Foreword

The publication is part of the Zimbabwe National Statistics Agency (ZIMSTAT)'s endeavour to contribute to the strengthening and progress of the social-economic development process in Zimbabwe.

The Compendium of Statistics provides information and statistical data on Zimbabwe that is useful for planning, policy formulation, research and other development related issues.

We sincerely request and hope that stakeholders will use the data to increase their understanding of the situation in Zimbabwe and thus enhance their contribution in addressing the socio-economic imperatives of the country.

ZIMSTAT wishes to acknowledge the continued co-operation of all who contribute materials for this and other publications.

Any views and comments that would assist in the improvement of this publication are sincerely welcome.

M. Dzinotizei

DIRECTOR-GENERAL, ZIMSTAT

HARARE 2013

Introduction

The Compendium of Statistics is meant to be the principal reference work produced by the Zimbabwe National Statistics Agency (ZIMSTAT). It provides data on most aspects of the economy and social conditions in Zimbabwe. Its objectives can be summarised as follows:

- to present in one volume a diversity of information on Zimbabwe, its people and economy;
- to act as a guide to additional socio-economic indicators produced by various agencies and government ministries;
- to facilitate direct contact with officials responsible for these statistics.

Sources of additional information

ZIMSTAT produces several statistical publications and some of the latest are indicated below.

Besides what has been put together in this volume, the following publications provide additional information on the social and economic situation in Zimbabwe:

General

Quarterly Digest of Statistics, June 2013
Zimbabwe Facts and Figures 2012

Agriculture

Production Account of Agriculture, Forestry and Fishing, 2010
Crop Production Time Series, 1993-2011

Employment

Labour Force Survey report, 2011
Child Labour survey report, 2011

Environment

Environment Statistics report, 2010.

External Trade

Statement of External Trade, 2012
Quarterly Trade Statistics, June 2013

Gender

Women and Men in Zimbabwe, 2012.

Health *(in conjunction with the Ministry of Health and Child Welfare)*

Basic Services Trends 2011
National Health Profile, 2008
Health Statistics Annual Report, 2012
Health Statistics Quarterly Tables, 2013
Weekly Disease Surveillance report, 2013

Income

Income, Consumption and Expenditure Survey, 2011-12
FinScope report, 2011
FinScope brochure, 2011

Industrial Statistics

Business Tendency Survey Report, 2012
Census of Industrial Production Report,
2011

Judicial

Quarterly Prison Report, December 2012

National Accounts

National Accounts Report, 2005

Population Statistics

Census Atlas, 2002

- 1.2 Provinces of Zimbabwe
- 1.3 National Mean Annual Rainfall Totals, Millimetres, 2007/08 - 2011/12

Figure 1.1: Location of Zimbabwe in Southern Africa

Figure 1.1 illustrates the location of Zimbabwe, which is in Southern Africa.

Physical Characteristics of Zimbabwe

Location

Zimbabwe is situated in the southern part of the continent of Africa between latitudes 15° 30" and 22° 30" South of the Equator and between longitudes 25° and 33° 10" East of the Greenwich Meridian.

Zimbabwe is completely land-locked and it is bordered by Mozambique to the East, South Africa to the South, Botswana to the West and Zambia to the North and North-west. Its total land area is approximately 390 757 square kilometres. Zimbabwe has 10 provinces including Harare and Bulawayo as shown on figure 1.2.

Relief

The principal physical feature is the high plateau, the "high veld", that runs from south-west to north-east across the whole country from Plumtree through Gweru and Marondera to Nyanga. This plateau is 650 kilometres long, 80 kilometres wide and lies mostly at an altitude between 1 200 and 1 500 metres above sea level. On each side of this central spine slopping down north-ward to the Zambezi River and southward to the Limpopo River, lies a wider plateau, the "middle veld", with an altitude between 600 and 1 200 metres.

Beyond this, mostly in the south, where the Save, Runde and Mwenezi rivers drain, lies the "low veld". This low veld consists of the Limpopo and Save basins in the South and the Zambezi valley in the North and the attitude is below 600 metres.

These areas have undulating plateaux with surfaces broken locally by rock formations, some quite large: the Great Dyke is more than 480 kilometres long and approximately 10 kilometres wide. The Mozambique border constitutes a fourth region known as the Eastern Highlands. This area marks the uplifted edge of the table land of south-central Africa and is extremely mountainous with many peaks exceeding 1 800 metres with the Inyangani reaching 2 594 metres.

Climate

Although Zimbabwe lies almost wholly within the Tropics, the normal tropical continental climate is considerably modified by altitude, especially on the central plateau where temperatures are lower than at sea level in the same latitude. The Eastern Highlands experiences the lowest temperatures.

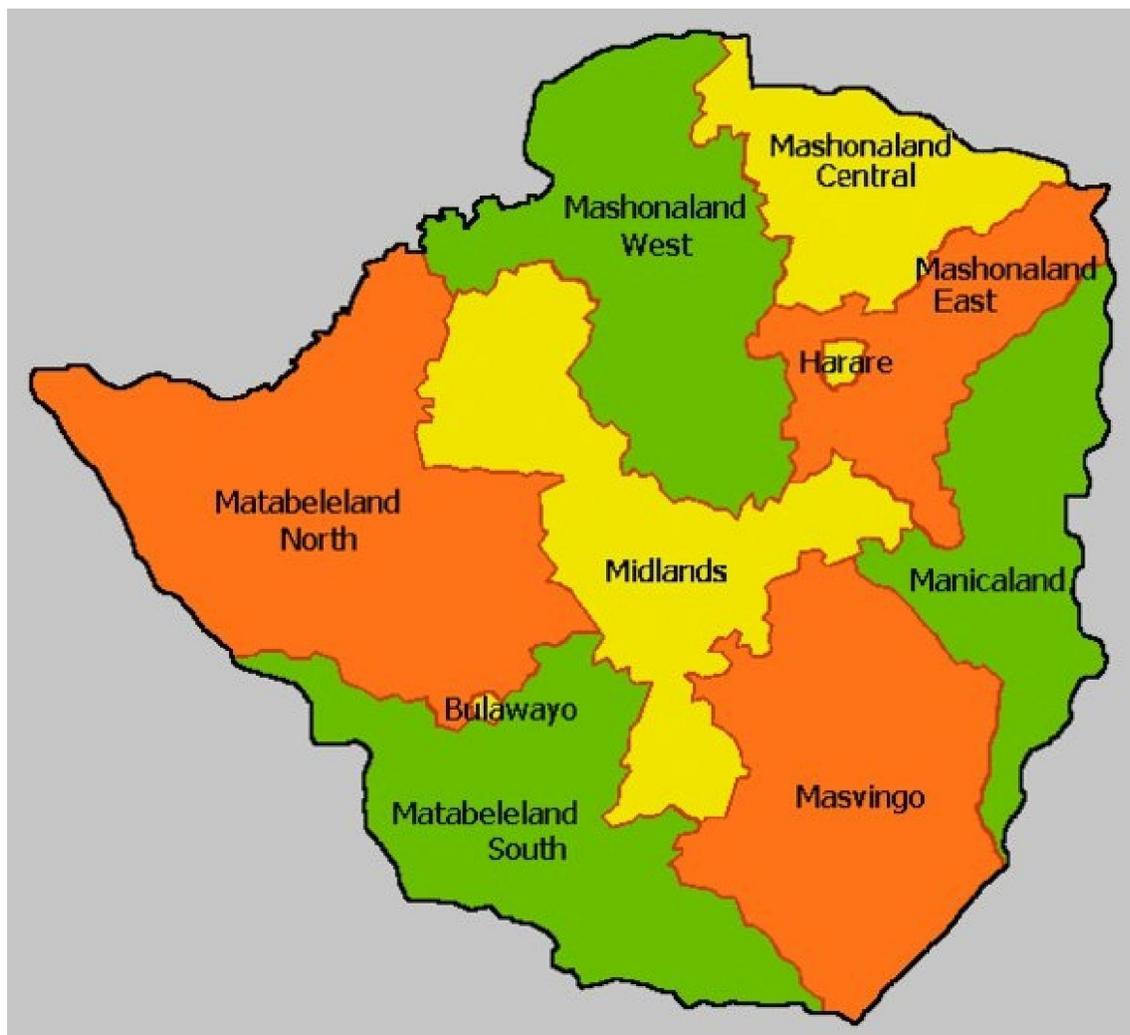

The year is divided into four seasons:

- 1) The cool season : Mid-May to August
- 2) The hot season: September to mid-November
- 3) The Rainy season: Mid-November to March
- 4) The post-rainy season: April to Mid-May

The main rains are associated with the Inter-Tropical Convergence Zone (ITCZ).

The ITCZ, where the northerly and southerly air masses meet, follows the seasonal movements of the overhead sun north and south of the Equator; hence the occurrence of the Zimbabwean wet season during the southern summer. June is the coolest month and October is the warmest: temperature variations correspond with height above sea level.

Figures

- 1.1 Population Growth 1911 – 2012
- 2.1 Distribution of the Population by Province, 2012 Census

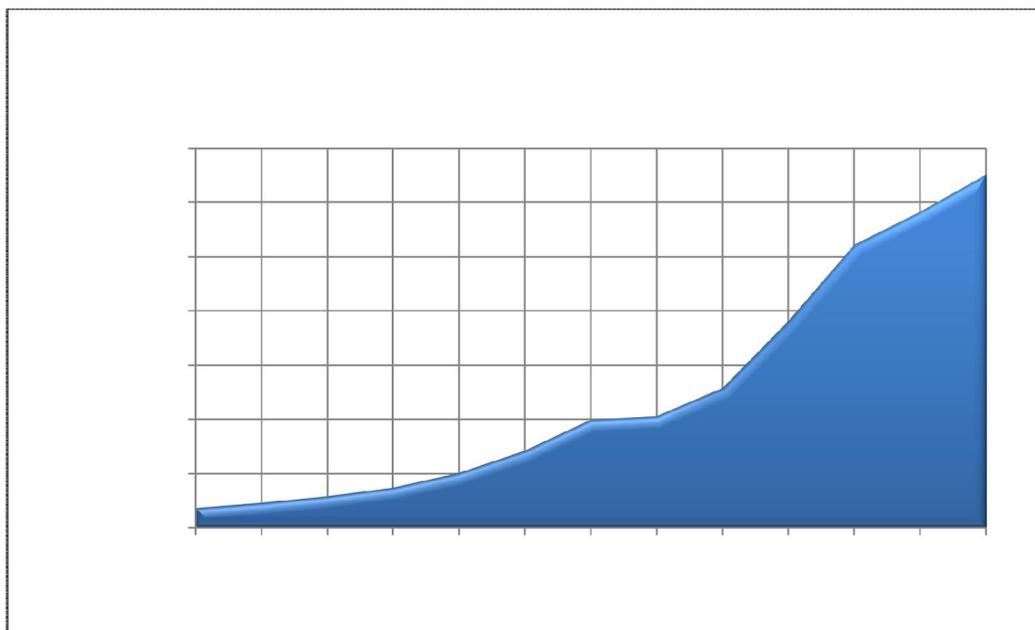

Population Size and Growth

The population figures are based on the 2012 Population Census preliminary results. The report basically provides information on the total number of males and females by district and province. It also provides basic information on population density and growth. Detailed results will be published in a series of subsequent Population Census reports that will be published after completion of data processing and analysis.

Table 1.0: Results in Brief

Male Population:	6 234 931
Female Population:	6 738 877
Total Population:	12 973 808
Annual Average Intercensal Growth Rate, 2002 – 2012 (%):	1,1
Average Size of Households (no. of persons):	4,2
Population Density (persons/ square km):	33

Figure 1.1:

The 2012 Census Figures

The population of Zimbabwe on 18 August 2012 was 12 973 808. Of this population 6 234 931 were males and 6 738 877 were females. This means that the overall sex ratio was 93 males per every 100 females. The population constituted 3 076 222 households, leading to an average of 4, 2 persons per household. With an area of 390 757 square kilometres, Zimbabwe has a population density of 33 persons per square kilometre.

The 2002 Census Figures

In 2002 the population of Zimbabwe was 11, 6 million, consisting of 5, 6 million males and 6 million females and the sex ratio was 95 males per 100 females.

The 2002 -2012 Inter-Censal Population Growth Rate

From the above figures the average annual inter-censal population growth rate between 2002 and 2012 is nearly 1,1 percent. With such a growth rate the population will double in roughly 70 years.

Distribution of the Population by Province, 2012 Census

The distribution of the population by province for 2012 indicates that Harare with 16 percent of the total population is the most populous province. Manicaland

Province is next with 14 percent, followed by Midlands (13%), Masvingo (11%), Mashonaland West (11%), Mashonaland Central (9%), Matabeleland North (6%), Bulawayo and Matabeleland South with (5%) each.

