no State irrigation projects, but preliminary inquiries as to the possibility of establishing one in the Coal River Valley have been made. Legislation is before Parliament to give a new Commission extensive powers for river control and for the design of irrigation projects. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation as practised in Tasmania, was applied in 1956-57 to 12,110 acres devoted to: hops (1,330 acres); fruit (773 acres); pastures (7,421 acres); green fodder, etc. (877 acres); and other crops (1,709 acres).

#### § 8. Northern Territory.

- 1. Climate and Topography.—Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter V.—The Territories of Australia.
- 2. Administration.—Under the Control of Waters Ordinance 1938–1955 of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed. There is a Water Use Branch in the Northern Territory Administration under the control of a Director. The functions of the Branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, flood prevention and control.
- 3. Underground Water.—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry which provides the bulk of the Territory's income. The inadequacy of surface water during the dry season underlines the importance of underground water supplies in the Territory where most of the cattle population is dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle population but geological features, controlling both soils and the storage of underground water, are even more important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall per year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, this area has a comparatively low carrying capacity for cattle and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in the winter despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an annual average rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lighter rainfall areas, the search for potable underground water becomes exacting but, in general, the regions providing the best pastures—the Ord-Victoria Region, the Barkly Tablelands and smaller areas in the Alice Springs district—provide also sub-surface conditions suitable for the storage of water. This comes about largely because, in these areas, both pasture and water are related to flat lying or gently folded limestones or volcanics of Upper Proterozoic or Cambrian age, overlying the basement of older, more tightly folded, metamorphic rocks and granites which crop out over wide areas within the Territory.

In the Ord-Victoria Region, probably the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Ground water is obtained in shallow bores averaging 70 to 80 feet in depth and producing small supplies which range up to 1,500 gallons per hour. For the most part, water is stored in joints, faults or cracks in the rocks although

in places sub-artesian conditions pertain and, on the whole, selection of bore sites is difficult. There are also small sedimentary basins in the region, some of which yield sub-artesian, and in places, artesian water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian) but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

A review is being made of the information available concerning the number of bores and wells sunk in the Territory. Preliminary information shows that in 1956-57, some 1,190 bores and 190 wells were registered. Of the 1,190 bores, 621 were on pastoral properties (33 being provided by the Government by way of assistance to pastoralists), 25 on Native Reserves, 8 for town water supplies and 6 for mining fields. It is not known how many of 341 registered bores drilled originally for defence and road construction purposes are still in use but it is probable that most of them have been abandoned.

The number of stock route bores established by the Government for watering some 2,500 miles of stock routes, is 160 which represents on the average one every 16 miles.

Regional surveys by the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization from 1947 to 1955 have established the existence of the valuable Barkly Basin of 57,000 square miles in the eastern part of the Territory and extensions of the Gulf Basin in the north-western part.

4. Irrigation.—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Hydrological investigations are being carried out by the Administration and a public company to determine the supply of water and the best methods of control and use in the potential rice growing areas of the Territory. Agricultural activity in the Territory is not extensive.

The Katherine River appears to offer irrigation potentialities on the levee soil below the township. The river passes through a gorge upstream under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the area for agricultural production. For particulars of these see p. 1138 of Official Year Book No. 37.

#### § 9. Papua and New Guinea.

- 1. Rainfall.—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 231 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).
- 2. General.—For a general description of these territories see Chapter V.—The Territories of Australia, p. 125, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (a description of which is given in Chapter XXVI. of Year Book No. 40), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential which is extensive. An outline of schemes at present in operation is given in the previous chapter.

#### CHAPTER IX.

#### WATER CONSERVATION AND IRRIGATION.

# A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS. § 1. Introduction.

Official Year Book No. 37, pp. 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues, much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article (pp. 1140-41) was a bibliography of selected books, reports, papers, etc., dealing with the development of the water resources of Australia and their conservation.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II.—Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XIX.—Local Government; and on the generation of hydro-electric power to Chapter VIII.—Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States was published on pp. 1073-9 of Official Year Book No. 40.

A map showing the extent of known artesian basins throughout Australia is shown on page 307 of this Year Book.

#### § 2. Water Resources and their Utilization.

- 1. Surface Supplies.—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. At present, therefore, it is impossible to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it would probably amount to only a small figure in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).
- 2. Major Dams and Reservoirs.—The table below lists existing major dams and reservoirs together with those under construction or projected as at June, 1957.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.		Location.	Capacity (Acre feet).	Height of Wall (Feet)	Remarks.
		Existing I	AMS AND	Reservoir	s.
Eildon	••	Upper Goulburn River, Victoria	2,750,000	250	Earthen embankment 3,300 feet long. Storage for irrigation and for the generation of electricity.
Hume	••	Murray River near Albury	1,452,000	140	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. Being increased to 2,500,000 acre feet. Hydro-electric power being developed.
Miena	• •	Great Lake, Tas-	(a)948,500	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck	• •	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and pro- duction of hydro-electric power.
Somerset	• •	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station.

Wellington	••	Collie River, Western Australia	150,000	110	Scheme. Existing dam to be enlarged for supply of water to irrigation districts and to agricultur areas and towns.
Koombooloomba	••	Tully River, North Queensland	146,000	123	Under construction for hydr electric and possibly irrigation
Upper Yarra	••	Yarra River, Victoria	110,000	270	purposes. Under construction for Melbour water supply.

- 3. Irrigation.—(i) History. For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey Brothers and to the Victorian Irrigation Act in 1886 see issues of the Official Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Official Year Book No. 37, p. 1009.
- (ii) Extent and Nature of Irrigated Culture. About half of Australia's irrigated acreage is in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In those areas served by the Murray and its tributaries, irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodders, and pastures are served. Large scale irrigation schemes have not been developed in Tasmania or the Northern Territory although reference is made on page 328 to investigations at present being carried out in the Northern Territory to determine the availability of irrigation water for rice production.

The following table shows the area of land irrigated in each State during the years 1952-53 to 1956-57:—

(e) Excludes lucerne fed off, included in "Other Crops".
(f) Includes lucerne for pasture.

(iii) Research. :Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research:Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—the influence of irrigation on plant-life (using horticultural trees as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—pastures; and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations, the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established. Research is also conducted in the field of water percolation in relation to soil structure.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

- 4. Preservation of Catchments.—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years, efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.
- 5. Sub-surface Supplies.—(i) General. While a more or less complete general; picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent of the artesian basins—particularly the Great Artesian Basin—has been fairly accurately determined, while the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed to any degree, except in a few localities.

(ii) Artesian and Sub-artesian Supplies. Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 307 of this Year Book.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 670,000 square miles, comprising about 430,000 in Queensland, 80,000 in New South Wales, 120,000 in South Australia and 40,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal:—

PRINCIPAL WATER-BEARING BASINS: AUSTRALIA.

Name.	State.	Geological Age of Chief Aquifers.	Approxi- mate Area.	Depth to Pressure Water.	
			Square Miles.	Feet.	
Great Artesian	Queensland, New South Wales, South Australia and Northern Territory	Pliocene-Permian	670,000	Up to 7,000

Adelaide	South Australia	Recent, Oligocene	-,		
Basins of Ord- Victoria Region	Northern Terri- tory, Western Australia	Mainly Cambrian and Permian	Unknown	Unknown	

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

(iii) Ground Water. Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle and at Botany, Sydney, private industry pumps 5 million gallons a day for its own use from similar sands.

Recent exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day.

### § 3. National and Interstate Aspects.

1. General.—As the Commonwealth Constitution makes special reference to water problems, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources resides in the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945, national aspects of water conservation and use were emphasized. The report recommended that to obviate lack of co-ordination, an all-Australian plan, having the assent of the various governments be adopted, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946, a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee first established under the authority of the Australian Agricultural Council in 1938. Its functions are:—(a) to prepare for the consideration of the Australian Agricultural Council or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. Murray River Scheme.—(i) General. The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (980 miles), the Darling (1,700 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,506,000 acre feet; Murrumbidgee River, 2,280,000 acre feet; Goulburn River (including Broken River), 2,502,000 acre feet; Darling River, 2,224,000 acre feet; and Ovens River, 1,169,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, fat lambs, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) River Murray Waters Agreement. Under the Agreement, construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Official Year Book No. 40 (p. 1065) and earlier issues.

At a Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River (see para. 4, Snowy Mountains Hydro-electric Scheme, page 303) and that a storage of not less than 1,500,000 acre feet should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury was the maximum that was economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the size of the Hume Reservoir from its previously designed capacity of 2,000,000 acre feet to 2,500,000 acre feet, but if additional storages for hydro-electric purposes become justified in the future further increases would best be provided at some other site. It subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet. A conference of Ministers considered the recommendation in July, 1954 and agreed to the enlargement. In addition, it was agreed that the Commission should be given power to construct regulators and to carry out such other work on the River Murray between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955.

The total estimated quantity of water diverted from the Murray and its tributaries (under the River Murray Agreement, in 1955-56 for irrigation and other purposes, including impounding in dams, was as follows (in acre feet):—New South Wales, 1,008,000; Victoria, 3,108,000; South Australia, 190,500; a total of 4,306,500 acre feet. Owing to the floods in the latter half of 1956 the quantity of water diverted in 1956-57 was considerably less than that for the preceding year.

(iii) River Murray Works. One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 110 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately one mile. Work is now in progress on the enlargement of the reservoir to its recently approved capacity of 2,500,000 acre feet.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. Work has recently been completed on the enlargement of the inlet channel to Lake Victoria to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 837,000 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 2,750,000 acre feet; Waranga (Goulburn), 333,400 acre feet. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia.

3. New South Wales-Queensland Border Rivers Agreement.—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on parts of those portions of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station Homestead which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. It is now intended to do exploratory drilling of the tributary sites.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. The construction of Bonshaw and Cunningham Weirs on the Dumaresq River was completed in January, 1953 and June, 1954 respectively.

Investigations are proceeding and designs are being prepared for a weir and regulator on the Barwon River at the offtake of the Boomi River and construction of a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River has been authorized. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland) and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

4. Snowy Mountains Hydro-electric Scheme.\*—(i) General. Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949 passed the Snowy Mountains Hydro-electric Power Act setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme will be constructed in two parts, the first being known as the Snowy-Murray Development where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne to the Swampy Plains River in the Murray Valley, and the second as the Tumut Development, in which water will be diverted by tunnel from a dam at Adaminaby on the Eucumbene River, a tributary of the Snowy, to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of seven major dams (with a total storage capacity of approximately 7 million acre feet), fifteen power stations, more than 80 miles of large diameter tunnels, and over 330 miles of racelines at high elevations.

Latest estimates indicate that the total cost will be approximately £419 million. The scheme is the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) Snowy Mountains Hydro-electric Power Act 1949. The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner, who is assisted by two Associate Commissioners. The functions of the Authority are defined in the Act as follows:—(a) to generate electricity by means of hydro-electric works in the Snowy Mountains area and (b) to supply electricity so generated to the Commonwealth for defence purposes and for consumption in the Australian Capital Territory. The general powers of the Authority as defined in the Act are as follows:—For the purpose of performing its functions the Authority shall have power to construct, maintain, operate, protect, manage and control works—(a) for the collection, diversion and storage of water in the Snowy Mountains Area; (b) for the generation of electricity in that area; (c) for the transmission of electricity generated by the Authority; and (d) incidental or related to the construction, maintenance, operation, protection, management or control of any of the works specified above. The Act provides that the Authority may sell to a State, or to an authority of a State, electricity generated by the Authority which is not immediately required by the Commonwealth for defence purposes or for consumption in the Australian Capital Territory.

See also Chapter VIII.—Electric Power Generation and Distribution, p. 272.
 For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX.—Miscellaneous, of Official Year Book No. 42.

(iii) The Authority's Objectives and Programme. The two basic objectives are the production of electricity and the diversion of water inland.

The first power station, at Guthega, came into service in April, 1955. Additional generating capacity is scheduled to become available progressively.

By the end of 1959, the Snowy Scheme will supply the Murrumbidgee River with approximately 300,000 acre feet per annum of additional water and by 1962 this amount will have increased to 500,000 acre feet per annum. Ultimately the scheme will provide approximately 1,818,000 acre feet per annum of additional regulated water of which 1,020,000 acre feet will go to the Murrumbidgee and 798,000 acre feet per annum to the Murray.

The New South Wales Department of Public Works, on behalf of the Authority, is supervising the construction of the Adaminaby Dam, for which a contract was let in May, 1956. Construction of the dam was sufficiently advanced to permit closure of the diversion tunnel gates on 22nd June, 1957 and the waters of the Eucumbene River are now being stored for later use through the Tumut Power Stations. The Department of Main Roads and the Snowy River Shire are reconstructing over 90 miles of existing roads. Construction is now in progress on the 14 mile Eucumbene–Tumut Tunnel, Tumut Pond Dam, the 8,000 feet pressure tunnel leading to Station T1, and on Station T1 itself. Designs for the Tooma–Tumut Diversion, the T2 Project and the Murrumbidgee–Eucumbene Diversion were sufficiently advanced to permit the calling of tenders for these works before the end of 1957.

#### B. STATES AND TERRITORIES.

#### § 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal with water conservation and irrigation in Australia generally and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

## § 2. New South Wales.

- 1. General.—(i) Rainfall and History. In issue No. 37 of this publication (p. 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme and river improvement works.

Under the Water Act, the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 302 of this Chapter.

2. Schemes Summarized.—(i) Location and Type. The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, a tributary of the Murrumbidgee. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, Flood Control and Irrigation Districts and River Improvement Districts. There are five Irrigation Areas:—The Murrumbidgee Irrigation Areas consisting of 451,251 acres served with water through a channel system stemming from the river at Berembed Weir; the Coomealla Irrigation Area of 34,693 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,549 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; and the Tullakool Irrigation Area of 18,006 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) below.

(ii) Works. The capacities of the main storages (in acre feet) are :-

Murray:—Half share of Hume Reservoir, weirs and locks to Wentworth (835,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (837,000); Berembed Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740).

Lachlan: —Wyangala Dam (303,900); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplied the districts of Jemalong and Wylde's Plains, serving an area of 224,556 acres. Proposals for future development include provision of a head storage on the Belubula River.

The approximate total length of channels (including main canals) constructed by the Water Conservation and Irrigation Commission in New South Wales is 2,957 miles. The approximate length of drains and escape channels is 860 miles, and the total length of pipe lines is approximately 50 miles, making a grand total of 3,867 miles of channels and pipe lines, etc.

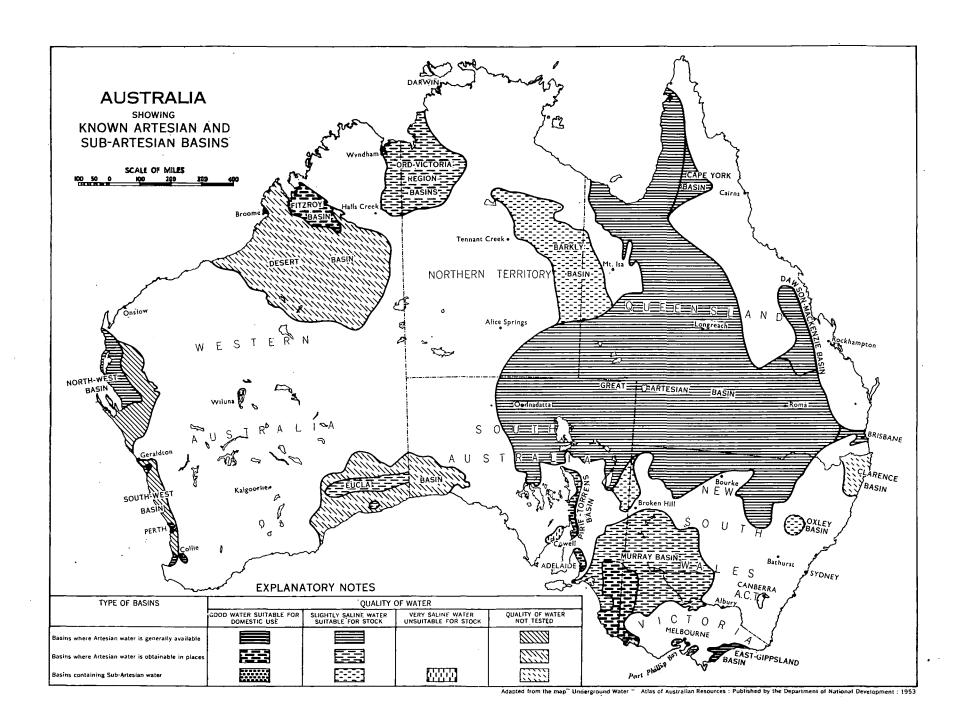

(iii) Extent of Systems and Nature of Irrigated Culture. The following table shows the areas of the various irrigation systems and particulars of the areas under irrigated culture in New South Wales during 1956-57.

<sup>(</sup>a) Includes grazing and cutting. (b) Perennial and annual self-seeding. Perennial amounted to 39,183 acres. (c) Citrus and deciduous. Deciduous amounted to 6,825 acres of which 6,144 acres were in the Murrumbidgee Irrigation Area. (d) Not available. (e) Incomplete. (f) Area irrigable; details of area actually irrigated are not available. (g) Excludes domestic and stock supplies for which particulars are not available. (h) Tobacco. (f) Includes Flood Control Districts; but excludes some Irrigation Trusts for which information is not available.

•	

3. Murrumbidgee Irrigation Areas.—(i) Description. These areas comprise about a third of the State's irrigated acreage and in 1956-57, together with lands adjacent supplied under agreement, received 318,388 acre feet of the total water allocated within the State for stock, domestic supply and irrigation (1,112,236 acre feet). They are served by the Burrinjuck Dam (capacity 837,000 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate approximately 857 miles and drainage channels 785 miles. In addition, approximately 374 miles of supply channels run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control.

The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations and was sparsely populated. Population was 12,000 in 1923, 15,000 in 1929, 20,000 at the 1947 Census and 24,000 at the 1954 Census. At the 1954 Census the population of the Yanco district (with Leeton as the centre) was 10,000 and the population of the Mirrool Area (with Griffith as the centre) was 14,000.

- (ii) Administration. The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1957, was 377,248 acres, including 38,918 held for short lease grazing, agriculture, etc.
- (iii) Production. Since the inauguration of the scheme in 1912 the volume of production from the area has greatly increased. Numbers of new crops are grown while the volume of the major products of the area prior to the scheme, such as wool and livestock for slaughtering, has expanded considerably. The principal products to-day are: wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924 and has since become the most important crop grown in the area. In 1956-57, the total area sown in the Murrumbidgee Irrigation Areas was 30,182 acres and the total quantity of water delivered for the rice crops was 154,672 acre feet.

In a normal season, the water supplied for rice represents about one-half of the total delivered on the Murrumbidgee Irrigation Areas.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle about 300,000 bushels of fruit per year (compared with 54,600 in 1927-28). The annual sales turnover of the Leeton cannery in recent years has exceeded £2,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. Other Irrigation Areas.—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for the operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,549 acres of which 7,754 acres were occupied at 30th June, 1957. Production consists of dried vine fruits, deciduous fruits and fodder crops.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 34,693 acres of which 30,948 acres were occupied at 30th June, 1957. Production consists of vine and citrus fruits. An extension of the Coomealla Irrigation Area has been completed in recent years to provide irrigation farms for ex-servicemen and 100 ex-servicemen have been placed on the new farms.

Tullakool Area, formerly part of the Wakool Irrigation District, comprises 18,006 acres of which 14,396 acres are occupied. Production consists of fat lambs, wheat and rice.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which, 6,240 acres are occupied. Production comprises dairy products, fat lambs, sheep, wool and fodders.

5. Irrigation Districts.—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—Murray River—Wakool District (completed) 493,730 acres, Berriquin Provisional District (completed) 779,564 acres, Deniboota Provisional District (first section completed) 306,907 acres, Denimein Provisional District (completed) 147,005 acres, Jernargo Provisional District (certain portions of which have been included in Berriquin District) 4,505 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; Murrumbidgee River (completed)—Benerembah District 112,818 acres, Tabbita District 10,745 acres, Wah Wah Provisional District 571,358 acres, Gumly Provisional District 345 acres; Lachlan River (completed)—Jemalong and Wylde's Plains District 224,556 acres.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1957, the total length of completed canal and channels in Berriquin District was 870 miles, including Mulwala Canal 75 miles, Berrigan channel 22 miles, subsidiary channels 729 miles, escape channels 33 miles and cross drainage channels 11 miles. Off-take capacity of the Mulwala Canal is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be completed.

Wakool, with 384 miles of channel, contains 292 holdings and the area developed by irrigation comprises about one acre in 9 of the total area. The total area irrigated in 1956-57 was 58,010 acres and water supplied was 103,554 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Total irrigated acreage was 158,126 at 30th June, 1957. Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1956-57 season for irrigation, etc. was 94,184 acre feet, and the area irrigated was 35,811 acres, including rice and other cereals, pastures, and fodder crops.

For the same season, 23,260 acre feet of water were supplied from the Lachlan River to irrigate a total area of 16,022 acres within the Jemalong and Wylde's Plains Districts.

6. Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.—
The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer.

The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district is shown in parentheses)—Murray River—Tuppal Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,980), Minnie Bend Flood Prevention (2,190); Murrumbidgee River—Yanco, Colombo and Billabong Creeks (1,001,210); Lachlan River—Torriganny, Muggabah and Merrimajeel Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (292,640), Ulonga (71,655), Micabil Weir (11,500); Miscellaneous—Algudgerie Creek (9,760), Nidgery Weir (46,880), Great Ana Branch of Darling River (967,339), Collarenebri town water supply (117)—making in all a total area of 2,914,831 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—Hunter River—Blairmore (315); Murray River—Bama (3,446), Goodnight (1,167), Bungunyak-Koraleigh (1,810), Glenview (661), Bringan (4,933); Darling River—Pomona (1,580)—making in all a total area of 13,912 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres), the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 50 holdings. Another district, Medgun (272,800 acres) near Moree in the North-West is also in operation. There are 20 holdings in the district and the area benefited by controlled floodings is approximately 61,800 acres.

7. River and Lake, and Farm Water Supplies.—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. Underground Water.—Extensive use is made of artesian, sub-artesian, and shallow underground water. Fractured Palaeozoic rocks in the South-east corner of the State provide useful supplies of ground water usually at depths of 50-250 feet. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5 million acres and water is distributed through approximately 7,400 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1957, was 1,036 and the estimated total daily flow from 581 flowing bores was 59 million gallons. The estimated flow in 1914-15 was 99 million gallons a day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely 1,115,000 gallons a day. Of the total number of bores sunk, 238 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Since 1912, the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1957, the total constructed by the Commission's plants was 4,714 and their average depth was 304 feet.

9. Future Programme.—The programme of post-war development already in hand includes the provision of eighteen dams and storages, eight diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie, while legislation has been passed authorizing the construction of a flood control dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. In the case of Burrendong Dam, work has been temporarily suspended in order to enable the Water Conservation and Irrigation Com-

mission to concentrate its available resources on the speedy completion of works having higher priority. The Menindee Lakes storage project—part of the scheme for conserving the waters of the Darling River—has been recommenced, while Glenbawn Dam on the Hunter River is substantially complete. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. The total estimated capacity of all proposed new storages is 5,500,000 acre feet. At 30th June, 1957 work was in hand to begin construction of a diversion weir at Gogeldrie on the Murrumbidgee River from which water will be supplied to a new irrigation area (Coleambally) on the south side of the river containing not less than 800 new irrigation farms. Later, development will extend to a new area on the north side of the river.

10. Hydro-electricity.—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (see page 279).

#### § 3. Victoria.

- 1. General.—(i) Rainfall. Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. The passing of the Irrigation Act of 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. In 1905, the Water Act established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted Waterworks Trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and local governing bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. Systems Summarized.—(i) Works. Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 4,962,550 acre feet (including Victoria's share of the Hume Reservoir). By means of channels, bores, etc., one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 105,000 acres in 1906 to 855,200 acres in 1956–57 and irrigation channels supply 2,150,000 acres.

The Commission controls 38 large reservoirs and 240 subsidiary storages. The capacities of the principal storages in acre feet within the various systems at 30th June, 1957 were as follows:—

Goulburn System:—Eildon Reservoir, 2,750,000; Goulburn Weir, 20,700; Waranga Basin, 333,400; Total, 3,104,100; Murray-Loddon System:—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 835,420; Cairn Curran, 120,600; Kow Swamp, Laanecoorie, Kerang-North-West Lakes, Lake Boga and Lake Cullulleraine, 148,210; Total, 1,071,230; Wimmera-Mallee:—Rocklands, 272,000; Total, 538,900; Maffra-Sale:—Glenmaggie, 106,040; Coliban:—62,730; Werribee:—34,900; Mornington Peninsula:—5,800; Otway:—1,080; Miscellaneous:—4,770; Total:—4,962,550.

Irrigation channels extend 5,000 miles, domestic and stock channels 9,500 miles and

Irrigation channels extend 5,000 miles, domestic and stock channels 9,500 miles and drainage and flood protection channels 2,000 miles, a total of 16,500 miles. In addition, the Commission controls 1,200 miles of piping, comprising 250 miles of mains and 950 miles of reticulation. Farm holdings served with water total 37,500 and another 7,000 holdings are in drainage or flood protection districts. Urban districts with a reticulated water supply number 282, of which 131 are served by the Commission's channels and pipelines and 151 are supplied by Trusts under the supervision of the Commission. The total number of persons served by a reticulated water supply is approximately 675,000 or 70 per cent. of the State's population outside Greater Melbourne.

To 30th June, 1957, the net capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £93,979,000, two-thirds of which was in respect of irrigation.

Of this net capital liability, at 30th June, 1957, £81,649,000 was borne by the State and £12,330,000 was borne by the water users. Waterworks Trusts and local governing bodies had a net capital liability of £9,130,000 at 30th June, 1957, of which £3,978,000 was borne by the State and £5,152,000 by the Authorities.

(ii) Extent of Systems and Nature of Irrigated Culture. Although the area irrigated is less than 2 per cent. of the State, it yields approximately 15 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1956-57.

# AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: VICTORIA, 1956-57.

- (a) Includes lucerne for both hay and pasture.
  Mildura Irrigation Trust only.
- (b) Area of Campaspe District only.
- (c) Area of First
- (iii) Production. The influence of irrigation on Victorian production has been considerable, the value of production from irrigation districts as estimated by the Commission having risen from £500,000 in 1905-6 to about £42 million in 1955-56. The major products of irrigated farms are: dairy products, livestock for slaughtering, wool, vine fruits, fresh and canning orchard fruits and vegetables.
- 3. Goulburn System.—This comprises the Eildon and Waranga Reservoirs, the Goulburn Weir and over 2,570 miles of distributary channels. The total capacity of these storages was 3,104,100 acre feet at 30th June, 1957. The Eildon Reservoir (capacity 2,750,000 acre feet) which was completed in June, 1955, is the largest dam in Australia and the largest earthen dam in the Southern Hemisphere. The enlargement of Eildon means that when the necessary distributary works are completed, the area at present irrigated from the Goulburn River can be practically doubled to 600,000 acres.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, and where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District. Following completion of Eildon Reservoir, the latter channel was duplicated to Waranga Basin.

Two main outlet channels issue from the Waranga Reservoir; one serves the Western part of the Rodney district, while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 196,000 acres east of the Goulburn; 602,000 acres between the Goulburn and Campaspe; 380,000 acres between the Campaspe and Loddon; and 80,000 acres west of the Loddon—a total of 1,258,000 acres.

The main products of the Goulburn districts are dairy products, fruit, wool and fat lambs. The development of the fruit canning industries is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—normally represents about two-thirds of Australia's total production of canned peaches, pears and apricots.

4. Murray River System.—The waters of the River Murray are used to supply an area of more than 700,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, except Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, which is served from Yarrawonga Weir, comprises 267,000 acres with 550 miles of distributary channels. This district lies west of Yarrawonga between the River Murray and Broken Creek, its main products being dairying, fat lambs and deciduous fruit. A major post-war development has been a Soldier Settlement Scheme involving 60,000 acres. With the exception of the necessary drainage works, which are under construction, this project is complete.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 377,600 acres through 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Robinvale Irrigation District, between Swan Hill and Mildura is a soldier settlement project established after the 1939–45 War. Set up on modern lines, the 3,000 acres irrigated annually are showing good yields of fruit. About ninety per cent. of the area is devoted to dried vine fruits, and the remainder to orchards.

Red Cliffs Irrigation District comprising 13,600 acres, of which, at present, 11,650 acres are irrigated, ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels supplies every holding in the district. The district, originally set aside for soldier settlement, has been subdivided into 700 blocks. The area is planted mainly with vines and citrus. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 9,200 acres and contains over 300 holdings averaging about 30 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply 51,200 acres forming part of the Millewa Waterworks District,

Nyah Irrigation District is supplied with water diverted from the Murray by a highlift pumping plant, serving 3,840 acres in about 200 holdings devoted mainly to vineyards.

- 5. First Mildura Trust District.—The First Mildura Irrigation Trust—the only Irrigation Trust operating in Victoria—controls an area of 45,000 acres, of which 15,000 acres are irrigated. Of this area, some 80 per cent, is used for the production of vine fruit and the bulk of the remainder for citrus and other fruit. The Trust area produces approximately 15,000 tons of raisins, currants and sultanas each year. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels.
- 6. Wimmera-Mallee System.—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Grampians storages with a capacity of 538,900 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 72,000 acre feet of water is distributed through 6,500 miles of open channels and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. About 10,000 farmers' tanks are served. In addition

315

forty-seven towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storage, 3,500 acres are irrigated for soft fruits and pastures. With the completion of the Rocklands Reservoir, this irrigation area is being extended to 7,000 acres.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditure to remove this sand drift before the annual water distribution can be made. This expenditure can be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn, and the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country have resulted in marked savings in maintenance costs.

7. Private Water Supplies.—The Rural Finance Corporation Act 1949 gave farmers assistance in establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

The control of private diversions from the streams is an important function of the State Rivers and Water Supply Commission. About 10 per cent. of irrigation production in the State comes from private diverters, mainly around the River Murray. In recent years, there have been substantial increases in the areas licensed, the total increase over the past ten years being approximately 50 per cent. At present 4,500 private diverters are licensed annually.

A Farm Water Supplies Branch set up by the State Rivers and Water Supply Commission advises farmers on farm water supply matters even if finance is not required. Comprehensive booklets prepared by this Branch have been widely circulated to landholders.

8. River Improvement, Flood Protection and Drainage.—The largest drainage work undertaken by the State Rivers and Water Supply Commission is Koo-wee-rup-Cardinia Flood Protection District embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth £3 million per year.

The Rivers and Streams Fund, established in 1931 from the rentals on river frontage reserves, gave an impetus to river improvement, but development accelerated rapidly after the 1948 River Improvement Act.

Under this Act, the formation of River Improvement Trusts is facilitated, assistance being granted by the State Government to supplement funds raised locally, and the importance of river improvement work is expected to continue to grow.

9. Underground Resources.—Due to inadequate information as to their extent, the underground waters of Victoria have not as yet been greatly utilized. The first stage of a comprehensive survey of these resources by the Victorian State Rivers and Water Supply Commission, which is responsible for the location, investigation and development of subterranean waters, has been completed and published recently. It provides records of bores in the Mallee, Wimmera and Glenelg regions, and a description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and elsewhere.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies from suitable for domestic purposes in much of the South-western part of the basin to saline and suitable for stock in the rest of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

10. Future Programme.—With the completion of the Eildon and Cairn Curran Reservoirs, storage capacity in Victoria has risen from 172,000 acre feet in 1902 to nearly 5,000,000 acre feet in 1957. In the near future, as a result of the enlargement of the Glenmaggie and Hume Reservoirs, a further increase of 600,000 acre feet of storage capacity will become available.

The most important work at present facing the Commission is the enlargement of the Goulburn Channel System to enable full advantage to be taken of the additional water now available from Eildon Reservoir. A new channel of 1,500 cubic feet capacity from the Goulburn Weir to Waranga Reservoir, duplicating the channel already there was completed in 1956-57 at a cost of £2,000,000. Approximately half the work was done on other contracts worth £2,750,000 and the channel construction programme generally is being completed as funds become available.

It will be possible to develop the present districts progressively before the whole operation is completed and in the meantime, the water already stored in the Eildon Reservoir will provide a valuable safeguard against any possible drought.

11. Hydro-electricity.—Details of hydro-electricity potential and utilization in Victoria may be found in the previous chapter (see page 283).

## § 4. Queensland.

- 1. General.—(i) Rainfall. Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122. (See also Chapter II.—Physiography, page 45 of this Year Book).
- (ii) Administration. The administration of irrigation and water supply in Queensland is under the control of a Commissioner of Irrigation and Water Supply. For a description of the development of the present administration see Official Year Book No. 42 and earlier issues.
- (iii) Water Utilization in Queensland. Queensland's predominant interest in the field of water conservation is the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half of the Commonwealth's cattle and a seventh of the sheep. But in addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has received much attention in later years.

The State's agricultural crops differ from those of other States in that a large proportion are tropical. Sugar-cane is the greatest individual crop, representing in value approximately 50 per cent. of total agricultural production. Approximately 16 per cent. of the sugar-cane acreage is irrigated and represents some 50 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation. The area of tobacco irrigated during 1955-56 represented 88 per cent. of the total plantings of this crop in the State.

2. Great Artesian Basin.—(i) General. Western Queensland beyond the 20 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 430,000 square miles or about two-thirds of the total State area of 670,500 square miles. Statistics of bores and flow as at 30th June, 1957, are:—Artesian bores drilled, 2,525; artesian bores still flowing, 1,627; total depth drilled, 3,596,000 feet; deepest bore, 7,009 feet; total estimated flow, 211 million gallons a day. The average depth of artesian bores is 1,425 feet. Some 9,000 sub-artesian bores, within the Great Artesian Basin, have been registered in Queensland. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1-2 feet/head, total flow, 1\frac{1}{2}-2 per cent. per annum.

The greater part of the artesian discharge is distributed by open earth channels totalling some 16,000 miles in length. Most of the water flowing along these channels is lost by soakage and evaporation and less than 10 per cent. is actually used by stock. The amount of soakage depends largely on the permeability of the earth and the rate of evaporation varies from season to season, but the shape and maintenance of the drains constitute further factors. The effective utilization of this water could be increased by the use of piping to overcome the loss by soakage and evaporation occurring in open earth channels.

Although artesian beds underlie such a large area of the State, only 80,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Though the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons per day was recorded in 1914. By 1938, the flow was only 230 million gallons per day. The decline gave rise to the fear that supplies were giving out and that the basin was seriously threatened. In 1939, the Queensland Government appointed a committee to ascertain the nature and structure of the Great Artesian Basin with particular reference to the problem of diminishing supply. In its final report, presented in 1954, the majority of the Committee found that the output will continue to decline during the next sixty years when the flow from the remaining flowing bores will be of the order of 110 million gallons per day. At this stage the discharge from windmills, springs and other leakages and the underflow past the Queensland borders will be of the order of 20 million gallons per day. The total discharge of the order of 130 million gallons per day will be in equilibrium with the recharge of the basin. Numbers of bores on higher ground will cease to flow during the next sixty years and the area served by flowing bores will contract by perhaps 20 per cent.

A programme of strict conservation, involving the restriction of bore flows and improved bore drains, would result in smaller shrinkage of the area served by flowing bores and would actually cost less than the installation and maintenance of pumps or other watering facilities which would be required to provide alternative water supply as additional bores ceased to flow because of a policy of non-restriction. On the other hand, strict conservation would not increase the amount of water ultimately available as perennial flowing supply and would in fact decrease the amount of water passed from intake beds to aquifers within the basin, by flattening the hydraulic gradient. The benefit from strict conservation was not considered sufficiently great, nor sufficiently concrete to warrant implementation.

The quality of artesian water from the greater part of the basin is such that it is not suited for prolonged use for irrigation on most soils. Moreover, artesian supplies are not sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

- (ii) Bore Water Areas. The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1956-57 are:—Areas constituted, 63; administered by Commissioner, 56; administered by Local Boards, 7; area benefited, 4,232,671 acres; average rate per acre, 0.95d.; number of flowing bores, 55; total flow, 25,524,000 gallons per day; drains served, 2,822 miles.
- 3. Other Basins.—Two major areas marginal to the Great Artesian Basin in Queensland carry artesian water. One occurs on the western slopes of Cape York Peninsula and the other in the Dawson-Mackenzie River Basin. A small area in which flowing wells occur (the Gatton Basin) extends from Gatton to the coast.

Sub-artesian water supply from the Barkly Basin which extends into western Queensland from the Northern Territory, is referred to in the section dealing with the Northern Territory.

4. Stock Route Watering.—During 1935; a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944, a: co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent; whose duty was, inter alia, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes through-

out the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1957, 409 facilities had been completed and at 30th June, 1957, 77 facilities were under construction or investigation.

5. Irrigation.—(i) General. Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. In addition to the Theodore Irrigation Area on the Dawson River, orthodox projects served by a channel system are being developed at Clare, Millaroo and Dalbeg, all on the Burdekin River, Gibber Gunyah on the Dawson River and St. George on the Balonne River. Construction of the Clare, Millaroo and Dalbeg irrigation works was completed during the year ended 30th June, 1957, but a small amount of drainage work requires to be completed. Works were virtually completed in the Gibber Gunyah Area and construction of the St. George Area was advanced sufficiently to permit opening of 10 farms. A start has been made on construction of part of the main channel system within the Mareeba-Dimbulah Irrigation Area. Because of the large variations in-both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1957.

AREA OF LAND UNDER IRRIGATED CULTURE: QUEENSLAND, 1956-57.(a	AREA	OF LAND	UNDER	IRRIGATED	CULTURE:	QUEENSLAND,	1956-57.(a
--	------	---------	-------	-----------	----------	-------------	------------

Division.		No. of Irri- gators.	Area under Irrigated Culture (Acres).

Total		6,078	25,096	3,660	57,158	6,350	407	23,440	5,561	121,672		

(a) Year ended 31st March, 1957.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land:—1906, 9,922 acres; 1916, 10,886 acres; 1926, 24,250 acres; 1935-36, 44,283 acres; 1945-46, 68,347 acres; 1955-56, 136,019 acres.

The pattern of irrigation in Queensland is unlike that in southern States; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

(ii) Lockyer Valley. West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30

inches the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area, only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 600 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems, an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) Burdekin River. The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile Delta Area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr, water for domestic supply is raised by a windmill on each property.

In 1940, the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested Government Departments under the general supervision of the Burdekin River Authority. The development envisaged includes a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobaccogrowing, dairying and cattle-fattening, with sorghum, sunflowers, peanuts, cotton and sugarcane as other possible forms of production. The projected scheme, together with the high-level railway bridge at present under construction, will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production.

The Clare Irrigation Area, constituted in 1949, the Millaroo Irrigation Area, constituted in 1952, and the Dalbeg Irrigation Area, constituted in 1953, are at present being developed for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 12,000 acres and obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin. To 30th June, 1957, 73 farms had been opened for selection in the Clare Area, 60 in the Millaroo Area and 45 in the Dalbeg Area.

(iv) Dawson Valley. The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of 70,000 acres. Storage for the scheme was to be provided by a dam of 2,000,000 acre feet capacity at Nathan Gorge. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central

pumping station. Two additional weirs have since been built, giving a total storage of 9,000 acre feet. Pasture, vegetables, cotton, fruit and dairy products are the principal produce. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development. Construction of works to serve some 2,400 acres at Gibber Gunyah, adjacent to the existing Theodore Area, was virtually completed at 30th June, 1957, and allotment of farms had commenced.

(v) Mareeba-Dimbulah Area. The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. In 1955-56, some 3,026 acres of high-grade tobacco were grown. Seven weirs of combined capacity of 2,600 acre feet have been completed on a number of streams to store water for irrigation.

During 1952, a report on the utilization of waters of the Barron and Walsh Rivers was prepared and the establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. In each case, construction has commenced. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

- (vi) Border Rivers Project. The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 302.
- (vii) Balonne River. The St. George Irrigation Area has been constituted and construction of works to serve some 11,000 acres is in progress. Water supply for the area will be obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.
- 6. Bureau of Investigation.—Under the Land and Water Resources Development Act of 1943, a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture, under the chairmanship of the Co-ordinator-General of Public Works. Among notable works carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State and the detailed investigation of the agricultural and pastoral potentialities of many regions.

7. Channel Country.—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage.

At 30th June, 1952, 41 watering facilities, at an estimated cost of £277,000, had been proposed under a Commonwealth-State agreement for stock routes through, and in the approaches to, the Channel Country. By 30th June, 1957, 28 had been completed, while two sub-artesian bores and one excavated tank were under construction.

8. Hydro-electricity.—An outline of Hydro-electricity Schemes operating in Queensland is given in the previous chapter (see page 286).

## § 5. South Australia.

- 1. General.—(i) Rainfall. Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37. (See also Chapter II.—Physiography, p. 45 of this Year Book.)
- (ii) Administration. Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district".
- (iii) Methods of Catchment and Conservation. Early steps were taken to vest all running streams, springs and "soaks" in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and "rainsheds" have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,751,269. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.
- 2. Irrigation.—In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers in the Murray Valley an area of 32,729 acres of irrigable high land together with 9,434 acres of reclaimed swamp and 167,223 acres of non-irrigable land in the irrigation areas and 29,731 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 239,117 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which more than 9,500 are irrigated. Water used for irrigation purposes in 1956-57 in the high land irrigation areas controlled by the Department of Lands, excluding War Service Land Settlement areas in course of development, was approximately 100,000 acre feet. No water was applied to the reclaimed areas during the 1956-57 season because of inundation by the floodwaters of the River Murray The swamps were de-watered however, by 30th June, 1957. In the Renmark area, 28,200 acre feet of water were used for irrigation in 1956-57. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of channel for reticulation to 9,550 acres.

The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges. Further developments currently being undertaken include the construction of a main pipeline and pumping stations for

<sup>(</sup>a) No water was applied to these lands during 1956-57. See text.

<sup>3.</sup> Water Supply Schemes.—(i) Summary. Water conservation and distribution works in South Australia have cost £51,264,226 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1956-57 is as follows:—Length of water mains, 5,934 miles; capacity of storages, 35,092 acre feet; approximate population served, 300,000; area served, approximately 5,000,000 acres; total capital cost, £27,237,093.

pumping water from the River Murray to Adelaide and, by means of a branch pipeline, to Warren Reservoir. Another reservoir (South Para Reservoir), to supplement the Warren and Barossa Reservoirs, is also being constructed on the South Para River. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

- (ii) Morgan-Whyalla Water Supply Scheme. For particulars of the construction and works of the main 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf see Official Year Book No. 37, page 1132. A 19-mile branch-line has also been constructed to Jamestown. The Morgan-Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.
- 4. Underground Water.—The occupied portion of South Australia is, on the whole, well endowed with underground water and the extent of the several artesian basins is reasonably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. However, deep boreholes have been drilled by the government to provide watering places along stock routes, and pastoralists rely largely on supplies from non-pressure aquifers at shallower depths. Marree township is supplied from this source, its deepest bore being 575 feet.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms, but also for township supplies to Mount Gambier, Naracoorte, Bordertown, Pinnaroo, Penola, Lamaroo, Coonalpyn, Nangwarry, Mount Burr, Kingston (S.E.), Parilla and Karoonda. The deepest bore in this Basin is 415 feet. Towns elsewhere which are supplied from bores include Mount Barker, Port Lincoln, St. Kilda, Peterborough, Warooka and Willunga.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 30 drills. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and considerable tracts of previously undeveloped country in the Upper South-east, Kangaroo Island and Yorke Peninsula have been found to have usable water and are now being opened up.

Ground water resources surveys are undertaken continuously by Departmental geologists, the results being published in various bulletins, reports and investigations issued from time to time.

- 5. Farm Water Schemes.—While the Department of Mines and Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs on the Murray River.
- 6. South-Eastern Drainage.—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia see Official Year Book No. 37, page 1133.