Distribution of Households by Province, 2012 Census

The distribution of the number of households by province follows almost the same pattern as that of the population distribution except for Harare, which has 17 percent of the total (*Table 1.1*). This large number of households in Harare, relative to the other provinces, is an outcome of the size of the households themselves. Unlike predominantly rural areas, relatively many households of small size usually characterize urban areas like Harare.

Sex Ratio by Province, 2012 Census.

The sex ratios by province range from 99 to 87 males per 100 females. Masvingo and Bulawayo provinces have the lowest while the highest is in Mashonaland West. All the provinces had relatively more females than males.

Provincial Growth Rate, 2002 – 2012(%).

Mashonaland East and Mashonaland West have the highest growth rates of (1,7%) followed by Mashonaland Central

(1,3%), Masvingo (1,2%), Manicaland (1,1%), Harare and Midlands (1,0%) then Matabeleland South and Matabeleland North (0,5%). Bulawayo has a slight decrease in population size having a growth rate of (-0,3%). (*Table 1.2*).

Population Density by Province 2012 Census.

Harare has the highest proportion of the country's population. The same province

also happens to have the highest population density. The number of persons per square kilometre in Harare is 2 406. This is followed by Bulawayo (1 369) then Manicaland (48), Mashonaland East (41), Mashonaland Central (40), Midlands (33) Masvingo (26) Mashonaland West (25), Matabeleland South (13) and Matabeleland North (10).

- 3.8 Utilisation Statistics of Beds for General Wards for Government and Mission Hospitals and Clinics by Province, 2011
- 3.9 Maternity Services in Mission and Government Hospitals, 2011

Health Care

There are five types of institutions providing health services in Zimbabwe. These are:

- (1) The Ministry of Health and Child Welfare
- (2) Local Authorities - these facilities are grant aided by the Ministry of Health and Child Welfare.
- (3) Mission Hospitals - these facilities are 100% grant aided by the Ministry of Health and Child Welfare.
- (4) Industrial medical services mainly funded by various industrial organisations.
- (5) Private medical services mainly funded by private individuals and organisations.

The Zimbabwe Government's health strategy is based on the concept of a country-wide health system based on primary health care. The main thrust of the strategy is the development of the health system infrastructure, starting with primary health for the delivery of the country-wide programme that reaches the whole population. The Ministry of Health and Child Welfare is committed to the principle of primary health care, emphasizing an integrated concept of

preventive, curative and rehabilitative services.

Whatever plans made for the universal provision of health services must take cognisance of the existing demographic features and their likely future trend. Children under five years and women in the reproductive ages (15 - 49) years are most vulnerable to diseases such as Acute Respiratory Infection (ARI), nutritional deficiencies, diarrhoeal diseases and malaria. Maternal mortality rate in Zimbabwe of 960 births per 100 000 live births for the 7 year period preceding the survey (2010-11 ZDHS), is thought to be very high. The high maternal and infant mortality rates mean that mother and child health services should be improved and expanded. As is known, the disease pattern is comprised of mostly preventable diseases. In expanding the health services, therefore, emphasis needs to be placed on preventive measures.

Source of Health Data

Data being collected and used extensively in the health sector may be broadly grouped into four categories:

- Public health problems
- Health services coverage
- Health resources
- Health services effectiveness

Data on the main public health problems comprise epidemiological, demographic and socio-economic components of main health problems. The health statistics available have been derived mainly from administrative records as a by-product of health activities and services. Information is collected by the Ministry of Health and Child Welfare. Demographic data is collected and disseminated by ZIMSTAT.

Data on health services coverage are collected and processed by ZIMSTAT and the Ministry of Health and Child Welfare as a by-product of health activity. The Ministry of Health and Child Welfare collects on a regular basis in-patient and out-patient statistics, maternity statistics, data on infectious diseases and hospital workload statistics.

Data on health resources covering health finance, health manpower, health facilities and health transport are collected by the Ministry of Health and Child Welfare.

Over the years 2008-2011, ARI was consistently the major cause of out-patient attendances. The other causes in the top nine were Skin Diseases, Diarrhoea, Burns and Other Injuries, Clinical Malaria, Diseases of the Eye, Sexually Transmitted Infections (STI), Dental Conditions, Bilharzia and Dysentery. For in-patients, the

top three causes of admissions were Normal Delivery, ARI (Lower Tract) and Malaria, although in 2011 Obstetric Causes surpassed Malaria.

The bulk of health expenditure was incurred in Medical Care Services (over 70%) followed by Administration accounting for about 14% in 2011 financial year. Preventive Services accounted for about 8% of total health expenditure.

Table 3.1 Recurrent Health Expenditure, 2009 – 2011

- 4.10 Employment by Industrial Sector and Sex (000), 2009 - 2011.
- 4.11 Average Earnings in US Dollar (US\$) by Sector, 2009 - 2011.

Introduction

This chapter gives some idea about the manpower needs of the country for development planning using the following data sources:-

- 2011 Labour Force and Child Labour Survey (LFCLS)
- Quarterly Employment Inquiry (QEI)

Quality of Data

Quality of data in any analysis is affected by many factors. These include differences in the sources of data especially if one combines sample survey results with national population census results or outcomes and indeed with establishment surveys or censuses in order to have one complete picture of the manpower situation. Data collected through the Labour Force Survey on main activity is compared to what is obtained during censuses and other surveys.

Children under 15 years of age are by definition excluded from the labour force. However, in Zimbabwe, as in many other developing countries, some children under 15 years participate actively in working life. They are found engaged mostly in agricultural activities. Their share and contribution to national income statistics is

therefore silent. This chapter gives an estimate of child labour.

Concepts and Definitions

Economically Active Population

This refers to those persons who were available for the production of goods and services in cash or in kind. The breakdown of these persons were:-

- Employee
- Employer
- Own Account Worker
- Contributing Family Worker and
- Unemployed

Economically Inactive Persons

These were persons whose main activity during the reference periods were studying, home making or were retired with or without pension or were sick or too old.

Activity Rate

This is defined as the number of economically active persons in a population per 100 persons in that particular population.

Unemployment

A situation where supply of labour exceeds demand leads to unemployment. The unemployed were those who had done no work or were looking for work, or were available for work.

Employment

The employment rate is calculated as the number of employed persons aged fifteen years and above divided by the total population in that age group.

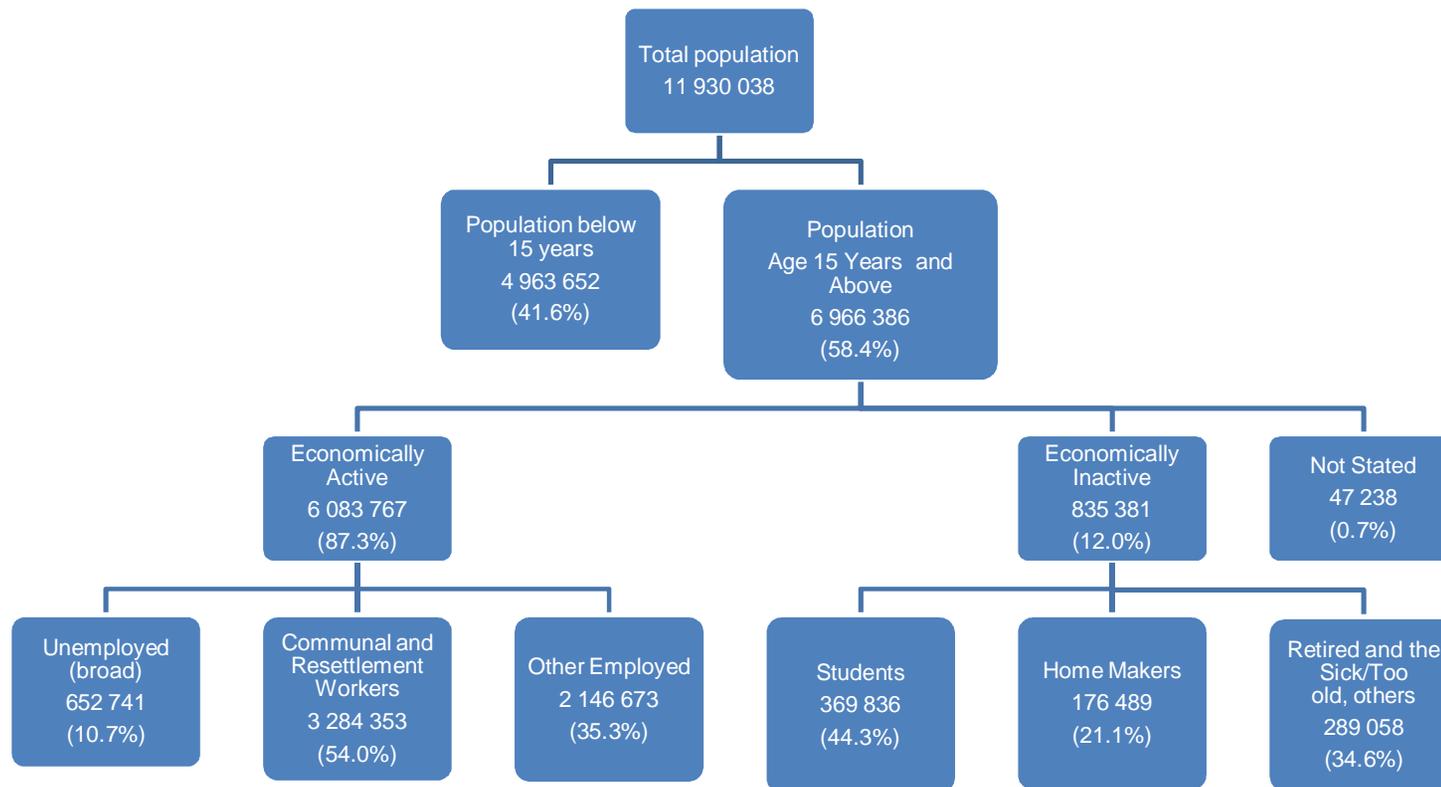

Homemaker

Refers to a person of either sex engaged in household chores in his/her own household e.g. cooking, fetching firewood, water etc. and not paid for doing these duties.

Age Dependency Ratio

This refers to the balance or the proportion of different age groups under 15 years and 65 years and above to the potential working population of 15 to 64 years.

Figure 4.1 Population Composition and Labour Force Status, Zimbabwe 2011 LFCLS

Labour Force Framework

The 2011 Labour Force and Child Labour Survey (LFCLS) collected labour force information from persons aged 15 years and above. The analysis was also based on the population age 15 years and above.

Economically Active Population

According to the 2011 LFCLS, the population aged 15 years and above was about 7 000 000. Out of the population aged 15 years and above just over 87 percent was economically active. Figure 4.1 demonstrates that out of the economically active population, about 11 percent was unemployed.

The 2011 LFCLS showed that of all economically active persons, 48 percent were males. For the categories of paid employees and employers there were more males than females. More females than males were either own account workers or contributing family workers or unemployed (Table 4.1a). However, own account workers constituted the bulk of the labourforce, with males (60.9%) and females (70.1%) see Table 4.1b.

Activity Rates

For the economically active persons, the activity rates obtained from the 2011 LFCLS were 90 percent for males, 85 percent for females and for both sexes it stood at 87 percent [see Table 4.3 (a) and (b)]. For the 2011 LFCLS, males' activity rates peaked at the age groups 25 - 29 years to 35 - 39 years while female ones peaked at 45 - 49 years.

Employment and Unemployment

According to the 2011 LFCLS the current unemployment rate was 11 (including communal farm workers) for the whole country as shown in Table 4.4.

Child Labour

The lower age limit below, which if children work, is considered as violating certain Human rights bordering on child abuse varies from country to country. In the 2011 LFCLS two scenarios were considered in coming up with the estimates of child labour. Child activities were broken down into economic and non economic activities. The first scenario was taking into consideration economically active children age 5 - 14 working at least 3 hours or more in economic activities who numbered 290

000 to give 10 percent for children in economic child labour. The second scenario was considering children aged 5 – 14 years doing non economic activities like house keeping with a cut-off point of 5 hours and more giving 65 000 children and the estimates of child labour was one percent.

Economically Inactive Population

The economically inactive categories were homemakers, students, retired and the sick/ too old.

Tables 4.5a Figure 4.1 give a picture of inactive population. Proportionately more females (63%) were economically inactive than males (37%). The largest proportion of inactive females (36%) and males (58%) reported being students as their main activity as shown in Table 4.5b.