#### § 6. Western Australia.

- 1. General.—(i) Rainfall. Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)
- (ii) Administration. Irrigation districts are administered by the Minister for Water Supply, Sewerage and Drainage under the Rights in Water and Irrigation Act 1914–1951, and he is advised by an Irrigation Commission representing the local irrigationists and governmental technical and financial branches. Water supplies in country areas in Western Australia coming under the provisions of the Water Boards Act 1904–1954 and the Country Areas Water Supply Act 1947–1954 (which are administered by the Minister for Water Supply, Sewerage and Drainage) are controlled either by the local authority or by the Water Supply, Sewerage and Drainage Department. Those controlled by the Water Supply, Sewerage and Drainage Department (except for some water supplies to country towns still under the provisions of the Water Boards Act) form the Country Areas Water Supply, consisting of the Goldfields and Agricultural Water Supply (formerly the Goldfields Water

Supply) the Great Southern Towns Water Supply and water supplies to country towns. Also controlled by the Water Supply, Sewerage and Drainage Department are individual water supplies serving isolated mines, stock routes, and agricultural areas: these works are done under the provisions of the Public Works Act 1902–1956. The Water Supply, Sewerage and Drainage Department is divided into metropolitan and country parts. The country part is combined with the Public Works Department. The Minister for Works is also the Minister for Water Supply, Sewerage and Drainage. Water rights over water flowing in streams and watercourses are vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. Irrigation.—(i) South-West. The main irrigation areas are situated along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth).

The Water Supply, Sewerage and Drainage Department controls three irrigation districts—Waroona, Harvey and Collie—the total area irrigated in these districts during 1956-57 being 24,724 acres and the total water used approximately 75,000 acre feet. The total of acre waterings (that is, the number of acres watered multiplied by the average number of waterings) was 141,714. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie Irrigation District.

The Waroona Irrigation District (10,302 acres) is supplied from Drakes Brook Dam (1,854 acre feet capacity) and Samson Brook Dam (6,624 acre feet), the Harvey Irrigation District (36,823 acres) from the Harvey Weir (8,370 acre feet) and Stirling Dam (44,160 acre feet), and the Collie Irrigation District (36,020 acres) from the Wellington Dam (29,440 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1952-53 to 1956-57 illustrates the growth of these irrigation schemes.

IRRIGATION,	WESTERN	AUSTRALIA	:	ACRE	WATERINGS(a).
-------------	---------	-----------	---	------	---------------

Year.		Pasture.	Fodder.	Potatoes.	Vege- tables.	Orchard.	Flax, Broom Millet, and Preparation of Ground.	
1952–53		95,491	2,235	4,185	2,588	1,070	536	106,105
1953-54		98,645	3,435	4,405	3,003	1,072	115	110,675
1954–55		112,659	3,268	2,363	3,294	845	121	122,550
1955-56		108,468	3,599	1,834	3,452	946	127	118,426
1956–57	••	129,502	3,757	3,995	3,317	1,024	119	141,714

<sup>(</sup>a) Number of acres watered multiplied by average number of waterings.

(ii) General. In 1956-57 the total area irrigated in Western Australia was 38,567 acres made up of vegetables (7,990 acres) fruit (5,137 acres) vineyards (493 acres) pastures (23,320 acres) and other crops (1,627 acres).

An area of approximately 500 acres of Gascoyne River flats adjacent to Carnarvon has been under irrigated cultivation for a considerable period. The principal crop has been bananas but others such as beans and tomatoes, are also grown. For this agriculture a total of over 220 acre feet of water per week is drawn from river underflow.

Following successful experimental work, commercial production of rice is currently being developed, requiring irrigation water to be diverted from the Fitzroy River. The first stage of this work involving the deepening and grading of an anabranch of the Fitzroy River 25 miles to the rice growing area where a natural storage of 2,000 acre feet existed, was carried out by the Public Works Department in 1956.

The Ord River in the Kimberley Division of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 inches in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 3,000,000 acre feet of water, equipped with a hydro-electric plant, which might supply irrigation water for an area of 100,000 acres, if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. The economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

Tasmania. 325

3. Water Supply Schemes.—(i) Goldfields and Agricultural Water Supply. Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of Official Year Book No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 55,767 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main, mostly steel and 30 inches in diameter, aided by seven pumping stations and one booster pumping station.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring Weir is nominally 15.9 million gallons per day. The total capacity of all receiving, regulating, standby and service tanks along the main pipe line is 154 million gallons which includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipe lines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 101 miles. The system serves some 72 towns and water is reticulated to about 2,000,000 acres of mixed farming lands. The total length of pipe lines is 2,578 miles and the number of services is 20,647. The total quantity of water pumped from Mundaring in 1956-57 was 3,076 million gallons. The total cost of the scheme to the end of 1956-57 was £11,410,906.

District water supply schemes established for the purpose of supplying certain country towns and mixed farming lands have been absorbed into the Goldfields and Agricultural Water Supply Scheme. For further particulars see Official Year Book No. 37, page 1135.

- (ii) Comprehensive Water Supply Scheme. A comprehensive water supply scheme to supplement water supplies to the goldfields, agricultural areas, and country towns, authorized in 1947 as a joint work between the Commonwealth and State and estimated to cost £10,000,000 is at present (1957) under construction in two main parts. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply Scheme. The southern section is the Great Southern Towns Water Supply Scheme. Linked with Wellington Dam (initially an irrigation work on the Collie River) by 80 miles of 30-inch diameter pipe through two pumping stations to Narrogin, it will eventually supplement the existing water supplies to country towns along the Great Southern Railway, north to Brookton and south to Katanning. The raising of the impounding wall of Wellington Dam to increase its storage to about 150,000 acre feet is also in progress.
- (iii) Country Towns Water Supplies. Country towns supplied by schemes otherwise than above comprise those in the remaining agricultural and mining areas, including the North-West and Kimberley Divisions. Sixty separate reticulated water supplies serve country towns. Of these, 50 are controlled by the Public Works Department and the remainder by the Local Authority.
- (iv) Catchments. The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores. Three types of catchment peculiar to this State deserves special mention, namely, rock catchments, which consist of mostly clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.
- 4. Underground Water.—Individual farmers, orchardists, market gardeners and others pump ground water from wells and bores, using windmills, engines or electric power. Water is also obtained from artesian and sub-artesian bores. The Public Works Department hires out to local authorities boring plants which are then hired out to farmers to assist their boring operations. In addition the Public Works Department operates its own boring plants and contracts with private firms in connexion with water supply works.

#### § 7. Tasmania.

- 1. General.—(i) Rainfall. Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.
- (ii) Main Purposes of Conservation and Utilization. Owing to Tasmania's fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for

domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality, but a small quantity which has been exploited to a limited extent only by bores and windmills exists over an area in the Midlands. Geological conditions do not appear to favour the utilization of underground water except on a minor scale.

- (iii) Administration. The State does not own all natural waters, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. Under the provisions of an Act passed in 1944, the Water, Sewerage and Drainage Board was constituted to consider the financial and technical practicability of all water supply schemes constructed by local authorities, other than the cities of Hobart and Launceston. Legislation was also enacted during 1952 empowering Local Authorities to take water from specific sources of supply and to construct waterworks. The Act does not cover irrigation, which is practised to a limited extent only by private interests. Provision has been made in the Act for the protection of riparian rights, but there is no general legislation for the control of water courses.
- 2. Hydro-electricity.\*—Tasmania depends entirely on water for power development. The Hydro Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration.

Most of the water potential is located on the Central Plateau with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo, each more than 12 square miles, and others of smaller area. Parliamentary approval has recently been given for the Commission to proceed with the development of the waters of the Great Lake through a 300,000 kW underground power station at the foot of the Western Tiers some 10 miles from Cressy. The power station will operate under a head of 2,750 feet and will utilize the existing Great Lake storage which is to be supplemented by water pumped from an additional storage which will be created at Arthurs Lakes some four miles to the east of the southern end of the Great Lake.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred in favour of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the South Esk River in the north and the Huon River in the south. A power station at Trevallyn, near Launceston, utilizes water from the South Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on this river at a reasonable cost and, because of its proximity to Hobart, a future power station would have considerable value for peak load development.

3. Industrial.—Three principal industrial schemes have been installed privately. Australian Newsprint Mills Ltd. pump approximately 6 million gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills Ltd. pump several million gallons a day from the Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Heybridge. In addition the State has constructed a regional water scheme to serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar and to supply several Municipalities with bulk water for domestic and industrial purposes.

<sup>\*</sup> See also Chapter VIII.—Electric Power Generation and Distribution, p 291.

A second regional water scheme draws water from the River Derwent at Lawitta to provide domestic and industrial supplies in five southern Municipalities. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State which is largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. Irrigation.—There are no State irrigation projects, but preliminary inquiries as to the possibility of establishing one in the Coal River Valley have been made. Legislation is before Parliament to give a new Commission extensive powers for river control and for the design of irrigation projects. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation as practised in Tasmania, was applied in 1956-57 to 12,110 acres devoted to: hops (1,330 acres); fruit (773 acres); pastures (7,421 acres); green fodder, etc. (877 acres); and other crops (1,709 acres).

### § 8. Northern Territory.

- 1. Climate and Topography.—Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter V.—The Territories of Australia.
- 2. Administration.—Under the Control of Waters Ordinance 1938–1955 of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed. There is a Water Use Branch in the Northern Territory Administration under the control of a Director. The functions of the Branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, flood prevention and control.
- 3. Underground Water.—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry which provides the bulk of the Territory's income. The inadequacy of surface water during the dry season underlines the importance of underground water supplies in the Territory where most of the cattle population is dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle population but geological features, controlling both soils and the storage of underground water, are even more important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall per year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, this area has a comparatively low carrying capacity for cattle and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in the winter despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an annual average rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lighter rainfall areas, the search for potable underground water becomes exacting but, in general, the regions providing the best pastures—the Ord-Victoria Region, the Barkly Tablelands and smaller areas in the Alice Springs district—provide also sub-surface conditions suitable for the storage of water. This comes about largely because, in these areas, both pasture and water are related to flat lying or gently folded limestones or volcanics of Upper Proterozoic or Cambrian age, overlying the basement of older, more tightly folded, metamorphic rocks and granites which crop out over wide areas within the Territory.

In the Ord-Victoria Region, probably the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Ground water is obtained in shallow bores averaging 70 to 80 feet in depth and producing small supplies which range up to 1,500 gallons per hour. For the most part, water is stored in joints, faults or cracks in the rocks although

in places sub-artesian conditions pertain and, on the whole, selection of bore sites is difficult. There are also small sedimentary basins in the region, some of which yield sub-artesian, and in places, artesian water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian) but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

A review is being made of the information available concerning the number of bores and wells sunk in the Territory. Preliminary information shows that in 1956-57, some 1,190 bores and 190 wells were registered. Of the 1,190 bores, 621 were on pastoral properties (33 being provided by the Government by way of assistance to pastoralists), 25 on Native Reserves, 8 for town water supplies and 6 for mining fields. It is not known how many of 341 registered bores drilled originally for defence and road construction purposes are still in use but it is probable that most of them have been abandoned.

The number of stock route bores established by the Government for watering some 2,500 miles of stock routes, is 160 which represents on the average one every 16 miles.

Regional surveys by the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization from 1947 to 1955 have established the existence of the valuable Barkly Basin of 57,000 square miles in the eastern part of the Territory and extensions of the Gulf Basin in the north-western part.

4. Irrigation.—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Hydrological investigations are being carried out by the Administration and a public company to determine the supply of water and the best methods of control and use in the potential rice growing areas of the Territory. Agricultural activity in the Territory is not extensive.

The Katherine River appears to offer irrigation potentialities on the levee soil below the township. The river passes through a gorge upstream under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the area for agricultural production. For particulars of these see p. 1138 of Official Year Book No. 37.

#### § 9. Papua and New Guinea.

- 1. Rainfall.—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 231 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).
- 2. General.—For a general description of these territories see Chapter V.—The Territories of Australia, p. 125, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (a description of which is given in Chapter XXVI. of Year Book No. 40), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential which is extensive. An outline of schemes at present in operation is given in the previous chapter.

#### CHAPTER X.

#### TRADE.

#### § 1. Introductory.

Constitutional Powers.—By the Commonwealth of Australia Constitution Act, section 51 (i.), the power to make laws with respect to trade and commerce with other countries was conferred on the Commonwealth Parliament. Under section 86 of the Constitution the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1st January, 1901. Other references to trade and commerce are contained in sections 87 to 95 of the Constitution (see pp. 18-19).

#### § 2. Commonwealth Legislation affecting Oversea Trade.

1. General.—The principal Acts affecting oversea trade at present in force are: The Customs Act 1901–1957; Customs Tariff 1933–1956; Customs Tariff (Canadian Preference) 1931 and Customs Tariff (Canadian Preference) 1934–1956; Customs Tariff (Industries Preservation) Act 1921–1956; Customs Tariff (New Zealand Preference) 1933–1954; Customs Tariff (Papua and New Guinea Preference) 1936–1956; Customs Tariff (Federation of Rhodesia and Nyasaland Preference) 1956; Customs Tariff (Primage Duties) 1934–1950; Trading with the Enemy Act 1939–1952.

The Customs Act is the administrative Act under which the Department of Customs and Excise operates, while the Customs Tariffs provide the statutory authority for imposing the actual rates of duty operative from time to time.

2. The Customs Tariff.—(i) General. The first Commonwealth Customs Tariff was introduced by Resolution on 8th October, 1901, from which date uniform duties came into effect throughout Australia. The tariff has since been extensively amended. The Act at present in operation is the Customs Tariff 1933-1956.

The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to imports from certain countries of the British Commonwealth. Duties are also imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

Australia has three classes of tariff—the British Preferential Tariff, the Intermediate Tariff and the General Tariff.

(ii) British Preference. British Preferential Tariff rates of duty apply to goods the produce or manufacture of the United Kingdom, provided that such goods comply with the laws and statutory regulations for the time being in force affecting the grant of preference, and that the goods have been shipped in the United Kingdom to Australia and have not been transhipped, or, if transhipped, it is proved to the satisfaction of the Collector of Customs that

the intended destination of the goods, when originally shipped from the United Kingdom, was Australia. For the purpose of the preferential tariff the following goods are deemed by section 151A of the Customs Act 1901-1957 to be the produce or manufacture of the United Kingdom, provided the final process of their production or manufacture was performed in that country:—

- (a) Goods which are wholly produced or wholly manufactured in the United Kingdom from materials in one or more of the following classes—
  - (i) Materials wholly produced or wholly manufactured in the United Kingdom or in Australia;
  - (ii) Imported unmanufactured raw materials;
  - (iii) Imported manufactured raw materials as determined by the Minister.
- (b) Goods of the factory or works cost of which not less than seventy-five per cent. is represented—
  - (i) by labour or material of the United Kingdom; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.
- (c) Goods of a class or kind not commercially produced or manufactured in Australia and of the factory or works cost of which not less than twenty-five per cent. (or fifty per cent. if the Minister so determines) is represented—
  - (i) by labour or material of the United Kingdom; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.

With the exception of a relatively small number of commodities which carry special rates of duty, the British Preferential Tariff has also been extended, as a result of separate trade agreements, to Canada and New Zealand and by tariff legislation to the Territory of Papua and New Guinea, and the abovementioned preference conditions apply mutatis mutandis to each of those countries, except that in respect of New Zealand the percentage content of goods under clause (b) of the said conditions is 50 per cent. of New Zealand and Australian labour and materials or 75 per cent. of New Zealand and United Kingdom or of New Zealand, Australian and United Kingdom labour and materials. In relation to specified goods, the British Preferential Tariff also applies to Ceylon, Ghana, the Federation of Malaya, and most of the British non-self-governing colonies, protectorates and trust territories.

- (iii) Intermediate Tariff. The Intermediate Tariff has been a feature of the Australian Tariff for a considerable number of years, although its effective application dates only from 1st January, 1937, consequent upon the conclusion of trade agreements with Belgium, Czechoslovakia and France in 1936. The countries to which the Intermediate Tariff applies include those countries with which Australia has concluded trade agreements (including tariff negotiations pursuant to the General Agreement on Tariffs and Trade) and countries which accord Australia reciprocal most-favoured-nation tariff treatment by reason of agreements between those countries and the United Kingdom. The Intermediate Tariff has also been extended to some countries to which Australia has no formal obligation to accord most-favoured-nation treatment. The countries and the particular tariff items to which the Intermediate Tariff applies are specified by Customs Proclamation.
- (iv) General Tariff. The General Tariff applies to goods other than those to which the British Preferential Tariff or Intermediate Tariff or special rates under trade agreements apply.
- 3. Primage Duties.—In addition to the duties imposed by the Customs Tariff, ad valorem primage duties at rates of 4 per cent., 5 per cent. or 10 per cent. are charged on some goods according to the type of goods and origin thereof under the Customs Tariff (Primage Duties) 1934-1950. Other goods are exempt from primage duty. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji and the Territory of Papua and New Guinea are exempt from primage duty.
- 4. Tariff Board.—The Tariff Board Act 1921-1953 provides for the appointment of a Tariff Board consisting of seven members, two of whom shall be administrative officers of the Department of Trade. Members of the Board are appointed for terms of not less than one year nor more than five years. The purpose of the Tariff Board is to assist the

Minister in the administration of matters relating to trade and customs. The more important matters which the Minister shall refer to the Board for inquiry and report include disputes arising out of the interpretation of any Customs or Excise Tariff; the necessity for new, increased or reduced duties; the necessity for granting bounties; any proposal for the application of the British Preferential Tariff to any part of the British Commonwealth or any foreign country; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff by charging unnecessarily high prices for his goods or acting in restraint of trade. The Minister may refer to the Board for inquiry and report the following matters:—The classification of goods under items of the Tariff that provide for admission under by-laws; the determination of the value of goods for duty; the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws of the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and any other matter affecting the encouragement of primary and secondary industries in relation to the Tariff.

Inquiries conducted by the Board relating to any revision of the Tariff, any proposal for a bounty, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff shall be held in public, and evidence in such inquiries shall be taken in public on oath, unless any witness objects to giving any evidence in public which the Board is satisfied is of a confidential nature, when the Board may take such evidence in private. Evidence taken by the Board in connexion with any inquiry under the Customs Tariff (Industries Preservation) Act 1921–1956 shall be taken in public on oath.

5. Industries Preservation.—The Customs Tariff (Industries Preservation) Act 1921–1956 provides that, after inquiry and report by the Tariff Board, special duties shall be collected in the following cases when the importation of the goods referred to might be detrimental to an Australian industry. In the case of goods sold for export to Australia at a price less than the fair market value for home consumption or at a price which is less than a reasonable price, a special dumping duty shall be collected equal to the difference between the price at which the goods were sold and the fair market value, or the difference between the price at which the goods were sold and a reasonable price. Similar provision is made for goods consigned to Australia for sale. With regard to goods exported to Australia at rates of freight less than the normal rate of freight the dumping freight duty shall be—on goods carried free—the amount payable as freight at the normal rate; and in the case of any other goods—an amount equal to the difference between the freight paid and the freight which would have been payable at the normal rate.

, The Act also provides for the collection of an emergency duty on goods which enter Australia under conditions which cause or threaten serious injury to Australian industries or to industries in a third country whose exports enter Australia under preferential tariff. The amount of emergency duty payable is the equivalent of the difference between the landed duty-paid cost of the goods and a reasonably competitive landed duty-paid cost.

- The Act provides that the Minister for Customs and Excise may publish a notice in the Gazette specifying the goods upon which the special emergency duties under this Act shall thereupon be charged and collected.
- 6. Trade Descriptions.—The Commerce (Trade Descriptions) Act 1905–1950 gives power to require the application of a proper trade description on certain prescribed goods imported into or exported from the Commonwealth. Goods which must bear a prescribed trade description upon importation into Australia are specified in the Commerce (Imports). Regulations. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.
- 7. Import Controls.—(i) Customs (Import Licensing) Regulations. The Customs (Import Licensing) Regulations were first promulgated in December, 1939, and were made pursuant to sections 52 (g) and 56 of the Customs Act 1901-1957. New regulations embodying minor changes were implemented on 14th December, 1956. The regulations provide, inter alia, that the importation into the Commonwealth of any goods (not excepted from the application of the regulations) is prohibited unless—(a) a licence under these regulations to import the goods is in force and (b) the conditions and restrictions (if any) to which the licence is subject are complied with.

The regulations were at first applied only to imports from non-sterling sources, with the object of conserving non-sterling exchange and enabling priority in shipping space to be given to essential imports. However, with a subsequent decline in Australia's sterling balances in London and changes in the general war situation the restrictions were extended in December, 1941 to cover a wide range of imports from sterling countries. The position remained basically the same during the remainder of the war and in the immediate post-war period.

As Australia's external financial position improved, the restrictions were progressively relaxed until, by November, 1950, imports from most countries had been exempted from the application of the regulations and, with minor exceptions, the restrictions applied only to imports from the dollar area and Japan. This position obtained until March, 1952.

During 1951-52, following a fall in the price of wool and a large increase in the volume of imports (the product, in turn, of the wool boom of 1950-51), Australia incurred a substantial deficit on current account. Oversea reserves fell rapidly in the latter part of 1951 and early 1952, endangering Australia's external financial position to such a degree that it became necessary on 8th March, 1952 to apply the Customs (Import Licensing) Regulations to imports from all sources, with the exception of goods originating in Papua, New Guinea and Norfolk Island. By March, 1953, Australia's balance of payments had shown sufficient improvement to justify a general relaxation in the quantitative restrictions applying to goods from sources other than the dollar area and Japan, and as a consequence progressive relaxations were made operative during 1953 and the first half of 1954. The balance of payments position deteriorated rapidly from June, 1954 and, as a result, import licensing restrictions were intensified during the second half of 1954 and throughout 1955, but the decline in oversea funds continued. New and more stringent measures were therefore introduced, operative from 1st July, 1956, involving considerable variations in import licensing and aimed at creating a balance between receipts and payments in foreign currency.

Australia's trade position improved considerably during the second half of 1956 and import restrictions were progressively relaxed in the early part of 1957. A new basis of licensing was introduced as from 1st August, 1957. This involved import licensing replacement for 56 commodities, licensing being based, in general, on usage of exchange allocations for these items.

Prior to 22nd November, 1954, goods of Japanese origin were licensed on a basis quite separate from that of other non-dollar licensing. From that date until 7th July, 1957, goods of Japanese origin were, with certain exceptions, licensed for importation on the same basis as like goods originating in other non-dollar countries. Since then there has been no distinction between Japan and other non-dollar countries as regards import licensing.

Restrictions on imports from the dollar area have been maintained in varying degrees since their imposition in December, 1939 and, in general, the issue of licences for the importation of goods from the dollar area is restricted to goods of a high degree of essentiality, unavailable in adequate quantities from other countries. The goods imported from the dollar area are mainly capital goods, raw materials, semi-manufactures and other producer goods. All applications for licences are treated on the merits of each individual case.

- (ii) Customs (Prohibited Imports) Regulations. In addition to the Import Licensing Regulations which are imposed for balance of payments reasons, section 50 of the Customs Act provides that the Governor-General may, by regulation, prohibit the importation of goods into Australia. Prohibition by regulation may be exercised by—(a) prohibiting the importation of goods completely; (b) prohibiting the importation of goods from a specified place; (c) prohibiting the importation of goods unless specified conditions or restrictions are complied with. Lists of products subject to prohibition are set out in the Customs (Prohibited Imports) Regulations. Commodities the importation of which has been prohibited under the regulations include dangerous drugs, firearms, undesirable publications and articles deleterious to public health.
- 8. Export Control.—(i) Commodity Control. Section 112 of the Customs Act provides that the Governor-General may, by regulation, prohibit the exportation of goods from Australia and that this power may be exercised by—(a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with Goods subject to this export control are listed in the Customs (Prohibited Exports) Regulations.

(ii) Monetary Control—Banking Act 1945-1953. As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the Banking (Foreign Exchange) Regulations, to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Commonwealth Bank of Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations to control the movement out of Australia of capital in the form of securities, gold and currency.

Provision is made in the regulations for the grant of export licences subject to such terms and conditions as are imposed. On the receipt in Australia by the Commonwealth Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Commonwealth Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions, exports by private individuals are controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds £A50, or where jewellery and other articles of high intrinsic worth either exceed £A1,000 in value or have not been the personal property of the passenger for at least twelve months.

9. Trade Agreements.—(i) The United Kingdom. The original United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on 20th August, 1932. Under this agreement, Australia secured preferences in the United Kingdom market for a wide range of Australian export commodities and in return incurred obligations in respect of tariff levels and the grant of preference to United Kingdom goods.

A new Trade Agreement, designed to replace the original agreement and correct the unbalance in benefits which had emerged in the 25 years of its operation, was signed in Canberra on 26th February, 1957. Briefly, the new agreement preserved security for Australian exports in the United Kingdom market, but lowered the obligatory margins of preference which Australia extends to the United Kingdom.

(ii) Canada. The existing trade agreement between Canada and Australia came into force on 3rd August, 1931. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are specified in the schedules to the agreement.

The Customs Tariff (Canadian Preference) 1931 and the Customs Tariff (Canadian Preference) 1934–1956 give effect to the agreement so far as Australia is concerned.

(iii) New Zealand. The existing trade agreement between Australia and New Zealand came into force on 1st December, 1933. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are listed in the schedules to the agreement.

The Customs Tariff (New Zealand Preference) 1933-1954 gives legislative effect to the provisions of the agreement.

- (iv) Federation of Rhodesia and Nyasaland. During June, 1955, a trade agreement was negotiated with the Federation. Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco, a concession formerly accorded only to Southern Rhodesia, under a trade agreement now terminated. The Federation accorded preferential tariff treatment on a wide range of Australian export products, including wheat and powdered and condensed milk.
- (v) Japan. An Agreement on Commerce between the Commonwealth of Australia and Japan was signed on 6th July, 1957, in Japan. Formal ratification took place in Canberra on 4th December, 1957, following approval of the agreement by the Commonwealth Parliament and the Japanese Diet. The agreement will remain in force until 5th July, 1960 and thereafter unless prior notice of termination is given by either Government.

The agreement provides that each country shall extend most-favoured-nation treatment to the other in respect of customs duties and similar charges and import and export licensing. Japan will not be entitled to claim the benefit of preferences accorded by Australia to Commonwealth countries and dependent territories.

All Japanese goods are now entitled to the most-favoured-nation rate of duty on importation into Australia, whereas previously the general rate applied. The reductions involved have not been significant. Japan has also been placed on an equal basis with other non-dollar countries under the import licensing system. Prior to the agreement certain goods when of Japanese origin could be imported only within specified limits.

Australia received certain specific undertakings. Japan agreed:-

- (a) To accord Australian wool the opportunity of competing in the global quotafor wool for not less than 90 per cent. of the total foreign exchange allocation for wool each year and not to restrict the total foreign exchange allocation for wool beyond the extent necessary to safeguard Japan's external financial position and balance of payments;
- (b) to take no action to vary the present level of duty on wool imports from Australia for a period of three years from date of signature;
- (c) to admit Australian wheat and barley on a competitive and non-discriminatory basis;
- (d) to accord Australian sugar the opportunity of competing for not less than 40 per cent. of the total foreign exchange allocation for sugar;
- (e) to include Australia as a permitted source of supply for beef tallow and cattlehides on the Automatic Approval (licensing) list;
- (f) to admit Australian dried skim milk on a competitive and non-discriminatory basis:
- (g) to make reasonable provision for the import of Australian dried vine fruits (raisins, currants and sultanas) in each year of the three-year period.

It was agreed that before the end of the initial three-year period of the agreement the two Governments would explore the possibility of applying the General Agreement on Tariffs and Trade between the two countries.

Provision exists for either country to suspend obligations under the agreement to the extent and for such time as may be necessary to prevent serious injury to domestic producers as a result of imports of like or directly competitive products from the other country. The Australian Government has appointed an Advisory Authority whose function is to advise the Minister for Trade whether Australian industry is threatened with serious damage as a result of the agreement.

- (vi) Other Countries. Australia has entered into bilateral trade agreements with the Union of South Africa, Belgium, Brazil, Czechoslovakia, France, Greece and Switzerland. Summaries of the texts of these agreements were given in earlier issues of the Official Year Book. In 1951, Australia entered into a trade agreement with Israel under which each country undertook to accord most-favoured-nation tariff treatment to imports from the other. A similar agreement with Iceland was concluded in 1952.
- (vii) The General Agreement on Tariffs and Trade (G.A.T.T.). The General Agreement on Tariffs and Trade is an international trade agreement which has been in operation since 1st January, 1948. Australia was an original signatory of the Protocol of Provisional Application, by which Parts I. and III. of the Agreement are being provisionally applied. Part II. is being applied to the fullest extent not inconsistent with existing legislation at the date of signature of the Protocol.

In November, 1957 there were 37 contracting parties to the Agreement, comprising most of the world's larger trading nations.

Many of the Articles in Part II. of the General Agreement are similar to articles which were included in the Havana Charter for an International Trade Organization. Had the Charter come into force, Part II. of the General Agreement, containing general commercial policy provisions to prevent the circumvention of tariff concessions by other measures, would have been suspended.

Four series of tariff negotiations have been conducted under the provisions of the General Agreement. As a result of these negotiations, Australia has obtained tariff concessions on almost all the principal products of which she is an actual or potential exporter to the individual countries concerned. These concessions were a result both of direct negotiation by Australia and of negotiation by other countries—in the latter case, the benefits occur through the operation under the Agreement of the most-favoured-nation principle.

The contracting parties periodically hold plenary sessions to deal with questions arising out of the administration of the Agreement. The twelfth session was held at Geneva in October and November, 1957.

### § 3. Imperial Preference in the United Kingdom.

1. Preferential Tariff of the United Kingdom.—A brief summary of the preferential tariff of the United Kingdom in the years prior to 1931 was published in previous issues of the Official Year Book.

By 1931, the United Kingdom imposed duties on a fairly wide range of goods, provision being made in all cases for preferential treatment to Empire goods. The important preferences for Australia were those on sugar, dried fruit, wine, and jams and jellies. Even at this time, however, the United Kingdom adhered to the principles of free trade and by far the greater part of imports was free of duty.

In order to counteract the flood of dumping which followed the collapse of world trade in 1929-30, the United Kingdom introduced emergency tariff legislation in 1931. Ad valorem duties were imposed on almost all goods imported into the United Kingdom with the exception of certain raw materials, goods from Empire countries being exempt from these duties. These temporary measures were embodied in the Import Duties Act of March, 1932, by the enactment of which the United Kingdom finally abandoned free trade as a policy. This Act provided for the free entry for Empire goods pending the conclusion of some permanent agreement. The Ottawa Agreements Act of November, 1932 emerged from the Imperial Economic Conference held in Ottawa and embodied agreements concluded between the United Kingdom and the Dominions, Newfoundland and Southern Rhodesia. For the purpose of considering the present preferences enjoyed by Australia in the United Kingdom, it is expedient to regard the Import Duties Act and the Ottawa Agreements Act as complementary.

The Import Duties Act provided for the imposition of a general ad valorem duty of 10 per cent. on all imports with certain exceptions (i.e., those on the Free List and those already dutiable under previous enactments). Additional duties could be imposed and items on the Free List subjected to duty, and in fact the range of items subject to duties under this Act has been extended from time to time since its enactment.

The freedom of Empire goods from these duties was guaranteed under the Ottawa Agreements Act, which also provided for the imposition of new duties on imports from foreign, but not Empire, countries of a number of products of special interest to the Empire countries concerned. Whilst free entry was guaranteed to Empire producers on a wide range of products, the margins of preference thereby applicable were not bound, and the duties could be varied up or down by the United Kingdom Government without the consent of Empire countries. On a selected range of items, however, which are specified in the schedules to the Ottawa Agreements Act, the duties could not be varied by the United Kingdom without the consent of the other party to the respective agreement.

Since 30th October, 1947, Canada and the United Kingdom have, by an exchange of letters, recognized the rights of their respective Governments to reduce or eliminate the preferences they accord one another without prior consultation or consent.

In 1947 the United Kingdom and Australia adhered to the General Agreement on Tariffs and Trade, which prohibits increases in tariff preferences by either country. This rule, as is the case with the other provisions of the General Agreement, may be waived by a two-thirds majority of the signatories to the agreement.

2. The Australia-United Kingdom Trade Agreement.—The provisions and history of the original Australia-United Kingdom Agreement (Ottawa Agreement) were published in previous issues of the Official Year Book.

The major provisions of the current agreement (signed in Canberra on 26th February, 1957) which affect Australia's position in the United Kingdom market are as follows:—

- (a) Continued free entry for those Australian goods in which Australia has an active trade interest, and which were accorded free entry immediately prior to the new agreement.
- (b) A guaranteed minimum margin of preference in the United Kingdom Tariff on all items so treated in the previous agreement plus an extension of this guarantee to several items on which the margin of preference, although in force, was not bound to Australia. This latter group comprised currants, egg powder and egg pulp, jam, rice, tomato juice, pineapple juice and coconut oil. A selection of the items on which Australia receives a bound margin of preference and the extent of that preference is as follows (all values in sterling):—Butter (15s. a cwt.); cheese (15 per cent. ad val.); canned peaches, pears and apricots (12 per cent. ad val.); raisins (8s. 6d. a cwt.); eggs in shells (1s. to 1s. 9d. a great hundred (10 dozen)); milk powder (6s. a cwt.); sweetened condensed milk (5s. a cwt.); apples (4s. 6d. a cwt. in season); honey (7s. a cwt.); flour (10 per cent. ad val.); light wine (2s. a gallon); heavy wine (10s. a gallon at present duty rate).
- (c) All rights under the Ottawa Agreement in respect of meat are maintained.
- (d) Australia receives an assured wheat market of at least 750,000 tons f.a.q. wheat or flour equivalent annually. Any Australian high-protein wheat sold to the United Kingdom is not counted against this obligation.

- (e) There is provision for full consultation between the two Governments on such matters as agricultural production and marketing, transport and communication, the disposal of surpluses and restrictive business practices.
- (f) The two Governments declared their intention to introduce legislation which will enable them to enforce anti-dumping or countervailing duties where material injury is caused or threatened to the other party.
- (g) The agreement shall be the subject of re-negotiation between the two Governments in 1961.
- 3. Recent Developments affecting the Operation of the Trade Agreement.—The effect of increases in commodity prices in the post-war period has been to reduce the effective value of those preference margins which are expressed in terms of British currency ("specific margins"). The commodities affected are butter, eggs, canned apples, logan-berries, pineapples, tropical fruit salad, raisins, dried apricots, sugar, lactose, and wines. The following table shows, for selected items, how the ad valorem incidence of specific preference margins originally negotiated in 1932 and rebound in the 1957 agreement has been reduced by increases in the average value of the commodities on which they are granted.

IMPERIAL PREFERENCE: CHANGES IN VALUE OF PREFERENCES.

Ad Valorem Incidence of Specific Preferences Received by Australia in the United Kingdom.

G	Commodity.		Ad Valorem Incidence. (a) (Per cent.)				
		Preference Margin.	1938.	1947.	1954.	1956.	
Sugar, raw		£3 14s. 8d. a ton	35.8	12.2	9.4	8.7	
Butter		15s. a cwt	13.3	7.6	4.3	4.6	
Beef (frozen)		₹d. a lb	17.3	10.3	4.3	3.6	
Canned pineapple		5s. a cwt	21.4	5.5	2.9	3.5	
Currants		2s. a cwt	7.2	2.8	2.4	1.8	
Raisins	••	10s. 6d. a cwt. to 1947; 8s. 6d. a cwt. from 1948	31.2	13.1	9.7	8.0	
Honey	••	7s. a cwt. to 1938; 5s. a cwt. from 1939	19.0	6.8	5.4	3.8	
Milk, dried whole		6s. a cwt.	8.7	4.7	2.9	3.1	
Milk, dried skim		6s. a cwt.	20.1	7.4	7.0	7.3	
Apples		4s. 6d. a cwt	26.4	9.9	5.9	5.4	
Pears		4s. 6d. a cwt	19.5	6.7	5.3	4.9	

<sup>(</sup>a) The ad valorem incidence of a preference is calculated by expressing the specific margin of preference (in £ sterling a cwt., a ton, etc.) on a particular commodity as a percentage of the average unit value (in £ sterling a cwt., a ton, etc.) of United Kingdom imports of that commodity from all sources in the year concerned.

### § 4. Trade Commissioner Service.

In the interest of building and maintaining a high level of trade, Governments nowadays generally appoint commercial representatives in their main export markets, their duties including the collection of information about trade conditions, assisting exporters in their difficulties and promotion of trade generally.

Prior to 1929, Australian representation abroad was limited to the High Commissioner's Office in London, with a subsidiary agent in Paris, and the Office of the Commissioner-General for Australia in New York. Apart from the facilities afforded by those offices, the only form of oversea trade representation available to Australia was that of the United Kingdom Department of Overseas Trade, whose activities were naturally concerned with the development of United Kingdom rather than Dominion trade.

The growing importance of Australia's trade with Canada led to the appointment in 1929 of an Australian Trade Commissioner in that country. The part played by that official in the subsequent negotiations of the Trade Agreement with Canada, in the cultivation

of close and cordial relations with the Canadian authorities, and in general in focussing interest on Australia and Australian products, amply demonstrated the value of such appointments to both the Commonwealth Government and the Australian trading community.

The Trade Commissioners Act 1933 provided for the establishment of an Australian Government Trade Commissioner Service and by the beginning of the 1939-45 War posts had been established at Wellington, Batavia (now Djakarta), Shanghai, Tokyo, Cairo, Bombay, New York and Calcutta. The Trade Commissioner Service was further expanded in 1946 and in February, 1958 there were 27 Trade Commissioner posts in 20 countries.

The general advantages to be derived from the appointment of Trade Commissioners may be briefly stated as follows:—(a) fostering of goodwill, (b) correction and avoidance of misunderstandings, and (c) dissemination of knowledge concerning the respective countries. Particular facilities which they are able to afford to the trading community are (a) information as to present and prospective demand for goods, (b) information as to foreign and local competition, (c) advice as to best selling methods, (d) reports as to the standing of foreign buyers, (e) specification of articles in demand, (f) dealing with trade inquiries, (g) advice and assistance to commercial visitors regarding trade matters, (h) settlement of difficulties between exporters in Australia and buyers abroad, and (i) information as to foreign import requirements, customs duties, trade regulations, etc.

In addition to the foregoing trade functions, it is the duty of a Trade Commissioner to watch and advise the Government of any developments in his territory (which may include several countries) likely to affect trade and commerce with Australia, and other matters of economic interest to the home Government. He may be called upon to represent his Government at oversea conferences, and in certain countries where there is no diplomatic or consular mission (e.g., British West Indies, Hong Kong and the Federation of Rhodesia and Nyasaland), he is called upon to act as the Australian representative on official occasions.

Trade Commissioners usually enter the Service from either the commercial world or the Public Service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts it is the practice for the Trade Commissioner to share his duties with an Assistant Trade Commissioner, who is selected to be trained in the Service and qualify at a later stage for appointment as a Trade Commissioner. These staffing arrangements are designed to enable the Government to draw upon experienced and able executives in both private enterprise and the Public Service, and at the same time to build up a body of competent personnel to carry out a policy of vigorous expansion in the field of oversea trade.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade (as distinct from the diplomatic and consular services, administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The oversea trade representation is shown in Chapter XXX.—Miscellaneous.

### § 5. Method of Recording Imports and Exports.

- 1. Source of Statistics.—Oversea trade statistics are compiled from documents obtained under the Customs Act 1901-1957 and supplied to this Bureau by the Department of Customs and Excise.
- 2. Customs Area.—The Customs Area, to which all oversea trade statistics issued by this Bureau apply, is the whole area of the Commonwealth of Australia. Non-contiguous territories are treated as outside countries, and trade transactions between Australia and these non-contiguous territories are part of the oversea trade of Australia. Such transactions are shown separately, i.e., the trade of Australia with each particular country is separately recorded and tabulated.
- 3. The Trade System.—There are two generally accepted systems of recording oversea trade statistics, namely, (a) special trade and (b) general trade, and statistics of both are published by the Bureau, although greater emphasis is placed on general trade. The Statistical Office of the United Nations defines the two systems as follows:—
  - (a) Special Trade. Special imports are the combined total of imports directly for domestic consumption and withdrawals from bonded warehouses or free zones for domestic consumption, transformation or repair. Special

- exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported.)
- (b) General Trade. General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. Direct transit trade and trans-shipment under bond are excluded. General exports are the combined total of national exports and re-exports of imported merchandise including withdrawals from bonded warehouse or free zone for re-export.

The tables which follow refer to general trade, except for those appearing in § 16, para. 2, which refer to imports cleared for home consumption.

- 4. Statistical Classification of Imports and Exports.—Statistics of oversea imports and exports from which the summary tables in this issue of the Official Year Book have been extracted were compiled according to the revised classification which came into operation on 1st July, 1945. This classification is designed to allow for the inclusion of items which become significant with varying trade conditions, and in 1956-57 provided for 2,264 import items and 1,072 export items.
- 5. The Trade Year.—From 1st July, 1914, the statistics relating to oversea trade have been shown according to the financial year (July to June). Prior to that date the figures related to the calendar year. A table is included in § 17 showing the total value of imports and exports in the calendar years 1953 to 1957 inclusive.
- 6. Valuation.—(i) Imports. The recorded value of goods imported from countries beyond Australia as shown in the following tables represents the amount on which duty is payable or would be payable if the duty were charged ad valorem. Since 15th November, 1947, the value for duty of goods imported into Australia has been the f.o.b. value in Australian currency instead of the British currency f.o.b. value plus 10 per cent.

Section 154 (1) of the Customs Act 1901-1957 provides that "when any duty is imposed according to value, the value for duty shall be the sum of the following:—

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
  - (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export."
- "Current domestic value" is defined as "the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country." All import values shown throughout this and other chapters of this issue of the Official Year Book are therefore uniform f.o.b. values at port of shipment in Australian currency.
- (ii) Exports. Since 1st July, 1937, the following revised definitions of f.o.b. values have been adopted for exports generally:—
  - (a) Goods sold to oversea buyers before export—the f.o.b. port of shipment equivalent of the price at which the goods were sold (e.g., as regards wool, the actual price paid by the oversea buyer plus the cost of all services incurred by him in placing the wool on board ship).
  - (b) Goods shipped on consignment—the Australian f.o.b. port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. port of shipment equivalent of the current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. port of shipment equivalent of the price ultimately received).

Exporters are required to show all values in terms of Australian currency, and to include the cost of containers.

An account of the bases of valuation in operation prior to 1st July, 1937 was given on page 469 of Official Year Book No. 39.

- 7. Inclusions and Exclusions.—(i) Ships' and Aircraft Stores. Prior to 1906, goods shipped in Australian ports on oversea vessels as ships' stores were included as exports. From 1906, ships' and aircraft stores have been specially recorded as such, and omitted from the tabulation of exports. A table showing the value of these stores (including bunker coal and oil) shipped each year since 1952-53 is shown on page 336.
- (ii) Outside Packages. Outside packages (containers, crates, etc.) have always been included as a separate item in the tabulation of imports but, except for those received from the United Kingdom, a classification according to country of origin has been available only since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.
- (iii) Trade on Government Account. Imports and exports on Government account are treated as normal transactions and are an integral part of oversea trade transactions.
- (iv) Currency. Notes and coins of base metal are included in the oversea trade statistics at their commodity value only.
- (v) Gold Content of Ores and Concentrates. The value of ores and concentrates imported and exported includes the value of the gold content. The latter is not recorded separately for purposes of inclusion in imports and exports of gold.
  - (vi) Personal Effects. Migrants' effects are included in imports and exports.
- 8. Countries to which Trade is Credited.—(i) Imports. From 1st January, 1905, in addition to the record of the countries whence goods arrived directly in Australia, a record of the countries of their origin was kept, as it was considered that classification of imports according to country of origin was of greater interest and value than classification according to country of shipment. Up to and including the year 1920-21, imports continued to be classified both according to country of shipment and according to country of origin, but the former tabulation was discontinued as from the year 1921-22.
- (ii) Exports. In the export sections of tables in this chapter, "country" refers to country of consignment.
- 9. Pre-Federation Records.—In the years preceding Federation, each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Official Year Book prior to No. 41. On the introduction of the Customs Act 1901 the methods of recording values were made uniform throughout the States.

### § 6. Total Oversea Trade.

1. Including Gold.—The following table shows the total trade (including gold) of Australia with oversea countries from 1901 to 1956-57. To save space, the period 1901 to 1950-51 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for the individual years were published in Official Year Book No. 40 and earlier issues, but it should be borne in mind that the figures for imports in issues prior to No. 37 were in British currency.

In this chapter the values in all tables of imports and exports are shown in Australian currency f.o.b. at port of shipment.

OVERSEA	TRADE	:	AUSTRALIA.

<sup>(</sup>a) The figures shown for the years 1901 to 1950-51 represent the annual averages for the periods covered. See text above. From 1914-15 onwards the particulars relate to financial years. (b) Prior to 1906, ships' stores were included in exports. For the value of such goods shipped on oversea vessels and aircraft during each of the years 1952-53 to 1956-57 see table on p. 356.

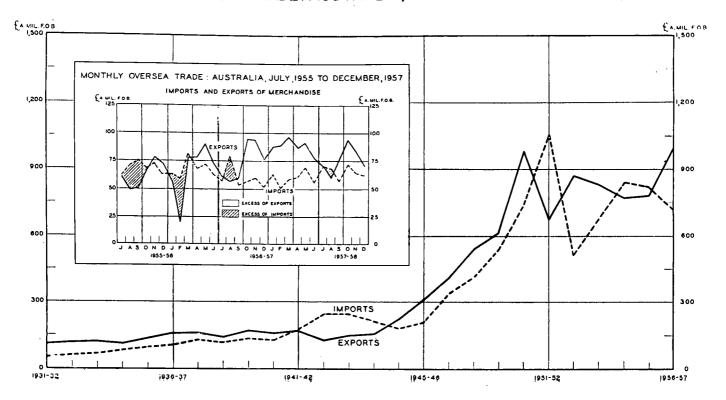

In issues of the Official Year Book prior to No. 23, fluctuations in the value of the oversea trade of Australia for earlier years were treated in some detail. The enhanced prices ruling for commodities and the peculiar conditions affecting Australian trade were responsible for the high value of imports in the years following the 1914–18 War, and these factors should be taken into consideration in making comparisons with earlier years. In the three years ended 1928–29, imports fell while exports were well maintained, but in 1929–30 both imports and exports declined substantially. The full effects of the economic depression are reflected in the greatly diminished trade figures for the period 1931–32 to 1935–36 and some years thereafter. The lowest level was recorded in 1931–32, when the total trade amounted to £137,538,000.

The outbreak of war in the Pacific in 1941 resulted in a substantial increase in the value of imports during the years 1941-42 to 1945-46. Since the end of the war the annual values of imports and exports have increased considerably, largely because of higher prices.

A graph showing the oversea trade of Australia from 1931-32 to 1956-57 appears on the next page.

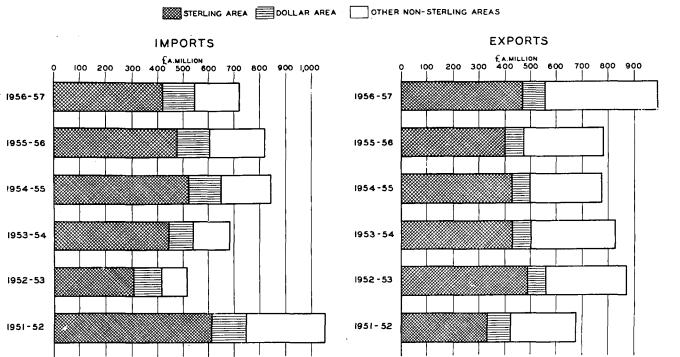

2. Excluding Gold.—The fluctuations in recent years in merchandise trade (including silver as merchandise) are shown more clearly in the following table, from which all gold movements have been excluded.

(ii) Proportions. In view of the fluctuations in the total values of imports and exports, it is somewhat difficult to ascertain from the preceding table the relative importance of the various countries in the trade of Australia. A better idea of the proportions of imports supplied by the various countries and of their relative importance as markets for Australian exports during the years 1954-55 to 1956-57 may be obtained from the following table.

# COUNTRIES OF ORIGIN OR CONSIGNMENT OF AUSTRALIAN IMPORTS AND EXPORTS: PROPORTIONS.

2. According to Monetary Areas.—The following table shows the trade of Australia according to monetary areas during the years 1955-56 and 1956-57.

The sterling area includes the United Kingdom, its colonies and dependencies, all other countries of the British Commonwealth (except Canada and the New Hebrides Condominium) and certain non-British countries of which the most important are Burma, Bahrain Islands, other Arabian States (excluding Saudi Arabia and Yemen) and Iceland.

The dollar area is comprised of the United States of America and dependencies, Canada, Mexico, other Central American countries, Bolivia, Colombia, Ecuador, Venezuela, the Philippines and Liberia.

The O.E.E.C. area consists of non-sterling members of the Organization for European Economic Co-operation, namely, Belgium, France, Italy, Norway, the Netherlands and Portugal together with their associated States and dependencies, Austria, Denmark, the Federal Republic of Germany, Greece, Luxemburg, Sweden, Switzerland, Trieste, Turkey and the New Hebrides Condominatum.

Of the remaining countries grouped under "other non-sterling", the more important as regards trade with Australia are Czechoslovakia, Finland, Poland, Spain, the Union of Soviet Socialist Republics, Egypt, Iran, Saudi Arabia, Japan, Indonesia, Thailand, Brazil and Chile.

4. Imports from the United Kingdom and Competing Countries.—Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8th August, 1907, the Commonwealth Customs Tariffs have provided preferential rates of customs duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on previous pages in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. Imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom cannot supply. These items, in addition to others not available from that country, have therefore been omitted from the computation following.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, Germany, Japan and the United States of America. These countries have been selected as the principal competitors in normal times with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1954-55 to 1956-57 are shown in the following table.

IMPORTS FROM THE UNITED KINGDOM AND ITS MAIN COMPETITORS. (£'000.)

Nature of Imports.	Year.	United Kingdom.	France.	Federal Republic of Germany.	Japan.	United States of America.	All Countries.

	1956–57	296,251	9,297	31,079	12,884	95,544	716,682

(a) Includes outside packages.

The principal classes of competitive imports are metals, metal manufactures and machinery (value £265,247,000 in 1956-57) and manufactured fibres, textiles and apparel (value £91,313,000 in 1956-57). The value of goods included in these two groups represented 74.1 per cent. of the total value of competitive commodities during 1956-57. In 1956-57 the United Kingdom supplied 54.8 per cent. of the total value of competitive goods.

### § 9. Trade with Eastern Countries.

1. Merchandise Trade according to Countries.—The values of imports from and exports to Eastern countries during the years 1954-55 to 1956-57 are shown in the following table. The principal commodities imported in 1956-57 according to countries of origin were:—Borneo (British)—crude petroleum, £13,157,000; Ceylon—tea, £8,732,000; India—bags and

sacks, £9,811,000, cotton and linen piece-goods, £4,036,000, hessian, £2,556,000 and cotton fibres, £643,000; Malaya—crude rubber. £6,720,000, timber, £1,268,000; Japan—metals and metal manufactures, £1,222,000, cotton and linen piece-goods, £5,654,000, other textiles, £1,141,000, tinned fish, £990,000; Indonesia—petroleum spirit, £3,419,000, kerosene, £3,641,000, crude petroleum, £10,761,000, residual and solar oil, £821,000, tea, £3,897.000.

1955-56	 421,208	397,085	818,293	2,795	821,088
1956-57	 403,496	313,186	716,682	2,309	718,991

5. Exports of Merchandise and Bullion and Specie.—The next table shows the value of exports from Australia during each of the years 1952-53 to 1956-57, grouped under the headings—Merchandise, and Bullion and Specie. The exports of Australian produce and re-exports are shown separately.

EXPORTS OF MERCHANDISE AND BULLION AND SPECIE: AUSTRALIA. (£'000.)

		Merchandise.			Bul	ie.	Total	
Year.		Australian Produce.	Re-exports.	Total.	Australian Produce.	Re-exports.	Total.	Exports.
1952–53		840,634	7.864	848,498	22,657	117	22,774	871,272
1953-54	• •	803,635	8,231	811,866	16,422	44	16,466	828,332
1954-55	• • •	749,765	8,276	758,041	16,118	5	16,123	774,164
1955-56		757,100	13,737	770,837	10,990	37	11,027	781,864
1956-57		959,747	13,650	973,397	19,896	12	19,908	993,305

6. Imports and Net Customs Revenue.—The percentage of net Customs revenue, excluding primage, collected to the total value of all merchandise imported in each of the years 1952-53 to 1956-57 was as follows:—1952-53, 12.6 per cent.; 1953-54, 12.8 per cent.; 1954-55, 11.1 per cent.; 1955-56, 9.8 per cent.; and 1956-57, 9.0 per cent. Primage duty was in force during these years and if this is added to net Customs revenue the percentages become:—1952-53, 13.8 per cent.; 1953-54, 14 0 per cent.; 1954-55, 12.1 per cent.; 1955-56, 10.7 per cent.; and 1956-57, 9.6 per cent. The percentages of net Customs revenue, excluding primage, to the total value of dutiable goods only were: 1952-53, 31.0 per cent.; 1953-54, 24.0 per cent.; 1954-55, 21.1 per cent.; 1955-56, 20.2 per cent.; and 1956-57, 20.5 per cent. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period.

# § 12. Ships' and Aircraft Stores.

Prior to 1906, goods shipped in Australian ports on board oversea vessels as ships' stores were included in the general exports. From 1906, ships' and aircraft stores have been specially recorded as such, and have been omitted from the export figures. The value of these stores during each of the years 1952-53 to 1956-57, with oils separate, is shown in the following table:—

VALUE OF STORES LOADED ON OVERSEA SHIPS AND AIRCRAFT: AUSTRALIA. (£'000.)

Item.	1952–53.	1953–54.	1954–55.	1955–56.	1956-57.
Oils All Stores (including oils)	6,657	5,919	7,328	7,970	9,059
	11,696	10,266	13,181	13,539	14,208

In addition to oils, the principal items supplied to oversea ships and aircraft in 1956-57 were:—Meats, £1,591,684; fruit and vegetables, £491,347; eggs, £169,094; butter, £120,460; ale, porter, beer, etc., £172,352; sea food, £133,241; coal, £44,116; flour, £81,872; rice, £37,503; milk and cream, £39,713.

### § 13. Movement of Bullion and Specie.

1. Imports and Exports.—The following table shows the values of gold and silver bullion and specie and of bronze specie imported into and exported from Australia during each of the years 1954-55 to 1956-57.

# § 14. Exports According to Industries.

1. Classification.—The following table provides an analysis of the total recorded value of Australian exports for the three successive financial years ended June, 1957. This analysis is designed to show fluctuations in the value of exports of Australian produce dissected according to the main industry of their origin, although any such classification is necessarily arbitrary in some respects.

Gold Exports(a)	• •	13,718	8,323	14,227	<del>:</del>	<del></del>	<del></del>	
Total Recorded Value			3,525			<del></del> -	<del></del> -	
Exports		774,164	781,864	993,305				

<sup>(</sup>a) The value of refined newly-won gold was £16,939,351 in 1954-55, £16,192,638 in 1955-56 and £16,599,179 in 1956-57. (b) Less than 0.05 per cent.

2. Relative Importance of Industrial Groups.—In the year 1956–57, Australian produce (other than gold) exported amounted to approximately £965 million. Of this, £869 million or 90 per cent. was mainly produce of primary industries, comprising £614 million of unprocessed produce and £255 million of goods which had been processed in some degree before export. The values of the principal individual items of processed primary produce exported were:—Raw sugar, £28,182,000; flour, etc., £23,066,000; canned fruit, £10,078,000; dried fruit, £6,586,000; wool (scoured, tops, etc.), £57,977,000; canned meats, £11,478,000; butter, £25,824,000; milk (condensed, dried, etc.), £10,736,000; pig lead, £22,915,000; lead bullion, £8,338,000; zinc bars, blocks, etc., £4,666,000; copper ingots, £5,110,000; and undressed timber, £2,716,000.

The value of manufactures exported as classified above was £74 million, or approximately 8 per cent. of Australian produce (other than gold) exported in 1956-57. The values of principal individual items here included were:—Manufactures of metal, £43,299,000; implements and machinery, £7,934,000; drugs and chemicals, £4,270,000; and paper and stationery, £2,674,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed

primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw materials (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and re-exported in the refined form. The values of principal individual items shown as "unclassified" in 1956-57 were:—Individual consignments of less than £50 in value, £4,486,000; and military equipment and stores and supplies for Australian projects overseas, £3,426,000.

### § 15. Australian Index of Export Prices.

- 1. General.—Over the past fifty years the exports of Australia have become increasingly diversified, but, although the proportion of highly manufactured exports has increased, it is still small in relation to total exports. Most of the exports still consist of basic products, such as wool, wheat, butter, etc.
- 2. Historical.—An annual index of export prices has been published by this Bureau since its inception.

The first index was compiled annually for the years 1901 to 1916–17. The method of computation was to select all those articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The total value so obtained was divided into the total actual (recorded) value of these exports for that year. The quotient (multiplied by 1,000) thus obtained was the export price index number for that year.

The method was changed in 1918. A weight for all principal exports was calculated on the average quantities of exports for the nineteen and a half years from 1st January, 1897 to 30th June, 1916. To these weights were applied the "average unit export values" of each export in successive years, and a weighted aggregative index of "price" variations was derived. It was published for the years 1897 to 1929-30, and particulars of this index were last published in Official Year Book No. 24, page 147.

After the 1914-18 War, however, the relative importance of different exports changed considerably. In addition, the pattern of exports varied considerably from year to year.

3. Present Indexes.—For the reasons just mentioned, two new series of monthly export price indexes—one using fixed weights, the other changing weights—were published in 1937, computed back to 1928. These are the only export price indexes now published.

The data on which both series are based differ from those utilized in the old series of annual index numbers. The most important change was the use of actual (or calculated) export parities, based on actual price quotations, in place of the "unit-values" declared at the Customs.

The old index took no account of gold exports. The omission is natural and reasonable for countries which produce little or no gold. For gold-producing countries, although some exports of gold would be irrelevant (e.g., the Australian shipments of gold reserves during the depression), the exports of newly-produced gold should be taken into account. In the new series, therefore, gold is included, but the weight given to it is not the quantity exported but the quantity produced.

The two series are compiled monthly, and both relate to commodities which normally constitute about 80 per cent. of the total value of exports of merchandise and gold and silver production.

4. Monthly Index (Fixed Weights).—(i) General. This is a weighted aggregative index of price variations. It was computed back to 1928, with that year taken as base. It is now usually published on the base—average of three years ended June, 1939 = 100.

The purpose of this index is to provide comparisons, over a limited number of years, of the level of prices of those commodities normally exported from Australia, making no allowance for any benefit or disadvantage accruing from variations during the period in the relative proportions of the different kinds of exports.

(ii) Weights. The original weights (used for the period 1928 to 1936) were, in round figures, the average annual exports (production, in the case of gold) during the five years 1928-29 to 1932-33.

From July, 1936, the weights were revised, and are now based on the average annual exports (production, in the case of gold) during the three years 1933-34 to 1935-36. The break of continuity has been bridged by the usual method of splicing. Consideration is being given to adopting weights for a post-war period.

The weight adopted for wheat takes into account the wheat equivalent of flour exported, the weight allotted to greasy wool takes account of the greasy equivalent of scoured wool, tops, and wool on skins, whilst for some metals allowance is made for the metallic content of ores and concentrates exported.

The twenty items, together with the units of quantity and the weights or "quantity multipliers", are given in the following table.

EXPORT PRICE INDEX: COMMODITIES AND WEIGHTING SYSTEM. (FROM 1ST JULY, 1936.)

(a) Includes "wheat equivalent" of flour.

The percentage distributions of the "Total Aggregate" shown in the foregoing table are of importance, firstly, as showing their variations from time to time as the result of differential price movements as between the various commodities, and secondly, as regards the effect on the indexes as a whole of the percentage price variations in each commodity.

(iii) Prices. The adoption of current market prices (as distinct from the former average unit export values) in the present indexes permitted the use of standards for each commodity. All export parities are calculated from price quotations from the most reliable and representative sources available. In most cases, the prices used are those at which current sales are being effected.

(iv) Index Numbers. The following table shows export price index numbers for Australia for individual commodities, groups of commodities, and all groups combined for each financial year from 1936-37 to 1956-57 and monthly from July, 1956 to December, 1957.

#### EXPORT PRICE INDEXES: AUSTRALIA.

SIMPLE AGGREGATIVE INDEX: FIXED WEIGHTS.

INDIVIDUAL COMMODITIES, GROUPS OF COMMODITIES AND ALL GROUPS (COMBINED).

<sup>(</sup>a) Non-ferrous—silver, copper, tin, zinc, lead. (b) Beef, lamb, mutton, pork. Guaranteed minimum prices are used when operative. (c) Sultanas, raisins, currants. (d) Cattle hides, calf skins. (e) Where Australian gold has been sold on the oversea premium markets such price has been used in the index. (f) For "All Groups (including Gold)"—applicable from 1936-37. (g) For "All Groups (excluding Gold)"—applicable from 1936-37.

A graph showing index numbers for All Groups (including Gold) appears on p 344.

Reference to the group indexes in the table above shows the great fluctuations and the wide dispersion of prices of export commodities in recent years. In particular, very great movements upwards and downwards have occurred in the price of wool. Since wool is a predominant export and comprises 46 per cent. of the base aggregate of the index, fluctuations in wool prices obscure the movements affecting the other components in the All Groups index. For purposes of comparison, wool and "other groups" are shown separately below.

5. Monthly Index (Changing Weights).—This series was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. The fixed weights index numbers indicate satisfactorily the general trend of export prices, but take no account of the relative quantities actually sold at the different prices ruling during each month. The impact of the price movements on current sales is indicated more directly by the index numbers in the following table. In computing these, the "quantity multipliers" are the quantities actually exported in the months (or periods) to which the index numbers relate.

For any given month, the procedure is to multiply the price of each commodity in that month, and its price in the corresponding month of the previous year, by the quantity exported during the given month. A comparison of the resulting aggregates gives one possible measure of the change in prices over the period; i.e., the change assuming that the proportions of the different kinds of exports whose prices are to be measured were the same as their proportions in the given month. Another possible measure is given by assuming that the proportions of the different kinds of exports in the given month were the same as their proportions in the corresponding month of the previous year. Accordingly, the first step in the procedure is repeated, substituting the quantities exported during the corresponding month of the previous year.

The index numbers so obtained have been proved over a period of years to lie very close together. As it is convenient for practical reasons to have one single figure rather than two close alternatives, the two index numbers are multiplied together and the square root of the product extracted. This is taken to be the index number for the month, the prices of the corresponding month of the previous year being taken as base.

The index numbers for the whole or portion of a year, as compared with the corresponding period of the previous year, are computed in very much the same way. The process involves merely the cumulative addition of the aggregates computed for the individual months, and extraction of the index numbers as explained above.

Index numbers computed on this basis are shown in the following table for the months July, 1956 to December, 1957 and for trade year periods ending in those months:—

MONTHLY EXPORT PRICE INDEX (CHANGING WEIGHTS): AUSTRALIA.

(Base: Weighted Average Price Level in corresponding months of preceding year = 100.)

<sup>(</sup>a) For certain months a nominal price is used for wool as indicated in the preceding two tables.

Monthly export price index numbers are issued in the mimeographed publication Monthly Index of Australian Export Prices, in the Monthly Review of Business Statistics and in the Quarterly Summary of Australian Statistics.

### § 16. External Trade of Australia and other Countries.

- 1. Essentials of Comparison.—Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e., from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand the same class of trade represents a comparatively small proportion of the total.
- 2. "Special Trade" of Various Countries.—In the following table the figures, which are expressed in Australian currency, relate as nearly as possible to imports cleared for consumption in the various countries specified and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed below are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available.

IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY): VARIOUS COUNTRIES, 1956.

### § 17. Oversea Trade in Calendar Years.

For the purpose of comparison with countries which record oversea trade in calendar years, the following table has been compiled to show Australian imports and exports for each of the calendar years 1953 to 1957:—

OVERSEA TRADE IN CALENDAR YEARS: AUSTRALIA. (£'000.)

	Year.		Mercha	andise.	Bullion an	d Specie.	Total.		
rear.		Imports.	Exports.	Imports.	Exports.	Imports.	Exports.		
1953			577,128	880,093	2,620	20,165	579,748	900,258	
1954			751,949	736,301	3,341	12,127	755,290	748,428

1956			764,597	823,422	3,235	22,236	767,832	845,658	
1957(a)	)		751,328	982,875	2,509	13,855	753,837	996,730	

(a) Subject to revision.

# § 18. Excise.

Although excise goods have no immediate bearing on oversea trade, the rate of excise duty is in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of Customs and Excise revenue are shown in Chapter XXI.—Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the yeers 1955-56 and 1956-57.

# QUANTITY OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY WAS PAID: AUSTRALIA.

### § 19. Interstate Trade.

Prior to the federation of the Australian Colonies (now States), each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the "book-keeping" period, these records were discontinued as from 13th September, 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July, 1953.

At the Conference of Statisticians held in January, 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities.

Interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania, prepared by the Deputy Commonwealth Statisticians in those States. The Deputy Commonwealth Statistician in South Australia publishes some figures for that State, made up from the records of Western Australia and Tasmania. The statistics of interstate trade for New South Wales and Victoria are very meagre. The Melbourne Harbor Trust publishes, in its annual report, the quantities of various commodities of interstate trade loaded and discharged in the Port of Melbourne. The trade with individual States is not disclosed.

### § 20. The Australian Balance of Payments.

1. Introduction.—Defining the balance of payments, the International Monetary Fund, in the second edition of its Balance of Payments Manual states "[It]... is a systematic record of all economic transactions during the period between residents of [a] country and residents of other countries." In a broad sense, therefore, statistics of the balance of payments summarize in money terms the economic relations existing between a national economy and the rest of the world, and are a pre-requisite to any attempt to examine the influence of external factors on the domestic economy.

The Australian economy is subject to large fluctuations in the level of export income and is affected in important respects by movements of oversea capital. As a result, balance of payments estimates have always assumed a particular importance in Australia. Between 1948–49 and 1955–56, for example, the value of exports was equivalent to almost 25 per cent. of national income, fluctuating between 30 per cent. of national income in 1950–51, the year of record wool prices, and 17 per cent. in 1955–56, a year of relatively low wool prices.

Official balance of payments estimates for Australia were first published for the years 1928-29 to 1930-31 as an appendix to Official Year Book No. 24. Prior to that the only estimates published by this Bureau related to the balance of trade, with some reference to

international transactions. Since 1930-31, estimates of the balance of payments have been published each year, except during the war period 1939 to 1945. From the first half of the year 1954-55, statistics of the balance of payments have been issued twice yearly in the mimeographed publication *The Australian Balance of Payments*. This, together with a printed volume *The Australian Balance of Payments*, 1928-29 to 1951-52 provides: (i) a description of the various items included in the official estimates, (ii) an indication of the sources from which the estimates are derived, and (iii) an explanation of the methods used in making them. The following paragraphs contain a brief description of the concepts adopted and a summary of the transactions for the years 1954-55 to 1956-57.

The form of the Australian balance of payments closely follows the pattern set out by the International Monetary Fund for the presentation of balance of payments statistics, although modifications have been introduced to accord with Australian conditions.

In the definitions adopted by the International Monetary Fund a basic distinction is drawn between "current" transactions and "capital" transactions. Current transactions consist of all transactions involving the transfer of ownership of goods or the rendering of services between residents of one country and residents of another country. Also included are items such as donations, reparations, etc. Capital transactions consist of all transactions involving the transfer of money, claims to money, and titles to investments, between residents of one country and those of another country.

This distinction is maintained in the Australian balance of payments accounts. Thus, transactions involving the transfer of the ownership of goods, i.e., imports and exports, and services, such as freight and insurance, investment income, etc. (customarily termed "invisibles"), are included in current account, while predominantly financial transactions are included in capital account.

By definition, and because of the method of constructing the accounts, the balance of payments on current account is always equivalent to the balance on capital account. In practice, however, there are "errors and omissions" in the estimates, including those which originate from factors such as the interval in time between the shipment of exports and the receipt of payment from overseas, and between the arrival of imports and the making of payment overseas. These cause discrepancies which are provided for by introducing a "balancing item" into the capital account. (See item 19 in the table on page 370).

2. Current Account.—The balance of payments on current account is constructed in the form of a series of credit and debit entries, the former comprising all transactions which result in receipts of foreign exchange and the latter all those resulting in payments thereof.

Within the current account the most important single relationship is the balance of trade—the difference between the value of exports and the value of imports. The balance of trade showed deficits of £85.5 million in 1954-55 and £47.2 million in 1955-56, and a surplus of £262.4 million in 1956-57.

17. Total Debits	1,158.4	1,155.0	1,065.8
Balance on Current Account	-258.8	-235.2	79.6

<sup>(</sup>a) Preliminary. For revised figures see Appendix. (b) Includes gold sold on the premium market valued at the price obtained. (c) Total marine insurance premiums payable on Australian imports (whether payable in Australia or overseas) were £4.3 million in 1954-55, £4.2 million in 1956-56 and £3.6 million in 1956-57.

When invisible transactions are taken into consideration, the current account deficits in 1954-55 and 1955-56 were considerably greater than the trade deficits in those years, while the trade surplus in 1956-57 was greatly reduced. The large and fairly constant deficit in invisible transactions in the three years increased the deficits in 1954-55 and 1955-56 to £258.8 million and £235.2 million respectively, while the surplus in 1956-57 was reduced to £79.6 million. The most important of the invisible transactions are the transportation items, which appear in both debits and credits. The principal component on the debit side is freight payable overseas—mainly freight on imports into Australia (£88 million in 1954-55, £103 million in 1955-56 and £115 million in 1956-57)—and on the credit side, expenditure of oversea ships in Australian ports (£56 million in 1954-55, £59.1 million in 1955-56 and £67 million in 1956-57).

The item next in importance after the transportation items is "Income from investment". The debit entries under this item represent the payment of interest and dividends overseas, while the credit entries represent the receipt of interest and dividends by Australian residents. The item also includes undistributed income, for which, since no actual monetary payment is involved, a compensating entry showing an increase in the value of capital investment is made in capital account. Investment income debits were £96.3 million in 1954-55, £105 million in 1955-56 and £113.7 million in 1956-57. Credits in the same periods were £19.8 million, £21.8 million and £26.4 million respectively.

The remaining items are much smaller than these two groups. Government transactions debits in these years were in the vicinity of £30 million each year and credits were about £10 million. Debits on account of donations and reparations were also about £30 million, with credits of approximately £20 million a year.

One item of some conceptual importance is the total Australian gold production (less industrial absorption), which is shown as a credit entry. The view taken is that Australian gold production constitutes an immediate addition to Australia's international reserves, and an entry covering the item is included in current account. At the same time total exports are adjusted to exclude gold.

 Capital Account.—The capital account shows the annual movements in items which are regarded as Australian oversea assets and those which are regarded as Australian oversea liabilities.

On the assets side, by far the most important item is Australia's holdings of monetary gold and foreign exchange—the international reserves. International reserves decreased by £142.4 million in 1954-55 and by £73.3 million in 1955-56 and increased by £211.5 million in 1956-57.

On the liabilities side, the most important items are public authority debt and direct investment in Australian companies.

In recent years the principal component of public authority debt has been the movement in net borrowing from the International Bank for Reconstruction and Development, from which £23.6 million net of repayments was received in 1954-55, £17.9 million in 1955-56 and £3.1 million in 1956-57. Private investment in Australia, however, has been much greater. Including undistributed income, total identified investment in Australian companies was £100.4 million in 1954-55 and £111.2 million in 1955-56.

Since, as mentioned above, the balance on capital account is identical with the balance on current account, the movement in international reserves should reflect the combined movement of current and capital items. In practice there is always an unexplained residue which is included in the table below as the balancing item.

Note.—Minus of an elementary denotes decrease.

4. Regional Balance of Payments.—It is possible to make some dissection of the overall Australian balance of payments to show the balance of payments with various countries and monetary areas.

The tables shown below provide two such dissections. The first table provides a dissection of the balance of payments on current account for the main monetary areas in each of the years 1954-55 to 1956-57. The second table provides a more detailed dissection of the dollar balance of payments during the same period and includes not only transactions with the dollar area but all transactions involving dollars, irrespective of where they were made.

5. Balance of Payments on Current Account—Monetary Areas.—It has not yet been found feasible to prepare complete estimates of the balance of payments with various countries, since sufficient information on capital movements to and from those countries is not available in the detail required. As a result, the estimates in the following table refer only to current account transactions.

The table shows the balance on current account in each of the years 1954-55 to 1956-57 for the sterling area, the dollar area and other non-sterling countries.

<sup>(</sup>a) For a list of the countries included in each monetary area see page 346. agencies. (c) Preliminary. For revised figures see Appendix.

<sup>(</sup>b) Includes international

Note.—Minus sign (-) denotes debits; other items are credits.

In recent years Australia has usually been in deficit on current account with the rest of the sterling area and with the dollar area, and in surplus with all other countries. This pattern can be seen in each of the years shown in the table. As mentioned above, there was a total current account surplus of £79.6 million in 1956-57, following on two deficits of £258.8 million and £235.2 million in 1954-55 and 1955-56 respectively. Considered on a regional basis the change to a surplus was due primarily to a reduction in Australia's deficit with the rest of the sterling area and to an increase in her surplus with the "Other Nonsterling" countries. The balance on current account with the dollar area was relatively stable during these years in comparison with the magnitude of movements in other areas.

The table also shows some information as to the balance of payments with countries within each monetary area. The importance of the United Kingdom in Australia's international transactions is apparent, as also is the importance of other countries combined in the Organization for European Economic Co-operation. The increase in total value of exports to these countries in 1956-57 was largely responsible for the surplus noted above with "Other Non-sterling" countries in that year.

The dollar area is shown dissected into United States of America and Canada. However, the more detailed treatment of the balance of payments with the dollar area is set out in the table on p. 373.

6. Balance of Payments with the Dollar Area.—The results of Australia's dollar transactions in the three years 1954-55 to 1956-57 are shown in the following table. As mentioned previously, the table shows in addition to transactions with the countries of the dollar area, all Australia's transactions which directly involve the receipt or payment of dollars, and includes the receipts of dollars under loans from the International Bank for Reconstruction and Development, payments of subscriptions to international agencies, etc.

The table has four main sections. The first section (items 1-17) provides detail on current transactions and item 17 is immediately comparable with the current account balance for the dollar area shown in the previous table. The next section (items 18 and 19) brings current dollar transactions outside the dollar area into account. The third section (items 20-24) brings in capital transactions and the final dollar deficit is shown against item 25. The fourth section shows the sources from which the deficit was financed.

Traditionally, Australia has always been in overall deficit in her balance of payments with the dollar area. Prior to the 1939-45 War, however, sterling was convertible into all other currencies and Australia's dollar deficits could be offset against her surpluses of other currencies. However, the emergence of the dollar as a scarce currency after the war and the loss of the convertibility of sterling have prevented the free working of such a system and Australia, in common with most other countries outside the dollar area, has been forced to exercise strict control over dollar transactions. Since the war, Australia, as a member of the sterling area, has purchased her net requirements of dollars from the Sterling Area Central Reserves, which the United Kingdom holds in her capacity as banker for the sterling area.

The table shows that after all direct dollar transactions—current and capital—have been taken into account, Australia drew on the Sterling Area Central Reserves to the extent of £54 million in 1954–55, £40.2 million in 1955–56, and £23.3 million in 1956–57, in order to finance the remaining dollar deficit. The reduction in 1956–57 resulted from the sale to the United Kingdom of £25 million of gold. This amount was offset against total drawings.

7. Conclusion.—Construction of the estimates of the Australian balance of payments involves the systematic assembly of much intricate data, from a variety of sources of which the following are the more important:—(i) Statistics of exports and imports, obtained in the first place from Australian trade statistics; (ii) information on particular invisible and capital items, obtained by regular inquiry from private organizations and government departments; (iii) details of many important receipts and payments of foreign exchange, provided by the banking system; (iv) information on dividends remitted, undistributed income and movements of private investment in companies, provided by statistics of oversea investment collected by this Bureau; and (v) information on international reserves, supplied by the Commonwealth Bank.

#### CHAPTER XI.

#### TRANSPORT AND COMMUNICATION.

Note.—Most of the statistics in this chapter cover the year 1956-57. More detailed figures for this and earlier years will be found in the annual bulletin, *Transport and Communication*.

#### PART I.—TRANSPORT.

#### A. SHIPPING.

#### § 1. Control of Shipping.

- 1. War-time Control.—An account of the action taken by the Commonwealth Government to control and regulate shipping throughout Australian waters during the 1939-45 War was given in Official Year Book No. 36, pp. 121-130.
- 2. Post-war Control and Developments.—A brief account of the post-war control of shipping and the establishment of the Australian Stevedoring Industry Board and the Australian Shipping Board will be found in Official Year Book No. 39, pp. 147-8.

The Maritime Industry Commission, established during the 1939-45 War under National Security legislation, was abolished on 19th December, 1952. Permanent legislation to cover many of the matters formerly dealt with by the Commission was enacted in 1952 in the form of amendments to the Navigation Act 1912-1950 (see p. 389).

As at 30th June, 1957, the Australian National Line operated 40 vessels totalling 153,704 gross tons, comprising thirteen "A" or River Class vessels of an average of 5,145 gross tons, five "B" Class vessels of an average of 3,923 gross tons, four "D" Class vessels of an average of 2,363 gross tons, two "D/A" Class vessels of an average of 2,407 gross tons, five "E" Class vessels of an average of 584 gross tons, two "Y" Class vessels of an average of 3,460 gross tons, two vessels engaged in the heavy trades of an average of 4,890 gross tons, and two vessels of an average of 7,399 gross tons, all of which were built in Australian yards, plus five vessels, totalling 18,514 gross tons, which were built overseas.

In the international sphere, ratification is still being awaited from one of 21 shipowning nations of a Convention establishing an Inter-Governmental Marítime Consultative Organization within the framework of the United Nations. The major objectives of this organization will be to provide machinery for co-operation among governments with shipping engaged in international trade, and to encourage the removal by governments of discriminatory action and unnecessary restrictions regarding such shipping.

This organization is designed to replace the United Maritime Consultative Council, which was established on a tentative basis after the expiry of the war-time United Maritime Authority and Combined Adjustment Board.

Up to 1st July, 1957, ratifications by twenty countries had been lodged, and there is a possibility of the remaining one ratifying in the near future, thus bringing the organization into force.

### § 2. System of Record.

In the system of recording statistics of oversea shipping, Australia is considered as a unit, and therefore only one entry and one clearance are counted for each voyage, without regard to the number of States visited (see also § 4, p. 381).

On arrival at, or departure from, a port in Australia, whether from or for an oversea country or from or for another port in Australia, the master or agent must "enter" the vessel with the Customs authorities at the port, and supply certain prescribed information in regard to the ship, passengers and cargo. At the end of each month the information so obtained is forwarded to this Bureau. This arrangement has been in operation since 1st July, 1924.

The volume of the vessel, as distinct from the cargo it carries, is recorded in net tons, i.e., the gross tonnage or internal cubic capacity less certain deductions on account of crew spaces, engine room, water ballast and other spaces not used for passengers or cargo. It is thus a rough measure of the capacity of the vessel for cargo or passengers. The unit of measurement is the ton register of 100 cubic feet.

The majority of cargo is recorded in terms of the ton weight of 2,240 lb. However, some additional cargo, mainly bulky commodities, is shipped and recorded on the basis of 40 cubic feet of space occupied representing one ton measurement.

From 1st July, 1914, trade and shipping statistics of Australia have been recorded for the financial years ending 30th June.

#### § 3. Oversea Shipping.

1. Total Movement.—The following table shows the number of entrances and clearances combined of oversea vessels at Australian ports, and the aggregate net tonnage, during each of the years 1952-53 to 1956-57:—

OVERSEA SHIPPING: ENTRANCES AND CLEARANCES (COMBINED) OF
VESSELS DIRECT, AUSTRALIA.

	<i>.</i>	<u>,                                      </u>			
Particulars.	1952–53.	1953–54.	1954-55.	1955-56.	1956-57.
Number of Vessels Net Tonnage '000 tons	4,041 17,571	4,127 17,733	4,505 20,003	4,882 22,324	5,290 23,659

The average net tonnage per vessel rose from 2,919 in 1921-22 to 4,472 in 1956-57.

Particulars of the total oversea movement of shipping for each year from 1822 to 1920-21 were published in Official Year Book No. 15, p. 507, and for each year from 1921-22 to 1950-51 in Official Year Book No. 40, p. 97.

2. Total Oversea Shipping, States.—The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels direct from and to oversea countries, and the aggregate net tonnage, during the year 1956-57.

OVERSEA SHIPPING:	<b>ENTRANCES</b>	AND	CLEARANCES	OF	VESSELS DIRECT,
	1	956-57	7.		

Particu	ıla <b>rs.</b>	N.S.W.	Vic.	QldL	S.A.	W.A.	Tas.	N.T.	Aust.

3. Shipping Communication with Various Countries.—A vessel arriving in Australia from overseas is recorded as coming from the country where the voyage commenced, irrespective of the number of intermediate ports of call. Similarly, a vessel leaving Australia is recorded as going to the country where the voyage is scheduled to terminate.

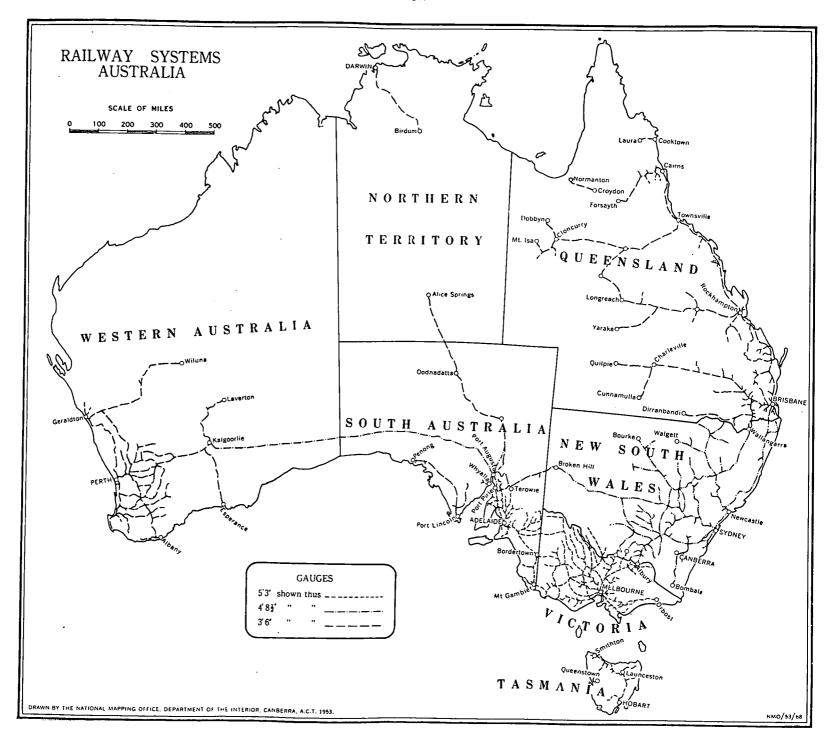

The following table shows statistics of the net tonnage entered and cleared, with cargo and in ballast, according to the principal countries where vessels commenced or terminated their voyages to or from Australia.

OVERSEA SHIPPING: COUNTRIES FROM WHICH ENTERED OR FOR WHICH CLEARED, AUSTRALIA.

4. Nationality of Oversea Shipping.—Vessels registered at ports in Commonwealth countries accounted for 57.6 per cent. of the net tonnage of shipping entering Australian ports in 1956-57. This proportion has varied considerably since the end of the 1939-45 War. By 1946-47 the proportion had increased from the low level of 43.4 per cent. recorded in 1943-44 to 76.2 per cent., but since then has steadily declined.

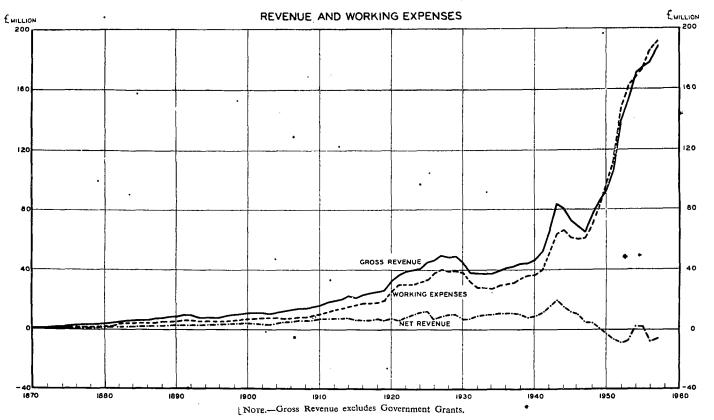

Particulars of the nationality of oversea shipping which entered Australian ports during each of the years 1954-55 to 1956-57 are given in the following table.

# GOVERNMENT RAILWAYS: AUSTRALIA, 1870 TO 1957

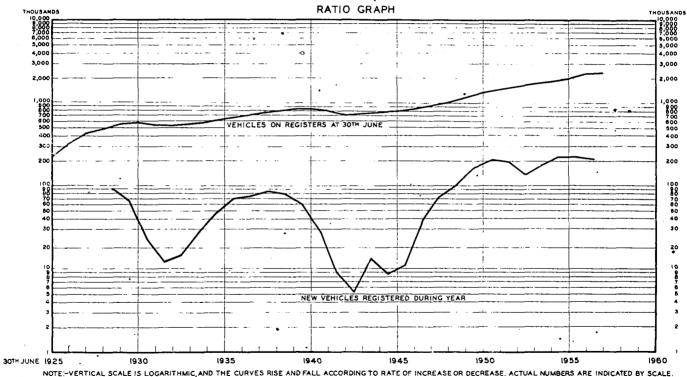

### GOVERNMENT RAILWAYS: AUSTRALIA, 1870 to 1957

Netherlands	608	630	670	Grand Total	9,939	11,228	11,815

(a) Federal Republic.

The Australian tonnage which entered Australian ports from overseas during the year 1956-57 represented 2.4 per cent. of the total tonnage entered and was confined mainly to the New Zealand and Pacific Islands trade.

The proportion of oversea shipping tonnage which entered Australia in cargo fell from 88.9 per cent. in 1938-39 to 79.4 per cent. in 1947-48. In 1956-57 it was 85.6 per cent. However, the proportion of shipping which cleared in cargo declined from 87.6 per cent. in 1938-39 to 66.5 per cent. in 1956-57, the trend over the period being generally downward.

#### 8 4. Interstate Shipping.

1. System of Record.—Interstate Shipping comprises two elements: (a) Vessels engaged solely in interstate trade; and (b) Vessels trading between Australia and oversea countries and in the course of their voyages proceeding from one State to another. (It should be mentioned that these vessels, except under special circumstances, do not engage in interstate carrying.) No complexity enters into the record of those in category (a), but with regard to the method of recording the movements of the oversea vessels (b) some explanation is necessary. Each State desires that its shipping statistics (which are prepared in this Bureau) should show in full its shipping communication with oversea countries, but at the same time it is necessary to avoid any duplication in the statistics for Australia as a whole. In order to meet these dual requirements, a vessel arriving in any State from an oversea country-say the United Kingdom-via another State, is recorded in the second State as from the United Kingdom via States, thus distinguishing the movement from a direct oversea entry. Continuing the voyage, the vessel is again recorded for the statistics of the third State as from the United Kingdom "Oversea via States". On an inward voyage, the clearance from the first State to the second State is a clearance interstate, and is included with interstate tonnage in conformity with the pre-federation practice of the States, and to preserve the continuity of State statistics. Thus, movements of ships which are, from the standpoint of Australia as a whole, purely coastal movements, must for the individual States be recorded as "Oversea via States" or "Interstate" according to the direction of the movement. The significance of the record of these movements will be seen more clearly from the following tabular presentation of the inward and outward voyages to and from Australia of a mail steamer which, it is presumed, reaches Fremantle (Western Australia) and then proceeds to the terminal port of the voyage-Sydney (New South Wales)-via South Australia and Victoria. From the terminal port the vessel will commence the outward voyage, and retrace its inward track.