Age Dependency Ratios

Using the 2011 LFCLS, three types of dependency ratios were calculated namely the old, the child and the age dependency ratios.

(i) The old age dependency ratio is the number of persons aged 65 years and above per 100 persons aged 15 - 64 years and this ratio was 8 percent.

(ii) The child dependency ratio is the number of children under 15 years of age per 100 persons aged 15 - 64 years which came to 77 percent.

(iii) The age dependency ratio refers to the number of persons aged less than 15 years plus those aged 65 years and above per 100 persons aged 15 - 64 years. This ratio was 85 percent.

Occupation

Table 4.7 shows that the largest proportion of employed persons in Zimbabwe were agricultural workers (62%).

Employment Sector and Earnings/Wages

Formal sector data on employment and earnings/wages is obtained through quarterly establishment surveys, which are carried out every year. Questionnaires are sent out to formal companies (companies registered by the registrar of companies). The response data from the various companies is combined, and then tabulated.

Employment in the formal sector, excluding Agriculture Sector was fluctuating around 800 000 between the year 2009 to 2011. There were more males than females across the years, see Table 4.8.

Table 4.9 shows the distribution of employment in the formal sector in some specified urban areas. The distribution between the years 2009 and 2011 seems to follow the sizes of the cities with Harare having expected having the biggest proportion followed by Bulawayo. Kadoma had the least contribution.

Table 4.10 shows the percentage share of employment by industrial sector and by sex, excluding the agriculture sector. The manufacturing sector was the largest employer of formal employees between the years 2009 and 2011, followed by education for both males and females. For the manufacturing sector, there was a

general decline in the number of employees between the years 2009 and 2011. The education sector witnessed a general increase in the number of employed persons, from about 113 000 in 2009 to about 130 000 in 2011. Transport and communication employed the least persons throughout the years under discussion.

Table 4.11 shows the average earnings by sector in Zimbabwe for the years 2009 to 2011. There has been a steady rise in the average earnings of most of the sectors from 2009 to 2011 except for construction and distribution, restaurants and hotels. The highest average earnings across the years were in the manufacturing sector.

Sources of Education Statistics

Education statistics on Primary and Secondary Schools are collected mainly from ED46, a questionnaire sent to all schools by the Ministry of Education, Sport, Arts and Culture while data on tertiary education is collected from the Ministry of Higher and Tertiary Education. Other supplementary information is obtained from the population census and other surveys carried out by ZIMSTAT such as the Labour Force and Child Labour Survey (LFCLS), Poverty, Income, Consumption and Expenditure Survey (PICES) etc. The surveys generally cover school attendance and highest level of education attained.

Current education statistics on primary and secondary education are collected from government schools and registered state-supported schools. Data on tertiary education is collected on an annual basis from the Ministry of Higher and Tertiary Education.

The Educational System in Zimbabwe

Structures of the Educational System

The education structure begins with a pre-school phase called the Early Childhood Development attended by 3-5 year olds. The system continues with a 7 year primary course divided into infant (Grades 1 and 2)

and junior (Grades 3 to 7). There is automatic promotion within the primary course, though in certain circumstances a pupil may repeat a grade. At the end of the primary education, pupils take the grade seven examinations. Generally, the primary course is for the 6 to 12 year olds.

The secondary system consists of a 6 year programme. At the end of the first 4 years, students sit for the Zimbabwe General Certificate of Education (GCE) at 'O' level examinations. These can be followed by 2 years of upper secondary education at the end of which students sit for the GCE 'A' level examinations.

At tertiary level, Universities offer 3 and 4 year degree courses as well as a number of post-graduate diplomas, masters' degrees and doctorate programmes. Besides universities, the following centres also offer courses at tertiary level: teacher training colleges, polytechnic and technical colleges, and agricultural colleges. Students can enrol for tertiary education after completing either O' or A' levels.

Primary School Curriculum

Shona, Ndebele and English are the official languages of instruction in Zimbabwe. In the first 3 years of primary schooling, the vernacular languages (Shona and Ndebele) are more often used. There is a gradual

change and at the end of grade 3, English becomes the medium of instruction.

The Curriculum Development Unit (CDU) within the Ministry of Education, Sport, Arts and Culture has been working on the development of academic and practical curricula which are uniquely suited to Zimbabwe's multi-cultural needs and to the development of the country's manpower skills.

The concept of 'Education with Production' is being applied right across the curriculum. The emphasis is on science and technology as related to the environment, through skill development and concept formation from an early age.

Secondary School Curriculum

The Curriculum Development Unit (CDU) of the Ministry of Education, Sport, Arts and Culture has organised a general education programme in the following major areas of learning:

- (i) language and communication skills
- (ii) mathematics, science and technology
- (iii) social studies
- (iv) practical and technical education

The curriculum is intended to give a high level of general education without specialisation although some latitude is left for the school within the 4 major learning

areas described above. Some degree of specialisation follows after the second year.

As in the primary school curriculum, the theme of education with production is incorporated in all the subjects as a means of offering the student the opportunity of developing skills and talents which will be of service to themselves and to the community.

Prior to the years 2000 and 2001, 'O' and 'A' Level students, respectively, were examined by the University Cambridge. The situation changed after the establishment of the Zimbabwe Schools Examination Council (ZIMSEC).

Teacher Education

The conventional structure of teacher education consisted of a 3 year course involving several weeks of teaching practice each year. However with the dramatic rise in enrolment in both the primary and secondary levels, an innovative and revolutionary programme of teacher training was embarked upon in 1981. This is an accelerated training programme known as Zimbabwe Integrated Teacher Education Course (ZINTEC) and extends over a 4 year period.

During the initial 16 weeks, the teacher trainees attend a residential course at one

of the 4 ZINTEC regional colleges. On completion of the residential course, the trainees are deployed into the field for the next 10 school terms. During this on-the-job training period, the trainees continue their studies with distance education coupled with field supervision by tutors, and attendance at district and regional seminars. At the end of the on-the-job training period, the trainees return to their colleges for a final 16 week residential course.

The success hitherto of this programme has brought about the adoption of the ZINTEC programme by other teacher training colleges in Zimbabwe. With effect from January 1984, in place of the 3 year conventional teacher training programme for primary and secondary school teachers, a four year course comprising 1st year residential, 2nd on-the-job, 3rd year residential and 4th year on-the-job, was instituted.

Non-formal Education

Non-formal education deals with organised educational activity outside the school system.

Whilst the government is committed to provide 4 years of secondary education for all, financial constraints make the immediate achievement of this goal using

conventional methods very difficult. Non-formal education is seen as an alternative approach.

Evening Classes

The great majority of students attending evening classes are in urban areas. Some of these evening classes are financed by Part-Time Adult Education Trust Fund. Students pay tuition fees per subject which goes towards the payment of the teachers' allowances. The trend today, however, is that a majority of students are attending private colleges and institutions.

Primary Education

The Government, in recognizing primary education as a right of every Zimbabwean, introduced free primary education to all children of school going age in September 1980. As a result, the primary school figures shot up remarkably from 1980 as reflected in the table below.

Number of Primary Schools, Enrolment and Number of Teachers, 1980, 2010

	1980	2010
No. of schools	3 180	4 633
Enrolment	1 236 100	2 662 384
No. of teachers	28 500	70 980

Most of the schools opened after 1980 were those that were closed down during the

war. A massive school reconstruction and repair programme was undertaken in which the local communities made a significant contribution. The number of new primary schools in all regions continued due to the Universal Primary Education (UPE) policy.

Nevertheless, the large enrolment figures at primary level have continued to cause acute shortages of trained teachers. To cope with these shortages it has been inevitable to rely on the services of student teachers from the ZINTEC programme (see section on Teacher Education), untrained teachers and indeed university graduates.

Secondary Education

The government is committed to providing 6 years of secondary education for all primary school graduates. This has resulted in a massive increase in secondary school enrolment figures as shown in the table below.

Number of Secondary Schools, Enrolment and Teachers, 2009 and 2010

	2009	2010
No. of schools	1 644	1 825
Enrolment	778 911	863 526
No. of teachers	34 864	39 606

This phenomenal growth in secondary schools enrolment has necessitated the opening of a large number of new schools. This increase is accounted for mainly by the rural day secondary schools under Rural District Councils. Secondary schools under the authority of Rural District Councils form well over 69% of all secondary schools.

The large student enrolment has made many schools resort to double sessioning in order to accommodate their classes. This in fact has meant over stretching the utilization of existing facilities.

Distance Education

Despite the significant increase in numbers (as shown in the table below), the present situation of correspondence education in Zimbabwe is faced with several difficulties. However, as it costs a lot less to educate someone by distance education than it does through the conventional school system, the Ministry of Education, Sport, Arts and Culture is actively looking into ways of improving the correspondence education system and of integrating the formal and non-formal systems.

Conclusion

This chapter focused on the structures of the educational system in Zimbabwe by way of school curricula from primary level through secondary to tertiary levels of

Education. Non-Formal education, Distance education and Adult education were examined. Generally, there is increase in school enrolments over the years.

6. Occupational Injuries and Crime Statistics

Tables

- 6.1 Occupational Injuries Reported by Year and Region, 2006 - 2011
- 6.2 Occupational Injuries Reported by Year and Body Part, 2009 - 2011
- 6.3 Reported Fatal Accidents by Industrial Sector, 2007 -2011
- 6.4 Total Occupational Injuries Reported by Industrial Sector, 2007 - 2011
- 6.5 Reported Crimes by Type, 2008 - 2012

Scope of the Chapter

This chapter covers statistics on crime and occupational injuries. Crime statistics deals with crimes reported to the Zimbabwe Republic Police (ZRP) by different categories while Occupational injury statistics have been compiled by the National Social Security Authority (NSSA) from new claims reported for workers' compensation made under the workers' compensation scheme.

National Accounts Concepts and Definitions

Different Ways of Measuring Production

When something is produced and sold:

a) Its value is equal to purchasers' expenditure on it.

b) The same amount constitutes income for those who contributed towards its production.

c) The value of the item which is sold will have come about as a result of the 'value added' to the product by successive stages of production: for example, farmers may produce grain, millers 'add value' by turning it into flour, merchants and transporters by delivering goods to the consumers.

Thus the total money value of goods and services produced and sold during the year, in theory could be calculated in any one of the three ways:

a) The sum of all market expenditure by final consumers, including purchase of capital goods by firms (expenditure method).

b) The sum of all the incomes received by the factors of production. e.g. wages and salaries, rent, gross operating profit (income method).

c) The sum of the value of each firm's contribution to output, the 'value added' or net output i.e.. (output less inputs) of that firm (product method).

These are three ways of deriving the same total. We can therefore say the product or output, income and expenditure methods give the same figure.

Gross Domestic Product

The term Gross Domestic Product (GDP) is the total value of goods and services produced within a country's boundaries during a year. Using the expenditure method, the figure of GDP is calculated at market prices. To convert GDP at market prices to GDP at factor cost, indirect taxes (e.g. sales taxes) are deducted while subsidies are added to GDP at market prices. The term GDP at factor cost measures the value of goods and services according to the factors of production used.

Gross domestic product at constant 1990 prices attempts to remove the direct effect of

price changes during the periods under review. This is necessary if intertemporal comparisons are to be made and rates of real growth are to be determined.

Gross National Income

Gross National Income (GNI) is the sum of the money value of all final goods and services produced during a year. The difference between GDP at factor cost and GNI at factor cost is the value of the net factor income paid abroad.

Gross National Income at Current Prices US\$

Year	2011
Wages and Salaries	3 358 395 794
<i>plus</i> Rent	149 811 930
<i>plus</i> Gross Operating Surplus	4 361 413 298
Less Fin Int Services Indirectly Measured	- 50 253 947
Gross Domestic Income at factor cost	7 819 367 075
<i>plus</i> Net taxes on production	134 420 171
GDP at Basic prices	7 953 787 246
<i>plus</i> Net taxes on products	911 640 671
GDP at market prices	8 865 427 917
<i>plus</i> Net primary income from abroad	- 208 400 000
Gross National Income	8 657 027 917

When a country invests in a foreign land, it receives dividends, profit and interest as payment. This is income received from

abroad. Sometimes the country pays dividends, interest and profit to the foreign countries for their investments here in Zimbabwe. The difference between income paid abroad and income received from abroad is the net factor income from abroad. This is added to GDP at factor cost to obtain GNI at factor cost.