6875/57.-12

#### ITINERARY OF AN OVERSEA VESSEL ON THE AUSTRALIAN COAST.

		Recorded as						
Particulars.	For the and Austra	for	For t	he States.				
Inward Voyage— Enters Fremantle from United Kingdom Clears Fremantle for Adelaide	Oversea	direct	Interstate direct Interstate direct Interstate direct	Oversea via States Oversea via States Oversea via States				
Outward Voyage— Clears Sydney for United Kingdom via Melbourne Enters Melbourne from Sydney Clears Melbourne for United Kingdom via Adelaide Enters Adelaide from Melbourne Clears Adelaide for United Kingdom via Fremantle Enters Fremantle from Adelaide Clears Fremantle from United Kingdom	Oversea	direct	Interstate direct Interstate direct Interstate direct	Oversea via States Oversea via States Oversea via States				

From the method outlined above, the requirements for Australia and for the individual States are ascertained as follows. (a) The aggregate of all ships recorded for each State as "Oversea direct" gives the oversea shipping for Australia as a whole; (b) the aggregate for all ships recorded in any State as "Oversea direct" plus those recorded as "Oversea via States" gives the total oversea shipping for that State; and (c) the aggregate for all ships recorded as "Oversea via States" may also be used, together with those recorded as "Interstate direct", to furnish figures showing the total interstate movement of shipping.

However, it should be remembered that all oversea vessels do not follow the same itinerary as the vessel in the table above.

2. Interstate Movement.—(i) Interstate Direct. The following table shows the number of entrances and the net tonnage of vessels recorded into each State and the Northern Territory from any other State (including oversea vessels on interstate direct voyages) during each of the years 1954–55 to 1956–57. The shipping of the Murray River, between the States of New South Wales, Victoria and South Australia, is excluded.

INTERSTATE MOVEMENT OF SHIPPING: ENTRANCES OF VESSELS INTERSTATE DIRECT.

State or Terri				Number.		Net Tons ('000).			
State of Terri	1954-55.	1955-56.	1956–57.	1954–55.	1955–56.	1956–57.			
New South Wales			1.584	1,634	1,711	4,553	4,606	4,853	
Victoria			1,555	1,614	1,594	4,058	4,475	4,128	
Queensland			598	597	688	1,541	1,554	1,806	
South Australia			963	1,027	1,088	3,476	3,733	3,876	
Western Australia			524	554	526	2,725	2,753	2,590	
Tasmania			960	893	1,025	1,085	984	1,203	
Northern Territory	••	• •	40	38	45	77	55	93	
Australia		••	6,224	6,357	6,677	17,515	18,160	18,549	

From 1938-39 the total net tonnage of interstate shipping declined steadily each year until 1942-43, when it represented only 38 per cent. of the total for the pre-war year. It remained practically unchanged during the next three years, but increased by almost one-third in 1946-47. By 1956-57 the total had risen to 93 per cent. of the 1938-39 total.

(ii) Oversea via States. To ascertain the aggregate movement of shipping between the States, including the total interstate movement of oversea vessels, the figures in the following table, which show the number of entrances and clearances of vessels to and from oversea countries via other Australian States and the aggregate tonnage, must be added to those in the preceding table.

INTERSTATE MOVEMENT OF SHIPPING: ENTRANCES AND CLEARANCES OF VESSELS OVERSEA VIA OTHER AUSTRALIAN STATES, 1956-57.

N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	Aust.

Oversea vessels moving interstate are with few exceptions not engaged in the active interstate trade of Australia, but are merely proceeding to the several States in continuation of their oversea voyages.

(iii) Total, Australia. The following table shows the total interstate movement of shipping, including oversea vessels travelling oversea via States and interstate direct, for each of the years 1952-53 to 1956-57.

#### § 6. Shipping Cargo.

1. Oversea and Interstate Cargo.—(i) Australia. The table hereunder shows the aggregate tonnage of oversea and interstate cargo discharged and shipped at Australian ports for the years 1952-53 to 1956-57. The majority of cargo is recorded in terms of the ton weight of 2,240 lbs. However, some additional cargo, mainly bulky commodities, is shipped and recorded on the basis of 40 cubic feet of space occupied representing one ton measurement.

#### § 7. Vessels Built and Registered.

1. Vessels Built.—The following table shows the number and tonnage of vessels built in Australia during each of the calendar years 1953 to 1957, so far as such information can be ascertained from the Shipping Registers of the various States. However, the Merchant Shipping Act, under which vessels are registered in Australia, does not make it compulsory to register vessels under 15 tons burden if engaged in river or coastal trade. Larger vessels are also exempt from registration if not engaged in trade. Yachts and small trading vessels may be, and frequently are, registered at the request of the owners.

3. World Shipping Tonnage.—At 1st July, 1957, the total steamships, motorships and auxiliaries of 100 gross tons and upwards throughout the world amounted to 33,804, with a gross tonnage of 110,246,000. Of these totals, steamships numbered 16,204 for 69,287,000 gross tons, motorships 16,605 for 40,760,000 gross tons and auxiliaries 995 for 199,000 gross tons. Included therein were 3,776 oil tankers of 100 gross tons and upwards, with a gross tonnage of 29,938,000. Australian steamships, motorships and auxiliaries, 232 for 603,000 gross tons, constituted 0.69 per cent. and 0.55 per cent. respectively of the total number and tonnage. There was one Australian oil tanker of 12,624 gross tons registered. This information has been derived from Lloyd's Register of Shipping.

#### § 8. Miscellaneous.

- 1. Lighthouses.—A list of the principal lighthouses on the coast of Australia, giving details of the location, number, colour, character, period, candle-power and visibility of each light so far as particulars are available, will be found in *Transport and Communication*, Bulletin No. 46.
- 2. Distances by Sea.—The distances by sea between the ports of the capital cities of Australia and the most important ports in other countries which trade with Australia are published in the annual bulletin, *Transport and Communication*.
- 3. Shipping Freight Rates.—The Quarterly Summary of Australian Statistics shows a list of the ruling freight rates for general merchandise in respect of both oversea and interstate shipments. At 31st December, 1957, the rate for general merchandise from Australia to the United Kingdom and the Continent was £10 4s. per ton weight or measurement, while

the rates for wheat and wool (greasy) were respectively £4 10s. per ton weight and 3.39d. less 7 per cent. per lb. These rates, which are expressed in sterling, are subject to an adjustment of 25½ per cent. when freight is prepaid in Australia.

- 4. Depth of Water at Main Ports.—A table showing the depth of water available and tides at principal ports of Australia is published in the annual bulletin, *Transport and Communication*.
- 5. Shipping Losses and Casualties.—Courts of Marine Inquiry are constituted by a magistrate assisted by skilled assessors, and, when necessary, are held at the principal port in each State and at Launceston (Tasmania). Such courts have power to deal with the certificates of officers who are found at fault. Particulars of shipping losses and casualties reported on or near the coast during each of the years 1953 to 1957 are shown in the table below.

SHIPPING	LOSSES A	AND CA	SUALTIES	: AU	STRALIA.

6. Commonwealth Navigation and Shipping Legislation.—By section 51 (i) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws in respect of trade and commerce with other countries and among the States. By section 98 the power in this particular respect is further defined as extending to navigation and shipping.

A review of the introduction and development of the Navigation Act 1912-1950 was given in Official Year Book No. 40, pp. 110-2. Amendments to the Principal Act were made by the Navigation Act 1952, the provisions of which covered the settlement of maritime industrial disputes, standards of accommodation to be provided on ships and the engagement and discipline of seamen.

Other shipping Acts under the trade and commerce power of the Commonwealth are the Sea-Carriage of Goods Act 1924, the Seamen's Compensation Act 1911–1954, and the Seamen's War Pensions and Allowances Act 1940–1955.

7. Ports and Harbours.—A report on "The Turn-round of Ships in Australian Ports" was submitted to the Commonwealth Government by Henry Basten, C.M.G., on 4th January, 1952. The report deals with all factors affecting the turn-round of ships and congestion in Australian ports and the measures that might be taken to effect improvement on both shorterm and long-term bases. Further information on ports and harbours will be found in Chapter XIX.—Local Government.

#### B. GOVERNMENT RAILWAYS.

1. General.—The first steam-operated railway in Australia, between Melbourne and Port Melbourne, a distance of two miles, was opened on 12th September, 1854. It was owned and operated by the Melbourne and Hobson's Bay Railway Company. In the next one hundred years the mileage increased greatly and at 30th June, 1957, 26,478 route-miles (excluding several hundred miles of privately-owned line) were open for traffic. However, the operation of Australia-wide services is greatly hampered by the presence of many break-of-gauge stations, necessitated by the several gauges at present in use. The policy of government ownership and control of railways has been adopted in each State and at 30th June, 1957, 24,213 route-miles were owned by the State Governments and 2,258 route-miles by the Commonwealth Government. In the following tables details of the four lines owned by the Commonwealth are grouped and shown with the totals for the various State-owned systems. Separate particulars for each Commonwealth line and more detailed statistics for all lines are shown in the annual bulletin, Transport and Communication.

In some States there are comparatively small privately-owned railway systems offering passenger and freight services to the public. Details of these private railways were included in Official Year Book No. 39 and previous issues, but owing to their relative unimportance and the incomplete nature of the statistics available the series has been discontinued.

2. Railway Communication in Australia.—An account of the progress of railway construction in Australia since the opening of the first line in 1854 was given in Official Year Book No. 6, p. 681 and in No. 22, p. 259. The main ports on the mainland are connected by lines running approximately parallel to the coast and are the focal points of lines which radiate inland to the agricultural, mining and pastoral areas of the continent to a distance of up to 600 miles at some points. However, Darwin in the Northern Territory is not connected by rail to any other port. A 3 ft. 6 in. gauge railway extends southward from Darwin to Birdum, a distance of 317 miles, and from Port Augusta in South Australia northwards to Alice Springs in the Northern Territory, a distance of 771 miles.

The heavy traffic of the 1939-45 War, coming after a period of depression when replacement of track and rolling stock had not been maintained at desirable levels, placed a severe strain on the railway systems, which required extensive post-war rehabilitation. Track works were restored and improved and many new items of rolling stock replaced worn-out equipment. Besides the construction of air-conditioned passenger trains and high-capacity goods rolling stock, many new locomotives were built and others purchased. In recent years there has been a significant development of diesel-electric traction and the number of diesel-electric locomotives in service has risen from two at 30th June, 1949 to 315 at 30th June, 1957.

- 3. Distances between Capital Cities.—The distances by rail between the capital cities of Australia are published in the annual bulletin, *Transport and Communication*.
- 4. Government Railways Development.—In spite of the great extensions of State railways since 1875 and the construction of various railways by the Commonwealth Government, there are still, in some States, immense areas of country which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished. The general policy of the States was to extend the existing lines inland in the form of light railways as settlement increased, and while it is true that lines which were not likely to be commercially successful in the immediate future were constructed from time to time for the purpose of encouraging settlement, the general principle that the railways should be self-supporting was kept in view.

The greatest recorded route-mileage of government railways was 27,234 at 30th June, 1941. Although short lengths of line have been opened since that date, most railway construction is being confined to the duplication and electrification of existing main lines. The closure of other lines (mainly developmental branch lines whose retention would have been uneconomic), especially in Victoria and Western Australia, has resulted in a considerable decrease in route-mileage. Variations in route-mileage in each State and Territory during the ten years ended 30th June, 1957 are shown in the following table.

#### GOVERNMENT RAILWAYS: VARIATIONS IN ROUTE-MILEAGE, 1947 TO 1957.

5. Standardization of Railway Gauges.—A summary of the report and recommendations relating to the standardization of Australia's railway gauges on the basis of a 4 ft. 8½ in. gauge, made in March, 1945, at the request of the Commonwealth Government by the late Sir Harold Clapp, together with an outline of the agreement between the Commonwealth Government and the States of New South Wales, Victoria and South Australia regarding the standardization of railway gauges in their respective States, was published in Official Year Book No. 37, pp. 146-9. The agreement, which was signed in 1946, was ratified by

the Governments of the Commonwealth, of Victoria and of South Australia, but not by the New South Wales Government. After some time had elapsed and New South Wales had failed to ratify the agreement, the Commonwealth Government decided to enter into a separate agreement with South Australia, and the necessary legislation was enacted in 1949 by each Government concerned. The Commonwealth-South Australia Agreement provides for the same standardization work to be carried out in South Australia as would have been carried out had New South Wales ratified the original Commonwealth-Three States Agreement, and that over a period of years the Commonwealth should contribute 70 per cent. and South Australia be responsible for the remaining 30 per cent. of the estimated cost.

As a further step towards standardization, a Committee consisting of members of the Federal Parliament was formed in March, 1956 to ascertain whether a scheme confined to the main trunk routes would be desirable. This Committee recommended in October, 1956 that standard gauge (4 ft. 8½ in.) lines be provided from Wodonga to Melbourne, from Broken Hill to Adelaide via Port Pirie and from Kalgoorlie to Fremantle via Perth. Action to implement these recommendations has been commenced in respect of the Wodonga to Melbourne line. This project envisages the construction of a new 4 ft. 8½ in. track alongside the present 5 ft. 3 in. single track between Wodonga and Mangalore, the conversion of one of the two existing tracks between Mangalore and Albion and a combination of new track and conversion of existing track between Albion and Spencer Street station. The Commonwealth Government agreed to contribute £25,000, supplemented with £25,000 from the Victorian Government, towards the cost of surveying the route of the proposed standard gauge line. Contracts have been let for aerial and altimetric surveys of the area and the design of station yard layouts has been commenced.

A map showing the railway systems of Australia according to gauge appears on page 377.

6. Grafton-South Brisbane Uniform Gauge Line.—The first step towards uniform gauge railway communication between the capitals of the mainland States was effected in 1930 with the construction of the 4 ft. 8½ in. gauge line from Grafton to South Brisbane. The finance required for the construction was provided by the Commonwealth Government. For details of the agreement between the Commonwealth and New South Wales and Queensland, see Official Year Book No. 31, p. 122.

This line is operated by the New South Wales Railways and details of operations in New South Wales are included with those of the New South Wales system. Details of operations on the Queensland portion are included with Queensland railway statistics unless otherwise specified.

7. Mileage Open for Traffic, all Lines.—Almost all the railways open for general traffic in Australia are owned and controlled by the State or Commonwealth Governments. Private lines have been laid down for the purpose of opening up forest lands, mining districts or sugar areas. These lines are not generally used for the conveyance of passengers or the public conveyance of goods.

The following table shows the route-mileage of Commonwealth and State lines open in each State and Territory at various periods since the inauguration of railways in Australia in 1854:—

GOVERNMENT RAILWAYS: ROUTE-MILEAGE OPEN. (Miles.)

(a) At 31st December.

At 30th June, 1957, 255 route-miles in Victoria and 209 route-miles in New South Wales were electrified.

The next table shows for each State and Territory the length of government lines open in relation to both population and area at 30th June, 1957.

GOVERNMENT RAILWAYS: ROUTE-MILEAGE OPEN AT 30th JUNE, 1957. (Miles.)

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Route-mileage open Per 1,000 of population Per 1,000 square miles	1.74			4.41	4,571 6.61 4.68	1.78	25.56	0.13	

8. Classification of Lines according to Gauge, at 30th June, 1957.—The next table shows the route-mileage of government railways open in each State and Territory at 30th June, 1957, classified according to gauge.

GOVERNMENT RAILWAYS: GAUGES, AT 30th JUNE, 1957. (Route-miles.)

Gauge.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
5 ft. 3 in. 4 ft. 8 in. 3 ft. 6 in. 2 ft. 6 in. 2 ft. 0 in.	 (a) 203 6,103 	4,171  34	(b) 69 6,357	1,631 (c) 809 (d)1,413	(c) 454 4,117	585	(c) 490	(c) 5	6,005 7,440 12,962 34 30

<sup>(</sup>a) Portion of Victorian system. (b) Queensland section of Grafton-South Brisbane Uniform Gauge Line. (c) Portion of Commonwealth system. (d) Includes 500 miles of Commonwealth system.

9. Summary of Operations.—In the following table a summary is shown of the operations of government railways open in Australia during 1956-57:—

#### GOVERNMENT RAILWAYS: SUMMARY OF OPERATIONS, 1956-57.

Particulars.	Commonwealth Railways.	State Railways.	Total.
Route-mileage, 30th June miles	2,258	24,213	26,471
Gross revenue £'000	4,961	182,883	187,844
", ", per revenue train-mile pence	557	472	474
Working expenses £'000	(a) 3,597	188,760	192,357
,, per revenue train-mile pence	404	487	485
Net revenue £'000	(a) 1,364	-5,877	-4,513
,, per revenue train-mile pence	153	- 15	- 11
Revenue train-miles '000	2,136	92,949	95.085
Passenger-journeys '000	213	499,303	499,516
Goods and livestock carried '000 tons	1,069	46,407	47,476
Average number of employees(b)	2,606	141.230	143,836
,, earnings per employee . £	859	957	955

<sup>(</sup>a) Excludes amounts paid for Commissioner's salary, government contributions under the Superannuation Act, Accident and Insurance Fund and proportion of salaries of Auditor-General's staff—total, £92,733.

(b) Excludes construction staff except in respect of Victoria.

Note.—Minus sign (-) denotes loss.

A graph showing the route-mileage and traffic of government railways from 1870 to 1956-57 appears on page 378.

10. Summary, States.—The following table shows, for government railways in Australia, particulars of the mileage open, cost of construction and equipment, passengers and goods carried and train-miles run during 1956-57.

#### GOVERNMENT RAILWAYS: SUMMARY, STATES, 1956-57.

		Mileage (	Open.(a)	Cost of Construc-	_	Goods and	Revenue	
Railway System.		Route- miles.	Track- miles.	tion and Equipment during Year. (£'000.)	Passenger- journeys.	Livestock Carried.	Train- miles.

Western Australia		4,117	4,706	3,742	13,271	4,223	8,278	
Tasmania		585	686	217	2,813	1,061	1,855	
Commonwealth	٠٠ ;	2,258	2,481	1,923	213	1,069	2,136	
Australia		26,471	32,825	31,824	499,516	47,476	95,085	

- (a) At 30th June.
- (b) Partly estimated.
- 11. Gross Revenue.—(i) General. The gross revenue is composed of (a) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) receipts from the carriage of goods and livestock; and (c) rents and miscellaneous items. State Government grants are excluded. Details of these grants made during 1956-57 are as follows:—£1,000,000 for the working of country development lines and £800,000 to subsidize payments from Superannuation Account in New South Wales; £10,356 recoup on operating the Kerang-Koondrook Tramway in Victoria; and £3,400,000 towards working expenses and £800,000 towards debt charges in South Australia.
- (ii) Coaching, Goods and Miscellaneous Receipts. (a) Summary. In the following table the gross revenue is shown for the years 1954-55 to 1956-57, together with the revenue per average route-mile worked and per revenue train-mile:—

#### GOVERNMENT RAILWAYS: GROSS REVENUE.(a)

(a) Excludes government grants; see para. 11 (i) above.

(b) Distribution. The following table shows the gross revenue for the year 1956-57 classified according to the main three sources of receipts.

#### GOVERNMENT RAILWAYS: DISTRIBUTION OF GROSS REVENUE(a), 1956-57.

		Gross	Revenue. (	£'000.)	Proportion	of Total.	(Per Cent.)
Railway System.		Coaching.	Goods and Livestock.	Miscel- laneous.	Coaching.	Goods and Livestock.	Miscel- laneous.
New South Wales		22,850	51,956	3,883	29.04	66.03	4.93
Victoria		12,775	22,110	2,467	34.20	59.20	6.60
Oueensland		5,155	30,502	1,021	14.05	83.16	2.79
South Australia		1,851	10,990	929	13.44	79.81	6.75
Western Australia		1,507	11,698	654	10.88	84.40	4.72
Tasmania		215	2,240	79	8.49	88.39	3.12
Commonwealth	••	973	3,626	363	19.60	73.09	7.31
Australia		45,326	133,122	9,396	24.13	70.87	5.00

(a) Excludes government grants; see para. 11 (i) on p. 393.

12. Working Expenses.—(i) General. In order to make an adequate comparison of the working expenses as between the several States and Territories, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the different systems of the State and Commonwealth railways, but also on different portions of the same system. When traffic is light, the proportion of working expenses to revenue is naturally greater than when traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—i.e., a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back loading.

Working expenses, wherever presented in the Railways section of this chapter, exclude interest, sinking fund, exchange and certain other payments (see paras. 13 and 14 following).

(ii) Working Expenses. The following table shows the total working expenses, the ratio of working expenses to gross revenue and working expenses per average route-mile worked and per revenue train-mile for the years 1954-55 to 1956-57:—

#### GOVERNMENT RAILWAYS: WORKING EXPENSES.

		(a) See 1	para. 9, no	te (a), pag	ge 392.	(b) Inclu	ides exchar	nge.	

(a) See para. 9, note (a), page 392.

(b) Includes exchange.

Note.-Minus sign (-) denotes loss.

A graph showing the gross and net revenue and working expenses from 1870 to 1956-57 appears on page 379.

14. Exchange.—Exchange on interest payments abroad and certain other charges are not debited against the railways in Queensland and Western Australia. For the purposes of comparison these items have been excluded wherever possible from the table above.

In the remaining States the amounts paid on account of exchange during 1956-57 were:-New South Wales, £482,540; Victoria, £123,891; and Tasmania, £4,349.

15. Traffic.—(i) General. Reference has already been made to the difference in the traffic conditions on many of the lines. These conditions differ not only in the several State and Commonwealth systems, but also on different lines in the same system, and apply to both passenger and goods traffic. By far the greater part of the population of Australia is located in a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to seaborne competition. In recent years competition from road and air transport has become an important factor.

The following table shows particulars of railway traffic for the years 1954-55 to 1956-57:--

#### GOVERNMENT RAILWAYS: TRAFFIC.

#### (a) Partly estimated.

- (ii) Passenger Traffic. With the exception of the Commonwealth Railway Systems, which operate only country services, all systems provide both suburban and country passenger services. Traffic classed as "suburban" moves between stations within a classified suburban area around each capital city, whilst traffic classified as "country" originates or terminates at stations outside of this suburban area. Particulars of suburban and country passenger traffic are shown separately in the two tables following.
- (a) Suburban Passenger Traffic. The following table shows a summary of suburban passenger operations for the years 1954-55 to 1956-57. Most of the suburban services in New South Wales and Victoria are operated within electrified areas.

<sup>(</sup>a) In Victoria, Queensland and Western Australia a considerable amount of construction work is carried out by private contractors and the staff engaged are therefore not under the control of the Railways Commissioners. (b) Includes construction staff. (c) Included with operating staff. (d) Includes construction staff, victoria.

#### C. TRAMWAY AND TROLLEY-BUS SERVICES.

1. Systems in Operation.—(i) General. Tramway systems are in operation in all the State capital cities and in a number of the larger towns of Australia. Since 1st April, 1947, all systems have been operated by government or municipal authorities. Tramway systems are located in the following cities—New South Wales, Sydney; Victoria, Melbourne, Bendigo and Ballarat; Queensland, Brisbane; South Australia, Adelaide; Western Australia, Perth; and Tasmania, Hobart. In Sydney, Brisbane, Adelaide, Perth and Hobart, tramway systems are supplemented by trolley-bus services. All systems are electric.

In many parts of Australia private lines used for special purposes in connexion with the timber, mining, sugar, or other industries are often called tramways, but they are more properly railways and the traffic on them has nothing in common with that of the street tramways for the conveyance of passengers, which are dealt with in the present section.

(ii) Total Mileage Open and Classification of Lines. The following table shows, for each State, the total route-mileage of tramway lines open for general passenger traffic at 30th June, 1957, classified (a) according to the controlling authority; (b) according to gauge. Trolley-bus route-mileage also is shown.

TRAMWAY AND TROLLEY-BUS SERVICES: ROUTE-MILEAGE OPEN AT 30th JUNE, 1957.

(Miles.)

#### D. MOTOR OMNIBUS SERVICES.

1. General.—Motor omnibus services have been in operation for some years in the capital cities and many of the larger towns of Australia. Government and municipal authorities operate certain services and the others are run by private operators; in the States the former are run in conjunction with the existing electric tramway systems.

2. Government and Municipal Services.—(i) Summary of Operations, States. The following table gives a summary for the year 1956-57 of the operations of omnibus systems controlled by government and municipal authorities.

MOTOR OMNIBUS SERVICES: GOVERNMENT AND MUNICIPAL, 1956-57.

Note.—Minus sign (-) denotes loss.

<sup>3.</sup> Private Services.—(i) General. Particulars of motor omnibus services under the control of private operators are recorded in the States of New South Wales, South Australia and Western Australia only.

In New South Wales, particulars are compiled for the Metropolitan, Newcastle and Wollongong Transport districts only, but in South Australia and in Western Australia particulars of all services throughout the State are included.

(ii) Summary of Operations. The following table shows the operations of motor omnibus services under the control of private operators in New South Wales, South Australia and Western Australia during each of the years 1954-55 to 1956-57:—

MOTOR OMNIBUS SERVICES: PRIVATE.

### E. FERRY (PASSENGER) SERVICES.

- 1. General.—Ferry services to transport passengers are operated in the following States—New South Wales, at Sydney and Newcastle; Western Australia, on the Swan River at Perth; Tasmania, on the Derwent River at Hobart, on the Mersey River at Devonport and across D'Entrecasteaux Channel to Bruny Island. Control is exercised both by governmental authorities and by private operators. In Victoria and Queensland the services operated are not extensive, and there are no ferry services in South Australia.
- Summary of Operations.—The operations of ferry passenger services in New South Wales, Western Australia and Tasmania during the years 1954-55 to 1956-57 are summarized in the following table. Particulars of passengers carried on vehicular ferries are not included.

#### F. MOTOR VEHICLES.

- 1. Motor Industry.—Chapter VII.—Manufacturing Industry contains summarized information on the motor industry of Australia and includes therein some data on the imports of motor bodies and chassis. Chapter X.—Trade contains further data on imports, including those of petroleum products.
- 2. Registration.—(i) General. The arrangements for the registration of motor vehicles and the licensing of drivers and riders are not uniform throughout Australia. The following statement indicates the procedure followed at 30th June, 1957 in each of the States and Territories, and the fees for registration and licensing and the amount of motor tax payable where such tax is not incorporated in the registration fees. Complete or partial exemption from the payment of registration fees or motor tax is usually granted for certain vehicles, such as ambulances, fire-brigade vehicles, those owned by farmers and used solely for carting the produce of, or requisites for, their farms, Government-owned vehicles, etc.

In all States except South Australia, before a licence to drive a motor vehicle or ride a motor cycle is issued the applicant must, by passing the prescribed test, satisfy the competent authority that he is capable of driving or riding the vehicle concerned. All vehicles, before being registered, must be tested for road-worthiness.

(ii) New South Wales. The registration of vehicles, licensing of drivers, and collection of various taxes, fees and charges are functions of the Commissioner for Motor Transport. By arrangement with the Commissioner for Motor Transport, the police effect the registrations and collect the taxes and fees in certain areas. The normal term of registrations and licences and renewals thereof is a year, but quarterly registrations of motor vehicles are permitted under certain conditions.

A driver's licence costs £1 a year for a motor vehicle and a rider's licence 15s. a year for a motor cycle. A learner's permit, which has a currency of two months, costs 5s.

Annual registration fees are as follows:—Motor cycles, 15s.; motor cars, lorries, trailers and tractors, £1 10s.; taxi cabs, hire cars and motor omnibuses—metropolitan area and cities of Greater Wollongong and Newcastle £5, country £3; traders' plates—motor cycles, £3 3s. 6d., other vehicles, £13 15s. An additional fee of 10s. a year is payable in respect of any vehicle used in trade or business.

- A motor tax is payable in addition to the registration fee. For motor cycles the tax is:—without side-car, £1 7s.; with side-car or box, £2 7s. 6d. For vehicles other than motor cycles, the tax is payable on the unladen weight of the vehicle. The taxes payable for different classes of vehicles are as follows:—
- (a) Motor Cars (including taxi-cabs, etc.). The rate commences at 3s. 6d. a ½ cwt. but decreases slightly as the weight of the vehicle increases.

- (b) Motor Lorries and Trailers. The tax payable commences at £1 15s. for a vehicle of 5 cwt. or less, and rises by a proportionately greater amount for each increase of 5 cwt., so that the average amount payable per cwt. increases with the weight of the vehicle.
- (c) Tractors. The rates of tax are the same as for motor lorries, subject to a maximum of £31 14s. 6d.
- (d) Motor Omnibuses. The rate commences at 5s. a ½ cwt., but decreases slightly as the weight of the vehicle increases.

In the case of vehicles with solid rubber tyres, the rates shown above are increased by 25 per cent. Double the ordinary rates of tax are payable in respect of vehicles powered by a diesel engine.

(iii) Victoria. The registration of motor vehicles and the licensing of drivers and riders is controlled by the Chief Commissioner of Police under provisions of the Motor Car Act 1951. The Motor Car (Fees) Act 1956 provided for an increase, as from 1st January, 1957, in the rates payable for the registration of motor vehicles. The annual fees payable for the registration of motor vehicles and licensing of drivers and riders are as follows:—

Motor cycles (without trailer, forecar or side-car attached)

Motor cycles (with trailer, etc.) .. £2 5s.

Motor cars (private use)

4s. 6d. for each power-weight unit. (The number of power-weight units equals the sum of the horsepower and the weight in cwt. of a motor car unladen and ready for use.)

£1 10s. to £6, according to the unladen

Trailers attached to motor cars ...

weight and type of tyres.

on £7 10s. plus additional fees for each passenger
erroseat.

type of tyres.

Motor omnibuses (operating on specified routes in the metropolitan area)

Motor cars used for carrying passengers or goods for hire or in the course of trade

Motor cars (constructed for the carriage of goods) owned by primary producers and used solely in connexion with their business From 5s. 6d. to 13s. 3d. for each power-weight unit, according to the unladen weight and

From 3s. 9d. to 8s. for each power-weight unit, according to the number of wheels and type of tyres. (When more than one motor car is so owned, the rate shall apply to one motor car only.)

Drivers' and riders' licences .. 10s.

Notwithstanding anything in the foregoing paragraphs, the minimum fee payable for the registration of a motor vehicle (other than a motor cycle) shall be £4 10s.

Where a vehicle is powered by a diesel engine the registration fee is double that charged for a vehicle of the same power-weight units fitted with a petrol engine.

(iv) Queensland. The Main Roads Department controls the registration of motor vehicles within the State. The rates are as follows:—Annual registration fees for pneumatictyred vehicles propelled by petrol engines are determined by adding the horsepower to the weight in cwt. of the vehicle ready for use, and charging 6s. a unit. Vehicles fitted with compression ignition (diesel) engines are charged at double the foregoing rates. For solidtyred vehicles propelled by petrol engines the sum of the horsepower, weight of the vehicle, and maximum permissible load (in cwt.) is charged at 5s. a unit if the maximum permissible load is not over 2 tons, and 9s. a unit if over 2 tons, whilst diesel units are rated at 9s. 9d. and 18s. a unit respectively. Registration fees for trailers are determined at the rate of 6s. a cwt., and for caravan trailers at the rate of 9s. a cwt. Traction engines are registered at the fixed rate of £3 3s. a year. The fees payable according to these rates on motor cars range from £4 16s. to approximately £25. On pneumatic-tyred trucks and utilities, the fees are from about £12 12s. to over £15 for a truck with a capacity of 1 ton, and up to £30 for 5-ton trucks. Fees for motor cycles are £2 5s., or £3 8s. with a side-car. With the above-mentioned fees, an annual driving fee of 7s. 6d. for a private motor vehicle or motor cycle or 12s. 6d. for a commercial vehicle must be paid to the Main Roads Department.

The driver of any motor vehicle or the rider of any motor cycle must hold a licence from the Commissioner of Police. Licences are endorsed according to the types of vehicles in the operation of which the holder has shown proficiency and which he or she is permitted

to operate. The period of currency of a licence varies according to the age of the applicant, namely:—Aged under 41 years, 10 years; 41 years and under 46 years, until 51st birthday; 46 years and under 62 years, 5 years; 62 years and under 66 years, until 67th birthday; 66 years and over, 1 year.

- (v) South Australia. Under the provisions of the Road Traffic Act 1934-1956, the Registrar of Motor Vehicles controls the registration of all motor vehicles and the granting of licences. The fee prescribed for a motor vehicle propelled by a compression ignition (diesel) engine is double that for a vehicle of the same horsepower and weight propelled by a petrol engine. The power-weight unit is the basis for the calculation of registration fees. The period of registration is for six or twelve months, commencing with the date of registration. Primary producers' vehicles are registered at 50 per cent. of the ordinary fee. The ordinary fees payable for yearly registration of motor vehicles, other than motor cycles and trailers, extend from a minimum of £5 10s. for 25 power-weight units or less to £54 10s. for 160 power-weight units. The ordinary fees for motor cycles are:—solo, up to 1 cwt.; £1 10s.; over 1 cwt., £2 5s. with side-car attached, £3. Fees for trailers vary according to the weight of the vehicle and range from £2 5s. for 1 ton or less to £4 10s. for 2 tons or more. An extra 50 per cent. is charged for trailers with solid rubber tyres and 100 per cent. for those with metal tyres. Fees for drivers' and riders' licences are:—for any motor vehicle, £1; for a motor cycle only, 10s.
- (vi) Western Australia. The Traffic Act 1919-1956 provides for the registration of motor vehicles by (i) the Commissioner of Police for the Metropolitan Traffic District and (ii) individual Local Government Authorities (10 Municipalities and 114 District Road Boards) throughout the remainder of the State. Ministerial supervision is exercised by the Minister for Local Government.

The basis on which fees are assessed was revised as from 14th January, 1957. Annual fees for motor vehicles, other than motor cycles, trailers and semi-trailers, are now assessed on a power-weight unit basis and R.A.C. horsepower rating is used instead of the Dendy Marshall formula. The power-weight of a vehicle is the weight in cwt. of the vehicle ready for use plus the rated horsepower. The annual fees for cars, commercial vehicles and tractors are as follows:—cars and tractors (other than prime mover type), 4s. for each power-weight unit; commercial vehicles and prime mover type tractors, from 5s. 3d. a unit to 9s. a unit where the number of units exceeds 100. Trailers and caravans are assessed on the unladen weight and semi-trailers (the trailer portion of an articulated vehicle) on a load plus weight The fees for caravans vary from 3s. to 5s. a cwt., for trailers from 5s. to £1 a cwt. and for semi-trailers (ascending on a differential scale) from £1 10s. where the weight of the semitrailer plus the declared maximum load does not exceed 10 cwt. to £72 for the first 10 tons and £6 for each additional ton where the load plus weight exceeds 10 tons. Double the ordinary fees are charged for vehicles propelled by engines using fuel other than petrol (e.g., diesel, kerosene, gas, electricity, etc.) and additional fees are charged for certain other vehicles, as follows:-80 per cent. extra if fitted with metal tyres, 40 per cent. if fitted with solid rubber tyres and 10 per cent. if fitted with cushion tyres (i.e., neither solid nor pneumatic).

Annual registration fees for motor cycles are: -solo, £2; with side-car attached, £3.

Vehicles used in the carriage of either passengers or goods for hire or reward (other than an omnibus licenced under the State Transport Co-ordination Act 1933-1948) are further subject to the additional licence fee of 15s, a wheel or pair of dual wheels.

The issue of drivers', riders' and conductors' licences is the sole prerogative of the Commissioner of Police.

The maximum period of a licence is twelve months, although short-term renewals may be effected at quarterly intervals. Date-to-date licensing periods operate in the metropolitan traffic area; elsewhere, a quarterly system of "staggering", whereby the last day of each quarter is an expiry date, is in operation.

(vii) Tasmania. By the Transport Act 1938 the Transport Commission assumed control of the registration and taxation of motor vehicles, the licensing of drivers and the regulation of commercial transport. Annual registration fees are as follows:—Motor vehicles other than motor cycles and trailers, £1 10s.; trailers, £1; motor cycles — less than 1 h.p., £2; 1 h.p. and over, £2 10s. Charges for transfer of registration and duplicate certificates are 5s. and 1s. respectively. A licence to drive or ride any motor vehicle costs 10s. a year.

Motor tax is calculated on a power-weight basis—i.e., unladen weight units and horse-power. Separate rates are provided for lorries, for trailers and for other motor vehicles. For lorries and trailers, every ½ cwt., and for other motor vehicles every cwt., constitutes a weight unit. The rate of tax for lorries is 3s. 6d. a unit and for motor vehicles other than lorries and trailers, 4s. 6d. a unit. In the case of a trailer, if the number of weight units does not exceed ten, no tax is payable, but for every unit exceeding ten the rate is 3s. 6d. The rate on motor vehicles propelled otherwise than by any volatile spirit by means of an internal combustion engine (steam, electric, diesel, or petrol-electric engines) is 8s. 3d. a unit.

(viii) Northern Territory. The registration of motor vehicles and the licensing of drivers and riders is controlled by the Registrar of Motor Vehicles, under the provisions of the Motor Vehicles Ordinance 1949-1954.

Annual registration fees for motor cars, motor lorries and tractors and motor omnibuses vary according to whether the vehicle is fitted with (a) pneumatic, semi-pneumatic rubber or super-resilient tyres or (b) non-pneumatic or solid tyres. The fees payable (for each ½ cwt.) are as follows:—motor cars, (a) 2s. 9d., (b) 3s. 9d.; motor lorries and tractors, (a) 2s. 9d., (b) 3s. 6d.; motor omnibuses (a) 4s. 3d., (b) 5s. 6d. For British manufactured vehicles these rates are reduced by 6d. a ½ cwt. A concession of 50 per cent. is allowed for (a) a motor lorry or tractor owned and used by a farmer or grazier solely for transporting his own produce or requisites for his business and (b) a motor lorry owned and used by a person engaged, on his own account and not in association with more than two other persons, in mining, hunting or trapping. The maximum fee for a motor tractor is £15.

Registration fees for motor cycles are as follows:—without side-car—British manufactured, £1 1s., other, £1 2s. 6d.; with side-car—British manufactured, £1 18s., other, £2. For other motor vehicles the fees are:—British manufactured, 3s. a  $\frac{1}{2}$  cwt., other, 3s. 6d. a  $\frac{1}{2}$  cwt.

The annual fee for a licence to ride a motor cycle is 5s. and to drive any other motor vehicle 10s. Where the licence is in respect of a motor lorry with a carrying capacity of more than one ton, a motor omnibus, a hire car, or a motor vehicle licensed to carry goods or to carry workmen to and from their work, an additional 10s. is payable. The fee for the use of one trader's plate is 10s.

(ix) Australian Capital Territory. The registration of motor vehicles and the licensing of drivers and riders in the Australian Capital Territory is controlled by the Services Branch of the Department of the Interior under the provisions of the Motor Traffic Ordinance 1936–1956.

Annual registration fees for motor cars, lorries and omnibuses are as follows (rates are for each  $\frac{1}{2}$  cwt. of unladen weight):—motor cars, 3s. 6d. a  $\frac{1}{2}$  cwt.; motor lorries—not over 40 cwt. unladen weight, 3s. 6d.; over 40 to 80 cwt., 4s. 3d.; over 80 to 120 cwt., 5s.; over 120 cwt., 5s. 9d.; motor omnibuses, 5s. Double these rates are payable for vehicles propelled by diesel engines. Fees for other motor vehicles are:—motor cycles—without side-car, £1 10s., with side-car, £2 10s.; motor tractors—primary producers', £1, other, £5; other motor vehicles, £5. The rates charged for the registration of trailers are:—domestic, social or farmers' purposes only—unladen weight not over 5 cwt., 10s.; over 5 to 10 cwt., £1; over 10 cwt., £1 for every 10 cwt. or part thereof; other trailers—2s. 9d. a  $\frac{1}{2}$  cwt. of the unladen weight.

Concessions are available in the case of vehicles owned by primary producers, totally and permanently incapacitated ex-servicemen, clergymen and certain members of the staffs of diplomatic missions.

The annual fees for drivers' and riders' licences are:—car, lorry or motor cycle, 10s., other vehicles, 12s. 6d.

- 3. Taxi-cabs and Other Hire Vehicles.—In all the capital cities and in many of the provincial centres, taxi-cabs and other vehicles ply for hire under licence granted by either the Commissioner of Police or the local government authority concerned. As most of these vehicles are independently controlled by individuals or small companies, it has not been possible to obtain complete data in respect of their operations.
- 4. Motor Omnibuses.—In both urban and provincial centres motor omnibus traffic has assumed considerable proportions during recent years and in some States the railway and tramway systems run motor services complementary to their main services. There has been a considerable replacement also, during the last few years, of existing tramway services by trolley-bus and motor omnibus services. (See pp. 402-6.)
- 5. Motor Vehicles on the Register, etc.—(i) Registrations and Revenue. The following table shows particulars of the registration of motor vehicles, licences issued and revenue received for 1956-57 and a summary for Australia for each of the years 1952-53 to 1956-57. It should be noted that in Victoria registration is made on the basis of the purpose for which the vehicle is to be used; consequently, motor car registrations are overstated by the inclusion of commercial vehicles registered for private use.

A graph showing for all motor vehicles other than motor cycles the registrations in force at 30th June of each year from 1925 to 1957 will be found on p. 380.

(a) Excludes, at 30th June, 1957, trailers (152,207), road tractors, etc. (31,947), and dealers' plates (10,815). Excludes Northern Territory registrations prior to 1953-54. (b) Includes taxis and hire cars. (c) Includes utilities, panel vans, lorries, omnibuses, and station wagons. (d) See reference to Victoria above. (e) As from 1st October, 1952, drivers' and riders' licences have not been issued on an annual basis in Queensland. (f) Excludes Queensland. (g) Excludes Queensland from 1953-54.

NOTE.—All Commonwealth-owned vehicles are included except those belonging to the Defence Services. Prior to 1st January, 1956, Department of the Navy vehicles were also included.

(ii) Relation to Population. The table hereunder shows the number of vehicles (excluding motor cycles) registered per 1,000 of population in each State and Territory at 31st December, 1921, and at 30th June for each of the years 1939 and 1953 to 1957.

7. World Motor Vehicle Statistics, 1956.—Particulars of motor vehicle registrations in the principal countries of the world may be found in the annual mimeographed publication Registrations of New Motor Vehicles. This information is derived from Automobile Facts and Figures. For reasons of space detailed particulars cannot be given here, but the same source shows that in 1956 there were 102,655,000 motor cars, trucks and omnibuses registered in various countries of the world. This was an increase of 7 per cent. on the figure for the previous year, 96,001,000. Of these vehicles, 65,213,000 or 64 per cent. of the world total were in the United States of America, and Australian registrations amounted to 2 per cent.

<sup>(</sup>c) Includes utilities, panel

8. Census of Motor Vehicles, 31st December, 1955.—A census of motor vehicles (including motor cycles) on the register in each State and Territory at 31st December, 1955 was conducted by the Commonwealth Statistician in collaboration with the State Government Statisticians and Road Transport Authorities. The census covered only those items normally shown on motor registration certificates, such as make, year of model, type of vehicle, horsepower, body type, carrying capacity, unladen weight and motive power. Results have been published in a series of bulletins which give details for each State, for the Northern Territory and the Australian Capital Territory and for Australia as a whole. Less detailed figures in respect of new vehicles only are published in the Monthly Bulletin of Registrations of New Motor Vehicles. Information contained therein includes the make, type and R.A.C. horsepower of new motor vehicles registered in each State and Territory.

A summary for each State and Territory of the number of motor vehicles of each type on the register at 31st December, 1955 is given in the following table.

### MOTOR VEHICLES ON THE REGISTER AT 31st DECEMBER, 1955.

<sup>(</sup>a) Under the system of registration in operation in Queensland it is not possible to distinguish between the various types of lorries shown for the other States and Territories.

(b) Includes Queensland panel vans.

(c) Excludes Queensland.

(d) Rigid type; see note (a).

(f) Towing units; see note (a).

(g) Includes Queensland towing units.

#### G. ROAD TRAFFIC ACCIDENTS.

- 1. General.—Prior to the year 1949-50, it was not possible to make proper comparisons between States of the number of accidents recorded, because of the differences in legislation regarding the reporting of accidents and the degree to which the legislation could be enforced. However, arrangements were made, in co-operation with the Australian Road Safety Council and the various police and transport authorities concerned, to obtain the numbers of road traffic accidents on a comparable basis from all States and the Australian Capital Territory in respect of the year ended 30th June, 1950 and subsequent years. This was achieved by restricting the statistics so that they related only to those accidents which resulted in death or bodily injury to any person, or in damage in excess of £10 to property. It is considered that there was little difference in the recording of accidents as between States for the years 1949-50 to 1953-54, except in the case of Western Australia, where statistics shown relate to all accidents which occurred in the metropolitan area and, in the remainder of the State, for periods prior to 1st January, 1953, only to those which involved fatal or "near-fatal" injury. Statistics are now collected on a comparable basis for all States except Tasmania, where, under legislation passed on 10th August, 1954, it is no longer obligatory to report accidents involving only damage to property. It should be noted, however, that the comparability of the statistics between States even on this basis still depends on the degree to which accidents so defined are in fact recorded by the police.
- 2. Total Accidents Recorded.—(i) States, 1955-56 and 1956-57. The following table gives a summary of accidents recorded and casualties in each State and the Australian Capital Territory for the years 1955-56 and 1956-57.

(a) Accidents (reported to the police) which occurred in public thoroughfares and which caused death or injury to persons or, except in Tasmania, damage exceeding £10 to property. (b) Accidents involving persons killed, and persons injured to an extent requiring surgical or medical treatment. (c) Persons injured to an extent requiring surgical or medical treatment. (d) See reference to Tasmanian legislation above.

<sup>(</sup>ii) Australia, 1952-53 to 1956-57. A summary for Australia of accidents recorded in each of the years 1952-53 to 1956-57 is shown in the following table.

#### ROAD TRAFFIC ACCIDENTS(a): ACCIDENTS RECORDED, AUSTRALIA.

Particulars.	1952–53.	1953–54.	1954-55.	1955-56.	1956–57.
Total accidents recorded(a) Accidents involving casualties(b)	75,295	87,224	97,758	105,638	109,672
	31,635	35,523	36,602	37,766	39,066

<sup>(</sup>a) Accidents (reported to the police) which occurred in public thoroughfares and which caused death or injury to persons or, except in Tasmania, damage exceeding £10 to property. See reference to Tasmanian legislation on p. 416. (b) Accidents involving persons killed, and persons injured to an extent requiring surgical or medical treatment.

A summary for persons killed or injured will be found on page 419.

(iii) Riders, Drivers, Pedestrians, etc., Killed or Injured. The following tables show the number of persons killed and the number injured during 1955-56 and 1956-57 in each State and the Australian Capital Territory, classified into drivers, riders, pedestrians, etc.

ROAD TRAFFIC ACCIDENTS(a): DRIVERS, RIDERS, PEDESTRIANS, ETC., KILLED OR INJURED, 1955-56.

<sup>(</sup>a) Accidents (reported to the police) which occurred in public thoroughfares. (b) Persons injured to an extent requiring surgical or medical treatment.

<sup>(</sup>v) Accidents Recorded and Casualties, classified according to Type of Vehicle, Road User, etc., Involved. The following table shows, for the years 1955-56 and 1956-57, the number of accidents in which each of several classes of vehicles, road users, etc., was involved. The accidents involving casualties and persons killed and injured are similarly classified.

ROAD TRAFFIC ACCIDENTS(a), CLASSIFIED ACCORDING TO TYPE OF VEHICLE, ROAD USER, ETC., INVOLVED, AUSTRALIA.(b)

Particulars.	Motor Vehicle.	Motor Cycle.	Pedal Cycle.	Tram.	Animal and Animal- drawn Vehicle.	Pedes- trian.	Fixed Object.	Other Vehicle.
			1955-56.					
Total Accidents Recorded Accidents Involving		10,080	5,272	1,954	2,744	8,671	9,029	389
Casualties	33,589 1,918	7,313 331 8,505	4,893 142 5,060	735 35 886	537 22 644	8,511 627 8,528	2,314 157 3,143	161 46 224
	1 / 1		1956-57		1		l	
Total Accidents Recorded Accidents Involving		10,205	5,097	1,689	2,995	8,174	9,631	451
Casualties	34,914	7,438 292	4,800 136	636 42	510 15	8,118 649	2,495 146	208 47
Persons Injured(d)	1 45 600 1	8,627	5,075	794	613	8,006	3,425	253

(a) Accidents (reported to the police) which occurred in public thoroughfares.
(b) It should be noted that, as accidents and casualties classified according to one type of road user, etc., may also be classified according to another, these totals cannot be added across to obtain grand totals. For 1956-57 (1955-56 figures in parentheses) the figures above exclude 408 (363) accidents which were not classified according to type of vehicle, road user, etc., involved, of which 117 (72) involved casualties—6 (7) persons killed and 115 (72) persons injured.
(c) Total accidents causing death or injury to persons or, except in Tasmania, damage exceeding £10 to property.
(d) Persons injured to an extent requiring surgical or medical treatment.

It will be seen, therefore, that in 1956-57 (1955-56 figures in parentheses) motor vehicles were involved in 104,710 (100,614) accidents, of which 34,914 (33,589) involved casualties —1,941 (1,918) persons killed and 45,689 (43,978) persons injured. The 104,710 (100,614) accidents in which motor vehicles were involved comprised 56,146 (54,154) collisions with other motor vehicles, 6,926 (6,848) with motor cycles, 4,082 (4,154) with pedal cycles, 1,213 (1,380) with trams, 2,629 (2,404) with animals and animal-drawn vehicles, 7,178 (7,580) with pedestrians, 8,975 (8,511) with fixed objects, 362 (303) with vehicles other than those mentioned, 16,556 (14,721) instances of overturning or leaving the roadway, and 643 (559) accidents to passengers only. The particulars of accidents in which motor cycles, pedal cycles, etc., were involved with motor vehicles are also included under their respective headings in the table above. Consequently, since the figures in each column refer to the total accidents in which the particular type of vehicle, etc., was involved, any aggregation across would result, through duplication, in considerable overstatement of the actual totals.

3. Persons Killed or Injured in Road Traffic Accidents.—The following table shows the number of persons killed or injured in road traffic accidents in each State and the Australian Capital Territory during each of the years 1952-53 to 1956-57:—

ROAD TRAFFIC ACCIDENTS(a): PERSONS KILLED OR INJURED.

<sup>(</sup>a) Accidents (reported to the police) which occurred in public thoroughfares. (b) Persons injured to an extent requiring surgical or medical treatment. (c) Includes all persons injured (i.e., requiring surgical or medical treatment) in the metropolitan area but in the remainder of the State, prior to 1st January, 1953, only those suffering "near-fatal" injuries.

#### H. AVIATION.

- 1. Historical.—A short review of the progress of civil aviation in Australia up to the date of foundation of a Civil Aviation Administration was published in Official Year Book No. 16, pp. 334-5.
- 2. Foundation and Administration of Civil Aviation.—A brief account of the foundation and objects of this Administration will be found in Official Year Book No. 19, p. 299. Official Year Book No. 38 and earlier issues contain information on the control of civil aviation by the Board (1936) and later (1939) by the Department of that name. The Acts defining the broad principles of operation of the administration of civil aviation and the Regulations amplifying them, and the principal functions of the administration are also described.

Details of the partial re-organization of the Department in June, 1954, to provide for the more effective distribution of duties and responsibilities among senior officers, were published in Official Year Book No. 43, p. 409. At that date there were nine Divisions—Air Transport and External Relations; Administration, Personnel and Establishments; Finance and Stores; Airports; Flying Operations; Airways Operations; Airways Engineering; Aviation Medicine; Accident Investigation and Analysis.

In 1956 the Division of Airports was divided into two separate Divisions, namely, Airport Engineering and Aviation Buildings and Property. This latter Division, in addition to its buildings function, became responsible for the implementation of the new organization to provide an efficient aviation fire service.

In 1957 the position of Assistant Director-General (Air Transport Policy) was abolished and a position of Assistant Director-General (Policy) was created in lieu. A Director of International Relations was also appointed.

- 3. International Activity.—(i) International Organizations. A full report of the formation of the International Civil Aviation Organization, the Commonwealth Air Transport Council and the South Pacific Air Transport Council appeared in Official Year Book No. 37 and particulars of subsequent activity in the international field were included in issue No. 38. The International Civil Aviation Organization had a membership of 72 nations at the end of 1957. Australia has continued her representation on the council, a position which she has held since the organization was established in 1947. The eleventh meeting of the South Pacific Air Transport Council was held at Wairakei, New Zealand, in November and December, 1957. Further details will be found in Official Year Book No. 40 and earlier issues.
- (ii) International Air Services. Major changes in the organization of trans-Pacific and trans-Tasman airline operations were outlined in Official Year Book No. 41. Qantas Empire Airways continues to operate services to the United Kingdom through the Middle East, to Japan via Hong Kong and Manila, to South Africa across the Indian Ocean, to North America, to the British Solomon Islands, to New Guinea, to Norfolk Island and to Noumea. Qantas Empire Airways is equipped for long-range operations with fourteen Super Constellation aircraft, which are now operating on the Pacific, United Kingdom, South Africa and Japan services. Orders have been placed for two more Super Constellations and for seven Boeing 707 jet aircraft. Qantas services to Noumea and Norfolk Island are operated with DC4 aircraft, which are also used on a freighter service to Labuan, Djakarta and Singapore. Qantas was operating over 52,696 route-miles on international services at 30th June, 1957. A summary of the operations of oversea services wholly or partly Australian-owned appears on page 425.

DC6 aircraft operated by Tasman Empire Airways Ltd., which is jointly owned by the Australian and New Zealand Governments, link Sydney and Melbourne with both Auckland and Christchurch.

4. Regular Air Services within Australia.—Under the Government's rationalization plan, introduced in 1954, it was agreed that services on competitive routes, such as in Queensland and the Riverina (New South Wales), should be regulated to avoid wasteful operations. Trans-Australia Airlines withdrew from operations in the Riverina but continued to serve Corowa. In Queensland this operator took over the Townsville-Mt. Is a service which was previously operated by Townsville and Country Airways.

Significant changes took place in the domestic field during 1957. Australian National Airways Pty. Ltd. indicated that under the existing economic conditions it was unable to continue in operation, and following protracted negotiations an offer was eventually made

Aviation. 421

by Ansett Transport Industries Ltd. to purchase Australian National Airways Pty. Ltd. as a going concern for £3,300,000. The purchase agreement was finalized on 4th October, 1957, and combined operations began on 21st October, 1957.

The Civil Aviation Agreement Act 1952 was amended by the Civil Aviation Agreement Act 1957, to give effect to the revised arrangements between the Commonwealth Government and Australian National Airways Pty. Ltd., and to include Ansett Transport Industries Ltd. and its subsidiaries within the scope of the agreement.

The Commonwealth Government also gave consideration during the year to its policy in regard to civil aviation, and announced on 3rd September, 1957, the revised policy which provided for extended assistance by way of subsidy to the operators of essential services in rural areas, and also assistance to help selected operators obtain suitable replacement aircraft for the DC3. The grant of this assistance is conditional upon the operator's agreeing to provide services to specified areas at frequencies approved by the Minister for Civil Aviation, having regard to public needs and convenience in the rural areas to be served. A further necessary condition is that fares and freight rates shall be fixed at reasonable levels.

A summary of the operations of regular air services within Australia appears on p. 424 and a map showing air routes on pp. 413-4.

5. Air Ambulance Services.—A brief statement of the foundation and objects of the Air Ambulance Services will be found in Official Year Book No. 32, pp. 145 and 146.

During the year 1956-57, the Air Ambulance and Royal Flying Doctor Services continued to provide medical aid for the outback regions of Australia. The Commonwealth Department of Health operates the Northern Territory Aerial Medical Service with two Drover and one Dove aircraft. The Royal Flying Doctor Service of Australia, operating from Broken Hill, New South Wales (two Drovers), and Port Hedland, Western Australia (one Cessna and one DH83), covers a wide area of inland Australia. The Bush Church Aid Society for Australia and Tasmania, supported by funds from the Church of England, maintains three aircraft (one DH84A, one Percival Proctor III and one Lockheed 12A) at Ceduna, South Australia. The Federal Methodist Inland Mission (one DH82A) operates services from Meckatharra, Western Australia and the Queensland Ambulance Transport Brigade operates a service from Cairns (one DH89A, one Auster J5B and one Cessna 182A).

6. Training of Air Pilots.—A brief statement of the pre-war policy of the Commonwealth Government regarding assistance to Aero Clubs was given in Official Year Book No. 32, p. 146. A summary of the assistance granted during the years 1951 to 1956 will be found in Official Year Book No. 42, p. 253.

Under a new contract initiated on 1st January, 1957, payments to clubs, subject to certain limitations, are made as follows:—(i) Maintenance grant of £1 10s. an hour flown at home base; (ii) maintenance grant of £2 an hour flown at other centres; (iii) licence issue bonuses of £100 for each private pilot licence gained, £150 for each commercial pilot licence gained and £50 for each initial instructor rating gained. In addition, the Commonwealth continues to assist the aero clubs in the purchase of approved types of replacement aircraft.

During the year 1956-57, the flying training organizations (non-profit aero clubs and commercial flying schools) earned bonuses in respect of 319 private pilot licences, 60 commercial pilot licences, 16 initial instructor ratings and 435 licence renewals. It should be noted that, under the new contract, commercial licence issue and instructor rating bonuses were substituted for renewal bonuses. Subsidized hours flown by aero clubs numbered 64,309 and the total earnings of all organizations amounted to £155,918. An overall limit placed on the subsidy restricted the total payments to £145,000. There were 24 aero clubs and 6 commercial flying training schools in operation during the year, and, in addition to civil flying, some 13,368 hours were flown in the training of service personnel.

7. Gliding Clubs.—For the year 1956-57 a total subsidy of £3,000 was distributed to member clubs of the Gliding Federation of Australia, on the basis of £1,500 for membership and £1,500 for gliding certificates issued.

8. Aeronautical Telecommunications.—During 1956-57 satisfactory progress was made with modernization of the aeronautical telecommunications system throughout the Commonwealth, in accordance with plans developed in previous years. Improved coverage by VHF communication was achieved on air routes covering Bass Strait and the new key communication centre at Cloncurry was brought into operation.

Installation of Instrument Landing Systems and their associated high-intensity approach and runway lighting systems was commenced at Sydney (No. 1 installation), Hobart and Adelaide. Monthly flight-testing of the Sydney (No. 1) and Melbourne Instrument Landing Systems was undertaken to ensure a high standard of operation of these essential landing aids. The Distance Measuring Equipment programme proceeded satisfactorily and at the end of the year 64 beacons were in operational use, whilst three more were awaiting final flight-testing and two were nearing completion of installation work. Experimental work being undertaken to increase the handling capacity of the Distance Measuring Equipment system by increasing the number of channels per beacon will, if successful, enable improvements to be made in the scope of the system and increase its useful operational life. The Visual Aural Range programme is now practically complete.

9. Air Traffic Control.—The Air Traffic Control System was temporarily extended and re-arranged to handle the increased traffic resulting from the Olympic Games in Melbourne. Aircraft movements additional to normal traffic which were directly attributable to the Olympic Games amounted to 670 at Melbourne, 550 at Sydney, and 240 at Darwin, with minor increases elsewhere. All were handled without incident. At Melbourne a modern Air Traffic Control centre and Airport Control Tower of Australian design was commissioned, incorporating new communication features; the Air Traffic Control centre was completed late in 1956 in time to handle the peak Christmas and New Year traffic. Airport control as required by traffic demands was also established at Coolangatta Airport, Queensland.

Procedures for expediting the handling of airport traffic through the use of high and low stacks were introduced at Melbourne and Sydney and a one-way traffic airways system between Melbourne and Tasmanian airports was brought into operation. The control procedures applied to light aircraft at "all over" training airports were revised after several full-scale experiments with various systems at Bankstown airport. Planning was completed for a "self help" Search and Rescue Service based on the maximum employment of civil facilities. Action to implement this plan was commenced. The Light Aircraft Handbook, a publication covering the rules and regulations governing the operation of the lighter class of aircraft, was issued during the year.

- 10. Meteorological Aids to Civil Aviation.—The development of working arrangements between the newly constituted Bureau of Meteorology and the Department of Civil Aviation was further advanced. A review of the present scale of meteorological aids to civil aviation, now in progress, will be finalized in the form of a plan covering all aspects of the provision of meteorological services to civil aviation. At aerodromes in Australia and its Territories officers of the Bureau of Meteorology provide forecasting and observing services for civil aviation. There are 12 forecasting and 29 observing stations.
- 11. Aircraft Parts and Materials.—At 30th June, 1957, the number of firms and organizations approved by the Department of Civil Aviation to trade in the aircraft industry was 436. With the introduction of gas turbine engines and pressurized aircraft, certain firms have been approved to undertake the specialized work of overhaul, repair and maintenance of these engines and of accessories. The major fuel and oil companies have been brought under a system of quality control.

- 12. Aircraft Overhaul and Repair.—Aircraft overhaul and repair is carried out in workshops approved by the Director-General of Civil Aviation. Components and accessories are now certified on release notes signed by approved members of the firm's inspection organization.
- 13. Test and Examination of Aircraft Parts and Materials.—This work is now carried out in test houses and laboratories registered by the National Association of Testing Authorities, except when production is for the manufacturer's own use, when the testing, etc. can be done in an approved laboratory. Certificates issued under registration by the Association are acceptable to any Commonwealth Government Department.
- 14. Statistical Summaries.—(i) Registrations, Licences, etc. The following table provides a summary of the civil aviation registrations and licences in force in Australia at 30th June in each of the years 1953 to 1957.

CIVIL AVIATION: REGISTRATIONS, LICENCES, ETC., AUSTRALIA.(a)

(iv) Operations of Oversea Services wholly or partly Australian-owned. The following table furnishes a summary of oversea services, wholly or partly owned by Australian interests, operating between Australia and oversea countries, including Pacific islands and the Territory of Papua and New Guinea, during the years 1952-53 to 1956-57. The operations of Qantas Empire Airways. Tasman Empire Airways Ltd. and British Commonwealth Pacific Airlines are included, but those of Canadian Pacific Airlines, K.L.M. and Pan-American Airways are excluded.

<sup>(</sup>a) Includes accidents and casualties in the Territory of Papua and New Guinea. all accidents irrespective of whether they involved death or injury.

425

15. Territory of Papua and New Guinea.—In this area there were, at 30th September, 1957, 20 aerodromes and 24 water aerodromes under the control of the Department of Civil Aviation; 56 aerodromes under the control of the Territory Administration; and 25 aerodromes and 14 water aerodromes under private control. Ten cleared heliports and approximately 300 helicopter clearings were also in existence.

Five companies conduct regular services between the major aerodromes. Charter flights can be arranged to almost any locality. Further information may be found in Chapter V.—The Territories of Australia.

During the year 1956-57, three accidents occured in which two persons were killed and five persons were injured. These figures are included in the total accidents for Australia in the table above.

<sup>(</sup>b) In terms of short tons (2,000 lb.).

<sup>(</sup>b) Includes

#### PART II.—COMMUNICATION.

# A. POSTS; TELEGRAPHS; TELEPHONES; CABLE AND RADIO COMMUNICATION.

Note.—In all tables in this Division particulars for the Australian Capital Territory are included with those for New South Wales, while the South Australian figures include particulars for the Northern Territory.

#### § 1. General.

- 1. The Postmaster-General's Department.—Under the provisions of the Post and Telegraph Act 1901, the Department was placed under the control of the Postmaster-General. The Director-General of Posts and Telegraphs controls the Department under the Postmaster-General, whilst the principal officer in each State is the Director of Posts and Telegraphs.
- 2. Postal Facilities.—(i) Relation to Area and Population. The following statement shows the number of post offices, the area in square miles and the number of inhabitants to each post office (including non-official offices) and the number of inhabitants to each 100 square miles in each State and in Australia at 30th June, 1957. In order to judge clearly the relative postal facilities provided in each State, the area of country to each office as well as the number of inhabitants per office should be taken into account.

POSTAL FACILITIES: RELATION TO AREA AND POPULATION AT 30th JUNE, 1957.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Aust.
Number of post offices(a) Number of square miles of territory per		2,316	1 267	897	638	513	8,202

Grand Total	34,814	27,181	12,323	7,965	5,396	2,395	90,074

<sup>(</sup>a) The figures in this table relate to revenue actually collected during the year as recorded for Treasury purposes. (b) Includes Central Office collections. (c) Includes Central Office revenue from airmail services, previously shown under Miscellaneous.

For each of the years 1952-53 to 1955-56 the gross revenue for Australia was £64,398,000, £67,797,000, £72,825,000 and £79,341,000 respectively.

Gross revenue for the year 1956-57 increased by 13.5 per cent. compared with that for the previous year. Revenue of the Postal, Telegraph and Telephone branches increased by 10.4 per cent., 19.1 per cent. and 15.0 per cent. respectively.

4. Expenditure, Postmaster-General's Department.—(i) Distribution. The following table shows, as far as possible, the distribution of expenditure (actual payments) in each State during 1956-57, as shown by records kept for Treasury purposes. The table must not be regarded as a statement of the working expenses of the Department, since items relating to new works, interest, etc., are included therein.

# POSTMASTER-GENERAL'S DEPARTMENT : DISTRIBUTION OF EXPENDITURE, 1956-57.(a)

<sup>(</sup>a) The figures in this table represent actual payments made during the year as recorded for Treasury purposes. (b) Expenditure on airmail services. (c) Excludes subsidy on coastal wireless stations, now provided by votes to the Department of Shipping and Transport. (d) Includes expenditure not apportioned to States, i.e., interest on loans, £862,000; sinking fund, £1,172,000; superannuation contributions, £1,734,000; transferred officers' pensions and allowances, £5,000; and pensions and retiring allowances, £6,000.

- (ii) Totals. Actual payments made for each of the years 1952-53 to 1955-56, respectively, were:—£98,344,000, £99,478,000, £103,586,000 and £114,397,000. Total expenditure increased by 6.6 per cent. during 1956-57, compared with that during 1955-56.
- 5. Profit or Loss, Postmaster-General's Department.—The foregoing statements of gross revenue and expenditure represent actual collections and payments made and cannot be taken to represent the actual results of the working of the Department for the year. The net results for each branch, after providing for working expenses (including superannuation, pensions and depreciation) and interest charges including exchange, are shown in the following table for the years 1952-53 to 1956-57.

POSTMASTER-GENERAL'S DEPARTMENT: PROFIT OR LOSS, BRANCHES. (£'000.)

(a) Includes registered, cash on delivery and duty parcels.

- 2. Cash on Delivery Parcels Post.—(i) General. The Postmaster-General's Department undertakes, upon prepayment of a prescribed commission, to deliver registered articles sent by parcels post within Australia, or between Australia and Lord Howe Island, Norfolk Island, Nauru, the Territory of Papua and New Guinea, or Fiji, to recover from the addressee on delivery a sum of money specified by the sender, and to remit the sum to the sender. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and of traders and others who do not wish their goods to be delivered except on payment.
- (ii) States. The next table shows particulars regarding the cash on delivery parcels posted in each State in 1956-57.

#### CASH ON DELIVERY PARCELS POST, 1956-57.

<sup>(</sup>a) From commission and postage.

<sup>3.</sup> Total Cost of Carriage of Mails.—During 1956-57 the total amounts paid for the carriage of mails, as disclosed by the Profit and Loss Account of the Postal Branch, were as follows:—road (including departmental transport) £3,478,000; railway £1,280,000; sea £172,000; air—internal £680,000, oversea £3,425,000; Grand Total—£9,035,000.

- 4. Transactions of the Dead Letter Offices.—During the year 1956-57, 1,509,000 letters were returned to senders or delivered, 346,000 were destroyed in accordance with the Act, and 254,000 were returned to other countries as unclaimed—a total of 2,109,000. Corresponding particulars for packets were—458,000, 241,000, 48,000 and 747,000. There were 2,856,000 articles handled in all.
- 5. Money Orders and Postal Notes.—(i) General. The issue of money orders and postal notes is regulated by sections 74–79 of the Post and Telegraph Act 1901–1950. The maximum amount for which a single money order payable within Australia may be obtained is £40, but additional orders will be issued upon request when larger amounts are to be remitted. The maximum amount permitted to be sent to any person in the dollar area is £A.5 a month and for remittances to countries outside the dollar area, £A.10 a week. A postal note cannot be issued for a sum larger than twenty shillings.
- (ii) States. Particulars regarding the business transactions in each State for the year 1956-57 are shown hereunder:—

- (iv) Classification of Money Orders Issued and Paid. Of the total money orders issued in Australia during 1956-57, 7,787,000 valued at £73,355,000 were payable in Australia and 339,000 valued at £1,187,000 were payable overseas. Of the total money orders paid in Australia during 1956-57, 7,694,000 (£73,048,000) were issued in Australia and 147,000 (£750,000) were issued overseas.
- (v) Postal Notes Paid. The following table shows the number and value of postal notes paid in each State during the year 1956-57. The number and value of postal notes issued and paid in each of the years 1952-53 to 1956-57 have been given in the previous table.

#### POSTAL NOTES PAID: STATE OF ISSUE, 1956-57.

#### § 3. Telegraphs.

1. General.—A review of the development of telegraph services in Australia up to 1921 appeared in Official Year Book No. 15, p. 625, and subsequent developments of importance have been dealt with in later issues. During the past few years substantial improvements in both the speed and grade of telegraph services throughout Australia have been effected, the entire system being subjected to intensive re-organization. The external circulation system of the Australian telegraph service has been considerably modified, and direct communication has been established between cities and towns which formerly were served through intermediate repeating centres.

Telephone subscribers may telephone telegrams for onward transmission, or have messages telephoned to them. The fee for the service is small, and the system means, in effect, that the telegraph system is brought into the home of every telephone subscriber. The number of telegrams lodged by telephone during the year 1956-57 was about 8.4 million, or approximately 37 per cent. of the total lodgments. The number of telegrams

telephoned to subscribers totalled 4.5 million.

A radiogram service is provided to certain isolated places throughout Australia and a number of privately-operated wireless transceiver stations have been established at various centres throughout the Commonwealth, enabling telegrams to be exchanged with departmental telegraph offices. Stations sponsored by the Royal Flying Doctor Service of Australia can communicate by wireless with base stations.

The picturegram service between Melbourne and Sydney, which was established in 1929, but which was suspended during 1942, was restored and extended to Brisbane and Adelaide in 1949, to Perth in 1950 and to Hobart and Newcastle in 1951. The equipment installed at these points also permits the direct transmission and reception of oversea phototelegrams. Portable picture-transmitting apparatus has been provided for use at country centres in New South Wales and Victoria and was first used for the opening of the 19th Federal Parliament at Canberra on 22nd February, 1950. In 1956–57, 7,855 picturegrams were lodged for destinations within Australia, 3,626 were transmitted to oversea destinations and 4,417 were received from other countries. As from 20th May, 1953, the Department authorized the connexion of privately-owned picturegram equipment to the public telephone trunk line network for the transmission of pictures. The facilities are provided subject to certain restrictions where Departmental picturegram services operate and to payment of appropriate charges to cover the use of trunk line channels and equipment. Pictures from overseas may be routed direct to private receivers.

Teleprinter services (i.e., typewriting over electrical circuits), affording the great advantage of direct and instantaneous communication between points within the same building or separated by distances up to thousands of miles, and printergram services, that is, leased teleprinter channels between the premises of subscribers and chief telegraph offices for the transmission and reception of telegrams, are available. The number of printergram services rose from 193 to 266 during 1956–57. Messages transmitted over these services increased from 750,000 during 1955–56 to 760,000 during 1956–57.

2. Telegraph and Telephone Mileage.—At 30th June, 1957 the combined single-wire mileages for both telegraph and telephone purposes were:—aerial, underground and submarine cables—exchange 6,658,000 miles, trunk telephone and telegraph 221,000 miles; aerial wires—telephone, trunk and/or telegraph purposes 548,000 miles, exchange and non-exchange service lines 721,000 miles. The mileages of conduits and pole routes were 11,200 duct miles and 118,000 miles respectively. Conduits include only ducts and conduits with an

internal diameter of 2 inches or over. Those with a diameter of less than 2 inches are not recorded separately and are included with underground cables. The mileages in each State in 1955-56 may be found in *Transport and Communication*, Bulletin No. 47.

- 3. Telegraph Offices.—(i) States. The numbers of telegraph offices, including railway telegraph offices, in the various States at 30th June, 1957 were:—New South Wales, 3,285; Victoria, 2,357; Queensland, 1,750; South Australia, 968; Western Australia, 1,002; Tasmania, 572.
- (ii) Australia. The numbers of telegraph offices in Australia at 30th June of each of the years 1953 to 1957 respectively were:—9,902, 9,909, 9,907, 9,896 and 9,934.
- 4. Telegrams Dispatched within Australia.—(i) States. The following table shows the number of telegrams dispatched to places within the Commonwealth and to adjacent islands and to ships at sea, according to the class of message transmitted:—

# TELEGRAMS DISPATCHED, 1956-57.

				( 000.)					
		Unpaid (Ser-	Total Tele-

Australia	18,360	783	168	80	261	744	20,396	748	21,144

(ii) Australia. Telegrams dispatched to destinations within Australia and to adjacent islands and to ships at sea, during each of the years 1952-53 to 1955-56 respectively, numbered:—23,407,000, 22,536,000, 22,713,000 and 22,600,000.

# § 4. Telephones.

1. General.—Particulars of the total mileage of lines used exclusively for telephone purposes are not available, but are combined with all other line mileage. Particulars of the total single wire mileage used for telephone, trunk and/or telegraph purposes are shown in § 3, para. 2, above.

During 1956-57, 125,570 telephone subscribers' lines and 185,093 telephones were added to the system, compared with 79,239 lines and 116,540 telephones in 1955-56. With an average at 30th June, 1957, of nineteen teiephones to every one hundred persons, Australia had a telephone density exceeded by that of only six other countries. The trunk line network was increased by 66,312 channel miles and at 30th June, 1957, had reached 992,029 miles; 68,328 additional channel miles were obtained by the installation of carrier-wave equipment, some of which was installed on radio-telephone bearers. Carrier-wave facilities enable several speech paths to be obtained from one pair of wires or, in the case of radio-telephone systems, without wires at all, and are designed to transmit the voice with greater fidelity than the wire pairs on which they are based. An alternative aerial route between Melbourne and Sydney has been completed and work is in progress to provide a direct route for traffic from Sydney to Adelaide and Perth. Sixteen additional trunk line channels are being provided between Tasmania and the mainland.

Eleven automatic exchanges were brought into operation in metropolitan areas during the year, together with 14 country and 74 rural automatic exchanges. At 30th June, 1957, there were 293 automatic exchanges in the metropolitan areas and 1,025 in country districts, to which 1,288,000 telephones were connected, representing 71 per cent. of the total number in use in Australia.

2. Summary.—Particulars relating to the telephone services in each State at 30th June, 1957, are shown in the following table:—

TELEPHONE SERVICES: SUMMARY, 30th JUNE, 1957.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Exchanges	2,306	1,766	1,345	696	764	407	7,284
changes)	3,448	2,569	1,806	1,012	999	550	10,384
Lines connected '000	479	401	174	113	73	39	1,279
Instruments connected '000	695	575	231	158	102	53	1,814
(i) Subscribers' instruments'000	680	563	. 224	154	99	51	1.771
(ii) Public telephones '000	7.7	5.5	3.2	1.7	1.4	0.9	20.4
(iii) Other local instruments '000	7.5	6.6	3.4	2.7	2.1	1.0	23.3
Instruments per 1,000 of population	190	215	166	177	148	162	188

Of the total telephones (1,814,430) in service at 30th June, 1957, 667,864 or 37 per cent, were connected to exchanges situated beyond the limits of the metropolitan telephone networks.

3. Daily Local Calling Rates.—The next table shows the average number of outward local calls daily per line at central, suburban and country telephone exchanges in the several States for 1956-57:—

TELEPHONES: DAILY LOCAL CALLING RATE AT EXCHANGES, 1956-57.

Exchanges.				N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.
Central Suburban Country				10.65 3.47 1.86	9.85 3.26 1.14	10.96 2.42 1.79	9.24 2.67 1.28	7.22 3.08 1.31	4.49 2.42 1.66

A comparison of the average daily calling rates for each class of exchange shows that Queensland registered the greatest number of calls per line at central exchanges, and New South Wales at both suburban and country exchanges.

4. Effective Paid Local Calls.—The numbers of effective paid local calls from subscribers' and public telephones in the various States during 1956-57 appear hereunder.

TELEPHONES: NUMBER OF EFFECTIVE PAID LOCAL CALLS, 1956-57.
(Million.)

Calls.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Subscribers'	469 49	343 31	133 12	88 9	65 7	26 2	1,124 110
Total	518	374	145	97	72	28	1,234

5. Trunk Line Calls and Revenue.—In the next table the number of telephone trunk line calls recorded, the amount of revenue received, and the average revenue per call are shown for each State and Australia for the year 1956-57.

TELEPHONES: TRUNK LINE CALLS AND REVENUE, 1956-57.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Total calls '000 Total revenue £'000	35,910 6,705	29,792 4,611	18,624 3,217	10,195 1,784	6,101 957	,	106,000
Average revenue per call pence	44.81	37.15	41.46	42.00	37.65	30.15	40.64

The number of trunk line calls during 1956-57 increased by 6.9 million, or 7 per cent., compared with the figure for the previous year, whilst the average revenue per call increased by 9.6 per cent.

6. Oversea Telephone Services.—During the year 1956-57, radio-telephone services were established between Australia and Bahrain, Bulgaria, Cyprus, Ethiopia, French North Africa, Ghana, Iraq, Lebanon, Nigeria, Spanish North Africa, Tangier, Turkey and the U.S.S.R., bringing the number of countries with which radio-telephone communication is available to 90. In addition, direct services were established with Canada and India to replace links through U.S.A. and London respectively. Service is also provided to certain trans-Atlantic liners, ships off the Australian coast, H.M.A. ships, and H.M.N.Z. ships when cruising in Australian waters.

The amount of traffic handled over the radio-telephone services increased by 17 per cent. over that handled in 1955-56. During 1956-57 the number of calls connected was 70,880, comprising 35,885 originating in Australia and 34,995 incoming calls.

- 7. Revenue from Telephones.—Particulars regarding the revenue from telephone services are included in tables in § 1 (see pp. 427-8).
- 8. World Telephone Statistics, 1957.—Information derived, in the main, from statistics compiled by the American Telephone and Telegraph Company shows that at 1st January, 1957, there were more than 101 million telephones in use throughout the world. The United States of America, with over 56 million, possessed by far the greatest proportion of these (56 per cent.). The United States of America also had the highest recorded number of instruments per 100 population, namely, 34. Figures for other leading countries were as follows:—Sweden 30, Canada 26, New Zealand 25, Switzerland 24, Denmark 20. At June, 1957, the number of telephones in Australia per 100 persons was 19.

### § 5. Cable and Radio Communication.

1. General.—Descriptions of the various cable services between Australia and other countries were given in Official Year Book No. 22, pp. 335-6 and earlier issues.

Competition from beam wireless services brought about a merger between cable and wireless interests, which was not, however, completely satisfactory in combining the advantages of both systems. Details of the merger, and of subsequent developments which led eventually to the establishment, in 1946, of the Overseas Telecommunications Commission, were published in Official Year Book No. 37, pp. 220-4.

2. Oversea Cable and Radio Traffic.—(i) States. The number of telegrams received from and dispatched overseas in each State during 1956-57 is shown hereunder:—

# INTERNATIONAL TELEGRAMS, 1956-57.

	_		(	'000.)

Words transmitted to "Other places" included 3,669,571 to the United States of America and 4,379,057 to New Zealand and the Pacific Islands. Words received from "Other places" included 3,757,150 from the United States of America and 4,645,995 from New Zealand and the Pacific Islands.

- 3. Coast Stations.—At 30th June, 1957, there were 61 radio stations established at points around the Australian coast and 13 about the coast of Papua and New Guinea and other External Territories. During the year ended 31st March, 1957, these stations handled 625,359 messages (534,286 paying, 14,747 free traffic and 76,326 meteorological) with a total of 13,171,778 paying words.
- 4. Radio-communication Stations Authorized.—(i) States and Territories, 30th June, 1957. The following table shows particulars of the different classes of radio-communication stations authorized in Australia and the External Territories at 30th June, 1957. Figures relate to radio-communication (radio telegraph and radio telephone) stations only; particulars of broadcasting stations and of broadcast listeners' licences are shown on pp. 439 and 444.

Owing to the use of a new classification, some of the figures in the table below are not comparable with those published in previous issues.

#### B. BROADCASTING AND TELEVISION.

#### § 1. Introductory.

- 1. General.—Broadcasting and television services in Australia operate under the Broadcasting and Television Act 1942-1956 and comprise the National Broadcasting Service, the National Television Service, the Commercial Broadcasting Service and the Commercial Television Service. General control of these services is a function of the Australian Broadcasting Control Board (see para. 3 below). Details of each service will be found on pp. 439-44.
- 2. Legislation.—The Broadcasting and Television Act 1956 came into force on 1st July, 1956, with the exception of the provisions relating to television viewers' licences, which have operated from 1st January, 1957.

A separate Act, the Broadcasting and Television Stations Licence Fees Act 1956, became law on 1st July, 1956. It prescribes the fees payable annually by licensees of commercial broadcasting stations and commercial television stations.

3. The Australian Broadcasting Control Board.—The Board, which was constituted on 15th March, 1949, operates under the Ministerial jurisdiction of the Postmaster-General, and its principal functions, as set out in section 16 of the Broadcasting and Television Act 1942–1956, are to ensure:—(a) that services by broadcasting stations and television stations are provided in accordance with plans from time to time prepared by the Board and approved by the Minister; (b) that the technical equipment and operation of such stations are in accordance with such standards and practices as the Board considers to be appropriate; and (c) that adequate and comprehensive programmes are provided by the stations to serve the best interests of the general public.

In addition, the Board may exercise such other functions as are prescribed in relation to broadcasting stations and television stations.

The Board is empowered to make recommendations to the Minister as to the exercise by the Minister of any power under Part IV. of the Act which relates to the Commercial Broadcasting Service.

The Board has power, subject to the direction of the Minister:—(a) to determine the situation and operating power of a broadcasting or television station; (b) to determine the frequencies of broadcasting and television stations within bands of frequencies notified to the Board by the Postmaster-General as being available; (c) to regulate the establishment and operation of networks of commercial broadcasting or television stations and the making of arrangements by licensees for the provision of programmes or the broadcasting or televising of advertisements.

The Board also has power:—(a) to determine the conditions subject to which advertisements may be broadcast or televised by licensees; (b) to determine the hours during which programmes may be broadcast or televised; and (c) to conduct examinations as to the competency of persons to operate the technical equipment of broadcasting and television stations and to charge appropriate fees.

The Board is obliged to hold public inquiries into applications made to the Minister for licences for commercial broadcasting and television stations in areas for which the Minister proposes to grant licences and into any other matter within its functions if the Board thinks it necessary or desirable, or the Minister so directs. The Board, in exercising its powers and functions in relation to commercial broadcasting and television stations, is obliged to consult representatives of those stations.

Subject to the approval of the Minister and of the Treasurer, the Board may provide financial and other assistance to commercial broadcasting stations for the purpose of ensuring that programmes of adequate extent, standard and variety are provided in the areas served by these stations.

Section 8 of the Act provides that the Board shall consist of five members (including two part-time members) appointed by the Governor-General, one of whom, other than a part-time member, shall be chairman. No person shall be appointed as a member of the Board who: -(a) has any financial interest whether direct or indirect, in any company which is the licensee of, or an applicant for a licence for, a commercial broadcasting or television station or manufactures or deals in equipment for the transmission or reception of broadcasting or television programmes; (b) is a member of the governing body of any company or other association of persons which is the licensee of, or an applicant for a licence for, a commercial broadcasting or television station; or (c) is the licensee of, or an applicant for a licence for, a commercial broadcasting or television station.

4. The Australian Broadcasting Commission.—The Broadcasting and Television Act 1942–1956 provides that the Australian Broadcasting Commission, which consists of seven members, one of whom shall be a woman, shall control the activities of the National Broadcasting Service and the National Television Service.

Under the provisions of the Act the Commission shall provide, and shall broadcast or televise from transmitting stations made available by the Postmaster-General, adequate and comprehensive programmes and shall take in the interests of the community all such measures as, in the opinion of the Commission, are conducive to the full development of suitable broadcasting and television programmes.

The Commission prepares estimates of its receipts and expenditure for each financial year and submits these estimates to the Minister. Appropriations are made by Parliament for the purposes of the Commission and these, together with all other moneys received by the Commission, are paid into an account in the Commonwealth Bank of Australia. From this account are defrayed all costs, charges, expenses, etc., incurred by the Commission in the exercise of its powers and functions under the Act. For particulars of the financial operations of the Commission see Chapter XXI.—Public Finance.

# § 2. Broadcasting.

1. Broadcasting Stations.—The following table shows the number of broadcasting stations in operation at 30th June, 1957:—

# BROADCASTING STATIONS, 30th JUNE, 1957.

Type of Station.	N.S.W.	Vic.	Qid.	S.A.	W.A.	Tas.	N.T. A		Papua and New Guinea.	Total.
National— Medium Frequency High Frequency Commercial	15 1 37	5 3 20	12 2 20	7 8	7   2   14	8	2	1	1	55 9 108

- 2. The National Broadcasting Service.—(i) General. In sound broadcasting, the programmes of the National Broadcasting Service are provided by the Australian Broadcasting Commission and the provision and operation of transmitters and technical facilities in the studios are the responsibility of the Postmaster-General's Department.
- (ii) Technical Facilities. At 30th June, 1957, the National Broadcasting Service comprised 64 transmitting stations, as follows:—

Medium-frequency Stations-

New South Wales-

2BL and 2FC Sydney, 2BA Bega, 2CO Corowa, 2CR Cumnock, 2GL Glen Innes, 2KP Smithtown, 2LG Lithgow, 2ML Murwillumbah, 2NA and 2NC Newcastle, 2NB Broken Hill, 2NR Grafton, 2NU Manilla, 2TR Taree.

Victoria---

3AR and 3LO Melbourne, 3GI Sale, 3WL Warrnambool, 3WV Dooen. Queensland—

4QG and 4QR Brisbane, 4AT Atherton, 4GM Gympie, 4QA Mackay, 4QB Pialba, 4QL Longreach, 4QN Townsville, 4QS Dalby, 4QY Cairns, 4RK Rockhampton, 4SO Southport.

South Australia-

5AN and 5CL Adelaide, 5CK Crystal Brook, 5LN Port Lincoln, 5MG Mt. Gambier, 5PA Penola, 5WM Woomera.

Western Australia-

6WF and 6WN Perth, 6AL Albany, 6GF Kalgoorlie, 6GN Geraldton, 6NM Northam, 6WA Wagin.

Tasmania—

7ZL and 7ZR Hobart, 7NT Kelso, 7QN Queenstown.

Northern Territory—

5AL Alice Springs, 5DR Darwin.

Australian Capital Territory—

2CN and 2CY Canberra.

Papua-

9PA Port Moresby.

High-frequency Stations—

VLI Sydney, New South Wales, VLG, VLH and VLR Lyndhurst, Victoria, VLQ and VLM Brisbane, Queensland, VLW and VLX Perth, Western Australia, VLT Port Moresby, Papua.

The medium-frequency transmitters operate in the broadcast band 540 to 1,600 kilocycles per second. From the high-frequency stations, using frequencies within the band 3 to 30 megacycles per second, service is given to listeners in sparsely populated parts of Australia such as the north-west of Western Australia, the Northern Territory, and northern and central Queensland and in Papua and New Guinea and adjacent islands.

Many of the programmes given by country stations are relayed from the capital cities, high-quality programme transmission lines being used for the purpose. A number of programme channels are utilized to link national broadcasting stations in the capital cities of Australia and when necessary this system is extended to connect both the national and

commercial broadcasting stations.

In June, 1957, 43 of the medium-frequency stations were situated outside the six State capital cities and additional country stations are to be constructed. When these additions have been made, the medium-frequency and high-frequency stations together will provide for clear reception of the programmes of the National Broadcasting Service in practically every part of Australia.