Components of Income

In practice establishments are regarded as paying out factor incomes to labour in the form of wages and salaries, and remaining with the gross operating profit which is the factor income attributable to the factors of production employed, but not necessarily owned by the establishment. Part of this gross operating profit is then distributed to the owners of the factors of production in the form of investment income (interest, rent and dividends) and to other final recipients in the form of transfer income (direct taxes, pensions, bursaries etc.). Finally, profits are retained by the establishments and utilised for further investment. Wages and salaries include (1) all cash wages, salaries, allowances, overtime, commissions and bonuses; (2) employers' contributions to pension funds, provident funds, holiday funds and medical aid societies, but exclude contributions by the Workers' Compensation

Fund; (3) the cash value of all the income received in kind, i.e. food, housing, uniforms etc.; paid on behalf of residents and non-resident labour by enterprises, Local and Central Government, persons and private non-profit institutions which are resident in the country. Wages and salaries paid by foreign diplomatic and consular missions (non-residents) are excluded. Services provided by housewives are excluded from the calculation of GDP figures.

Rent includes the imputed income from owner occupied dwellings and the actual payments to both private rentiers of residential buildings and to Government in its capacity as owner of buildings. The rental income of Government is recorded before deduction of costs and depreciation. Gross operating profit is estimated before receipt or payment of property income (interest other than those on residential buildings and dividends) and is expressed gross of depreciation.

Unincorporated enterprises' gross operating profit is the income in cash and kind actually received by individual employers and persons working on their own account from the total entrepreneurial income of their enterprises plus income from property.

Components of National Expenditure

National expenditure falls into three broad groups of expenditure such as current consumption, capital formation (fixed and change in stocks) and expenditure abroad (exports minus imports). To help in the analysis, current consumption expenditure is split into three categories of those by individuals, by non-profit making bodies and by general Government.

Private consumption expenditure represents consumption by persons in their capacity as final consumers. Private consumption expenditure is derived as a residual after the allocation of expenditure to all the other components of National Expenditure. It includes imputed rentals for owner-occupied dwellings but not expenditure on new dwellings.

What is wanted as a component of final uses of gross domestic product is final consumption of resident households. However, what can be directly estimated is expenditure in the domestic market. To obtain final consumption expenditure of resident households, expenditure in the domestic market is adjusted for net external expenditure (expenditure less receipts) on passenger fares, holiday travel, amount spent

by visitors, foreign exchange bought from travellers and no-currency involved imports.

Net current expenditure by private non-profit making bodies equals their current expenditure on goods and services less fees, sales and recoveries. Net government current expenditure relates to expenditure by all government departments on goods and services netted for fees, sales and recoveries. All expenditure on defence is treated as current expenditure, except identifiable capital expenditure on airfields used for civilian purpose also and family residential dwellings.

Gross fixed capital formation is made up of purchases of new fixed assets (other than land) by all enterprises, Central and Local Government less their sales of similar second hand goods. It includes work-in-progress of construction industry as well as expenditure on new private dwellings by individuals (net of sales).

Increase in stocks includes livestock, materials and finished goods and work in progress of all industries (other than construction).

Net import of goods and services (exports less imports) includes export/import of merchandise and services as well as direct purchases made by resident households and

by government (on current account) abroad and by visitors, travellers and foreign governments in Zimbabwe.

Net investment income from abroad covers similar transactions on wages and salaries and on property and entrepreneurial incomes.

Components of Output or Production

In order to calculate the total value added of the country, the value added of 14 sectors of the economy is aggregated. The term value added refers to the total value of output less total value of inputs into the production process. Imputed banking service charges are deducted from aggregate value added to give the value of GDP at factor cost. The industries are listed below:

- Agriculture, forestry, fishing and hunting
- Mining and quarrying
- Manufacturing
- Electricity and water
- Construction
- Finance and insurance
- Real estate
- Distribution, hotels and restaurants
- Transport and communication
- Public administration
- Education
- Health

GDP at factor cost	7 819 367 075	-1
Net taxes on production	134 420 171	88
Other taxes on production	134 420 171	2
Other subsidies on production	-	2
GDP at basic prices	7 953 787 246	
Net taxes on products	911 640 671	90
Taxes on products	911 640 671	10
Subsidies on products	-	10
GDP at Market Prices	8 865 427 917	

The expenditure method adds together Household Private Consumption (C), Government Consumption (G), Gross Fixed Capital Formation (I), and Exports (X) less Imports (M). Thus GDP at market prices = C+I+G+X-M. The term Gross

Domestic Product (GDP) means that Production of goods and services is confined to the country's boundaries implying that exports are included while imports are excluded.

Gross National Income	6 049 666 842	7 348 554 843	8 657 027 917

The table above simplifies the analysis of Gross domestic income at factor cost such that its only components are wages and salaries, and gross operating surplus. The building blocks to each of these three are not shown though they have been incorporated in this compilation. Most of

the domestic income in the years 2000 to 2005 was gross operating surplus. It constitutes an average two thirds of total domestic income in each year over the six year period. Its important to note that its contribution rose between year 2009 and 2010

Central Government Revenue and Expenditure

In Zimbabwe, there are two main levels of government namely central government and local government. Central Government deals with the administration of affairs that are national in character. Among other things, such affairs include overall finance, defence, police, foreign affairs, health and education. Central government also regulates the operations of local government which includes 16 municipalities, 4 town councils, 58 Rural District Councils. Local government deals with the local administration of education, health, housing, electricity, water and liquor undertaking.

General government is the merging of the two levels of government referred to above. Data for this is presented on a calendar year basis. Direct (taxes on income and profits) and indirect (taxes on goods and services) taxes as well as fees, sales and recoveries are the three main categories contributing significantly to revenue. On the expenditure side most expenditure is on salaries, wages and allowances as well as on other goods and services. Table 8.1 shows that in the year 2012, 50.8 percent of the total revenues generated in Zimbabwe emanated from taxes on goods and services. This is followed by tax on income and profits with

31.9 percent. Due to low production activities the level of revenue collected in Zimbabwe is low. Most individuals who are working are below the taxable income bracket while company production activities are affected by poor availability of working capital due to liquidity problems in the financial services sector. Currently the financial services sector is not able to provide long term loans to companies because of liquidity challenges in the economy.

For Central Government the most important items of recurrent expenditure are goods and services with salaries, wages and allowances being most notable. Other expenditure includes transfers in the form of interest, subsidies, pensions and other transfers. Transfers to public corporations and local government are included in other transfers, which are the largest item in this category. From Table 8.1 it is shown that salaries wages and allowances constituted 48.3 percent of total Central Government expenditure in 2012. During the same period domestic current transfers constituted 26.3 percent of total Central Government Expenditure. Domestic current transfers refers to transfers of funds from the Central Government budget to quasi government

institutions such as parastatals or to local government institutions such as city

councils or rural district councils.

Table 8.1 Central Government Revenue and Expenditure, 2012 US\$ 000's

Vote of Credit	0	0.0
Total Expenditure	3 640 000	100.0

Looking at expenditure from a different angle, the levels of expenditure by votes give a broad indication of the purpose and type of activity to which the expenditure refers. Thus the Central Government expenditure by the categories of votes for 2012 is shown in Table 8.2. It is shown that 88.3 percent of the total budget in 2012 went towards vote appropriations while the remainder 11.7 percent went

towards constitutional and statutory appropriations. As has always been the case, the largest proportion of the budget 19.7 percent went towards the provision of primary and secondary education. This was followed by the Ministry of Defence 8.6 percent, Ministry of Health and Child Welfare 8.3 percent and Ministry of Home Affairs 8.2 percent.

Components of Central Government Revenues

The total revenues received by the Ministry of Finance amounted to US\$3,6 billion. As previously noted most Central Government revenues were generated from taxes on goods and services which contributed slightly over half of the total government revenues in 2012. In this revenue category value added tax

constituted the highest proportion of total revenues of 29.8 percent, while customs duty contributed 10.4 percent and excise duties contributed 10.6 percent. In the tax on income and profits revenue category employees contributed 17.7 percent while companies contributed 11.4 percent.

However due to the Government's Policy of cash budgeting instituted since 2009 there has been no budget deficit in the country which needed to be financed. Government however has an external debt that has accumulated over time to reached US\$ 7.2 billion in 2011.

Government revenues increased 2.6 times from US\$1.4 billion in 2009 to US\$3.6 billion in 2012, see Table 8.4. Revenue growth over the last 4 years has been slow mainly due to liquidity challenges being faced in the financial services sector resulting from low deposit base.

Source: Treasury Department, Ministry of Finance and Other Government Departments.

Expenditure is categorised into goods and services (including wages and salaries), transfers and capital expenditure. In general, government expenditures have increased gradually over the last four years being constrained by revenue inflows into the Treasury. Table 8.5 shows that Central Government recurrent expenditures rose from US\$931.1 million to US\$3.2 billion in 2012. Employment

costs constituted 42.0 percent of total recurrent expenditures in 2009 but in 2012 the proportion of the wage bill to recurrent expenses shot up to 55.7 percent. Government Capital Expenditures has increased from 4.7 percent in 2009 to 10.6 percent of total government expenditures in 2012 due to shortage of funds to finance government projects.

9. Mining, Manufacturing, Energy Statistics

Tables

- 9.1 Principle Indicators of Establishments by Industrial Group and ISIC_monetary values in US\$ millions): Census of Industrial Production Zimbabwe, 2009 - 2011
- 9.2 Mineral Production, Excludes Production from Sand and Stone Quarries, 2009 - 2012
- 9.3 Volume of Manufacturing Index (VMI): 2009 - June 2012 (Base 1990=100)
- 9.4 Electrical Energy Produced and Distributed, Millions of Kilowatt Hours, 2009 – 2012
- 9.5 Electrical Energy Used by Major Industrial Divisions, millions of kilowatt 2009 - 2012

Mining, Manufacturing, Electricity and Water Supply

Institutions that Facilitate Development

The Zimbabwe Investment Authority (ZIA) is an investment promotion body established by the Zimbabwean Government in 2007 to promote and facilitate investment for growth in Zimbabwe. ZIA's main mission is to contribute to sustainable national economic development and growth through the timeous promotion and facilitation of value added investment.

The functions of the Authority include to:

- deal with applications for investment licences;
- plan and implement investment promotion strategies for the purpose of encouraging investment by domestic and foreign investors;
- identify sectors of the economy with potential for investment for the purpose of attracting domestic and foreign investors;
- respond to proposals from any domestic or foreign investor for joint ventures with the State or otherwise;
- promote the decentralisation of investment activities in accordance with the development policy of the Government;
- supervise, monitor and evaluate the implementation of approved investment projects;

- promote and co-ordinate investment activities in enterprises or sectors of the economy which are of strategic importance to national development; or require additional investment for the purpose of any sectoral objectives;
- grant additional incentives, where necessary, outside of existing policy investment procedures;

Infrastructure Development Bank of Zimbabwe (IDBZ)

The objectives of the Infrastructure Development Bank of Zimbabwe are to:

- promote economic development and growth, and to improve the living standards of Zimbabweans, through the development of infrastructure including, but not limited to, roads, dams, water reticulation, housing, sewerage, technology, amenities and utilities;
- develop institutional capacity in undertakings and enterprises of all kinds in Zimbabwe;
- support development projects and programmes in all sectors of the Zimbabwean economy; through all or any of the following means—
 - i. providing capital for the expansion or modernization of existing infrastructure, undertakings and enterprises or the creation or development of new infrastructure, undertakings and enterprises;

- ii. mobilising internal and external resources from the public and private sectors;
- iii. facilitating the participation of the private sector and community organisations in development projects and programmes;
- iv. appraising, planning and monitoring the implementation of development projects and programmes;
- v. providing technical assistance with regard to the identification, preparation, evaluation, financing, implementation and management of development projects and programmes; whether by itself or in co-operation with international, regional or national organisations or bodies.

The Bank offers the following products and services:

- Infrastructure/Project Financial Products
- Long-term loan finance in local and foreign currency
- Equity Finance
- Venture capital finance
- Project Management
- Joint venture partnerships
- Public-Private Partnership advisory services
- Guarantees

Investment Banking Services:

- Corporate finance
- Project finance
- Co-financing and/or loan syndications
- Structured finance

- Trade Finance

Treasury Products

The Bank also offers treasury products to public and private sector clients, including:

- Deposit taking (call, fixed and notice)
- Foreign currency accounts
- Money market investments.

The Role of ZIMTRADE

With its emphasis on the private sector, ZimTrade provides a wide range of services aimed at promoting international trade and, in particular, developing exports. The organisation's role is to help create a conducive environment in which the whole enterprise sector can perform to the maximum. ZimTrade has become the regional nerve centre for effective trade information.

Mining and Manufacturing

There are many institutions, which are involved in mining and manufacturing in Zimbabwe, both in the private and public sectors.