- (iii) Programme Facilities. (a) General. The programmes of the Australian Broadcasting Commission cover a wide range of activities, which are indicated briefly in the following paragraphs. The proportion of broadcasting time allocated to the various types of programme during 1956-57 was as follows:—Classical Music, 23.3 per cent.; Light Music, 12.4 per cent.; Variety, 20.2 per cent.; News, 7.8 per cent.; Talks, 6.9 per cent.; Sport, 5.6 per cent.; Drama and Features, 4.0 per cent.; Youth Education, 3.6 per cent.; Religion, 3.5 per cent.; Parliament, 3.3 per cent.; Children's Session, 2.3 per cent.; Rural Broadcasts, 1.6 per cent.; Non-departmental, 5.5 per cent.
- (b) Music. The A.B.C., in addition to its extensive activities in the field of musical broadcasting, is one of the largest concert-giving organizations in the world. During the 25 years of the Commission's existence there has been an immense growth of interest in fine music. Today the regular broadcasts command a large listening audience and the number of subscribers to A.B.C. public concerts exceeds 50,000. This vigorous musical life is typified in the activities of the symphony orchestras in Sydney, Melbourne, Brisbane, Adelaide, Perth and Hobart. These have developed from the studio broadcasting orchestras set up in 1936 in the six capital cities to bodies whose present standard compares favourably with that of orchestras in oversea musical centres of similar size. Until 1946 these orchestras were maintained solely by the A.B.C., but since then they have been subsidized by State Governments and major municipal bodies.

In 1957, the A.B.C. organized 535 public orchestral concerts (including 157 free concerts for school children and 36 free concerts for adults) and 232 public recitals by famous artists throughout the Commonwealth. Of these concerts, 263 were given outside the State capitals, including 75 free orchestral concerts for school children.

The policy of the A.B.C. has been to foster the highest standards of musical appreciation and performance, making the utmost use of the best local talent and at the same time giving Australian audiences the opportunity of hearing leading artists from overseas.

- (c) Drama and Features. Drama programmes are designed to give listeners opportunities, which they might not otherwise have, of hearing the world's great plays as well as adaptations of the best modern stage plays and also those written specially for broadcasting. The main regular drama programmes are broadcast on Sunday afternoons and Sunday and Monday evenings, and special series of longer plays are also given at various times during the year.
- In recent years the technique of the feature programme has also been developed. The feature is a form of entertainment which is unique to radio, consisting of specially written programmes designed to present information in an interesting way. It may deal with a very wide variety of subjects ranging from history and current events to science and the arts. A number of Australian writers have become interested in this form of entertainment and about 97 per cent. of the features broadcast are written by Australians. Local writers also contribute a large proportion of the plays broadcast and every effort is made to assist and encourage their work.
- (d) Youth Education. The A.B.C. provides a regular series of broadcasts to schools as an addition to normal class-room education. The total number of listening schools at the end of June, 1957 was 8,537 or about 88 per cent. of all schools, State and private, throughout the Commonwealth. Many of the school broadcasts are presented in dramatized form, as this method makes the material more vivid and interesting to the young listener. For the very young children, the Commission broadcasts every week-day the "Kindergarten of the Air", a type of broadcast which originated in Australia. (See also Chapter XII.—Education, on this subject.)
- (e) Talks. The aim of the Talks Department is to provide programmes which will keep the listener well informed on current affairs and on general topics. Many of the talks in the first category are now presented in a magazine type of session consisting of a number of short items linked by a narrator. An extension of this type of programme is the documentary, in which radio goes into the field to analyse or to describe, using the actual sounds and voices recorded on location.

Major controversial topics are covered in the "Nation's Forum of the Air" (using the debating technique) and "I Put it to You", in which a well-known speaker presents a contentious theme before an audience chosen because it will generally be critical; afterwards the speaker must stand up to questioning by the audience. Another outstanding session is "News Review", containing at least five comments on the news of the day recorded over landline from all States of the Commonwealth and, in the case of significant world events, from overseas by radio-telephone.

(f) Rural Broadcasts. The Rural Broadcasts Department devotes its programmes to weather and market reports and talks, interviews, etc., designed to provide useful information for the man on the land. These programmes are presented on a regional, State and national

basis, many being directed to particular districts, because of the diversity of climate and conditions. Rural programmes are broadcast regularly through 17 regional stations. Other programmes are broadcast throughout each State or on a national relay, depending on whether the information they contain is of general interest or refers only to the rural industries of one State.

Material for rural programmes is obtained from many sources in Australia, including the Departments of Agriculture, numerous government and private organizations and practical farmers. Talks, interviews, etc., are also secured from many oversea sources, thus bringing to rural listeners the latest information on oversea research that is relevant to Australia's primary industries. Programme material is exchanged regularly with British Commonwealth countries and with the U.S.A. and a number of officers from the broadcasting organizations of South-East Asia have come to Australia, under the Colombo Plan and similar projects, to study A.B.C. rural broadcasting, with the aim of developing services of this type in their own countries.

During 1956-57, 6,808 talks and interviews on rural topics were broadcast by the A.B.C., as well as 5,044 weather reports and 6,240 interstate and local market reports. In times of emergency, the regular weather reports are supplemented by special services giving flood or fire warnings—a very important service because of the speed with which radio can reach a widely scattered audience.

- (g) News. On 1st June, 1947, the Australian Broadcasting Commission's independent news service came into full operation. Since that date the Commission has collected all its Australian (including Papua and New Guinea) news through its own staff journalists and part-time correspondents. It also maintains a news room in London for the selection and transmission of news obtained from major oversea agencies and has special representatives in South-East Asia. Regional bulletins are broadcast from country centres and also from capital cities to cover near-city districts. Radio Australia (the Overseas Service of the A.B.C.) broadcasts Australian and oversea news daily in English, French, Mandarin, Indonesian and Thai, with special attention to Asia and the Pacific. Each day the A.B.C. re-broadcasts two news bulletins from the British Broadcasting Corporation. The A.B.C. broadcasts 157 news bulletins each day, including those given over Radio Australia.
- (h) Other Activities. The broadcasting of the proceedings of Federal Parliament commenced as a regular service in July, 1946. At present these broadcasts are confined to one of the two national transmitters in each capital city and to one domestic short-wave station (VLR).

The National Children's Hour, presented seven days a week, is composed of over 40 programme items, including stories, music, games, and items about art, literature, natural history and sport. There is a children's newsreel and a Brains Trust, discussing, through children, topics of wide general interest. The Argonauts' Club is an important part of the session and encourages children between the ages of 7 and 17 in self-expression and the appreciation of cultural subjects, but the provision of entertainment suitable for children is the main purpose of the session.

In co-operation with the various religious denominations, the A.B.C. broadcasts several religious sessions each week-day in addition to those given on Sundays. These religious broadcasts include relays of normal church services and a variety of special programmes of talks and sacred music. The modern trend towards the use of religious drama is also followed.

The variety and sporting programmes of the A.B.C. provide the lighter side of the service. In its variety sessions the A.B.C. does everything possible to assist local artists in order to increase the amount of first-class talent in this country, and encouragement is also given to Australian composers of light music. The A.B.C. dance bands in Sydney and Melbourne are regarded as being two of the most outstanding bands in Australia.

The coverage of sport at home and abroad by the A.B.C. is comprehensive. On Saturday afternoons the sporting panel provides listeners with progress results, scores and descriptions from half a dozen or more fields of sport. Events of international interest such as Test matches, the Davis Cup, etc., are covered by simultaneous descriptions from A.B.C. commentators. In covering events overseas, the A.B.C. is indebted to the B.B.C. for its collaboration in Great Britain, to the New Zealand Broadcasting Service for events in New Zealand and to broadcasting organizations in many other countries.

3. The Commercial Broadcasting Service.—Commercial broadcasting stations are operated under licences granted and renewed by the Postmaster-General after taking into consideration any recommendations which have been made by the Board. The initial period of a licence is five years and renewals are granted for a period of one year. The fee payable for a licence is £25 on the grant of the licence, and thereafter £25 a year plus one per cent. of the gross earnings of the station from the broadcasting of advertisements or other matter during the preceding financial year. Licensees of these stations rely for their income on the broadcasting of advertisements and other publicity.

- At 30th June, 1957, there were 108 commercial broadcasting stations in operation. A table showing the call sign, location, frequency and aerial power of each commercial broadcasting station licensed at 30th June, 1956 may be found in *Transport and Communication*, Bulletin No. 47.
- 4. Overseas Broadcasting Service.—There are five high-frequency stations at Shepparton, Victoria (VLA, VLB, VLC), VLD), VLG) for use only in the oversea service known as "Radio Australia". As in the case of the National Broadcasting Service, these stations are maintained and operated by the Postmaster-General's Department and their programmes are arranged by the A.B.C. During certain periods station VLG Lyndhurst is also used for the transmissions of the domestic short-wave service. The programmes, which give news and information about Australia, presented objectively, as well as entertainment, are directed mainly to South-East Asia and the Pacific. The oversea audience has grown very substantially in recent years, as evidenced by a large and increasing number of letters from listeners abroad.

### § 3. Television.

- 1. General.—Television services in Australia operate under the Broadcasting and Television Act 1942-1956 and comprise the National Television Service and the Commercial Television Service.
- 2. The National Television Service.—(i) General. The A.B.C. provides the programmes for the National Television Service from stations made available for the purpose by the Postmaster-General. Two stations have been established, ABN Sydney and ABV Melbourne, both operating on Channel 2. ABN commenced operations on 5th November, 1956 and ABV on 18th November, 1956. Both stations operate on a frequency of 64.25 megacycles a second for vision and 69.75 mc/s. for sound.
- (ii) Programme Facilities. (a) General. The television programmes provided by the A.B.C. cover a wide range of activities. The proportion of television time allocated among the A.B.C.'s various departments to 30th June, 1957 was as follows:—Talks Department, 22.3 per cent.; Drama and Features, 18.5 per cent.; Sport, 17.6 per cent.; Variety, 9.2 per cent.; Children's Session, 7.7 per cent.; News, 5.4 per cent.; Classical Music, 1.1 per cent.; Light Music, 2.6 per cent.; Rural Services, 3.5 per cent.; Religion, 2.7 per cent.; Youth Education, 1.0 per cent.; Non-departmental (including trade demonstration films), 8.4 per cent. A summary of the activities of the departments in the field of television is given in the following paragraphs.
- (b) Talks. In television, Talks covers a very wide field, ranging from commentaries on international affairs to panel games and outside telecasts of public events. Discussions, topical interviews, magazine programmes, women's programmes, demonstrations and film and studio documentaries are all part of the regular output.
- (c) Drama and Features. A considerable proportion of television time is devoted to drama and features, and "live" television plays featuring Australian artists may usually be seen fortnightly both in Sydney and Melbourne.
- (d) Music. During 1957 the A.B.C.'s musical activities were extended to the field of television. A number of public concerts and studio performances were successfully telecast and there is reason to believe that the new medium will contribute to the further development of musical appreciation in Australia.
- (e) Rural Services. The emphasis has been on providing information for consumers and on giving city viewers, by means of films, demonstrations, etc., a picture of Australia's rural industries. Regular programmes featuring many facets of Australian agriculture and livestock activities have already been given, and this work will be developed as further facilities become available. Weather reports and forecasts are also telecast on six evenings a week.
- (f) Youth Education. The A.B.C. provides a television programme for very young children each week-day, under the title "Kindergarten Playtime". Experimental television programmes for schools are being presented during 1958.
- (g) News. Television news bulletins and newsreels have been included in the programmes presented in both Sydney and Melbourne since the television services began in November, 1956.
- (h) Other Activities. Special television programmes are presented for children, including filmed material obtained on an exchange basis from oversea television organizations. Church services have been televised in Sydney and Melbourne and other special religious programmes have been telecast. Outside broadcast cameras have covered a number of sporting events, including Davis Cup tennis, Sheffield Shield cricket and swimming championships. The A.B.C. gave a comprehensive television coverage of the Olympic Games held in Melbourne

at the end of 1956 and a film coverage of the Australia v. South Africa Cricket Tests and the Australian Rugby Union tour of Great Britain was also given. The A.B.C. hopes to develop the oversea sporting coverage on television.

3. The Commercial Television Service.—Commercial television stations are operated under licences granted by the Postmaster-General. Licences for commercial television stations have been granted as follows:—Sydney—ATN (Channel 7), TCN (Channel 9); Melbourne—HSV (Channel 7), GTV (Channel 9). These stations commenced operations on the following dates:—ATN, 2nd December, 1956; TCN, 16th September, 1956; HSV, 4th November, 1956; GTV, 19th January, 1957.

The initial period of a licence is five years, the existing four being granted as from 1st December, 1955. The fee payable is £100 on the grant of a licence and thereafter £25 a year plus one per cent. of the station's gross earnings from the televising of advertisements or other matter during the preceding financial year.

4. Extension of Television Services.—On 4th September, 1957, the Postmaster-General announced that the Government had decided to proceed with the second phase of the extension of television services in Australia, under which arrangements will be made for the establishment of national television stations in Brisbane, Adelaide, Perth and Hobart and for the Broadcasting Control Board to hold public inquiries into applications for licences for commercial television stations in each of these cities. This decision was in accordance with the policy announced by the Government in 1954, that television would be introduced on a gradual basis, the extent and timing of each stage in the development of the services being determined by the knowledge gained in the previous stages and by Australia's economic circumstances. The Postmaster-General stated that the Government had made a special examination of the financial aspects of the matter, from which it seemed evident that the revenue which would be received from viewers' licence fees (£5 a year) and from the excise duty of £7 on each cathode ray tube would ensure that the costs of the service would be borne by those who use it and that the programme of development would therefore impose no financial burden on the public in general.

Although the second stage in the development of television is confined to the remaining capital cities, the Government is anxious that television services should be available to people in other areas as soon as practicable. All aspects of the matter are therefore under close review so that the Government may be in a position to consider, as circumstances permit, the question of the further extension of the services to major provincial centres.

The Broadcasting Control Board has prepared a provisional Frequency Assignment Plan which provides for the allocation of channels for four television services in each capital city and two services in every town with a population in excess of 5,000.

#### § 4. Licences, etc.

1. Broadcast Listeners' and Television Viewers' Licences.—(i) General. Broadcast listeners' and television viewers' licences are issued at post offices in accordance with the provisions of the Broadcasting and Television Act 1942–1956, which stipulates that, except as prescribed, a person shall not use, maintain or have in his possession a broadcast or television receiver unless there is in force a licence which applies to that receiver. A broadcast listener's licence authorizes the operation of any broadcast receiver, and a television viewer's licence any television receiver, which is:—(a) in the possession of the holder of a licence, or of a member of his family, at the address specified in the licence and/or ordinarily kept at that address; (b) installed in a vehicle which is ordinarily in the possession of the holder, or of a member of his family, and is ordinarily kept at that address while not in use.

The fee for a broadcast listener's licence or a renewal thereof is:—Zone 1, £2 15s.; Zone 2, £1 8s. Zone 1 is the area within approximately 250 miles of specified broadcasting stations and Zone 2 is the remainder of the Commonwealth. A television viewer's licence costs £5.

A licence may be granted at reduced rates to any person who (a) is in receipt of a pension under Part III. or Part IV. of the Social Services Act 1947–1957 or a service pension, or a pension in respect of total and permanent incapacity, under the Repatriation Act 1920–1956 or the Repatriation (Far East Strategic Reserve) Act 1956; and (b) lives alone, with another pensioner, or with any person whose income does not exceed the maximum amount of income and pension allowed under Part III. or Part IV. of the Social Services Act 1947–1957 or section 87 of the Repatriation Act 1920–1956. Licence fees for pensioners are as follows:—broadcast listener's licence—Zone 1, 10s.; Zone 2, 7s.; television viewer's licence, £1 5s.

A licence may be granted free of charge to a blind person over 16 years of age or to a person or authority conducting a school. A tourist resident in Australia for not more than six months and an oversea diplomatic or consular representative or a member of his staff is not required to hold a licence. Inmates of a hospital or charitable institution are covered by the licence held by the institution.

(ii) Licences in Force. (a) Broadcast Listeners'. The following table shows the number of broadcast listeners' licences in force at five-year intervals from 1925 to 1957.

DDOADCACT	LISTENERS'	LICENICES	IN ECDOR	
RRUALICAST	LISTENERS	LICHNICHS	IN BURGE.

(a) Includes the Australian Capital Territory. (b) Includes the Northern Territory. (c) Excludes licences for receivers in excess of one. These licences were introduced in July, 1942 and were abolished on 31st December, 1951.

Of the 2,107,253 broadcast listeners' licences in force at 30th June, 1957, 1,222,558 or 58 per cent. were held by persons living in metropolitan areas and 884,695 or 42 per cent. by persons in country areas. Of the latter, only 12,927 were in respect of Zone 2.

(b) Television Viewers'. The following table shows the number of television viewers' licences in force at 30th June and 31st December, 1957.

TELEVISION VIEWERS' LICENCES IN FORCE.

D	ate.		N.S.W.	Vic.	Tas.	Australia.
30th June, 1957 31st December, 1957		 • •	28,912 74,627	44,986 91,922	11 27	73,909 166,576

2. Radio-inductive Interference.—In each State of the Commonwealth, the Postmaster-General's Department maintains a staff of experts with suitable equipment and transport, for the purpose of investigating complaints of radio-inductive interference to the reception of broadcast and television programmes and to defence and civil radio-communication services.

During the year 1956-57, 10,780 sources of trouble, including 444 affecting television reception, were eliminated as a result of Departmental efforts or by other action. More than 4,000 suppressors were fitted to offending appliances as recommended by investigating officers, who carried out 25,622 inspections in metropolitan and country areas.

3. Prosecutions under the Broadcasting and Television Act.—Persons convicted during the year ended 30th June, 1957 for operating unlicensed broadcast receivers numbered 4,447. Fines and costs amounting to £22,809 were imposed. During the period 1st January, 1957 (when television viewers' licences became compulsory) to 30th June, 1957, 39 unlicensed viewers were convicted and fined a total of £286, including costs.

### CHAPTER XII.

#### EDUCATION.

#### § 1. Introduction.

An account of the development of the Australian school system up to 1929 may be found in Official Year Books Nos. 1, 2, 17 and 22. In Official Year Book No. 40 a reasonably complete review of changes which had occurred up to 1951 and of the practices then current was presented from material furnished in the main by the Commonwealth Office of Education.

In the sections which follow, the information relating to the educational programme applies mainly to the year 1957. The statistics given in the tables relate to 1955 and 1956 for schools and technical colleges and to 1956 for universities.

### § 2. Government Schools.

1. Administration.—Education is mainly the responsibility of the State Governments but the Commonwealth Government provides financial assistance to students and meets the full cost of education in Commonwealth Territories (see Chapter V.)

Although there is a tendency towards regional administration, State educational administration is centralized. The permanent head of the Education Department in each State is responsible to the Minister for Education. Contact with the schools is maintained principally through Inspectors, called Superintendents in Western Australia and Tasmania. Departments are usually divided into primary, secondary and technical divisions. Some technical colleges are in a large measure autonomous. Universities are independent foundations although much of their income is derived from State and Commonwealth grants.

Examination Boards, representative of the universities, the Education Departments and non-government schools, control public examinations and syllabuses, and curriculum committees prepare primary and secondary curricula. State Ministers for Education meet periodically as the Australian Education Council, and Directors of Education meet annually as a standing committee of this Council.

- 2. The School System.—(i) Compulsion. In all States, there is legislation for compulsory school attendance. The original Victorian Education Act was passed in 1872, followed by similar Acts in Queensland (1875), South Australia (1878), New South Wales (1880), and Tasmania and Western Australia (1893).
- In 1957, the ages between which children were legally required to attend school were as follows:—New South Wales, 6 to 15 years; Victoria, 6 to 14 years; Queensland, 6 to 14 years; South Australia, 6 to 14 years (children may not leave school until the end of the term during which they reach the age of 14 years); Western Australia, 6 to 14 years; and Tasmania, 6 to 16 years. The employment of children of school age is prohibited by law.
- In Victoria, South Australia, and Western Australia, amendments to the Acts have provided for the raising of the school leaving age to 15 years, but to date this legislation has not been implemented.

Schooling may be given in government schools (including correspondence and special schools), in non-government schools or by private tuition. Schooling in government schools is ordinarily free. Non-government schools charge fees and, with the exceptions noted on p. 456, are not financially supported by State or Commonwealth Governments.

(ii) Beyond compulsion. In recent years, the development of large-scale industry and scientific farming has demanded a diversity of skills and a general raising of the educational level of the population. The raising of the school leaving age in two States and the tendency everywhere for children to stay longer at school have been expressions of public realization of this. In recent years, less than half of all children left school when they reached the age limit for compulsory attendance. Indeed, almost half now proceed to some form of further education beyond secondary school, either as full-time students, as part-time apprentices or trainees released during the day by their employers, or as part-time evening students.

In the early years of government provision of education, the main emphasis was on the primary school, which catered for children under compulsion and offered a course largely confined to the tool subjects, reading, writing and arithmetic. However, a process of extension and differentiation both at the bottom—infants' schools and kindergartens—and at the top—secondary schools—was well under way during the early years of this century.

- 3. The Educational Ladder.—(i) Infants' Schools. It is now customary, although not compulsory, for children to begin school when they are five years old. In larger primary schools, they enter the infants' school, and in smaller schools infants' classes, which occupy two or three years, the first year in some States being called "Kindergarten" or "Preparatory". The emphasis in the infants' classes is very much on general development, on play activities and on the informal aspects of the educational processes. In some cases the first two grades of primary education, together with any "Preparatory" or "Kindergarten" classes, are to be found in separate infants' schools or departments. But whether in a separate establishment or as a part of a primary school, there is a gradual move towards formal instruction. At the end of the period, most children are able to read with some fluency, carry out simple arithmetical operations founded on the basic number facts, and can write in pencil. In addition, they have acquired skills with art materials and the like. A good deal of the instruction is carried on through activity methods, involving, for example, dramatic work, puppetry, and school "shops". Children then pass at about the age of 8 or 9 to the more formal primary school, in which they normally spend four or five years.
- (ii) Primary Schools. The main emphasis in the primary school as distinct from the infants' school still lies on the tool subjects (reading, writing and arithmetic) and, in more recent years, on oral language, but the methods of teaching have undergone considerable changes. Changes in the purpose and outlook of educationists, and the raising of the professional standards of teachers, have made for greater freedom for pupils and teachers, some departure from the methods of mass instruction, and the closer linking of the curriculum with the child's social environment.

In general, there is now less emphasis on results than formerly, and basic skills are taught at a somewhat later stage. At the same time, the curriculum has been broadened. More individual instruction has led to a reduction in minimum standards of achievement for the less able and a stress on curriculum enrichment for the bright. Retardation, i.e., the repeating of grades, has been considerably reduced, the aim being for each child to remain with his age group. In all States, opportunity classes exist for backward children, and in one State opportunity classes are provided for the especially bright.

(iii) Secondary Schools. At the age of 12 or 13 (in Queensland, 14), children transfer to a secondary school course. In the cities and larger country centres, this is provided in a separate school, but in less densely populated areas secondary classes share the same buildings as primary classes. In rural areas, secondary pupils may share teachers or classrooms with primary pupils, and in one-teacher schools a few secondary students may carry out correspondence assignments under the supervision of the primary teacher-in-charge.

Secondary curricula have developed from the matriculation requirements of the universities. Formerly English grammar and literature, and mathematics, including algebra, geometry and trigonometry, were the core. Languages, chiefly Latin and French, or science, chiefly physics and chemistry, and history had an important place. Geography and drawing were often taken in the first two or three years.

As a result of changes in the academic course for matriculation, greater emphasis has been placed on oral language and written expression in the English course; Latin has waned in popularity and modern languages other than French and German are being taught in a few schools. A general science course has been introduced in some States, and social studies, a synthesis of history, geography and civics, is a subject to matriculation level in two States. More emphasis has been placed on art, music and physical education. In recent years, the provision of a secondary education for all has gained ground rapidly, although the entrance requirements of tertiary institutions are still provided for.

Consequently, alongside the academic course, other courses have grown up. In country areas, they may be offered in the same school or the academic course may even be largely abandoned. In the city, it is usual to offer non-academic courses in separate schools. The academic schools and multi-lateral country schools are usually known as High Schools, while the other types are generally distinguished by such names as Junior Technical Schools and Home Science Schools.

Particular mention should be made of the recent development of the all-age consolidated school sometimes with an agricultural bias, found under various names in different States. Tasmania and South Australia adapted the idea of the English village area schools to Australian conditions and established "Area Schools", some of which have farms attached.

The courses followed in the non-academic schools are, in general, broader than in the academic schools. There is less concentration on establishing an academic discipline and method peculiar to each subject, but more attention to correlation between fields of knowledge, sometimes expressed by projects involving them all. Generally, less time is devoted to mathematics and the formal sciences, and more time to practical work and to art and musical appreciation. In English, oral language is emphasized rather more and grammar much less than in the academic schools.

- (iv) State Details. Very brief particulars of the position in each of the States were given on pp. 432-3 of Official Year Book No. 40.
- 4. Examinations and Accrediting.—(i) Examinations. In earlier years, most States had three examinations for school children. The first came at the end of primary school and was variously known as the "Qualifying Certificate" or "Scholarship". These examinations were regarded as a qualification for secondary education. The third came at the end of the secondary course, at the age of sixteen or seventeen, and was known as the "Leaving" or "Senior Public" examination, which qualified students for university matriculation. Between these came the "Intermediate Certificate" or "Junior Public Certificate", usually one or two years before the end of the full course of secondary schooling. A pass in this examination was a useful entrance qualification for clerical occupations, nursing; some public service positions, and other callings requiring academic training.

The entrance examination for secondary schools was administered by the Education Departments, although students from private schools also sat for it. The two higher examinations were generally under the control of a board, on which universities, Education Departments and non-government schools were represented.

The external examination for secondary school entrance has now been abolished in every State except Queensland, where the age of transition is fourteen and the "Scholarship" examination must be passed to entitle the student to free education and boarding allowances. The external Intermediate Examination has declined in importance, some States substituting internal examinations in some or all schools, other States providing a variety of internal certificates from different types of schools. The Leaving Certificate in most States has not been supplanted, but has been modified to provide a greater variety of subjects and, as for example in mathematics, the opportunity of choosing several specialized courses or a broad course.

The length of the secondary course has been increased in two States from two to three years for the Intermediate Certificate and from a further one to a further two for the Leaving: South Australia has a further year beyond the Leaving Certificate fon a separate examination known as "Leaving Honours". Only the Leaving Certificate is necessary for matriculation, but good results—credits as distinct from passes—in the Leaving Honours examination may carry exemption from some subjects of the first-year university course. In Victoria, the optional Leaving Honours year has been replaced by adding a further year after the Leaving examination for a course leading to a special matriculation examination. Separate matriculation examinations also exist in New South Wales, Western Australia and Tasmania, but successful Leaving candidates are not required to sit.

- (ii) Accrediting. The system of granting certificates, or credit for subjects passed, without external examination is a major development and now operates in four States. Credit is assessed on the student's record of work for the year, together with performance in internal examinations. Syllabuses can be less rigidly controlled and can be more freely adapted to local conditions, although standards are maintained by the supervision of the central authority. All States have an external examination for matriculation.
- (iii) State Details. The details of accrediting in each State were given on pp. 433-4 of Official Year Book No. 40.
- 5. Health Services to Schools.—Information relating to school medical and dental services is given in Chapter XIV.—Public Health.

6875/57.--14

6. Guidance.—Each Australian State now has a comprehensive system of educational guidance administered by trained and experienced educational psychologists and backed by a system of school record cards. In general, the functions of these services are:—selection and differentiation for secondary education, diagnosis and guidance of atypical children, preliminary vocational guidance and, in some States, research. The weight given to each of these functions varies considerably from State to State, but the aim is the provision of thorough educational guidance services for all children.

The Vocational Guidance Division of the Commonwealth Employment Service cooperates with State Education Departments by giving post-school vocational guidance, using the data obtained and made available by the Education Departments during the school career of the children. In New South Wales, a similar service is also provided by the Vocational Guidance Bureau of the Department of Labour and Industry.

- 7. Research.—(i) State Education Departments. All State Education Departments have set up research branches which function as integral parts of head offices. In several States, the officer who directs research is also responsible for the guidance service offered by his department. The research undertaken is directed towards departmental activities and the findings of research are examined carefully in the determination of policy and procedures; in addition, many problems of immediate importance are handled. In the majority of States, too, the Research Branch supervises the collation of statistics and also plays an important part in curriculum revision and modification of examinations.
- (ii) Australian Council for Educational Research. The Australian Council for Educational Research, a non-governmental body, is also engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and inquiries, makes grants to approved educational investigators, serves as a centre for disseminating educational information, provides training for research workers, and standardizes and distributes educational and psychological tests for use in Australia. Although this council is an autonomous body, the Commonwealth and State Governments contribute some financial support to it.
- 8. Atypical Children.—Pupils who, for one reason or another, cannot progress to their best advantage in an ordinary school are catered for by special schools or classes. Among groups given special attention are the mentally backward, the gifted, the physically handicapped, the blind, deaf and dumb, the epileptic, the cerebral palsied, the partially sighted, the hard-of-hearing and the delinquent. The provision of special schools and classes has involved the appointment of departmental specialists, special training courses and close liaison with school health services. In some States, special clinics attached to hospitals or functioning as an independent child-welfare service handle cases of personality maladjustment and work in co-operation with the psychological services of the Education Departments.
- 9. Education of Native Children in Australia.—The Commonwealth Government is responsible for the education of full-blood native children in the Northern Territory. Each State has responsibility for the welfare and education of native children within its boundaries.

Native children are admitted to government schools in all States except in areas where separate facilities are provided for the natives. In those States where natives are more numerous, special schools are located at or near aboriginal reserves, settlements and stations. The schools are for the most part staffed by teachers from the Education Departments, and the curriculum is similar to that in ordinary government schools with a bias towards handicrafts. Numbers of native children also attend the mission schools conducted in several States by the various denominations. The standard of education in these schools generally is similar to that in the government schools.

- 10. Provision for Rural Areas.—(i) General. The population of Australia is so scattered that there is a problem in providing primary, and more especially secondary, education for all children. One method of meeting this problem was the establishment of a wide network of one-teacher primary schools, staffed in the main with trained teachers. The practice of sending itinerant teachers to assist correspondence students in outlying areas has been introduced in the far north of Western Australia.
- (ii) Subsidized Schools. Where a group of children is too small to warrant the establishment of a one-teacher school, a "subsidized school" may be opened. The Education Department pays part of the cost, and in some States appoints a teacher. Some States also administer "provisional schools", which are completely financed by the Government but which are not large enough, or sufficiently assured of adequate continued attendance of pupils, to warrant classification as permanent schools.

- (iii) Consolidation. As early as 1904, the policy of transporting pupils to larger and more central schools began to come into operation. Trains, bicycles and horses were first employed, but the use of buses has led to a very great development of school transport systems. This policy, known as "consolidation", has been responsible for a substantial reduction in the number of small schools, and is one of the most striking developments of the past twenty years. The consolidated school is usually not merely a larger primary or secondary school; and generally provides a curriculum specially adapted to the needs of the rural area it serves. Organized transport for children attending country primary and secondary schools has been developed considerably.
- (iv) Special Assistance. Another way of bringing children and schools together has been the provision of financial assistance for children who have to live away from home in order to attend school. Most of these board in private homes but there are eight government hostels and over 60 private ones (excluding private boarding schools), many of which are government-subsidized. Together, these cater for more than 1,800 children of secondary school age and a small number of primary school children also. Special scholarships for country children, giving allowances for living away from home, and substantial fare concessions for vacation travel are provided by all States.
- (v) Correspondence. For children who are still unable to attend school, systems of correspondence tuition have been established in every State. The Education Departments provide tuition through primary and secondary school levels and up to matriculation standard if required. In addition, the Technical Correspondence Schools conducted by the senior technical college of each State provide correspondence tuition at secondary level up to matriculation standard for students over the school leaving age. Further reference to the work of the Technical Correspondence Schools is made in § 5 of this chapter, which deals with technical education (see p. 461).
- 11. School Broadcasting in Australia.—Over the years, an extensive school broadcasting system has been developed in Australia by the co-operative efforts of the Australian Broadcasting Commission and education authorities. The Youth Education Department of the A.B.C. is responsible for the broadcasting of the programmes, but it draws freely on the advice and services of teachers and maintains permanent liaison officers with the Education Departments. More than two-thirds of Australian schools are equipped with radio receivers.

School broadcasts are presented as part of the regular A.B.C. programmes without separate stations or wave lengths. Special efforts are made, however, to relate the broadcasts to school work by the extensive distribution of booklets giving details of programmes in advance and subject notes accompanied by picture sheets, work books, and teachers' notes.

Broadcasting has proved to be a most effective way of reaching the outback children of Australia, and radio lessons have been designed to supplement correspondence lessons. The success of the first School of the Air, which has been in operation at Alice Springs in the Northern Territory since 1950 and serves correspondence pupils of the South Australian Education Department, has led to the opening of similar schools in other isolated areas. One of these is based at Ceduna on the west coast of South Australia; and the other is at Broken Hill, in the far west of New South Wales. These schools serve a total of well over half a million square miles. By means of special two-way radio equipment, children hundreds of miles apart can participate in the same lesson and teachers and pupils can talk directly with each other.

The "Kindergarten of the Air" is described in § 4 (p. 460) of this chapter, which deals with pre-school education.

12. Teacher Training and Recruitment.—(i) General. The training of government school teachers is carried out by the State Education Departments, but in most States persons who wish to train for teaching in private schools may attend government training colleges on payment of a fee. Many non-government school teachers have been drawn from the government teaching services; and others have been recruited at the university graduate level. Private training institutions also provide some teachers.

An account of the early growth of teacher training systems is to be found in Official Year Book No. 22 and subsequent developments were reviewed extensively in Official Year Book No. 40. The pupil-teacher system has been abandoned as the chief method of training teachers and teacher students are now recruited at matriculation level and given a professional course of training at colleges controlled by Education Departments or by university Departments of Education. The raising of entrance standards and prolongation of training has led to a close association between the Education Departments and universities. The trend has been towards placing teacher training on the same basis as other professional training.

There is at present a shortage of teachers in Australia. Measures taken to overcome this shortage include substantial increases in teachers' salaries and liberalization of promotion systems, publicity drives to attract recruits and increases in living allowances to departmental teachers' college students.

- (ii) Training Colleges. Every State maintains at least one teachers' training college. Most students are trained at colleges in the capital cities, although there has been a movement towards the establishment of colleges in the country. In 1957, there were in Australia 22 teachers' colleges' conducted by Departments of Education and professional training for graduate teachers was provided by seven universities.
- (iii) Training of Primary Teachers. In most States, teachers for government primary schools are trained in teachers' training colleges controlled and administered by the State Education Departments. Colleges are co-educational. Departmental trainees are given a monetary allowance while in training and are required to enter into a bond to serve for a specified period or to repay all or portion of the cost of training.

The entrance standard is generally at the Leaving Certificate level at about the age of seventeen. In some States, intending teachers can obtain a scholarship at the Intermediate Certificate level to enable them to complete teachers' college entrance requirements. In return, they are required to enter into a bond of service additional to that normally required of departmental teachers' college trainees.

In general, the duration of courses is two years for primary teachers, including infants' teachers. The basic subjects taken in the various courses are principles, history and general methods of teaching, special methods of teaching primary school subjects and educational psychology. In addition, students undertake courses in physical education, art, music, school hygiene and handicrafts as well as lectures designed to widen their own cultural background.

In South Australia, primary teacher trainees attend certain university courses, including Education, as part of their training. In Tasmania, while the majority of departmental teacher trainees receive their training at the university, there is also a government teachers' college providing a special short course designed to train women primary and infant teachers.

In some States, separate courses are provided for infants' teachers and for teachers in small one-teacher schools. In Victoria, an extension course of one year following the primary course is designed to train teachers of home-crafts for primary schools.

- (iv) Training of Secondary Teachers. Prospective secondary teachers are required to undertake a degree course followed by a one-year post-graduate course leading to a university degree or diploma in education. This period of professional training includes lectures and seminars on subjects associated with educational theory and practice, study of methods and techniques appropriate to secondary school subjects, periods of practice teaching and the observation of classroom techniques in the teaching of special subjects. In some States, the teachers' colleges provide special courses of training for teachers of junior secondary schools or classes.
- (v) Training of Specialist Teachers. Teachers of specialist subjects such as music, art, manual arts, domestic science and commercial subjects receive from two to five years' training varying according to the institution concerned and the type of secondary school in which the teacher is to teach. In several States, the shorter courses are provided wholly by the teachers' colleges. Where the specialist course is given at an institution other than the teachers' college—for example, at a university, technical college or conservatorium of music—as is usual for teachers of specialist subjects in high schools, trainees are required to attend teachers' college or university lectures in education and in some cases the specialist course is followed by a year of professional training.

There are conservatoria of music in four States. In New South Wales and Queensland the conservatorium is a State institution under the Minister for Education; in Victoria and South Australia it is attached to the university.

Courses designed to train Physical Education teachers are offered in five States, in one at a teachers' college and in the others by the universities.

Training of teachers of agricultural subjects in secondary schools is available in five States and consists of either an agricultural college diploma or a university degree course together with professional training. In Victoria, the two-year agricultural college diploma course follows the normal two-year primary teachers' course. In New South Wales, in addition to the three-year university agricultural course followed by one year's professional training, there is a two-year teachers' college agricultural course.

(vi) Training of Technical Teachers. Teachers of general subjects in technical schools and colleges usually receive their training either as primary or as secondary teachers and after some experience in either or both fields are transferred to a technical institution.

Teachers of specialist subjects in technical schools are in the main recruited from the ranks of qualified tradesmen engaged in either industry or commerce. Upon appointment, teachers of technical subjects usually receive instruction in classroom teaching techniques and procedures. A Technical Teachers' College has been established in Victoria.

(vii) In-service Training. As almost all teachers now enter the profession by way of teachers' training colleges, where they receive basic professional training, in-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training.

Such training usually takes the form of short courses held sometimes during vacations, sometimes during school-time or in the evenings. Courses consist of discussions and lectures given by senior staff members of Education Departments and university and teachers' college lecturers, on such subjects as classroom techniques and supervision, librarianship, music, arts and crafts, and physical education. In some States, there are also in-service courses for special groups of teachers, such as headmasters or teachers of one-teacher schools. In addition, district inspectors are responsible for organizing short conferences of teachers where professional topics are discussed.

Education Departments encourage teachers to pursue university courses, and in some States pay the cost of courses undertaken by selected teachers.

The official publications of the Education Departments contain articles dealing with educational theory and practice. In most States, the magazines of the teachers' organizations, which reach the majority of government teachers, also contain articles of this type.

- (viii) State Details. The details of teacher training in the States were given on pp. 442-3 of Official Year Book No. 40.
- (ix) Sex and Status of Teachers. Although about one half of the teachers in State schools in Australia are men, the ratio varies from State to State. In the infants' schools and generally in girls' departments, women teachers only are employed. Men, however, predominate in the senior positions, both because of their greater preponderance amongst those with long service and because the higher promotion positions are generally reserved for men, except for some in infants' schools and girls' schools which are reserved for women.
- 13. School Buildings and Grounds.—In 1930, school building programmes were seriously cut because of the financial difficulties of the depression. The 1939-45 War intervened before school building could be resumed on a large scale. After the war, the building of schools was given a high priority, but the rapid post-war increases in school population have imposed a severe strain on available school accommodation and such emergency measures as the use of halls, cloakrooms and weather-sheds for class instruction have been adopted in some areas.

The post-war buildings fall into two groups, portable and permanent. In primary schools in particular, some Education Departments favour the use of both kinds of classroom in conjunction, thus enabling them to cope with the changing age-composition of particular areas. Prefabricated buildings and classrooms have been imported or locally produced in increasing quantities and include both timber-frame, aluminium and steel units and single and multiple pre-cast concrete units. Such prefabricated buildings are used not only in extending the facilities of existing schools and to provide multi-purpose units such as assembly hall gymnasiums but also, now, for erecting entire schools.

14. Equipment.—(i) Text Books and Materials. The State Education Departments supply government schools with essential equipment free of charge, including scientific apparatus and equipment, maps, blackboards, chalk and cleaning materials, and non-consumable equipment for commercial, home science and manual training. Garden tools and physical training equipment are supplied free in most States.

Primers and writing equipment for individual pupils are usually supplied free in primary schools, and each Department, except that in Tasmania, produces in addition monthly school magazines which are supplied free or at a small cost. Textbooks, however, are supplied to primary pupils free of charge in one State only. In other primary schools and in all secondary schools, textbooks must be purchased by students, although in several States, schools own stocks of textbooks which are hired to students, and in one State secondary textbooks are sold at reduced rates.

Other equipment is supplied free by the Departments on a limited basis only. Equipment such as radios, film and filmstrip projectors, pianos, duplicators and library books are ordinarily purchased for individual schools by the parent and citizens organizations associated with them, with the assistance of subsidies from the Departments.

(ii) Furniture. There has been considerable development in this field. Originally most schools were equipped with long desks and benches, seating six to eight pupils, but these were later replaced by the standard dual desk with tip-up seat, and in infant classes

by individual chairs and small tables. After the war, considerable research was undertaken on posture and the physical measurement of children. The dual desk is now being replaced in some States by the individual table and chair, provided in a range of sizes suitable to each class. In some States, tubular steel is used. The new type of furniture is more suitable for flexible arrangements of the class in line with modern educational practice.

- (iii) Visual Aids. In the past 20 years, there has been a remarkable growth in the use of visual aids in education. After some resourceful pioneering work had been done by individuals, the Departments of Education, between 1936 and 1939, appointed special committees and teacher demonstrators to guide the development of the new educational medium. Production units to produce film strips suitable for use in schools were set up in five States and an Australian-produced film-strip projector was manufactured. After the war, the emphasis moved from the strip projector to the 16 mm. sound machine and the Australian National Film Board, set up by the Commonwealth Government to promote the use of educational films, became the main producer of these films. Film companies are also designing films primarily for class-room use and several manufacturers have produced 16 mm. sound projectors. Education Departments have their own film libraries to distribute films to schools and, in addition, borrow from the Commonwealth National Library, which is the main distributing centre for non-technical films in Australia.
- 15. Parent and Citizen Organizations.—In Australia, where all government schools are administered by central departments, there is little opportunity for local administration of education. Public interest is expressed through parents' committees or organizations of parents and other citizens interested in supporting their local school. The Education Acts of all States provide for the formation of groups of this type, whose aims are to promote the interest of the school by bringing parents, pupils and teaching staff together, to help provide teaching aids and recreation materials not supplied by the departments, to assist in the regular attendance of children at school and to help find accommodation for teachers.

In several States, the general maintenance of school buildings, equipment and grounds is a statutory responsibility of the parent groups, costs being covered by government grants. Lunch canteen services at local schools, where Oslo lunches may be purchased, are maintained by groups in some States.

A notable achievement of the parent groups in three States has been the establishment of schoolchildren's insurance schemes, operated through State government insurance offices or private insurance companies. These schemes cover accidents to children which occur between the time of leaving home for school and returning home by the usual direct route.

In all States, parents' groups have affiliated to form State-wide councils or federations. These, in turn, form a federal body, the Australian Council of School Organizations.

16. Statistics of Government Schools.—(i) General. The government schools shown in the following tables include primary, secondary, junior technical, correspondence and subsidized schools, but exclude senior technical colleges, evening schools and continuation classes.

Particulars relating to senior technical colleges are given in § 5, p. 461.

(ii) Years 1955 and 1956. (a) General. The following tables show for 1955 and 1956 the number of government schools, together with the teachers employed, teachers in training and the number of children enrolled.

#### GOVERNMENT SCHOOLS(a), 1955.

<sup>(</sup>a) Excludes Senior Technical Colleges. (b) Includes Australian Capital Territory. (c) Estimated.

As with enrolments, there is no uniform method of calculating the average attendance. Most of the States aggregate the attendances for the year and divide by the number of school sessions. New South Wales and Western Australia, however, employ averages of term averages. The average enrolment and attendance in each State and the Northern Territory during 1955 and 1956 are shown below:—

GOVERNMENT SCHOOLS(a): AVERAGE ENROLMENT AND ATTENDANCE, 1955 AND 1956.

		1955.		1956.			
State or Territory.	Average Weekly Enrolment.	Average Daily Attendance.	Percentage of Atten- dance to Enrolment.	Weekly	Average Daily Attendance.	Percentage of Atten- dance to Enrolment.

<sup>(</sup>a) Excludes Senior Technical Colleges. (b) Includes Australian Capital Territory. (c) Census enrolment at 1st August. (d) Year ended 30th June.

The average attendance at government schools in Australia is shown in the following table for the year 1891 and at varying intervals to 1956.