Mining contributes 10 percent and Manufacturing 16 percent of the gross domestic product (GDP).

Mining

Mining is defined as consisting of underground and surface mining and quarrying and includes all supplementary operations, such as drilling, breaking, milling, cleaning and grading and

establishments operating on a mining site as refineries/smelters of non-ferrous or precious metals. Excluded, however, are mines and quarries operated by manufacturers as a source of their raw materials, such as limestone mines operated by cement manufacturers. These form part of the manufacturing sectors.

Manufacturing

Manufacturing is defined as the mechanical or chemical transformation of materials into new product; the assembly of component parts of manufactured products, except in cases where the activity is more appropriately classified as construction. Establishments primarily engaged in repair work for industry and commerce are also classified under manufacturing according to the type of product repaired. Those primarily engaged in repair work for private persons are excluded. Establishments operating on a mining site as refiners/smelters of non-ferrous or precious metals are also excluded.

Electricity and Water

The Electricity and Water group consists of entities whose main activity is the generation, and/or transmission and distribution of electricity and the purification and distribution of water respectively. Electricity and Water contributes 5 percent of the GDP.

Electricity

The Zimbabwe Electricity Supply Authority, (ZESA) is the utility responsible for the generation, transmission and distribution of electricity. It took over the operations of the Central African Power Corporation (CAPCO), Municipal Electrical Department and the Electricity Supply Commission (ESC) in 1987.

To meet its mandate of electricity generation, transmission and distribution, ZESA restructured to form units such as the Zimbabwe Power Company (ZPC), Zimbabwe Electricity Transmission and Distribution Company (ZETDC) and others. ZESA has both hydro and thermal power stations. Kariba, is the only hydro power station and is co-owned by ZESA and ZESCO in Zambia. There are four thermal power stations: Hwange, Munyati, Bulawayo and Harare power stations. To meet total electricity demand for the nation, the ZPC imports some of the electricity from Hydro Caborra Bassa, Mozambique.

Water

The Zimbabwe National Water Authority (ZINWA) was put in place through the law to assist and participate in or advise on any matter pertaining to the planning of the development, exploitation, protection and conservation of water resources. It was also mandated to provide, at such fee as the Authority may determine, all forms of

assistance, including technical assistance, personnel, advisory and training, information and other services to the Government, local authorities and catchment councils in connection with the exploitation, development management and distribution of water resources among others.

Collection and Presentation of Mining, Manufacturing, Electricity and Water Supply Statistics

Source of Data

Statistics on mining, manufacturing, electricity and water supply are mainly collected through the annual Census of Industrial Production (CIP). The definitions and classifications presented below relate to the annual CIP. The data for mineral production is collected from the Chamber of Mines of Zimbabwe, for electrical energy produced, distributed and used by major industrial divisions from ZESA and the water purification and distribution from ZINWA and local authorities.

Definitions and Classifications

Coverage

The statistics for the mining, manufacturing and electricity and water supply industries are collected at national level and based on establishments in the formal sector.

Establishment

An establishment is an enterprise or part of an enterprise which independently engages in one, or predominantly one, kind of economic activity at or from one location or within a geographical area, for which data are available, or can meaningfully be compiled, that allow the calculation of value added.

Principal Indicators

Gross output, intermediate consumption and value added as principal indicators.

Gross output illustrates the result of the overall production activity of establishments (i.e. industrial units) and it corresponds to the sum of the value of all goods or services that are actually produced within an establishment and become available for use outside that establishment plus any goods and services produced for own final use. The value of production is given by:

$$\begin{aligned} \text{Gross output} = & \text{value of} \\ & \text{sale/turnover/shipments of all goods or} \\ & \text{services produced by the establishment} + \\ & \text{value of sale/turnover/shipments of all goods} \\ & \text{and services purchased for resale in the} \\ & \text{same condition as received} - \text{purchases of} \\ & \text{goods and services for resale in the same} \\ & \text{condition as received} + \text{receipts for industrial} \\ & \text{work done or industrial services rendered to} \\ & \text{others} + \text{other revenues} + \text{value of own-} \\ & \text{account fixed assets} + \text{change in work-in-} \\ & \text{progress} + \text{change in inventories of finished} \end{aligned}$$

goods + change in inventories of goods purchased for resale in the same condition as received.

Intermediate consumption consists of the value of goods and services consumed as inputs in the process of production, excluding fixed assets. The goods or services may be either transformed or used up in the production process and is calculated as follows:

Intermediate consumption = Cost of raw materials and supplies except gas, fuels and electricity + cost of gas, fuel and electricity purchased + purchases of services except rentals + rental payments + changes in inventories of materials, fuels and supplies.

Hence value added = gross output – intermediate consumption.

Transport and Communications

Introduction

The main road network is made up of a watershed route from Bulawayo through Harare to Mutare and across the river valleys from Bulawayo through Masvingo to Mutare. There are also international routes which radiate from Harare to Chirundu (for Zambia), to Nyamapanda via Mozambique (for Malawi) and to Beitbridge (for South Africa). International routes also radiate from Bulawayo to Victoria Falls (for Zambia) and from Victoria Falls to Kazungula (for Botswana and Namibia) from Plumtree (for Botswana) and Bulawayo to Beitbridge (for South Africa) and from Mutare down to Beira port in Mozambique.

Internal Roads

The main towns and municipalities are serviced by commuter omnibuses which operate within and between the cities. Luxury buses amongst them Go-Line, City Link and Pathfinder commute between the major towns of Bulawayo, Harare, Mutare, Masvingo. There are four authorities responsible for roads maintains: Rural District Councils are responsible for roads in their areas of jurisdiction, the same goes for Municipal Authorities in their areas of control,

the District Development Fund has its share of roads to take care of while state roads are the responsibility of the mother ministry of transport. The Zimbabwe National Road Authority (ZINARA) is overall regulatory body.

Gateway Roads and Rail Ports

Freight cargo is also transported through the main trunk roads and railway lines connecting the major border posts.

Zimbabwe is a landlocked country and its access to the sea on the eastern side is through Mutare by both rail and road to the port of Beira in Mozambique. On the south-eastern side the country accesses the sea by rail through the port of Maputo in Mozambique. The country also accesses the sea through the South Africa ports of Cape Town, Durban, Port Elizabeth, by both rail and road via Beitbridge. Walvis Bay In Namibia is also accessible through Botswana by road via Plumtree border posts.

The National Railways of Zimbabwe (NRZ) is a statutory creation of the Zimbabwe Government which conducts operations in Botswana. It runs passenger and goods services between the two countries. NRZ also has connections with the South Africa railways at Beitbridge and at Mafeking. It also has connections with the Zambian Railways

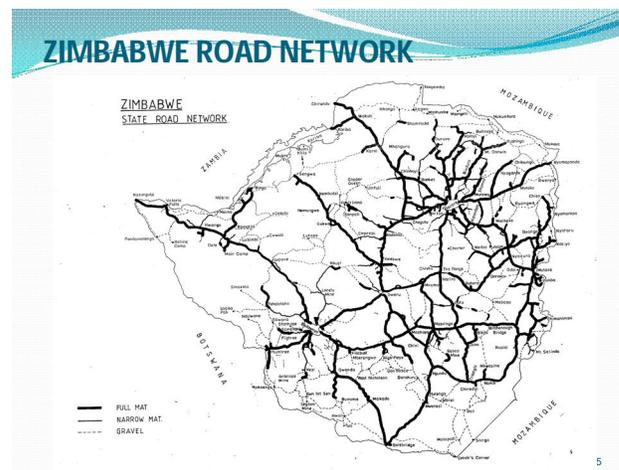

at Victoria Falls and this link carries both passenger and cargo as far as the Democratic Republic of the Congo (DRC). On the South-Eastern side of the country it has links with the Mozambiquean Raiways at Chicualacula which links Zimbabwe to the sea at Maputo port.

Air

Air Zimbabwe has a very limited fleet of aircraft that services mainly domestic and regional routes. The Civil Aviation Authority of Zimbabwe has authorised the entry into the country of about thirteen foreign airlines. Besides bringing in passenger traffic the airlines also bring air cargo.

The telecommunication system of Zimbabwe has been privatised and has experienced enormous growth spurred by competition between three main players: Econet, Telecel and Netone, sharing the domestic market. The range of telecommunication and Internet services have greatly increased over the past decade in accordance with global technological advances.

Roads

There are a number of authorities that are responsible for types of roads in the country. The Ministry of Transport is responsible for the primary system of state roads linking major cities and towns including growth-points and service centres. Rural District Councils are responsible for a secondary road system servicing rural areas and small population centres. Municipalities on the other hand run the roads within the municipal jurisdiction..

Railways

Zimbabwe and Botswana are served by the National Railways of Zimbabwe (NRZ), which is a statutory body of the Zimbabwe Government. The National Railways of Zimbabwe operates within Zimbabwe and Botswana and has connections with the

South African Railways at Beitbridge and Mafeking. It connects with the Zambian Railways at Victoria Falls Bridge and this link carries traffic to and from the Democratic Republic of the Congo. The national Railways of Zimbabwe also has connections with the Mozambique Railway System at Machipanda which serves the port of Beira and at Chicualacuala which services the port of Maputo.

The Road Motor Service provides a network of regular scheduled goods services which operate from depots in various centres throughout the country. Their services cater mainly for goods and parcels traffic tendered in small quantities and they meet the transport needs of Zimbabwe's rural areas in between Bulawayo and Beitbridge. Special trips for the movement of full loads of goods and livestock can also be arranged to suit individual requirements.

Road Accidents

Road accidents statistics are based only on the statistics reported to the Zimbabwe Republic Police (ZRP). Most minor or single vehicle accidents never come to the attention of the authorities. The true figure of accidents can therefore be higher than the reported one. The total number of people killed in accidents refers only to those who died at the scene of accident, and does not include those who died in hospital afterwards.

Table 10.1: State Roads in Kilometres by Type, 2012

There are 4 Road authorities in the country

The Department of Roads (DoR)	18 000 kms
Urban Councils	7 975 kms
Rural District Councils	30 626 kms
District development Fund	25 000 kms
Total Road network	81 601 kms

The DoR network carries 80% of cargo carried on the roads

- 11.20 Number of Poultry Flocks and Sales of Eggs, 2001- 2010
- 11.21 Major Crops, Summary of Sales, 2001 - 2010

11.22 Crop Sales to/through Marketing Authorities, 2001 - 2010

11.23 Livestock figures by sector and type 2010

11.24 Number of working tractors classified by size of tractor and sector, 2010

11.25: Number of animal drawn equipment by type of equipment and sector: 2010

11.26: Number of Employees in Agriculture and Wages paid by Sector and Quarter, 2010-2011

Natural Regions and Agriculture

Zimbabwe is divided into five natural regions on the basis of soil type, rainfall and other climatic factors. The first three regions are suitable for intensive crop and livestock production whereas the remaining two offer limited scope for agricultural development.

Region 1: Specialized and Diversified Farming

Rain: Above 1 050mm per annum and Normally receives some precipitation in all months of the year.

Production: Afforestation and production of fruit and intensive livestock. In frost-free areas tea, coffee, macadamia nuts and other plantation crops.

Area: 7 000 sq. km (less than 2% of the total of Zimbabwe)

Region 2: Intensive Farming

Rain: 750-1 000 mm per annum. In parts of the region crop yields in certain years will be affected by relatively short rainy seasons or dry spells during the season.

Production: Crops and intensive livestock production.

Area: 58 600 sq. km (15% of the total area of Zimbabwe).

Farming: Almost 74% is large scale commercial land, 22% is communal land and 4% small scale commercial land.

Region 3: Semi-intensive Farming

Rain: 650-800 mm per annum. Fairly severe mid-season dry spells.

Production: Livestock production together with fodder crops and cash crops. Marginal production of maize, tobacco and cotton.

Area: 72 900 sq. km (19% of the total area of Zimbabwe).

Farming: Approximately 49% is large scale commercial land, 43% is communal land, and 8% is small scale commercial land.

Region 4: Semi-Extensive Farming

Rain: 450-650 mm per annum. Periodic seasonal drought and severe dry spells during the rainy season.

Production: Livestock production, drought-resistant crops.

Area: 147 800 sq. km (38% of the total area of Zimbabwe).

Production: Extensive cattle ranching or game ranching.

Farming: 62% is communal land, 34% is large scale commercial land and 4% small scale.

Area: 104 400 sq. km (27% of the total area of Zimbabwe).

Region 5: Extensive Farming

Farming: Approximately 45% is communal land, 35% large scale commercial land and less than 20% national parks.

Rain: Too low and erratic for production of even drought resistant fodder and grain crops.

Land Distribution and Population Density by Sector

	Large Scale Commercial	Small Scale Commercial	Resettlement Schemes	Communal Lands	National Land (Parks etc.)
Total area, sq. km	88 600	14 200	68 400	163 500	56 200
Total area, %	23	4	17	42	14
Number of farmers	3 994	9 655	-	-	-
Average size of farm, ha	2 219	148	-	^a 23	-
Population density, ha/person	-	8.3	-	3.1	-

Note

74% of all communal land is located in regions 4 and 5.

44% of all small scale commercial land is located in regions 4 and 5

^a Result of total area in Communal lands divided by the total number of households. The area includes arable and non-arable land.

- Data not available

Organization of Agriculture Industry

For purposes of data collection, agriculture in Zimbabwe is divided into four major sectors:

i) Large Scale Commercial Farming Areas

Large scale commercial farms are taken for the purpose of agricultural censuses and surveys, to be those geographically located in the former European Areas but excluding resettlement areas. These farms include the portion occupied by the original farmer if the farm was subdivided. There are approximately 4 283 large scale commercial farms in Zimbabwe. The average farm size is about 2249 hectares. Large scale commercial farming is well organised and financed and produces most of the market surplus especially industrial crops. The number and area of large scale commercial farms has been decreasing during the past twenty-one years mainly due to the Government's land redistribution programme.

ii) Small Scale Commercial Farming Areas

There are approximately 9 655 Small Scale Commercial Farms in Zimbabwe with an average size of 148 hectares. Small scale commercial farms occupy 4% of all land. An

individual farmer was given a farm where crop and livestock production is carried out within the farm. Recently, the number of households in the farm has increased due to reproduction.

iii) Resettlement Schemes

These are the products of the Government's land redistribution programme. From 1982 to 1998, the government bought land from large scale commercial farming areas and resettle farmers from communal lands into the resettlement schemes. The farmers were resettled on an individual family basis or as co-operatives. Five models were used in resettling the farmers and these are as follows:

- a. **Model A:** The individual family holding is five hectares plus a common grazing land for animals. The homesteads were in villages and farmers had fields at a designated area.
- b. **Model B:** Members of a co-operative were given an area.
- c. **Model C:** Farmers from a communal area were given additional land in the

neighbouring large scale commercial area and operated as a co-operative.

d. **Model D:** Farmers were resettled in a big area so that they can be involved in cattle ranching. This model is mainly in Matabeleland South province.

e. **Model E: (Self-Contained Units):** Farmers were resettled in a way similar to the small scale commercial farms where an individual has a farm where crop and livestock production is carried out within the farm.

The government then implemented the accelerated land reform programme in 2000. In this programme farms were acquired from large scale commercial farming areas and farmers from communal and urban areas that required land were resettle into two accelerated resettlement models namely A1 and A2.

a) **Model A1 (A1 farms):** The individual family farm is six hectares plus a common grazing land for animals. The homesteads were in villages and farmers had fields at a designated area.

b) **Model A2 (A2 farms):** This is the commercial model of the accelerated

land reform where farmers are resettled in a way similar to the small or large scale commercial farms. An individual has a farm where crop and livestock production is carried out within the farm.

The old resettlement schemes were collective of farm/farms while the accelerated resettlement maintains the farm boundaries. To date resettlement areas occupy 11.3% of all land.

iv. Communal Lands

Farmers live in villages and have areas for cropping and common grazing lands. Agricultural production is mainly for subsistence with the surplus being sold to the market. The population in the communal sector makes up to about 51.4% of Zimbabwe's population.

Agricultural Survey

The ALS is the major survey conducted annually in order to collect crop and livestock production statistics. The Zimbabwe National Statistics Agency (ZIMSTAT) has conducted agriculture and livestock surveys annually in Communal lands only since 1983. The surveys were being run under the Zimbabwe National Household Surveys Capability Program (ZNHSCP). Beginning with the 2002/3

agricultural season the ALS was expanded to include five other sectors: the Old Resettlement Schemes, the Large Scale Commercial Farms, the Small Scale Commercial Farms and the A1 and A2 Farms. Prior to the 2002/3 agricultural season information was disaggregated to provincial level only. Starting with the 2003/04 survey sample sizes for each farming sector was increased so as to enable provision of district level estimates.

The survey consists of twelve modules administered in cycles at different times of the year in line with the farming activities taking place in the course of the season. The survey is designed to provide benchmark data on:

- (a) Persons living and working on holdings
- (b) Fertilizers and other crop inputs
- (c) Credits and loans facilities
- (d) Inventory of cattle, other livestock and quantities and values of livestock inputs
- (e) Cultivated areas and cropping patterns
- (f) Yield estimate
- (g) Inventory of farm implements and machinery
- (h) Cost of new buildings, works and farm improvements
- (i) Transport costs and fuel use on farm holdings.

Miscellaneous Censuses

These include;

1. Communal Lands Irrigation Schemes (Annually).
2. Deciduous Fruit Tree and Vine (Annually).
3. Registered Poultry Producers and Breeders (Quarterly).
4. Registered Butchers (Quarterly).
5. Tanneries (Quarterly).
6. Hides and Skins (Quarterly)

Production Account of Agriculture, Forestry and Fishing

The aim of this account is to determine the contribution of major establishments whose main activity is production of primary agricultural products, forestry and fishing to the country's Gross Domestic Product (GDP). The account is compiled using information obtained from the ALS which is complemented by monthly, quarterly and annual special returns received from other sources such as the Wattle Company, Kariba Peoples Projects, Tobacco Industry and Marketing Board (TIMB) among others.

Crop Forecasting:

A sample survey is undertaken in January each year to determine the farmers' intended planting and anticipated production

of summer controlled crops that season and the estimates are presented to the Crop Forecasting sub-committees. The latter include representatives of the Ministry of Lands, Agriculture and Water Development (including Agritex) the Marketing Boards, Farmers' Unions, and so on, as well as ZIMSTAT. Estimates obtained from the first round of the ALS namely Area Measurement, are presented to the committee and appropriate organizations present their estimates to relevant sub-committee meetings held in March. The main committee then soon afterwards convenes to adopt figures or resolve any problems brought up by the Chairpersons of the subcommittees. A second series of meetings are convened in April with the full effects of the rains being known, the forecasts can be updated. There ZIMSTAT present its figures from the second round of ALS namely Yield Estimates.

Ministries and Institutions within the Agricultural Sector

The Ministry of Agriculture, Mechanization and Irrigation development:

The Ministry of Agriculture, Mechanization and Irrigation Development is responsible for agricultural policy formulation and support services to the agricultural sector.

The ministry also has responsibility on the general policy and control of the following government departments.

Divisions of the Ministry

Agricultural, Technical and Extension Services (AGRITEX)

AGRITEX came into being in June 2001 through the merger of the Department of Research and Specialist Services and Agricultural, Technical and Extension Services (Agritex). Its main responsibility is:

- 1 Research in agricultural sciences and crop pastoral production and for the provision of dairy and meat grading services.
- 2 Implement government policies relating to agricultural development.
- 3 Improve the dissemination of existing and new knowledge resulting from research.
- 4 Stimulate the adoption and/or diffusion of locally adaptable modern farming methods through various training programs.

The Department of Veterinary Services has responsibility for the prevention and control of animal disease and the provision of dipping services in communal lands.

The Department of Irrigation Services has responsibility for planning, development and maintenance of irrigation schemes within the country.

The Agricultural Development Authority (ARDA) is a planning and coordinating agency for rural development.

Its functions are to plan, co-ordinate, implement and promote

- 1 Agricultural and rural development in Zimbabwe
- 2 Schemes for the betterment of agricultural and rural development.
- 3 Schemes for the development and utilisation of specific state lands.

Other Agricultural Institutions

The Agricultural Bank of Zimbabwe Ltd (Agribank) is the major purveyor of agricultural finance. Its main objectives are to promote agricultural production by providing credit for the purchase of agricultural inputs and for the development of agricultural marketing.

The Ministry of Lands and Rural Resettlement: is responsible for Land policy formulation and Implementation.

Note: (1) Includes maize, sorghum, wheat, barley, mhunga, rapoko and other grain crops.

(2) Includes tobacco, coffee, cotton, groundnuts, soyabeans, sunflowers, sugarcane, tea and other industrial crops not specified.

(3) Includes lucerne, other legume hays and silage from Large Scale Commercial Farms.

(4) Includes citrus fruits like oranges, grapefruit, deciduous fruits including strawberries, tropical fruits like mangoes,bananas, avocados and tree nuts.

(5) Includes edible dry beans, sunhemp, nyimo, sweet potatoes, potatoes, onions, peas, tomatoes, other unspecified vegetables, green flowers, shrubs, seedlings and planted pastures grown commercially.

2001	118 164	12 031	41 400	171 594
2002	-	59 926	6 116	66 042
2009	-	-	-	760 321
2010	-	-	-	2 401 073
2011	-	-	-	4 141 020
2012	-	-	-	5 501 421

The short term credit extended to the Agricultural Sector by the Commercial Banks cannot be split from the Loans and Advances figures provided by the Commercial Banks. Hence these figures are not provided in the table for this sector.

The Agricultural Finance Corporation was transformed into an Agricultural Development Bank with emphasis on offering agricultural loans.

- 12.4b: Direction of Export Trade US\$ and Percentage Distribution 2007 -2012
- 12.5: Imports classified by Broad Economic Category: US\$ (c.i.f)

Collection and Presentation of External Trade Statistics

Source of Data

The main source of trade statistics are customs bills of entry. Whenever a good is imported or exported, a customs declaration form is completed pertaining to the nature of the good and the importation and exportation details involved. This is done for customs purposes. With the introduction of the Automated System of Customs Data Administration (ASYCUDA), ZIMSTAT no longer receives hard copies of bills of entry but electronic text files detailing each transaction by month. This means that the data capture is done by ZIMRA. This data is sent to ZIMSTAT either by email or collected on a flash drive. Most of the data is in ASYCUDA WORLD while a smaller portion of it is in ASYCUDA++. Trade in electrical energy is collected directly from the Zimbabwe Electricity Supply Authority (ZESA) on a monthly basis and merged with the data from ZIMRA. ZIMSTAT processes the data using software called EUROTRACE.

Concepts and Scope of Trade Statistics

Domestic Exports Goods, materials or articles which have been produced, manufactured or partly (but substantially) transformed in Zimbabwe, except goods which were originally imported and have

undergone only repair or minor operations which leave them essentially unchanged.

Re-exports Goods, materials or articles originally imported which are exported either in the same conditions in which they were imported or after going through minor operations like blending, packing, bottling, cleaning or sorting.

Gold Sales Sales of gold by the Reserve Bank of Zimbabwe to monetary authorities abroad are a balancing item and are not to be treated as merchandise trade.

Total Exports The aggregate of domestic exports of Zimbabwean origin and re-exports. In addition to commercial transactions, the other items included are exports of goods for which no foreign currency was involved (NCI) such as migrants effects.

Imports Goods imported into the country directly for home consumption or use and those going into customs bonded warehouses. In addition to commercial transactions, the other items included are imports of goods for which no foreign currency was involved (NCI) such as migrants effects.

Visible Balance The export and import of goods is referred to as visible trade and the difference between the total value of exports and imports is known as the balance of visible trade. The visible balance can either be positive or negative. Surplus refers to a situation where the value of exports is greater than imports. A deficit in the trade balance

exists when the value of exports is less than the value of imports.

Domestic exports and re-exports are valued free on rail (F.O.R.) at the point of dispatch.

Coverage

- . Gold bullion is excluded.
- . Goods imported for repair and return are included with exports.