#### GOVERNMENT SCHOOLS(a): AVERAGE ATTENDANCE, AUSTRALIA.

	Year.	Total Population. (b)	Average Attendance.		Year.	Total Population. (b)	Average Attendance.
		'000.	No.			 '000.	No.
1891		 3,421	350,773	1950		 8,307	844,123
1901		 3,825	450,246	1951		 8,528	899,514
1911		 4,574	463,799	1952		 8,740	974,934
1921		 5,511	666,498	1953		 8,903	1,037,621
1931		 6,553	817,262	1954		 9,090	1,089,484
1941		 7,144	732,116	1955		 9,313	1,153,628
1949		 8,046	810,800	1956		 9,533	1,219,081

<sup>(</sup>a) Excludes Senior Technical Colleges.

<sup>(</sup>b) Average Enrolment and Attendance. The methods of calculating enrolment are not identical throughout Australia. The unit in South Australia is daily enrolment, while New South Wales, Victoria, Western Australia and Tasmania use weekly enrolment. In Queensland, no average enrolment is compiled, and the August census enrolment figure has been taken.

<sup>(</sup>b) At 31st December.

- (c) Schools in the Australian Capital Territory. During 1956, 13 government schools were in operation in the Australian Capital Territory. Enrolment numbered 4,678; and average attendance was 4,133. Figures for 1955 were 13, 5,196 and 4,667, respectively, By arrangement with the Commonwealth Government, these schools are conducted by the New South Wales Education Department with a provision for primary and secondary education, the Department being recouped for expenditure. The cost of the teaching staff in 1955-56 was £219,582, while the cost of general maintenance amounted to £125,820. The figures quoted exclude enrolment, etc., at the Canberra Technical College and the Evening Continuation School. For further particulars of educational facilities in the Australian Capital Territory see Chapter V.—The Territories of Australia, Australian Capital Territory, p. 117.
- (iii) Expenditure. (a) Maintenance—All Schools (except Senior Technical Colleges). The net expenditure on maintenance in all grades of schools, except senior technical colleges and, in Victoria, junior technical schools, and the cost per head of average attendance for each of the years 1952 to 1956 are shown in the following table. The figures do not include expenditure on buildings, which is shown in a subsequent table. In all expenditure tables, the figures for Victoria, Queensland, Western Australia and the Northern Territory relate to the financial year ended six months earlier than the calendar year.

#### GOVERNMENT SCHOOLS(a): NET EXPENDITURE ON MAINTENANCE.

<sup>(</sup>a) Excludes Senior Technical Colleges.(c) Excludes Junior Technical Schools.(e) Not yet available.

(b) Maintenance—Secondary Schools. The figures shown in the preceding table refer to expenditure on the maintenance of all government primary and secondary schools, excluding senior technical colleges. It has been the practice of the State Education Departments to give separate information in regard to the cost of secondary education. The fact, however, that both elementary and higher education are in some instances given in the same school and by the same teacher makes difficult any satisfactory allocation of expenditure between primary and secondary education. Furthermore, the term "secondary" has not the same meaning in all States. Similar difficulties arise in connexion with the apportionment amongst the various branches of expenditure on administration, inspection and the training of teachers. The figures quoted hereunder in regard to cost have been extracted mainly from the reports of the State Education Departments, and are subject to the foregoing qualifications. There are no secondary schools in the Northern Territory, although some primary schools have secondary tops. Consequently no figures are given in the following table for the Northern Territory.

<sup>(</sup>b) Gross figures, receipts not being available.
(d) Twelve months ended 30th June of year shown.

#### GOVERNMENT SECONDARY SCHOOLS(a): EXPENDITURE ON MAINTENANCE.

	19	54.	19	55.	19	1956.			
State.	Cost.	Cost p Head Populat	of	Cost.	Cost p Head Populat	of	Cost.	Cost per Head of Population.

(a) Excludes Senior Technical Colleges. (b) Gross expenditure, receipts not being available. (c) Figures relate to 12 months ended 31st December of year shown. (d) Figures relate to 12 months ended 30th June of year shown. (e) Excludes Junior Technical Schools. (f) Excludes expenditure on buildings. (g) Not yet available.

The figures in this and the preceding tables refer to all grades of government schools with the exception of senior technical colleges, and in Victoria, junior technical schools.

(e) School Banking. Particulars of School Savings Banks are included in Chapter XX.—Private Finance.

#### § 3. Non-Government Schools.

1. Public Authority and the Non-Government Schools.—In all States, education is compulsory for all children between certain ages. It must be received in a government school, unless the child is under "regular and efficient" instruction elsewhere. This may be at home, or in a non-government school. The provision for control over the regularity and efficiency of instruction in the non-government schools varies considerably from State to State. In New South Wales and Western Australia, provision is made for an initial inspection when a new school starts, and for inspections thereafter as the Minister requires, to ensure efficiency. In Victoria and Tasmania, registers are kept of teachers and schools, and both teachers and schools must satisfy the administering authority that they are efficient before registration is granted. Without such registration, neither a teacher nor a school can operate. Provision is made, too, for inspections at any time by the registering authority.

In Queensland, eight grammar schools, which exist by statutory authority and are subsidized by the State, are subject to annual inspection. These are the only non-government schools in Australia for which an annual inspection is prescribed by statute. Other non-State schools in Queensland may be inspected at their own request, but it is possible for these schools—and also those in South Australia—to exist without inspection.

Public authority over schools or institutions having scholars above the compulsory ages is generally less direct. It is effected directly by the registration procedures in Victoria and Tasmania, and in all States there is a measure of indirect control through provisions governing the award of State scholarships, bursaries or other forms of financial assistance to secondary scholars, which are available only in State or approved non-State schools. In New South Wales, also, the Intermediate and Leaving Certificates are awarded only to pupils of schools whose courses of study are approved by the Department of Education.

In all States, non-government schools are required, under the authority of either the Education Acts or Statistics Acts, to furnish certain statistical returns. The form of these returns may be prescribed in the Acts or may be subject to alteration with the Minister's consent.

2. Non-Government Schools Finance.—Roman Catholic parochial schools do not charge fees, although most families make a contribution if they can afford to do so. With this exception, pupils of non-government schools must ordinarily pay fees. At the majority of non-government secondary schools, privately endowed scholarships are available in varying numbers and reductions in fees are normally made for children of clergy or for two or more members of one family attending the same school.

Certain State scholarships and bursaries are, as noted above, tenable at approved non-State secondary schools. Since the establishment of educational systems by the State Governments, official policy has been largely against the provision of direct financial assistance to non-government schools. Eight undenominational grammar schools in Queensland, however, receive a State subsidy under the Grammar Schools Acts 1860–1900. In 1957, the Tasmanian State Government approved the provision of capital grants to non-government schools, and in 1956, the Commonwealth Government announced a plan to contribute to the interest payments on loans raised by churches in order to build denominational secondary schools in the Australian Capital Territory.

3. Numbers of Non-Government Schools, Teachers and Enrolments.—The numbers of non-government schools, teachers and enrolments for 1955 are shown in the following table:—

#### NON-GOVERNMENT SCHOOLS, 1955.

<sup>(</sup>a) Partly estimated.

4. The Organization of Roman Catholic Education.—There is, in each State capital, an official who acts under the Archbishop as a Director of Catholic Education for the area. Each diocese within the area is, however, autonomous and manages its own educational affairs subject to the local episcopal authority. The State Director has, in

<sup>(</sup>a) Includes Australian Capital Territory. (b) Presbyterian and Methodist Schools' Association.

addition to possible inspectorial functions within his own diocese, the duty of co-ordination of educational matters within his area, and of liaison with other educational authorities, particularly the State Education Department.

The system includes kindergartens, sub-primary, primary, academic secondary, home science, commercial, agricultural and technical schools, juniorates and minor seminaries, schools for the mentally and physically handicapped, orphanages and a variety of special schools of a charitable nature for under-privileged or socially handicapped children.

With the exception of a small number of permanent lay teachers and a number of visiting teachers, usually specialists in such matters as physical education, sport, and speech, teaching is done by members of religious orders.

5. The Organization of Other Non-Government Education.—(i) General. Practically all non-government schools, except a limited number under private ownership, are governed by a controlling body known variously as a School Council or Board of Trustees or Governors.

Within each State, although the other non-government schools may be organized into loose forms of association for purposes such as sports, conferences, uniform conditions, there is no system corresponding in size, detail or organization with the Roman Catholic schools.

The Headmasters' Conference of Australia and the Headmistresses' Association of Australia are composed of headmasters and headmistresses respectively of a number of the larger non-State schools, including some Roman Catholic schools. Neither body has executive powers. One of the chief considerations for the admission of new members is the degree of independence enjoyed by the governing body and principal of the school concerned.

(ii) Church of England. The various types of Church of England schools include small schools associated with a local parish; schools under direct ownership of a diocese; schools established by Acts of the Church Synod, in which the majority of the members of the council are church representatives but which, otherwise, have almost complete independence; and schools conducted by religious orders of the church.

The proportion of members of a school council nominated by the church varies. In some schools, members may also be nominated by parents, by former students, and by the council itself.

In general, schools incorporating the words "Church of England" in their title follow a diocesan syllabus of religious education.

(iii) Other Denominations. In general, control of Presbyterian schools is exercised through School Councils appointed by the General Assembly of the Presbyterian Church in the State concerned. Councils vary considerably in size and in the bodies represented on them. Similarly, appointments to councils of Methodist schools are made by the annual Conference of each State.

In Queensland, six schools are operated under the joint auspices of the Presbyterian and Methodist churches.

A limited number of schools are conducted by other denominations, such as the Baptist, Congregational and Lutheran churches and by the Seventh Day Adventists. The Society of Friends conducts one school in Australia, the Friends' School, Hobart.

Jewish schools are conducted in several capital cities.

(iv) Undenominational. There are a number of undenominational schools in Australia. Some of the larger, although not State-operated, have Government nominees on their boards. They include Sydney Grammar School, the Hale School, Perth, and the eight Queensland grammar schools. Other undenominational schools operate under the auspices of corporate bodies, usually in the form of a limited liability company, while others are privately owned. The majority of schools in this last category are small kindergartens and primary schools.

#### § 4. Pre-School Education.

1. Types of Pre-School Centres.—Free kindergartens were originally established in congested industrial areas and financed mainly by voluntary effort, but over the years the Commonwealth Government, the State Governments and some municipal councils have provided an increasing amount of financial assistance.

In 1938, the six Kindergarten Unions, the voluntary organizations which pioneered pre-school education in Australia, met to form a federal organization. Its title "Australian Association for Pre-school Child Development" was changed in 1954 to "Australian Pre-school Association". Its membership is now open to all organizations whose main objective is the care of the pre-school child, and includes bodies in the Australian Capital Territory, the Northern Territory, and the Territory of Papua and New Guinea.

The aim of the association is to promote the continuous advancement of pre-school movements throughout Australia. It sets out standards which act as a guide throughout Australia to those sponsoring pre-school centres, and is responsible for the administration of the six Lady Gowrie Child Centres. These centres are demonstration nursery schools which the Commonwealth Government established in each of the capital cities in 1940 and which are maintained by Commonwealth grants.

To-day pre-school centres are found not only in inner city areas but also in suburban and country districts. Programmes are adapted to suit the areas in which the centres are situated. Types of pre-school centres include nursery kindergartens, crèches with full-day care for children of working mothers, play groups and play centres, occasional care centres and residential holiday homes. Crèches accept children from a few weeks of age up to 5 or 6 years while other centres cater for children from about 3 years up to 5 or 6 years. A mobile unit is in operation in the Australian Capital Territory.

2. The Training of Teachers.—It is an accepted principle in Australia that all types of pre-school work should be under the guidance of trained pre-school teachers, although, owing to the shortage of teachers, this cannot always be put into practice.

The Kindergarten Unions in all States except Tasmania have established teacher training colleges providing three year courses. The minimum entrance age is seventeen and the Leaving Certificate is usually required before admission. In addition, in New South Wales, the Sydney Day Nursery and Nursery Schools' Association maintains a training college, and a two-year course for nursery teachers is available at the Sydney Teachers' College.

In Tasmania, prospective teachers may either complete the normal two-year primary course followed by one year's training at the Kingston Pre-School Centre or undertake a shorter course entirely at the Centre. Those wishing to gain a Kindergarten Training College diploma must attend a college on the mainland.

Many students-in-training receive government scholarships, and others are sponsored by government departments or voluntary organizations.

- 3. Kindergarten of the Air.—The Kindergarten of the Air came into being in 1942 in Western Australia, where, under the stress of the war, kindergartens could not remain open. It was conducted by the Australian Broadcasting Commission and proved so successful that within a few years it was being broadcast throughout Australia and has inspired similar projects overseas. It consists of a daily programme of 25 minutes based on the interests of children from 3 to 5 years of age and reaches children in the outback and in isolated country schools, children in hospital, and other children who are not able to attend a pre-school centre.
- 4. Kindergarten Unions.—The following information regarding kindergarten unions has been compiled from particulars supplied by the principals of the chief institutions or the organizing secretary in each State, except in the case of Western Australia where the details were furnished by the Education Department. It refers to kindergarten unions or associations and excludes the kindergarten branches in the government schools of the various States.

KINDERGARIEN UNIONS, 1956.											
State.			No. of Schools.	Average Attendance.	Permanent Instructors.	Student Teachers.					
New South Wales			38	1,548	118	21					
Victoria			47	1,449	71 أ	(a)

South Australia(b)			90	3,167	272						
Western Australia		\	41	1,410	78						
Tasmania			(c)	(c)	(c)	(c)					
Total		i	236	7,574	572	(a)					

(a) Not available. (b) Includes affiliated suburban and country centres. (c) In 1956, all Kindergartens formerly under the jurisdiction of the Tasmanian Kindergarten Union came under the control of the Department of Education.

In 1956, only 51 of these 236 kindergartens were located outside metropolitan areas, mainly in the larger provincial cities. In each capital city, except Hobart, there is a training college and the number of students in training during 1956 was 89 in Sydney, 154 in Melbourne, 29 in Brisbane, 44 in Adelaide, and 20 in Perth.

### § 5. Technical Education.

1. General .- In this section, technical education refers to that branch of education which is concerned with the preparation for entry to skilled occupations, including trades and professions. In the main, this education is vocational and is chiefly part-time, being carried out by the student while he is engaged in his occupation. The work of technical high schools, junior technical schools and other schools of this nature, which provide courses with a bias towards technical handwork, has been excluded, as these schools provide a form of education which is more properly regarded as secondary education.

The chief institutions for higher education other than the universities are the technical colleges, which are administered in five States by a division of the Education Department. In New South Wales a separate Department of Technical Education has been established, and in Victoria a number of the foremost technical colleges are controlled by independent councils which, although responsible to the Minister of Education, enjoy a large measure of autonomy.

The technical colleges offer training not only in all the major industrial skills, but also in a variety of commercial, artistic and domestic occupations. Their courses may be divided into three main types, as follows:-

(i) Diploma courses giving advanced training in the technical professions and other fields such as accountancy and art.

- (ii) Vocational courses, usually leading to the award of a certificate, for skilled technical and semi-professional workers. Many of these courses are in fields not covered by an apprenticeship award.
- (iii) Craftsman or artisan training in the apprenticeship trades.

In New South Wales, the University of Technology conducts a number of diploma courses on behalf of the Department of Technical Education.

A brief description of the expansion in technical training since the 1939-45 War appeared in Official Year Book No. 43, p. 449 The following table gives some indication of the growth of technical education in the years 1952 to 1956.

	Year.				No. of Students.	No. of Teachers.(a)	Total Expenditure.	
							£	
1952				141	170,239	6,428	7,145,402	
1953				141	178,301	6,688	7,826,645	
1954		• •		148	178,527	7,149	9,245,560	
1955				151	(b)	7,632	(b)	
1956				164	(b)	8,364	(b)	

<sup>(</sup>a) Includes both full-time and part-time teachers.

Training in certain technical aspects of agriculture such as farm mechanics, wool classing, and in related fields such as food technology is also provided by the technical colleges, while the seven State agricultural colleges (see also § 27 of Chapter XXII), located in all States except Tasmania, provide comprehensive agricultural courses of two to three years' duration which lead to diplomas in agriculture. At some colleges other diploma courses are offered in addition, including horticulture, dairying and dairy manufactures, food technology and oenology. The Queensland Agricultural High School and College is administered by the Department of Education; in other States the Departments of Agriculture are responsible for administration of the colleges.

2. Correspondence Training.—Technical correspondence courses were first offered in Australia about 1910. During the period 1940 to 1944, technical correspondence schools were founded in each state in conjunction with the Commonwealth and these have become an important part of the system of technical education in the Australian states.

These schools not only offer a wide variety of correspondence courses, including trade and apprenticeship, rural, commercial and art courses, but, in addition, provide secondary courses up to matriculation or diploma entrance standard. Students who because of distance or working hours cannot attend technical college classes may enrol for these courses. In New South Wales, "mobile instructional units" consisting of rail cars equipped as self-contained workshops are used to provide practical experience for correspondence students, as well as for the instruction of apprentices and tradesmen at smaller country centres.

<sup>(</sup>b) Not yet available.

In 1955, the Royal Melbourne Technical College established a shortwave broadcasting station to provide further tuition for its correspondence students.

An interesting recent development in technical correspondence education, in which the Australian technical colleges are co-operating with the Commonwealth Government, is the Correspondence Scholarship Scheme operating under the Colombo Plan. Through this scheme, South and South-east Asian students may take correspondence courses conducted by the technical colleges and by the University of Queensland, which has a highly organised system of external tuition. Courses include commercial, rural and teachertraining, engineering and other technical courses. Where practical training is required as part of the course, it is taken by the student in his own country.

- 3. Teacher Training.—Prior to the 1939-45 War, technical colleges were staffed chiefly by men drawn from two sources. They were either trained teachers in the employment of the Education Department or technicians drawn from industry. Although some of the latter were highly qualified, the great majority had not been trained as teachers. In order to remedy this, there has been a move to develop schemes of training technical college teachers without breaking the important link provided by recruiting specialist tradesmen to teach in the colleges. In New South Wales, technical college lecturers and tradesmen-instructors receive an in-service course of teacher training in both general educational theory and teaching method, and correspondence courses and visiting lecturers care for the newly appointed teacher-instructor in country colleges. Modifications of this scheme are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teachers' certificates from teachers' colleges.
- 4. Colleges, Teachers and Students.—The number of colleges, teachers and enrolments of individual students during the years 1952 to 1956 are given in the following table:—

TECHNICAL EDUCATION: COLLEGES, TEACHERS AND ENROLMENTS.

_				Teachers.		Individua	l Students	Enrolled.

Australia(f)		7,979,582	388,268	2,406,432	11,395,445	(e)	(e)				

<sup>(</sup>a) The differences between amounts shown in this column and the sums of the three preceding columns represent expenditure on other items. (b) Includes expenditure on Junior Technical Schools. (c) Year ending June. (d) Included with salaries and maintenance. (e) Not yet available. (f) There is no technical college in the Northern Territory.

Fees and other receipts are paid into Consolidated Revenue in all States except Victoria, where they are retained and spent by the Technical School Councils. The expenditure on buildings is financed largely from loan moneys, the sums provided from this source in 1955 being: New South Wales, £585,644; Victoria, £1,051,176; Queensland, £143,272; South Australia, £88,192; Western Australia, £50,097; Tasmania, nil.

#### § 6. Commonwealth Activities.

Although the primary responsibility for education rests with the States, the Commonwealth Government is committed to a number of educational activities related to its other functions. For example, it maintains officer training colleges and education services for each of its defence services, a School of Pacific Administration for the training of administrative and other officers for service in Commonwealth Territories, and a School of Forestry. In each of the Australian Territories, the educational programme provides for both the native and white children who live there. References to these programmes appear in Chapter V.—The Territories of Australia.

The Australian Broadcasting Commission features school broadcasts and other educational broadcasts as part of its daily programmes. The Commonwealth Scientific and Industrial Research Organization undertakes research, the results of which are made available to educational institutions. In 1951, the Commonwealth Government in roduced a free-milk scheme for school children. This extended a service which some State authorities were already providing for a proportion of the school population. Under the Commonwealth Reconstruction Training Scheme, many ex-servicemen and women have received the training which has enabled them to enter many different trades and professions.

The Commonwealth Office of Education, established under the Education Act 1945, acts as the Commonwealth's educational adviser, undertakes research work as Commonwealth activities require and is the channel for liaison between Commonwealth and State educational authorities. This office has responsibilities with regard to the education of migrants, international relations, including the association of Australia with the aims and activities of the United Nations Educational, Scientific and Cultural Organization, and the provision of scholarships and fellowships for selected students under the Technical Cooperation Scheme (Colombo Plan) and under the scheme known as Australian International Awards.

The Universities Commission was also established under the Education Act 1945. This commission is mainly concerned with arranging training in universities and similar institutions for ex-members of the forces and providing assistance to students at universities and other approved institutions.

The Commonwealth assists a number of other bodies concerned with education. Besides grants to organizations such as the Australian Council for Educational Research, grants are made to the States for payment to universities.

Further details of Commonwealth assistance to students and of grants for universities are given in § 8, para. 6, (iii) and (iv), of this chapter.

#### § 7. Australia and International Relations in Education.

Despite its isolation, Australia has always been responsive to educational developments in oversea countries, particularly those in the United Kingdom, but it is only recently that it has begun to make any considerable impact on educational thought overseas.

In this connexion, there have been important developments since the 1939-45 War. For instance, there has been a remarkable increase in the volume of information on educational matters exchanged between Australia and South-east Asia, and Australia participates in the Technical Co-operation Scheme (Colombo Plan), the United Nations Technical Assistance programme and the cultural programme of SEATO.

Perhaps the most important single factor behind the quickening of Australian interest in international cultural affairs has been membership of the United Nations Educational, Scientific and Cultural Organization. Australia has been a member since 1946. Eleven expert committees in Australia are responsible for a wide and varied programme of activities on behalf of UNESCO. Their advice has helped to make Australia's contribution to UNESCO international conferences and seminars highly effective. Other work undertaken by these committees has included the provision of technical material and advice to the countries of South and South-east Asia, the conducting of seminars in Australia, arranging for exhibitions and displays in Australia and overseas, and the publication of handbooks and brochures to assist teachers and other persons in meeting the problems involved in educating for international understanding.

The Australian National Advisory Committee for UNESCO, on which all the other committees are represented, advises the Commonwealth Government and co-ordinates the work of the specialist committees.

#### § 8. Universities.

1. General.—There are at present nine universities and two university colleges in Australia, as follows:—

#### New South Wales.

University of Sydney				Sydney							
New South Wales University of T	echnolog	у		Sydney							
University of New England				Armidale							
Newcastle University College				Newcastle							
Vic	toria.										
University of Melbourne				Melbourne							
Quee	ensland.										
University of Queensland				Brisbane							
South Australia.											
University of Adelaide				Adelaide							
Western	Australia										
University of Western Australia				Perth							
Tası	mania.										
University of Tasmania				Hobart							
Australian Co	apital Teri	ritory.									
Australian National University				Canberra							
Canberra University College				Canberra							

Three of these universities (the New South Wales University of Technology, the University of New England and the Australian National University) and one university college (the Newcastle University College) have been established since the 1939-45 War.

Officially incorporated by the Technical Education and New South Wales University of Technology Act 1949 of the New South Wales Parliament, the New South Wales University of Technology was established to provide facilities for training and research in the fields of applied science and technology. The council of the university is empowered to establish colleges of the university in country districts of New South Wales. Under this authority, a college of the university was established at Newcastle in December, 1951. In addition, the university provides part-time instruction in science and engineering at Wollongong and Broken Hill, and in mechanical engineering at Orange and Lithgow. Courses are provided at the technical colleges in these towns. Further particulars concerning the New South Wales University of Technology were given in Official Year Book No. 42 (pp. 473-4). In all cases, statistics of the Newcastle University College have been included with those of the New South Wales University of Technology.

The New England University College, established as a branch of the University of Sydney in 1938, was incorporated as the University of New England under the University of New England Act 1953 of the New South Wales Parliament. There are at present four faculties in the university—Arts, established in 1938; Science, established in 1939; and Rural Science and Agricultural Economics, established in 1955. The university co-operates with the New South Wales University of Technology in the provision of arts courses at the Newcastle University College. Under this scheme, the courses of study are prescribed by the University of New England which is also the examining body. Instruction is provided by the members of the teaching staff of the Newcastle University College. Further particulars concerning the University of New England were given in Official Year Book No. 42 (p. 475).

The Australian National University was established under the Australian National University Act 1946 of the Commonwealth Parliament. It provides facilities for post-graduate research in medicine, physical sciences, social sciences and pacific studies. Further particulars concerning the Australian National University were given in Official Year Book No. 42 (pp. 472-3).

2. Expansion within the Universities.—An important administrative development in all universities has been the appointment of full-time salaried Vice-Chancellors or Principals. This has given much greater effectiveness to university administration.

Within the past 20 years, the appearance of some of the universities has altered to a striking extent. New permanent buildings and some temporary ones have been erected and new wings have been added.

There was a continuing increase in university enrolments from 1929 (approximately 9,000) to 1940 followed by a slight recession. In the closing year of the 1939-45 War, however, the number of students had risen beyond any previous figure, and rapid post-war expansion was responsible for a peak enrolment of 32,453 students in 1948. After 1948, the numbers decreased each year until 1953 as ex-service personnel completed their training under the Commonwealth Reconstruction Training Scheme. Thereafter they increased again and it is expected that by 1965 some 70,000 students will be enrolled in Australian universities. Enrolment in 1956 was 34,406.

3. Courses.—A brief survey of developments in university courses since the war up to 1954 was given in Official Year Book No. 42 (p. 476). An outline of some developments during 1955 and 1956 appeared in Year Book No. 43 (p. 453).

At the New South Wales University of Technology, two new courses, leading to bachelor's degrees in Commerce and Textile Technology, commenced in 1957, and the extension course in Hospital Administration, designed for administrators with previous experience in this field, was held for the first time. Another new course to commence in 1957 was the one-term post-graduate course in Traffic Engineering.

The University of New England completed plans for its new four-year degree course in Agricultural Economics, designed to provide general training in economics and principles of agriculture with the possibility of specialization in one of these fields.

A four-year course leading to the degree of Bachelor of Agricultural Engineering was offered by the University of Melbourne for the first time. This university also instituted a one-year post-graduate course in Audio-Visual Aids in 1957.

In South Australia, a number of associate diploma courses of the School of Mines and Industries were replaced by three-year courses conducted by the University of Adelaide and leading to the degree of Bachelor of Technology. The courses are offered in a variety of engineering and technological fields.

Medical courses are at present available at four Australian universities. During the year, the University of Western Australia proceeded with arrangements for the establishment of a medical course. In 1957, in addition to the first year course, sixth year Western Australian students who had completed the earlier years of their course at the University of Adelaide were enrolled. A complete medical course will be available in 1959.

For the majority of university courses full-time attendance is required. At most universities, however, certain courses, such as arts, commerce and economics, may also be undertaken by part-time or evening study. At the New South Wales University of Technology a variety of degree courses are available to evening students.

Several universities have limited systems of external tuition whereby students in country areas may take a restricted number of courses by correspondence. The University of Queensland has developed a system of correspondence tuition which now caters not only for students within the State but for those in the Northern Territory, Papua and New Guinea and adjacent Pacific islands. External students within Queensland receive tutorial assistance at university centres in the principal country towns. In addition, the university co-operates in the Colombo Plan Correspondence Scholarship Scheme (see p. 462).

The University of New England's Department of External Studies offers a wide range of subjects for external study, leading to the degree of Bachelor of Arts and the Diploma in Education. External students must attend short annual residential schools of instruction in their subjects, usually held at the university.

4. Research.—The research activities of the universities have been greatly stimulated over recent years by the interest and assistance of the Commonwealth and State Governments, of government departments and instrumentalities such as the Commonwealth Bank and C.S.I.R.O., of private foundations, both oversea and Australian, such as the Nuffield-Foundation, the Carnegie Corporation and the Water Research Foundation of Australia, and of industrial undertakings such as General Motors Holdens Limited and Broken Hill Proprietary Company Ltd.

The Water Research Foundation of Australia, founded in 1956 and supported by pastoral and industrial concerns and private individuals, has provided funds for research by Australian universities into the supply, use, control and disposal of water in Australia. In 1957, the New South Wales University of Technology commenced a Hunter Valley research project as part of the Hunter Valley Research Foundation's programme.

During the year the universities continued research projects in a number of fields, including education, anthropology, psychology, medicine and nuclear physics. Grants have been made by the Commonwealth Government, through the Australian Atomic Energy Commission, to a number of Australian universities for nuclear research.

The further expansion of teaching and research in various agricultural and veterinary fields was assisted by the annual and special grants of the Commonwealth Bank's Rural Credits Development Fund to several Australian universities. The C.S.I.R.O. also contributed to research in these and other fields.

- 5. Services.—The various types of community services provided by the universities are outlined in Official Year Book No. 42 (pp. 476-7). A noteworthy example of service to agriculture and industry is the Tractor Research Station at Werribee, Victoria, which was opened in 1957, as a result of an agreement between the Commonwealth, the States and the University of Melbourne. The station is conducted by the university and carries out tests for manufacturers on new tractors and other agricultural equipment.
- 6. The Commonwealth and the Universities.—(i) General. Before 1939, Commonwealth interest in research projects carried out by or in collaboration with the universities led to the granting of increasing sums for this purpose. During and after the 1939-45 War, the Commonwealth extended assistance to university students, at first with the object of increasing the number of highly qualified people available for the war effort, then with the object of rehabilitating ex-servicemen and finally as a social service of benefit to the community. Since 1951, the Commonwealth has made special grants to the States for payment to universities, and in addition has, through the Commonwealth Scholarship Scheme, given direct assistance to university students on a wide scale.
- (ii) Grants for Research. The Commonwealth had given some support to research prior to 1926, chiefly through the Institute of Science and Industry, but the amount spent did not exceed £25,000 per annum. In 1926, the Institute was replaced by the Council for Scientific and Industrial Research (known since 1949 as the Commonwealth Scientific and Industrial Research Organization) with an annual appropriation of £250,000. Further particulars concerning this organization may be found in Chapter XXX, Miscellaneous, §7. It has since worked in close association with the universities. Both fundamental and applied research have at times occupied the attention of both the universities and the Commonwealth Scientific and Industrial Research Organization, but in general, the preliminary training of graduates in research work has been left to the universities.

In 1936, the Commonwealth Government made a grant of £30,000 a year for five years to Australian universities for research in the physical and biological sciences. When this grant was reviewed in 1941, a slight increase was made in funds available for research in the physical and biological sciences and an amount of £9,000 added for research in the social sciences. The combined figure rose over the years to £110,000 in 1950 and was subsequently absorbed in the larger general grant which was then made available by the Commonwealth to the States for universities.

(iii) Assistance to Students. Up to 1945, the Universities Commission functioned under National Security Regulations but in that year it was established on a permanent basis under the Education Act. After the 1939-45 War, the Commission continued to provide financial assistance to students under an interim scheme until 1951, when the interim scheme was superseded by the Commonwealth Scholarship Scheme.

Under this scheme, 3,000 scholarships are allocated annually to the States on a population basis. These scholarships are tenable at universities and other approved institutions. Awards are made on merit and all successful applicants have their fees paid. In addition, scholarship holders may be paid a living allowance subject to a means test. At 31st October, 1957, there were 9,036 scholars in training at universities and 833 at other institutions.

The Universities Commission also provides for the training at universities and similar institutions of ex-service personnel and war widows under the Reconstruction Training Scheme, the Korea and Malaya Training Scheme and the Disabled Members' and Widows' Training Scheme. A detailed description of the Reconstruction Training Scheme was given on page 240 of Official Year Book No. 39. For the purpose of reconstruction training, the Commonwealth Government made available to the universities approximately £1 million for buildings and £500,000 for equipment, and, in addition to paying the full tuition fees for reconstruction trainees, paid the universities an amount to cover the full cost of their training.

At 30th June, 1957, 25,253 full-time and 19,547 part-time students had been selected for university or university-type training under the Reconstruction Training Scheme and 21,429 had successfully completed their courses. At the same date, 22 full-time and 26 part-time students were taking university or university-type training under the Korea and Malaya Training Scheme and 27 had completed their courses. Eight students were taking university or university-type courses under the Disabled Members' and Widows' Training. Scheme and five had completed their courses.

(iv) Commonwealth Grants to the States for University Purposes. Following a report submitted by a committee of inquiry appointed to report on university finances and requirements, the Commonwealth passed the States Grants (Universities) Acts in 1951, 1953, 1955, 1956 and 1957 to enable grants to be made to the States for their universities.

The States Grants (Universities) Act No. 7 of 1957 (assented to 15th April, 1957) operated with effect from 1st January, 1957. The main provisions of the act are summarized below:-

Section 4 (1).—If the sum of the fees and State grants received by a university during the years 1957 and 1958 exceeds the amount specified in column 2 of the table below, the grant to the State for the years 1957 and 1958 for that university is:-

(a) an amount equal to one-third of the excess, and

(b) the amount shown in column 3 of the table.

Section 4 (2).—The maximum amount payable under Section 4 (1) is shown in column 4. Section 5 (1).—The State will:—

- (a) in the year in which payment is received pay to the university concerned an amount equal to the grant received for that university; and
- (b) ensure that the amount shown in column 5 is applied towards the teaching and administrative costs of the residential colleges of the university and that the remainder of the grant is used for expenditure, not being capital expenditure, for university purposes.

<sup>(</sup>v) Committee on Australian Universities. In 1957, the Prime Minister appointed a committee to investigate the problems of Australian universities. The committee was given wide terms of reference. Among other things, it was asked to consider the role of the university in the Australian community, the extension and co-ordination of university facilities, technological education at university level, the financial needs of universities and appropriate means of providing for these needs, and the Commonwealth Scholarship Scheme.

The report of the Committee (Murray Committee)\* was presented to Parliament in November, 1957.

In accepting the principal recommendations of the committee the Government offered considerable additional assistance to the States for the recurrent expenses of their universities and has offered assistance to meet the capital needs of the universities for new buildings

<sup>\*</sup> Report of the Committee on Australian Universities (Canberra, Commonwealth Government Printer, 1957.)

and equipment. It also stated that it would establish a permanent Australian Universities Committee.

The Government also accepted certain recommendations related to the Australian National University and the Canberra University College.

The Australian National University and the Canberra University College, which are not covered by the States Grants (Universities) Acts, receive grants direct from the Commonwealth Government.

7. Teaching and Research Staff.—The following table shows particulars of the teaching and research staff of Australian universities during 1956:—

UNIVERSITIES: TEACHING AND RESEARCH STAFF, 1956.

<sup>(</sup>a) Adjustment made for students enrolled for more than one course.

9. University Income for General Activities.—The income of the universities is derived principally from State and Commonwealth Government grants, students' fees, and income from private foundations. From all sources other than new bequests, the income during 1956 for general university functions was as shown in the table below. In South Australia, Government grants and income from private foundations include amounts in respect of the Waite Agricultural Research Institute.

<sup>(</sup>a) Includes degrees conferred on students of the Canberra University College. (b) Since separate degrees for M.B. and B.S. are conferred by the University of Sydney, the number of persons who qualify at that University to practise is not more than half the number of degrees conferred.

#### § 9. Further Education.

- 1. General.—Beyond the schools, colleges and universities, there are agencies engaged in less direct educational work which cannot be readily assessed and described. Among them are the media of mass communication (press, film and radio) which are powerful educational forces—whether they are used specifically to disseminate information such as new agricultural techniques or preventive health measures, or, on the other hand, in a much more general way to exert a powerful influence on the cultural level of the population. There are also bodies and institutions such as the adult education authorities, libraries, art galleries and museums which aim at catering for the educational and cultural needs of the general public.
- 2. Adult Education.—(i) General. The term "adult education" is used in Australia to refer in the main to non-vocational educational and cultural activities for adults provided by some of the universities and by various adult education authorities, which vary in form from State to State.

The Workers' Educational Association movement, which has for its object the bringing of the universities into closer relationship with the community in general, and providing for the higher education of the workers in civic and cultural subjects, has been active in Australia. In 1913, associations were formed in all the Australian States. In four States the associations have been superseded by Adult Education Boards or Councils—set up by the State Governments in Victoria, Queensland and Tasmania and by the university in Western Australia. In the other two States, New South Wales and South Australia, the associations continue to co-operate with the universities in their extension work and are given direct grants by the governments concerned.

While the choice of courses offered by these bodies is naturally more limited in the smaller States, a variety of topics including social studies and current affairs, language and literature, drama, music, arts and crafts are available in all States.

- (ii) New South Wales: (a) Adult Education Advisory Board.—State Government grants for adult education are allocated by the Adult Education Advisory Board. Grants are made to the University of Sydney (Department of Tutorial Classes), the Workers' Educational Association, the University of New England (Department of Adult Education), the Public Library of N.S.W. (Adult Education Section) and the Arts Council of Australia (N.S.W. Division).
- (b) University of Sydney.—The Extension Board of the University of Sydney provides lectures and short courses in city and country.

In 1914, the Department of Tutorial Classes was established to provide classes and study groups along the lines of similar work in England. Its activities include the provision of tutorial classes in a wide variety of subjects, discussion groups and "kits" to serve the needs of country districts and people who cannot be catered for by tutorial classes, and publication of the fortnightly \*Current Affairs Bulletin\*. This publication, begun in 1942 and produced for four years by the Australian Army Education Service, was recommenced in 1947 as a civilian and service publication by the Commonwealth Office of Education. At the beginning of 1952, the Department of Tutorial Classes took over the full responsibility for the bulletin. It receives an annual grant from the Commonwealth Government for this purpose.

In 1956, there were 138 tutorial classes (91 in the metropolitan area and 47 in the country) with a total enrolment of 3,792, 138 discussion groups (76 in the metropolitan area, 62 in the country) with a total enrolment of 2,343, and 69 kits groups with an estimated membership of 1,100, who studied a total of 74 kits.

The Department works in conjunction with the Workers' Educational Association through the Joint Committee of Tutorial Classes, appointed by the university senate.

(c) Workers' Educational Association.—In addition to co-operating with the Department of Tutorial Classes in organizing certain classes and groups, the Association itself provides classes in a wide variety of fields. It publishes Highway, a bi-monthly journal of adult education and maintains a property near Sydney where short residential schools are held throughout the year.

In 1956, the Association ran 34 classes in the metropolitan area and Newcastle, for which there were 2.056 enrolments.

- (d) University of New England.—When the New England University College became an autonomous university in 1954, its Department of Adult Education took over full responsibility for the activities formerly undertaken by it on behalf of the Department of Tutorial Classes of the University of Sydney. It brings university extension activities to the people of northern New South Wales and conducts classes in arts and social sciences in towns throughout this region. Short residential courses are held on topics of interest to primary producers in the area.
- (e) Public Library of New South Wales.—The Public Library's Adult Education Section provides an adult education library service for all classes and groups conducted by the Department of Tutorial Classes of the University of Sydney, the Workers' Educational Association, and the Department of Adult Education of the University of New England.
- (f) Arts Council.—The New South Wales Division of the Arts Council of Australia provides a mobile theatre unit and organizes touring companies in ballet, opera and plays to country towns. Musicians provide some short lecture courses in the city.
- (g) Education Department.—The New South Wales Education Department provides evening colleges, housed in its schools and staffed by trained teachers, which provide non-vocational courses in a wide variety of crafts, dramatic and musical activities. Adults may prepare for the Intermediate and Matriculation examinations at certain of these colleges.
- (iii) Victoria.—The Council of Adult Education is a government instrumentality established by the Adult Education Act 1946. Its aims are to stimulate adult education in Victoria and to encourage voluntary organizations and associations by giving them advice and assistance. Its activities include a variety of classes (approximately 60 were available in 1956) on topics ranging from social studies, psychology, language and literature, to crafts, music, drama, travel and deportment, and usually lasting from 10 to 20 weeks. An annual 10-day summer school is another important activity. The Council publishes a monthly bulletin, C.A.E. Newsletter and a quarterly journal, Adult Education. Its group service assists and provides programme material for the discussion groups formed by organizations and individuals throughout the State. In 1955-56, there were 4,750 enrolments for classes and 2,200 individual enrolments for 193 discussion groups.

A recent development of importance is the extension of the council's activities, including classes and discussion groups, to the prisons, as part of a general plan for penal reform in Victoria.

Through its Community Arts Service, the Council organizes tours by musicians and by theatrical and other companies in country towns which otherwise would have no opportunity of seeing such performances. It provides an advisory service to musical societies and cooperates with the National Gallery of Victoria in the organization of travelling art exhibitions.

The council's income is derived mainly from a government grant, but also from student fees and Community Arts Service performances.

(iv) Queensland.—The Queensland Board of Adult Education was constituted in 1944 and is responsible under the Minister for Education for the provision of adult education facilities throughout the State. Under the executive officer of the Board, the Supervisor, are five district officers, based in large country towns, who are responsible for organizing activities in country areas.

The cost of the programme is borne by the State Government and admission to all courses is free. Activities include lectures, group meetings on a variety of topics, generally short-term but some of which extend over a full year, and film screenings. Library and film services are provided for adult education groups.

In 1956, enrolments in classes totalled 2,140. Some form of adult education activity was available in almost 170 centres.

(v) South Australia.—Since 1917, the University of Adelaide, through the Joint Committee for Tutorial Classes, has provided each year in the metropolitan area a series of tutorial classes, lecture classes and study circles on a wide range of subjects of cultural and current interest. Fees are paid direct to the Workers' Educational Association, which organizes these classes. The Joint Committee extends its activities into the larger country centres by sending art exhibitions and plays on tour, lending boxes of books and arranging lectures and film screenings.

The Education Department also caters for adults in country towns by providing evening classes, particularly in arts and crafts, at adult education centres.

Adult education in South Australia in expanding. In 1956, the university appointed a director of adult education, who took up duty in 1957. Annual governmental grants for adult education activities are to be increased.

(vi) Western Australia.—Adult education in Western Australia is organized by the Adult Education Board, established in 1928 under the terms of the statutes of the University of Western Australia. The board has a considerable degree of autonomy. Its executive officer is the Director of Adult Education.

The board conducts lecture classes in the city and in a few suburban centres. Twentyone classes were held in 1956, with a total enrolment of 800. It sponsors musical and dramatic performances by outstanding artists both in the city and country, and arranges for screenings of foreign films. Its library provides a box scheme for discussion groups, of which there were some 60 scattered throughout the State in 1956.

The board holds an annual summer school in January, coinciding with the Festival of

Perth, for the inauguration of which it was largely responsible.

The board's finance is derived from university grants, while many of its activities are self-supporting. The State Government makes grants for the board's work in country areas.

(vii) Tasmania. Some form of adult education has existed since the formation in 1913 of a Workers' Educational Association, which worked in conjunction with the University of Tasmania for a number of years, receiving a grant through the university, which had a Director of Tutorial Classes. Later the grant was paid direct to the Association by the Government and the university's tutorial department ceased to exist. In 1948, the Adult Education Act was passed providing for the formation of an Adult Education Board whose functions are to plan and develop adult education in Tasmania and to assist other bodies actively engaged in adult education.

The executive officer of the board is the Director of Adult Education, at Hobart. Activities are organized on a regional basis by organizers based in Hobart, Launceston and

three large country centres.

- The board organizes classes of ten weeks' duration on a wide range of subjects. In 1955-56, 640 classes with an enrolment of 7,600 were held throughout the State. It sponsors special lectures, film screenings and art exhibitions, recitals of music and dramatic performances, in both city and country areas. Its income is derived from a State Government grant and from student fees.
- 3. The New Education Fellowship.—The New Education Fellowship is a world organization of parents, educators, and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State. Its Australia-wide journal New Horizons in Education is published quarterly.
- 4. Migrant Education.—The Commonwealth Government's post-war immigration policy has brought to Australia some thousands of immigrants with little or no knowledge of English. To assist their assimilation into the Australian community, a system of migrant education has been developed to teach them English and to give them information about Australia.

Before arriving in Australia, non-English-speaking migrants are taught English by shipboard education officers.

In Australia, free evening classes are arranged by State Education Departments wherever a group of nine or more migrants in country areas, or twelve or more migrants in city areas, wish to learn English. Should migrants find it impossible to attend classes, they may apply, through State Education Departments, for a free correspondence course in English. In addition, English lessons are broadcast regularly by the Australian Broadcasting Commission. The Commonwealth Office of Education provides technical advice on all aspects of migrant education and is responsible for the preparation of teaching materials.