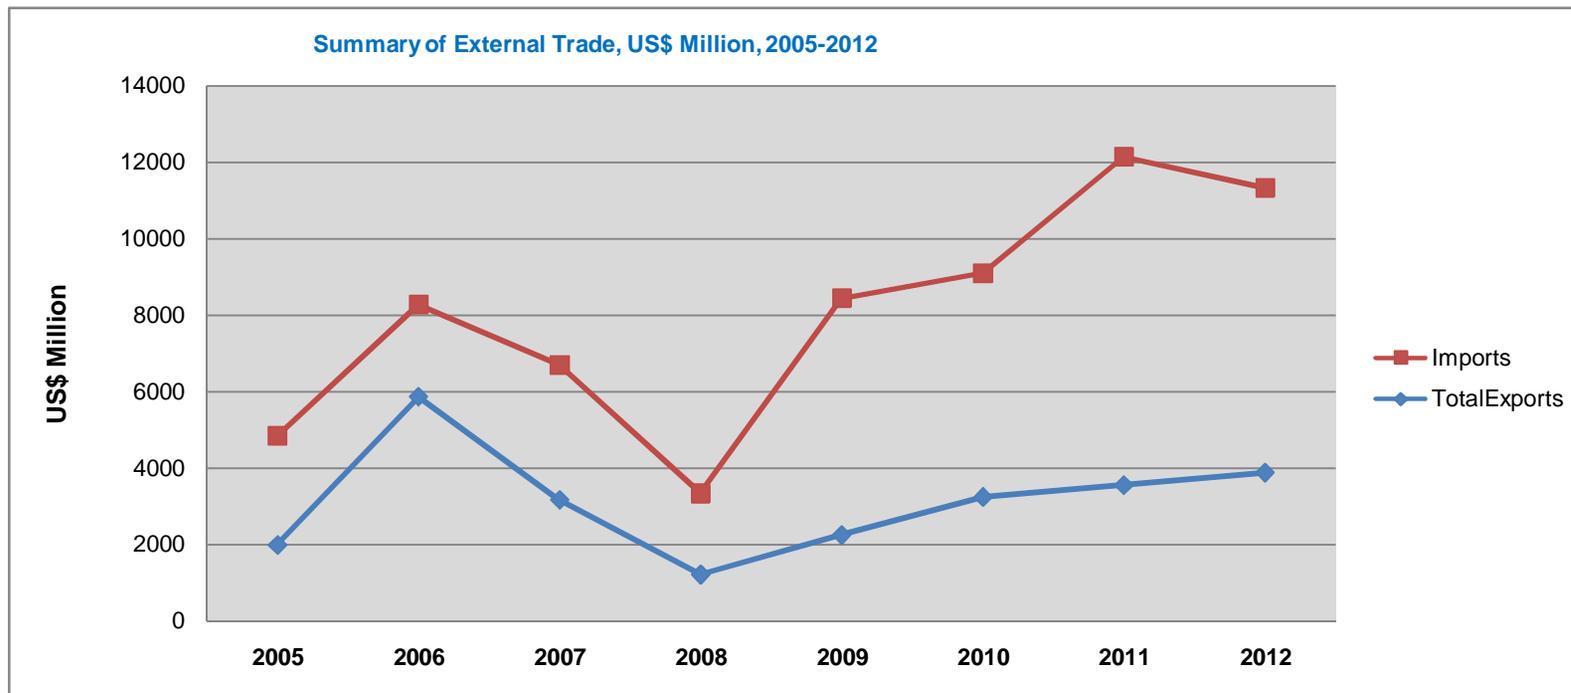

Imports from adjacent and those from free on board (F.O.B.) at the seaport or airport of the exporting country.

- . Re-exports consists of the export of imported goods other than goods imported for repairs.
- . Migrant's effects.
- . Goods on direct transit, i.e. being transported or moved through Zimbabwe are excluded.
- . Imports by and exports to diplomatic and other official foreign missions are excluded.
- . Imports of returned exports are included in imports.
- . Postal traffic is included without a commodity breakdown.
- . Fuel uplifts and stores purchased by railways are excluded.

Valuation

13. Balance of Payment

The objectives of the Balance of Payments Account is to record and identify transactions between residents and non-residents. The account is designed to indicate:

- a) Flows of resources
- b) Changes in foreign financial assets and liabilities
- c) Transfer payments i.e. payments flowing either way without a quid pro quo.

Conceptually each transaction involves a debit and credit entry. However, these are not explicit or accurate. Timing variations may cause transactions not to match; exchange variations may also affect the balance. To offset these and other variations, errors and omissions are included as a balancing item against such discrepancies. The account is divided into a current account covering goods, services and transfers and a capital account covering public and private capital flows. The resulting balance is financed by official financing which may involve borrowing for this specific purpose.

Concept and Scope of Statistics

Merchandise: Covers the export and import of goods, including imports under aid programmes; the re-export of previously

imported goods; gold which is sold exclusively by the Reserve Bank of Zimbabwe. International freight reflects payment for transport from neighbouring countries to our border or receipts for transport costs from point of loading to the border.

Trade Balance: Shows whether or not earnings from the export of goods exceed payments for the import of goods.

Shipment Services: Include port dues which are payments for port fees, charges, storage and handling. External freight credits are for transport to destination or port on exports: debits cover sea freight and air freight on imports, plus transport costs from port to our border.

Other Transport: Passenger fares are for rail and air fares whilst port services cover payments and receipts for fuel and catering, station costs, maintenance and repair and hire fees.

Travel: Shows the inflows or outflows connected with business and holiday travel, tourism as reflected by package and sale of foreign currency plus education costs.

Direct Investment: Net income accruing to the National Railways of Zimbabwe from its Botswana operations plus dividends and

profits paid or received by companies in Zimbabwe.

Other Investment Income: Includes interest paid and received by the public sector which covers Central Government, the Reserve Bank, statutory bodies and also International Monetary Fund interest. The private sector covers payment and receipts for private companies and persons and includes dividends received by individuals. Former residents' remittances refer to income remitted to migrants.

Other Goods, Services and Income: Official refers to diplomatic and government expenditure both abroad by the Zimbabwe Government and in Zimbabwe by other Governments.

Private covers labour income in the form of salaries and fees both received and paid. Property covers rents and the maintenance of property and royalties. Other includes a wide variety of credits and debits for professional, technical and administrative fees, hire purchase charges, book and periodical subscriptions, commissions and insurance, advertising and communications.

Unrequited Transfers (private): Includes such funds as migrants are allowed to remit when leaving or entering this country, counterpart entries for migrants effects,

pension payments and receipts, including communications. Other covers a wide range of credits and debits for which no quid pro quo exists such as inheritance, gifts, maintenance payments, grants and donations and some No Currency Involved (NCI) transactions.

Unrequited Transfers (official): Includes official aid to Government, official NCI transactions and official transfers for education and health for Zimbabwean citizens temporarily residing abroad.

Net Balance on Current Account: Measures total balance on goods, services, income and transfers.

Government Capital Account: Includes mainly long term capital of an official nature reflecting payments and receipts on external loans, lines of credit and official bond holdings.

Public Authorities: Long term capital includes inflows and outflows for statutory bodies such as the National Railways of Zimbabwe, the Zimbabwe Electricity Supply Authority etc. Short term capital includes special credits and repayments of same for organisation such as the National Oil Company.

Private Capital: Long term includes debits and credits on long term private investments

and foreign assets and liabilities of the deposit money banks. Short term reflects the short term i.e. less than one year position of the deposit money banks.

Balance on Capital: Shows the position with regard to capital flows and taken with the Current Account balance gives the net position which may have to be financed. In the absence of borrowing this reflects movements in Zimbabwe's reserves position.

Official Financing: Includes valuation changes of gold and foreign assets, gold monetization/demonetization, changes in reserves and any short term credits needed to balance the account.

Source : Reserve Bank of Zimbabwe

In 2012, the current account balance improved from -3.1 billion in the previous year to -2.4 billion. This improvement was attributable largely to merchandise receipts. The capital account balance fell from 1.6 billion to 1.2 billion in 2012. The overall balance on both the capital and current accounts was -380 million, up from -782 million in 2011.

14. Prices Statistics

Tables

- 14.0: Consumer Price Index (December 2008=100 up to December 2012)
- 14.1: Food Poverty Datum Lines per person per month
- 14.2: Food Poverty Datum Lines for 5 persons per household per month
- 14.3: Total Consumption Poverty Lines per person per month
- 14.4: Total Consumption Poverty Lines for 5 persons per household per month
- 14.5: Building Materials Price Index, average
- 14.6: Civil Engineering Price Index (Dec 2008 = 100)
- 14.7: Producer Price Index (2009=100 December) - 2012

Introduction

1. The Consumer Price Index measures the cost of living in a country. It measures the pure price change in a fixed market basket of goods and services of constant quantity. It shows how much the cost of living has risen or fallen owing to price changes irrespective of changes in consumer behaviour or in the quality of goods and services.

The Consumer Price Index, (see Table 14.0) is used as

- a general measure of inflation as it affects households
- an adjustment factor for indexation of prices, wages and other payments.
- an index for use in deflation of series in normal terms to derive values in real terms
- a proxy in the estimation of cost of living
- an input in determining real interest rates
- an input in measuring poverty.

2. The Poverty Datum Line (PDL), see Table 14.1-14.4 represents the cost of a given standard of living that must be attained if a person is deemed not to be poor.

The Food Poverty Datum Line (FPL) represents the minimum consumption expenditure necessary to ensure that each household member can (if all the expenditures were devoted to food)

consume a minimum food basket representing 2100 kilo calories.

To obtain the FPL, average prices of items in the basket are computed. Since poverty varies from region to region the FPL lines are also calculated for each of the ten provinces. The Total Consumption Poverty Line (TCPL) is the combination of the FDL and the non food component.

3. The Building Materials Price Index measures the average changes in the prices of building materials for an average dwelling unit.

The importance of the Building Materials Price Index, see table 14.5.

It is used to measure the cost of building materials which are

- Bricks
- Cement
- Timber and wood
- Metal windows and door frames
- Roofing
- Sanitary ware and plumbing
- Flooring
- Paint and glass
- Electrical goods and materials

4. The Civil Engineering Materials Price Index measures the changes in the prices of civil engineering materials.

The importance of Civil Engineering Price Index see Table 14.6.

It is used to measure the cost of civil engineering materials which are:

- Steel
- Shutter
- Asbestos pipes
- Concrete pipes
- Bitumen
- Coal tar
- Water stops
- River sand
- Stones

5. The Producer Price Index see Table 14.7 measures the changes in prices of

manufactured goods at factory gate prices.

The importance of the Producer Price Index:

It shows the changes in the prices of goods produced by producers at factories on a quarterly basis. The index is used for deflating nominal values supplied by companies to get real values.

Source: Consumer Price Survey Note:

The Indices are inclusive of value added tax and excise duty.

With effect from January 2013, ZIMSTAT is publishing the new Consumer Price Index (CPI) with new weights and a new classification in accordance with international guidelines. The use of a new classification of Individual Consumption by Purpose (COICOP) resulted in the creation of a new classification which resulted in coming up with 83 classes, 41 groups and 12 divisions while in the old classification there were 68 subgroups and 12 major groups. The number of items in the CPI basket has also been increased from 428 to 495.

Due to the reclassification that has been done, the sub-groups and major groups have been substituted by classes, groups and divisions. The implementation of the COICOP classification is also part of the harmonisation project of Consumer Price Indices in different regions like the SADC region. All member states are supposed to adopt the new procedure to enable inter country comparisons of the CPI and the rate of inflation. The indices prior to January 2013 were re-referenced to December 2012=100. The rates of inflation remain the same under different weight regimes as the relative magnitude of indices is maintained. The new weights are therefore applicable from January 2013 onwards.

Scope of the Chapter

This is a brief account of trends in money supply, movements in the money and property market, changes in assets and liabilities of the banking sector, interest rates and the exchange rates between the United States dollar and major foreign currencies. It also covers Zimbabwe's external debt in relation to the Gross Domestic Product. Currently the banking sector comprises Accepting Houses, Commercial Banks, Merchant Banks, Building Societies, and the Post Office Savings Bank.

Monetary aggregates

Money stock can be measured under two categories. First, there is the narrowly defined money supply (M1) defined as notes and coins in circulation plus demand deposits with the monetary sector. The broader definition, M2, is made up of M1 plus near money, that is savings deposits plus fixed deposits with a maturity period of 30 days or less held with commercial banks. There is a correlation of the movement of the annual

inflation rate and money supply growth. A high growth of money supply if unchecked is inflationary.

The monetary aggregates consist of total demand deposits from Commercial Banks, Merchant banks and the Reserve Bank of Zimbabwe. These total demand deposits constitute the first money supply aggregate known as M1. When total savings and short term deposits are added the new money supply aggregate becomes M2. Finally when long term deposits are added to M2 we obtain the last money supply aggregate known as M3. Table 15.1 shows the three monetary aggregates in Zimbabwe for the period 2009 to 2012. The money supply M3 grew by 68.5 percent between 2010 and 2009. However money supply growth declined consistently from 2011 to 2012. Money supply M3 grew by 42.6 percent in 2011 and by another 17.1 percent between 2012 and 2011. The value of total money supply in the Country in 2012 was US\$3.9 billion compared to only US\$1,4 billion in 2009.

Commercial Banks

The assets of Commercial banks consist of notes and coins at banks, balances with the Reserve Bank, balances at foreign banks, securities, loans, advances and other assets. The total value of assets of Commercial Banks stood at about US\$ 5.0 billion in 2012 compared to a value of US\$ 1.8 billion in 2009, see Table 15.3.

The liabilities of Commercial Banks consist of demand deposits, short term deposits, long term deposits and foreign liabilities. Liabilities also include amount owing to the Reserve Bank, Other Banks, Capital Reserves, contingent liabilities and other liabilities. As expected the value assets equals the value of liabilities, see Table 15.4.

Table 15.5 shows that Commercial Banks advanced money to various sectors of the economy over the period 2009 to 2012. The total advances by Commercial Banks to the country's sectors rose from US\$ 542.4 million in 2009 to a phenomenal US\$ 1.8 billion in 2012. Although Merchant Banks also advanced money to the same sectors of the economy the level of advances

are much lower compared to those of the Commercial Banks. For instance in 2009 Merchant Banks only made advances totalling US\$50 million but in 2012 the total advances by Merchant Banks to all sectors of the economy amounted to US\$ 684.1 million see Table 15.6.

An Accepting House is a financial institution that accepts a bill of exchange. A bill of exchange is a financial instrument closely related to a cheque. A cheque is a bill of exchange drawn on a bank. When an accepting House “accepts’ a bill of exchange, it guarantees it. The bill can then be more easily sold, as this greatly reduces the credit risk. The total assets of Accepting Houses are relatively lower the assets of Merchant Banks and much lower than the assets of Commercial Banks.

The total assets of Accepting Houses rose from US\$ 230.5 million in 2009 to US\$ 713.6 million in 2011 and dropped to US\$ 401.8 in 2012, see Table 15.7. As expected the liabilities of Accepting Houses are almost equal to liabilities of Accepting Houses. However the liabilities of Accepting Houses which are due to the public are almost half of the total liabilities for the year 2012, see Table 15.8.

Table 15.7 Assets of Accepting Houses, US\$ Million, 2009-2012

Mortgage advances is the largest form of assets contributing 38.8 percent of the total assets of Building Societies in 2012, see Table 15.9. The total liquid assets constituted 22.7 percent of the total assets in 2012. There are four Building Societies in Zimbabwe namely CBZ Building Society, Central Africa Building Society (CABS), FBC Building Society and ZB Building Society. Although the largest asset of Building Societies is mortgages the economy is still constrained by liquidity shortages which has

hampered the extent of mortgage advances to the home seekers. About 39.6 percent of Building Societies liabilities emanate from savings and short term deposits, see Table 15.10. The long term deposits are 28.6 percent. About 68.1 percent of the total liabilities are from the public whilst the rest of the liabilities for the Building Societies are capital and reserves and other liabilities.

Table 15.11 shows Zimbabwe's External Debt Outstanding by Debtor (Including all arrears but Excluding penalties). The total external Debt has been on the rise since the year 2001. The External debt to GDP ratio has been rising over the past decade

reaching a peak of 147.7 percent in 2008 and declined to 92.7 percent and 80.8 percent in 2011. The External Debt outstanding by debtor was 3.4 billion in the year 2001 but it short to 7.2 billion in 2011.

Principal Interest Rates

Principal interest rates are money market rates, deposit rates and lending rates. The money market interest rates include the bank rate, treasury bills rate and the discount rates. However figures on treasury bills and discount rates are not yet available as the money market is not yet fully operational since the

introduction of the multicurrency interest rates in 2009. The three months Commercial Banks deposit rates averaged 12 percent per annum whilst the average deposit interest rates for Accepting Houses dropped from 16 percent in 2009 to 11.5 percent in 2012.

Table 15.12 Deposit Rates in Commercial Banks and Accepting Houses (percent per annum), 2009-2012

End of Year	COMMERCIAL BANKS V1		ACCEPTING HOUSES V1
	Savings	3 Months	3 Months
2009	0.05-2.00	0.05-20.00	2.00-30.00
2010	0.05-2.00	0.50-16.00	10.00-18.00

2012	0.15-8.00	4.00-20.00	6.00-17.00

Source: Reserve Bank of Zimbabwe

The Commercial Bank lending rates have been on the increase since 2009 partly due to the huge demand for money by individuals and businesses. The average Commercial Bank lending rates increased from 13.1 percent in 2009 to 22.5 percent in 2012. The weighted average for individuals in 2011 was 13.2 percent compared to 15.1 percent in 2012. The Corporate sector is charged lower interest rates as these funds

are used for production of goods and services whilst individuals who borrow mainly for consumption purposes are charged higher rates. The weighted average of Commercial Bank lending rates for Corporates was 10.4 percent in 2012. The lending rates charged by Merchant banks are higher than those of Commercial Banks being 17.9 percent for individuals compared to 14.4 percent for the year 2012.

Table 15.13 Lending Rates in Commercial banks, Accepting Houses and Merchant Banks (percent per annum), 2009-2012

End of Year	Commercial Banks Lending Rate	Commercial Banks Weighted Average Base Lending Rate		Accepting Houses Lending Rate	Merchant Banks Lending Rate	Merchant Banks Weighted Average Base Lending Rate

- Note:
1. Nominal lending rates depict the range of rates quoted by banks.
 2. Weighted lending rate is the sum of minimum nominal lending rates by individual bank's loan book sizes

Exchange Rates

In general the South African Rand has been appreciating over the US dollar. There were short term periods of the depreciation of the South African rand experienced from November 2008 to February 2009. Thereafter the South African rand has been stable and hovered around 7 and 8 Rands per US dollar.

Zimbabwe has benefited from the stability of the South African rand as most products are being imported from South Africa. The stability in the South African Rand has also helped to keep inflation in Zimbabwe around or below 4 percent on a monthly basis see Tables 16.14 and 16.15.

Table 15.14: Exchange rates South African Rand per US Dollar end of month; 2000-2012

Zimbabwe Stock Exchange

(1) The industrial share price index is calculated on the closing prices on the last day of business of each month. It covers all domestic industrial shares. It is a base weighted index constructed using chain-base method to take account of new issues, bonus issues, etc.

(2) For both the value of turnover and industrial share price indices, the annual index is the average of the twelve months of each particular year.

The Zimbabwe Stock Exchange industrial indices were relatively stable over the period from 2009 to 2012. While the industrial index

was relatively stable over the period under review the mining index has been on the decline since the year 2010 due to declining prices of minerals on the international markets. The market capitalization has been stable over the previous four year being about US\$ 4.0 billion in 2012. The market volume turnover has also been on the decline since 2010. The turnover in volume terms declined from US\$ 523.6 million to US\$ 123.9 million in 2012. Activity on the Zimbabwe Stock Exchange has been lower than expected due to liquidity shortages continuously being faced in the Zimbabwean economy.

Table 15.16 Zimbabwe Stock Exchange Statistics; 2009-2012

Introduction

Tourism is becoming one of the world's fastest growing industries and indeed one of Zimbabwe's greatest assets. The sector is recognised because of its vital contribution to the development of the country's economy. As a service sector, tourism is a labour intensive industry, it provides employment opportunities and has the potential to create more. In a country like Zimbabwe, rich in natural resources capable of attracting tourists, the tourism industry becomes an indispensable earner of foreign currency as services are rendered to regional and international visitors.

There has always been a problem in ascertaining the real value of the contribution of the industry to the national economy. This is so because of the industry's highly complex and multifaceted nature involving many players from segments of economic sectors e.g. transport, accommodation and services, etc. Hence, tourism is often not singled out as a sector on its own. Indicators relating to the performance of the sector are often lumped with other sectors. Currently the country is trying to come up with a Tourism Satellite Account (TSA) which will assist in determining the contribution of tourism to the Gross Domestic Product (GDP) of the country.

The Tourism Product

Zimbabwe is one of the leading tourist destinations in Africa, thanks to the diversity of attractions available. The country boasts of the Victoria Falls, one of the natural wonders of the world, some of the finest national parks with a huge variety of flora and fauna species. Hwange National Park is the biggest in the country and one of the largest game sanctuaries in Africa. Approximately 12% of the country's surface area was set aside for the National Parks and Wildlife Estates. Other attractions include the scenic Eastern Highlands, Great Zimbabwe National Monument and other places of historical and cultural significance. The mighty Zambezi river offers the greatest challenge to White Water rafting and Kyating enthusiasts while on the same river lies Lake Kariba, one of the world's largest man-made lakes. The lake provides an arena for a diversity of water-based activities: yachting, sport fishing, canoeing, boating and game viewing. For those in love with sport there is golfing, walking safaris and bungee jumping. Above all Zimbabwe has a pleasant climate with sunshine almost all year round and the people are very friendly and hospitable.

Transport

The areas of tourist attractions in Zimbabwe are all easily accessible as the country has a well-developed transport and communications network. The major resorts are well served by road, air and rail transport. Air Zimbabwe, the national airline, has flights from Harare to Kariba, Victoria Falls and Bulawayo.

Complementing the air service to Victoria Falls are direct flights by regional airlines like South African Airlines from Cape Town and Johannesburg, Air Botswana from Gaborone and Namibia Airways from Windhoek.

Accommodation

Zimbabwe's generally well-developed tourism infrastructure provides a wide variety of accommodation facilities for international, regional and local tourists. These range from the simple camping sites through the rugged camps in the bush, luxury exclusive safari camps, backpacker lodges to the five star hotels/lodges in the resort areas as well as in urban centres. To add to the prestige of the facilities and services on offer in the country's hotels some of the hotels have become affiliated with international hotel chains of fame such as the Sheratons, the Holiday Inns, the Best Westerns and the Inter-continentals.

Tourist visits can be arranged privately or through tour operators and/or hotel agencies.

Tourism Administration

Tourism policy and policy formulation is the responsibility of the Ministry of Tourism and Hospitality Industry. Policy implementation rests with the Zimbabwe Tourism Authority (ZTA). ZTA is the national tourism authority established by the Tourism Act of 1995 to take over the functions of the defunct Zimbabwe Tourism Development Corporation. The authority has also assumed extra responsibilities that include collection of levies, the registration, grading and inspection of tourism facilities.

The authority's brief is to: implement tourism policy as enunciated by the Ministry; encourage tourism development with due regard for environmental/ecological issues and the physical carrying capacity of particular areas; ensure adequate publicity of Zimbabwe as a tourist destination; promote consultation and advisory services in relation to tourism; promote high standards in the tourism industry through the establishment of standards; training and human resource development; planning for the tourism

industry, including conducting market research and developing a tourism database; developing marketing skills and initiatives within the tourism industry.

The Tourism Private Sector

Tourism development lies in the hands of the private sector with government mainly playing a regulatory role. The private sector enterprises provide the various services such as accommodation, touring, entertainment, transport and catering, etc. Zimbabwe has a very well organised tourism private sector committed to the provision of high standard facilities and services. There are various sub-sector associations representing a diversity of interests in the tourism industry. These include: the Hotel Association of Zimbabwe (HAZ), the Zimbabwe Association of Tour and Safari Operators (ZATSO), the Zimbabwe Vehicle Rental Association (ZIVRA), the Boat Association of Zimbabwe (BOAZ), the Board of Airlines (BOA), the Association of Zimbabwe Travel Agents (AZTA) etc. The umbrella body of the various sub-sector associations in the industry is the Zimbabwe Council of Tourism.

Tourism Development

Visitor Arrivals

Zimbabwe has been experiencing an increase in the number of visitors coming to the country

since the year 2008. The figures increased from 935 260 in 2008 to 1 385 246 in 2010 then to 1 744 858 in 2012. The increase could be attributed to the aggressive marketing strategy by the Zimbabwe Tourism Authority (ZTA) as well as the improving socio-economic conditions since the introduction of the use of the multi-currency system in 2009. This has resulted in the drop of inflation figures to single digits making more affordable to the visitors compared to the years prior 2009. In 2012, using the country of permanent residence approach, the majority of the visitors, as has always been the case, originated from the region with South Africa contributing 639 063 of the tourists followed by Mozambique and then Botswana who contributed 131 172 and 66 643, respectively. The rest of the visitors came from all over the world. Asia as a whole contributed 32 273, Canada and the United States together contributed 56 138 visitors. The whole of Europe contributed 105 579 with Britain and Ireland contributing 29 358 visitors.

Length of Stay

Due to the absence of exit cards, ZIMSTAT have not been computing this variable since 2005.

Receipts from Tourism

Data on tourism receipts have not been made available to ZIMSTAT by Reserve Bank of Zimbabwe (RBZ) since 2004.

Hotel Occupancy

The average hotel occupancy rate has been on an upward trend since 2008. It increased from 33% in 2008 to 36% in 2010 then to 37% in 2012. The increase might be due to domestic tourism which has been on an upward trend of late. Again this could be attributed to the aggressive promotion of domestic tourism by ZTA.