In July, 1957, 17,780 migrants were enrolled in evening classes and 13,500 were taking correspondence lessons. At the same time, 15,580 migrants were receiving the monthly booklet accompanying the radio lessons.

#### § 10. Libraries.

- 1. General.—The Munn-Pitt Report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is seen in the rapid development of libraries in all States, all of which have now passed legislation to increase library services, and in the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia, its functions now including the promotion and improvement of libraries and library services. The Association conducts annual examinations for which students are prepared by courses of instruction in all States. Formal library schools exist in the National Library, Canberra, and the Public Libraries at Sydney and Melbourne.
- 2. Commonwealth.—(i) Commonwealth National Library. This library grew directly from the Library of the Commonwealth Parliament established in 1901. Whilst providing, as a primary responsibility, for the general reading and reference needs of the Members

Libraries. 477

of Parliament, it has developed into a central source of information for the government and its departments and other agencies. The close association of the National Library with the central government follows the pattern of the Library of Congress at Washington, U.S.A. Like the latter, it has also inherited the basic elements of the national library concept of the older countries of Europe: that a national library is the proper place to collect the national literature systematically and to make it known and available for use, and that it is a place to which scholars may turn for what is most significant in the literature of other countries.

Through its Legislative Reference Branch the National Library aims to provide for the Parliament and the government an up-to-date reservoir of fact and opinion on public issues both domestic and foreign. In addition to assembling material, the staff compiles bibliographics and reference guides to the literature on special subjects and in 1957 handled 1,100 inquiries involving special search. A further service to the government flows from the activities of the Archives Division, a central element in the government machinery for the management and preservation of its records. Archival repositories for Commonwealth records are maintained in Canberra, Sydney, Melbourne, Brisbane, Adelaide and Perth.

As well as the governmental record of national life and development, the National Library systematically collects and preserves Australian books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving-picture films and sound recordings. It is assisted by the Copyright Act 1912–1950, which requires one copy of all material printed in Australia to be deposited in the Library and has been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews ornithological collection in 1940, and the Ferguson sociological collection now being transferred to the Library. A special feature of the Library's Australian work is the copying on microfilm in association with the Public Library of New South Wales of all important unique material overseas relating to Australia, including more than a million pages in the Public Record Office in London.

The Library fulfils its obligations to make Australian publications widely known, both at home and abroad, through a series of select lists which include Australian Public Affairs Information Service (monthly with an annual cumulation) and Australian Books (annual) and full bibliographies in the monthly Australian Government Publications and Books Published in Australia, cumulated as the Annual Catalogue of Australian Publications. Collections of Australian books are maintained by the library at all posts at which Australia is officially represented abroad. In London and New York, the National Library maintains and staffs Australian Reference Libraries.

The Library is the central library of documentary and educational films and the nontheatrical film-distributing agency in Australia for the Australian National Film Board, and its film collection contains nearly 6,000 titles, together with Australian historical films and a great number of film strips. Special efforts are being made to discover and preserve samples of early Australian film-making.

Local library services are provided by the Library for the residents of the Australian Capital Territory, the Northern Territory, the Territory of Papua and New Guinea, Norfolk Island and Nauru.

The National Library's collections contain nearly 500,000 volumes, together with very extensive holdings of pamphlets, pictures, prints, maps, manuscripts and microfilm, and about 5½ million feet of moving-picture films. Its permanent and temporary holdings of archives were, in 1955, approximately 100,000 cubic feet. Special features of the Library's book collections are its strong holdings of Australiana, materials relating to the Pacific area and to East and South-east Asia, the publications of foreign governments and of international organizations, works in the social sciences and in particular in political theory and economics.

- (ii) Patent Office Library. The Library of the Commonwealth Patent Office, Canberra, contains approximately 8,500 books and a wide variety of periodicals and other literature relating to pure and applied science, industrial technology and the industrial property (patent, trade mark, design and copyright) laws and practice of most countries. Patent specifications of inventions are received from the principal countries of the world; present holdings are more than 6,000,000.
- (iii) The Australian War Memorial Library. In the War Memorial library are housed the documentary and pictorial records of Australia's fighting services, together with collections covering the war in Korea, 1950-53, and earlier wars in which Australian troops participated—Sudan, 1885, South Africa, 1899-1902 and the Boxer Rebellion in China, 1900-01. Books, periodicals and other records covering contemporary trends and events in the fields of military history and military science are constantly being added.

The printed records section contains approximately 55,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings of war leaders, personalities and events, war posters and postage stamps. Many personal collections by distinguished soldiers and historical documents relating to the wars have also been placed in the Memorial's custody for preservation.

Written records comprise correspondence files of headquarters and units of both world wars, and the original war diaries compiled from day to day by each unit during its service.

The collection of official war photographs covering the 1914-18, 1939-45 and Korean Wars numbers over 250,000, and a collection of official motion picture film depicts Australia at war.

Facilities for public research are not yet fully developed, but all requests for information are met where practicable.

(iv) Other Departmental Libraries. The following Commonwealth authorities in Canberra have specialized collections in their own fields, and in addition draw largely on the National Library:—Attorney-General's Department, Commonwealth Bureau of Census and Statistics, Commonwealth Forestry and Timber Bureau, Department of Trade; Department of Primary Industry, Department of External Affairs, Department of Territories, Department of Health, Department of National Development, Commonwealth Public Service Board, Department of Customs and Excise, Department of Works, and News and Information Bureau of the Department of the Interior.

The Department of Labour and National Service has its main library in Melbourne, and branch libraries in Sydney and Adelaide. Other departmental libraries in Melbourne are those of the Department of Air, Department of Defence, Department of Social Services, Repatriation Commission and Postmaster-General's Department. The library of the Commonwealth Office of Education is in Sydney.

(v) Commonwealth Scientific and Industrial Research Organization. The head office in East Melbourne maintains a library covering all branches of science except the medical sciences. In addition, each division and section of the organization has its own library; together, these form a series of specialist libraries covering such subjects as food preservation, forest products, industrial chemistry and physics, fisheries, agriculture, animal husbandry; and building research. There are 34 such branches, each with its own staff, and also smaller collections under the care of research officers aided by visiting librarians. The head office library maintains a union catalogue of the holdings of all C.S.I.R.O. libraries, and small union catalogues are being developed among groups of branch libraries with similan interests. The collections are particularly strong in the publications of oversea scientific and technical research institutions, with many of which exchange relations exist. The general public may have access to these materials for reference purposes. The head office library, and most of the larger branches, have photocopying facilities. This service is normally for the use of officers of the organization itself, but where the organization holds a publication not available elsewhere in Australia photocopies will be made on request.

3. States.—(i) Metropolitan Public Libraries. In each of the capital cities, there is a well-equipped public library, the libraries in Melbourne and Sydney especially comparing very favourably with similiar institutions elsewhere in the world. The following statement gives the number of volumes in the public library of each capital city at 30th June, 1956:—

#### METROPOLITAN PUBLIC LIBRARIES, 30th JUNE, 1956.

				Nur				
City.		Reference Branch.		Ordinary Lending Branch.	Country Lending Branch.	Total.		
Canberra(a)		 	-	500,000	ļ	(b)		500,000
Sydney		 	(c)	516,174	(d)	161,452	(e)	677,626
Melbourne		 	` '	636,127	102,341	43,413	1 '	781,881
Brisbane		 		163,980		1	1	163,980
Adelaide		 		179,498	(f) 48,617	54,235		282,350
Perth		 	1	200,000				200,000
Hobart		 		52,892	(g) 125,438	83,963		262,293
Darwin		 	1	550		(h) 21,550	1	22,100

<sup>(</sup>a) Commonwealth National Library, including Parliamentary Section. (b) Books are lent to libraries or students throughout Australia whenever necessary for research work. (c) Includes 159,750 volumes in the Mitchell Library. (d) The maintenance and control of the ordinary lending branch of the Public Library at Sydney were transferred in 1908 to the Municipal Council. In 1956; octs in this library numbered 146,467. (e) Includes 10,000 volumes in the Children's Branch. (g) Includes 94,723 volumes in the Children's Branch. (h) Ordinary and Country Lending Branch and 1,800 volumes in the Children's Branch.

LIBRARIES. 479

(ii) New South Wales. The Free Library Movement in New South Wales, founded for the establishment of a system of public libraries on the basis suggested in the Munn-Pitt Report of 1935, helped to pave the way for the Library Act 1939, which was fully proclaimed as from 1st January, 1944. Of the 150 councils which have adopted the Library Act, 128 have put their adoption into effect. During 1955-56, they spent on their libraries £715,582, including £145,903 received in subsidy. There are 154 libraries of which seven are in Sydney, 30 in suburbs of Sydney, five in Newcastle and 112 in country municipalities and shires. There are also 12 bookmobiles, of which two are in Sydney, five in the suburbs of Sydney and five in country municipalities and shires. These libraries contain 1,468,000 volumes.

New South Wales departmental libraries are staffed by officers seconded from the State Library, which also provides a central cataloguing service for certain municipal and shire libraries constituted under the 1939 Act. The State Library manages the libraries of the University Tutorial Classes and the Workers' Educational Association.

The Country Circulation Department forwards books on loan to State schools, to municipal and shire libraries and to individual students. During 1956-57, 104,769 books were lent to small State schools, and 34,231 to country libraries, while 30,580 reference works were lent to individual country students and to libraries to satisfy special requests.

The State Library includes a general reference department of 355,000 volumes together with the Shakespeare Tercentenary Memorial Library, and the Mitchell and Dixson Libraries and Galleries which are mainly devoted to Australian and Pacific material. The Mitchell Library, of more than 60,000 volumes and pamphlets and 300 paintings, was bequeathed to the trustees of the Public Library in 1907 by Mr. D. S. Mitchell, together with an endowment of £70,000. There are now 163,000 volumes in the library, in addition to valuable manuscripts, maps and other material. In 1929, Sir William Dixson gave a collection of historical pictures then valued at £25,000. These were subsequently added to and, at his death in 1952, Sir William bequeathed the whole of his collection of books, manuscripts, pictures and other material together with an endowment of more than £113,000, mainly for the printing or reprinting of historical documents relating to Australia and the Pacific.

The State Library also takes care of the State archives.

Other important libraries in New South Wales are the Australian Museum, 31,749 volumes; Teachers' Colleges, 155,061; Technical Education Branch, 62,319; Railways Institute, 146,499; Government Transport Institute, 46,726; Cooper Library of the New South Wales Public School Teachers' Federation, 22,000; and the Library at the National Herbarium, 8,100 volumes. At 30th June, 1957, the Parliamentary Library contained 122,815 volumes.

(iii) Victoria. Until the establishment of the Free Library Service Board in 1947, the only public library facilities available in Victoria (apart from those of the State Public Library and one or two Metropolitan Municipal Libraries) were those offered by about 200 Mechanics' Institute Libraries situated in country areas all over the State. The Board's policy has been to replace these services with modern public libraries controlled by local Municipal Councils and subsidized by the Board. Since the Board's inception, 77 municipalities, comprising 1,465,000 of the State's population, have established libraries. Of these, 19 are in the city, serving 980,000 people, and 58 in the country, serving 485,000 people. The amount of £181,600 was paid to the Councils in library subsidy for the year 1956-57 and a total of £394,824 was expended in Municipal Library Service for the same year. There are 758,318 books available to the communities in which libraries are established and combined circulation figures were 4,608,195 as at 30th September, 1956.

A feature of the services provided in the country is the number of co-operative or regional library groups now being developed. These services, of which there are twelve, comprising a total of 40 Councils, consist of groups of Councils which pool their financial resources, book-stocks and trained staff, in order to provide more comprehensive, efficient library facilities.

Approximately 140 Mechanics' Institute Libraries are still in existence in country areas. In 1956, 64 of them shared a grant of £2,000.

(iv) Queensland. The Library Board of Queensland was established in 1945 under the provisions of the Libraries Act of 1943. Its duty is to attain the fullest co-operation and improvement of the library facilities of the State, with the object of placing such facilities on a sound basis for the benefit and educational improvement of the citizens generally. The Board consists of six members with the State Librarian as ex officio member and secretary.

One of the Board's functions is the control and management of the Public Library of Queensland. Its policy is to build up the main collection of the Library, being as it is the State's reference centre.

The Country Extension Service, which is accommodated at the Public Library of Queensland, lends books of non-fiction free to adults and children residing outside the metropolitan area and to municipal libraries in areas of low population.

The Oxley Memorial Library was established in connexion with the Brisbane Centenary celebrations in 1923, and since 1946 has been administered as a department of the Public Library of Queensland and the collection has been kept segregated. Its object is to collect books, manuscripts, pamphlets and other graphic material relating to the history and literature of Australia and of Queensland in particular, and to provide facilities for research students in Queensland literature and history.

The holdings of the Public Library of Queensland and its extension services in 1955-56 were:—Main Reference Collection, 106,278 volumes and 23,114 maps and pamphlets; Country Extension Service, 39,397 volumes; Oxley Memorial Library, 18,305 volumes and 6,433 maps, pamphlets and miscellaneous items. Regarding library development throughout the State, the policy of the Library Board of Queensland is to encourage local authorities to conduct library services as a function of local government. In 1955-56, 36 local authorities were conducting 47 library services and 29 others indicated that they would do so in the near future. There were 22 libraries in Queensland free to adults and 27 free to children.

The South Western Regional Library Service was established by the State Government in 1955, as a result of co-operation between seven local authorities. By 30th June, 1956, five libraries had been opened.

The Brisbane City Council has established nine libraries of which five have separate children's collections.

The library of the Parliament of Queensland was established in 1860. At 30th June, 1957, the library held 83,791 books and pamphlets, consisting of official publications and books devoted largely to history, the social sciences, biography and literature. The library is entitled to a copy of every book published in Queensland.

(v) South Australia. In the reference department of the Public Library of South Australia there are about 179,000 volumes, most of which may be borrowed. Over 3,000 periodicals are filed, and the collection of newspapers includes every newspaper printed in South Australia. There are 36,400 volumes in the lending department available to persons living in the metropolitan area, and the Country Lending Service has 54,200 volumes, of which more than half are suitable for children.

The Research Service specializes in scientific and technical inquiries, and supplements the resources of the Public Library by borrowing from other libraries and by obtaining microfilm copies of material not available locally. It has an extensive collection of trade catalogues.

The library of the Parliament of South Australia held approximately 65,000 volumes at 31st December, 1956.

The Institutes' Association in 1956 comprised 223 suburban and country libraries with 743,809 volumes.

(vi) Western Australia. In 1955, the Library Board of Western Australia was made responsible for all public library services throughout the State to which the State Government contributes funds.

The Board has the following major functions:-

- (a) To encourage local authorities throughout the State to establish public libraries and to provide as a State subsidy all books and bibliographical services necessary for such libraries when established;
- (b) To administer for a limited period a former scheme of monetary grants of up to £50 per annum to local authorities which maintain public libraries;
- (c) To administer the State Library;
- (d) To advise the Government on all matters relating to libraries;

(e) To provide for the training of librarians.

Local public libraries are subsidized on a £1 for £1 basis, the local authority providing accommodation and staffing and the Board all books and related services. The Board provides at least one volume per head of the population. All books throughout the State are available at any library on request to the Board. All cataloguing is done by the Board. The first library under this scheme was opened in August, 1954. By 30th June, 1957, 23 libraries had been established.

Prior to the establishment of the Library Board in 1944, the government appointed a Country Free Lending Libraries Committee to make small grants to local authorities for library purposes. That committee has now been merged with the Board. Its activities will cease in about 1962, and will be replaced by the full service of the Board.

The State Library, established in 1887, is the reference division of the Library Service of Western Australia. In addition to providing the normal facilities of a reference library for the metropolitan area, it extends its service throughout the State through local public libraries. It is divided into four subject departments as follows:

J. S. Battye Library of West Australian History. Library of Business, Science and Technology. Library of Social Sciences, Philosophy and Religion.

Library of Literature and the Arts.

The State Bibliographical Centre is housed at the State Library and there is also a Commercial Information Centre. The State archives are maintained by the State Library and managed by the staff of the Battye Library. The library is fully equipped with microfilms and photocopy apparatus.

The bookstock of the Board at 30th June, 1957, was approximately:

Lending library services (including books in public libraries): 80,000 volumes.

State Library: 200,000 bound volumes.

The University of Western Australia, through its Adult Education Board, manages the Adult Education Library of some 12,000 volumes of general reading and fiction. Books are sent to country readers by post.

There are some 80 special libraries in government departments and industrial firms. A union catalogue of periodicals currently received in the libraries of all types in the metropolitan area has recently been published by the Library Board of Western Australia.

(vii) Tasmania. The Tasmanian Library Board, constituted in 1944, is responsible for administering the State library headquarters in Hobart, for the extension of library services throughout the State and for the control of State aid for libraries. State aid to municipalities is provided in the form of books of a value equal to the amount of library rates collected. The total cost of library services to the State during 1956-57 amounted to £95,162.

The Tasmanian Library Board provides lending and reference services for the people of Hobart and operates a reference service for people throughout the State. In addition, it conducts screenings of documentary films, recitals of recorded music, lectures, library weeks in country centres, puppetry demonstrations, etc.

The Parliamentary Library works in close collaboration with the State Library, which provides a reference officer to serve members during session. It catalogues all new books added to the library and supplies recreational reading.

4. University Libraries.—The libraries of the Australian universities provide material not only for the education of graduates and undergraduates, but also for scholars, research workers and practical investigators all over the continent. Much of the material they contain is not available elsewhere, for although in most cases smaller, they are in many directions more highly specialized than the public libraries. They lend to one another and to State and private institutions as well as to individual investigators. Each of them is governed by a librarian, who is responsible as a rule to an executive sub-committee and a committee which is practically co-extensive with the professional staff. In size, the library of the University of Sydney is the fourth library in Australia, and the libraries of the Universities of Melbourne and Adelaide are respectively seventh and eighth. The following table shows the sizes and rates of growth and expenditure of the Australian university libraries; borrowing statistics are not shown, as they differ too widely to be comparable without considerable explanation.

UNIVERSITY LIBRARIES, 1956.

t	niver	sity or College.			Volumes.	Accessions during year.	Expenditure.
							£

The library of the Australian National University was founded in 1948. At the end of 1957, stock comprised about 130,000 volumes, including a collection in oriental languages. The library is designed to serve a staff and students of a post-graduate institution but its resources are freely available to all serious readers. It specializes in the fields of the physical and medical sciences, excluding clinical works. In the social sciences, it aims to provide a good working collection while giving consideration to the holdings of the Commonwealth National Library. It possesses significant collections in anthropology, linguistics, mathematics and mathematical statistics.

The first books were bought for the library of the University of Sydney as early as 1851. Only since 1910, however, has it possessed a building of its own; previously it had been housed in the main building. It is named after the principal benefactor, Thomas Fisher, who, in 1885, bequeathed to it the sum of £30,000. It contains an up-to-date bookstack of glass and steel and a fine reading room in which, since the beginning of 1941, about 18,000 volumes of the collection have been made available on open access shelves. In addition, members of the teaching staff and certain classes of undergraduates are admitted to the bookstacks and all readers are encouraged to borrow freely. The library possesses a large number of periodicals, especially scientific, valuable collections of seventeenth-century pamphlets and Elizabethan translations from the classics, and an extensive collection of Australian literature. Besides medical and law branches, there are a number of departmental libraries. The total holding at the 30th June, 1957, was 407,163 volumes, including more than 15,000 books in Chinese acquired during the previous two years.

Early in 1854, the University of Melbourne made its first allocation for books, but the library was housed in temporary quarters for some time. In recent years, the university authorities have treated the library generously, and there have been some welcome benefactions, but accommodation is insufficient and a new library building is a pressing need. The W. L. Baillieu Trust made available the first instalments of a £100,000 gift for building purposes, which have been followed by subsequent gifts and substantial grants from the State government, with the result that it has been possible to begin the construction of the new library at an estimated cost of £690,000. Most of the books are accessible on open shelves, and though the library is intended primarily for reference purposes, borrowing, except of text-books and certain valuable volumes, is made as easy as possible. The resources of the library are also extensively used on inter-library loan by industries and other organizations throughout Australia. The library is administered from the centrally situated general library. There is a large medical branch library specially rich in periodicals, and smaller branch libraries in various other departments. At the end of 1956, it contained 225,183 volumes.

The library of the University of Queensland was founded in 1911. The main library is now in its own building in the new University at St. Lucia, and there are a considerable number of departmental libraries. All books are in open access and most are available for borrowing. At the end of 1957, the library contained more than 155,000 volumes. The main library includes a special collection of material relating to the history, development and culture of the countries surrounding the Pacific Ocean.

The Adelaide University library bears the title of its original benefactor, Robert Barr Smith, who, with members of his family in and after 1892, gave the university about £50,000 for the library. Some 25,000 volumes are shelved in the reading room and are available to the ordinary student. Up-to-date steel bookstacks hold about 150,000 volumes. Borrowing facilities are available to all matriculated students, to country students and to graduates. There are departmental libraries for medicine, law and music. The British Medical Association (South Australian Branch) makes an annual contribution towards the maintenance of the medical library. In return, all its members enjoy borrowing privileges.

In the University of Western Australia, the first permanent library staff was not appointed until 1927. Provision for a permanent library was not possible when the university moved to its present site, and space and facilities have consequently been inadequate. The whole collection, consisting of about 140,000 volumes, is accessible on open shelves, and there are several departmental libraries. The library possesses a good range of periodicals, especially legal and scientific and is building up a useful collection of Australian literature. The medical library was opened in 1956.

Although the library of the University of Tasmania was founded in 1893, a full-time librarian was appointed for the first time at the end of 1945. From 1945 to 1956, the book stock almost doubled and now approaches 100,000 volumes. The library received about 2,000 periodicals in 1956. Since 1954, a Hobart Union List of Serials has been housed in and kept up to date by the university library, thus providing a major reference tool for all bibliographic inquiries in the State. At the end of 1957, the library contained 95,000 volumes

The New England University library was founded in 1938, and bears the name of its benefactor, Sir William Dixson. At the end of 1956, it contained 42,980 volumes, mainly on open shelves. In 1957, the library moved to its new temporary quarters which hold approximately 65,000 volumes on open access and seat 100 readers. Two basement areas are being developed to accommodate a bindery and a stack room for local records and additional books and periodicals. Microfilm and microcard readers are available.

The New South Wales University of Technology made its first allocation for books and periodicals in 1950, the publications being incorporated in the Library of the Sydney Technical College. In 1951, publications relating to professional diploma courses were transferred to the university but remained in the libraries of the Technical College where these courses were being conducted. Of the 70,640 volumes in the university's library at

Libraries. 483

December, 1956, 14,230 were in the university's library at Kensington, 19,400 in the library of the Newcastle University College, and the rest in the Technical College libraries. The university library is administered through a central unit at the Sydney Technical College Library which maintains a central catalogue of the holdings of all libraries other than that of the Newcastle University College. The university library is strong in current scientific and technical periodicals. Borrowing facilities are available to all students.

The Canberra University College library was established in 1938. In 1957, it contained 30,000 volumes, which are on open shelves.

- 5. Children's Libraries and School Libraries.—(i) New South Wales. Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents' and citizens' associations and partly by departmental subsidy. Secondary and central schools have trained teacher librarians.
- (ii) Victoria. Under the auspices of the Free Library Service Board, 78 municipal children's libraries have been, or are in the process of being, established as part of the library services provided by the councils concerned. All these libraries provide comprehensive modern children's book collections which are constantly being refreshed. An annual grant of £5,000, which is additional to the ordinary annual municipal library grant, is provided to assist these libraries. In addition, 14 independently controlled children's libraries shared in this grant in 1957.

The Education Department is making provision for the building of a library room in new schools. Where accommodation is available in existing schools, library furniture is provided free of cost to the schools and the government subsidises the purchase of books. In December, 1957, 270 schools had central libraries.

A scheme of circulating libraries for small schools, particularly in remote areas, has been operating for some years. Four hundred and fifty schools benefited from this scheme in 1956.

The Department has a Library Service Officer with a small staff to advise and assist schools in the establishment and organization of libraries. A one-year course for the training of teacher-librarians was established at Melbourne Teachers' College in 1955. Approximately 20 teachers are trained each year.

- (iii) Queensland. The purchase of books in State school libraries in Queensland is financed by school committees and parents' associations, with a subsidy from the Department of Public Instruction on a £1 for £1 basis. Teachers are given short courses in school library organization at the public library in Brisbane.
- (iv) South Australia. A Children's Library of 12,230 volumes is used by school classes and individual children living in the metropolitan area. Books of fiction are lent to children of fourteen years and over, while other books may be borrowed by children of any age.
- (v) Western Australia. The State Education Department makes library subsidies and grants to government schools for the purchase of non-fiction books.

All high schools are provided with a library room and furniture, and trained teacherlibrarians are appointed to them. Building plans do not provide for primary school libraries, but a number of the schools have set up central libraries when rooms have become available.

One-teacher and two-teacher schools are served by a travelling library and the Small Schools Fixed Library services. Under the Fixed Library Scheme permanent libraries of reference books and encyclopaedias were placed in each such school. Books to the value of £15 were added to each of these libraries annually from 1948 to 1954. From 1955, the grant for these books is to be made at three year intervals. The travelling library provides recreational reading and operates 350 boxes which are exchanged every three months. The government grants £500 per annum for this service, and the participating schools contribute the commission received from the Commonwealth Savings Bank for the teachers' services—about £170.

Children in isolated country areas are catered for by books sent out by the State Correspondence School's Library. The children are kept in touch with the library by means of radio talks and leaflets issued periodically.

(vi) Tasmania. The Lady Clark Memorial Children's Libraries, at the State Library, Hobart, aim to serve all children in Tasmania with books. At 30th June, 1957, 197 children's libraries and depots had been established.

Practically all State secondary schools in Tasmania have libraries, with full-time librarians in four of them. A Schools' Library Service gives a book service to schools and assists schools wishing to set up their own libraries. In 1956, the number of schools receiving service was 112 and the number of books issued was 8,923.

6. Special Libraries.—Before the 1939-45 War, the number of special libraries, apart from those maintained by government departments, was small, but during recent years

many manufacturing, commercial, research and other firms, as well as statutory bodies, have found it necessary to establish special libraries to serve their specialist or other staff. These libraries, which are most numerous in Sydney and Melbourne, are being increasingly staffed by trained librarians.

7. Microfilms.—The following libraries supply microfilm or photostat copies of material, usually at a small charge (the letter "P" signifies photostat supplied and "M" microfilm supplied):—Australian Capital Territory—Australian War Memorial (P), Commonwealth National Library (PM), C.S.I.R.O. (M); New South Wales—Metropolitan Water, Sewerage and Drainage Board (P), Public Library of New South Wales (M), Standards Association of Australia (P), School of Public Health and Tropical Medicine (M), Fisher Library, University of Sydney (PM); Victoria—Commonwealth Serum Laboratories (P), Technical Information Section, Munitions Supply Laboratories (PM), Public Library of Victoria (M), Standards Association of Australia (Melbourne Branch) (P), University of Melbourne (PM), C.S.I.R.O. (M); Queensland—Public Library (P); South Australia—Public Library of South Australia (PM), University of Adelaide (PM), Waite Agricultural Research Institute (P); Western Australia—State Library (PM); Tasmania—University of Tasmania (PM).

#### § 11. Public Museums.

The Australian Museum in Sydney, founded in 1836, is the oldest museum in Australia. In addition to possessing fine collections of Australian fauna, the museum contains valuable anthropological and mineral collections. The number of visitors to the institution during 1955-56 was 290,000 and the average attendance on week-days 650, and on Sundays, 1,700. The expenditure for 1955-56 amounted to £69,154. A valuable library containing 32,000 volumes is attached to the museum. Courses of evening popular lectures are delivered and lecturers also visit distant suburbs and country districts, and afternoon lectures for school children are provided; 10,300 children attended during 1955-56. Representative collections illustrative of the natural wealth of the country are to be found in the Agricultural and Forestry Museum and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids to country schools. The "Nicholson' Museum of Antiquities, the "Macleay" Museum of Natural History and the Museum of Normal and Morbid Anatomy attached to the University of Sydney, and the National Herbarium and Botanical Museum at the Sydney Botanic Gardens, are all accessible to the public. There is a Museum of Applied Arts and Sciences in Sydney with branches in three country centres. Expenditure during the year 1955-56 was £59,404. Valuable research work is being performed by the scientific staff in connexion with oil and other products of the eucalyptus and the gums, kinos, tanning materials, and other economic products of native vegetation generally.

The National Museum at Melbourne, devoted to natural history, geology and ethnology is in the eastern section of the Public Library Building. The Museum of Applied Science, also housed under the same roof, contained at 30th June, 1956, 24,100 exhibits which covered applied and economic aspects of all branches of science. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. In addition to the large collection in the geological museum attached to the Mines Department in Melbourne, well-equipped museums of mining and geological specimens are established in connexion with the School of Mines in the chief mining districts.

The Queensland Museum, founded in 1855, comprises exhibited and reference collections of zoology, geology and ethnology. It is maintained entirely by the State Government. Expenditure for the year 1955-56 was £29,405. The collections are principally Australian but there is an excellent series of ethnological material formed by Sir William McGregor in New Guinea. The publication is Memoirs of the Queensland Museum which was preceded by the Annals of the Queensland Museum.

The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and in Brisbane, opened in 1892.

The South Australian Museum has considerable collections of most branches of natural history. In 1956-57, there were at least 200,000 visitors and expenditure was £47,868.

The Western Australian Museum was established in 1895. It is under the statutory management of a Board of Trustees, appointed by the State Government, but operates under its own director and staff. Although it is primarily a museum of natural history, with principal research interests in the fauna of Western Australia and the ethnology of the Western Australian aborigine, the museum has also historical and technological exhibits.

A teacher is employed full-time conducting visiting classes from schools in the metropolitan area. Under this scheme, 11,647 school children visited the museum in 1956-57.

A close relationship exists between the museum and the Geological Survey of Western Australia, the collections of the survey being housed and exhibited in the museum.

Public lectures on natural history are held in the evenings. Lectures are given three times a month for adults and more frequently for juniors.

There are two museums in Tasmania—the Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston—both of which contain valuable collections of botanical, mineral and miscellaneous products. The museums received aid from the Government during 1955-56 to the extent of £23,000.

#### § 12. Public Art Galleries.

The National Art Gallery of New South Wales originated in the Academy of Art founded in 1871. The expenditure for 1955-56 was £35,622. At the end of 1956, its contents comprised 1,380 oil paintings, 865 water colours, 2,106 prints and drawings, 281 sculptures and casts, and 1,318 ceramics, works in metal and miscellaneous. Since 1895, loan collections of pictures have been exhibited regularly in important country towns.

The National Gallery at Melbourne at 30th June, 1956, contained 1,004 oil paintings, 7,548 objects of statuary, bronzes, ceramics, etc., and 7,962 water colour drawings, engravings and photographs. The Gallery is situated in the same building as the Museum and Public Library. Expenditure allocated to the National Gallery in 1955-56 was £63,202, including £2,076 for purchases of works of art. Several munificent bequests have been made to the institution by private citizens. There are provincial art galleries at Ararat, Ballarat, Bendigo, Castlemaine, Geelong, Mildura, Shepparton, St. Arnaud and Warrnambool, to which, periodically, pictures are sent on loan from the National Gallery.

The Queensland National Art Gallery, Brisbane, maintained by the State Government, was founded in 1895. A Director was appointed in 1950, in which year the interior of the gallery was remodelled. More recently an art museum and a print room have been opened. At 30th June, 1956, there were on view 397 oil paintings, 210 water colours, 330 black and white, and 54 pieces of statuary, together with 141 prints, mosaics, and miniatures. Exclusive of exhibits on loan, the contents are valued at about £35,000. Visitors during the year 1955-56 averaged 1,250 on Sundays and 380 on week-days.

The Art Gallery at Adelaide originated in an exhibition of pictures in the Public Library Building in 1882. Many bequests made by private citizens have materially assisted its growth. At 30th June, 1957, there were in the Gallery 1,712 paintings in oil and water colours, 108 items of statuary and a large collection of drawings, prints and furniture. The expenditure during 1956-57 was £25,592.

The Art Gallery of Western Australia was established in 1895. Although under the statutory management of a Board of Trustees, appointed by the State Government, it functions under its own director and staff. At the 30th June, 1957, the collection comprised 320 oil paintings, 157 water colours, 9 pastels, 645 black and white, 500 prints, 9 miniatures and 17 pieces of sculpture. International and interstate exhibitions are frequently held and travelling exhibitions are sent to country centres.

In Tasmania, the Art Gallery at Hobart was opened in 1887. In June, 1956, the contents consisted of 171 oil paintings, 177 water colours, 125 black and white, three statuary and 144 etchings, engravings, etc. Expenditure in 1955-56 was £19,341.

The Art Gallery at Launceston was opened in 1891. Only a small proportion of the contents belongs to the gallery, the bulk of the pictures being obtained on loan. In June, 1956, there were on view 53 oil paintings, 25 water colours, four black and white, and three miscellaneous exhibits. Expenditure in 1955-56 was £11,908.

#### § 13. Scientific Societies.

1. Royal Societies.—In earlier issues of the Official Year Book, an outline was given of the origin and progress of the Royal Society in each State. The accompanying table contains the latest available statistical information regarding these institutions, the head-quarters of which are in the capital cities.

#### **ROYAL SOCIETIES, 1956.**

(a) Proceedings.

- 2. The Australian and New Zealand Association for the Advancement of Science.—This association was founded in 1887. Its headquarters are at Science House, Gloucester Street, Sydney, and meetings are held at intervals of approximately eighteen months within the various States and in the Dominion of New Zealand. The next meeting is scheduled to take place in Adelaide in August, 1958.
- 3. Other Scientific Bodies.—A number of scientific bodies have been set up by the Commonwealth Government. These are the Commonwealth Scientific and Industrial Research Organization, the Commonwealth Observatory (which has now been incorporated in the Australian National University), the Ionospheric Prediction Service, and the Atomic Energy Commission. Particulars concerning these bodies may be found in Chapter XXX.—Miscellaneous.

The Linnean Society of New South Wales, with head-quarters in Sydney, was founded in 1874. Sir William Macleay, who died in 1891, during his lifetime and by his will endowed the Society to the amount of £67,000, which has been increased by investment to approximately £100,000. The Society offers annually to graduates of the University of Sydney who are members of the Society and resident in New South Wales, research fellowships (Linnean Macleay Fellowships) in various branches of natural history. Two fellowships were awarded in 1957. The library comprises some 18,000 volumes. Eighty-two volumes of proceedings have been issued, and the Society exchanges with about 300 kindred institutions and universities throughout the world. The membership at the end of 1957 was 257.

The British Astronomical Society has a branch in Sydney, and in each of the States the British Medical Association has a branch.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation.

#### § 14. State Expenditure on Education, Science and Art.

The expenditure in each State on education, science and art during the year 1955-56 is shown in the following table. Owing to the details not being available in all States, the figures exclude officers' pensions and superannuation, pay-roll tax, and interest and sinking fund on capital expended on buildings. The cost of the medical and dental inspection of school children is also excluded, as this service is more appropriately classified under public health.

STATE EXPENDITURE ON EDUCATION, SCIENCE AND ART, 1955-56. (£'000.)

		-	Expenditu	re from—			Net
State.		Revenue.	Loan.	Other Funds.	Total.	Receipts.	Expendi- ture

#### CHAPTER XIII.

#### PUBLIC JUSTICE.

Note.—In the interpretation of statistics of public justice, allowance must be made tor the following factors which affect comparability from State to State and from year to vear:—

(a) Differences in the jurisdiction of courts;

(b) The introduction of new laws in particular States;

- (c) The methods of compilation of the figures (see footnotes to the tables dealing with convictions);
- (d) The attitude of the magistracy and instructions issued to the police, especially in the case of laws connected with liquor, vagrancy and gaming;

(e) The strength and distribution of the police force;

(f) The proportion of crime solved.

#### § 1. The Australian Legal System.

1. General.—Australia, being a federation, has two systems of courts—State and federal. The only federal courts are the High Court of Australia, the Federal Court of Bankruptcy and the Commonwealth Industrial Court. Otherwise, federal jurisdiction is vested in the State courts.

Thus, while the High Court has extensive original jurisdiction, most civil cases involving federal jurisdiction are heard in the State courts. Almost all criminal matters involving federal jurisdiction are tried in State courts. In the tables in this chapter which give statistics of proceedings in State courts, no distinction has been drawn between State cases proper and cases where State courts are exercising federal jurisdiction.

2. State Courts.—(i) Civil jurisdiction. Lower courts (which term includes, for the purposes of this chapter, Magistrates' Courts, Courts of Petty Sessions, and Small Debts Courts) are presided over by a stipendiary or police magistrate. In some limited instances, justices of the peace may exercise the jurisdiction of the court. § 2 below sets out the powers of the magistrates in the various States and Territories. Unless the amount be very small, in most cases appeal may be made to a higher court against a magistrate's decision. In any case the Supreme Court has a supervisory power, by means of the prerogative writs, to examine whether a lower court has properly exercised its jurisdiction.

In the higher courts (which term includes for the purposes of this chapter District Courts, County Courts, and the Supreme Courts) actions are usually tried by a single judge, sitting with or without a jury, from whose judgment appeal lies to the full bench of the Supreme Court. In certain cases the appeal can be carried to the High Court of Australia. Appeals to the Privy Council are discussed below.

(ii) Criminal jurisdiction.—Criminal courts are of two kinds, namely, courts of summary jurisdiction, usually called Courts of Petty Sessions, which may deal summarily with minor offences, and higher courts, known as Courts of Sessions, Quarter Sessions or General Sessions, and the Supreme Court, which hear indictable offences. A court of summary jurisdiction consists of a stipendiary or police magistrate, or two or more justices of the peace; a higher court consists of a judge or chairman, sitting with a jury. The jury finds as to the facts of the case and the judge determines the applicable law.

In the case of other than minor offences, a preliminary hearing is held before a stipendiary magistrate or justice of the peace for the purpose of determining whether a prima facic case has been made out. If the magistrate or justice of the peace finds that there is a case to answer, the person charged is committed for trial at a higher court. A magistrate or justice of the peace has power to release on bail.

There is an appeal to a higher court from the decision of a court of summary jurisdiction hearing a minor offence, and an appeal from a higher court to the full bench of the Supreme Court, or Court of Criminal Appeal. A further appeal may, with leave, be brought to the High Court of Australia.

3. Federal Courts.—The judicial power of the Commonwealth is vested in the High Court of Australia (the federal supreme court), in the federal courts created by Parliament (the Federal Court of Bankruptcy and the Commonwealth Industrial Court), and in the State courts invested by Parliament with federal jurisdiction, both civil and criminal. Further particulars regarding the judicial power of the Commonwealth will be found in Chapter III. (§§71–73) of the Commonwealth constitution (see p. 16 of this Year Book).

Particulars concerning the Federal Court of Bankruptcy, the High Court of Australia and the Commonwealth Industrial Court will be found in paragraphs 3, 4 and 5 respectively of § 3 of this chapter.

4. Appeal to the Privy Council.—There is an appeal, by special leave of the Privy Council, from the High Court to the Privy Council. In certain important types of constitutional disputes, involving questions of the powers of the Commonwealth vis-à-vis the States, a certificate of the High Court in effect granting leave to appeal is necessary. There is also an appeal from the State Supreme Courts direct to the Privy Council.

#### § 2. Criminal Courts.

#### A. LOWER (MAGISTRATES') COURTS.

- 1. Powers of the Magistrates.—(i) New South Wales. There is no general limit to the powers of the magistrates with regard to offences punishable summarily, their authority depending in each case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to twelve months. Imprisonment in default of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of liquidated debts, and damages, whether liquidated or unliquidated, the amount is limited to £50 before a court constituted by a stipendiary magistrate. Magistrates have power to entertain claims of up to £250 under the Hire Purchase Agreements Act. The amount in actions of debt before two or more justices of the peace is limited to £30 and in actions of damage it is limited to £10, but may extend to £30 with the consent of the defendant. Outside the metropolitan Area of Sydney and certain other prescribed districts one justice of the peace may near cases of debt, liquidated or unliquidated, or damage up to £5 or to £30 by consent or parties.
- (ii) Victoria. The civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £100, and to actions arising out of torts or contracts to the extent of £250. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences, sentences of up to two years' imprisonment may be imposed. The proportion of long sentences is, however, comparatively small.
- (iii) Queensland. Generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233, 344 and 445 of the Criminal Code (betting houses, aggravated assaults, and unlawfully using animals), sentences of twelve months may be imposed.

There is provision for applying cumulative sentences, but in practice not more than one sentence is generally made cumulative on a previous sentence.

Magistrates have no power to deal with habitual offenders.

- (iv) South Australia. The power of special magistrates to impose fine and imprisonment is defined by the special Act creating the offence and conferring jurisdiction. In the case of minor indictable offences, triable summarily, a maximum penalty of £100 fine or two years' imprisonment is fixed by the Justices Act 1921–1957. Magistrates also have power to hear certain civil actions in which the amount claimed is less than £1,250.
- (v) Western Australia. The powers of magistrates and justices with regard to offences triable summarily are governed by the Act creating the offence and giving them jurisdiction. Imprisonment in default of payment of a fine is regulated by a scale limiting the period according to the amount of the fine but not to exceed six months.

The civil jurisdiction of magistrates and courts is restricted in general to £500. By consent of the parties, any action that might be brought in the Supreme Court may be dealt with in a Local Court. Justices may act in the case of illness or absence of the magistrate.

Magistrates are coroners and justices may be appointed as acting coroners.

Magistrates have appellate jurisdiction under some statutes and in country districts act as Chairmen of the Courts of Session. They may be appointed as Commissioners of the Supreme Court. On the goldfields, the magistrate is also the warden.

(vi) Tasmania. Magistrates are empowered to hear and determine in Courts of Petty Sessions all offences when an enactment expressly or by implication provides that the matter is to be determined summarily, or by or before justices, or that any offence is to be punishable upon summary conviction. In addition, stealing and analogous crimes may be heard and determined summarily on the election of the person charged, when the amount involved does not exceed £100.

No general limit is fixed in respect of sentences, the statute creating the offence almost invariably laying down the penalty. Where this is not the case, the Contravention of Statutes Act 1889 provides that a fine of £50 may be imposed. Sentences of imprisonment which justices may impose vary with the nature of the offence, with a maximum of two years. The aggregate of terms of cumulative sentences may not exceed two years.

The civil jurisdiction of magistrates is divided into two categories. A Commissioner of the Court of Requests, provided he is a legal practitioner, may hear actions for the recovery of debts and damages not exceeding £250. As Commissioners are invariably police magistrates, this jurisdiction is State-wide. Courts of General Sessions, constituted by at least two justices, exercise similar powers, but the jurisdiction cannot exceed £50. Only one court, that at Currie, King Island, has the maximum jurisdiction, the others being limited to £30.

(vii) Northern Territory. Magistrates constituting courts of summary jurisdiction try offences punishable summarily. The punishment that may be imposed depends on the law creating the offence. Where there is no magistrate available the offence may be tried by two or more justices of the peace or, if all parties consent, by one justice. Proceedings for committal on indictable offences may be heard by either a magistrate or a justice of the peace. Certain minor indictable offences may be tried summarily by a magistrate or two justices of the peace who may impose a fine up to £100 or two years' imprisonment.

A stipendiary magistrate constituting a local court has a civil jurisdiction to hear and determine claims for not more than £1,000. A local court constituted by two justices of the peace has a civil jurisdiction to hear claims up to £50.

(viii) Australian Capital Territory. Magistrates have jurisdiction to try an offence which is punishable summarily and also where a person is made liable to a penalty or punishment and no other provision is made for trial. The punishment depends upon the statute which creates the offence. Certain indictable offences of a less serious nature may be tried summarily by a magistrate, who may impose a fine of £50 or imprisonment for one year. Magistrates also hear proceedings for committal on indictable offences. The stipendiary magistrate is also the coroner. In civil proceedings, magistrates try actions for amounts up to £200. Justices of the peace have no judicial functions.

2. Cases Tried.—The total numbers of cases tried at magistrates' courts in each State for the years 1952 to 1956 are shown in the following table:—
